endogenous (*Zool.*). (In *Sporozoa*) said of forms in which sporulation is effected within the host: (in higher animals) said of metabolism which leads to the building of tissue, or to the replacement of loss by wear and tear. Cf. *exogenous.*

endogenous spore (*Bot.*). A spore formed inside a sporangium.

endogenous thallus (*Bot.*). The thallus of a lichen in which the alga predominates.

en'dognaths, —gnaths (*Zool.*). In *Crustacea*, the endopodites of the mouth-parts.

endolith'ic (*Bot.*). Growing within the substance of rocks or stones.

en'dolymph (*Zool.*). In Vertebrates, the fluid which fills the cavity of the auditory vesicle and its outgrowths (semicircular canals, etc.).

en'dolymphan'gial (*Zool.*). Situated within a lymphatic vessel.

endolymphat'ic (*Zool.*). Pertaining to the membranous labyrinth of the ear in Vertebrates, or to the fluid contained therein.

endome'trial (*Anat.*). Pertaining to, or having the character of, endometrium.

endometrio'ma (*Med.*). Adenomyoma. An endometrial tumour consisting of glandular elements and a cellular connective tissue, occurring in regions where endometrium is normally absent.

endometri'tis (*Med.*). Inflammation of the endometrium.

endome'trium (*Anat.*). The mucous membrane lining the cavity of the uterus.

en'domix'is (*Zool.*). In *Protozoa*, a process closely resembling conjugation, but taking place in solitary individuals without involving syngamy.

en'domyocardi'tis (*Med.*). Inflammation of the heart muscle and of the membrane lining the cavity of the heart.

endomys'ium (*Zool.*). The intra-muscular connective tissue which unites the fibres into bundles.

endoneu'rium (*Zool.*). Delicate connective tissue which lies between the nerve fibres of a funiculus.

endopar'asite (*Bot., Zool.*). A parasite living inside the body of its host.

en'doperid'ium (*Bot.*). The inner layer of a peridium, when distinguishable.

en'dophlebi'tis (*Med.*). Inflammation of the intima of a vein.

endophrag'mal skeleton (*Zool.*). An internal skeletal framework formed by the elaboration and combination of apodemes and serving for muscle attachment.

endophthalmi'tis (*Med.*). Inflammation of the internal structures of the eye.

endophyl'lous (*Bot.*). (1) Said of a parasite living inside a leaf.—(2) Said of a plant member developed in the shelter of a sheathing leaf.

en'dophyte (*Bot.*). A plant living inside another plant, but not necessarily parasitic on it.

endophytic mycorrhiza (*Bot.*). See **endotrophic mycorrhiza.**

en'doplasm (*Cyt.*). The granular central portion of the cytoplasm of a cell. Cf. *ectoplasm.*

endopleu'rite (*Zool.*). A lateral apodeme: an infolding of a pleurite.

endop'odite (*Zool.*). The inner ramus of a biramous arthropod appendage.

Endopterygota, —pter-i-gō'ta (*Zool.*). A subclass of *Insecta* in which wings occur, although sometimes secondarily lost; the change from young form to adult is accompanied by a sharp metamorphosis, the wings developing internally; the young form is usually a specialised larva.

endorha'chis (*Zool*). In *Vertebrata,* a layer of connective tissue which lines the canal of the vertebral column and the cavity of the skull.

endorhi'zoid (*Bot*). A rhizoid formed at the base of the seta of a Bryophyte, and penetrating the gametophyte.

endosal'pingi'tis (*Med.*) Inflammation of the lining membrane of the Fallopian tube.

en'dosarc (*Zool.*). See **endoplasm.**

en'doscope (*Med.*). A tubular instrument for inspecting the cavities of internal organs.

endoscop'ic embryology (*Bot*). The condition when the apex of the developing embryo points towards the base of the archegonium.

endosmo'sis (*Chem*). The process of osmosis in an inward direction towards the solution. See **osmosis.**

en'dosome (*Cyt*). See **karyosome.**

en'dosperm (*Bot.*). A multicellular tissue formed inside a developing seed, serving in the nutrition of the embryo, and sometimes increasing greatly, forming the bulk of the ripe seed. Many endospermous seeds are important sources of food materials, for man and other animals.

endosper'mous (*Bot*). Said of a seed having endosperm: albuminous.

en'dospore (*Bot*). (1) The innermost layer of the wall of a spore.—(2) A spore formed inside a mother cell.

endoster'nite (*Zool.*). In *Insecta,* a sternal apodeme: in *Notostraca, Apus* and some decapod *Crustacea,* a mesodermal tendinous plate lying under the anterior part of the alimentary canal: in *Arachnida,* a slightly chitinised cartilaginous plate lying between the nerve ganglia and the alimentary canal.

endos'teum (*Zool*). The periosteum lining the cavities of some kinds of bones.

en'dostyle (*Zool.*). In some *Prochordata* and in the larvae of *Cyclostomata,* a longitudinal ventral groove of the pharyngeal wall, lined by ciliated and glandular epithelium.—*adj.* **endostylar.**

endoter'gite (*Zool*). A dorsal apodeme: an infolding of a tergum.

endothe'cium (*Bot.*). (1) The inner tissues in a young sporogonium of a moss.—(2) The fibrous layer in the wall of an anther.

endothelio'ma (*Med.*). A tumour arising from the lining membrane of blood-vessels or lymph channels. The term is also applied to a tumour arising in the pleura, in the peritoneum, or in the meninges.

endothe'lium (*Zool.*). Pavement epithelium occurring on internal surfaces, such as those of the serous membranes, blood-vessels, and lymphatics.

endother'mic (*Chem.*). Accompanied by the absorption of heat.

endothermic compound (*Chem.*). A compound whose formation is endothermic; it is therefore relatively unstable.

endothi'obacte'ria (*Bacteriol.*). Bacteria which form sulphur inside their cells.

endotho'rax (*Zool.*). In *Crustacea,* the endophragmal skeleton of the thorax.

endotox'in (*Bacteriol.*). Toxin retained within the substance of a bacterium.

en'dotrache'a (*Zool.*). In *Insecta,* the chitinous innermost layer of a trachea.

endotracheitis, —ē-ī'tis (*Med.*). Inflammation of the mucous membrane of the trachea.

endotro'phic (*Zool.*). (In *Insecta*) said of the space enclosed within the peritrophic membrane.

endotrophic mycorrhiza (*Bot*). A mycorrhiza in which the fungus occurs almost entirely inside the body of the associated plant.

endozo'ic (*Bot.*). (1) Living inside an animal.—(2) Said of the method of seed dispersal in which seeds are swallowed by some animal and voided unharmed after having been carried for some distance.

endurance (*Aero*). The maximum time, or distance, that an aircraft can continue to fly without refuelling, under any agreed conditions.

endurance limit, endurance range (*Met*). See under **limiting range of stress.**

endy'sis (*Zool.*). The formation of new layers of the integument following ecdysis.

en'ema (*Med*). Fluid injected into the rectum to promote evacuation of the bowels or to convey nutrition to the body (*nutrient enema*).

energetics (*Chem*). The abstract study of the energy relations of physical and chemical changes. See **thermodynamics.**

ener'gid (*Biol.*). Any nucleus, together with the cytoplasm which it controls.

energy (*Phys.*). The capacity of a body for doing work. Mechanical energy may be of two kinds: *potential energy,* by virtue of the position of a body; or *kinetic energy,* by virtue of its motion. Both mechanical and electrical energy may be converted into heat, which is itself regarded as another form of energy. See **potential energy, kinetic energy, mechanical equivalent of heat.**

energy component (*Elec. Eng.*). See **active component.**

energy curve (*Photog*). The spectral distribution of radiated energy in a source of light, e.g. an arc, the ordinate being proportional to the energy contained in a specified small band of wavelengths.

energy density of sound (*Acous.*). In a reverberant sound field, the particle vibration energy per unit volume, averaged over the whole of the enclosure when the distribution has become stable.

energy meter (*Elec. Eng.*). An instrument which registers the amount of energy (kilowatt-hours) passing through an electric circuit. Also called a WATT-HOUR METER.

eng (*Timber*). A very durable dark reddish-brown wood from Burma, much used for house-building and for parquet flooring. Also called IN.

engaged column (*Build*). An *embedded column* (q v.) of which more than half projects.

engine (*Eng.*). Generally, a machine in which power is applied to do work: particularly, a machine for converting heat energy into mechanical work: loosely, a locomotive.

See **air—**
atmospheric—
compression-ignition—
Diesel—
gas—
high-speed—
hot-air—
internal-combustion—
marine—
radial—
reciprocating—
rotary—
steam—
wobble-plate—

engine cylinder (*Eng.*). That part of an engine in which the heat and pressure energy of the working fluid do work on the piston, and are so converted into mechanical energy. See **cylinder, cylinder barrel.**

engine friction (*Eng.*). The frictional resistance to motion offered by the various working parts of an engine. See **friction horse-power.**

engine pit (*Eng.*). (1) A hole in the floor of a garage to enable a man to work on the underside of a motor vehicle.—(2) An engine sump or crank pit; the box-like lower part of the crankcase.—(3) A large pit for giving clearance to the flywheel of a large gas engine or winding engine. See **pit.**

engine plane (*Mining*). In a coal-mine, a roadway on which tubs, trucks, or trains are hauled by means of a rope worked by an engine.

engine-sized paper (*Paper*). Paper hardened by the addition of rosin and alum to the fluid pulp.

engineer. One engaged in the science and art of engineering practice. The term is a wide one, but it is properly confined to one qualified to design and supervise the execution of mechanical, electrical, hydraulic, and other devices, public works, etc.

See **civil engineering** **marine engineering**
electrical do. **mechanical** do.
hydraulic do. **mining** do.

engineer's chain (*Surv.*). A chain having an overall length of 100 ft., so that each link is 1 ft. long; it is much used in connexion with construction works.

engineering bricks (*Build.*). A class of brick used wherever strength and appearance are essential; e.g. for the faces of abutments, piers, and arches. They are machine-made and pressed, and may have ' frogs ' on one or both of the larger sides.

engla'cial streams (*Geol*). Streams which follow courses in the ice, after having left the surface of the glacier by plunging into a swallow- or sink-hole. Cf. *subglacial drainage.*

Eng'ler distillation (*Chem.*). The determination of the boiling range of petroleum distillates, carried out in a definite prescribed manner by distilling 100 c.c. of the substance and taking the temperature after every 5 or 10 c.c. of distillate has collected. The initial and final boiling-points are also measured.

Engler flask (*Chem*). A 100 c.c. distillation flask of definite prescribed proportions used for carrying out an *Engler distillation* (q.v.).

English bond (*Build.*). The form of bond in which each course is alternately composed entirely of headers or of stretchers.

English cross bond (*Build.*). A *Dutch bond* (q.v.).

English foot (*Hosiery*). The term for a foot made in two sections, upper and lower, which are joined with a seam.

English garden-wall bond (*Build.*). The form of *garden-wall bond* (q v.) in which a course of headers alternates with three courses of stretchers. Also called SCOTCH BOND.

English pink (*Paint.*). See **Dutch pink.**

English roof truss (*Eng.*). A truss for roofs of large span in which the sloping upper and lower chords are symmetrical about the central vertical, and are connected by vertical and diagonal members.

en'gobe (*Pot.*). A coating of fine paste.

engorgement (*Med.*). Congestion of a tissue or organ with blood.

enlargement (*Bot.*). Primary growth in thickness before secondary thickening begins.

enlarger (*Photog.*). See **enlarging machine.**

enlarging (*Photog.*). The regular photographic process whereby the negative image is projected, usually enlarged, on to the positive, during printing exposure, as contrasted with *contact printing* in which the positive and negative must coincide in size.

enlarging machine or **enlarger** (*Photog.*). The apparatus for projecting a negative on to a sensitive surface for making an enlarged print.

enneandrous, en-e-an'drus (*Bot.*). Having nine stamens.

Enochkin Series (*Geol.*). The middle portion of the thick Jurassic succession of Alaska, consisting of shales, sandstones, and conglomerates; represented in N.W. Alaska by a very great thickness of plant-bearing continental strata.

e'nol form (*Chem.*). The carbinol form of a substance exhibiting keto-enol tautomerism, i.e. that form in which the mobile hydrogen atom is attached to the oxygen atom, and therefore possesses acidic properties.

enophthal'mos, enophthal'mus (*Med.*). Abnormal retraction of the eye within the orbit.

enosto'sis (*Med.*). A bony growth formed on the internal surface of a bone.

enriched water gas (*Fuels, etc.*). See **carburetted water gas.**

enrichment (*Arch., Build.*). Ornamentation applied to building features.

enrockment (*Hyd. Eng.*). The layer of stones placed over the face of a dyke or sea-embankment as a protection against the impact of the water.

ensemble, ahn^{g}-sahmbl' (*Acous.*). The quality of concerted musical sounds made by a number of musicians; implies artistic mixing of the individual sounds without any being blurred or masked.

en'siform. Shaped like the blade of a sword.

ensiform process (*Zool.*). See **xiphisternum.**

en'silage. A cattle food formed by the bacteriological breakdown, in portable or fixed silos, of vegetable matter (grasses, clovers, pea haulms, beet tops, etc.), with the admixture of diluted molasses. Also, the process of making such food.

Ensonit (*Build.*). A form of building-board which may be stained and polished.

ensor (*Lace*). A levers net made in imitation of a traverse net.

en'statite (*Min.*). An orthorhombic pyroxene, chemically a silicate of magnesium, $MgSiO_3$; it occurs as a rock-forming mineral, and also as an important constituent of other pyroxenes of more complex chemical composition.

enstyle (*Build.*). See **eustyle.**

entab'lature (*Arch.*). The whole of the parts immediately supported upon columns, consisting of an architrave, a frieze, and a cornice.—(*Eng.*) An engine framework supported by columns.

en'tamoebiasis, —mē-bī'a-sis (*Med.*). Infection with *Entamoeba histolytica.*

en'tasis (*Arch.*). The slight swelling towards the middle of the length of a column to correct for the appearance of concavity which the outline of the column would present if it had a straight taper.

entasis reverse (or **rule**) (*Masonry*). A templet cut to the profile of an entasis, for the shaping of which it is used as a reference.

entel'echy (*Zool.*). The vital element that controls and directs response to stimuli.

entep'icon'dylar (*Zool.*). In some Reptiles and Mammals, said of a foramen near the lower end of the humerus, for the radial nerve and brachial artery.

enteque, en-tā'kā (*Vet.*). A variety of haemorrhagic septicaemia of cattle, horses, and sheep in South America; osseous metaplasia commonly occurs in the chronic forms of the disease in cattle.

enter-, entero- (Greek *enteron*, intestine). A prefix used in the construction of compound terms; e.g. *enterectomy, entero-anastomosis* (qq.v.).

en'teral (*Med.*). Within, or by way of, the intestine.

enteral (*Zool*). See **parasympathetic.**

enterclose (*Build.*). A corridor separating two rooms.

enterec'tomy (*Surg.*). Surgical removal of part of the bowel.

enter'ic (*Med.*). (1) Pertaining to the intestines. —(2) Synonym for *enteric fever* (see **typhoid fever**).

entering edge (*Elec. Eng.*). The edge of the brush of an electrical machine which is first met during revolution by a point on the commutator or slip ring. Also called LEADING EDGE OR TOE OF THE BRUSH. Cf. *leaving edge.*

entering pallet (*Horol.*). The pallet upon which a tooth of the escape wheel first acts.

entering tap (*Eng.*). See **taper tap.**

enteri'tis (*Med.*). Inflammation of the small intestine.

entero-anastomo'sis (*Surg.*). The operative union of two parts of the intestine: the operation for doing this.

enterobi'asis (*Med.*). Infection by the thread- or pin-worm *Enterobius vermicularis*.

en'terocele (*Med.*). A hernia containing intestine.

enterocente'sis (*Surg.*). Operative puncture of the intestine.—(*Vet.*) The operation of puncturing the distended intestine of a horse suffering from colic, in order to liberate the gas.

en'terocoel (*Zool.*). A coelomic cavity arising by the formation and separation of a series of hollow diverticula of the archenteron.—*n.* **enterocoe'ly.** —*adj.* **enterocoe'lic.**

enterocoli'tis (*Med.*). Inflammation of the small intestine and of the colon.

enterocolos'tomy (*Surg.*). A communication, made by operation, between the small intestine and colon.

enterocys'tocele (*Med.*). Hernia containing intestine and bladder.

entero-enteros'tomy (*Surg.*). The operative formation of a communication between two separate parts of the small intestine: the operation for doing this.

entero-epip'locele (*Med.*). A hernia containing small intestine and omentum.

enterog'enous cyanosis (*Med.*). A disorder characterised by chronic cyanosis and by the presence of methaemoglobin or sulphaemoglobin in the blood; due usually to taking drugs, especially aniline derivatives.

enterohepati'tis (*Vet.*). See **trichomoniasis.**

enteroki'nase (*Chem., Zool.*). A kinase which activates trypsinogen of the pancreatic juice to trypsin.

en'terolith (*Med.*). A concretion of organic matter and lime, bismuth, or magnesium salts, formed in the intestine.

en'teron (*Zool.*). The single body cavity of *Coelenterata*; it corresponds to the archenteron of a gastrula: in higher forms, the alimentary canal. See also **archenteron.**—*adj.* **enter'ic.**

Enteropneusta, —pnūs'ta (*Zool.*). See **Hemichorda.**

enteroproc'tia (*Surg.*). The condition in which an artificial anus is formed from intestine.

enteropto'sis (*Med.*). Glénard's disease; visceroptosis. Abnormally low position of the intestines in the abdominal cavity, as a result, partly, of weakness of the abdominal and pelvic muscles.

en'terospasm (*Med.*). Spasm of the muscle of the intestine.

enteros'tomy (*Surg.*). The surgical formation of an opening in the intestine, for the purpose of draining intestinal contents.

en'terosympathet'ic (*Zool.*). Said of that part of the autonomic nervous system which supplies the alimentary tract.

enterot'omy (*Surg.*). Incision of the intestinal wall.

enthal'py (*Phys.*). The heat content of a substance per unit mass.

entire (*Bot.*). Said of the margin of a flattened organ when it is continuous, being neither toothed nor lobed.

ento- (Greek *entos*, within). A prefix used in the construction of compound terms; e.g. *entobranchiate*, having internal gills.

entobron'chia (*Zool.*). In Birds, secondary bronchi leading to the air-sacs, being diverticula of the mesobronchium.

en'tochondros'teo'sis (*Zool.*). Ossification of cartilage commencing in the interior of the cartilage, and extending in all directions.

en'toderm (*Zool.*). See **endoderm.**

entogas'tric (*Zool.*). Within the stomach or enteron.

entoglos'sal (*Zool.*). Lying within the substance of the tongue: in some Fish, an anterior extension of the hyoid copula supporting the tongue.

entoglos'sum (*Zool.*). A structure lying within the tongue; as an anterior extension of the basihyal in some Fish.

entomog'enous (*Bot.*). Living on or in insects.

entomol'ogy. The branch of Zoology which deals with the study of insects.

entomoph'agous (*Zool.*). Feeding on insects.

en'tomophi'ly (*Bot.*). Pollination by insects.—*adj.* **entomophilous.**

Entomos'traca (*Zool.*). An obsolete group of *Crustacea* which comprised the four classes *Branchiopoda*, *Copepoda*, *Ostracoda*, and *Cirripedia* (qq v.) and was distinguished by small size, variable number of body somites, situation of the excretory glands in the second maxillary segment, the absence of a gastric mill, and the presence of a simple heart and a persistent nauplius eye.

entoplas'tron (*Zool.*). In *Chelonia*, one of the plates composing the plastron, lying between the hyoplastron and the epiplastron.

Entoproc'ta (*Zool.*). A class of *Polyzoa* in which the anus is inside the circlet of tentacles; mainly marine forms.

entopterygoid, —pter'i-goid (*Zool.*). In some Fish, a paired ventral bone of the skull, adjoining the palatine.

entoster'nite (*Zool.*). See **endosternite.**

entotur'binals (*Zool.*). The shorter inner series of ethmoturbinal plates in Mammals. Cf. *ectoturbinals.*

entotympan'ic (*Zool.*). In some Mammals, a cartilage bone which lies close to and supplements the tympanic bulla.

entova'rial (*Zool.*). Within the ovary.

entozo'ic (*Bot.*). Living inside an animal.

entozo'on (*Zool.*). An animal parasite living within the body of the host.—*adj.* **entozo'ic.**

entrance lock (*Hyd. Eng.*). A lock through which vessels must pass in entering or leaving a dock, on account of difference in level between the water impounded in the dock and the external water.

entresol, en'ter-sol *or* ahn^{g}tr-sol (*Build.*). A *mezzanine* (q.v.) floor usually between the ground and first floors.

entro'pion, entro'pium (*Med.*). Rolling in or inversion of the eyelid.

en'tropy (*Phys.*). A thermodynamic conception that, if a substance undergoing a reversible change takes in a quantity of heat dQ at temperature T, its *entropy* is increased by $\frac{dQ}{T}$.

Entz booster (*Elec. Eng.*). An automatic battery booster in which the excitation is controlled automatically by a carbon rheostat, according to the load requirements.

enucleation (*Bot., Zool.*). The removal of the nucleus from a cell, by manipulation.—*adj.* and *v.* **enucleate.**

enucleation (*Surg.*). Surgical removal of any tumour or globular swelling so that it comes out whole.

enure'sis (*Med.*). Involuntary micturition.

envelope (*Aero.*). The gas-bag of a balloon, or of a non-rigid or semi-rigid airship.

envelope (*Elec. Comm.*). The variation in the amplitude of an alternating current in a communication channel, apart from its detailed waveform.

envelope (*Paper*). A covering (usually of paper folded and gummed) for a letter, etc. Envelope blanks are cut out by dies and folded by hand or by machine. Common sizes are: *commercial*, 6¼ × 3½ in.; *court*, 5½ × 4¼ in.; *foolscap*, 8¾ × 3¾ in.

envelope (*Radio*). The curve formed by joining the successive peaks of a modulated wave. In the case of perfect modulation, it is the same shape as the modulating signal.

envelope (*Thermionics*). The outer containing-vessel of a discharge tube.

envelope delay (*Elec. Comm.*). The time taken for the envelope of a signal to travel through a transmission system, without reference to the time taken by the individual components. —(*Radio*) See **group delay.**

envelope distortion (*Elec. Comm.*). The change in shape of the envelope of a transmitted signal as it passes through a transmission system, due to the differential time-delay of its component frequencies.

envelope velocity (*Radio*). See **group velocity.**

Enville Marls (*Geol.*). A thick group of red marls occurring in the English Midlands, and usually referred to the Permian System. By some authorities some underlying breccias and conglomerates are included in an *Enville Group.*

environment (*Biol.*). The sum total of the external and internal conditions which influence existence, growth, development, and activity.

en'zymes (*Chem.*). Catalysts produced by living cells. They are proteins, often conjugated and consisting of a simple protein (the carrier) joined to a relatively simple substance (the active group) which may be a metal (e.g. copper), an organo-metallic compound (e.g. haematin) or a purely organic compound (e.g. a nucleotide). They are specific, each enzyme catalysing only one reaction or type of reaction (e.g. esterase effects the hydrolysis only of esters, maltase only of α-glucosides, pepsin only of proteins). A few occur in digestive juices, etc., but most are intracellular.

E'ocene System (*Geol.*). The oldest of the Tertiary systems occurring in Britain, comprising a variable series of marine sands and clays in the eastern parts of the London Basin, but passing westwards into lagoonal, deltaic, and fluviatile deposits. The system includes the Thanet Sands, Woolwich and Reading Beds, Blackheath and Oldhaven Beds, London Clay, Claygate Beds, Bagshot Beds, and, in the Hampshire Basin, the overlying Bracklesham Beds.

E'ocreta'ceous (*Geol.*). A great thickness of unfossiliferous slates, with intercalated marine limestones, equivalent to the Trinity Series and older rocks of the Comanchean, occurring in the Mexican states of Vera Cruz and Puebla.

e'olith (*Geol.*). Literally 'dawn stone'; a term applied to the oldest-known stone implements used by early man which occur in the Stone Bed at the base of the Crag in E. Anglia and in high-level gravel deposits elsewhere. The workmanship is crude, and some authorities question their human origin, thinking it likely that the chipping has been produced by natural causes.

Eolith'ic Period (*Geol.*). The time of the primitive men who manufactured and used eoliths: the dawn of the Stone Age. Cf. *Palaeolithic Period, Neolithic Period.*

e'osin (*Chem.*). $C_{20}H_6Br_4O_5K_2$, the potassium salt of tetrabromo-fluorescein, a beautiful red dye.

eosin'ophil (*Histol.*). Any cell the protoplasmic granules of which readily stain with the dye eosin; especially a granular white cell in the blood, and one of the cells present in the pituitary gland.

eosinophil'ia (*Med.*). A pathological excess of eosinophils in the blood.

Eozo'ic (*Geol.*). A term suggested for the Pre-Cambrian System, but little used. It means the 'dawn of life,' and is comparable with *Palaeozoic, Mesozoic,* and *Cainozoic.* See also **Protozoic.**

eozo'on (*Geol.*). A banded structure found originally in certain Canadian Pre-Cambrian rocks and thought to be of organic origin; now known to be inorganic and a product of dedolomitisation, consisting of alternating bands of calcite and serpentine replacing forsterite.

epac'me (*Zool.*). The period in the history of an individual or a race when vigour is increasing: the nepionic and neanic periods in the life-history of an individual: the phylonepionic and phyloneanic periods in the history of a race. Cf. *paracme.*

ep'apoph'ysis (*Zool.*). A median process of a vertebral neural arch.

eparte'rial (*Anat.*). Situated over an artery. EPARTERIAL BRONCHUS, the first division of the right bronchus, which passes to the upper lobe of the right lung.

ep'aulettes (*Zool.*). In *Scyphozoa,* projections of the outer sides of the oral arms: in late *Echinoplutei,* four ciliated projections at the base of the postoral and posterodorsal arms.

epax'ial (*Zool.*). Above the axis, especially above the vertebral column, therefore, dorsal; as the upper of two blocks into which the myotomes of fish embryos become divided. Cf. *hypaxial.*

epaxon'ic (*Zool.*). See **epaxial.**

epeirogen'ic earth movements (*Geol.*). Continent-building movements, as distinct from mountain-building movements, involving the coastal plain and just-submerged 'continental platform' of the great land areas. Such movements include gentle uplift or depression, with gentle folding and the development of normal tensional faults.

epeirogenic folds (*Geol.*). Folds of continent-building type, as distinct from those of mountain-building type; usually anticlines, synclines, or monoclines of small amplitude, associated with normal faults in the coastal plains of the continental areas of the earth.

epenceph'alon (*Zool.*). See **cerebellum.**

epen'dyma (*Zool.*). In Vertebrates, the layer of columnar ciliated epithelium, backed by neuroglia, which lines the central canal of the spinal cord and the ventricles of the brain.—*adj.* **epen'dymal.**

ependymi'tis (*Med.*). Inflammation of the ependyma.

ependymo'ma (*Med.*). A tumour within the brain arising in or near the ventricles and containing ependyma-like cells.

ep'harmon'ic convergence (*Bot.*). A likeness in external appearance and in structure between plants which are not closely related in their systematic positions.

ephe'bic (*Zool.*). Pertaining to the period of maximum strength of an individual: adult: mature.

eph'edrine (*Chem.*). $C_{10}H_{15}ON$, an alkaloid isolated from *Ephedra vulgaris*; it is a colourless crystalline substance, m.p. 40° C., b.p. 225° C., soluble in water, alcohol, and ether. Iso-ephedrine has the constitutional formula: $HO{\cdot}CH(C_6H_5){\cdot}CH(CH_3){\cdot}NH(CH_3)$, and is therefore a derivative of an aliphatic amine.

ephemeral (*Bot.*) A plant which completes its whole life-history in a very short time.

ephemeral movement (*Bot.*). A movement of a plant member which cannot be repeated; as the opening of a bud.

ephem'eris (*Astron.*). A compilation, published at regular intervals, in which are tabulated the daily positions of the sun, moon, planets, and certain stars, with other data necessary for the navigator and observing astronomer.

Ephemerop'tera (*Zool.*). An order of *Exopterygota,* in which the adults have large membranous forewings and reduced hind wings, and the abdomen bears two or three long caudal filaments; the adult life is very short and the mouthparts are reduced and functionless; the immature stages are active aquatic forms. May-flies.

ephip'pium (*Zool.*). In *Crustacea*, the thickened cuticle of the carapace which separates from the rest at ecdysis, or in some cases (*Cladocera*) is thrown off as an egg-case: in *Vertebrates*, the pituitary fossa of the sphenoid.

epi- (Greek *epi*, upon). A prefix used in the construction of compound terms; e.g. *epicerebral*, above or upon the brain.

epi- (*Chem.*). (1) Containing a condensed double aromatic nucleus substituted in the 1,6 positions.—(2) Containing an intramolecular bridge.

epian'drium (*Zool.*). In *Arachnida*, a plate surrounding the male genital aperture.

epiascidium, —sid'i-um (*Bot.*). A funnel-shaped abnormal leaf, with the upper surface of the leaf lining the inside of the funnel.

ep'ibasal half (*Bot.*). The anterior portion of an embryo.

epiben'thos (*Ocean*.). Animals and plants found living below low-tide mark and above the hundred-fathoms line.

ep'iblast (*Bot.*). A small outgrowth, of obscure nature, from the embryo of a grass.

epiblast (*Zool.*). The outer germinal layer in the embryo of a metazoan animal, which gives rise to the ectoderm. Cf. *Hypoblast.*

epibol'ic gastrulation (*Zool.*). Gastrulation by overgrowth.

epib'oly (*Zool.*). Overgrowth; growth of one part or layer so as to cover another part or layer — *adj.* **epibol'ic.**

epibran'chial (*Zool.*). An element of a branchial arch, lying between the pharyngobranchial and the ceratobranchial.

epica'lyx (*Bot.*). (1) A group of bracts placed close underneath the calyx of a flower.—(2) A series of small sepal-like structures, alternating with the sepals, and growing out from their under sides.

epican'thus (*Anat.*). A semilunar fold of skin above, and sometimes covering, the inner angle of the eye; a normal feature of the Mongolian races.

epicar'dium (*Zool.*). In Vertebrates, the serous membrane covering the heart: in *Urochorda*, diverticula of the pharynx, which grow out and surround the digestive viscera like a perivisceral cavity.—*adj.* **epicardial.**

ep'icarp (*Bot.*). The superficial layer of the pericarp, especially when it can be stripped off as a skin.

epicen'tral (*Zool.*). Arising from, or attached to, the vertebral centra; as certain small membrane bones lying in the myosepta in bony Fish.

ep'icentre. That point on the surface of the earth lying immediately above the focus of an earthquake.

ep'ichlorhy'drin (*Chem.*). The hydrochloric ester of glycide alcohol, a liquid of chloroform odour, b.p. 117° C.

epichor'dal (*Zool.*). Above or upon the notochord; said of the upper lobe of a caudal fin.

ep'icoele, —sēl (*Zool.*). In *Craniata*, the cerebellar ventricle or cavity of the cerebellum.

epicon'dylar (*Zool.*). Above the condyle; said of a foramen of the humerus. See **ectepicondylar, entepicondylar.**

epicon'dyle (*Zool.*). The proximal part of the condyle of the humerus or femur.

epicor'acoid (*Zool.*). In *Vertebrata*, a bony or cartilaginous element uniting the ventral ends of the coracoid and the precoracoid.

epicor'mic (*Bot.*). Said of a branch formed from a dormant bud on the trunk or limb of a tree, which becomes active owing to some mutilation of the tree or other change in the conditions surrounding the tree.

epicot'yl (*Bot.*). The part of the axis of a seedling between the cotyledons and the first leaf or whorl of leaves.

epicotyl (*Zool.*). In Birds, the axis of a down-feather.

epicra'nium (*Zool.*). In Insects, the upper part of the head above and behind the frons.

epicrit'ic (*Zool.*). Pertaining to sensitivity to slight tactile stimuli.

epictesis, ep'i-te'sis (*Bot.*). That property of the living cell which enables it to accumulate soluble salts in a concentration higher than that existing in the solution from which they are diffusing into the cell.

ep'icycle (*Astron.*). The term applied in Ptolemaic or geocentric astronomy to a small circle described uniformly by the sun, moon, or planet, the centre of that circle itself describing uniformly a larger circle (the *deferent*), concentric with the earth.

epicy'clic gear (*Eng.*). A system of gears, in which one or more wheels travel round the outside or inside of another wheel whose axis is fixed. See **epicycloid.**

epicyclic train (*Eng*.). A system of epicyclic gears, in which at least one wheel axis itself revolves about another fixed axis; used for giving a large reduction ratio in small compass, and for the gear-boxes of some motor-cars.

epicycloid (*Eng.*). The path traced out by a point on the circumference of a given circle, as it rolls round the circumference of another circle.

ep'icyte (*Zool.*). The cuticular layer of the ectoplasm in some *Protozoa.*

ep'idemes, —dēmz (*Zool*.). In flying Insects, small sclerites associated with the articulation of the wings.

epidem'ic (*Med.*). An outbreak of an infectious disease spreading widely among people at the same time in any region. Also used as *adj.*

epidemic encephalitis (*Med.*). Sleepy sickness, Von Economo's disease. An acute inflammation of the brain with a filterable virus; characterised by fever and disturbances of sleep, and followed by various persisting forms of nervous disorder (e.g. Parkinsonism), or by changes in character.

epide'miol'ogy (*Med.*). That branch of medical science concerned with the study of epidemics.—*n.* **epidemiol'ogist.**

epider'mal (*Bot., Zool.*). Relating to the epidermis.

epider'mis (*Bot.*). A sheath of closely united cells forming a layer over the surface of the leaves and young stems of a plant. The layer is seldom more than one cell in thickness, and is continuous except where it is perforated by stomata.

epidermis (*Zool.*). Those layers of the integument which are of ectodermal origin: the epithelium covering the body.

epider'moid cyst (*Med.*). A wen. A cyst lined with epithelium, occurring in the scalp.

epidermol'ysis bullo'sa (*Med*.). A congenital defect of the skin, in which the slightest blow produces a blister.

epidi'ascope (*Light*). A projection lantern which may be used for transparencies or for opaque objects. See **episcope.**

ep'ididymec'tomy (*Surg.*). Operative removal of the epididymis.

epidid'ymis (*Zool.*). In the male of *Selachii*, some *Amphibia* and *Amniota*, the greatly coiled anterior end of the Wolffian duct, which serves as an outlet for the spermatozoa.

epididymi'tis (*Med.*). Inflammation of the epididymis.

epidid'ymo-orchi'tis (*Med.*). Inflammation of the epididymis and the testes.

epididymot'omy (*Surg.*). Incision into the epididymis.

epidi'orite (*Geol.*). A term for altered gabbroic and doleritic rocks in which the original pyroxene has been replaced by fibrous amphibole. Other mineral changes have also taken place, and the rock may be regarded as a first step in the conversion, by dynamothermal metamorphism, of a basic igneous rock into a green schist.

epid'osites (*Geol.*). See **epidotisation.**

ep'idote (*Min.*). A rare accessory, but common secondary, mineral in igneous rocks, covering a wide range of composition. Crystallises in the monoclinic system, in lustrous green-black to yellowish-green crystals. In composition closely related to clinozoisite but contains iron, thus being hydrated silicate of calcium, aluminium, and iron. Also called PISTACITE.

epidotisation (*Geol.*). A process of alteration, especially of basic igneous rocks in which the feldspar is albitised, with the separation of epidote and zoisite, representing the anorthite molecule of the original plagioclase. Pressure seems to be the dominant factor in this change.

epigam'ic (*Zool.*). Attractive to the opposite sex; as *epigamic colours.*

epig'amous (*Zool.*). Said of the period of acquisition of the heteronereid condition in *Polychaeta.*

epigas'tric (*Zool.*). Above or in front of the stomach; said of a vein in Birds, which represents the anterior part of the anterior abdominal vein of lower Vertebrates.

epigas'trium (*Zool.*). In *Insecta*, the sternites of the mesothorax and metathorax —*adj.* **epigastric.**

epigas'troid (*Zool*). See **epipubis.**

epige'al, epigae'ous (*Bot.*). (1) Germinating with the cotyledons appearing above the surface of the ground.—(2) Living on the surface of the soil.

epige'an (*Bot.*). Occurring on the ground.

epige'ic (*Bot.*). Said of a plant having stolons on the surface of the soil.

epigen'esis (*Biol.*). The theory, now universally accepted, that the development of an embryo consists of the gradual production and organisation of parts, as opposed to the theory of preformation, which supposed that the future animal or plant was already present complete, although in miniature, in the germ.

epigenet'ic (*Min.*) See **syngenetic.**

epiglot'tidec'tomy (*Surg.*). Excision of the epiglottis.

epiglot'tis (*Zool.*). In *Polyzoa*, the epistome: in *Insecta*, the epipharynx: in *Mammalia*, a cartilaginous flap which protects the glottis.

epigna'thous (*Zool.*). Having the upper jaw longer than the lower jaw, as in Sperm Whales.

epigna'thus (*Med.*). A foetal monstrosity in which the deformed remnants of one twin project through the mouth of the more developed twin.

epigy'nous (*Bot.*). Having the calyx, corolla, and stamens inserted on the top of the inferior ovary.

epigy'num (*Zool.*). In *Arachnida*, a plate surrounding the female genital aperture.

epihy'al (*Zool.*). An element of the hyoid arch, corresponding to the epibranchials of the branchial arches.

epila'brum (*Zool.*). In *Myriapoda*, a process at the side of the labrum.

epila'tion (*Med.*). Removal of hair by the roots.

ep'ilepsy (*Med.*). A general term for a sudden disturbance of cerebral function accompanied by loss of consciousness, with or without convulsion. See **grand mal, petit mal.**

epilep'tic (*Med.*). Pertaining to or afflicted with epilepsy: one who suffers from epilepsy.

epilep'tiform (*Med.*). Resembling epilepsy.

epilep'togen'ic (*Med.*). Exciting an attack of epilepsy.

epilith'ic (*Bot.*). Growing on the surface of rock.

epilit'toral zone (*Bot.*). A zone on the coast bordering on the ground occupied by plants which cannot withstand exposure to salt.

epiloi'a (*Med.*). A condition characterised by feeble-mindedness, epileptic fits, sclerosis of the brain, and tumours in the skin and viscera; due to a defect in development. See also **tuberose sclerosis.**

epimenorrhoe'a (*Med.*). Too frequent occurrence of menstrual periods.

ep'imere (*Zool.*). In a developing Vertebrate, the dorsal muscle-plate zone of the mesothelial wall.

epim'erite (*Zool.*). The region of the body of an Arthropod between the base of an appendage and the pleuron: the pleuron: in some *Amphipoda*, a wide lamellar expansion of the coxopodite of a thoracic leg: in some *Gregarinidea*, part of the body forming an organ of attachment.

epim'eron (*Zool.*). The posterior of two sclerites, typically composing the pleuron in Insects. See also **epimerite.**

ep'imorph (*Min.*). A natural cast of a crystal.

epimor'pha (*Zool.*). Larvae which possess the full number of segments at the time of hatching.

epimy'sium (*Zool.*). The investing connective-tissue coat of a muscle.

ep'inas'ty (*Bot*). (1) The occurrence of stronger growth on the upper than on the under side of a plant member.—(2) Excentric thickening of a more or less horizontal branch or root.

epineph'rine (*Chem.*). *Adrenaline* (q.v.).

epineph'ros (*Zool.*). See **suprarenal body.**

epineu'ral (*Zool.*). In *Echinodermata*, lying above the radial nerve: in *Vertebrata*, lying above or arising from the neural arch of a vertebra.

epineu'rium (*Zool.*). The connective tissue which invests a nerve trunk, uniting the different funiculi and joining the nerve to the surrounding and related structures.

epino'tum (*Zool.*). See **propodeon.**

epiop'ticon (*Zool.*). In Insects, the external medullary mass or middle zone of the optic lobe of the brain.

epiot'ic (*Zool.*). A bone of the auditory capsule of the Vertebrate skull, situated above and between the pro-otic and the opisthotic.

ep'iparasite (*Zool*). See **ectoparasite.**

epipet'alous (*Bot.*). Arising from the upper surface of a petal.

ep'ipharynge'al bone (*Zool.*). One of the expanded upper elements of the first four gill-arches, in Fish with a bony skeleton.

ep'iphar'ynx (*Zool.*). In *Insecta*, the membranous roof of the mouth which in some forms is produced into a chitinised median fold, and in *Diptera* is associated with the labrum, to form a piercing organ: in *Acarina*, a forward projection of the anterior face of the pharynx.—*adj.* **epipharyngeal.**

ep'iphloeodal, ep'iphloeodic, —flē'dal, —flē'dik (*Bot.*). Growing on the surface of bark.

epiph'ora (*Med.*). An overflow of the lacrimal secretion, due to obstruction of the channels which normally drain it.

ep'iphragm, —fram (*Zool.*). In *Gastropoda*, a plate of mucus and lime salts, with which the aperture of the shell is sealed during periods of dormancy.

ep'iphyl'lous (*Bot.*). Growing upon, or attached to, the upper surface of a leaf: sometimes, growing on any part of a leaf.

epiph'ysis *or* —fi'zis (*Bot.*). An upgrowth around the hilum of a seed.

epiphysis (*Zool.*). A separate terminal ossification of some bones, which only becomes united with the main bone at the attainment of maturity: the pineal body: in *Echinoidea*, one of the ossicles of Aristotle's lantern.—*adj.* **epiphys'ial.**

epiphysis cerebri (*Zool.*). See **pineal gland.**

epiph'ysi'tis (*Med.*). Inflammation of the epiphysis of a bone.

ep'iphyte (*Bot.*). A plant which grows attached to the stems of leaves of another plant, but is not a parasite, that is, it takes no material from the plant to which it is attached.—*adj.* **epiphyt'ic.**

epiphy′tism (*Ecol.*). A form of *commensalism* (q.v.) in which a sessile animal is associated with a larger motile animal, with benefit to the former but not to the latter; e.g. *Temnocephala* on various fresh-water *Crustacea*.

epiplank′ton (*Ocean.*). Plankton found in depths of less than a hundred fathoms.

ep′iplasm (*Bot.*). Residual cytoplasm left in the ascus after the ascospores have been delimited; it may play a part in the subsequent nutrition of the developing spores.

epiplas′tron (*Zool.*). In *Chelonia*, one of the plates composing the plastron, lying anterior to the entoplastron.

epipleu′ra (*Zool.*). In *Coleoptera*, the reflexed sides of the elytra: in *Aves*, the uncinate process: in bony Fish, upper ribs formed from membrane bone: in *Cephalochorda*, horizontal shelves of membrane arising from the inner sides of the metapleural folds, and forming the floor of the atrial cavity.

epip′locele (*Med.*). A hernia containing omentum (the *epiploon*) only.

epiplo′ic foramen (*Zool.*). See **Winslow's foramen.**

epiploi′tis (*Med.*). Inflammation of the omentum.

epiplo′on (*Zool.*). In Mammals, a double fold of serous membrane connecting the colon and the stomach (the great omentum): in Insects, the fat-body.—*adj.* **epiplo′ic.**

epipo′dia (*Zool.*). In some *Gastropoda*, paired lateral lobes of the foot.—*adj.* **epipo′dial.**

epip′odite (*Zool.*). In *Crustacea*, a process arising from the protopodite.

ep′ipreco′racoid (*Zool.*). In some *Amphibia* and *Reptilia*, one of a pair of small ventral cartilages of the pectoral girdle.

epipteric, ep-i-ter′ik (*Zool.*). Wing-shaped: situated above a wing.

epipterous, ep-i-ter′us (*Bot.*). Having a wing at the apex

epipterygoid, ep-i-ter′i-goid (*Zool.*). In some Reptiles, a cartilage bone lying between the pterygoid and the parietal; formed by the ossification of the ascending process of the quadrate.

epipu′bic (*Zool.*). In front of or above the pubis: pertaining to the epipubis.

epipu′bis (*Zool.*). In some *Reptilia* and *Amphibia*, the median cartilage of the pelvic symphysis, in front of the pubes, or an ossification arising from this cartilage.—*adj.* **epipu′bic.**

episcle′ra (*Anat.*). The connective tissue between the conjunctiva and the sclera.

episcleritis (*Med.*). Inflammation of the episclera, sometimes involving the sclera.

ep′iscope (*Light*). A projection lantern which is used for throwing on a screen an enlarged image of a brilliantly illuminated opaque object.

episemat′ic (*Zool.*). Serving for recognition; as *episematic colours*.

episep′alous (*Bot.*). (1) Borne on the sepals.—(2) Placed opposite to the sepals.

episi′osteno′sis (*Med.*). Narrowing of the vulvar orifice.

episiot′omy (*Surg.*). Cutting the vulvar orifice to facilitate delivery of the foetus.

epispa′dias (*Med.*). Congenital defect in the anterior or dorsal wall of the urethra, commoner in the male than in the female.

epispas′tic (*Med.*). Producing a blister: an agent which does this.

ep′isperm (*Bot.*). The outer part of the seed coat.

ep′ispore (*Bot.*). The outermost layer of a spore wall, often consisting of a deposit forming ridges, spines, or other irregularities of the surface.

epistat′ic (*Gen.*). Said of a character which is dominant to another to which it is not the allelomorph.

epistax′is (*Med.*). Bleeding from the nose.

epister′num (*Zool.*). In Insects, the anterior of two sclerites typically composing the pleuron: in *Amphibia*, the interclavicle; an anterior element of the sternum.

epistil′bite (*Min.*). A colourless zeolite, chemically similar to heulandite; hydrated silicate of calcium and aluminium, crystallising in the monoclinic system.

ep′istome (*Zool.*). In *Polyzoa* and *Phoronidea*, a ridge overhanging the mouth: in decapod *Crustacea*, the sternal region of the body in front of the mouth: in certain *Coleoptera*, the reduced fronto-clypeal region: in *Diptera*, the distal border of the face.

ep′istrophe (*Bot.*). The position of chloroplasts in diffuse light, on the periclinal walls of the palisade cells.

epistro′pheus (*Zool.*). The axis Vertebra.

ep′istyle (*Build.*). See **architrave.**

epithal′amus (*Zool.*). In the vertebrate brain, a dorsal zone of the thalamencephalon.

epithal′line (*Bot.*). Growing on a thallus.

epithal′lus (*Bot.*). The upper layer of fungal hyphae in a lichen thallus.

epithe′ca (*Bot*). The older of the two valves forming the wall of a cell of a diatom.

epithe′cium (*Bot.*). A thin coloured layer over the asci in an apothecium, particularly in lichens, formed from the tips of the paraphyses.

epithe′lial layer (*Bot.*). A layer of elongated cells set end on to the endosperm in a grain, forming the boundary of the scutellum.

epithe′lioid (*Anat*). Resembling epithelium.

epithelio′ma (*Med.*). A malignant growth derived from epithelium.

epithelioma contagiosa (*Vet*). See **fowl pox.**

epithe′lium (*Zool.*). A form of tissue characterised by the arrangement of the cells as an expansion covering a free surface, or as solid masses, by the presence of a basement membrane underlying the lowermost layer of cells, and by the small amount of intercellular matrix: the secretory substance of glands, the tissues lining the alimentary canal and blood-vessels, etc.—*adjs.* **epithe′lial, epithe′liomorph.**

ep′ithem (*Bot.*). A group of cells occurring in the mesophyll of a leaf and exuding water.

epithem hydathode (*Bot.*). A hydathode which is directly connected with the vascular system of the leaf.

epito′kous (*Zool.*). Said of the heteronereid stage in *Polychaeta*.

epitrich′ium (*Zool.*). A superficial layer of the epidermis in Mammals, which consists of greatly swollen cells and is found on parts of the body devoid of hair.—*adj.* **epitrich′ial.**

epitroch′lea (*Anat.*). The inner condyle, or bony eminence, on the inner aspect of the lower end of the humerus.

epitro′phic (*Bot.*). (1) Having buds on the upper side.—(2) Growing more on the upper than on the under side.

epituberculo′sis (*Med.*). Congestion and inflammation of the area surrounding a tuberculous focus, especially in the lung.

epixylous, —zi′lus (*Bot.*). Growing on wood.

epizo′ic (*Bot.*). (1) Growing on a living animal.—(2) Having the seeds or fruits dispersed by animals.

epizo′on (*Zool.*). An animal which lives on the skin of some other animal; it may be an *ecto-parasite* or a *commensal*.—*adj.* **epizoan.**

epizootic, —zō-ot′ik (*Vet., Zool.*). Pertaining to an epizoon: appearing as an epidemic among animals: a disease occurring epidemically among animals.

epony′chium (*Zool.*). In higher Mammals, the narrow band of cuticle which overlies the base of the nail.

epoöphoron, ep-ō-of′— (*Zool*). A rudimentary structure in the ovary of Vertebrates, homologous with the epididymis of the male.

ep′somite or **Epsom salts** (*Min.*). Hydrated magnesium sulphate, $MgSO_4 \cdot 7H_2O$; occurring in colourless orthorhombic prismatic crystals, botryoidal masses, or incrustations in gypsum mines and limestone caverns; common in solution in mineral waters. The chief source for commercial Epsom salts are the salt beds of Stassfurt.

Epstein hysteresis tester (*Elec. Eng*). An apparatus for measuring the hysteresis and eddy current losses in a sample of sheet-iron. Strips cut from the sheet are assembled in the form of a square or rectangular magnetic circuit, upon which windings are placed, and the losses are measured by means of a wattmeter. The assembly is sometimes called an EPSTEIN SQUARE.

epu′lis (*Med.*). A tumour, innocent or malignant, of the gums, growing from the periosteum of the jaw.

equal (*Bot.*). Not lop-sided.

equal-area criterion (*Elec. Eng.*). A term used in connexion with the stability of electric power systems. The stability limit occurs when two areas on the power-angle diagram, governed by the particular load conditions obtaining, are equal.

equal dichotomy (*Bot.*). Dichotomy giving two branches of the same size.

equal falling particles (*Mining*). Particles possessing equal *terminal velocities* (q.v.): the underflow, oversize product of a classifier.

equal-tempered scale (*Acous.*). See **tempered scale.**

equalisation of boundaries (*Surv.*). A method of area computation applied to plans of areas with irregular boundaries; the latter are replaced by straight *give-and-take lines* (q.v.), the area being then computed as a number of triangles.

equaliser network (*Elec. Comm.*). The same as *equalising network.*

equaliser (or **balancing**) **ring** (*Elec. Eng*). A conductor on the armature of an electrical machine which serves to connect two points that are normally at the same potential.

equaliser switch (*Elec. Eng.*). A switch for connecting the armature end of the series field winding of a compound-wound generator to an equalising bar.

equalising bar (*Elec. Eng.*). A bus-bar connecting the armature ends of the series field windings of a number of compound-wound generators operating in parallel; the series field windings are thus put in parallel and stable operation is ensured.

equalising bed (*Civ. Eng.*). The bed of fine ballast or concrete laid immediately underneath a pipe-line, e.g. in a trench, in cases where the bottom of the excavation is sound but uneven (as in rock, hard chalk, etc.). The pipe must be sufficiently cradled in the bed material to prevent any rolling or lateral movement.

equalising current (*Elec. Eng.*). The current flowing in an equaliser ring or equalising bar; it performs the necessary equalising action.

equalising network (*Elec. Comm.*). (1) A network, incorporating any inductance, capacity, or resistance, which is deliberately introduced into a transmission circuit to alter the response of the circuit in a desired way; particularly to equalise a response over a frequency range.—(2) A similar arrangement incorporated in the coupling between valves in an amplifier.

equalling (*Bot.*). The condition when the tips of several organs, or of organs of diverse kinds, are at the same level, but the lengths of the several organs differ.

equation (*Chem.*). See **chemical equation.**

equation division (*Zool.*). Division of chromosomes which results in the production of daughter chromosomes of equal size, form, and potency.

equation of maximum work (*Chem.*). See **Gibbs-Helmholtz equation.**

equation of state (*Chem.*). An equation relating the volume, pressure, and temperature of a given system; e.g. van der Waals' equation.

equation of time (*Astron.*). The difference between the right ascensions of the true and mean sun, and hence the difference between apparent and mean time. In the sense mean time minus apparent time, it has a maximum positive value of nearly 14½ minutes in February, and a negative maximum of nearly 16¼ minutes in November, and vanishes four times a year.

equation, personal. A term applied, in various sciences, to a systematic error due, as shown by analysis of a long series of similar observations, to an observer's individual peculiarity.

equator. See **celestial—** **terrestrial—**

equatorial (*Astron.*). The name given to an astronomical telescope which is so mounted that it revolves about an axis parallel to the earth's axis, and, when set on a star, will keep that star in the field of view continuously, without adjustment. It has two graduated circles reading *Right Ascension* and *Declination* respectively.

equatorial (*Cyt*). Situated or taking place in the equatorial plane; as the *equatorial furrow* which precedes division of an ovum into upper and lower blastomeres, and the *equatorial plate*, which, during mitosis, is the assembly of chromosomes on the spindle in the *equatorial plane.*

equatorial acceleration of the sun (*Astron.*). An effect, due to the non-solid constitution of the sun, by which the rate of rotation of the surface at the solar equator is more rapid than that in higher latitudes. It was deduced from the periods of rotation of sun spots.

equatorial radius of the earth. See under **Earth.**

equi- (Latin *aequus*, equal). A prefix used in the construction of compound terms; e.g. *equivalve* (q.v.).

equiangular spiral (*Geom*). A spiral in which the angle between the tangent and the radius vector is constant.

equi-axed crystals (*Met.*). Polyhedral crystals formed by spontaneous crystallisation in the interior of a mass of metal in a mould. Distinguished from *columnar crystals* and *chill crystals.*

equilabration tissues (*Zool.*). Tissues that record the position of the body, or part of it, in relation to gravity or some other constant factor.

equilateral arch (*Build.*). An arch in which the two springing points and the crown of the intrados form an equilateral triangle.

equilateral roof (*Build.*). A pitched roof having rafters of a length equal to the span.

equilibration (*Eng.*). The production of balance or equilibrium; as in the provision of balance weights for a lift or cage.

equilibration tissue (*Zool.*). Sensory epithelium connected with the perception of balance and position, such as that lining the semicircular canals of the ear.

equilibrium (*Chem.*). The state reached in a reversible reaction when the reaction velocities in the two opposing directions are equal, so that the system has no further tendency to change.

equilibrium (*Mech.*). The state of a body which is at rest or is moving with uniform velocity. A body on which forces are acting can be in equilibrium only if the resultant of the forces is zero.—NEUTRAL EQUILIBRIUM, the state of equilibrium of a body when a slight displacement does not alter its potential energy.—STABLE EQUILIBRIUM, the state of equilibrium of a body when any slight displacement increases its potential energy. A body in stable equilibrium will return to its original position after a slight displacement. —UNSTABLE EQUILIBRIUM, the state of equilibrium of a body when any slight displacement decreases its potential energy. The instability is shown by the fact that, having been slightly displaced, the body moves farther away from its position of equilibrium.

equilibrium constant (*Chem.*). The ratio, at equilibrium, of the product of the active masses of the molecules on one side of the equation representing a reversible reaction to that of the active masses of the molecules on the other side.

equilibrium diagram (*Met., Min.*). See **constitutional diagram.**

equilibrium of floating bodies. For a body which floats, partly immersed in a fluid, the weight of the body is equal to the weight of fluid which it displaces. Therefore the ratio of the volume of the body to the volume immersed equals the ratio of the density of the fluid to that of the body. See **Archimedes' principle.**

equilibrium ring (*Eng.*). A ring placed in the steam chest of large steam-engines, between the back of the slide-valve and the cover. By connecting the enclosed space to the exhaust, the force on the valve and the corresponding driving effort are much reduced.

equilibrium slide-valve (*Eng.*). A large slide-valve balanced by the use of an *equilibrium ring* (q.v.).

equinoctial (*Bot.*). Said of plants bearing flowers which open and close at definite times.

equinoctial points (*Astron.*). The two points, diametrically opposite each other, in which the celestial equator is cut by the ecliptic; called respectively the *First Point of Aries* and the *First Point of Libra*, from the signs of the Zodiac of which they are the beginning.

equinox (*Astron.*). The instant, occurring twice in each tropical year, at which the sun in its apparent annual motion crosses the celestial equator; so called because the lengths of the day and night are then equal. The calendar dates of the spring equinox and autumn equinox are respectively March 21 and September 23.

equipartition of energy (*Chem.*). See **principle of the equipartition of energy.**

equip'otent (*Zool.*). See **totipotent.**

equipotential cathode (*Thermionics*). An emitting cathode whose surface is all at the same potential, the heating current being carried in a separate heater coil in close proximity. Also called INDIRECTLY HEATED CATHODE, INDEPENDENTLY HEATED CATHODE.

equipotential surface (*Elec. Eng.*). A surface upon which there is no potential difference between any two points.

eq'uitant (*Bot.*). A term applied to the condition when a plant member folded inwards about its midrib covers the edges of another similarly folded, that covers a third, and so on; used chiefly of leaves with their bases so folded.—(*Zool.*) In spiral shells (as of *Foraminifera* or *Gastropoda*), having the whorls so arranged that each one overlaps the previous one at the sides and so hides it.

equi-tempered scale (*Acous.*). See **tempered scale.**

equivalence, coefficient of (*Met.*). A factor used in converting amounts of aluminium, iron, and manganese into equivalent amounts of zinc, in relation to their effect on the constitution of brass.

equivalence, photochemical (*Chem.*). See **Einstein's law of photochemical equivalence.**

equivalent (*Chem.*). See **equivalent weight.**

equivalent circuit (*Elec. Eng.*). An electric circuit, made up of resistances, inductances, and condensers, which behaves, so far as the current and voltage at its terminals are concerned, exactly as some other circuit or piece of apparatus; e.g. a transformer may be represented by an arrangement of resistances and inductances.

equivalent conductivity (*Chem.*). The electrical conductivity of one gram-equivalent of a substance in solution.

equivalent height of antenna (*Radio*). The height of a perfect antenna, erected over a perfectly conducting ground, which, when carrying a uniformly distributed current equal to the maximum current in the actual antenna, radiates the same amount of power.

equivalent lens (*Light*). A simple lens which, substituted for a system of lenses, would give an image of the same size and in the same position.

equivalent points of a lens (*Light*). The principal points of a lens that is used with the same medium on both sides. See **cardinal points of a lens.**

equivalent proportions (*Chem.*). See **law of equivalent** (or **reciprocal**) **proportions.**

equivalent reactance (*Elec. Eng.*). The value which the reactance of an equivalent circuit must have in order that it shall represent the system of magnetic linkages present in the actual circuit.

equivalent resistance (*Elec. Eng.*). The value which the resistance of an equivalent circuit shall have in order that the loss in it shall represent the total loss occurring in the actual circuit.

equivalent simple pendulum (*Phys.*). See **centre of oscillation.**

equivalent sine wave (*Elec. Eng.*). A sine wave which has the same frequency and the same r.m.s. value as a given wave.

equivalent T- (or π) **networks** (*Elec. Comm.*). T- (or π) networks that are equivalent in electrical properties to sections of transmission line, provided these are short in comparison with the wavelength.

equivalent weight (*Chem.*). That weight of an element or radical which combines with, displaces, or is in any way equivalent to, unit weight of hydrogen.

eq'uivalve (*Zool.*). Said of bivalves which have the two halves of the shell of equal size.

Er (*Chem.*). The symbol for *erbium*.

erasion (*Surg.*). Removal of all diseased structures from a joint by cutting and scraping.

erbium (*Chem.*). Symbol, Er. A metallic element, a member of the rare-earth group. At. no. 68, at. wt. 167·7. Found in the same minerals as dysprosium (gadolinite, fergusonite, xenotime), and in euxenite.

Erdmann float (*Chem.*). A glass float used to facilitate the reading of the liquid level in a burette.

erect (*Bot.*). Set at right-angles to the part from which it grows.—(*Zool.*) See under **erection.**

erect'ile tissue (*Zool.*). Tissue which contains baggy blood-spaces, by the distension of which with blood it can be rendered turgid.

erecting prism (*Light*). A right-angled prism used for erecting the image formed by an inverting projection system. The prism is used with its hypotenuse parallel to the beam of light incident on one of the other faces, which is totally reflected at the hypotenuse and emerges from the third face parallel to its original direction.

erecting shop (*Eng.*). That part of an engineering works where finished parts are assembled or fitted together; the term is generally applied to a fitting shop for relatively large machines.

erection (*Build.*). The assembly of the parts of a structure into their final positions.

erection (*Zool.*). The turgid condition of certain animal tissues when distended with blood : an upright or raised condition of an organ or part.—*adj.* **erect.**

erector (*Zool.*). A muscle which, by its contraction, assists in raising or erecting a part or organ.

er'emacaus'is (*Chem.*). A process of very slow oxidation without the application of heat; e.g. the decay of wood.

ere'mochaetous, —kē'tus (*Zool.*). Having the bristles or chaetae arranged according to no definite plan.

erep'sin (*Chem., Zool.*). An enzyme of the intestinal juice, acting upon casein, gelatine, and the products of peptic digestion, the end products being polypeptides and amino-acids.

er'ethism (*Med.*). Abnormal irritability of a tissue or organ.

erg (*Mech.*). The unit of work or energy in the c.g s. system of units ; equal in magnitude to the work done when the point of operation of a force of one dyne is allowed to move one centimetre in the direction of the force.

ergas'tic substance (*Cyt.*). A non-protoplasmic cell inclusion, playing a part in respiration or other metabolic activity of the cell.

ergas'toplasm (*Zool.*). See **archoplasm.**

ergatan'dromorph (*Zool.*). An ant which has the characters of the worker, combined with those of the male.

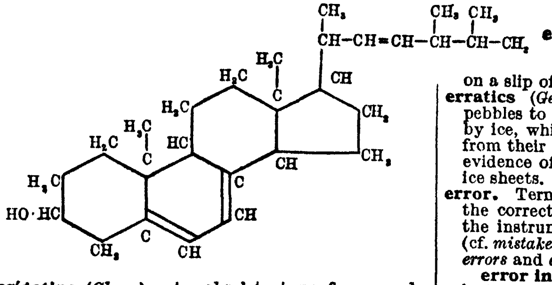
ergatan'er (*Zool.*). An apterous male ant having some of the characteristics of the worker.—*adjs.* **ergatan'drous, er'gatoid.**

er'gate (*Zool.*). A sterile female ant or worker.

ergat'ogyne, —jin (*Zool.*). An apterous queen ant.

er'gatoid (*Zool.*). Resembling a worker; said of sexually perfect but wingless adults of certain social Insects.

ergos'terol (*Chem.*). A *sterol* (q.v.) which occurs in ergot, yeast, and moulds. Traces of it are associated with cholesterol in animal tissues. On irradiation with ultra-violet light, *vitamin D* (q.v.) is produced. The constitution of ergosterol is :



er'gotine (*Chem.*). An obsolete term for a crude base obtained from ergot. See **ergotoxine.**

er'gotism (*Med.*). A condition characterised by gangrene, or by degenerative changes in the nervous system; due to eating the grains of cereals which are infected by the ergot fungus *Claviceps purpurea.*

ergotox'ine (*Chem.*). $C_{35}H_{41}O_6N_5$, an alkaloid of unknown constitution, obtained from ergot (*Claviceps purpurea*); it forms a bulky white powder, m.p. 162°-164° C., soluble in alcohol, slightly in ether. It produces all the characteristic effects of ergot, viz. contraction of the uterus and rise of blood pressure.

E'rian Stage (*Geol.*). The higher division of the Middle Devonian in N. America ; it includes the Hamilton beds, and marks the maximum extension of the Devonian sea.

erica'ceous (*Bot.*). Heather-like.

Erichsen test (*Met.*). A test in which a piece of metal sheet is pressed into a cup by means of a plunger ; used to estimate the suitability of sheet for pressing or drawing operations.

er'icoid (*Bot.*). Having very small tough leaves like those of heather.

eric'thys (*Zool.*). A larval stage of *Stomatopoda.*

Erinofort (*Plastics*). A proprietary non-flam cellulose acetate thermoplastic.

Erinoid (*Plastics*). Trade-name for a casein thermoplastic, made from the colloidal protein matter in separated milk by treatment with formaldehyde ; sp. gr. 1·32-1·39, moulding temp. 250° F., breakdown value in volts per mm. 13,000. Artificial horn.

er'iopho'rous (*Bot.*). Having a thick cottony covering of hairs.

er'kensator (*Paper*). A machine which extracts dirt, etc. from the wet pulp ; centrifugal force is used.

Er'lenmeyer flask, —mi-er (*Chem.*). A conical glass flask with a flat bottom; it is more easily washed out than an ordinary round flask.

ermine (*Furs*). The dressed skin of the stoat in its winter coat ; the fur is then white and the tail tipped with black. The black tips are removed from the tail and attached to the skins at regular intervals.

eroded, erose (*Bot.*). Appearing as if gnawed or worn irregularly.

E'ros (*Astron.*). The name given to one of the asteroids with a highly elliptical orbit. At perihelion it may be nearer the earth than the planet Mars at opposition. For this reason it was used to determine the one exact distance needed to deduce all other distances in the solar system, in particular the sun's distance.

erosion (*Geol.*). The lowering of the land surface by weathering, corrasion, and transportation, under the influence of gravity, wind, and running water.

erosion-littoral fauna (*Ecol.*). Animals living at the edges of lakes with open, wave-washed shores.

erra'ta (*Typog.*). A list of the author's or printer's errors, inserted at the beginning or end of a book, or printed on a slip of paper which is pasted in.

erratics (*Geol.*). Stones, ranging in size from pebbles to large boulders, which were transported by ice, which, on melting, left them stranded far from their original source. They furnish valuable evidence of the former extent and movements of ice sheets.

error. Term for any small residual difference from the correct value, due to unavoidable defects in the instruments or to inaccuracy of observation (cf. *mistakes*). Errors are of two kinds : *systematic errors* and *accidental errors* (qq.v.).

error in indication (*Elec. Eng.*). In indicating instruments, the difference between the indication of the instrument and the true value of the quantity being measured. It may be expressed as a percentage of the true value, and a positive value of the error means that the indication of the instrument is greater than the true value.

error, normal law of. When an observation of a quantity is made, it is subject to small accidental errors ; when these errors are equally liable to be positive or negative, and a large number of observations is made, the probability that n observations (including $n=1$) shall have an error between x and $x+dx$ is :

$$nh\epsilon^{-h^2x^2}dx/\sqrt{\pi}.$$

If r is the probable error, $hr=0{\cdot}477$.

If μ is the mean square error, $\mu h=0{\cdot}7071$.

error of closure (*Surv.*). See **closing error.**

ersaeome, er-sē-ōm (*Zool.*). See **eudoxid.**

erubes'cite (*Min.*). See **bornite.**

eru'ciform (*Zool.*). Resembling a caterpillar; said of certain insect larvae with a fleshy cylindrical body, weakly chitinised integument, and reduced antennae and thoracic legs.

eructa'tion (*Med.*). A belching of gas from the stomach through the mouth.

erum'pent (*Bot.*). Developing at first beneath the surface of the substratum, then bursting out through the substratum and spreading somewhat.

eruption (*Med.*). A breaking-out of a rash on the skin or on the mucous membranes: a rash.

eruptive rocks (*Geol.*). A term sometimes used for all igneous rocks; but carefully compare *extrusive rocks*.

erysip'elas (*Med.*). St. Anthony's fire. A spreading streptococcal infection of the lymphatics of the skin, especially of the face, neck, forearm, and hands, the inflamed area being red and shiny and the edge raised.

erysipelas, swine (*Vet.*). See **swine erysipelas.**

erysipel'atous (*Med.*). Pertaining to, or resembling, erysipelas.

erythe'ma (*Med.*). A superficial redness of the skin, due to dilatation of the capillaries.

erythema multiforme (*Med.*). A skin disease in which raised red patches appear and reappear, especially on the upper part of the body, associated with pain and swelling of the joints.

erythema nodo'sum (*Med.*). A skin disease in which red, painful, oval swellings appear, usually on the shins, associated with fever, joint pains, and sore throat.

erythema per'nio (*Med.*). Painful red swelling of the extremities; known as CHILBLAINS.

erythe'matous (*Med.*). Resembling, or of the nature of, erythema.

erythr-, erythro- (Greek *erythros*, red). A prefix used in the construction of compound terms; e.g. *erythropoiesis* (q.v.).

erythrae'mia, erythre'mia (*Med.*). Polycythaemia vera; Osler's disease; Vaquez's disease. A disease in which persistent increase in the number of red cells in the blood is associated with enlargement of the spleen.

erythras'ma (*Med.*). Infection of the horny layer of the skin with the fungus *Microsporon minutissimum*, giving rise to superficial, reddish-yellow patches, especially in the groins and armpits.

er'ythrene (*Chem.*). *Butadiene* (q.v.).

eryth'rite (*Min.*). Monoclinic arsenate of cobalt, occurring as reddish crystals or incrustations. Also called COBALT BLOOM.

eryth'roblast (*Zool.*). An embryonic cell the cytoplasm of which contains haemoglobin, and which will later give rise to an erythrocyte. See also **megaloblast.**

eryth'rocyte (*Zool.*). One of the red blood corpuscles of *Vertebrata*; flattened oval, or circular disc-like, cells (lacking a nucleus in Mammals) containing haemoglobin.

eryth'rocytol'ysis (*Zool.*). See **haemocytolysis.**

erythrocyto'sis (*Med.*). Excess in the number of red cells in the blood.

eryth'rodex'trin (*Chem.*). The most complex of all dextrins, obtained by the hydrolysis of starch. It gives a wine-red colour with iodine.

erythroedema, erythredema, —ē-dē'ma (*Med.*). Acrodynia; pink disease. A disorder of infants, characterised by swelling and redness of face, fingers, and toes, and by restlessness, weakness, and neuritis.

eryth'romelal'gia (*Med.*). A condition characterised by pain, redness, and swelling of the toes, feet, and hands, due to an affection of the arteries supplying these parts.

erythrope'nia (*Med.*). Diminution, below normal, of the number of red cells in the blood.

erythropho'bia (*Med.*). Morbid fear of blushing.

eryth'rophore (*Zool.*). A chromatophore containing a reddish pigment.

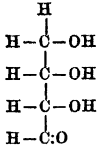
eryth'rophyll (*Bot.*). See **anthocyanin.**

eryth'ropoiesis, —poi-ē'sis (*Physiol.*). The formation of red blood corpuscles.

erythrop'sia (*Med.*). The state in which objects appear red to the observer; e.g. snow blindness.

erythrop'sin (*Zool.*). A pigment which occurs in the retinular elements of the eyes of certain night-flying Insects.

er'ythrose (*Chem.*). A tetrose of the constitution:



$$\begin{array}{c} \mathrm{H} \\ | \\ \mathrm{H-C-OH} \\ | \\ \mathrm{H-C-OH} \\ | \\ \mathrm{H-C-OH} \\ | \\ \mathrm{H-C{:}O} \end{array}$$

Esbach method (*Chem.*). A method for the quantitative estimation of albumen in the urine, based upon the precipitation of albumen with picric acid.

escalator. A conveyor for passenger-transport, consisting of a continuous series of steps carried on an endless chain, arranged either to ascend or descend, and so guided as to flatten out to a horizontal platform at the top and bottom of their run. Also called MOVING-STAIRCASE.

Escamela Limestone (*Geol.*). See **Tamasopo Limestone.**

escape (*Bot.*). A cultivated plant growing wild and holding its place more or less successfully against competition.

escape (*Build.*). A *fire escape* (q.v.).

escape motion (*Cotton Spinning*). See **box of tricks.**

escape (or **'scape) pinion** (*Horol.*). The pinion on the arbor of the escape wheel.

escape (or **'scape) wheel** (*Horol.*). The wheel of which the teeth act on the pallets.

escapement. A device for converting circular motion into reciprocating motion. Specifically (*Horol.*), in a watch or clock, it is the mechanism which transmits the power from the weight or spring to maintain the vibration of the pendulum or balance; at the same time it controls the rate at which all the wheels in the train move, the governing factor being the time of the vibration of the pendulum or balance. The ideal, which cannot be attained in practice, is a pendulum or balance vibrating without any external interference. The escapement which provides a minimum of interference is referred to as *highly detached.* Where, for a considerable period, there is contact with the escape wheel, the escapement is referred to as *frictional rest.*

Clock escapements are usually either (a) *recoil*; or (b) *dead-beat.* In the recoil type, during part of the action the pendulum pushes the escape wheel back against the power in the train, giving the 'recoil.' Although this is bad from the theoretical standpoint, in practice such an escapement gives very satisfactory results, as it is 'self-correcting'; i.e. should the arc of vibration of the pendulum tend to increase, it is checked by the greater amount of recoil. In the dead-beat type no recoil is possible as the locking faces of the pallets are arcs struck from the pallet staff centre.

Watch escapements are classified as *frictional-rest* or *detached.* The cylinder is a frictional-rest escapement, and the lever a detached escapement. The chronometer is the most highly detached of all escapements. The majority of modern watches are fitted with the club-tooth lever escapement (straight-line lever), in which the impulse is divided between the pallets and the escape wheel teeth

In the English lever escapement with ratchet tooth escape wheel, the impulse is due entirely to the pallets, whereas in the pin-pallet escapement, an escapement very much used in low-grade watches, the pallets are vertical pins, and impulse is given entirely by the teeth of the escape wheel.

escarpment (*Geol.*). A long cliff-like ridge developed by denudation where hard and soft inclined strata are interbedded, the outcrop of each hard rock forming an *escarpment*, such as those of the Chalk (Chiltern Hills, N. and S. Downs) and the Jurassic limestones (Cotteswold Hills). Generally an escarpment consists of a short steep rise (the *scarp face*) and a long gentle slope (the *dip-slope*).

eschar, es'kar (*Med.*). A dry slough produced by burning or by corrosives.

escharot'ic (*Med.*). A corrosive or caustic chemical agent.

escutcheon (*Build.*). A perforated plate around an opening, such as a key-hole plate or the plate to which a door-knob is attached.

es'erine (*Chem.*). *Physostigmine* (q v.).

esker (*Geol.*). A long winding gravel ridge, laid down by waters issuing from the front of a retreating glacier, or actually in the bed of a subglacial stream. Known in America as OS, *pl.* OSAR (from the Swedish *ås, åsar*). See **glacial action,** etc.

Esmarch's bandage (*Med.*) A rubber bandage which, applied to a limb from below upwards, expels blood from the part.

esophagus, etc. (*Zool*). See **oesophagus,** etc.

esopho'ria (*Med.*). Latent internal squint, revealed in an apparently normal person by passing a screen before the eye.

espagnolette bolt, es-pan-yol-et' (*Build.*). A long upright bolt, used to fasten a french window at both the threshold and the frame head in one operation.

espar'to (*Paper*). A paper made from a coarse grass of the name obtained from southern Spain and northern Africa.

espu'ndia (*Med.*). An ulcerative infection of the skin, and of the mucous membranes of the nose and the mouth, by the protozoal parasite *Leishmania Braziliensis*; occurs in South America.

essential element (*Bot.*). A chemical element without which a plant cannot complete its development.

essential minerals (*Geol.*). Components present, by definition, in a rock, the absence of which would automatically change the name and classification of the rock.

essential oils (*Chem.*). Ethereal oils which are contained in many plants and flowers and give them their characteristic odour. Many of them belong to the terpene group, others are related to benzene derivatives.

essential organs (*Bot.*). Stamens and carpels.

Essex board (*Build.*). A building-board made of layers of compressed wood-fibre material cemented with a fire-resisting cement.

es'sexite (*Geol.*). A coarse-grained deep-seated igneous rock, essentially an alkali-gabbro, with preponderance of soda. Named from Essex Co., Mass.

Esson coefficient (*Elec. Eng.*). See **specific torque coefficient.**

es'sonite (*Min.*). A variety of hessonite.

establishment (*Bot.*). The successful germination and subsequent growth of a plant, particularly in a new locality.

establishment (*Typog.*). A workman who receives a weekly wage is said to be *on the establishment*, in contrast to one who does piece-work. Usually abbreviated to *stab*.

establishment charges. See **on-costs.**

es'tamene (*Textiles*). A dress fabric with a rough fibrous twilled surface, made from crossbred worsted yarns. Usually of 2-and-2 twill weave.

ester (*Chem.*). Esters are derivatives of acids obtained by the exchange of the replaceable hydrogen for alkyl radicals. Many esters have a fruity smell and are used in artificial fruit essences; also used as solvents.

ester gums (*Chem.*). Rosin or gums which have been esterified with glycerine; raw material for varnishes.

ester'ifica'tion (*Chem.*). The direct action of an acid on an alcohol, resulting in the formation of esters. An equilibrium is reached between the quantities of acid and alcohol present and the quantities of ester and water formed.

esthesiometer (*Med.*). See **aesthesiometer.**

esthiomene, es'thi-om'en-e (*Med.*). A condition in which there are chronic hypertrophy and destructive ulceration of the external genitals of the female.

estimating. The operation of determining what will be the cost, inclusive of labour, materials, and overheads, of doing a certain piece of work.

estrade (*Build.*). A *dais* (q.v.).

estuarine deposition (*Geol.*). Sedimentation in the environment of an estuary. The deposits differ from those which form in a deltaic environment, chiefly in their relationship to the strata of the adjacent land, and are usually of finer grain and of more uniform composition. Both are characterised by brackish water and by their containing land-derived animal- and plant-remains.

estuarine muds (*Geol.*). So-called *estuarine muds* are, in many cases, silts admixed with sufficient true clay to give them some degree of plasticity; they are characterised by a high content of decomposed organic matter.

Estuarine Series (*Geol.*). A division of the Jurassic System in Yorkshire and parts of Scotland, equivalent to the oölitic limestones of the Cotteswold Hills. Actually misnamed, as the deposits are deltaic rather than estuarine.

estuary (*Geol*). An inlet of the sea at the mouth of a river; developed especially in areas which have recently been submerged by the sea, the lower end of the valley having been thus drowned. See **fjord** and cf. *delta*.

E.S.U. (*Elec. Eng.*). Abbrev. for *electrostatic unit*.

Et (*Chem.*). A symbol for the ethyl radical C_2H_5— .

eta patch (*Aero.*). A patch of fabric and webbing, in the shape of a fan, securing the rigging to the envelope of an airship or balloon.

etae'rio (*Bot.*). A group of achenes or of drupels.

et'alon (*Light*). An interferometer consisting of an air film enclosed between half-silvered plane parallel plates of glass or quartz having a fixed separation. It is used for studying the fine structure of spectral lines. See **Fabry and Pérot interferometer.**

etched figures or **etch-figures** (*Crystal.*). Small pits or depressions of geometrical design in the faces of crystals, due to the action of some solvent. The actual form of the figure depends upon the symmetry of the face concerned, and hence they provide invaluable evidence of the true symmetry in distorted crystals.

Etcheminian (*Geol.*). The Lower Cambrian Series of strata in the Atlantic Province of N. America.

etching (*Met.*). The process of revealing the structure of metals and alloys by attacking a highly polished surface with a reagent that has a differential effect on different crystals or different constituents.—(*Photog.*) The process of (1) dissolving, with an acid, portions of a surface, such as copper or zinc sheet, where it is not protected with a resist; (2) soaking away gelatine differentially to form a relief image.

etching pits (*Met.*). Small cavities formed on the surface of metals during etching.

etching reagent (*Met.*). See **etching.**

etching test (*Chem.*). A test used in analytical chemistry for the detection of fluorides. The substance under examination is heated with sulphuric acid in a lead vessel covered with a glass lid. If fluorides are present the glass will be etched owing to the action of hydrogen fluoride produced by the action of the acid on the fluoride.

Eternit (*Build.*). A trade-name for a form of corrugated asbestos cement roofing material.

ete'sian winds (*Meteor*). In the Mediterranean, winds which blow from the north-west for about 40 days in the summer.

ethane (*Chem.*). $H_3C{\cdot}CH_3$, a colourless, odourless gas of the paraffin series; the critical temperature is +34° C., the critical pressure is 50·2 atm, b.p. −84° C. The second member of the paraffin series of hydrocarbons.

eth'anol (*Chem.*). *Ethyl alcohol* (q.v.).

eth'ene (*Chem.*). *Ethylene* (q.v.).

eth'enoid resins (*Plastics*). Resins made from compounds containing a double bond between two carbon atoms; i.e. the acrylic, vinyl, and styrene groups of plastics.

e'theogen'esis (*Zool*). Parthenogenesis of male individuals: development of male gametes without fertilisation.

e'thers (*Chem.*). (1) Compounds derived from two molecules of an alcohol by elimination of one molecule of water. Their general formula is R·O·R'.—(2) The term is often erroneously applied to esters.

ether (*Chem.*). *Diethyl ether* (q.v.).

ether or **aether** (*Phys*). A hypothetical non-material entity supposed to fill all space whether 'empty' or occupied by matter. The ether has the property of transmitting electromagnetic waves (light, radiant heat, X-rays, etc.) and is probably concerned in gravitational attraction, but it possesses no properties in common with matter.

ether waves (*Radio*). Electromagnetic waves.

ether'ic telegraphy (*Radio*). An obsolescent name for *radiotelegraphy*.

eth'ine (*Chem.*). *Acetylene* (q.v.).

Ethiopian region (*Zool.*). One of the primary faunal regions into which the surface of the globe is divided; it includes all of Africa and Arabia south of the tropic of Cancer.

ethmo- (Greek *ethmos*, sieve). A prefix used in the construction of compound terms; e.g. *ethmopalatine*, stretching from the palatine to the ethmoid, or pertaining to the palatines and ethmoids.

eth'mohyosty'lic (*Zool.*). In some Vertebrates, having the lower jaw suspended from the ethmoid region and the hyoid bar.

eth'moid (*Zool.*). A bone of the Vertebrate skull, one of the *ethmoidalia* (q.v.).—*adj.* **ethmoidal.**

ethmoid plate (*Zool.*). A cartilage element of the developing Vertebrate skull.

ethmoida'lia (*Zool.*). A set of cartilage bones forming the anterior part of the brain-case in the Vertebrate skull.

ethmoidec'tomy (*Surg.*). Surgical removal of the ethmoid cells or of part of the ethmoid bone.

ethmoidi'tis (*Med.*). Inflammation of the ethmoid cells.

ethmotur'binal (*Zool.*). In Vertebrates, a paired bone or cartilage of the nose, which supports the folds of the olfactory mucous membrane.

ethox'yl group (*Chem.*). The group $-O{\cdot}C_2H_5$.

ethyl group, ĕ'thil *or* eth'il (*Chem.*). The monovalent radical $-C_2H_5$.

ethyl (*Chem.*). See **lead tetraethyl.**

ethyl acetate (*Chem.*). Acetic ether, $CH_3COO{-}C_2H_5$, m.p. −82° C., b.p. 77° C.; colourless liquid of fruity odour, used as a lacquer solvent and in medicine.

ethyl alcohol (*Chem.*). Ethanol, C_2H_5OH, m.p. −114° C., b.p. 78·4° C.; a colourless liquid, of vinous odour, miscible with water and most organic solvents, sp. gr. 0·789; formed by the hydrolysis of ethyl chloride or of ethyl hydrogen sulphate; it may be obtained by absorption of ethylene in fuming sulphuric acid at 160° C., followed by hydrolysis with water, by reduction of acetaldehyde, or by direct synthesis from ethylene and water at high temperatures in the presence of a catalyst. It is prepared technically by the alcoholic fermentation of sugar. It forms alcoholates with sodium and potassium.

ethyl mercaptan (*Chem.*). See **mercaptan.**

eth'ylamine, —mĕn' (*Chem.*). $C_2H_5{\cdot}NH_2$, b.p. 19° C., a liquid or gas of ammoniacal odour, which dissolves in water, and forms salts; it dissolves $Al(OH)_3$.

eth'ylene (*Chem.*). Ethene, $H_2C{:}CH_2$, m.p. −169° C., b p. −103° C., a gas of the olefine series, contained in illuminating gas and in gases obtained from the cracking of petroleum. Used for synthetic purposes, and for maturing fruit in storage.

ethylene glycol (*Chem.*). Glycol, $HO{\cdot}CH_2{\cdot}CH_2{\cdot}OH$, b.p. 197·5° C., sp. gr. 1·125, a colourless, syrupy, hygroscopic liquid, miscible with water and alcohol. Prepared from ethylene dibromide or ethylene chlorhydrin by hydrolysing with caustic soda. Intermediate for glycol esters, which are solvents and plasticisers for lacquers; used in the textile industry, for printing-inks, foodstuffs, anti-freezing mixtures, and for de-icing aeroplane wings.

ethylene oxide (*Chem.*). C_2H_4O, b.p. 13·5° C., a mobile colourless liquid of ethereal odour, obtained by distilling glycol chlorhydrin with concentrated caustic potash.

et'iola'tion (*Bot.*). The condition of a green plant which has not received sufficient light; the stems are weak, with abnormally long internodes, the leaves are small, yellowish or whitish, and the vascular strands are deficient in xylem.—*adj.* **etiolated.**

etiology (*Med.*). See **aetiology.**

Etruria Marls (*Geol.*). A thick series of red marls developed high up in the coal measures of some of the Midland coalfields in England; used extensively in the pottery industry. Named from one of the pottery towns in N. Staffordshire.

eu- (Greek *eu*, well, good). A prefix used in the construction of compound terms; e.g. *eucephalous*, having a well-developed head.

Eu (*Chem.*). The symbol for *europium*.

euapogam'y, ū-ap'— (*Bot.*). The development of the sporophyte from a cell or cells of the gametophyte, not from a zygote resulting from gametic fusion; the sporophyte is diploid.

euap'ospo'ry (*Bot.*). Complete failure on the part of a plant to form spores.

eucalyp'tole (*Chem*). *Cineole* (q.v.).

Eucar'ida (*Zool.*). A subclass of *Malacostraca* in which there are six abdominal somites and the thoracic limbs have a two-jointed protopodite; the carapace coalesces dorsally with all the thoracic somites, and the protopodite of the antenna may be one- or two-jointed.

eucar'pic (*Bot.*). Having both vegetative and reproductive organs, separate and functioning at the same time.

euceph'alous (*Zool.*). Having a well-developed head; applied to certain dipterous larvae which possess a head (as Mosquitoes), in contradistinction to the majority of dipterous larvae, which have the head much reduced. Cf. *acephalous, hemicephalous.*

euchlo'rine (*Chem.*). A mixture of chlorine with chlorine peroxide in varying proportions.

euchro'mocentre (*Cyt.*). A portion of a chromosome which stains very deeply and does not loosen out to form part of the reticulum.

euchro′mosome (*Cyt.*). A typical chromosome, as opposed to a sex-chromosome; an autosome.

eu′clase (*Min.*). A monoclinic member of the datolite group of minerals, occurring as prismatic, usually colourless, crystals. Chemically it is hydrated silicate of beryllium and aluminium.

eucoil′iform (*Zool.*). Resembling *Eucoila*; said of a larval type of certain *Hymenoptera* which possesses three pairs of long thoracic appendages.

eucone, ū-kōn (*Zool.*). (Of Insects) having compound eyes in which each ommatidium contains a true crystalline cone.

Eucopep′oda (*Zool*). A subclass of *Copepoda* in which paired compound eyes are absent, the genital openings occur on the seventh trunk somite, and the thoracic limbs lack a flagellum; includes parasitic forms such as the Sea Lice and Gill Maggots which occur on many food fish, as well as free-living forms.

eu′crite (*Geol.*). A coarse-grained, usually ophitic, deep-seated basic igneous rock, containing plagioclase near bytownite in composition, both ortho- and clino-pyroxenes, together with olivine. Eucrite is an important rock type in the Tertiary complexes of Scotland.

eucy′clic (*Bot*). Said of a flower made up of successive whorls, all with the same number of members.

eudiom′eter (*Chem.*). An apparatus for determining the composition of gases by observing the volume changes which occur on sparking them in a confined space, generally over mercury.

eudox′id, eudox′ome (*Zool*). In some *Siphonophora*, a free-swimming monogastric stage, without a special nectocalyx.—*pl.* **eudoxia.**

eugam′ic (*Zool.*). Pertaining to the period of maturity.

eu′genol (*Chem.*). $C_6H_3(OH)(OCH_3)(CH_2{\cdot}CH{:}CH_2)$, a phenol homologue, the chief constituent of oil of cloves and cinnamon leaf oil, b.p. 252° C., sp. gr. 1·07; used for manufacturing *vanillin* (q.v.).

Eugle′na (*Zool.*). A plant-like flagellate which gives its name to a peculiar type of movement (*euglenoid movement*), in which it indulges when for any reason its flagellum is ineffective.

eugle′noid (*Zool.*). Pertaining to or resembling *Euglena*; as *euglenoid movement.*

Eugle′noidi′na (*Zool.*). An order of *Phytomastigina*, comprising forms generally with one flagellum; green or colourless; with a gullet but without a transverse groove; having food-reserves of paramylum, and sometimes also of oil; with a contractile vacuole, e.g. *Euglena.*

eugonid′ium (*Bot.*). A bright-green algal cell forming part of the thallus of a lichen, and belonging to the *Chlorophyceae.*

euhe′dral crystals (*Geol.*). See **idiomorphic crystals.**

euhyme′nial (*Bot.*). Having a hymenium in which all the basidia are formed nearly at the same time.

Eu′lamel′libran′chia (*Zool.*). An order of *Pelecypoda*, in which the branchial axis of the gill is united to the body throughout its length, and bears parallel, ventrally directed and reflected filaments, which are joined to one another by vascular junctions; similarly, the lamellae of each gill are united by vascular junctions; the byssus gland is variable; ciliary feeders. True Oysters, Cockles, River and Pond Mussels, Clams, Zebra Mussels, and Shipworms.

Euler's formula, oi′ler (*Civ. Eng.*). A formula giving the collapsing load for a long, thin column of given sizes. It states that

$$P=\frac{\pi^2EI}{L^2},$$

where P=the collapsing load; E=Young's modulus; I=the least moment of inertia; L= the length of the pin-jointed column.

Eumal′acos′traca (*Zool.*). An obsolete group of *Crustacea*, which comprised the four subclasses *Syncarida*, *Peracarida*, *Eucarida*, and *Hoplocarida* (see these articles), and was distinguished by the possession of six abdominal somites, the absence of movable furcal rami and of adductor muscles, and the presence of pediform thoracic limbs, with a protopodite of two segments.

eu′merism (*Zool.*). An aggregation of similar parts.

eumer′ogen′esis (*Zool*). A form of segmentation in which the parts produced are alike (although dissimilarity may arise later).

eumito′sis (*Cyt*). Typical normal mitosis, in which the chromosomes separate distinctly and clearly divide longitudinally. Cf. *cryptomitosis*, *paramitosis.*

Eumyce′tes (*Bot*). The higher fungi, with many thousand species. The group includes the *Ascomycetes* and the *Basidiomycetes*, as well as the *Fungi imperfecti.* The mycelium is usually strongly developed, and consists of branching, septate hyphae.

eupep′tic (*Med*). Possessing a good digestion.

Euphausia′cea (*Zool.*). An order of *Eucarida* in which the caridoid facies are retained; none of the thoracic limbs are modified as maxillipedes; many kinds possess luminous organs; in Arctic and Antarctic waters they occur in huge shoals in the surface waters and are known as *kril*; they form the chief food of some kinds of whales.

Euphon quilt, Chance's (*Acous.*). An acoustic absorbing quilt made of matted layers of glass silk threads supported between layers of paper or canvas.

eupho′ria, eu′phory (*Med.*). A feeling of well-being, not necessarily indicative of good health.

eupho′tomet′ric (*Bot.*). Said of a leaf which occupies a fixed position with its lamina perpendicular to the direction of the strongest diffuse light to which it is exposed.

euploid′y (*Cyt.*). Polyploidy in which the chromosome number is an exact multiple of the haploid number; organisms showing this condition are *euploid.*

eupot′amous (*Ecol.*). Normally living in rivers and streams. Cf. *tychopotamous.*

eupy′rene (*Zool.*). (Of spermatozoa) normal, typical. Cf. *oligopyrene*, *apyrene.*

Eureka Black Shale (*Geol.*). A diachronous shale deposit forming the transgressive basal member of the Mississippian in Arkansas, Missouri, etc.

Eureka wire (*Elec. Eng*). Wire made of an alloy of copper and nickel. It has a very small temperature coefficient and does not deteriorate at high temperatures. Used for winding resistance coils.

euro′pium (*Chem.*). Symbol, Eu. A rare metallic element, a member of the rare-earth group. At. no. 63, at. wt. 152. Behaves as a divalent and trivalent element. Contained in black monazite, gadolinite, samarskite, xenotime.

euryba′thic (*Ecol.*). Tolerant of a wide range of depth.

euryha′line (*Ecol.*). Normally inhabiting salt water, but adaptable to a wide range of salinity. Cf. *stenohaline.*

Euryp′terid Series (*Geol.*). A little-used name; synonymous with *Temeside Shales*, in the Downtonian Stage of the Devonian System.

Eurypter′ida (*Geol.*). An order of *Crustaceans* occurring first in the Silurian and Devonian rocks of Britain, and represented by such types as *Eurypterus* and *Stylonurus*, the latter reaching 6 ft. in length.

euryp′ylous (*Zool.*). (In *Porifera*) said of a type of canal system in which the flagellated chambers open directly into the ex-current canals by apopyles.

euryther′mous (*Ecol.*). Tolerant of a wide range of temperature.

Euselachii, —lak'i-i (*Zool.*). A subclass of *Selachii* characterised by the possession of a spiracle and five or more gill-clefts, which open separately to the exterior. Sharks and Rays.

eusporan'giate fern (*Bot.*). A fern in which the sporangia are developed each from a group of cells.

Eusta'chian tube (*Zool.*). In land Vertebrates, a slender duct connecting the tympanic cavity with the pharynx.

Eustachian valve (*Zool.*). In Mammals, a rudimentary valve separating the openings of the superior venae cavae from that of the inferior vena cava.

eustatic movements (*Geol.*). Changes of sea-level, constant over wide areas, due probably to alterations in the volumes of the seas resulting from the formation or melting of ice-caps.

euster'num (*Zool.*). In Insects, a ventral sclerite of a thoracic segment, lying in front of the sternellum.

eusto'matous (*Zool.*). With a well-defined mouth or opening.

eustyle (*Build.*). A colonnade in which the space between the columns is equal to two and a quarter times the lower diameter of the columns.

Eutaw Group, ū'taw (*Geol.*). A subdivision of the Cretaceous System in the southern U.S.A., lying between the Tuscaloosan, which it overlaps northwards, and the overlying Selma Chalk. The Tombigbee Sand occurs at the top of the group.

eutec'tic (*Chem.*). Relating to a mixture of two or more substances having a minimum melting-point. Such a mixture behaves in some respects like a pure compound.

eutectic change (*Met.*). The transformation from the liquid to the solid state in a eutectic alloy. It involves the simultaneous crystallisation of two constituents in a binary system and of three in a ternary system.

eutectic point (*Met.*, *Min.*). The point in the binary or ternary constitutional diagram indicating the composition of the eutectic alloy, or mixture of minerals, and the temperature at which it solidifies.

eutectic structure (*Met.*). The particular arrangement of the constituents in a eutectic alloy which arises from their simultaneous crystallisation from the melt. See **graphic texture** (*Min.*).

eutectic system (*Met.*). A binary or ternary alloy system in which one particular alloy solidifies at a constant temperature which is lower than the beginning of solidification in any other alloy.

eutectoid (*Met.*). Similar to a eutectic except that it involves the simultaneous formation of two or three constituents from another solid constituent instead of from a melt. *Eutectoid point* and *eutectoid structure* have similar meanings to those given for *eutectic*.

eutectoid steel (*Met.*). Steel having the same composition as the eutectoid point in the iron-carbon system (0·87% C.), and which therefore consists entirely of the eutectoid at temperatures below 710° C. See **pearlite.**

euthana'sia (*Med.*). Easy or painless death: the action of procuring this.

Euthe'ria (*Zool.*). A subclass of viviparous *Mammalia* in which the young are born in an advanced stage of development; there is no marsupial pouch; an allantoic placenta occurs; the scrotal sac is behind the penis, the angle of the lower jaw is not inflexed and the palate is imperforate. Also called PLACENTALIA, MONODELPHIA.

Euthyneu'ra (*Zool.*). A subclass of hermaphrodite *Gastropoda*, in which the visceral mass and commissure show detorsion, and there are usually two pairs of cephalic tentacles. Sea Slugs, True Snails, Land Slugs, etc.

euthyneural, euthyneurous (*Zool.*). Having a symmetrical nervous system; said especially of certain *Gastropoda* in which the visceral nerve loop is untwisted.

eutro'phic (*Ecol.*). Said of a type of lake-habitat with gently sloping shores, and a wide belt of littoral vegetation.

eutrop'ic series (*Chem.*). An arrangement of substances in which crystalline form and physical constants show a regular variation.

eu'tropy (*Chem.*). The regular variation of the crystalline form of a series of compounds with the atomic number of the element.

eux'enite (*Min.*). An uncommon mineral containing rare elements; a niobate and titanate of yttrium, erbium, cerium, and uranium, and valuable on this account. Commonly massive and brownish-black in colour; rarely, crystalline (orthorhombic prismatic forms).

evag'inate (*Bot.*, *Zool.*). Not having a sheath.

evagination (*Med.*). The turning inside out of an organ.

evagination (*Zool.*). Withdrawal from a sheath: the development of an outgrowth: eversion of a hollow ingrowth: an outgrowth: an everted hollow ingrowth. Cf. *invagination*, *evaginate*.

evaporation (*Phys.*). The conversion of a liquid into vapour, at temperatures below the boiling-point. The rate of evaporation increases with rise of temperature, since it depends on the saturated vapour pressure of the liquid, which rises until it is equal to the atmospheric pressure at the boiling-point. Evaporation is used to concentrate a solution.

evaporation, natural (*Meteor.*). The evaporation that takes place at the surface of ponds, rivers, etc. which are exposed to the weather; it depends on the relative humidity, and also, to some extent, on the strength of the wind.

evaporative cooling (*I.C. Engs.*). An engine cooling system which consists in allowing the cooling liquid to boil, condensing it, and returning it to the cylinder jackets, thus dispersing the heat by means of the latent heat of evaporation.

evaporator (*Chem.*). A still designed to evaporate moisture or solvents in order to obtain the dried product. An example is the preparation of milk powder from milk.

evaporim'eter (*Meteor.*). An instrument used for measuring the rate of natural evaporation.

evection (*Astron.*). The second of the four principal periodic inequalities in the mathematical expression of the moon's orbital motion; due to the variable eccentricity of the moon's orbit, with a maximum value of 1° 16′ and a period of 31·81 days.

even (*Bot.*). Having a smooth surface.

even pages (*Typog.*). The left-hand pages of a book, i.e. those which bear the even page-numbers.

even pitch (*Eng.*). In screw cutting in the lathe, the thread cut is said to be of *even pitch* if its threads per inch are equal to, or a multiple of, the threads of the lead screw.

even small caps (*Typog.*). Small capitals set up without capitals. Sometimes called LEVEL SMALL CAPS.

evening star (*Astron.*). The name given in popular language to a planet, generally Venus or Mercury, seen in the western sky at or just after sunset.

eventration (*Med.*). Protrusion of the abdominal contents outside the abdomen; e.g. through the diaphragm into the thorax.

ever-bearer, ever-bloomer (*Bot.*). A plant which vegetates and flowers for a long period of the growing season, and often bears flowers and fruits at the same time. The flowering of ever-bloomers does not seem to be significantly affected by the duration of the periods of light to which they are exposed, during the ordinary alternation of day and night.

eversporting race (*Bot.*). A race of plants which does not breed true, and gives mixed progenies.

Everest theodolite (*Surv.*). A form of theodolite differing from the transit in that reversal of the line of sight is effected by removing the telescope from its trunnion supports and turning it end for end.

Everite (*Build.*). A proprietary form of asbestos-cement material used for roofing, eaves, gutters, rain-water pipes, etc.

everted (*Bot.*). Turned outwards abruptly.

evident plasmolysis (*Bot.*). The stage in plasmolysis when the protoplast can be seen to have shrunken away from the cell wall.

evisceration (*Surg.*). Disembowelment: operative removal of thoracic and abdominal contents from the foetus in obstructed labour: operative removal of a structure (e.g. the eye) from its cavity.

e'volute (*Biol.*). Having the margins rolled outwards.

evolute (*Geom.*). See **involute.**

evolution (*Biol.*). The gradual development of more complex organisms from simpler forms: the development of organs from other organs, or from simpler organs of the same type.

evol'vate (*Bot.*). Lacking a volva.

Evos door (*Build.*). A trade-name for a form of finished door and door-case supplied ready to be put in place.

evulsion (*Surg.*). Plucking out by force.

Ewing curve tracer (*Elec. Eng.*). An instrument for throwing a curve representing the hysteresis loop of a sample of iron on to a screen. A mirror is deflected horizontally in proportion to the magnetising force and vertically in proportion to the flux produced.

Ewing permeability bridge (*Elec. Eng.*). A measuring device in which the flux produced in a sample of iron is balanced against that produced in a standard bar of the same dimensions. The magnetising force on the bar under test is varied until balance is obtained, and from the value of the force so found the permeability can be estimated.

E.W.T. (*Build., Civ. Eng.*). Abbrev. for *elsewhere taken.*

ex- or **e-** (Latin *ex*, out of). Prefixes used in the construction of compound terms; e.g. *excystation*, emergence from encystment; *Edentata* (q.v.). Variant forms are **ef-** and **es-**.

ex. & ct. (*Build., Civ. Eng.*). Abbrev. for *excavate and cart away.*

ex. sur. tr. & ct. (*Build., Civ. Eng.*). Abbrev. for *excavate surface trenches and cart away.*

exacerba'tion, eks-as— (*Med.*). An increase in the severity of a disease, or of its manifestations.

exalbu'minous (*Bot.*). Lacking endosperm; exendospermous.

exaltation (*Chem.*). The abnormal increase in the molecular refractivity of a compound produced by the presence of conjugated double bonds ($>C=CH-CH=C<$).

examiner (*Mining*). See **fireman (2).**

exan'nulate (*Bot.*). Said of a fern sporangium which has no annulus.

exanthe'ma, exan'them (*Med.*). An eruption on the surface of the body.

exanthema, coital (*Vet.*). A vesicular eruption on the external genital organs of cattle and horses, rarely of sheep and swine; transmitted through coitus.

exanthema, infectious (*Vet.*). See **pox.**

exanthema, vesicular (*Vet.*). See **exanthema (coital),** also **foot-and-mouth disease.**

exanthe'mata (*Med.*). *Pl.* of *exanthema.* The term is used of infectious diseases characterised by an exanthem.

exanthemat'ic fever (*Vet.*). An infectious disease of dogs due to a protozoan *Hepatozoan canis*, which is transmitted by the 'brown' tick *Rhipicephalus appendiculatus.*

exar'ate (*Zool.*). Said of pupae in which the wings and legs are free, and which are therefore capable of a limited degree of movement.

exarch, eks'ark (*Bot.*). Said of a xylem strand having the protoxylem on the edge remote from the centre of the axis.

exasperate (*Bot.*). Having the surface rough, with hard short points projecting from it.

ex'calated (*Zool.*). In metameric animals, said of somites which are represented in the embryo, but which atrophy and disappear, leaving no trace in the adult.

excavation (*Civ. Eng.*). The operation of digging material out from the solid mass and depositing it elsewhere.

excavation (*Med.*). The process of hollowing out: a part hollowed out.

excavator (*Civ. Eng.*). A power-driven machine for digging away or excavating earth. See **dredger excavator, grabbing crane, power drag line, power shovel** (or **navvy**).

exceeding (*Bot.*). Projecting beyond a neighbouring member.

excentric (*Bot.*). (1) See **eccentric.**—(2) Said of a pileus in which the stipe is not inserted in the centre.

excess pressure (*Acous.*). See **sound pressure.**

excess voltage (*Elec. Eng.*). See under **overvoltage protective device.**

exchange (*Teleph.*). The location of all apparatus and operators for interconnecting the various lines from subscribers and other exchanges.

See **automatic telephone—**
discriminating satellite—
private automatic branch—
private branch—
radio—
satellite—
toll—
trunk—

exchange area (*Teleph.*). The area covering the subscribers connected to a local exchange.

exchange hold (*Teleph.*). The retention of the connexion to the exchange, without the facility of conversation from a main telephone, while the latter can converse with an extension telephone.

exchange line (*Teleph.*). A line from a subscriber to his local exchange.

excip'ient (*Med.*). The inert ingredient in a medicine which takes up and holds together the other ingredients.

ex'ciple, excip'ulum (*Bot.*). The outer layer of the wall of an apothecium or of a perithecium, especially when it is well developed and distinct.

excipu'liform (*Bot.*). Cup-shaped.

excision (*Surg.*). The action of cutting a part out or off: the surgical removal of a part.

excitable tissue (*Zool.*). Tissue which responds to stimulation by activity.

excitant (*Elec. Eng.*). A term occasionally used to denote the electrolyte in a primary cell.

excitation (*Bot.*). The action of a stimulus on a plant or a plant organ.

excitation (*Elec. Eng.*). The magnetomotive force producing the flux in the field system of an electric machine or in an electromagnet.

excitation (*Zool.*). The setting of a metabolic process into activity or acceleration; cf. *inhibition.*—*adj.* **exci'tatory.**

excitation loss (*Elec. Eng.*). The ohmic loss (I^2R) in the field or exciting windings of an electric machine excited by direct current.

excitatory cells (*Zool.*). Motor nerve-cells of the autonomic nervous system.

exciter (*Elec. Eng.*). A small machine for producing the current, usually d.c., necessary for supplying the exciting winding of a larger machine. It is frequently mounted on the shaft of the machine which it is exciting. See **a.c. exciter.**

exciter (*Radio*). The original source of high-frequency oscillations in an independent drive transmitter, comprising the master oscillator and its immediately subsequent amplifying stages. Also called DRIVER UNIT. *

exciter field rheostat (*Elec. Eng*). A rheostat in the field of an exciter whereby the voltage of the exciter, and therefore the excitation on the main machine, can be controlled.

exciter lamp (*Cinema.*). The electric lamp for providing the light to be modulated for recording sound photographically on a sound-track, or the light-source for modulation by the sound-track in the sound-head of a projector.

exciter set (*Elec. Eng.*). An assembly of one or more exciters with a prime-mover or electric driving motor.

exciting circuit (*Elec. Eng.*). The complete circuit through which flows the current for exciting an electric machine. It comprises the exciter, the windings of the main machine, and possibly a field rheostat and measuring instruments.

exciting coil (*Elec. Eng.*). A coil on a field magnet, or any other electromagnet, which carries the current for producing the magnetic field.

exciting winding (*Elec. Eng*). The winding which produces the m.m.f. to set up the flux in an electric machine or other apparatus

exci'tor (*Zool.*). Stimulating into activity, as a motor nerve or neurone.

exclusive species (*Bot.*). A species which is confined to a definite plant community.

ex-conjugant (*Zool.*). An animal which has regained its independence after conjugation.

excoria'tion (*Med.*). Superficial loss of skin.

excres'cence (*Med.*). Any abnormal outgrowth of tissue.

excre'ta (*Zool.*). Poisonous or waste substances eliminated from a cell, tissue, or organism.—*adjs.* **excrete, excreted.**—*n.* **excretion.**

excreting cell (*Bot*). A cell in which the secretion is exuded from the cell.

excurrent (*Bot.*). Said of a vein which runs out beyond the lamina of the leaf.

excurrent (*Zool*). Carrying an outgoing current; said of ducts, and, in certain *Porifera*, of canals leading from the apopyles of the flagellated chambers to the exterior or to the paragaster.

exei'resis, exer'esis (*Surg.*). Operative evulsion of a part, especially of a nerve.

exen'dosper'mous (*Bot*). Said of a seed lacking endosperm: exalbuminous.

exentera'tion (*Surg.*). Disembowelment: complete removal of the contents of a cavity.

exer'esis (*Surg.*). See **exeiresis.**

exflagella'tion (*Zool.*). The formation of microgametes, in some *Haemosporidia*.

exfoliation. The process of falling away in flakes, layers, or scales, as (*Bot.*) some bark.—(*Geol.*) The splitting off of thin folia or sheets of rock from surfaces exposed to the atmosphere, particularly in regions of wide temperature variation. It is one of the processes involved in spheroidal weathering.

exha'lant (*Zool*). Emitting or carrying outwards a gas or fluid; as the *exhalant siphon* in some *Mollusca*.

exhaust (*Eng.*). (1) The working fluid discharged from an engine cylinder after expansion.—(2) That period of the cycle occupied by the discharge of the used fluid.

exhaust fan (*Eng.*). A fan used in artificial draught systems; placed in the smoke uptake of a boiler to draw air through the furnace and exhaust the flue gases.

exhaust gas (*Eng.*). The gaseous exhaust products of an internal-combustion engine, containing in general CO_2, CO, O_2, N_2, and water-vapour.

exhaust gas analyser (*I.C. Engs.*). An instrument which records continuously the mixture strength supplied to a petrol engine by automatic electrical measurement of the thermal conductivity of the exhaust gas. See also **CO_2 recorder, Orsat apparatus.**

exhaust lap (*Eng.*). (Of a slide-valve) the distance moved by the valve from mid-position on the port face, before uncovering the steam port to exhaust; sometimes called INSIDE LAP.

exhaust line (*Eng.*). The lower line of the enclosed area of an indicator diagram, showing the back pressure on the piston during the exhaust stroke of a steam engine.

exhaust pipe (*Eng.*). The pipe through which the exhaust products of an engine are discharged.

exhaust port (*Eng.*). In an engine cylinder, the port or opening through which a valve allows egress of the exhaust steam or gas.

exhaust shaft (*Build.*). A ventilating passage used to convey vitiated air away from rooms.

exhaust silencer (*Automobiles, etc.*). An expansion chamber fitted in the exhaust pipe of an internal-combustion engine, which reduces the noise level of the exhaust by drilled baffles or other means.

exhaust steam (*Eng.*). See **live steam.**

exhaust stroke (*Eng.*). In a reciprocating engine, the piston stroke during which the expanded working substance, steam or exhaust gas, is ejected from the cylinder; sometimes called the SCAVENGING STROKE.

exhauster, gas (*Eng.*). See **gas exhauster.**

exhausting fan (*Eng.*). A fan used to exhaust foul air, fumes, etc. from a workshop or mine. See **fan, induced draught fan.**

exhaustive methylation (*Chem.*). The process of converting bases into their quaternary ammonium salts and subsequent distillation with alkalis, resulting in the formation of simpler unsaturated compounds which can be reduced to known saturated compounds. This method is used for testing the stability of ring compounds and is of particular value for investigating the constitution of alkaloids and other complicated ring systems.

exhibit (*Med.*). To give as a remedy.

exhibitionism (*Psycho-path.*). The act of displaying parts of the body, normally clothed, in public, accompanied by sexual gratification; often unconscious.

exindu'siate (*Bot.*). Having no indusium.

ex'ine (*Bot.*). The outermost layer of the wall of a pollen grain or of the spore of a moss.

exin'guinal (*Zool*). In *Arachnida*, the second joint of a walking leg: in land Vertebrates, outside the groin.

exit papilla, exit tube (*Bot.*). A short, or a longer, outgrowth from a zoosporangium, through which the zoospores escape into the surrounding water.

exit pupil (*Light*). An imaginary aperture for a telescope or microscope, limiting the emergent beam of light where its cross-sectional area is least. It is usually the image of the objective formed by the eyepiece, and is at the position which should be occupied by the eye of the observer.

exites, eks'its (*Zool.*). In some *Arthropoda*, lobes on the outer side of a limb: especially, in *Crustacea*, lobes on the outer side of a phyllopodium.

Exmet (*Build.*). A proprietary expanded metal specially suitable for reinforcing brickwork, concrete-block work, etc.; manufactured from 24, 22, and 20 gauge mild steel.

exo- (Greek *exo*, without). A prefix used in the construction of compound terms; e.g. *exocardiac* (q.v.).

exocar'diac (*Zool.*). Outside the heart.

ex'ocarp (*Bot.*). See **epicarp.**

exoccipital, —ok-sip'— (*Zool.*). A paired lateral cartilage bone of the Vertebrate skull, forming the side-wall of the brain-case posteriorly.

exocho'mophyte (*Bot.*). A plant which forms a dense mat, and occurs on rocky ledges bearing much detritus.

exocoelar, —sē'lar (*Zool.*). See **somatopleural.**

ex'ocoele, —sēl (*Zool.*). In *Zoantharia*, the portion of coelenteron between each pair of mesenteries. Cf. *endocoele.*

exocoelom, —sē'lom (*Zool.*). The extra-embryonic coelom of a developing Bird, Reptile, or Selachian.

ex'ocone (*Zool.*). (In *Insecta*) said of compound eyes in which the crystalline cone is replaced by a conical ingrowth from the cornea.

ex'ocrine (*Zool.*). Said of glands the secretion of which is poured into some cavity of the body, or on to the external surface of the body by ducts. Cf. *endocrine.*

ex'oderm (*Zool.*). In *Porifera*, the outer or dermal cell layer.

exoder'mis (*Bot.*). A more or less cuticularised layer formed from the outer cells of the cortex of a root, and constituting a temporary protective sheath.

exodon'tia. See under **dentistry.**

ex'ogam'ete (*Zool.*). A gamete which unites with one from another parent.

ex'ogam'y *or* —og'am-i (*Bot., Zool.*). Union between gametes which are not closely related: the mating or conjugation of organisms having different parental stock Cf. *endogamy.*

exogas'tric (*Zool.*). Said of spirally coiled shells in which the coil is directed on to the anterior face of the animal. Cf. *endogastric.*

exogas'trula (*Zool.*). An abnormal echinoid larva, induced artificially, having an evaginated archenteron.

ex'ogen'ous *or* —oj'en-us (*Bot.*). (1) Produced on the outside of another plant member.—(2) Developed from superficial tissues.—(3) Increasing in thickness by the addition of new layers on the outside.

exogenous (*Zool.*). (In *Sporozoa*) said of forms in which sporulation is effected after the cyst has left the host; (in higher animals) said of metabolism which leads to the production of energy for activity. Cf. *endogenous.*

exogenous spore (*Bot.*). A spore formed on the end of a hypha, not inside a sporangium.

exogenous thallus (*Bot.*). The thallus of a lichen in which the fungus predominates.

ex'ogy'nous (*Bot.*). Having the style projecting beyond the corolla.

exomph'alos (*Med.*). A hernia formed by the protrusion of abdominal contents into the umbilicus.

ex'operid'ium (*Bot.*). The outer layer of the peridium.

exopho'ria (*Med.*). Latent external squint revealed in an apparently normal person by passing a screen before the eye.

exophthal'mic goitre (*Med.*). See **Basedow's disease.**

exophthal'mos, exophthal'mus (*Med.*). Protrusion of the eyeball, often associated with goitre.

ex'oplasm (*Zool.*). See **ectoplasm.**

exop'odite (*Zool.*). The outer ramus of a biramous arthropod appendage.

Ex'opterygo'ta (*Zool.*). A subclass of *Insecta* in which wings occur, although sometimes secondarily lost; the change from young form to adult is gradual, the wings developing externally; the young form is usually a generalised nymph.

exoscop'ic embryology (*Bot.*). The condition when the apex of the embryo is turned towards the neck of the archegonium.

exoskel'eton (*Zool.*). Hard supporting or protective structures that are external to and secreted by the ectoderm—e.g. in Vertebrates, scales, scutes, nails, and feathers; in Invertebrates, the carapace, sclerites, etc.

exosmo'sis (*Chem.*). The process of *osmosis* (q.v.) in an outward direction.

ex'ospore (*Bot.*). (1) The outer layer of the wall of a spore.—(2) A sheath of epiplasm which forms round a young ascospore and plays a part in the formation of the spore wall.—(3) A wall formed around some oospores from periplasm.

exospo'rous (*Bot.*). Having exogenous spores.

exosto'sis (*Med.*). A bony tumour growing outwards from a bone.

exothe'cal (*Zool.*). See **extrathecal.**

exothe'cium (*Bot.*). The outer layer in the wall of a moss capsule, and of the microsporangium in Gymnosperms.

exother'mic (*Chem.*). Accompanied by the evolution of heat.

exothermic compound (*Chem.*). A compound whose formation is exothermic; it is therefore relatively stable.

exot'ic (*Zool.*). Ecdemic.

exotox'in (*Bacteriol.*). The toxin produced by a bacterium or micro-organism in the medium in which it grows.

ex'otype (*Zool.*). A category of individuals dependent on the recognition that a given form is non-heritable

Expamet (*Build., Civ. Eng.*). A proprietary expanded metal obtainable in steel, brass, copper, etc.

expanded (*Bot.*). Flattening out and becoming less concave as development proceeds.

expanded concrete (*Build.*). See **light-weight concrete.**

expanded metal (*Build., Civ. Eng.*). A metal network formed by suitably stamping or cutting sheet-metal and stretching it to form open meshes. It is used as a reinforcing medium in concrete construction, as lathing for plasterwork, and for various other purposes. Cf. *B.R.C. fabric.*

expander (*Elec. Eng.*). An inert material, such as carbon or barium sulphate, added to the active material in accumulator plates in order to prevent shrinkage of the mixture.

expanding bit (*Carp., etc.*). A boring-bit carrying a cutter on a radial arm, the position of the cutter being adjustable so that holes of different sizes may be cut.

expanding mandrel (*Eng.*). See under **mandrel** (1).

expanding metals (*Met.*). Alloys of bismuth, which expand on cooling and solidifying; e.g. 2 parts antimony to 1 part bismuth.

expanding plug (*San. Eng.*). A *bag plug* (q.v.).

expanding reamer (*Eng.*). A *reamer* (q.v.) partially slit longitudinally, and capable of slight adjustment in diameter by a coned internal plug.

expandor (*Elec. Comm.*). The amplifying apparatus for automatically increasing the contrast in speech modulation, particularly after reception of speech which has had its contrast compressed by a *compressor* (q.v.).

expansion. Increase in one or more of the dimensions of a body, caused usually by a rise of temperature or a decrease of pressure.

expansion (*Eng.*). (1) The increase in the volume of working fluid in an engine cylinder.—(2) The piston stroke during which such expansion occurs.

expansion, adiabatic (*Heat*). See **adiabatic change.**

expansion circuit-breaker (*Elec. Eng.*). A circuit-breaker in which arc extinction takes place as a result of the rapid cooling produced by the expansion of steam or of gases; these result from the arc which arises between the contacts in water or in a small quantity of oil.

expansion, coefficient of (*Heat*). The fractional expansion (that is, the expansion of unit length, area, or volume) per degree rise of temperature. Calling the coefficients of linear, superficial, and cubical expansion of a substance α, β, and γ respectively, β is approximately twice and γ three times α.

expansion curve (or line) (*Eng.*). The line on an indicator diagram which shows the pressure of the working fluid during the expansion stroke.

expansion engine (*Eng.*). An engine which utilises the working fluid expansively.

expansion gear (*Eng.*). That part of a steam-engine valve gear through which the degree of expansion can be varied.

expansion joint (*Civ. Eng., Rail.*). A joint arranged between two parts to allow these parts to expand with temperature rise, without distorting laterally; e.g. the gap left between successive lengths of rail, or the joint made between successive sections of carriageway in road construction.—(*Eng.*) A special pipe joint used in long pipe-lines to allow for expansion; e.g. a horseshoe bend, a corrugated pipe acting as a bellows, a sliding socket joint with a stuffing box.

expansion line (*Eng.*). See **expansion curve.**

expansion pipe (*Build.*). In a domestic system of heating, a pipe carried up from the hot-water tank to a point above the level of the cold-water tank, where its open end is bent over, so that, if the water boils, it may discharge into the latter tank any water or steam forced out.

expansion rollers (*Eng.*). Rollers on which one end of a large girder or bridge is often carried, to allow of movement resulting from expansion; the other end of the girder, etc. is fixed.

expansion tank (*Build.*). In a hot-water system, the tank connected to, and above, the hot-water cylinder to allow of expansion of the water on heating; often the cold-water feed tank is so used. See **expansion pipe.**

expansion valve (*Eng.*). An auxiliary valve working on the back of the main slide-valve of some steam-engines, in order to provide an independent control of the point of cut-off.

expansive working (*Eng.*). The use of a working fluid expansively in an engine; an essential feature of every efficient working cycle.

expe'dor phase advancer (*Elec. Eng.*). A phase advancer which injects into the secondary circuit of an induction motor an e.m.f. which is a function of the secondary current. Cf. ***susceptor phase advancer.***

experimental embryology (*Zool.*). The experimental study of the physiology and mechanics of development.

experimental mean pitch (*Aero.*). The distance of travel of an airscrew along its own axis, while making one complete revolution, assuming the condition of its giving no thrust.

expiration (*Zool., etc.*). The expulsion of air or water from the respiratory organs.

ex'planate (*Bot.*). Spread out on a surface.

explantation (*Zool.*). In experimental zoology, the culture, in an artificial medium, of a part or organ removed from a living individual: tissue-culture; cf. *interplantation.*—*n.* **explant.**

ex'pletive (*Masonry*). A stone used as a filling for a cavity.

exploder (*Mining*). An appliance for firing electrically the explosives used in mining and shaft sinking.

exploitation (*Mining*). The operations involved in winning or obtaining ore from a mine.

exploring brush (*Elec. Eng.*). A small brush fitted to a d.c. machine for experimental purposes; it can be moved round the commutator to investigate the distribution of potential around it.

exploring coil (*Elec. Eng.*). A small coil used for measuring the flux in a magnetic field. Also called a SEARCH COIL.

explosion (*Chem.*). A rapid increase of pressure in a confined space. Explosions are generally caused by the occurrence of exothermic chemical reactions in which gases are produced in relatively large amount.

explosion engine (*Eng.*). An obsolete term for *internal-combustion engine.*

explosion-proof or **flame-proof** (*Elec. Eng.*). Said of electrical apparatus so designed that an explosion of inflammable gas inside the enclosure will not ignite inflammable gas outside. Such apparatus is used in mines or other places having an explosive atmosphere.

explosion pot (*Elec. Eng.*). A strong metal container surrounding the contacts of an oil circuit-breaker; the high pressure set up inside the pot when an arc occurs assists in the extinction of the arc.

explosive. A generic term which embraces all materials that can be either exploded or detonated. See **high explosive, detonator.**—(*Mining*) There are two main classes—'permitted' and 'non-permitted,' i.e. those which are safe for use in coal-mines and those which are not. Ammonium nitrate mixtures are mostly used in coal-mines; nitro-glycerine derivatives in metal-mines. Detonators and fuses are also included under the Coal Mines Acts.

exponential baffle (*Acous.*). A baffle approximating to a short section of an exponential horn.

exponential horn (*Acous.*). A horn for coupling a diaphragm with the outer air, arranged so that the area progressively increases as an exponential function of the distance of the area from the throat.

exposure (*Meteor.*). The method by which an instrument is exposed to the elements. The exposure in meteorological stations is standardised in order that records from different stations may be comparable.

exposure (*Photog.*). The act and duration of permitting light to fall from an object on to a photographically sensitive emulsion. The exposure is determined by the time, the stop, and the brightness of the object, and is measured in candle-metre-seconds. See also **double exposure.**

exposure meter (*Photog.*). An indicating meter which is operated by the illumination falling on its light-sensitive element, thereby giving information which determines the photographic exposure to be given to an emulsion under the prevailing conditions.

expulsion fuse (*Elec. Eng.*). An enclosed fuse-link in which the arc occurring when the link melts is extinguished by the lengthening of the break due to expulsion of part of the fusible material through a vent in the container.

expulsion gap (*Elec. Eng.*). A special form of expulsion fuse connected in series with a gap and placed across insulator strings on an overhead transmission line; a voltage surge breaks down the gap and the resulting arc is quickly broken by the fuse, so that no interruption to the supply need take place.

exscu'tellate (*Zool.*). Without a scutellum.

exser'ted. Stretched out; protruded.—(*Bot.*) Said of stamens which project beyond the corolla of a flower.

exsicca'tion (*Geog.*). The draining away of water of precipitation as a result of human activity; e.g. the cutting down (in Africa and elsewhere) of forests, the debris of which retain moisture, the draining of swampy ground, such as the Fens, and the continued ploughing of lands unprotected from winds, which consequently blow the topsoil away and turn the area into a desert. See **desiccation.**

exstip'ulate (*Bot.*). Without stipules.

ex'strophy, ex'trophy (*Med*). A turning inside out of a hollow organ (especially the bladder).

extender (*Paint.*). A substance, generally an inert material, which is added to paint to give it extra body, key, opacity, or to serve as an adulterating medium.

extension (*Acous.*). The use of one long rank of pipes in an organ for a number of stops of the same class but of different pitches. The extension principle economises in pipes, but volume is lost on thick chords because one pipe can be blown once only.

extension (*Photog.*). The facility for varying the distance between the lens and the photosensitive surface and for bringing the image into focus on the surface, for which purpose fine adjustments are provided in most cameras.

extension coefficient (*Elec. Eng.*). A coefficient applied to the length of the air gap of an electric machine in order to allow for the effect of the teeth when calculating the m.m.f. required for the magnetic circuit. It is greater than unity and therefore increases the effective gap length. Cf. *contraction coefficient.*

extension telephone (*Teleph.*). A telephone which is connected in parallel with a main telephone, or to a subscriber's switchboard.

extensom'eter (*Met.*). An instrument used, in the testing of metals, for measuring small values of strain.

exten'sor (*Zool.*). A muscle which by its contraction straightens a limb, or a part of the body. Cf. *flexor.*

external characteristic (*Elec. Eng.*). A curve showing the relation between the terminal voltage of an electric generator and the current delivered by it.

external circuit (*Elec. Eng.*). The circuit to which current is supplied from a generator, battery, or other source of electrical energy.

external compensation (*Chem.*). Neutralisation of optical activity by the mixture or loose molecular combination of equal quantities of two enantiomorphous molecules.

external conductor (*Elec. Eng.*). The outer earthed conductor of an earthed concentric wiring system.

external digestion (*Zool.*). A method of feeding, adopted by some *Coelenterata, Turbellaria, Oligochaeta, Insecta,* and *Araneida,* in which digestive juices are poured on to food outside the body and imbibed when they have dissolved some or all of the food.

external firing (*Eng.*). The practice of heating a boiler or pan by a furnace outside the shell; all modern boilers have internal furnaces and flues.

external hazard (*Build.*). A fire risk in connexion with a building, arising from adjacent buildings.

external indicator (*Chem.*). An indicator to which are added drops of the solution in which the main reaction is taking place, away from the bulk of the solution.

external screw-thread (*Eng.*). A screw-thread cut on the outside of a cylindrical bar. Also called a MALE THREAD.

external secretion (*Zool.*). A secretion which is discharged to the exterior, or to some cavity of the body communicating with the exterior. Cf. *internal secretion.*

ex'terocep'tor (*Zool.*). A sensory nerve-ending, receiving impressions from outside the body. Cf. *interoceptor.*

extinction coefficient (*Chem.*). A measure of the absorption of light by a dissolved substance. It is given by the formula $\varepsilon = \frac{I}{cd} \cdot \log \frac{I_0}{I}$, where I_0 and I are the intensities of the incident and transmitted light respectively, in a solution d cms. thick of molar concentration c.

extinction meter (*Photog.*). An exposure meter in which the reading is found by attenuating the light from the object until an image superimposed on it just becomes indistinguishable.

ex'tine (*Bot.*). The outer wall-layers of a pollen grain.

extra-, extr- (Latin *extra,* outside). A prefix used in the construction of compound terms; e.g. *extranuclear,* outside the nucleus.

extra (*Cinema.*). In motion-picture production, an artist who is engaged by the day for small parts or crowd scenes.

extra (*Typog.*). A charge on work extra to the estimated price. Author's corrections in excess of a certain allowance come under this head.

extras (*Build., Civ. Eng.*). All works the inclusion of which is not expressed or implied in the original contract price. Also called VARIATIONS.

extra-heavy (*Plumb.*). Said of pipe which is of greater thickness than the standard pipe.

extra-high voltages (*Elec. Eng.*). A term used in official regulations for voltages above 3·3 kV; but more commonly employed to denote voltages of the order of 100 kV or more.

extra material (*Weaving*). The name indicating extra threads, warp or weft, for producing a figured effect on a fabric.

extra thirds (*Paper*). A standard size of cut card, 1⅞ × 3 in.

extra-axillary (*Bot.*). Said of a bud which is formed elsewhere than in an axil.

extracellular digestion (*Bot.*). The digestion of material by enzymes secreted from the cell and acting outside it.

ex'tracolumel'la (*Zool.*). The distal element of the auditory ossicles of all land Vertebrates except *Gymniophiona, Urodela,* and *Mammalia.*

extract (*Woollen*). A material made from rags composed of cotton and wool from which the former has been extracted by a chemical process.

extract ventilator (*Build.*). A cowl-like appliance fitted to the top of a ventilating shaft in a building, in order to induce in it an up-draught.

extraction (*Chem.*). A process for dissolving certain constituents of a mixture by means of a liquid with solvent properties for one of the components only. Substances can be extracted from solids, e.g. grease from fabrics with petrol; or from liquids, e.g. extraction of an aqueous solution with ether, the efficiency of which is governed by the partition coefficient of the particular substance between the two solvents.

extraction (*Met.*). The processes used in obtaining metals from their ores. They usually involve decomposition of a compound containing the metal, and the separation of this from the gangue minerals. See **refining, smelting.**

extraction turbine (*Eng.*). A steam-turbine from which steam for process work is tapped at a suitable stage in the expansion, the remainder expanding down to condenser pressure.

extra'dos (*Build., Civ. Eng.*). The back or top surface of an arch. See **intrados.**

extradu'ral (*Anat.*). Situated outside the dura mater.

extra-embryonic (*Zool.*). (In embryos developed from eggs containing a great deal of yolk, as those of Birds) pertaining to that part of the germinal area beyond the limits of the embryo.

extra-floral (or extra-nuptial) nectary (*Bot.*). A nectary occurring on or in some part of a plant other than a flower.

extra-galactic nebula (*Astron.*). A *nebula* (q.v.) external to the Galaxy.

extramat'rical (*Bot.*). Said of a fungus which has the greater part of its thallus, and especially the reproductive organs, outside the host cell, or on the surface of the substratum.

extra-nuptial nectary (*Bot.*). See **extra-floral nectary.**

extrasys'tole (*Med.*). A premature contraction of the heart interrupting the normal rhythm, the origin of the impulse to contraction being abnormally situated.

extrathe'cal (*Zool.*). (In Corals) outside the theca.

extra-uterine (*Anat.*). Situated or happening outside the uterus.

extravasa'tion (*Med.*, *Zool.*). The abnormal escape of fluids, as blood or lymph, from the vessels which contain them.—*v.* **extrav'asate.**

extravas'cular (*Anat.*). Placed or happening outside a blood-vessel.

ex'travert (*Psychol.*). An individual preoccupied mainly with external things and events; well adapted to the outside world and to other people. Examples are the soldier, business man, actor, etc. Cf. *introvert.*

extrin'sic (*Zool.*) Said of appendicular muscles of Vertebrates which run from the trunk to the girdle, or the base of the limb. Cf. *intrinsic.*

ex'trophy (*Med.*). See **exstrophy.**

extrorse' (*Bot.*). (1) Said of the manner of dehiscence when an anther opens towards the periphery of the flower.—(2) Turned so as to face away from the centre of the axis.

extrorse (*Zool.*). Directed or bent outwards.

ex'trovate (*Zool.*). The substance which flows out of a punctured cell.

extroversion (*Med.*). (1) See **exstrophy.**—(2) The turning of interest to objects outside the person.

extrusion (*Met.*). The operation of producing rods, tubes, and various solid and hollow sections, by forcing hot metal through a suitable die by means of a ram. Applied to numerous non-ferrous metals, alloys, and other substances.

extrusive rocks (*Geol.*). Rocks formed by the consolidation of magma on the surface of the ground, as distinct from *intrusive rocks* which consolidate below ground. Commonly referred to as LAVA FLOWS; normally of fine grain or even glassy.

ex'udate (*Med.*). The fluid which has escaped from the blood-vessels into the tissues or the cavities of the body as a result of inflammation; it contains protein and many cells, and clots outside the body.

exudation (*Bot.*). The liberation of liquid water or sap from special pores in the plant.

exudation (*Med.*). The escape of fluid from the blood-vessels into the tissues, as a result of inflammation.

exudation cone (*Zool.*). A cone of clear protoplasm which, after fertilisation, protrudes from some types of ovum.

exudation pressure (*Bot.*). See **root pressure.**

exudation theory (*Zool.*). The theory that caste in *Isoptera* depends upon the exudations produced by the nymphs.

exumbrel'la (*Zool.*). The upper convex surface of a medusa.—*adj.* **exumbrellar.**

exu'viae (*Zool.*). The layers of the integument cast off in ecdysis.

exu'vial (*Zool.*). Pertaining to, or facilitating, ecdysis.

eye (*Build.*). (1) The circular opening in the top of a dome.—(2) A circular or oval window.

eye (*Eng.*). (1) A loop formed at the end of a steel wire or bolt. See **eye bolt.**—(2) The central inlet passage of the impeller of a centrifugal compressor or pump.

eye (*Glass*). The hole in the centre (or elsewhere) of the floor of a pot furnace up which the combustible gases rise as flame to heat the furnace.

eye (*Join.*). The circular centre of a volute scroll.

eye (*Meteor.*). The central calm area of a cyclone or hurricane, which advances as an integral part of the disturbed system.

eye (*Mining*). The mouth or entrance to a pit shaft.

eye (*San. Eng.*). A short branch off a drain-pipe, useful for inspection or clearing purposes.

eye (*Zool.*). The sense-organ which receives visual impressions.

eye-and-object correction (*Surv.*). A correction applied in precise work to the average angle of elevation read on the vertical circle, in order to compensate for the vertical axis of the theodolite not being truly vertical. The correction is

$$+\frac{\Sigma o-\Sigma e}{4}\cdot\theta,$$

where o=object-end reading of the altitude level; e=eye-end reading of the altitude level; θ=angular value of 1 division of the altitude level.

eye bolt (*Eng.*). A bolt carrying an eye instead of the normal head; fitted to heavy machines and other parts for lifting purposes.

eye-ground (*Anat.*). The fundus; that part of the cavity of the eyeball which can be seen through the pupil with an ophthalmoscope.

eyepiece (*Phys.*, *etc.*). In an optical instrument, the lens or lens system to which the observer applies his eye in using the instrument.

See **Huyghens— Ramsden— terrestrial—***

eye spot (*Bot.*, *Zool.*). A small mass of light-sensitive pigment found in some lower animals and plants.

eyed gneiss, īd nīs (*Geol.*). See **augen-gneiss.**

eyra, ā'ra (*Furs*). The dressed skin of a wild-cat of S. America, of brownish-grey colour. Also called JAGUARONDI.

Eyring formula, ī'ring (*Acous.*). A formula proposed for the period of reverberation of an enclosure, taking into account the time required for waves to travel between successive reflections.

Eytelwein's formula, ī'tel-vin (*Hyd.*). An expression giving the velocity of flow in a pipe as:

$$V=\sqrt{11704.m.i+0{\cdot}01698}-0{\cdot}1303,$$

where V=velocity in ft. per second; m=hydraulic mean depth in feet; i=virtual slope.

f (*Chem.*). A symbol for (1) activity coefficient, for molar concentration; (2) partition function.

f-number, f-system (*Photog.*). The measurement of lens aperture by reference to focal-length of the lens; e.g. *f*/2·8 means that the focal length is 2·8 times the diameter of the circular aperture determining the maximum area of the centre of the lens used by light passing through it.

F (*Biol.*). An abbrev. for *filial generation* in work on inheritance; usually distinguished by the addition of a number, thus: F_1, first filial generation; F_2, second filial generation, etc. Cf. *P*, P_1, P_2, etc.

F. (*Build.*). The abbrev. for *face* or *flat*.

F (*Chem.*). The symbol for *fluorine*.

F (*Chem.*). A symbol for *Faraday's constant*.

[F] (*Light*). A Fraunhofer line in the blue of the solar spectrum of wavelength 4861·527 A. It is the second line in the Balmer hydrogen series, known also as H_β.

F. (*Phys.*). The symbol used, following a temperature (e.g. 41° F.), to indicate the *Fahrenheit scale* (q.v.).

F-layer (*Radio*). The upper ionised layer in the ionosphere resulting from the ultra-violet radiation from the sun. At a regular height of 300 km. during the night, it falls to about 200 km. during the day. During some seasons, this remains as the F_1 layer while an extra F_2 layer rises to a maximum of 400 km. at noon. Considerable variations are possible during particle bombardment from the sun, the layer rising to great heights or vanishing. See **D-layer.**

fabel'la (*Zool.*). In Vertebrates, a small isolated bone situated in the angle of the knee.

fabric (*Build.*). A general term applied to the walls, floors, and roof of a building.

Fabry and Pérot interferometer, fab-ri, pā-rō (*Light*). An instrument in which circular interference fringes are produced by the passage of monochromatic light through a pair of plane, parallel, half-silvered glass plates, of which one is fixed while the other may be moved by an accurately calibrated screw. By observing the fringes while changing the plate separation by means of the screw, the wavelength of the light may be measured.

façade, fa-sahd' (*Build.*). The front elevation of a building.

face. The outer, upper, or more important surface of any object. For specific senses, see below.

face (*Bot.*). In general, the upper side of an organ when it has two well-marked sides.

face (*Build.*). (1) The front of a wall or building.—(2) The exposed vertical surface of an arch.

face (*Crystal.*). See **crystal face.**

face (*Eng.*). The working surface of any part; as the sole of a carpenter's plane, the striking surface of a hammer, the surface of a slide-valve, or the surface of the steam chest on which it slides, the seating surface of a valve, the flank of a gear-tooth, etc.

face (*Horol.*). The dial of a watch or clock.

face (*Masonry*). The exposed front surface of a building-stone or ashlar when it is built into a wall.

face (*Mining*). The exposed surface of coal or other mineral deposit in the working place where mining, winning, or getting is proceeding.

face (*Zool.*). In Mammals, the portion of the skull anterior to the junction of the presphenoid and the mesethmoid: the fleshy structures overlying this portion of the skull.—*adj.* **facial.**

face-airing (*Mining*). The operation of directing the air current along the face of a working place.

face-centred cubic structure (*Met.*). An arrangement of atoms in crystals which may be imitated by packing spheres and is characteristic of many metals. The atomic centres are disposed in space in such a way that they may be supposed to be situated at the corners and the middle of the faces of a set of cubic cells.

face chuck or **face plate** (*Eng.*). A large disc which may be screwed to the mandrel of a lathe and is provided with slots and holes for securing work of a flat or irregular shape.

face-hammer (*Tools*). A hammer having a peen which is flat rather than pointed or edged.

face joint (*Masonry*). A joint between adjacent stones which is visible on the face of the wall.

face lathe (*Eng.*). A lathe designed for work of large diameter but short length (e.g. large wheels or discs).

face left and **face right** (*Surv.*). Expressions referring to the pointing of a theodolite telescope when the vertical circle is respectively *left* and *right* of the telescope, as seen from the eyepiece end.

face mark (*Carp., Join.*). A distinguishing mark made on one face of a piece of wood to show that it was used as the basis for truing the other surfaces.

face mix (*Build.*). A mixture of cement and stone dust used for facing concrete blocks in imitation of real stone.

face mould (*Build.*). A templet used as a reference for shaping the face of wood, stone, etc.

face plate (*Eng.*). (1) See **face chuck.**—(2) A *surface plate* (q.v.).

faceplate breaker controller (*Elec. Eng.*). A faceplate controller having a separate contactor for breaking the circuit.

faceplate breaker starter (*Elec. Eng.*). A faceplate starter having a separate interlocked contactor for breaking the circuit.

faceplate controller (*Elec. Eng.*). See **faceplate starter.**

faceplate coupling (*Eng.*). See **flange coupling.**

faceplate starter (*Elec. Eng.*). An electric motor starter in which a contact lever moves over a number of contacts arranged upon a plane surface. Also called a FACEPLATE CONTROLLER.

face right (*Surv.*). See **face left.**

face side (*Carp., Join.*). The side of a piece of wood bearing the face mark.

face-wall (*Build.*). The front wall.

facel'lite (*Min.*). See **kaliophilite.**

facet, fas'et (*Arch.*). A *facette* (q.v.).

facet (*Zool.*). One of the corneal elements of a compound eye: a small articulatory surface.

facets (*Jewel.*). (1) The flat sides of a crystal.—(2) The flat surfaces of varying shapes and sizes cut on precious stones.

facette (*Arch.*). A projecting flat surface between adjacent flutes in a column. Also called a LISTEL.

facia, fash'i-a (*Arch.*). A flat banded projection from the face of a member.

fa'cial (*Zool.*). Pertaining to or situated on the face: the seventh cranial nerve of Vertebrates, supplying the facial muscles and tongue of higher forms, the neuromast organs of the head and snout in lower forms, and the palate in both.

facies, fā'sēz (*Bot.*). The general form and appearance of a plant.

facies (*Geol.*). The sum of the lithological and faunal characters of a sediment is its *facies*. Lithological facies involves composition, grain-size, texture, colour, as well as such mass characters as current bedding, nature of stratification, ripple-marks, etc. Similarly, metamorphic facies involves the degree of crystallisation and the mineral assemblage in a group of metamorphic rocks.

facing (*Civ. Eng., Masonry, etc.*). An outer covering applied to the exposed face of sea-walls, embankments, brick walls, etc.

facing (*Eng.*). (1) The operation of turning a flat face on a piece of work in the lathe.—(2) A raised machined surface to which another part is to be attached.

facing (*Mining*). A front cleat or face slip: situated opposite a back cleat. See **cleat.**

facing bar (*Textiles*). A strip of metal which forms a background to the fabric as it leaves the points in a lace machine. Also called WORK BAR.

facing bond (*Build.*). A general term for any bond consisting mainly of stretchers.

facing bricks (*Build.*). A class of brick used for ordinary facing work; of better quality and appearance than common bricks, but not made to withstand heavy loads, as are engineering bricks.

facing gauge (*Eng.*). An instrument for measuring the total head of a stream of fluid; it consists of a small tube which faces upstream in the pipe carrying the fluid and is attached to a manometer. See **Pitot tube.**

facing paviors (*Build.*). A name given to a class of hard-burnt bricks used as facing bricks in high-class work.

facing sand (*Foundry*). Moulding sand, containing a proportion of finely powdered coal dust, rammed round the faces of a pattern to give a smoother surface to the casting.

facio- (Latin *facies*, face). A prefix used in the construction of compound terms; e.g. *faciolingual*, pertaining to the face and tongue.

fa'cioplas'ty (*Surg.*). Plastic surgery of the face.

facsimile radio, fak-sim'il-e (*Radio*). The transmission of a still picture by means of a radio link.

facsimile telegraphy (*Teleg.*). The transmission of still pictures over telegraph circuits by scanning, modulating a carrier, and consequent reconstruction of the picture by synchronous scanning. A radio link may be included in the transmission circuit.

factable (*Build.*). A *coping* (q.v.).

fac'tice (*Rubber*). A substance produced by vulcanising vegetable oils with sulphur or sulphur chloride; originally used as a rubber substitute but now employed as a compounding ingredient in rubber manufacture; e.g. in the production of rubber-proofed fabrics.

factor (*Elec. Eng., Illum.*).

See **absorption—**
amplitude—
copper—
crest—
damping—
daylight—
decay—
demand—
diffuse reflection—
diffuse transmission—
diversity—
duty cycle—

utilisation—
waste light—
winding—

factor, filter (*Photog.*). See **filter factor.**

factor of merit (*Elec. Eng.*). (Of reflecting galvanometers) the deflection, in millimetres, produced on a scale at a distance of one metre by a current of 1 micro-ampere, the deflection being corrected for coil-resistance and time of swing. Also called NORMAL SENSITIVITY.

factor of safety (*Build., Civ. Eng., etc.*). The ratio, allowed for in design, between the breaking load on a member or structure and the safe permissible load on it.

factor of the habitat (*Bot.*). Anything in the environment which affects, directly or indirectly, the life of a plant.

factor-symbols (*Zool.*). Letters in a genotypic formula which designate separate characters.

factorial development (*Photog.*). The time procedure of development, in which the time taken for the image to appear is multiplied by a factor, depending on the temperature and the type and dilution of the developer, to obtain the time after which the development is stopped.

factory-fitting (*Illum.*). An electric-light fitting in which the lamp is housed in a strong protecting glass globe. Also called a MILL-FITTING.

fac'ulae (*Astron.*). The name given to small bright patches seen on the surface of the sun, generally in the neighbourhood of sun spots, but also seen without the latter and believed to be independent phenomena.

fac'ultative (*Zool.*). Optional: able to live under different conditions, as a *facultative parasite* which can live either as a parasite or as a free-living form. Cf. *obligate*.

facultative anaerobe (*Bot.*). A plant which normally uses free oxygen but can live with little or none of it.

facultative gamete (*Bot.*). A zoospore which can function as a gamete.

facultative parasite (*Bot.*). A saprophyte which may become a parasite under special conditions.

facultative saprophyte (*Bot.*). A parasite which can live as a saprophyte under special conditions. Also HEMIPARASITE, HEMISAPROPHYTE.

fade (*Cinema.*). The gradual appearance or disappearance of an image during projection of a motion picture.

See **chemical—** **cross—**

fade-in (*Cinema.*). The operation of the iris of a cinematograph camera to obtain the gradual appearance of the image in the final projected motion-picture.

fade-out (*Cinema.*). The operation of slowly closing the iris of a cinematograph camera so as to effect the gradual disappearance of the image in the resulting positive print.

fader (*Cinema.*). In a cinematograph camera, the device for making fades; often operated automatically by the driving mechanism.

fader (*Elec. Comm.*). A potentiometer device or variable attenuator; used, in a communication channel, for varying the modulation level continuously from zero to maximum, or vice versa.

fading (*Photog.*). The diminution of contrast in a print after long exposure to light or from incomplete fixing or washing.

fading (*Radio*). The phenomenon represented by more or less periodic reductions in the strength of the field of a distant station; produced by variations in the nature of the atmospheric path followed by the waves.

fadom'eter (*Chem.*). An instrument used to determine the resistance of a dye or pigment to fading.

faeces, fē'sēz (*Zool.*). The indigestible residues remaining in the alimentary canal after digestion and absorption of food-materials.

faggot (*Civ. Eng.*). A bundle of brushwood. See **fascine.**

faggot or **fagot** (*Met.*). Made by forming a box with four long flat bars of wrought-iron and filling the interior with scrap and short lengths of bar.

faggoted (or **fagoted**) **iron** (*Met.*). Wrought-iron bar made by heating a faggot to welding heat and rolling down to a solid bar. If the process is repeated *double-faggoted iron* is obtained.

fag'opy'rism (*Vet*). Poisoning of white-skinned animals and birds which have eaten and become sensitised to a fluorescent substance in certain *Polygonaceae* (particularly buckwheat, *Fagopyrum esculentum*) and have been exposed to sunlight. Usually the poisoning is manifested as an inflammation of the unpigmented skin.

fagot, fagoted. See **faggot, faggoted.**

fahlerz, fah'lerts (*Min.*). The grey-copper ore *tetrahedrite* (q v.).

Fahrenheit scale, fah'ren-hit (*Heat*). The method of graduating a thermometer widely used in English-speaking countries. The lower and upper fixed points are marked respectively 32° F. and 212° F., the fundamental interval being therefore 180 degrees. To convert from the Fahrenheit scale to the Centigrade, subtract 32 and multiply by $\frac{5}{9}$.

F.A.I. (*San. Eng.*). Abbrev. for *fresh-air inlet*.

faïence, fă-yahngs (*Build.*). Glazed terra-cotta blocks used as facings for buildings.—(*Pot.*) Glazed earthenware of a superior kind. Also called FAYANCE, FAYENCE.

faikes or **fakes** (*Mining*). Shaly sandstone. See **blaes.**

fair cutting (*Build.*). The operation of cutting brickwork to the finished face of the work.

fair ends (*Masonry*). Projecting masonry ends requiring to be dressed to a finished surface.

fairing (*Aero.*). A covering to any aircraft structure, for the purpose of reducing it to the form having the least possible head resistance.

fairing (*Ship Constr.*). The process of ensuring that the lines of intersection of all planes with a true ship form are *fair*; the resulting lines are known as *quarter lines* (q.v.).

Fairlight Clay (*Geol.*). An impersistent clay band varying in thickness from nearly 400 ft. to nothing, occurring in E. Kent at the base of the Ashdown Sands in the Wealden Series of Lower Cretaceous age.

fairy ring (*Bot.*). A ring of strongly growing dark-green vegetation, often with a ring of dead plants inside it, the middle being occupied by vegetation more or less normal in appearance. The condition is caused by the spreading, in the soil, of a fungal mycelium which releases compounds of nitrogen at its active edge, and forms a dense mass of hypha just behind that edge. The nitrogenous compounds stimulate the growth of the higher plants, but behind this zone of stimulation the dense mycelium in the soil upsets water movements, so that the plants above it may die of drought. In autumn, the fruit bodies of the fungus may appear at the periphery of the ring.

fakes (*Mining*). See **faikes.**

faking (*Cinema.*). *Trick photography* (q.v.).

fal'ciform, fal'cate (*Bot., Zool.*). Flattened and curved like a sickle; sickle-shaped.

falciform ligament (*Zool.*). In higher Vertebrates, a peritoneal fold attaching the liver to the diaphragm.

falciform process (*Zool.*). In the eyes of many Fish, a muscular and highly vascular structure which enters the retinal cup at the chorioid fissure and extends across to the lens, where it expands into the campanula Halleri; it is believed to be a means of accommodation.

falciform young (*Zool.*). The sickle-shaped sporozoites of some *Eugregarinaria.*

Falco'nifor'mes (*Zool.*). An order of *Pelargomorphae* characterised by the possession of a powerful hooked beak, strong talons, and a desmognathous palate; rapacious carnivorous forms; birds of prey. Hawks, Eagles, Falcons, Kites, Buzzards, Vultures, Secretary-birds, and Harriers.

falcu'la (*Zool.*). A sharp curved claw.—*adj.* **falculate.**

Falk rail-joint (*Elec. Eng*). A joint for tramway rails, made by the cast-welding process.

fall (*Civ. Eng., etc*). The inclination of rivers, streams, ditches, drains, etc. quoted as a fall of so much in a given distance. See **cross fall*.**

fall (*Eng.*). A hoisting rope.

fall (*Mining*). (1) The collapse of the roof of a level or tunnel, or of a flat working place or stall: the collapse of the hanging wall of an inclined working place or stope.—(2) A mass of stone which has fallen from the roof, or sides of an underground roadway, or from the roof of a working place.—(3) To blast, wedge, or in any other way to break down coal from the face of a working place.

fall bar (*Join*). The part of a latch which pivots on a plate screwed to the inner face of a door, and drops into a hook on the frame.

fall-of-potential test (*Elec. Eng.*). A test for locating a fault in an insulated conductor; the voltage-drop along a known length of the conductor is compared with the voltage drop between one end of the conductor and the fault. Also called DROP TEST, CONDUCTIVITY TEST.

fall of the leaf (*Bot.*). The organised shedding of leaves by deciduous plants in autumn or as a dry season comes on. The plant is thereby rid of a large potential transpiring area, and is less likely to suffer from excessive loss of water during periods of physiological drought or of actual drought. Evergreen leaves fall when they become old.

fall pipe (*Build.*). A *downpipe* (q.v.).

fall-ridder (*Mining*). See **bordroom-man.**

fall table (*Mining*). A hinged shaft-cover.

fallen wool (*Textiles*). (1) Wool procured from sheep that have died.—(2) Fibres that have become detached from the fleece before shearing.

fallers (*Mining*). Movable supports for a cage or bond. See **keps.**

falling mould (*Join.*). The development in elevation of the centre line of a handrail.

falling starch (*Bot.*). See **statolith.**

falling stile (*Join.*). The shutting stile of a gate, especially of a gate so hung that the bottom of the shutting stile falls as the gate closes.

falling weight test (*Eng.*). See **drop test.**

Fallo'pian tube (*Zool.*). In Mammals, the anterior portion of the Müllerian duct; the oviduct.

false amethyst, etc. (*Min.*). In naming gemstones those engaged in the trade are guided by the colour of the gem rather than by its composition and physical characters. Thus, to them, all mauve stones are amethyst. Yet many minerals, when quite pure, are without colour; the addition of a minute amount of impurity of the right composition will impart to any of them a mauve tint. Unless the mauve stone is pure silica, it is incorrect to call it *amethyst*. For example, some specimens of corundum are mauve; these are known in the trade as *oriental amethyst* —one type of *false amethyst.*

false amnion (*Zool.*). See **chorion.**

false annual ring (*Bot.*). A second ring of xylem formed in one season, following the defoliation of the tree by the attacks of insects or other accident; oaks are liable to this, as they may be completely stripped of leaves by the oak tortrix.

false axis (*Bot.*). A monochasium which looks like one axis but really consists of a number of successive lateral branches running more or less in a line.

false bearing (*Build.*). A beam, such as a sill, when not supported under its entire length, is said to have a *false bearing*.

false bedding planes (*Geol.*). Minor planes of stratification inclined at an angle to the major bedding planes; due to changes in the direction and velocity of currents. Characteristic of sedimentation under deltaic and aeolian conditions.

false berry (*Bot.*). A fleshy fruit, looking like a berry, but with some of the flesh developed from the receptacle of the flower.

false bottom (*Eng.*) A removable bottom placed in a vessel to facilitate cleaning: a casting placed in a grate to raise the fire bars and reduce the size of the fire.

false ceiling (*Build.*). A lower dummy ceiling formed to provide covered accommodation for wires, conduits, etc.

false core (*Eng.*). See **drawback.**

false cow-pox (*Vet.*). See **impetigo (bovine).**

false diamond (*Min.*). Several natural minerals are sometimes completely colourless and, when cut and polished, make brilliant gems. These include zircon, white sapphire, and white topaz. All three, however, are birefringent and can be easily distinguished from true diamond by optical and other physical tests. See **false amethyst.**

false dichotomy (*Bot.*). Branching in which two lateral branches arise on opposite sides of the main stem and overtop it.

false dissepiment (*Bot.*). A wall which divides the loculus of an ovary into two compartments, but is an ingrowth from the carpel wall and not a wall between one carpel and its neighbour.

false ellipse (*Build.*). An approximate ellipse, composed of circular arcs.

false fruit (*Bot.*). A fruit formed from other parts of the flower in addition to the gynaeceum.

false galena (*Min.*). An obsolete term for *blende* (q.v.).

false germination (*Bot.*). An appearance of germination in a dead seed due to swelling of the embryo as it takes up water.

false gilding (*Jewel.*). Transparent yellow lacquer over bright silver or tinfoil.

false header (*Build.*). A half-length brick, sometimes used in Flemish bond.

false hybrid (*Bot.*). A plant developed after cross-fertilisation, but possessing characters from one parent only.

false key (*Eng.*). A circular key for attaching a hub to a shaft; it is driven into a hole which is parallel with the shaft axis and has been drilled half in the hub and half in the shaft.

false pile (*Civ. Eng.*). A length added to a pile which has been driven.

false ribs (*Zool.*). In higher Vertebrates, ribs which do not reach the sternum.

false roof (*Carp.*). The space between the roof-covering and the ceilings of the upper rooms.

false ruby (*Min.*). Some species of garnet (*Cape ruby*) and some species of spinel (*Balas ruby* and *ruby spinel*) possess the colour of ruby, but have neither the chemical composition nor the physical attributes of true ruby. See **false amethyst.**

false septum (*Bot.*). See **spurious dissepiment.**

false station (*Surv.*). A point at which a ranging rod is fixed when setting out the skeleton, but from which it is later removed to a more suitable point to mark a true station.

false tissue (*Bot.*). See **pseudoparenchyma.**

false topaz (*Min.*). A trade name applied to yellow quartz. See **citrine.**

falsework (*Civ. Eng.*). The temporary work known as *centring* (q.v.)—scaffolding, or other supports used in construction.

false zero test (*Elec. Eng.*). A test, made on a bridge or potentiometer, in which a balance is obtained, not with zero galvanometer reading, but with some definite value caused by a constant extraneous current.

falx (*Zool.*). Any sickle-shaped structure.—*adjs.* **falciform, falcate.**

falx cerebri (*Zool.*). A strong fold of the dura mater, lying in the longitudinal fissure between the two cerebral hemispheres.

famat'inite (*Min.*). An orthorhombic sulphide of copper and antimony, Cu_3SbS_4, occurring in the Famatina Mts. (Argentina) and in Peru.

family (*Biol.*). A group of individuals within an order or suborder.

fan (*Eng.*). (1) A device for delivering or exhausting large volumes of air or gas with but a low pressure increase. It consists either of a rotating paddle-wheel or an airscrew. See **propeller fan, centrifugal fan.**—(2) A small vane to keep the wheel of a wind pump at right-angles to the wind.

fan (*Horol.*). A wheel whose velocity is regulated by air resistance; used in some clocks

fan (*San. Eng.*). A metal plate serving to spread the flush in a W C pan.

fan (*Soap*). A paddle used in soap-boiling kettles.

fan (*Zool.*). Any fan-shaped structure, as the tail feathers of a Bird, and certain types of coelenterate colony (e.g. *Gorgonia*).

fan antenna (*Radio*). An antenna in which a number of vertically inclined wires are arranged in a fanwise formation, the apex being at the lowest point.

fan cooling (*Automobiles*). The use of an engine-driven fan to induce a greater air-flow through the radiator at low speeds than would result from the forward motion of the vehicle.

fan drift (*Mining*). The passage or duct for the intake of a ventilating fan on a mine.

fan-guard (*Build.*). A protective parapet formed of boarding secured around the platforms of builders' stagings or gantries, when the platforms are to be used for receiving and distributing materials.

fanlight (*Join.*). A glazed sash, often semicircular, located above a door.

fan shaft (*Mining*). The shaft or pit on a mine at the top of which a ventilating fan is placed, not the shaft of the fan impeller.

fan structure (*Geol.*). A complicated arrangement of folds in which the axial planes converge like the ribs of a fan; the normal arrangement of folds in an anticlinorium.

fantail burner (*Eng.*). A pulverised-coal burner which discharges the fuel and primary air vertically downwards into the furnace in a thin flat stream, to meet heated secondary air which is discharged horizontally from the walls.

fancy (*Woollen*). One of the rollers of a carding machine which lifts the carded material on to the swift, to facilitate removal by the doffer.

fancy yarns (*Textiles*). Yarns made for decorative purposes. The ornamentation of the thread may be due to a variety of reasons, such as (*a*) colour; (*b*) the combination of threads of different types; (*c*) the production of thick and thin places; (*d*) the production of loops, slubs, knops, etc., at suitable intervals. The majority of these fancy yarns are *folded yarns*, two or more threads being combined in some special way in order to produce the desired effect. Special types of ring doubling machines are usually used for their production. The yarns are of many types, e.g. *bead, bouclé, bourette, chenille, cloud, crêpe, curl, diamond, flake, gimp, grandrelle, knickerbocker,* *knop*, *loop*, *marl*, *mottle*, *ondé*, *reany*, *slub*, and *spiral*.

fang (*Build.*). The part of an iron railing which is embedded in the wall.

fang (*Mining*). An air course along the side of an adit or shaft.

fang (*Zool.*). The grooved or perforate poison-tooth of a venomous serpent: one of the cuspidate teeth of carnivorous animals, especially the canine or carnassial.

fangs (*Mining*). See **keps.**

fang bolt (*Eng.*). A bolt having a nut which carries pointed teeth for gripping the wood through which the bolt passes, so preventing the nut from rotating when the bolt is tightened.

fanging (*Mining*). See **brattice.**

fanion (*Surv.*). A small *flag* (q.v.).

fanners (*Mining*). Hand-operated ventilating fans.

fant'asy (*Psychol.*). See **phantasy.**

far-end cross-talk (*Teleph.*). Cross-talk heard by a listener, and caused by a speaker at the distant end of the parallelism.

farad (*Elec. Eng.*). The practical unit of electrostatic capacitance, defined as that capacitance which, when charged to a potential of one volt, carries a charge of one coulomb. Equal to 10^9 electromagnetic units and 9×10^{11} electrostatic units. See **micro-farad.**

faraday (*Chem.*, *Elec.*). The quantity of electricity associated with one gram-equivalent of chemical change, i.e. 96,500 coulombs.

Faraday cage (*Elec. Eng.*). An earthed wire screen completely surrounding a piece of equipment in order to shield it from external electric fields.

Faraday effect (*Light*). The rotation of the plane of polarisation produced when plane-polarised light is passed through a substance in a magnetic field, the light travelling in a direction parallel to the lines of force. For a given substance, the rotation is proportional to the thickness traversed by the light and to the magnetic field strength. See **Verdet's constant.**

Faraday tube (*Elec. Eng.*). A tube of force in an electric field, of such magnitude that unit charge gives rise to one tube.

Faraday's constant (*Chem.*). See **faraday.**

Faraday's disc (*Elec. Eng.*). A disc used in elementary experiments on electromagnetism. It is made to rotate between the poles of a magnet and currents are induced in it.

Faraday's ice-pail experiment (*Elec. Eng.*). A classical experiment which consists in lowering a charged body into a metal pail connected to an electroscope, in order to show that charges reside only on the outside surface of conductors.

Faraday's law of induction (*Elec. Eng.*). A principle arising from Faraday's discovery of electromagnetic induction. It states that the induced e.m.f. in any circuit is proportional to the rate of change of the number of lines of force linked with the circuit.

Faraday's laws of electrolysis (*Chem.*). (1) The amount of chemical change produced by a current is proportional to the quantity of electricity passed.—(2) The amounts of different substances liberated or deposited by a given quantity of electricity are proportional to the chemical equivalent weights of those substances.

faradic currents (*Med.*). Currents obtained from an induction coil and used for curative purposes.

faradise (*Med.*). To stimulate the muscles or nerves of a living subject with faradic currents.

faradism (*Med.*). The treatment of disease by the use of an interrupted current obtained from an induction coil, the wave-form being very peaky.

farc'tate (*Bot.*). See **stuffed.**

farcy (*Med.*, *Vet.*). Chronic *glanders* (q.v.).

fardel-bound (*Vet.*). Said of cattle affected by impaction of the omasum.

Fareham reds (*Build.*). A form of hand-moulded, sand-faced, red facing bricks.

Farewell Rock (*Geol.*). The highest division of the so-called Millstone Grit of S. Wales, lying immediately beneath the productive Coal Measures.

farina (*Textiles*). The name still used in the cotton industry for potato starch; used for sizing warp yarns.

farina'ceous (*Bot.*). (1) Having a surface covered with particles looking like meal.—(2) Of mealy character.

Faringdon Sponge Bed (*Geol.*). The local representative of the Lower Greensand, of Lower Cretaceous age, at Faringdon, Wilts.; it consists of sandy gravel rich in the remains of fossil sponges such as *Barroisia* and *Rhaphidonema*.

far'inose (*Bot.*). Covered with whitish, very short hairs, which are easily detached as whitish dust.

-fa'rious. A suffix meaning *arranged in so many rows*.

Farleigh Down stone (*Build.*). A fine-grained, even-textured, warm cream-coloured Bath oölite; used for building purposes, but weathers poorly.

Farmer's reducer (*Photog.*). A reducing bath for photographic images made by the addition of ferri-cyanide to hypo.

Farotex (*Build.*). A proprietary bituminous material having waterproofing and plastic properties.

Fars Series (*Geol.*). Lagoonal deposits more than 3000 ft. thick, associated with massive gypsum and salt beds; of Miocene age in part, and occurring in the oil-fields of Persia.

fascia, fash'i-a *or* fas'i-a (*Arch.*, *Build.*). (1) A wide flat member in an entablature.—(2) A board carrying a gutter around the eaves of a building.—(3) The broad flat surface over a shop front or below a cornice.

fascia (*Automobiles*). The instrument-board of an automobile.

fascia (*Zool.*). Any band-like structure; especially the connective-tissue bands which unite the fasciculi of a muscle.—*adj.* **fascial.**

fasciation (*Bot.*). An abnormal condition usually shown by marked flattening, and brought about by the union of a number of members, usually all of the same kind, side by side as they develop.

fas'cicle (*Bot.*). (1) A tuft of leaves crowded on a short stem.—(2) A close tuft of branches all arising from about the same place.—*adj.* **fascicled.**

fascic'ular cambium (*Bot.*). The flat strand of cambium between xylem and phloem in a vascular bundle.

fascic'ulate (*Bot.*). In bunches or bundles consisting of a number of members all of the same kind.

fascic'ulus (*Zool.*). A small bundle, as of muscle or nerve fibres.

fasciitis, fascitis, fash-(i-)ī'tis (*Med.*). Inflammation of fascia.

fascine, fa-sēn' (*Civ. Eng.*). A bundle of brushwood used to help make a foundation on marshy ground, or to make a wall to protect a shore against erosion by sea or river, or to accumulate sand and silt on the bed of an estuary.

fascine building (*Build.*). A building constructed with logs and boards.

fascio'la (*Zool.*). A narrow band of colour: a delicate lamina in the Vertebrate brain.

fas'ciole (*Zool.*). In *Spatangoidea*, a tract of ciliated spines (clavulae) which create a current of water.

fascioli'asis (*Med.*, *Vet.*). Infection of Man and other animals with the liver fluke *Fasciola hepatica*.

fasciot'omy (*Surg.*). Surgical incision of fascia.

fast (*Mining*). (1) A heading or working place which is driven in the solid coal, in advance of the open places, said to be in the *fast*.—(2) A hole in coal which has had insufficient explosive used in it, or which has required undercutting.

fast (*Paint.*). Said of colours which are not affected by the conditions of use (i.e. light, heat, chemical action, damp, etc.) to which they are subjected.—*n.* **fastness.**

fast coupling (*Eng*). A coupling which permanently connects two shafts; it consists of flanges formed integral with the shafts.

fast-end (*Mining*) A stall which has a 'rib' of coal at one end and has its face line in advance of the adjoining stall is said to have a *fast-end*.

fast head (*Eng.*). The fixed headstock of a lathe.

fast needle surveying (*Surv.*). See **fixed needle surveying.**

fast pulley (*Eng.*). A pulley fixed to a shaft by a key or set bolt, as distinct from a *loose pulley* (q.v.) which can revolve freely on the shaft.

fast reed loom (*Weaving*). A loom with a fixed reed; used for weaving heavy fabrics or those in which weft threads are closely packed.

fast sheet (*Build.*). See **stand sheet.**

fast (*Photog.*). Contributing to reduction of time of exposure; said of an emulsion or lens.

fast-acting relay (*Auto. Teleph.*). A relay designed to act with minimum delay after the application of voltage, usually by increasing the resistance of the circuit in comparison with the inductance, and by minimising moving masses.

fastener, fastening (*Build.*). A device such as a nail, screw, dowel, dog, etc. for securing two parts together.

fastigiate, —tij'i-āt (*Bot.*) Having the branches more or less erect and all more or less parallel, giving an effect like a slender broom.

fastig'ium (*Build.*). (1) The pediment above a portico.—(2) A roof ridge.

fastigium (*Med.*). The highest point of temperature in a fever.

fastness (*Paint*). See **fast** (*Paint.*).

fat. See **adipose tissue.**

fat (*Build.*). Part of a cement mortar mix containing a higher proportion of cement than the rest.

fats (*Chem.*). An important group of naturally occurring substances consisting of the glycerides of higher fatty acids; e g. palmitic acid, stearic acid, oleic acid. See Supplement, also **human fat.**

fat board (*Build.*). A board on which the bricklayer collects the fat during the process of pointing.

fat-body (*Zool.*). In Insects, a mesodermal tissue of fatty appearance, the cells of which contain reserves of fat and other materials and play an important part in the metabolism of the animal: in *Amphibia*, highly vascular masses of fatty tissue associated with the gonads.

fat boys or **fatters** (*Mining*). Boys or men employed to lubricate axles of tubs or wagons and rollers of haulage gear.

fat coals (*Mining*). Coals which contain plenty of volatile matter (gas-forming constituents).

fat colour (*Paint.*). Paint which, as a result of exposure to the air, has become greasy and sticky.

fat edges (*Paint.*). A defect in paintwork, characterised by the formation of ripples at edges and in angles; due to excess of paint.

fat lime (*Build.*). *Lime* (q.v.) made by burning a pure, or very nearly pure, limestone, such as chalk.

fat liquor (*Leather*). An emulsion consisting of oil, soap, and water, which is added to warm water for drumming skins, before drying.

fat-necrosis (*Med.*). The splitting of fat, due to the escape of a fat-splitting enzyme from the pancreas into the abdominal cavity, with death of the fat-containing cells so affected.

fata morgan'a (*Meteor.*). A complicated mirage caused by the existence of several layers of varying refractive index, resulting in multiple images, possibly elongated. Especially characteristic of the Strait of Messina and Arctic Regions.

father of the chapel (*Typog.*). A person elected by the associated employees of a printing department to represent them and to watch their interests.

fathom. A unit of measurement. Generally, a nautical measurement of depth = 6 ft. Specific senses follow.

fathom (*Mining*). In general mining, the volume of a 6-ft. cube: in gold mining, often a volume 6 ft. by 6 ft. by the thickness of the reef: in lead mining, sometimes a volume 6 ft. by 6 ft. by 2 ft. It is the unit of performance of a rock drill—' fathoms per shift.'

fathom (*Timber*). A timber measure = 216 cu. ft. = 6 ft. by 6 ft. by 6 ft.

fatigue (*Zool.*). The condition of an excitable cell or tissue which, as a result of activity, is less ready to respond to further stimulation until it has had time to recover.

fatigue, colour (*Optics*). See **colour fatigue.**

fatigue, elastic (*Eng.*). See **elastic fatigue.**

fatigue limit (*Met.*). The upper limit of the range of stress that a metal can withstand indefinitely. If this limit is exceeded, failure will eventually occur.

fatigue of metals (*Met*). The phenomenon of the failure of metals under the repeated application of a cycle of stress. Three factors are involved: (1) the range of stress; (2) the mean stress; (3) the number of cycles.

fatigue test (*Eng., Met.*). A test made on a material to determine the range of alternating stress to which it may be subjected without risk of ultimate failure. By subjecting a series of specimens to different ranges of stress, while the mean stress is constant, a stress-number curve is obtained.

fatigue-testing machine (*Eng., Met.*). A machine for subjecting a test piece to rapidly alternating or fluctuating stress, in order to determine its fatigue limit. See **Wöhler test, Haig fatigue-testing machine.**

fat'iscent (*Bot.*). Cracking and falling apart.

fats (*Chem.*). See above under **fat.**

fatters (*Mining*). See **fat boys.**

fatty acids (*Chem.*). A term for the whole group of saturated and unsaturated monobasic aliphatic carboxylic acids. The lower members of the series are liquids of pungent odour and corrosive action, soluble in water; the intermediate members are oily liquids of unpleasant smell, slightly soluble in water. The higher members, from C_{10} upwards, are solids, insoluble in water, but soluble in alcohol and in ether.

fatty degeneration (*Med.*). Degeneration of the cell substance, accompanied by the appearance in it of droplets of fat, due to the action of poisons, lack of oxygen, or interference with the nerve supply.

fatty heart (*Med.*). (1) A heart the muscle of which has undergone fatty degeneration.—(2) An increase of fat in parts of the heart where it is normally present, associated with general adiposity.

fauces, faw'sēz (*Zool.*). In Vertebrates, the pharynx: in spirally coiled shells, the aperture.

faucet (*Plumb.*). (1) A small tap or cock.—(2) The enlarged or socket end of a pipe at a *spigot-and-socket joint* (q.v.).

faucet ear (*Plumb.*). A projection from the socket of a pipe by means of which the pipe may be nailed to a wall.

faulding (or **folding**) **boards** (*Mining*). Catches in a mine shaft to facilitate the stopping of the cage at intermediate coal-seams.

faulschlamm, fowl'shlam (*Ecol.*). A type of lake-bottom deposit composed of organic detritus covered by mineral deposits, which is characterised by the absence of *sediment transporters* (q.v) and in which anaerobic decomposition takes place.

fault. A defect in a mechanism or piece of work such that normal function or operation is impaired; e.g. a defect in any piece of electrical apparatus or in an electrical conductor.

fault (*Geol., Mining*). A fracture in rocks along which some displacement (the *throw* of the fault) has taken place. The displacement may vary from a fraction of an inch to thousands of feet. Movement along faults is the common cause of earthquakes. A fault causes the displacement of mineral veins, reefs, lodes, or coal-seams.

See **compound—**
dip—
horst—
normal—
overthrust—
reversed—
trough—
step—
strike—
downthrow
upcast.

fault-breccia (*Geol.*). A fragmental rock of breccia type resulting from shattering during the development of a fault.

fault current (*Elec. Eng.*). The current flowing, on account of a fault, from a conductor to earth or to another conductor.

fault resistance (*Elec. Eng*). A term sometimes used to denote insulation resistance, but more commonly the resistance of an actual fault; e.g. an arc between a conductor and earth.

fauna, faw'na (*Zool.*). A collective term denoting the animals occurring in a particular region or period.—*pl.* **faunas** or **faunae.**—*adj.* **faunal.**

faunal region (*Zool.*). An area of the earth's surface characterised by the presence of certain species of animals.

Faure accumulator, fawr (*Elec. Eng.*). An accumulator having Faure (pasted) plates.

Faure plate (*Elec. Eng.*). See **pasted plate.**

fauton, faw'ton (*Build.*). A metal rod which is embedded in concrete.

fa'veolate, fa'vose (*Bot., Zool*). Resembling a honeycomb in appearance.—FAVOUS, said of a surface pitted like a honeycomb.—FAVUS, a hexagonal pit or plate.

fa'vus (*Med.*). A contagious skin disease, especially of the scalp, due to infection with the fungus *Achorion Schonleinii.*

favus, avian (*Vet.*). A contagious disease (usually of the skin of the head) of birds due to infection by a fungus *Lophophyton gallinae.*

fay'alite or **iron-olivine** (*Min.*). A silicate of iron, Fe_2SiO_4, crystallising in the orthorhombic system, discovered originally at Fayal in the Azores, probably in a slag carried to the island as ballast; but found subsequently in igneous rocks, chiefly of acid composition, including pitchstone, obsidian, quartz-porphyry, and rhyolite.

fayance, fayence. See **faïence.**

faying face (or **surface**) (*Eng.*). That part of a surface of wood or metal specially prepared to fit an adjoining part.

F.C. (*Build.*). Abbrev. for *fair cutting.*

fd. (*Build.*). Abbrev. for *framed.*

Fe (*Chem.*). The symbol for *iron.*

Fear process (*Cinema.*). The use of optical rotation lenses to register cinematograph images along the length of standard film instead of across, which is normal, and so to allow of wider projected pictures.

fearnought (*Woollen*). A machine which opens and mixes woollen material, preparatory to carding.

feather (*Carp.*). A thin tongue along the edge of a board, fitting into a corresponding groove in the edge of another board. See **matched boards.**

feather (*Eng.*). (1) A rectangular key sunk into a shaft to permit a wheel to slide axially, while preventing relative rotation.—(2) Iron slips for reducing the friction between a wedge and an object to be split.

feather (*Masonry*). A steel wedge driven in between a pair of semi-cylindrical plugs placed in a drilled hole in a mass of stone, as a means of splitting the stone.

feathers (*Zool.*). Epidermal outgrowths forming the body-covering of Birds; distinguished from scales and hair, to which they are closely allied, by their complex structure, and by the possession of a vascular core which at first projects from the surface.

feather eating (*Vet.*). A vice, acquired by birds, characterised by pecking, plucking, or eating their own plumage or that of other birds. The vice may develop into *cannibalism.*

feather-edge brick (*Build.*). A brick similar to a compass brick, used especially for arches.

feather-edged board (*Join*). A weathered-board of tapered thickness, the thick edge being always placed downwards.

feather-edged coping (*Masonry*). A coping-stone sloping in one direction on its top surface.

feather edging (*Furn.*). A thin, bevelled, feather-like edging or cresting to chairs, etc.

feather joint (*Join.*). A *ploughed-and-tongued joint* (q.v.).

feather ore (*Min.*). A plumose or acicular form of the orthorhombic sulphide of lead and antimony, occurring in the Harz Mts. and elsewhere. Also called JAMESONITE.

feather-perforating mite disease (*Vet.*). An infection of the plumage and skin of pigeons due to the feather-perforating mite, *Falculifer rostratus.*

feather rot (*Vet.*). See **itch (depluming).**

feather tongue (*Join.*). A wooden tongue for a *ploughed-and-tongued-joint* (q.v.), cut so that the grain is diagonal to the grooves.

feather twills (*Weaving*). See **herring-bone twills.**

featherweight paper (*Paper*). A very light antique book paper. It is made from loosely woven esparto, and often three-quarters of its bulk is air space.

feathering (*Pot.*). Feather-like figures appearing in defective glazes.

feathering airscrew (*Aero.*). An airscrew with blades so mounted that they turn on their own axes, automatically, while the airscrew is rotating, to any desired setting—usually that of maximum thrust for the particular rotational speed.

feathering paddles (*Eng.*). Paddle-wheels so controlled that the floats enter and leave the water at right-angles to the surface.

feathering screw (*Eng.*). A marine screw-propeller whose blades could be turned parallel with the shaft to reduce resistance when the vessel was under sail. (Obsolete.)

feathery (*Bot.*). Covered with long branching hairs.

feature film (*Cinema.*). A long fictional film, forming the basis of most programmes.

feb'rifuge, —fūj (*Med.*). Against fever: a remedy which reduces fever.

feb'rile (*Med.*). Pertaining to, produced by, or affected with fever.

Fechner's constant (*Illum.*). See **Fechner's law.**

Fechner's fraction (*Illum.*). See **Fechner's law.**

Fechner's law (*Illum.*). A physiological law stating that the eye can distinguish differences in illumination which are a constant fraction of the total illumination, the value of the constant being about 0·01 (called *Fechner's constant* or *Fechner's fraction*).

Federal hearth (*Met.*). A modified Scotch hearth, in which rabbling and shovelling are done mechanically.

fee-junction circuit (*Teleph.*). A junction between two exchanges which entails more than the charge of a unit fee when used for connecting two subscribers.

feebly hydraulic lime (*Build.*). *Lime* (q.v.) made by burning a limestone containing 5-12% clay.

feed (*Eng.*). (1) The rate at which the cutting tool of a machine is advanced.—(2) Fluid pumped into a vessel; e.g. feed water to a boiler.—(3) Mechanism for advancing material into a machine for processing.

feed-back (*Acous.*). See **acoustic feed-back.**—(*Radio*) See **back-coupling, negative feed-back, positive feed-back*, stabilised feed-back amplifier.**

feed-check valve (*Eng.*). Non-return valve in the delivery pipe between feed-water pump and boiler.

feed-cistern (*Build.*). A cold-water tank connected to the town pressure main through a ball-cock, and supplying cold water to the boiler in a hot-water system.

feed current (*Radio, Thermionics*). The direct-current component of the anode current of a thermionic valve, especially when it is separated from the alternating components.

feed mechanism (*Illum.*). The mechanism which causes the carbons of an arc lamp to move gradually towards the arc at the speed necessary to compensate for the rate at which they burn away, thereby keeping the arc length constant.

feed pipe (*Eng.*). The pipe carrying feed water from the feed pump to a boiler.

feed reel (*Cinema.*). The reel of film which is being unwound as the film is taken off to pass through the gate in a camera, printer, or projector.

feed screw (*Eng.*). A screw used for supplying motion to the feed mechanism of a machine tool.

feed water (*Eng.*). The water, previously treated to remove air and impurities, which is supplied to a boiler for evaporation.

feed-water heater (*Eng.*). An arrangement for heating boiler feed-water by means of steam which has done work in an engine or turbine. It is similar in principle to a steam condenser of either the surface or the jet type.

feeder (*Cables*). An overhead or underground cable, of large current-carrying capacity, used in the transmission of electric power; it serves to interconnect generating stations, substations, and feeding points, without intermediate connexions.

See **dead-ended—**

radial—
return—
trunk—

feeder (*Foundry, etc.*). The runner or riser hole of a mould, containing sufficient molten metal to feed the casting and so compensate for contraction of the solidifying metal.

feeder (*Hyd. Eng.*). A natural or artificial channel supplying water to a reservoir or canal.

feeder (*Mining*). A mechanical appliance for supplying broken rock or crushed ore, at a predetermined rate, to some form of crusher or concentrator.

feeder (*Radio*). The conductor, or system of conductors, connecting the radiating portion of an antenna to the transmitter or receiver.

feeder (*Typog.*). (1) One who passes paper, sheet by sheet, into the machine during printing.—(2) A mechanical device used for this purpose.

feeder-box (*Elec. Eng.*). See **junction-box.**

feeder bus-bars (*Elec. Eng.*). In a generating station or main substation, bus-bars to which the outgoing feeders are connected.

feeder ear (*Elec. Eng.*). A type of ear for attaching an overhead contact wire of a tramway system to the supporting wire; it serves also to lead current to the contact wire.

feeder-fed bottle machines (*Glass*). See **bottle-making machines.**

feeder head (*Met.*). See **hot top.**

feeder mains (*Cables*). See **feeder.**

feeder panel (*Elec. Eng.*). A switchboard panel on which are mounted the switch-gear and instruments for controlling one or more feeders.

feeder pillar (*Elec. Eng.*). A pillar containing switches, links, and fuses, for connecting the feeders of an electric power distributing system with the distributors.

feeding head (*Foundry*). An extension to the upper part of a casting, provided to act as a feeder to the main part during cooling.

feeding-point (*Elec. Eng.*). The junction point between a feeder and a distribution system. Also called a DISTRIBUTING POINT.

feeding rod (*Foundry*). A heated iron rod inserted in the feeder of a mould, and worked with a pumping motion to assist feeding during the cooling of the molten metal.

feeding-up (*Paint.*). Thickening of varnish in the can.

feel (*Textiles*). The term used to describe the character of a cloth when handled.

See **boardy—** **full—** **thin—**

feeler (*Weaving*). A device which is used with an automatic weft replenishing motion to determine when replenishment is necessary

feeler switch (*Elec. Eng.*). A switch sometimes forming part of the equipment of an auto-reclose circuit-breaker; after the circuit-breaker has opened on a fault, the feeler switch closes a test circuit to determine whether or not the fault has cleared itself, and, if not, it prevents the circuit-breaker from reclosing.

feeling (*Psychol.*). An affective experience, essentially of pleasantness-unpleasantness or of some degree between.

feet-switch (*Elec. Eng.*). See **tropical switch.**

Fehling's solution, fā′ling (*Chem.*). A solution of cupric sulphate and potassium sodium tartrate (Rochelle salt) in alkali, used as an oxidising agent. It is an important analytical reagent for aldehydes, glucose, fructose, etc., which reduce it to cuprous oxide.

feigh, fā (*Mining*). Refuse or dirt from ore or coal.

feldspar or **felspar** (*Min.*). A most important group of rock-forming silicates of aluminium, together with sodium, potassium, calcium, and barium, crystallising in closely similar forms in the monoclinic and triclinic systems. The chief members are *orthoclase* and *microcline* (*potash feldspar*); *albite* and *barbierite* (*soda feldspar*); and the *plagioclases* (*soda-lime feldspar*). The form *felspar*, though still commonly used, perpetuates a false derivation from the German *fels* (rock); actually it is from the Swedish *feldt* (field).

feldspathic sandstone (*Geol.*). See **arkose.**

feld′spathoids (*Min.*). A group of rock-forming minerals chemically related to the feldspars, but undersaturated with regard to silica content, and therefore incapable of free existence in the presence of magmatic silica. The chief members of the group are *haüynite, leucite, nepheline, nosean,* and *sodalite* (qq.v.).

fell. A skin or hide.

fellmonger (*Leather*). A dealer in hides and skins, who prepares them for the tanner by removing the hair or wool.

fell (*Weaving*). The edge of a cloth in the loom, to which the weft yarn is placed during weaving.

fell railway (*Civ. Eng.*). A form of mountain railway in which a central, elevated, double-headed rail, laid on its side, is gripped by horizontal wheels on both sides, thus increasing adhesion.

felling marks (*Woollen*) Material of a different kind or colour, forming lines across both ends of a length of cloth.

felling subsere (*Bot.*). A developmental series of communities started by the felling of a wood.

felloe (*Carp., etc.*). (1) The outer part of the framing for a centre.—(2) A segment of the rim of a wooden wheel, about which a tyre is usually shrunk. The term is sometimes applied to the whole rim.

felon or **fellon** (*Med*). See **paronychia.**—(*Vet.*) Suppurative arthritis of cattle; commonly associated with mastitis.

felsite (*Geol.*). An 'omnibus term' for fine-grained igneous rocks of acid composition, occurring as lavas or minor intrusions, and characterised by the felsitic texture—a fine patchy mosaic of quartz and feldspar, resulting from the devitrification of an originally glassy matrix.

felspar (*Min.*). See **feldspar.**

felstone (*Geol.*). An obsolete term for *felsite.*

felt (*Build*). A fibrous material, treated so as to be rendered watertight, used as underlining for roofs, etc.

felt (*Paper*). A blanket which carries the web of paper and squeezes the moisture from it.

felt (*Textiles*). (1) A densely matted fabric of wool or hair that has passed through a felting process.—(2) A heavily milled woven fabric with fibrous surface.—(3) An imitation felt consisting of wool waste and wood pulp.

felt-grain (*Timber*). Grain following the direction from pith to bark.

felting (*Paper*). The binding together of fibres in paper-making.—(*Woollen*) The matting together of wool fibres.

female (*Bot.*). A flower having carpels and no stamens.—(*Zool*) An individual the gonads of which produce ova.

female (*Eng.*). See **male and female**; also **internal screw-thread.**

female gauge (*Eng.*). See **ring gauge.**

female screw (*Eng.*). An *internal screw-thread* (q.v.).

fem'erell (*Carp.*). A roof lantern having louvres for ventilation.

fem'ic constituents (*Geol.*). Those minerals which are contrasted with the salic constituents in determining the systematic position of a rock in the American C I P W. scheme of classification. Note that these are the *calculated* components of the 'norm'; the corresponding *actual* minerals in the 'mode' are said to be *mafic*, i.e. rich in magnesium and iron.

femmer (*Mining*). Slender, weak, as in the case of a thin shaly section of roof.

fe'mora. *Pl.* of *femur.*

fe'moral (*Zool.*). See **femur.**

fe'mur (*Arch.*). See **meros.**

femur (*Zool.*). The proximal region of the hind limb in land Vertebrates: the bone supporting that region: the third joint of the leg in *Insecta*, *Myriapoda*, and some *Arachnida.*—*adj.* **femoral.**

fen. Low, marshy land; bog or morass.

fence (*Eng.*). (1) A guard or stop to limit motion.—(2) A guide for material, as in a circular saw or planing machine.

fence (*Mining*). A protection round the mouth of a shaft, or at the entrance to a dangerous or unsafe tunnel or level.

fence (*Tools*). An adjustable grinding edge or plate directing or limiting the movement of one piece with respect to another.

fencing (*Build.*). A construction placed along the boundary of a property or elsewhere, to divide one area from another.

fender (*Carp.*). A timber baulk which is laid as a temporary kerb beside the sleeper supporting a gantry constructed over a public footway.

fender (*Civ. Eng.*). A timber, bag of old rope, or other object, placed against the edge of a pier, dock, etc., to take the impact from a vessel drawing up alongside.

fender (*Elec. Eng.*). A metal cover attached to the end of the frame of an electric machine in such a way as to prevent accidental contact with live or moving parts. It does not carry a bearing. Also called a PROTECTION CAP.

fender pile (*Civ. Eng.*). An upright timber serving as a *fender* (q.v.) protecting the edge of a dock-wall or wharf.

fender post (*Civ. Eng.*). A protective post on a street refuge to take the impact of a vehicle leaving the road.

fender wall (*Build*). A dwarf brick wall supporting the hearthstone to a ground-floor fireplace.

fenes'tra (*Build.*). A window or other opening in the outer walls of a building.—*pl.* **fenestrae.**

fenestra (*Zool.*). An aperture in a bone or cartilage, or an opening between two or more bones: in some *Orthoptera*, one of the pale spots on the head, believed to represent ocelli: a transparent spot on an insect wing which is otherwise opaque.—*adj.* **fenestrate.**

fenestra metot'ica (*Zool.*). In a typical chondrocranium, an opening behind the auditory capsule, through which pass the ninth and tenth cranial nerves and the internal jugular vein.

fenestra ova'lis (*Zool.*). In Vertebrates in which the middle-ear is developed, the upper of two openings in the skeletal wall of the ear. Cf. *fenestra rotunda.*

fenestra pro-ot'ica (*Zool.*). In a typical chondrocranium, an opening in front of the auditory capsule, through which pass the fifth, sixth, and seventh cranial nerves.

fenestra rotunda (*Zool.*). In Vertebrates in which the middle-ear is developed, the lower of two openings in the skeletal wall of the ear. Cf. *fenestra ovalis.*

fenestra tym'pani (*Zool.*). See **fenestra rotunda.**

fenestra vestib'uli (*Zool.*). See **fenestra ovalis.**

fenestral (*Build.*). A window-opening covered with oiled paper or cloth instead of being glazed.

fenestrate, fenestrated (*Bot.*). Perforated and divided into compartments, remotely suggesting a window.

fenestration (*Build.*). The arrangement of window and other openings in the outer walls of a building.

fent (*Textiles*). A damaged piece of cloth cut from a length, or a short piece of material; usually sold by weight.

fe'ral (*Bot., Zool.*). Wild: not cultivated: savage.

fer'berite (*Min.*). A member of the wolframite group of minerals; theoretically pure tungstate of iron, but usually some of the iron is replaced by manganese.

fer'gusonite (*Min.*). A rare mineral occurring in pegmatites; it consists of columbate and tantalate of yttrium, which may be partially replaced by iron, cerium, calcium, etc.

Fermat's principle of least time, fer'ma (*Light*). The path of a ray of light from one point to another is always such that the time taken by the light to traverse it is a minimum.

ferment (*Chem., etc.*). A substance inducing *fermentation* (q.v.).

fermentation (*Chem.*). A slow decomposition process of organic substances induced by microorganisms, or by complex nitrogenous organic substances (*enzymes*, q.v.) of vegetable or animal origin. Fermentation is usually accompanied by evolution of heat and gas. Important fermentation processes are the alcoholic fermentation of sugar and starch, and the lactic fermentation.

fermentation amyl alcohol (*Chem.*). A synonym for *iso*amyl alcohol, the chief constituent of fusel oil.

Fernie Shales (*Geol.*). Marine Jurassic strata consisting chiefly of black shales associated with some sandstones and limestones in British Columbia.

Ferran'ti effect (*Elec. Eng.*). The rise in voltage which takes place at the end of a long transmission line when the load is thrown off; it is due to the charging current flowing through the inductance of the line.

Ferranti-Hawkins protective system (*Elec. Eng.*). A discriminative protective system for feeders; core balance transformers are placed at each end, with their secondary windings connected to each other through pilot wires.

Ferranti meter (*Elec. Eng.*). A name often given to the mercury-motor type of supply meter invented by Ferranti.

Ferranti rectifier (*Elec. Eng.*). An old type of rectifier employed in conjunction with constant-current transformers for arc lighting; it consists of a synchronously driven commutator.

Ferrar'is instruments (*Elec. Eng.*). A name sometimes given to induction-type electrical measuring instruments as originally developed by Ferraris.

Ferraris motor (*Elec. Eng.*). An early type of two-phase induction motor.

ferri-, ferro- (Latin *ferrum*, iron). Prefixes used in the construction of compound terms; e.g. *ferri-silicon*, *ferro-chromium* (qq v.).

ferri-silicon paint (*Paint.*) A combination of iron and other oxides with silicates, which, incorporated with a special enamel oil, produces a paint closely resembling enamel, but with a very tough and elastic surface, making it specially suitable for use as a preservative for ironwork, woodwork, and all exposed surfaces.

ferricyanide, potassium (*Chem.*). See **potassium ferricyanide.**

ferrimolybdite (*Min.*). See **molybdite.**

ferric oxide (*Chem.*). Fe_2O_3. An oxide of iron.

ferric sulphate (*Chem*). $Fe_2(SO_4)_3$. A yellowish-white powder which dissolves slowly in water.

ferrite (*Met.*). Originally, substantially pure α-iron occurring in iron-carbon alloys. The term is now extended to any solid solution based on α-iron as distinct from those based on γ-iron, i.e. austenite.

ferro-. Prefix. See **ferri-.**

Ferrocart (*Radio*). A registered trade-name for a ferromagnetic material which is suitable for use at high frequencies on account of its small hysteresis and eddy current losses, achieved by subdivision of the material into fine particles.

ferro-chromium (*Met.*). An alloy of iron and chromium (60-72% chromium) used in making additions of chromium to steel and cast-iron.

ferro-concrete (*Civ. Eng.*). *Reinforced concrete* (q.v.).

Ferrocrete (*Build., Civ. Eng.*). A trade-name for a variety of rapid-hardening Portland cement.

Ferrodur (*Build., Civ. Eng.*). A proprietary waterproofing agent for concrete.

Ferro-glass (*Build.*). A patented form of *pavement lights* (q.v.).

Ferrolithic (*Build.*). A proprietary water-, dust-, and oil-proofing preparation for concrete floors.

ferromagnetic (*Elec. Eng.*). Said of materials having a permeability which is considerably greater than unity, and which varies with the flux density. Iron or steel are the most common ferromagnetic materials.

ferro-manganese (*Met.*). An alloy of iron and manganese (80% manganese) used in making additions of manganese to steel or cast-iron.

ferro-molybdenum (*Met.*). An alloy of iron and molybdenum (55-65% molybdenum) used in adding molybdenum to steel and cast-iron.

ferro-nickel (*Met.*). Alloys of iron and nickel containing more than 30% of nickel. Lower nickel alloys are known as nickel steel. See **Elinvar, Invar, Mu-metal, Permalloy.**

ferro-prussiate paper (*Paper*). A paper specially made for the production of blue-prints. It is treated with a sensitising solution mixed with gum.

ferro-resonance (*Elec. Eng.*). A special condition of resonance occasionally set up in armoured cables; caused by the changing inductance resulting from the flux in the armouring.

ferro-silicon (*Met.*). An alloy of iron and silicon (15% silicon) used in making additions of silicon to steel and cast-iron.

fer'rotype (*Photog.*). The wet collodion process in which varnished iron plates are used as supports.

ferrous oxide (*Chem.*). FeO. An oxide of iron.

ferrous sulphate (*Chem.*). $FeSO_4$. See also **copperas.**

ferroxyl indicator (*Chem.*). A little potassium ferricyanide and phenolphthalein, together with a corroding solution, e g. of sodium chloride, made into a jelly with agar. It is used to show the positive and negative parts of a piece of iron.

ferru'ginous, ferrugin'eous (*Bot.*). Reddish-brown, the colour of rusty iron.

ferruginous clay (*Geol.*). An impure clay rock, with an admixture of iron compounds.

ferruginous deposits (*Geol*). Sedimentary rocks containing sufficient iron to justify exploitation as iron ore. The iron is present, in different cases, in silicate, carbonate, or oxide form, occurring as the minerals chamosite, thuringite, siderite, haematite, limonite, etc. The ferruginous material may have formed contemporaneously with the accompanying sediment, if any, or may have been introduced later.

ferrule (*Cables*). A slotted metal tube into the ends of which the conductors of a joint are inserted. The whole is soldered solid. When the conductors are oval, the ferrule is in two parts to allow for the fact that the major axes of the oval sections may not coincide.

ferrule (*Carp.*) The brass ring round the handle of a chisel, or similar tool, at the end where the tang enters.

ferrule (*Eng.*). (1) A short length of tube.—(2) A circular gland nut used for making the joint between tubes and tube-plates in a *surface condenser* (q.v.).

ferrule (*Horol.*). A small grooved pulley around which is wrapped the string of a bow, to give rotary motion.

ferrule (*Plumb.*). A side opening in a pipe; it is fitted with a screwed plug giving access for inspection and cleaning.

Ferry (*Elec. Eng.*). A nickel-copper alloy (44% nickel) used for low-temperature resistances; the wire runs at a black heat.

fertile (*Bot.*). Able to produce spores or seeds.

fertile flower (*Bot.*). A pistillate flower.

fertilisation (*Biol.*). The union of two sexually differentiated gametes to form a zygote.

fertilisation cone (*Zool.*). A conical projection of protoplasm arising from the surface of an ovum and giving rise to a filamentous process which adheres to a spermatozoon-head and then retracts, dragging the spermatozoon into the cytoplasm of the ovum.

fertilisation tube (*Bot.*). See **conjugation tube.**

fertili'sin (*Zool.*). A substance which is present in the cortex of an ovum and assists in the activation of the ovum.

F.E.S. (*Build.*). Abbrev. for *feather-edged springer*.

Fessenden detector (*Radio*). An early form of electrolytic detector, comprising two polarised electrodes immersed in an electrolyte.

festination (*Med.*). Involuntary quick walking with short steps, occurring in certain diseases of the nervous system, e.g. in paralysis agitans.

festoon (*Build.*). An ornamental feature representing usually a hanging garland of flowers or leaves.

festoon lighting (*Elec. Eng.*). Lighting, usually for decorative purposes, in which a number of lamps are arranged at intervals along a suspended cable.

fetch (*Civ. Eng.*). The distance of the nearest coast in the direction of the strongest and most prevalent winds on a harbour site.

fet'ishism (*Psycho-path.*). A pathological condition or sexual perversion in which sexual attraction and gratification is obtained from various non-genital eroticised areas of the body, or from any object which has become similarly emotionally charged.

fetlock (*Vet.*). The metacarpophalangeal and metatarsophalangeal regions of the horse.

fettler (*Woollen*). An operative who clears away the fibrous material and dirt from the card of carding machines.

fettling (*Foundry*). See **dressing-off.**—(*Met*) The preparation of the hearth of an open-hearth or reverberatory furnace, to make it capable of holding a charge of molten metal.

fever (*Med.*). The complex reaction of the body to infection, associated with a rise in temperature. Less accurately, a rise of the temperature of the body above normal.

F.H.P. (*Eng.*). *Friction horse-power* (q.v.).

fiber. A variant spelling of *fibre*

Fiberlic (*Build.*). Trade-name for a particular type of building-board.

fibre (*Bot.*). (1) A very narrow, elongated, thick-walled cell, tapering to a sharp point at both ends.—(2) A very delicate root.

fibre (*Met*). Any arrangement of the constituents of metals parallel to the direction of working. It is applied to the elongation of the crystals in severely cold-worked metals, to the elongation and stringing out of the inclusions in hot-worked metal, and to preferred orientations.

fibre (*Textiles*). The name for any type of filament, of animal, vegetable, or mineral origin, from which yarns and fabrics are manufactured.

fibre board (*Build.*). A form of building-board made from fibrous material such as wood pulp.

fibre tracheide (*Bot.*). An elongated cell found in wood, which has thicker walls with fewer pits than a tracheide, and thinner walls with more pits than a fibre.

fi'bril, fibril'la (*Bot.*). (1) A small fibre.—(2) A tiny fibre-like branch.—(*Zool.*) Any minute thread-like structure, as the longitudinal contractile elements of a muscle fibre.—*adjs.* **fi'brillar, fibrillate.**

fibrillation (*Med.*). (1) Twitching of individual muscle fibres, or bundles of fibres, in certain nervous diseases.—(2) Inco-ordinate contraction of individual muscle fibres of the heart, giving rise to an irregular and inefficient action of the heart; especially, *auricular fibrillation.*

fibrillose (*Bot.*). (1) Covered with a loose fibrous coating.—(2) Appearing as if made up of fibres.

fi'brin (*Chem., Zool.*). An insoluble proteid substance which is precipitated in the form of a meshwork of fibres when blood coagulates.

fibrin'ogen (*Chem., Zool.*). A protein contained in the plasma of blood. The coagulation of fibrinogen is responsible for the clotting of blood and the production of fibrin.

fibrino-purulent (*Med.*). Containing fibrin and pus.

fi'bro-adenoma (*Med.*). An adenoma in which there is an overgrowth of fibrous tissue.

fibroblasts (*Zool.*). Flattened connective-tissue cells of irregular form, believed to be responsible for the secretion of the white fibres: lamellar cells.

fibrocar'tilage (*Zool*). A form of cartilage which has white or yellow fibres embedded in the matrix.

fibrocys'tic disease (*Med.*). Osteitis fibrosa. A condition in which there may be (1) a single cyst in a bone, or (2) cysts in many bones; the latter (generalised osteitis fibrosa; Von Recklinghausen's disease of bone) is due to loss of calcium salts from the bone, and is associated with a tumour of the parathyroid glands.

fibrolipo'ma (*Med.*). A tumour composed of fibrous and fatty tissue.

fibromyec'tomy (*Surg.*). Surgical removal of a fibromyoma.

fibromyo'ma (*Med.*). Fibroid. A tumour composed of fibrous tissue and unstriped muscle fibres, commonly found in the uterus.

fibromyosi'tis (*Med*). Inflammation (usually rheumatic) of fibrous tissue in muscle and in the muscle fibres adjacent to it.

fibro-vascular bundle (*Bot.*). A vascular bundle accompanied, usually on its outer side, by a strand of sclerenchyma.

fibroid (*Med.*). Resembling fibrous tissue: a fibromyoma.

fibroid phthisis (*Med.*). Chronic pulmonary tuberculosis, in which there is an overgrowth of fibrous tissue in the lung.

fi'brolite or **sil'limanite** (*Min.*). One of three crystalline forms of aluminium silicate, Al_2SiO_5, the others being andalusite (low temperature) and kyanite (high pressure). Sillimanite occurs commonly as felted aggregates of exceedingly thin fibrous crystals (hence the name *fibrolite*) in contact metamorphosed aluminous sediments such as mudstones, shales, etc. Crystals of a pale sapphire blue are used as gems.

fibro'ma (*Med.*). A tumour composed of fibrous tissue.

fibrose (*Med*). To form fibrous tissue.

fibro'sis (*Med.*). The formation of fibrous tissue as a result of injury or inflammation of a part, or of interference with its blood supply.

fibrosi'tis (*Med.*). Inflammation (especially rheumatic) of fibrous tissue.

fibrot'ic (*Med.*). Pertaining to fibrosis.

fi'brotile (*Build.*). A corrugated tile, 4 ft. by 3 ft. 10 in., of asbestos cement.

fibrous concrete (*Build.*). Concrete in which fibrous aggregate, such as asbestos, saw-dust, etc, are incorporated either as alternative or additional to the sand and gravel.

fibrous filler (*Acous.*). The most commonly used filler in gramophone discs, generally of cotton flock. Chosen because of its properties of reducing the brittleness associated with the shellac, and of taking up strains during the shrinkage which occurs during cooling, after pressing.

fibrous layer (*Bot.*). A layer of cells having their walls thickened irregularly by thin bands of material, occurring in the wall of an anther. The walls shrink unevenly as they dry, a strain is set up, and the wall of the anther is torn, releasing the pollen.

fibrous plaster (*Build.*). Prepared plaster slabs formed of canvas stretched across a wooden frame and coated with a thin layer of gypsum plaster.

fibrous tissue (*Zool.*). A form of connective-tissue consisting mainly of bundles of white fibres: any tissue containing a large number of fibres.

fib'ula (*Masonry*). A bent iron bar, used to fasten together adjacent stones.

fibula (*Zool*). In land Vertebrates, the post-axial bone of the crus.

fibular'e (*Zool.*). A bone of the proximal row of the tarsus, in line with the fibula.

fictile (*Pot.*). Said of all thrown, modelled, moulded, and carved clay work.

fidelity (*Elec. Comm*). The measure of the performance of a reproducing system, in which the output signal or wave-form is compared with the input wave-form. Sometimes restricted to the frequency-response of the system for the frequencies likely to be in the signal wave-form.

Fidler's gear (*Build., Civ. Eng.*). Hoisting and lowering apparatus adapted to lowering large masonry blocks at any required angle.

fidu'cial (*Surv., etc*). Said of a line or point assumed as a fixed basis of reference.

fiducial temperature (*Meteor.*). The temperature at which a sensitive barometer reads correctly, the maker's calibration holding for latitude 45° at the temperature 285° Absolute only.

field (*Auto. Teleph*).

See **cross-connexion—**
jumper—
translation—

field (*Elec. Eng.*). More properly called a *vectorial field*. The region of space in which the phenomenon characterising the field, e.g. electric, magnetic, or gravitational, is representable by a vector. Field frequently means *intensity of field*.

See **commutating—**
compensating—
cross—
electric—
magnetic—
main—
residual—
reversing—
rotating—
series—
shunt—
stray—

field (*Phys.*). The region in which the forces being considered are appreciable: the area over which objects are visible, as in the *field of view* (q.v.) of a telescope.

field (*Surv.*). A term denoting the scene of operation of the surveyor

field ampere-turns (*Elec. Eng*) The ampere-turns producing the magnetic field of an electric machine.

field book or **chain book** (*Surv.*). A book in which the surveyor records field measurements made in the course of a chain survey.

field-breaking resistance (*Elec. Eng.*). See **field-discharge resistance.**

field-breaking switch (*Elec. Eng.*). See **field-discharge switch.**

field coil (*Elec. Eng.*). The coil which carries the current for producing the magnetomotive force to set up the flux in an electric machine; occasionally called a FIELD SPOOL. See also **magnetising coil.**

field-control (*Elec. Eng.*). A method of controlling the speed of a d.c. motor by varying the exciting flux, either by the use of a shunt field rheostat, a field diverter rheostat, or tappings on a series field winding, or by some other suitable means.

field copper (*Elec. Eng.*). A term used in the design of electrical machines to denote the total quantity of copper used in the field windings of a machine.

field current (*Elec. Eng.*). The current in the field winding of an electric machine.

field, curvature of (*Photog.*). See **curvature of the field.**

field-discharge resistance (*Elec. Eng.*). A discharge resistance used for connecting across the terminals of the shunt or separately excited field winding of an electric machine, to prevent high induced voltages when interrupting the field circuit. Also called a FIELD-BREAKING RESISTANCE.

field-discharge switch (*Elec. Eng.*). A switch for controlling the field circuit of a generator. It is provided with special contacts, so that a discharge resistance is connected across the winding at the moment of breaking the field circuit. Also called a FIELD-BREAKING SWITCH.

field diverter rheostat (*Elec. Eng.*). A rheostat connected in parallel with the series field winding or the compole winding of a d.c. machine, in order to give control of the m.m.f. produced by the winding, independently of the current flowing through the main circuit.

field drains (*Civ. Eng*). Brick clay or terra-cotta pipes laid end-to-end in a trench to drain fields.

field form (*Elec. Eng*). A curve showing the value of the flux density at all points in the air-gap of an electric machine.

field-form factor (*Elec. Eng*). A factor used in electric machine design to give the ratio of the average value of the flux density in the air-gap of a machine to the maximum value.

field intensity (*Elec. Eng*). *Field strength* (q.v.).

field magnet (*Elec. Eng.*). The permanent or electro-magnet which provides the m.m.f. for setting up the flux in an electric machine. See **rotating field magnet.**

field of view (*Light*). The area over which the image is visible in the eyepiece of an optical instrument. It is usually limited by a circular stop in the focal plane of the eye-lens. See **sagittal field*, tangential field*.**

field plates (*Elec. Eng.*). The conductors used in some forms of electrostatic machine for inducing charges on the carriers.

field rheostat (*Elec. Eng.*). A variable resistance (rheostat) connected in series or parallel with the field winding of an electrical machine for the purpose of varying the current in the winding. Also called a FIELD REGULATOR.

See **balancer—**
exciter—
potentiometer-type—
reversible potentiometer-type—
shunt—
field diverter rheostat.

field rivet (*Struct.*). A rivet which is put in when the work is on the site. Also called SITE RIVET.

field spider (*Elec. Eng.*). The portion of an electric machine which supports the revolving magnet poles.

field-splitting switch (*Elec. Eng.*). A switch sometimes used for subdividing the field winding of a rotary convertor into a number of groups, in order to prevent excessive induced voltages during the starting period.

field spool (*Elec. Eng.*). A spool or bobbin upon which a field coil may be carried. Occasionally used also to denote a *field coil*.

field strength (*Elec. Eng.*). See **electric field strength, magnetic field strength.**—(*Radio*) The intensity of an electromagnetic wave, expressed as the e.m.f. which it induces in an antenna of unit effective height (one metre).

field suppressor (*Elec. Eng.*). An arrangement for automatically reducing the field current of a generator when a short-circuit or other fault occurs on the machine or its adjacent connexions.

field tube (*Eng.*). A special form of boiler tube, consisting of an outer tube which is closed at its lower end and contains a second concentric tube, down which the water passes to return up the annular space between the two.

field winding (*Elec. Eng.*). The winding placed on the field magnets of an electric machine and producing the m.m.f. necessary to set up the exciting flux.

field work (*Surv.*). That part of a surveyor's work which is done in the *field* (q.v.) as distinct from that done in the office.

Field's siphon flush tank (*San. Eng.*). A tank used for automatically flushing sewers and drains by a siphoning method.

fielded panel (*Join.*). A panel which is moulded, sunk, or raised, or is divided into smaller panels.

fiery mine (*Mining*). A mine containing coal-gas in its atmosphere: one in which there is a possibility of explosion from gas or coal-dust.

figure (*Timber*). The natural markings produced by grain or colour on the surface of timber.

figure-eight wire (*Elec. Eng.*). Wire used for the overhead contact wire of a traction system; it has a cross-section resembling a figure eight, the object being to provide a groove whereby it can be supported from the ears attached to the supporting wires.

figure of loss (*Elec. Eng.*). A term occasionally used in connexion with transformers to denote the energy loss per lb. of material (iron or copper).

figure of merit (*Elec. Eng.*). See **sensitivity.**

figure of the earth (*Surv.*). The shape that the earth would have if it were entirely covered by water.

figure sheet (*Textiles*). The form into which a lace pattern draft is converted, to simplify manufacture in a Levers machine.

figured twills (*Textiles*). Fabrics having simple figure effects, combined with the diagonal twill lines.

filament (*Bot.*). (1) A chain of cells set end to end.—(2) The stalk of a stamen.

filament (*Elec. Eng., Illum.*). A fine wire of high resistance, which is heated to incandescence by the passage of an electric current. In an electric filament lamp it acts as the source of light, and in thermionic tubes it acts as an emitter of electrons.

filament (*Textiles*). The fibre produced by the silkworm for spinning the cocoon.

filament (*Thermionics*). A metallic wire heated by the passage of a current to such a temperature that electrons are emitted copiously from its surface. Also called DIRECTLY HEATED CATHODE.

filament (*Zool.*). Any fine thread-like structure: the axis of a down-feather.

filament current (*Thermionics*). The current used to heat the filament.

filament efficiency (*Thermionics*). The ratio of the current emitted from a filament to that used to heat it.

filament electrometer (*Elec. Eng.*). A type of electrometer in which the moving part consists of a fine wire filament, the deflection of which is observed through a microscope.

filament-lamp (*Illum.*). An electric lamp in which a filament in a glass bulb, evacuated or filled with inert gas, is raised to incandescence by the passage through it of an electric current.

See **carbon—**
gas-filled—
projector-type—
vacuum—

filament limitation (*Thermionics*). The limitation of anode current in a thermionic tube by the finite emission from the filament, as distinct from *space-charge limitation*. Also called FILAMENT SATURATION.

filament saturation (*Thermionics*). The condition of a thermionic tube when all the electrons emitted from the filament are drawn to the other electrodes. Also called EMISSION LIMITATION. See also *field limitation*.

filamen'tous. Thread-like.

filaria'sis (*Med., Vet.*). Infestation with nematode worms of the family *Filariidae*, which inhabit the lymphatic channels, often causing elephantiasis.

Filarioidea, —ō-id'e-a (*Zool.*). A class of *Nematoda*, comprising a number of parasitic forms in which an intermediate host is probably always necessary for development; paired lateral lips may occur, and the oesophagus is without a bulb; the eggs hatch in utero or contain embryos when laid.

file (*Eng.*). A hand metal-cutting tool, blade, or rod of hardened cast-steel on which small teeth have been cut. The file section may be flat, round, triangular, half-round, etc., and either parallel or taper; the degree of fineness of the teeth is specified as *rough, middle, bastard, second-cut, smooth*, and *dead-smooth*, corresponding to a range of from about 12 to 120 teeth per inch. See also **float, rasp.**

filial generation (*Gen.*). The offspring of a cross mating, the first filial generation being the direct off-spring of the first filial generation inbred, and so on.

Filibran'chia (*Zool.*). An order of *Pelecypoda*, in which the branchial axis of the gill is united to the body throughout its length and bears parallel, ventrally directed, and reflected filaments, which are joined to one another by interlocking cilia; there is a well-developed byssus gland; ciliary feeders. Sea Mussels, Scallops, Pearl Oysters, Thorn Oysters, Hammer Oysters, Wing Shells, etc.

Filicales, Filices, —kā'lēz, fil'i-sēz (*Bot.*). The ferns. A large group belonging to the *Pteridophyta*, with large, often highly compound leaves, bearing the sporangia. They occur chiefly in damp shady places. The ferns show a well-marked alternation of generations, a small inconspicuous gametophyte bearing the sexual organs, and a large sporophyte (the ordinary fern plant) producing the spores.

filicin'ean (*Bot.*). Relating to ferns.

fil'iform (*Bot., Zool.*). Thread-like; as *filiform antennae*.

fil'igree (*Jewel.*). Ornament formed with precious metal wires and grains.

filing block (*Eng.*). A wooden block which is held in the vice, and to which light flat work is secured for filing.

filings coherer (*Radio*). An early detector, comprising two electrodes placed end to end in a glass tube and almost touching, the inter-electrode space being partially filled with metallic filings. The inter-electrode resistance remains high until the arrival of a signal, when it falls to a much lower value.

filipen'dulous (*Bot.*). Having swellings of considerable size along, or at the ends of, thin roots.

Filippi's glands (*Zool.*). In lepidopterous larvae, a pair of accessory glands associated with the silk-glands.

filled cloth (*Textiles*). A cloth to which sizing material has been added to increase the weight or improve the appearance.

filled gold. Gold plating, the sheet gold being backed on base metal.

filler (*Acous.*). The inert fine-grained material which is added to the binding material of the normal gramophone record to give weight and colour. Examples are carbon black and pigments. See also **fibrous filler.**

filler (*Boots and Shoes*). Material forming a pad between the outer and the inner sole.

filler (*Civ. Eng.*). A finely divided substance added to bituminous material for road surfacing, in order to reduce it to a suitable consistency.

filler (*Dec.*). (1) A material used to fill in the pores of, or any holes in, wood, plaster, etc. which is to be painted, varnished, or otherwise decorated.—(2) An *extender* (q.v.).

filler (*Plastics*). Material, such as wood meal, paper pulp, or mineral powder, added to a moulding composition to give strength and good working properties to the product.

filler and drawer (*Mining*). A man who fills tubs at the coal face and pushes them to the main haulage road.

filler joist floor (*Build.*). A type of fire-resisting floor, consisting of main steel joists supporting small 'filler' joists at intervals, the panels between filler joists being filled, and all steelwork encased in concrete.

filler-rod (*Elec. Eng.*). See **welding-rod.**

fillet (*Arch.*). (1) A flat and narrow surface separating or strengthening curved mouldings.—(2) A *listel*. See **facette.**

fillet (*Bind.*). A band or line of gold leaf, or a plain band or line, on a cover.

fillet (*Carp.*). A thin strip of wood fixed into the angle between two surfaces, to a wall as a shelf support, to a floor as a door stop, etc.

fillet (*Eng.*). (1) A narrow strip of metal raised above the general level of a surface.—(2) A radius provided, for increased strength, at the intersection of two surfaces.

fillet ground (*Textiles*). A square ground-mesh of lace.

filleting (*Build.*). See **cement fillet, fillet** (*Arch.*, *Carp.*).

filling (*Mining*). (1) The loading of tubs or trucks with coal, ore, or waste.—(2) The filling-up of worked-out areas in a metal-mine.

filling (*Paint.*). The part of the wall surface included between the dado and the frieze.

filling (*Textiles*). (1) The name used in America for *weft*.—(2) Size that is added to cloth, either during dyeing and finishing or subsequently.

filling-in (*Masonry*). The operation of building in the middle part of a wall, between the face and the back.

filling-in piece (*Carp.*). A timber of shorter length than its fellows; e.g. a jack-rafter at the hip of a roof.

filling pile (*Hyd. Eng.*). A pile serving to retain the sheeting of a coffer-dam.

filling post (*Join.*). A middle post in a timber frame.

filling-up (*Dec.*). The operation of levelling surfaces by stopping hollows in the work with putty, plastic wood, etc.

fillister (*Carp.*, *Join.*). (1) A groove in the edge of a sash bar, to receive the glass and putty.—(2) A rabbeting plane having a movable stop to regulate depth of cut.

fillister-head screw (*Eng.*). A cheese-head screw with a flat or slightly rounded or cambered upper surface.

film (*Chem.*). A thin layer of a substance, at the most a few molecules thick, generally differing in properties from other layers in contact with it.

film (*Cinema, Photog.*). (1) A sensitive emulsion on a flexible base (usually celluloid).—(2) Abbrev. for *sound-film*.—(3) To make a cinematograph film.

sub-standard do.

film gate (*Cinema.*). The detachable element which guides the film past the exposing aperture and holds it in position during exposure.

film record (*Acous.*). A record, intended for subsequent reproduction, in which the registration is made photographically on film, the variation in density along a track constituting the record, which is scanned by a constant beam of light. See **sound-film.**

film recorder (*Cinema.*). The machine which records sound on film, generally in sound-film production. See **sound camera.**

film recording (*Acous.*). The process of recording sound on a sound-track on the edge of cinematograph film, for synchronous reproduction with the picture. The track is exposed so as to vary the density in the direction of motion of the film according to the recorded sounds, in order that subsequent scanning by a finely focused slit and photo-electric cell may reproduce the modulation of the density.

film speed (*Cinema.*). The speed at which a cinematograph film passes through a gate; expressed in feet per minute or second, or frames per second. For standard film, the speed is 90 feet per minute, or 24 frames per second.

film stock (*Cinema.*). Film, for cinematograph purposes, which is ready for use in cameras.

See **negative—**
ortho—
pan—
positive—
standard—
sub-standard—

filmic (*Cinema.*). The same as *cinematic*.

filmogen'ic (*Cinema.*). Said of action or scenes which would have cinematographic values if photographed.

fil'oplumes (*Zool.*). Feathers having a slender hair-like shaft, with few or no barbs.

filopo'dia (*Zool.*). Fine, thread-like pseudopodia of some *Sarcodina*.

fi'lose (*Zool.*). Said of pseudopodia which are long and slender, and composed entirely of ectoplasm. Cf. *lobose*.

filter (*Chem.*, *etc.*). An apparatus used for the separation of liquids from solids. See **filtration.**

filter (*Elec. Comm.*). Abbrev. for *frequency-discriminating filter*, or *electric wave filter*, a device greatly used in electrical communication circuits to discriminate between currents of different frequencies and keep transmitted signals in their proper channels, and to reject interference from other channels and from outside sources, etc.

filter (*Met.*). Apparatus for separating a solution from finely crushed ore after leaching. It consists essentially of a canvas cloth, through which the solution is forced or drawn by pressure or suction, leaving the solid as a cake on the outside of the canvas.

filter (*Photog.*). A device, usually consisting of a glass plate or a sheet of gelatine, interposed across a beam of light for the purpose of altering the relative intensity of the different component wavelengths in the beam.

See **colour—**

filter bed (*Sewage*). A general name for a *contact bed* (q.v.) or any similar bed used for filtering purposes.

filter circuit (*Radio*). A resonant circuit connected in the lead to a transmitting antenna, to prevent the radiation of harmonics generated in the transmitter.

filter cut (*Photog.*). The wavelength at which the relative absorption for light of different wavelengths changes rapidly.

filter factor (*Photog.*). The number of times a given exposure must be increased because of the presence of a filter, which absorbs light and reduces the effective exposure of a lens system.

filter overlap (*Photog.*). The band of wavelengths transmitted by a combination of filters.

filter paper (*Chem.*). Paper, consisting of pure cellulose, which is used for separating solids from liquids by filtration. Filter paper for quantitative purposes is treated with acids to remove all or most inorganic substances, and has a definite ash content.

filter-passer (*Bacteriol.*). Filter-passing virus; filterable virus; ultramicroscopic virus. A living organism which is invisible by ordinary microscopical methods, and is able to pass through the pores of a filter which retains microscopically visible bacteria. Filterable viruses cause many infectious diseases. See also **virus.**

filter press (*Chem.*). An apparatus used for filtrations; it consists of a set of frames covered with filter cloth between which the mixture which is to be filtered is pumped.

filter-press action (*Geol.*). A differentiation process involving the mechanical separation of the still liquid portion of a magma from the crystal mesh. The effective agent is pressure operating during crystallisation.

filter pulp (*Paper*). Rag fibre made up into convenient cakes at the paper mill. It is reduced to fibres again when required.

filter record position (*Teleph.*). The special position at which records of calls on specified lines are made, to ascertain whether they are overloaded or not.

filterable (or **filtrable**) **virus** (*Bacteriol.*). See **filter-passer.**

filtering basin (*Hyd. Eng.*). A tank through which water passes on its way from the reservoir to the mains, and in which it is subjected to a process of filtration.

filtrate (*Chem.*). The liquid freed from solid matter after having passed through a filter.

filtration (*Chem*, *etc.*). The separation of solids from liquids by passing the mixture through a suitable medium, e.g. filter paper, cloth, glass wool, which retains the solid matter on its surface and allows the liquid to pass through.

filty (*Mining*). A colloquial term for *fire-damp*.

fi'lum termina'le (*Zool.*). In some Vertebrates, a slender non-nervous thread into which the hinder end of the spinal cord is drawn out.

fim'bria (*Zool.*). Any fringing or fringe-like structure: the delicate processes fringing the internal opening of the oviduct in Mammals: the processes fringing the openings of the siphons in Molluscs.

fimbriate, fimbriated (*Bot.*, *Zool.*). Having a fringed margin.

fim'briocele, —sēl (*Med.*). Hernia containing the fimbriae of the Fallopian tube.

fim'ico'lous (*Bot.*). Growing on or in dung.

fin (*Aero.*). In an aeroplane, a fixed vertical surface giving lateral stability of motion; usually placed at the tail, then sometimes called a TAIL FIN. In an airship, a fixed vertical or horizontal surface giving stability of motion.

fin (*Carp.*). A tongue left or formed on the edge of a board.

fin (*Eng.*). (1) The name applied to the thin projecting strips of metal formed integral with an air-cooled engine cylinder to increase the cooling area.—(2) A thin projecting edge on a casting or stamping, formed by metal extruded between the halves of the die: any similar projection.

fin (*Zool.*). In Fish, some *Cephalopoda*, and other aquatic forms, a muscular fold of integument used for locomotion or balancing; supported in the case of Fish by internal skeletal elements.

fin rays (*Zool.*). In Fish, the distal skeletal elements which support the fins.

final common path (*Zool.*). A motor neurone serving several different afferent arcs.

final consonant articulation (*Acous.*). See **articulation.**

final limit-switch (*Elec. Eng.*). A limit switch used on an electric lift; it is arranged to operate in case of failure of the ordinary limit-switch. Also called an ULTIMATE LIMIT-SWITCH.

final selector (*Auto. Teleph.*). The selector which is operated by two trains of impulses so that the wipers finally rest on contacts which are connected to the required subscriber's line.

finder (*Astron.*, *etc.*). A small auxiliary telescope of low power fixed parallel to the tube of a large telescope for the purpose of finding the required object and setting it in the centre of the field; also used in stellar photography for guiding during an exposure.—(*Photog*) See **view finder.**

fine (*Textiles*). The term applied by woolsorters to wool of the best quality, from the shoulders.

fine aggregate (*Civ. Eng*). Sand or the screenings of gravel or crushed stone (forming a constituent part of concrete), which, when dry, will pass a sieve having ¼-in. diameter holes. See **aggregate.**

fine-grained (*Geol.*). See **grain-size classification.**

fine panel saw (*Join*) A saw differing from the panel saw only in that it has slightly smaller teeth.

fine-screen (*Photog.*, *Print.*). Said of a half-tone block whose screen is of the order of 150. The dots are small and close, necessitating the use of art paper. Usually produced on copper.

fine silt (*Geol.*). See **silt grade.**

fine stuff (*Plast.*). Lime slaked with a little water and then diluted to the consistency of cream, after which it is allowed to thicken by evaporation loss to a working consistency for plastering purposes.

fineness (*Chem.*). The state of subdivision of a substance.—(*Met.*) The purity of a gold or silver alloy; stated as the number of parts per thousand that are gold (or silver).

fineness modulus (*Civ. Eng.*). A numeral indicating the fineness of an aggregate, as determined by ascertaining the percentage residue remaining on each of a series of ten sieves with apertures ranging from 1·5 in. to 0·0058 in., summing, and dividing by 100.

finery (*Met.*). A furnace or hearth in which best quality bar-iron is produced from white pig-iron (used particularly in Sweden).

finger plate (*Join.*). A plate fixed on the side of the meeting stile of a door, near the lock, to prevent damage to the paintwork by finger-marks.

finger-type contact (*Elec. Eng.*). A type of contact which, as usually fitted to drum-type controllers, is in the form of a finger which is pressed against the contact surface by means of a spring.

fingering (*Textiles*). Worsted yarn of the type generally used for knitting by hand.

fin'ial (*Build.*). A term applied to an ornament placed at the summit of a gable, pillar, or spire.

finials (*Zool.*). In *Crinoidea*, the ossicles of the distal rami of the arms.

fining coat (*Plast.*). See **setting.**

fining-off (*Plast.*). The operation of applying the setting coat.

finings (*Brew.*). A preparation of isinglass and water, a small quantity of which is added to beer to clarify it.

finisher box (*Worsted*). A machine for straightening and levelling the fibres in readiness for drawing and spinning.

finishing (*Bind.*). The lettering and ornamentation of a bound volume by the finisher; the term does not apply to 'case' work.

finishing (*Furs*). (1) The operation of adding trimmings and paddings.—(2) The placing together of the component parts of an article.

finishing (*Leather*). The processes by which tanned leather is rendered suitable for a particular purpose; e g. dressing, dyeing, currying.

finishing coat (*Plast.*). See **setting.**

finishing cut (*Eng.*). A fine cut taken to finish the surface of a machined work.

finishing department (*Boots and Shoes*). The department in which the edges of the soles and the heels are trimmed, stained, and burnished, and the bottoms of the soles finished according to specification.

finishing-off (*Join.*). See **cleaning-up.**

finishing stove (*Bind.*). A small stove, with gas burners, on which the finisher heats the tools required for his work.

finishing tool (*Eng.*). A lathe or planer tool, generally square-ended and cutting on a wide face, used for taking the final or finishing cut.

Fink truss (*Eng.*). See **French truss.**

Finlay process (*Photog*). A system of colour photography in which a colour screen or a ruled screen is used over a panchromatic plate.

Finsen lamp (*Med.*). A form of arc lamp which is rich in ultra-violet rays; used for medical purposes.

fiords or **fjords** (*Geol.*). Narrow winding inlets of the sea bounded by mountain slopes; formed by the drowning of steep-sided valleys, which are thought to have been deeply excavated by glacial action; in many cases a rock-bar partially blocks the entrance and impedes navigation. Typical examples are the well-known Norwegian fiords.

fire alarms. In a building, these usually consist of thermostatically controlled 'detectors' installed in different parts of the building, or of a sprinkler system; both of these operate a gong on a rapid rise in temperature. In town systems, street alarm boxes are erected at various points; by these visual or audible notice of the outbreak of fire can be conveyed to the fire station.

fire-back (*Build.*). See **chimney-back.**

fireback boiler (*Build.*). The boiler fitted in a *kitchener* (q.v.).

fireball (*Astron.*). See **bolide.**

fire bank (*Mining*). A slack or rubbish heap or dump, at surface on a colliery, which becomes fired by spontaneous combustion.

fire-bar (*Elec. Eng.*). A heating element fitted to a high-temperature electric radiator.

fire-bars (*Eng.*). Cast-iron bars forming a grate on which fuel is burnt, as in domestic fires, boiler furnaces, etc.

fire barriers (*Build.*). Fire-resisting doors, enclosed staircases, and similar obstructions to the spread of fire in a building. See **fire stop.**

fire-box (*Eng.*). That part of a locomotive type boiler containing the fire; the grate is at the bottom, the walls and top being surrounded by water. See **locomotive boiler.**

firebrick arch (*Eng.*). An arch built at the end of a boiler furnace, either to deflect the burning gases or to assist the combustion of volatile products.

fire cement (*Build.*). See **refractory cement.**

fireclay (*Geol., Met.*). Clay consisting of minerals containing predominantly SiO_2 and Al_2O_3, with small proportions of Fe_2O_3, CaO, MgO, etc. Those clays which soften only at high temperatures are used widely as refractories in metallurgical and other furnaces. Fireclays occur abundantly in the Carboniferous System, as 'seat earths' underneath the coal-seams. See **underclay.**

fire-cracked (*Pot.*). Said of ware which has cracked during firing in the biscuit oven.

fire cracks (*Plast.*). Fine cracks which appear in a plastered surface, due to unequal contractions between the different coats.

fire-damp (*Mining*). The combustible gas contained naturally in coal; chiefly a mixture of methane and other hydrocarbons; forms explosive mixtures with air.

fire-damp cap (*Mining*). A small cap which forms over the flame of a safety-lamp when sufficient fire-damp (methane) is present.

firedog (*Grates*). See **andiron.**

fire door (*Build., etc.*). A fire-resisting door of wood, metal, or both; e.g. the door of a boiler furnace.

fire drencher (*Build.*). A hand-operated appliance for extinguishing fire.

fire escape (*Build.*). A special means of exit from a building, for use in the event of fire.

fire extinguishers. These are generally portable, and have a range up to 40 ft. In most types the discharge contains CO_2 gas.

fireman (*Mining*). (1) In a metal-mine, a miner whose duty it is to explode the charges of explosive used in headings and working places. —(2) In a coal-mine, an official responsible for safety conditions underground. See **deputy.**

fire opal (*Min.*). A variety of opal (amorphous silica) characterised by a brilliant orange-flame colour. Particularly good specimens, prized as gemstones, are of Mexican origin.

fireplace (*Build.*). The place where the chimney opens into a room.

fire plug. A *hydrant* (q.v.) for service in extinguishing fires.

fire point (*Oils, etc.*). The temperature at which sufficient vapour is given off by a heated liquid, under standard test conditions, to maintain combustion. Cf. *flash point.*

fire polishing (*Glass*). The polishing of glass-ware, decorated with a pressed pattern, by holding it in a glory-hole.

fireproof aggregates (*Build.*). Materials such as crushed firebricks, fused clinkers, slag, etc., incorporated in concrete to render it fire-resisting.

fire refining (*Met.*). The refining of blister copper by oxidising the impurities in a reverberatory furnace and removing the excess oxygen by poling. May be used as an alternative to electrolytic refining, and in any case is carried out as a preliminary to this.

fire-resisting covering (*Elec. Eng.*). An incombustible covering for electric wires and cables, placed over the ordinary combustible insulation.

fire ring (*Eng.*). A top piston-ring of a special heat-resisting design, used in some two-stroke oil engines.

fire stink (*Mining*). The smell given off underground when a fire is imminent, e.g. in the gob.

fire-stone (*Geol.*). A stone or rock capable of withstanding a considerable amount of heat without injury. The term has been used with reference to certain Cretaceous and Jurassic sandstones employed in the manufacture of glass furnaces.

fire stop (*Build.*). An obstruction across an air passage in a building to prevent flames from spreading further.

fire-trap or **magazine valve** (*Cinema.*). The pair of rollers through which the film passes in entering and leaving the feed and take-up magazines on a projector; its purpose is to cool the film and prevent the ingress of air to the magazine, should the film ignite in the gate, and so stop the spread of fire to the bulk of the reel in the magazine.

fire-tube boiler (*Eng.*). A boiler in which the hot furnace gases, on their way to the chimney, pass through tubes in the water space, as opposed to a *water-tube boiler* (q.v.). See **marine boiler, locomotive boiler.**

firing (*Eng.*). (1) The process of adding fuel to a boiler furnace.—(2) The ignition of an explosive mixture, as in a petrol or gas engine cylinder.—(3) Excessive heating of a bearing.

firing (*Jewel.*). A method of changing the colour of some precious stones; it consists in exposing them to heat.

firing (*Pot.*). Baking or vitrifying clay goods in a kiln.

firing (*Vet.*). The application of the thermo-cautery to the tissues of animals.

firing key (*Elec. Eng.*). A key which fires a charge of explosive by completing the electric circuit to a fuse.

firing order (*I C. Engs*) The sequence in which the cylinders of a multi-cylinder internal-combustion engine fire; e.g. 1, 3, 4, 2 for a 4-cylinder engine.

firing stroke (*Eng.*). The power or expansion stroke of an internal-combustion engine.

firing tools (*Eng.*). Implements (e.g. shovels, rakes, and slicers or slicing bars) used in firing a boiler furnace by hand.

firing top-centre (*Eng.*). The top dead-centre of an internal-combustion engine, when the piston is about to make its power stroke.

firmer chisel (*Carp., Join.*). A woodcutting chisel, usually thin in relation to its width, which varies between $\frac{1}{16}$ in. and 2 in. It is stouter than a paring chisel but less robust than a mortise chisel.

firmer gouge (*Carp.*). A stout chisel having a shaped blade, which cuts a segmental groove.

fir′mister′nous (*Zool.*). Having the two halves of the pectoral girdle firmly united, as Frogs. Cf. *arciferous.*

firn (*Geol.*). A more or less compacted snow-ice occurring above the snow-line; it consists of small rounded crystalline grains formed from snow crystals. Also called NÉVÉ (nā-vā).

Firola (*Join.*). A patented type of fireproof revolving door or shutter.

firring (*Carp.*). Timber strips of constant width but varying depth, which are nailed to the wood bearers to flat roofs as a basis for roof boarding, to which they give a suitable fall. Also spelt FURRING.

first coat (*Plast.*). The base of coarse stuff applied in plastering.

first detector (*Radio*). The modulating portion of a frequency changer.

first fixings (*Join.*). Items, such as grounds, plugs, etc., which form a basis for the support of joinery.

first floor (*Build.*). The floor next above the ground floor.

First Point of Aries (*Astron.*). See **Aries (First Point of), equinoctial points.**

First Point of Libra (*Astron.*). See **equinoctial points.**

first runnings (*Chem.*). The first fraction collected from a *fractional distillation* (q.v.) process, usually containing low boiling impurities.

first ventricle (*Zool.*). In Vertebrates, the cavity of the left lobe of the cerebrum.

first water (*Gems*). Gems of the highest value, irrespective of size, are said to be of the *first water*. In diamonds, the term applies to stones which are without colour and are unflawed. The incoming of a slight amount of colour detracts from the value and they are said to be *off colour*. Actually diamonds of the first water are almost bluish-white.

first weight (*Mining*). The first indications of roof pressure which take place after the removal of coal from a seam.

fish (*Elec. Eng.*). To insert wires or strings in conduits or holes to facilitate the drawing-in of insulated conductors.

fish-bar (*Rail*). See **fish-plate.**

fish-beam (*Civ. Eng.*). A beam which is *fish-bellied* (q.v.).

fish-bellied (*Eng.*). Said of (1) steel girders with a convex lower edge; (2) long straight-edges, which are convex upward; such a form results in greater resistance to bending.

fish-eye (*Min.*). A literal translation of the term *ichthyophthalmite* (=*apophyllite*, q.v.).

fish glue. (1) *Isinglass* (q.v.).—(2) Any glue prepared from the skins of fish (esp. sole, plaice), fish-bladders, and offal.

fish joint. A *fished joint* (q.v.).

fish-piece (*Carp.*). The wooden or steel cover-plate used on each side of a fished joint.

fish-plate (*Eng., Rail., etc.*). A steel cover-plate, fitted one to each side of a fished joint between successive lengths of beam or rail. Also called FISH-BAR, SPLICE PIECE, SHIN.

fish-wire (*Elec. Eng.*). A thin wire drawn into a conduit for electric cables or wires during their construction, in order that it may be subsequently used for drawing in the cables or wires themselves.

fished joint (*Eng., Rail., etc.*). A butt joint between two rails or beams, in which fish-plates or cover-straps are fitted on both sides of the joint and bolted together. See **butt joint.**

fishing (*Carp., Eng., etc.*). Jointing two parts in the same straight line by butting their ends, and securing them together by means of two short side pieces covering the joint.

fishing (*Eng.*). The process of recovering tools dropped from drilling tackle during oil-well drilling operations.

fissile (*Bot.*). Split, or having a tendency to split.

fissilin′gual (*Zool.*). Having a forked tongue.

fission (*Astron*). The breaking-up of a single gaseous body into two unequal masses, to form a binary star, according to a possible dynamical theory of the origin of such systems.

fission (*Zool*). See **binary— multiple—**

fission fungi (*Bot*). Bacteria.

fis′siped (*Zool.*). Having the digits free. Cf. *pinniped.*

fissiros′tral (*Zool.*). Having a cleft beak.

fissle (*Mining*). The sound which is heard in a coal-mine when the floor is rising because of pressure.

fissure (*Geol.*). A cleft in rock determined in the first instance by a fracture, a joint plane, or fault, subsequently widened by solution or erosion; may be open, or filled in with superficial deposits. See **grikes.**

fissure (*Med.*). (1) Any normal cleft or groove in organs of the body.—(2) Linear ulceration of the anus, usually the result of constipation.

fissure eruptions (*Geol.*). Throwing-out of lava and (rarely) volcanic ' ashes ' from a fissure, which may be many miles in length. Typically there is no explosive violence, but a quiet welling-out of very fluid lava. Recent examples are known from Iceland.

fissure vein (*Mining*). Valuable mineral filling a crack or fissure in the earth's crust. It has no special significance with regard to depth or value.

fistu′ca (*Civ. Eng.*). A pile-driver.

fis′tula (*Build.*). An ancient name for a water-pipe.

fistula (*Med.*). A morbidly formed infected canal in any part of the body, often communicating with a hollow viscus.—*adj.* **fistulous.**

fis′tular, fis′tulose (*Bot.*). Hollow like a pipe.

fistulous withers (*Vet.*). Abscess formation in the withers of a horse due to infection by *Brucella abortus*, *Bacillus viscosum equi*, or *Staphylococcus*. Sometimes the ruptured abscess contains a neuratode worm, *Onchocerca cervicalis*, which is transmitted by *Culicoides nebeculosus*.

fit (*Med.*). A sudden attack of disturbed function of the sensory or of the motor parts of the brain, with or without loss of consciousness. See also **epilepsy.**

fit-up (*Civ. Eng.*). Shuttering which is framed so as to be suitable for repetition work.

fitch (*Furs*). The dressed skin of the fitchew or polecat; the fur is dark-brown above and black below, with white markings on the face.

fitch (*Paint.*). A small hog's-hair brush with a chisel edge, used for fine finishing work.

fitchering (*Dec.*). Lining or picking-out with a fitch brush.

fitter (*Eng.*). A mechanic who assembles finished parts in an engineering workshop.

fitter's bench (*Eng.*). A heavy wooden bench provided with a vice and a drawer for tools; used by a fitter.

fitter's hammer (*Eng.*). A hand hammer having a flat striking face, and either a straight, cross, or ball pane.

Fittig's synthesis, fit'ihh (*Chem.*). The synthesis of benzene hydrocarbon homologues by the action of metallic sodium on a mixture of a brominated benzene hydrocarbon and an alkyl bromide or iodide in a solution of dry ether.

fitting (*Illum.*). A device used for supporting or containing a lamp, together with its holder, and its shade or reflector; part of the equipment of an electric-light installation.

See **bulkhead—**
candle—

indirect—
inspection—
mill—
oyster—
semi-indirect—
split—
standard—
waterproof—
weatherproof—

fitting (*Eng.*). Hand or bench work involved in the assembly of finished parts by a fitter.

fittings (*Eng.*). (1) Small auxiliary parts of an engine or machine.—(2) Boiler accessories, as valves, gauges, etc.

fitting shop (*Eng.*). The department of an engineering workshop where finished parts are assembled. See **erecting shop.**

five-centred arch (*Build.*). An arch having the form of a false ellipse struck from five centres.

five-electrode valve (*Thermionics*). See **pentode valve.**

five-unit code (*Teleg.*). The Baudot code, as used for machine transmission of telegraphic signals in synchronous and start-stop systems.

five-wire system (*Elec. Eng.*). A system used for electrical distribution. It may be a d.c. system in which one wire is at earth potential, two are at a potential of V to earth, and the other two are at a potential of 2V to earth; or it may be a 2-phase four-wire system, in which the two phases are connected and earthed at their mid-points, and a neutral wire is brought out from this point.

fixation (*Bot.*, *Zool.*). The treatment of a specimen with a reagent which will fix its structure and appearance in a life-like condition.—(*Zool.*) The action of certain muscles which prevent disturbance of the equilibrium or position of the body or limbs: the process of attachment of a free-swimming animal to a substratum, on the commencement of a temporary or permanent sessile existence.

fixation (*Psycho-path.*). An emotional arrest of the personality at an earlier stage of development; caused by the maintenance of the instinctual forces in the channels of gratification common to that phase.

fixation of nitrogen (*Chem.*). The conversion of atmospheric nitrogen into a combined form, suitable for use in fertilisers, explosives, etc. The most important methods are the *arc process* (q.v.), the *Haber process* (q.v.), and the *cyanamide process* (q.v.)—(*Bot.*) The formation, by soil bacteria, of nitrogenous compounds from elementary nitrogen.

fix'ative (*Bot.*, *Zool.*). A reagent which will permanently fix the structure of a specimen in a life-like condition.

fixed air (*Chem.*). An obsolete term for *carbon dioxide*.

fixed ammunition. See **cartridge, cartridge case.**

fixed beam (*Struct.*). A beam with fixed ends.

fixed-charge collector (*Elec. Eng.*). A device, attached to prepayment meters, which is arranged so that the insertion of coins corresponding to a fixed charge (rental or hire-purchase charge) allows a consumer to close a switch to receive a supply, the switch being opened automatically after a predetermined time.

fixed contact (*Elec. Eng.*). The contact of a switch or fuse which is permanently fixed to the circuit terminal.

fixed eccentric (*Eng.*). An eccentric which is permanently keyed to a shaft, not capable of angular movement, as is a *loose eccentric* (q.v.).

fixed end (*Struct.*). The term applied to the end of a beam when it is built in or otherwise secured so that the tangent at the end to the curve taken up by the beam when it is deflecting under applied loading remains fixed.

fixed expansion (*Eng.*). A steam-engine in which the cut-off cannot be altered and which thus works with a constant expansion ratio.

fixed handle circuit-breaker (*Elec. Eng.*). See **fixed trip.**

fixed light position (*Bot.*). The position of a fully developed leaf in respect of the direction of the strongest diffused light that reaches it.

fixed needle surveying (*Surv.*). Traverse work done with a compass fitted with a vernier connected to the line of sight, and moving over a fixed graduated circle, the instrument being used to measure horizontal angles, as if it were a theodolite, the bearing being carried forward, while the needle is read only as a check after the first station. Also called FAST NEEDLE SURVEYING, RACKING.

fixed oils (*Dec.*). Vegetable oils which are not changed by heat or distillation.

fixed points (*Heat*). The standard temperatures chosen to define a thermometer scale. Those invariably used are the temperature of melting ice and the temperature of steam from water boiling under a pressure of 76 cm. of mercury.

fixed pulley (*Eng.*). A pulley keyed to its shaft. See **fast pulley.**

fixed sash (*Build.*). (1) A *stand sheet* (q.v.).—(2) A sash permanently fixed in a solid frame.

fixed time-lag (*Elec. Eng.*). See **definite time-lag.**

fixed-trip (*Elec. Eng.*). A term applied to certain forms of circuit-breaker or motor starter to indicate that the tripping mechanism cannot operate while the breaker or starter is actually being closed. Also called FIXED-HANDLE. Cf. *free-trip.*

fixed-type metal-clad switchgear (*Elec. Eng.*). Metal-clad switchgear in which all parts are permanently fixed, no provision being made for easy removal of any part for inspection or maintenance purposes.

fixing block (*Build.*). A block of material, having the shape of a brick, which can be built into the surface of a wall to provide a substance to which joinery, such as window frames, may be nailed. Fixing blocks are made of porous concrete, of coke breeze, or of a special brick made with a mixture of sawdust which burns away in the kiln to leave a porous brick material. See also **wood brick.**

fixing fillet (or **pad**) (*Build.*). A *slip* (q.v.).

fixings (*Join.*). Supports, such as grounds and plugs, for securing joinery in position.

fixture (*Build.*). An attachment to a building.

fjords (*Geol.*). See **fiords.**

flab′ellate, flabel′liform (*Bot., Zool.*). Shaped like a fan.

flabel′lum (*Zool.*). Any fan-shaped structure: in *Crustacea*, the distal exite of a phyllopodium: an epipodite.

flaccid, flak′sid (*Bot.*). Limp and flabby.

flag or **flagstone** (*Civ. Eng.*). A flat thin stone, either natural or artificial, used as a paving material or for purposes of providing cover (e.g. for a catch-pit).—(*Geol.*) Natural flagstones are sedimentary rocks of any composition which can be readily separated, on account of their distinct stratification, into large slabs. They are often fine-grained sandstones interbedded with shaly partings along which they can be split.

flag (*Surv.*). A piece of cloth tied to a pole at a survey station, in order to render the station more easily visible from a distance in cases where the line of sight passes between trees, or when the background is deceptive, etc.

Flagella′ta (*Zool.*). See **Mastigophora.**

flagellate (*Bot., Zool.*). (1) Having flagella.—(2) Bearing a long thread-like appendage.—(3) A member of the *Flagellatae* or *Mastigophora.*

flagellate disseminule (*Bot.*). A zoospore or other motile means of propagation.

flagel′liform (*Bot.*). Like a whip lash.

flagel′lispore or **flagellu′la** (*Zool.*). A zoospore having one or more flagella as locomotor organs.

flagel′lum (*Bot.*). (1) A delicate filiform branchlet in mosses.—(2) A thread-like extension of the protoplast of a cell or of a motile spore.

flagellum (*Zool.*). (1) A thread-like extension of the protoplasm of a cell, or of a Protozoan, which is capable of carrying out lashing movements: in Insects, the *clavola* (q.v.).—(2) In some *Arachnida*, a group of specialised setae on the proximal segment of a chelicera, believed to be tactile.—*pl.* **flagella.**

flaikes (*Mining*). Sandstone which splits along the grain.

flail joint (*Med.*). A joint in which there is, as a result of disease or of operation, excessive mobility.

flakes (*Met.*). Minute transverse internal fissures which appear as bright scales on fractured surfaces of steel forgings. They occur most frequently in large forgings of alloy steels. Attributed to the presence of hydrogen.

flake white (*Paint.*). A paint base composed of pure white lead; made in England in small scales.

flake yarn (*Textiles*). A fancy yarn, composed of two foundation threads, which has pieces of short-fibred twistless roving twisted in at intervals. Two doublings are necessary for its production. The foundation threads are first twisted together, and the roving which produces the *flakes* at this stage delivered intermittently. A further twisting process is necessary to lock the flakes of roving in position. The finished thread has small bunches of fibres bound to it at intervals; these form a spot or lump if the yarn is woven into cloth.

flaking (*Build.*). A basis for reed thatching, formed by covering the rafters with reeds thinly interlaced.

flaking (*Paint.*). A defect in paintwork, the paint film breaking away in small areas from the surface it was covering.

flambé, flom-bā (*Pot.*). A form of lustre ware, usually red or yellow, with flame-like splashes of blue, violet, and other colours, giving changing tints in different aspects.

flame (*Chem.*). A region in which chemical interaction between gases occurs, accompanied by the evolution of light and heat. See also **neutral flame*, sensitive flame.**

flame-arc (*Illum.*). An electric arc maintained between carbons containing certain metallic salts, which give a colour to the arc flame.

flame-arc lamp (*Illum.*). An arc lamp employing flame carbons.

flame carbons (*Illum.*). Carbon electrodes containing certain metallic salts, which have the effect of colouring an arc maintained between them. See **flame-cored carbon.**

flame-cell (*Zool.*). See **solenocyte.**

flame-cored carbon (*Illum.*). A carbon electrode having a central core of a material designed to colour the flame of an arc drawn from it.

flame lamp (*Illum.*). A filament lamp having the bulb in the form of a flame.

flame plates (*Eng.*). Those plates of a boiler firebox subjected to the maximum furnace temperature.

flame-proof (*Elec. Eng.*). See **explosion-proof.**

flame test (*Chem.*). The detection of the presence of an element in a substance by the coloration imparted to a Bunsen flame.

flame trap (*I.C. Engs*). A gauze or grid of wire, or coiled corrugated sheet, placed in the air intake to a carburettor to prevent the emission of flame from a 'pop-back.'

flaming onions (*Ammunition*). An anti-aircraft projectile having the appearance of a string of fireballs.

flamper (*Mining*). Beds of clay ironstone.

flang (*Mining*). A double-pointed mandril or pick.

flange (*Eng.*). (1) A projecting rim, as the rim of a wheel which runs on rails.—(2) The top or bottom members of a rolled I-beam.—(3) A disc-shaped rim formed on the ends of pipes and shafts, for coupling them together; or on an engine cylinder, for attaching the covers. See also **flanged rail.**

flange coupling (*Eng.*). A shaft coupling consisting of two accurately faced flanges keyed to their respective shafts and bolted together.

flange joint (*Eng.*). Any joint between pipes, made by bolting together a pair of flanged ends.

flange protection (*Elec. Eng.*). The rendering of electrical apparatus flame-proof by providing all joints with very wide flanges.

flanged beam (or **girder**) (*Eng.*). A rolled-steel joist of I-section.

flanged chuck (*Eng.*). See **face chuck.**

flanged nut (*Eng.*). A nut having a flange or washer formed integral with it. See **collar-headed screw.**

flanged pipes (*Eng.*). Pipes provided either with integral or attached flanges for connecting them together by means of bolts.

flanged rail (*Rail., etc.*). A rail section of inverted-T shape, the flange being at the bottom and the end of the cross-piece of the T at the top—the latter part being enlarged locally to form the head of the rail. Also called a FLAT-BOTTOMED RAIL.

flanged seam (*Eng.*). A joint made by flanging the ends of furnace tubes and bolting them together between a pair of steel rings.

flank (*Build.*). (1) A roof valley. (*Local*).—(2) The side of a building.

flank (*Eng.*). (1) That part of a gear-tooth profile which lies inside the pitch-line or circle.—(2) The working face of a cam.

flanks (*Build., Civ. Eng.*). The parts of the intrados of an arch near to the abutments. Also called HAUNCHES. See also Supplement.

flanks (*Masonry*). The side surfaces of a building stone or ashlar, when it is built into a wall.

flank dispersion (*Elec. Eng.*). See **end leakage flux.**

flank holes (*Mining*). Holes bored ahead of a working place, when approaching old workings.

flank wall (*Build.*). A side wall.

flanking window (*Build.*). A window located beside an external door.

flannel (*Textiles*). An all-wool material made from fine soft wools, the weave being either plain or twill. The cloth is shrunk and raised.

flannelette (*Textiles*). A cotton fabric of plain or twill weave, raised on both sides during finishing. Used for pyjamas.

flanning (*Build.*). The internal splay of a window jamb, or of a fireplace.

flap (*Aero.*). A movable pivoted section of a wing or aerofoil, forming the trailing edge, for modifying the drag or lift of the complete structure, either automatically or through controls. Such a flap may alter the chord, or introduce a slot over part or all of the trailing edge.

flap (*Carp.*). A hinged leaf of a shutter, counter, table, etc.

flap (*Surg.*). An area of tissue partly separated by the knife from the surface of the body, in connexion with amputation of a limb or for the purpose of grafting skin.

flap tile (*Build.*). A purpose-made tile, shaped so as to fit over a hip or valley line, or to catch water.

flap-trap (*San. Eng.*). A type of anti-flood valve, in which back flow is prevented by a hinged metal flap fitted in an intercepting chamber, so as to allow of flow in one direction only.

flap-valve (*Eng.*). A non-return valve in the form of a hinged disc or flap, sometimes leather- or rubber-faced, used for low pressures.

flare. A bright, often coloured, light used as a signal, e g. a *Very light* (q.v.).

flare (*Photog.*). An extraneous image, generally of a light source, registered on the sensitive surface, through spurious focusing, by internal reflection within a complex lens.

flare (*Acous.*). The prominent part of the opening of a horn, bell, or trumpet attached to a loud-speaking unit.

flare header (*Build.*). A brick which has been burnt to a darker colour at one end, so that it may be used with others in facing-work, to vary the effect.

flare, lead (*Cables*). A flare (or bell) of lead which fits the paper stress cone placed on the core near the cut of the lead sheath.

flaring. A term applied to the end of a pipe, etc. when it is shaped out so as to be of increasing diameter towards the end. See also **flare** (*Acous.*).

flas'er structure (*Geol.*). A type of parallel arrangement of mica in thin wavy films in gneisses, typically seen in certain plutonic gneisses. Flaser gabbro is basic plutonic rock in which the original structure is largely destroyed, but the striking mineral banding of the hornblende-schist into which it ultimately passes has not yet been developed. See **foliation.**

flash, flash service (*Elec. Comm.*). The sudden, emergency, or priority use of a communication channel, such as broadcasting or trunk telephone.

flash (*Met.*). A thin fin of metal formed at the sides of a forging where some of the metal is forced between the faces of the forging dies. By extension, a similar extrusion in other (e.g. moulded) materials.

flash boiler (*Eng.*). A steam boiler consisting of a long coil of steel tube, usually heated by oil burners, in which water is evaporated as it is pumped through by the feed pump. See **steam car.**

flash colours (*Zool.*). Bright colours on the body of an animal which are conspicuous while it is moving, but which are either concealed or merge with the surroundings—and so render it invisible—as soon as it stops.

flash-guard (*Elec. Eng.*). See **barrier** (2).

flash-lamp (*Illum.*). A filament lamp, usually for less than 5 volts, intended for use with a dry battery.

flashlight (*Photog.*). The use of magnesium or aluminium powder for rapid ignition in air, with consequent brilliant illumination for a short period, usually for taking photographs when the available lighting is inadequate.

flash-over (*Elec. Eng*). The accidental occurrence of an arc between two parts of a piece of electrical apparatus, or between a piece of the apparatus and earth.

flash-over test (*Elec. Eng.*). A test applied to electrical apparatus to determine the voltage at which a flash-over occurs between any two parts, or between a part and earth. Also called a SPARK-OVER TEST.

flash-over voltage (*Elec. Eng.*). The voltage at which a flash-over occurs between two parts of a piece of electrical apparatus, or between one part and earth.

See **dry—** **wet—**

flash-point (*Oils, etc.*). The temperature at which a liquid, heated in a Cleveland cup (open test) or in a Pensky-Martens apparatus (closed test), gives off sufficient vapour to flash momentarily on the application of a small flame. The *fire point* (q.v.) is ascertained by continuing the test.

flash roasting (*Met.*). The roasting of finely ground concentrates by blowing them into a large combustion chamber in which the sulphur is burned off as they fall.

flash spectrum (*Astron*). A phenomenon seen at the first instant of totality in a solar eclipse; the dark lines of the Fraunhofer spectrum formed in the chromosphere flash out into bright emission lines as soon as the central light of the sun is cut off.

flash suppressor (*Elec. Eng.*). A device for preventing flash-overs on the commutators of d.c. generators; it consists of an automatically operated switch for short-circuiting certain points in the winding, thereby reducing the voltage to zero before a flash-over has had time to develop.

flash test (*Elec. Eng.*). A test applied to electrical equipment for testing its insulation strength; it consists of the application of a voltage of about twice the working voltage, for a period of not more than about one minute.

flashed glass (*Glass*). A term sometimes applied to glass coloured by the application of a thin layer of densely coloured glass to a thicker, colourless, base layer.

flasher (*Illum.*). An apparatus for intermittently lighting electric lamps; used largely for decorative or advertising purposes. See **thermal flasher.**

flashing (*Build.*). A method of brick burning in which the air supply is periodically stopped in order that the colouring of the bricks shall be irregular.

flashing (*Hyd. Eng.*). The process of passing a boat across any point in a river where there is a sudden fall; effected by constructing a convergent passage from the high to the low level, shutting it by a sluice gate to allow the water to pond up, and then opening the gate and allowing the boat to be carried through the sluice way by the artificially deepened water.

flashing (*Plumb.*). A strip of sheet-lead or zinc laid around the junction of two surfaces, e.g. where a chimney projects from a roof, in order to render the junction watertight. See also **apron.**

flashing board (*Build.*). A board to which flashings are secured.

flashing hook (*Build.*). A form of wall hook for carrying steel rods supporting expanded metal to be used for forming a ceiling surface.

flashing (*Paint.*). Glossy patches appearing on flat-finished surfaces.

flashing (*Thermionics*). An operation in the manufacture of thermionic cathodes, in which the cathode is raised to a very high temperature for a short period.

flask (*Foundry*). A moulding box of wood, cast-iron, or pressed steel, for holding the sand mould in which a casting is made; it may be in several sections. See **cope, drag.**

flat (*Build.*). A part of a house or building used for domestic purposes and frequently self-contained.

flat (*Cinema.*). (1) The unit panel of which sets are constructed.—(2) A *tormentor* (q.v.).

flat (*Elec. Eng*). A term used to denote a point on the surface of a commutator where the bars are lower than normal, due to wear or displacement.

flat (*Mining*). (1) A number of working places in a coal-mine worked under one deputy.—(2) A cap or cross-piece in a timber for roof support.

flat (*Photog.*). Characterised by *flatness* (q.v.).

flat (*Textiles*). One of a chain of metal bars, wire-covered, forming part of a carding engine.

flats (*Eng.*). Iron or steel bars of rectangular section.

flat arch (*Build.*). An arch whose intrados has no curvature and whose voussoirs (laid in parallel courses) are arranged to radiate to a centre. It is used over doorway, fireplace, and window-openings, to relieve the pressure on the beam or lintel below it. Also called a JACK ARCH and STRAIGHT ARCH.

flat-back (*Bind.*). Said of a volume having a back that has been finished 'flat,' instead of being rounded.

flat-back (*Moulding*). A pattern having a flat upper surface at the joint of the mould, so lying wholly within the drag or bottom half.

flat band (*Build.*). A square and plain impost stone.

flat-bar toothed rack (*Civ. Eng.*). A form of rack-railway in which the rack is centrally located, and is formed by cutting the edge of a flat steel bar so as to provide a row of teeth along its upper edge.

flat-bottomed rail (*Rail.*). See **flanged rail.**

flat chisel (*Eng.*). A cold chisel having a relatively broad cutting edge, used in chipping flat surfaces.

flat coat (*Paint.*). A *flatting* (q.v.) coat of paint.

flat-compounded (*Elec. Eng.*). Said of a compound-wound generator the series winding of which has been so designed that the voltage remains constant at all loads between no-load and full-load. Also LEVEL-COMPOUNDED.

flat cost (*Civ. Eng.*). The *prime cost* (q.v.).

flat finish (*Paint.*). A non-glossy finish, showing no brilliancy of surface. Also called a DEAD FINISH.

flat foot (*Med.*). See **pes planus.**

flat gouge (*Carp., etc.*). A gouge having a cutting edge shaped to a large radius of curvature. See **middle gouge, quick gouge.**

flat joint (*Build.*). The type of mortar joint made in *flat pointing* (q.v.).

flat-joint jointed (*Build.*). A flat joint which has had a narrow groove struck along the middle of its face by means of a jointer.

flat keel (*Ship Constr.*). See under **keelson.**

flat lead (*Plumb.*). Sheet-lead.

flat lighting (*Cinema.*). The lighting of objects to be photographed in which the illumination is uniform, contrast being obtained solely through reflection from the objects, and not from the relative intensity of their illumination.

flat of keel (*Ship Constr*). The portion of a ship's form actually coinciding with the base line in a transverse plane.

flat pointing (*Build.*). The method of pointing, used for uncovered internal wall surfaces, in which the stopping is formed into a smooth flat joint in the plane of the wall.

flat-rate tariff (*Elec. Eng.*). A method of charging for electrical energy in which only one single charge is made; e.g. a fixed price per unit consumed.

flat roof (*Build.*). A roof surface laid nearly horizontal, i.e. having a fall of only about 1½ in. in 10 ft.

flat roof antenna (*Radio*). The same as *flat top antenna.*

flat sheets (*Mining*). Iron sheets, laid at rail junctions, crossings, and ends underground, on which tubs or trucks can be turned.

flat spin (*Aero.*). See **spin (flat).**

flat spot (*I.C. Engs.*). In a carburettor, a point during increase of air flow (resulting from increased throttle opening or speed) at which the air-fuel ratio becomes so weak as to prevent good acceleration.

flat surface (*Paint.*). The surface presented by a flat coat.

flat tint (*Photog.*). A surface in an image which is uniform in brightness and colour.

flat top antenna (*Radio*). An antenna in which the uppermost wires run horizontally. Also called FLAT ROOF ANTENNA.

flat-topped wave (*Elec. Eng.*). A wave-form of current, voltage, flux, etc., sometimes met with in alternating-current work, in which the ordinates of the maximum value of the wave are less than those of a corresponding sine wave.

flat tuning (*Radio*). Inability of a tuning system to discriminate sharply between signals having different frequencies.

flat twin cable (*Elec. Eng.*). Cable for wiring work in which two conductors are laid side by side (but not twisted together) and surrounded by a suitable covering or sheath.

flatness (*Photog.*). A photographic fault whereby contrast is lost through over-exposure or unsuitable development.

flattener (*Glass*). One who takes a cylindrical piece of glass like a wide tube, cracked longitudinally, and, after heating it to softening in a furnace, flattens it out to form a sheet. An old process only used for making special types of sheet.

flatter (*Eng.*). (1) A smith's tool resembling a flat-faced hammer, which is placed on forged work and struck by the sledge-hammer.—(2) A draw-plate for producing flat wire, such as watch-springs.

flatter (*Mining*). A man who uncouples empty tubs or trucks and couples on full tubs, to make up sets at the inbye sidings or putter's flat.

flatting (*Paint.*). Paint, particularly paint used for undercoating, which dries with a dull non-glossy finish.

flatting varnish (*Paint.*). An oil varnish, containing considerable resin, used as a basis for the final coat of varnish.

flatulence (*Med.*). Excessive accumulation of air or gas in the stomach or intestines.

fla'tus (*Med.*). Gas or air accumulated in the stomach or intestines.

flaunching (*Build.*). The slope given to the top surface of a chimney, in order that it may throw off the rain.

flaves'cent (*Bot.*). Having yellow-green or yellow spots mingled with the normal green of the general surface.

flav'one (*Chem.*). A yellow plant pigment; the phenyl derivative of chromone, parent substance of a number of natural vegetable dyes.

flaw-piece (*Timber*). A slab of timber cut from the outer parts of a log.

fleaking (*Build.*). The operation of making a thatched roof with reeds.

fleam (*Carp.*). The angle of rake between the cutting edge of a saw-tooth and the plane of the blade.

fleam (*Hyd. Eng.*). An artificial water-course.

fleam (*Vet.*). A lancet used in phlebotomy.

fleam-tooth (*Tools*). A saw-tooth having the shape of an isosceles triangle.

flèche, flesh (*Arch.*). A very slender spire, particularly a timber one, springing from a roof ridge.

flèches d'amour, dam-oor' (*Min.*). Acicular, hair-like crystals of rutile, a crystalline form of oxide of titanium, TiO_2, embedded in quartz. Used as a semi-precious gemstone. Also called LOVE ARROWS—the literal translation of *flèches d'amour.*

fleck (*Mining*). To flake off or fall off suddenly, due to a natural parting; as coal in a coal-seam.

flecked (*Woollen*). The term applied to yarn or cloth having a spotted effect.

fled (*Pot.*). Said of pottery in which cracks have appeared after removal from the biscuit-oven.

fleece wool (*Textiles*). Wool obtained from a clip made subsequent to the first clip (which is termed *lamb's wool* or *yearling's wool*).

fleecy fabrics (*Textiles*). A term applied in the hosiery trade to fabrics having at the back a thick yarn which is brushed to raise a pile.

Fleming valve (*Thermionics*). The original form of thermionic valve, comprising an incandescent filament lamp, with an additional electrode acting as an anode sealed into the bulb.

Fleming's rule (*Elec. Eng.*). A simple rule for relating the directions of the flux, motion, and e.m.f. in an electric machine. The forefinger, second finger, and thumb, placed at right-angles to each other, represent respectively the directions of flux, e.m.f., and motion or torque. If the right hand is used the conditions are those obtaining in a generator (*Fleming's right-hand rule*), and if the left hand is used the conditions are those obtaining in a motor (*Fleming's left-hand rule*).

Flemish bond (*Build.*). A bond consisting of alternate headers and stretchers in every course, each header being placed in the middle of the stretchers in the courses above and below.

Flemish garden bond (*Build.*). A bond in which each course consists of three stretchers alternating with a header, each header being placed in the middle of the stretchers in the courses above and below.

Flemming's germ-centres (*Zool.*). In Vertebrates, the centres of the cortical nodules of the lymph-glands where active formation of lymph-corpuscles is taking place.

flesh side (*Eng.*). That side of leather which formed the internal surface of the hide; used next to the pulley in driving belts.

flesh split (*Leather*). The middle split of a hide, or the inner split of a sheepskin.

fleshing (*Furs, Leather*). The operation of removing fat and flesh from the inner side of hides and skins.

fleshy (*Bot.*). Thick and soft, but not necessarily juicy. Cf. *succulent.*

fleshy disseminule (*Bot.*). A seed or fruit consisting in large part of fleshy material.

fletton (*Build.*). A well-known type of brick of a mottled pink and yellow colour and having sharp arrises and a deep frog; made chiefly around Peterborough and Bedford.

Flewel'ling circuit (*Radio*). A form of super-regenerative receiving circuit in which the quenching oscillations are generated by the same valve as is used for super-regeneration.

flews (*Hyd. Eng.*). A Scottish term for a sluice draining water from irrigated lands.

flex (*Elec. Eng.*). A colloquial term for *flexible cord, flexible cable.*

flex (*Struct.*). To bend, as a beam under applied loading.

flexibil'itas ce'rea (*Med.*). The state in which the limbs will remain in any position in which they are passively placed; e.g. in catalepsy.

flexible (*Bind.*). The term used to indicate that in attaching the sections of a volume together the bands are not let into the back of the sections, the sewing thread passing completely round each band. See **raised bands.**

flexible cable (*Elec. Eng.*). A cable containing one or more cores of such cross-section and sufficiently fine stranding as to make the whole quite flexible.

flexible cord (*Elec. Eng.*). A flexible cable of small cross-section, consisting usually of a large number of fine wire strands, surrounded by rubber insulation and braiding. Used for connexions to portable domestic apparatus, pendant lamps, etc. See **twin flexible cord.**

flexible coupling (*Eng.*). A shaft coupling used to connect two shafts in which perfectly rigid alignment is impossible; the drive is commonly transmitted from one flange to another through a resilient member, such as a steel spring, or a rubber disc or bushes.

flexible support (*Elec. Eng.*). A support for an overhead transmission line, which is designed to be flexible in a direction along the line, but rigid in a direction at right-angles to the line.

flexible suspension (*Elec. Eng.*). A method of suspending the contact wire of a traction system so that it has a certain amount of lateral and vertical movement relative to the fixed supports.

flexible wiring (*Elec. Eng.*). The use of flexible cables in wiring an interior installation.

flexor (*Zool.*). A muscle which by its contraction bends a limb or a part of the body. Cf. *extensor.*

flex'uose, flexuous (*Bot.*). Said of a stem which is zig-zag, usually showing a change of direction at each node.

flexure (*Struct.*). The bending of a member; e.g. under load.

flexures (*Geol.*). See **folding.**

flick (*Cinema.*). A colloquialism for *cinematograph film.*

flick roll (*Aero.*). See **roll.**

flicker (*Cinema.*). The perception of discontinuity in the projection of motion pictures, due to insufficient number of flashes of the pictures per second, the effect becoming more pronounced with increase of illumination.

flickers (*Cinema.*). A primitive form of motion picture in which consecutive pictures of action on paper are flicked before the eye.

flicker effect (*Thermionics*). The irregular emission of electrons from a thermionic cathode due to spontaneous changes in the condition of the emitting surface.

flicker photometer (*Illum.*). A photometer in which a screen is illuminated alternately and in quick succession by the lamp under test and a standard lamp, thus producing a flickering effect. When the illumination from the two sources of light is equal, the flickering effect disappears.

flicker shutter (*Cinema.*). The rotating shutter that flashes the stationary images on to the screen, as contrasted with the automatic shutter, which cuts the light off the film when intermittent motion ceases.

flier (*Build*). A step, rectangular in plan, forming part of a stair.

flier (*Carp.*). A *flying-shore* (q.v.).

flies (*Cinema.*). The upper part of the stage and wings, remote from, and unseen by, the audience, into which scenery, drop curtains, screens with loudspeakers, etc., can be withdrawn at will by mechanical hoists.

flight (*Build.*). A regular series of steps, between successive landings.

Flinders bar (*Ships*). A bar of soft iron properly placed in the binnacle of a ship, in order to correct errors in the ship's compass due to variation in the earth's magnetism.

flint (*Geol.*). Flints are concretions of silica, sometimes tabular, but usually irregular in form, distributed in countless numbers on the bedding planes of the Upper Chalk. Thought to have been formed by the segregation of organic silica derived from siliceous sponges. See also **paramudra.**

flint (*Paper*). A coated paper with a hard polished surface produced by a flint burnisher. It is used for box covering.

flint glass (*Glass*). Originally lead glass, because the good quality silica needed to ensure freedom from colour was obtained from crushed flints. The name is now often applied indiscriminately to any glass of good 'colour.'

flint gravel (*Geol.*). A deposit of gravel in which the component pebbles are dominantly of flint. The Tertiary and fluvioglacial gravels in S.E. England are essentially of this kind.

flint wall (*Build.*). A wall built of broken flints set in mortar, with their black broken surfaces exposed on the face, and having masonry quoins.

flint ware (*Pot.*). An alternative name for stoneware.

Flintkote (*Build.*). A brand of bituminous material used as a waterproofing agent.

Flintshire process (*Met.*). A process for smelting lead sulphide ores in a reverberatory furnace. Some of the sulphide is first converted to oxide, the temperature is then raised, and the sulphide and oxide combine, producing lead and sulphur-dioxide.

flip-flop (*Elec. Comm.*). A pair of gas-filled or vacuum valves so arranged, by resistance back-coupling, that only one is conducting; which one conducts is determined by external impulses.

flirt (*Horol.*). A device for bringing about the sudden movement of mechanism.

flitch (*Timber*). A piece of timber of greater size than 4 × 12 in., intended for re-conversion.

flitch beam (*Build.*). A built-up beam formed of an iron plate sandwiched between two timber beams, the whole being securely bolted together. Also called FLITCHED BEAM, SANDWICH BEAM.

flitching (*Mining*). The operation of taking off the sides of an underground roadway or heading.

float. (1) A floating metal air-container for indicating the height of liquid in a tank.—(2) A polishing block used by marble-workers (see also **float stone,** *Build.*).—(3) A cart having a cranked axle and a very low floor.

float (*Aero.*). The distance travelled by an aircraft between flattening-out and landing.

float (*Build.*). A plasterer's trowel.

float (*Cinema.*). Said of walls or ceilings of sets which can be swung out of the way temporarily to obtain desired camera angles.

float or **float-cut file** (*Eng.*). A single-cut file, i.e. a file having only one set of parallel teeth, as distinct from a *cross-cut file.*

float (*Hyd. Eng.*). A small floating body whose rate of passage down a stream can be taken as a measure of the velocity of flow of the stream.

float (*Mining*). (1) Values so fine that they float on the surface of the water when crushed or washed; e g. *float gold.*—(2) Surfacial deposit of rock or mineral detached from the main dyke or vein; e g. *float quartz* in the Lake District.

float (*Petrol Engines*). A small buoyant cylinder of thin brass, steel, or proofed cork, placed in the float chamber of a *carburettor* (q.v.), for actuating a valve controlling the petrol supply from the main tank.

float (*Plumb.*). The floating, hollow ball in a *ball-cock* (q.v.).

float (*Weaving*). (1) A thread, either warp or weft, which passes over other threads, in order to produce the requisite pattern.—(2) A defect in a fabric, caused by a thread passing over other threads with which it is designed to interweave.

float bowl (*Eng.*). A float chamber. [U.S.]

float case (*Hyd. Eng.*). A *caisson* (q.v.).

float chamber (*Eng.*). In a *carburettor* (q.v.), the petrol reservoir from which the jets are supplied, and in which the fuel level is maintained constant by means of a float-controlled valve.

float-cut file. See **float** (*Eng.*).

float seaplane (*Aero.*). An aeroplane of the seaplane type, in which the water support consists of floats under the main undercarriage, and sometimes at the tail and wing tips. It may be of the *single-* or *twin-float type.*

float stone (*Build.*). A shaped iron block which is rubbed over curved brickwork, such as cylindrical backs, in order to remove marks left on the surface by the rough dressing.

float stone (*Min.*). A coarse, porous, friable variety of impure silica, consisting chiefly of the siliceous skeletons of infusoria. On account of its porosity it floats on water until saturated, hence the name.

float switch (*Elec. Eng.*). A switch operated by a float in a tank or reservoir, and usually controlling the motor of a pump.

floated coat (*Plast.*). A coat of plaster smoothed with a float.

floating (*Plast.*). The second of three coats applied in plastering, the method of application being with a float, to bring the coat level with the screeds.

floating accent (*Typog.*). See **accent.**

floating anchor (*Ships*). See **sea anchor.**

floating bank (*Eng.*). A stoker-fired boiler to which sufficient coal is fed to keep the boiler under full pressure.

floating battery (*Elec. Eng.*). A battery connected permanently in parallel with an electric supply circuit, thereby serving as a stand-by in case of failure of the main supply, and also assisting in the supply of peak loads.

floating bay (*Plast.*). An area between screeds, which is to be filled in with plaster.

floating bricks (*Build.*). See **Rhenish bricks.**

floating bridge (*Civ. Eng.*). A bridge supported on pontoons instead of on fixed piers.

floating-card compass (*Ships*). A compass in which a circular card, marked with the 32 points and having two or more magnetic needles attached below, floats in a brass bowl on a mixture of water and alcohol, or on oil, being free to turn on the point of a steel cone.

floating carrier system (*Radio*). A system of radio-telephone transmission in which the amplitude of the carrier wave varies with the depth of modulation.

floating crane (*Eng.*). A large crane carried on a pontoon; used in fitting-out docks, etc.

floating dam (*Hyd. Eng.*). A *caisson* (q.v.).

floating dry dock (*Civ. Eng.*). A floating structure of iron or steel, with air chambers. It is open at the ends, and can be sunk by admitting water to the air chambers, and raised when a vessel is berthed for repairs, etc., lifting the vessel with it. In some cases the dock is sectional, thus facilitating repair.

floating gudgeon pin or **wrist pin** (*Eng.*). A gudgeon or piston pin free to revolve in both the connecting-rod and the piston bosses.

floating harbour (*Hyd. Eng.*). A breakwater formed of booms fastened together and anchored so as to afford protection to vessels behind it.

floating kidney (*Med.*). See **nephroptosis.**

floating respiration (*Bot.*). Respiration using carbohydrates and other reserve materials.

floating ribs (*Zool.*). See **false ribs.**

floating rule (*Build.*). A long straightedge used to form flat surfaces in plaster or cement work.

floating tissue (*Bot.*). A tissue of thin-walled cells, usually containing air. The tissue is very difficult to wet, therefore does not readily become waterlogged; occurs in seeds and fruits which are dispersed by water.

floccilla'tion, floccita'tion, flok'si— (*Med.*). Fitful plucking at the bed-clothes by a delirious patient, as in typhoid fever. See **carphology.**

floc'cose (*Bot.*). Bearing a dense covering of tangled hairs resembling wool, which is easily detached from the plant.

flocculation (*Chem.*). The coalescence of a finely divided precipitate into larger particles.

floc'culent (*Chem.*). Existing in the form of cloud-like tufts.

floc'culi (*Astron.*). The name given by Hale to *faculae* (q.v.) on the solar surface, as photographed in calcium light, when they show as much more extensive than in ordinary photographs.

flocculus (*Zool.*). In higher Vertebrates, a small lateral outgrowth of the cerebellum.—*adj.* **floccular.**

floccus (*Zool.*). In Birds, the downy covering of the young forms of certain species: in Mammals, the tuft of hair at the end of the tail: more generally, a tuft.

flock (*Textiles*). Waste fibres produced in the processes of finishing woollen cloths.

flock paper (*Dec.*). Wallpaper printed with design in an adhesive material, then dusted with fine shreds of wool, plain or coloured.

flogging (*Carp.*). The operation of rough-dressing a timber to shape, when the material is removed in large pieces.

flogging chisel (*Eng.*). A large heavy cold-chisel used for rough work, now largely superseded by pneumatic chisels.

flong (*Typog.*). Papier-mâché sheets used for making moulds from which stereo plates are cast. They consist of layers of tissue and blotting paper pasted together.

flood fencing (*Hyd. Eng.*). Fencing which is so anchored as (1) to enable it to withstand the force of flood waters, or (2) to permit it to hinge over when the water rises sufficiently.

flood fever (*Med.*). See **shimamushi fever.**

flood flanking (*Hyd. Eng.*). The constructing of an embankment by depositing stiff moist clay in separate small loads, so that each shall unite so far as is possible with the others, while the crevices left when the clay has dried out are filled with *sludging* (q.v.).

flood-lighting (*Illum.*). The lighting of a large area or surface by means of light from projectors situated at some distance from the surface.

flood-light projector (*Illum.*). The housing and support for a lamp used in a flood-lighting scheme; it is designed with a reflector which directs the light from the lamp into a suitable beam.

flooding (*Med.*). Copious bleeding from the uterus.

flookan or **flucan** (*Mining*). A vein of clayey material: a vein of fine material and water which will run into underground workings if not stopped.

floor (*Build.*). The surface on which one normally walks within the rooms of a building.

floor (*Foundry*). The bed of sand constituting the floor of a foundry; in it large castings are often made.

floor (*Mining*). The upper surface of the stratum underlying a coal-seam.

floor contact (*Elec. Eng.*). A switch contact which is attached to the floor of an automatic electric lift and is operated by the passenger stepping into the lift; it is usually arranged so as to prevent the lift from being operated from any of the landings.

floor cramp (*Join.*). A cramp for closing up the joints of floor-boarding when it is being nailed in position.

floor guide (*Build.*). A groove formed in a floor surface to receive a sliding door or partition and direct its movement.

floor joist (*Carp.*). A *bridging joist* (q.v.).

floor line (*Join.*). A mark made at the lower end of a door-post, or other finishing, to indicate the level of the floor when the finishing is in position.

floor plan (*Build.*). A separate plan drawn for each floor of a building, showing the dimensions of the rooms, corridors, etc., and the thicknesses of walls.

floor standard (*Illum.*). A portable electric-light fitting, suitable for standing on the floor.

floor stop (*Build.*). A *door-stop* (q.v.) projecting from the floor near a door.

floor strutting (*Carp.*). *Bridging pieces* (q.v.).

floor-switch (*Elec. Eng.*). See **landing switch.**

flooring (*Malting*). The process of spreading out and turning the germinating grain on the floor of the malthouse to ensure aeration.

flop damper (*Build.*). A damper which stays under its own weight in the open or shut position.

flora (*Bot.*). (1) The plant population of any area under consideration.—(2) A description of the plants of any region.

floral axis (*Bot.*). See **receptacle** (6*a*).

floral diagram (*Bot.*). A conventional plan of the arrangement of the parts of a flower as seen in cross-section.

floral envelope (*Bot.*). The calyx and corolla, or perianth.

floral leaf (*Bot.*). (1) A bract or bracteole.—(2) A sepal or petal.

Florentine (*Textiles*). A twilled cotton cloth used for tropical suitings. The weave, a $\frac{3}{1}$ twill, is often termed the Florentine weave.

Florentine arch (*Build.*). An arch having a semicircular intrados and a pointed extrados, giving greater strength at the crown.

Florentine blind (*Build.*). An outside roller blind, similar to the Italian blind but having side pieces.

floret (*Bot.*). An individual flower in a crowded inflorescence.

floriated (*Arch.*). Said of an elaborately ornamented building style.

Florid'eae (*Bot.*). The larger of the two classes of the *Rhodophyceae*, containing many hundreds of species of red seaweeds, many of considerable size, and all characterised by the fact that the cells composing the thalli are united by protoplasmic threads.

florid'ean starch (*Bot.*). A solid carbohydrate resembling starch, formed by red algae as a product of assimilation. It stains reddish or brown with iodine.

floristic composition (*Bot.*). A complete list of the plants forming a plant community.

flos ferri (*Min.*). A 'massive' form (as distinct from individual crystals) of the orthorhombic carbonate of calcium *aragonite*, some of the masses resembling delicate coralline growths; deposited from hot springs.

flotation (*Met.*). An ore concentration process in which air is blown into a mixture of ore pulp, water, oil, and various chemicals. The oil forms a film on the mineral particles and air bubbles adhere to this. Thus the mineral particles are floated while other matter sinks.

flotation gear (*Aero.*). A system of air or gas bags, sometimes with hydrovanes, to enable a land plane, in an emergency, to land and remain afloat, on water.

flour (*Build., Civ. Eng.*). The fine dust incidentally formed in crushing material to be used as an aggregate.

flourom'eter (*Civ. Eng.*). An instrument used to determine the proportion of very fine material (*flour*) in a filler for asphalt.

flow (*Eng.*). A pipe by which water leaves a boiler or pressure cistern. Also called FLOW PIPE.

flow lines (*Met.*). Lines which appear on the surface of iron and steel when stressed to the yield point. They arise from the fact that all parts of a given sample do not yield at the same time; the lines are traces on the surface of the planes along which yielding first occurs.

flow-off (*Moulding*). A channel cut from a riser to allow metal to escape when it has reached a pre-determined height.

flow pipe (*Eng.*). A *flow* (q.v.).—(*Plumb.*) The pipe conveying hot water from the boiler to the tank in a domestic system of hot-water supply.

flow sheet (*Met., etc.*). A diagram showing the sequence of operations employed in a process of production with a given plan; e.g. the extraction and refining of metals.

flow-structure (*Geol.*). A banding, often contorted, resulting from flow movements in a viscous magma, adjacent bands differing in colour and/or degree of crystallisation. It is also shown by the alignment of phenocrysts, or of minute crystals and crystallites, in the groundmass of lavas and, more rarely, minor intrusions.

flower (*Bot.*). A group of closely crowded specialised leaves at the end of a short branch, including one or more of the following kinds of members:—sepals, petals, stamens, carpels.

flowers (*Typog.*). Small type ornaments, copied from early designs, used for building up fancy borders, etc.

flower bud (*Bot.*). A bud enclosing one or more young flowers but no foliage leaves.

flowers of sulphur (*Chem.*). A form of sulphur obtained by slow distillation of other forms.

flowering glume (*Bot.*). A glume which subtends a flower in the spikelet of a grass.

flowing-on (*Dec.*). The process of applying paint or varnish with a full brush, to minimise brush work.

Fluate (*Build.*). A chemical preparation applied to building-stone as a preservative.

flucan (*Mining*). See **flookan.**

fluctuating variation (*Gen.*). Variation as shown by the differences between the individuals of one progeny.

fluctuation (*Bot.*). A change in a plant due to the effect of its environment on it.

fluctuation (*Med.*). The palpable undulation of fluid in any cavity or abnormal swelling of the body.

fluctuation noise (*Thermionics*). The noise produced in the output circuit of an amplifier by shot and flicker effects.

flue (*Build.*). A smoke-duct in a chimney.—(*Eng.*) A passage or channel through which the products of combustion of a boiler or other furnace are taken to the chimney.

flue bridge (*Eng.*). See **firebrick arch.**

flue gas (*Eng.*). The gaseous products of combustion from a boiler furnace, consisting chiefly of CO_2, CO, O_2, N_2 and water vapour, whose analysis is used as a check on the furnace efficiency. See **CO_2 recorder,** also Supplement.

flue gathering (*Build.*). See **gathering.**

flue grouping (*Build.*). The arrangement of flues whereby a number are brought together within a single stack.

flue lining (*Build.*). A fireclay pipe arranged with others within a flue passage to protect the walls.

flue pipe (*Acous.*). A pipe of metal or wood which relies only on the air-column resonance excited by an edge tone for producing a musical note.

flueing soffit (*Build.*). A flush soffit under a geometrical stair.

fluffing (*Leather*). An operation which produces a velvet finish on the flesh side of leather.

fluffy (*Carp.*). A term applied to wood having a woolly instead of a clean surface on being cut.

fluid. A substance which flows. It differs from a solid in that it can offer no permanent resistance to change of shape. See **liquid, gas.**

fluid flywheel (*Eng.*). A device for transmitting power through the medium of the change in momentum of a fluid, usually oil. Similar in principle to a Froude brake, in which the stator is released and forms the driven member.

fluid lubrication (*Eng.*). A state of perfect lubrication in which the bearing surfaces are completely separated by a fluid or viscous oil film which is induced and sustained by the relative motion of the surfaces.

fluidity (*Phys.*). The inverse of *viscosity* (q.v.).

fluing (*Build.*). A term applied to window jambs which are splayed. See **splayed jambs.**

fluing arch (*Build., Civ. Eng.*). See **splaying arch.**

fluke (*Zool.*). A semi-popular name for worms belonging to the group *Trematoda*.

flukes (*Ships*). The flattened and curving points terminating the arms of an anchor.

flume (*Build., Civ. Eng.*). A metal chute used for the distribution of concrete from a placing plant.—(*Hyd. Eng., Mining, etc.*) A flat-bottomed timber trough, or other open channel, for the conveyance of water, e.g. to a water-wheel, ore-washing plant, etc.—(*Aero.*) A *wind-tunnel* (q.v.).

fluobor'ic acid (*Chem.*). A complex monobasic acid formed by the combination of hydrogen fluoride and boron trifluoride. Salts called *borofluorides* or *fluoborates*.

flu'orene (*Chem.*). Diphenylenemethane, $(C_6H_4)_2CH_2$; colourless fluorescent plates; m.p. 113° C., b.p. 295° C.; contained in coal-tar; produced by leading diphenylmethane through red-hot tubes.

fluorescein, —es'e-in (*Chem.*). $C_{20}H_{12}O_5$, resorcinol-phthalein, red crystals which dissolve in alkalis with a red colour and green fluorescence.

fluores'cence. The absorption of radiation of a particular wavelength by a substance and its re-emission as light of greater wavelength. With many substances, such as quinine sulphate, ultra-violet radiation produces visible fluorescence.—(*Cathode Ray Tubes*) The emission of visible light from certain materials when excited by invisible radiation or by electronic bombardment.

fluores'cent screen (*Cathode Ray Tubes*). That portion of a cathode ray tube upon which the luminous spot appears. It consists of a surface layer of fluorescent material, such as zinc sulphide, upon which the electron beam is focused.

flu'orides (*Chem.*). Salts of hydrofluoric acid.

fluorine (*Chem.*). Symbol, F. A non-metallic element, the lightest of the halogens, in the seventh group of the periodic system. At. no. 9, at. wt. 19·00, valency 1. Fluorine is extremely reactive, as it is the most electronegative (non-metallic) of the elements. It is a pale greenish-yellow gas; m.p. −223° C., b.p. −187° C., density 1·696 gms. per c.c. at N.T.P.

fluorite (*Min.*). See **fluorspar.**

fluorophore (*Chem*). A group of atoms which give a molecule fluorescent properties.

fluoro'sis (*Med.*). Chronic poisoning with fluorine.

flu'orspar or **fluorite** (*Min.*). Calcium fluoride, CaF_2, crystallising in the cubic system, commonly in simple cubes. Occasionally colourless, yellow, green, but typically purple; the coloured varieties fluoresce strongly in ultra-violet light.

flush (*Bot.*). (1) A period of renewed growth in a woody plant.—(2) A limited area watered by a spring or by the run off from rainfall, and distinguished by its luxuriant vegetation.

flush (*Build., Join., etc.*). In the same plane.

flush bead (*Join.*). A sunk bead, finished so as to be level with the surface which it decorates.

flush boards (*Bind.*). A method of binding in which boards are drawn on and trimmed with the book. The covers are then flush with the page edges.

flush-bolt (*Join.*). A sliding bolt sunk into the side or edge of a door so as to be flush with the surface.

flush-faced door (*Join.*). See **hospital door.**

flush joint (*Build.*). The type of mortar joint made in *flat pointing* (q.v.).

flush panel (*Join.*). A panel whose surface is in line with the faces of the stiles.

flush-plate (*Elec. Eng.*) See **switch plate.**

flush soffit (*Build.*). The continuous surface under a stair formed of *spandrel steps* (q.v.).

flush-switch (*Elec. Eng.*). A switch which can be mounted flush with the wall; used in electric installation work. Also called PANEL-SWITCH, RECESSED SWITCH.

flush (*San. Eng.*). To cleanse a space by *flushing* (q v.): the water used in flushing.

flush valve (*Plumb.*). A valve operating the flushing system for a fixture.

flushing (*Hyd. Eng., San. Eng.*). The process of cleansing a sewer or other space by suddenly passing through it a quantity of water.

flushing (*Mining*). The operation of clearing off accumulation of fire-damp or noxious gases underground by means of air currents.

flushing tank (*San. Eng.*). A tank used to accumulate the water for flushing a drain or sewer which is not laid at a self-cleansing gradient. The discharge is often effected automatically by a siphoning device.

flushing (*Masonry*). A crushing of the edges of a stone at a *hollow bed* (q.v.), due to excessive pressure upon them.

flute (*Build.*). A long vertical groove, usually circular in form, in the surface of a column or other member.

flutes (*Glass*). Substantially parallel depressions, cut in a glass article or moulded in whilst the glass is plastic, for the purpose of decoration.

fluted carbon (*Illum.*). An arc lamp carbon with grooved sides, used for exceptionally heavy-current arcs.

fluting (*Build.*). See **flute.**

fluting (*Eng.*). Parallel channels or grooves, longitudinal or helical, cut in a cylindrical object such as a tap or reamer.

fluting plane (*Join.*). A special plane for cutting grooves.

flutter (*Acous.*). A wow which has fluctuation changes between about 6 to 30 changes per second.

flutter (*Aero.*). An unstable oscillation arising from aerodynamical and/or mechanical forces interacting with one another.

flutter (*Med*). An abnormality of cardiac rhythm, in which the auricles of the heart contract regularly at a greatly increased frequency (between 180 and 400 beats a minute), the ventricles contracting at a slower rate.

flu'viatile (*Bot., Zool.*). Occurring in rivers and streams.

fluviatile deposits (*Geol.*). Sand and gravel deposited in the bed of a river.

flu'viomarine, —ēn' (*Zool.*). Able to live in rivers and in the sea, as the Salmon.

flu'vioterres'trial (*Zool*). Found in rivers and on their banks, as the Otter.

flux (*Chem.*). A substance added to a solid to increase its fusibility.

flux (*Elec. Eng.*). See **electric— magnetic—**

flux (*Illum.*). See **light flux.**

flux (*Met.*). Material added to a furnace charge to combine with the gangue and form a fusible slag.

flux (*Pot.*). An easily fusible material, such as borax, lead, lime, or silica, used in mixing enamels or glazes.

flux density (*Elec. Eng., Illum.*). The quantity of flux passing through a unit area.

See **electric— luminous— magnetic—**

fluxmeter (*Elec. Eng.*). An electrical instrument for measuring the total quantity of magnetic flux linked with a circuit; it consists of a search-coil, placed in the magnetic field under investigation, and a ballistic galvanometer

fly (*Horol.*). An air brake; a fan with two or four blades, used in clocks to maintain uniformity between the blows of the hammers when striking or chiming.

flyback (*Television*). The return of the scanning spot from the end of one scanning line to the beginning of the next, usually at a much higher speed than during the forward motion.

flyback action (*Horol.*). In a chronograph or stop-watch, that part of the action which causes the hands to fly back to zero when the button is pressed.

fly cutter (*Eng.*). A narrow milling cutter used for cutting slots such as keyways in shafts.

fly frames (*Cotton Spinning*). A series of machines used to attenuate roving in preparation for the spinning frame.

fly leaf (*Bind.*). A blank leaf at the beginning and at the end of a bound volume. It may be part of an end-paper.

fly nut (*Eng.*). See **wing nut.**

fly pinion (*Horol.*). The pinion on the arbor of which a fly is mounted.

fly press (*Eng.*). A press for punching holes, making driving fits, etc.; it consists of a bed supporting a vertical frame through which a square-threaded screw is fitted. The screw is turned by a cross-piece terminating in one or two heavy steel balls, for giving additional impetus to the descent of the die attached to the bottom end.

fly rail (*Join.*). A flap attached to a table-frame by means of a vertical hinge; it swings out to provide support for a folding leaf.

fly shuttle (*Weaving*). The name given to the mechanism, invented by John Kay in 1738, for propelling the shuttle across the loom. It superseded hand-shuttling.

fly spring (*Teleph.*). In a relay spring assembly, a very thin spring for the first contact. The partial operation of the relay is sufficient to cause the fly spring contact to close, thus making a current for the full operation of the relay and for closing the remainder of the contacts.

flywheel (*Eng.*). A heavy wheel attached to a shaft (e.g. an engine crankshaft) either to reduce the speed fluctuation resulting from uneven torque, or to store up kinetic energy to be used in driving a punch, shears, etc., during a short interval.

flywheel-type alternator (*Elec. Eng.*). An alternator having a heavy spider so that a separate flywheel is not necessary to prevent hunting, when running in parallel with others.

fly wire (*Build.*). A fine woven wire mesh used to cover the joint between adjacent pieces of building-board.

fly-blown (*Vet.*), Said of an animal affected by myiasis.

flyer (*Build*). A *flier* (q.v.).

flyer (*Carp.*). A *flying shore* (q.v.).

flyer spinning (*Spinning*). A method of spinning, used for coarse yarns, in which twist is inserted by bobbin and flyer. The flyer guides the yarn on to the bobbin and revolves at a different speed.

flying-boat (*Aero.*). An aeroplane of the seaplane type in which the water support consists of a boat body or hull.

flying bond (*Build.*). See **monk bond.**

flying bridge (*Civ. Eng.*). A temporary bridge.

flying buttress (*Build*). An arched buttress giving support to the foot of another arch. Also called ARC-BOUTANT, ARCH(ED) BUTTRESS.

flying levels (*Surv.*). Back-sight and fore-sight readings taken between any two points, without reference to bench marks, when only the difference of level of the points is required.

flying organ (*Bot.*). Any structure attached to a fruit or seed which facilitates dispersal by the wind.

flying scaffold (*Build.*). A *suspended scaffold* (q.v.).

flying-shore (*Carp*). A horizontal baulk of timber used to provide temporary support between two opposite walls, usually not more than about 30 ft. apart.

flying spot system (*Television*). A system in which the object to be televised is illuminated by a rapidly moving spot of light, the successively illuminated portions being viewed by a photo-electric cell.

foal paralysis (*Vet.*). Pyosepticaemia of sucklings.

foam (*Chem.*). A suspension, often colloidal, of a gas in a liquid.

focal (or **working**) **aperture** (*Photog.*). The ratio of the focal length to the true diameter of the centre of the lens which is in use. This may differ appreciably from the diameter of an inserted diaphragm or an adjusted iris. See ***f*-number.**

focal length of a lens (*Light*). The distance, measured along the principal axis, between the principal focus and the second principal point. In a thin lens both principal points may be taken to coincide with the centre of the lens. See **back—***, **equivalent—***; also **convention of signs.**

focal plane (*Light*). The plane, at right-angles to the principal axis of a lens or lens system, in which the image of a particular object is formed. The principal focal plane passes through the principal focus, and contains the images of objects at infinity.—(*Photog.*) The plane in which light rays from an external object are focused in a camera—the normal location of the sensitive surface of a film or plate, or a ground-glass focusing screen.

focal plane shutter (*Photog.*). A roller blind with a slot, which is pulled rapidly across, and as close as practicable to, the plate or film being exposed in a camera.

focimeter, fō-sim′— (*Photog.*). An arrangement of numbered cards for ascertaining the true focusing adjustment of a camera.

focus (*Geol.*). See **earthquake.**

focus (*Light*). A point to which rays converge after having passed through an optical system, or a point from which such rays appear to diverge. In the first case the focus is said to be *real*; in the second case, *virtual*. The *principal focus* is the focus for a beam of light rays parallel to the principal axis of a lens or spherical mirror.

See **chemical—**
paraxial—*
pulling—
sagittal—*
tangential—*
focusing (*Photog.*)
depth of focus.

focusing (*Acous.*). The concentration of radiated sound power from a diaphragm, because the dimensions of the latter are comparable to or greater than the wavelength of the sound generated.

focusing (*Cathode Ray Tubes*). The bringing together of the stream of electrons emitted from the cathode, substantially to a point, by means of electrostatic or magnetic fields, or by the presence of positive ions in the tube.

focusing (*Photog.*). The act of adjusting an optical system, as in a camera, by observation of the image, generally on a ground-glass screen located where the emulsion will be during subsequent exposure.

focusing arc lamp (*Illum.*). An arc lamp with a feed mechanism arranged in such a way that the position of the arc crater does not alter.

focusing cloth (*Photog.*). Opaque cloth, usually velvet, for excluding extraneous light while focusing an image on the ground-glass screen of a camera.

focusing coil (*Cathode Ray Tubes*). A coil carrying a direct current which produces a magnetic field for focusing the beam.

focusing glass (*Photog.*). A small eye-piece for examining the sharpness of focus of an image on the ground-glass screen of a camera. Also called MAGNIFIER.

focusing screen (*Photog.*). The temporary screen, located in the place of a film or plate, for adjusting the focusing of the lens before exposure. The image is realised on a sheet of plate-glass, sand-blasted, ground with emery, or coated with a translucent varnish.

foetal membranes, fē′tal (*Zool.*). In Reptiles, Birds, and Mammals, outgrowths from the embryo, or the extra embryonic tissue, which surround and protect the foetus and facilitate respiration. See **amnion, allantois, chorion.**

foetus, fē′tus (*Zool.*). A young animal within the egg or the uterus of the mother, from the commencement of organogeny until birth.—*adj.* **foetal.**

fog (*Meteor.*). A condition of obscurity in which *visibility* (q.v.) is less than 1 kilometre. Fog may consist of a cloud of water droplets, dust, or smoke particles, or a combination of these. It is of most frequent occurrence in anticyclones during autumn and winter.

fog (*Paint.*). The thick mist of paint forced through a spray-gun or Aerograph under pneumatic pressure. See also **fogging.**

fog (*Photog.*). The general reduction of silver halide, apart from that exposed to the required image; due either to extraneous light (*light fog*), or to deterioration of the emulsion or to over-vigorous development (*chemical fog*).

See **chemical— dichroic— light—**

fogbow (*Meteor.*). A bow seen opposite the sun in fog. The bow is similar to the rainbow, but the colours are faint, or even absent, owing to the smallness of the drops, which causes diffraction scattering of the light.

fog sickness (*Vet.*). See **tympanites.**

fog signal (*Rail.*). A detonating cap which is placed on a rail before the passage of a train, so that the detonation occurring when a wheel passes over it shall serve as a signal to the driver in foggy weather.

fog-type insulator (*Elec. Eng.*). A type of overhead-line insulator having long creepage distances; specially designed for areas in which fog is prevalent.

fogging (*Paint*). *Blooming* (q v.).

föhn wind, fēn (*Meteor.*). A warm, dry wind which blows down a mountain side It is prevalent on the northern slopes of the Alps, and is likely to occur whenever a cyclonic system passes over mountains.

foig (*Mining*). A crack or a break in the roof.

foil (*Jewel.*). A highly polished leaf of metal placed beneath an inferior stone, or clear enamel, to enhance brilliancy.

foil (*Paper*). Wrapping or decorative paper coated with tin, copper, etc., in powder form.

folded horn (*Acous*). A horn which is constructed so that its cross-section increases according to a specified law with respect to an axis which is not straight but may be turned through several angles in order to reduce the effective space taken by the horn as a whole.

folded vernation (*Bot*). The condition in which the leaf is folded about the midrib, with the two faces brought together.

folded yarns (*Spinning*). Yarns formed from two or more single threads combined; the operation is termed *doubling*.

folding (*Bind., etc.*). The operation of making a fold in a book-sheet or a newspaper, so that the pages will appear in proper relation. Book-sheets are generally machine-folded, newspapers always so. See **parallel—** **square—**

folding (*Geol.*). *Folding* (*bending*) of strata is usually the result of compression that causes the formation of the geological structures known as anticlines, synclines, monoclines, isoclines, etc. The amplitude (i e. vertical distance from crest to trough) of a fold ranges from a fraction of an inch to thousands of feet.

folding boards (*Mining*). See **faulding boards.**

folding doors (*Join*). Doors which close an opening by two leaves hinged at the opposite jambs.

folding shutters (*Join.*). See **boxing shutters.**

folding wedges (*Build., Civ. Eng., etc.*). *Striking wedges* (q.v.) used for tightening and easing shoring and centring, and in some joint construction in joinery.

fo′lia′ceous, fo′liose (*Bot.*). (1) Flat and leaf-like.—(2) Bearing leaves.

foliage leaf (*Bot.*). The ordinary green leaf of a plant, largely concerned with photosynthesis and transpiration.

Fo′lian process (*Zool.*). In Mammals, an anterior process of the malleus which extends into the Glaserian fissure.

foliar gap (*Bot.*). See **leaf gap.**

foliar trace (*Bot.*). See **leaf trace.**

foliated structure (*Geol.*). See **foliation.**

foliation (*Geol.*). The arrangement of minerals normally possessing a platy habit (such as the micas, chlorites, and talc) in folia or leaves, lying with their principal faces and cleavages in parallel planes; due to development under great pressure during regional metamorphism.

fo′licole (*Bot.*). Living on leaves, either as a parasite or as an epiphyte.

folie circulaire, fol-ē sĕr-kü-lăr′ (*Psychol.*). Manic-depressive psychosis, in which phases of melancholia and mania regularly alternate.

folio (*Typog*). (1) A sheet of paper folded in half.—(2) A book made up of sheets folded once, so having four pages to the sheet.—(3) The number of a page.

fo′liobran′chiate (*Zool.*). Having leaf-like gills.

fo′liolose (*Bot.*). Made up of minute flattened lobes.

fo′liose (*Bot.*). Said of a thallus which is flattened and leaf-like.

Folkestone Beds (*Geol.*). A series of variously coloured sands, well exposed at the type locality on the Kent coast, but traceable all round the Weald, lying between the Gault above and the Sandgate Beds below, in the Lower Cretaceous Lower Greensand. Contain glauconite and, locally, iron oxides derived from its decomposition.

fol′licle (*Bot.*). A fruit formed from a single carpel and containing several seeds; it resembles a pod, but splits open along the ventral suture only.

follicle (*Zool.*). Any small sac-like structure, as the pit surrounding a hair-root in Mammals.—*adjs.* **follic′ular, folliculose.**

follic′uli′tis (*Med.*). Inflammation of a follicle, especially of the ovary.

folliculitis, bovine (*Vet*). A pustular eruption of the pilo-sebaceous glands of the udder of milch cows due to infection by staphylococci.

folliculitis, demodectic (*Vet.*). An inflammation of the skin of dogs due to infection of the sebaceous glands by *Demodex folliculorum.*

folliculo′ma (*Med*). A tumour arising from cells in the Graafian follicle of the ovary.

follower (*Civ. Eng.*). An intermediate length of timber which transmits the blow from the monkey to the pile; used when driving below water-level.

follower (*Horol.*). The driven wheel of a pair of wheels engaging with each other. In clocks and watches the wheels are the drivers and the pinions the followers. In synchronous electric clocks the wheels are the followers.

follower (*Surv.*). A chainman who has charge of the rear end of a chain and is responsible for lining-in the leader at each chain's length.

following dirt (*Mining*). A thin bed of unconsolidated dirt: a parting between the top of a coal-seam and the roof. See **pug.**

following stone (*Mining*). A bed of hard stone which falls simultaneously with the removal of the coal from some coal-seams.

fomes, fō′mēz (*Med.*). Any infected object other than food.—*pl.* **fomites** (fō′mit-ēz). Fomites such as clothing, bedding, etc., may convey infection from one person to another.

font (*Typog.*). See **fount.**

Fontainebleau Sands, fon^{g}ten-blō′ (*Geol.*). Marine sands of Oligocene age occurring in France; well known as furnishing the so-called sand-calcites by the local cementation of the sand by calcium carbonate, deposited in such a way as to build up perfect crystals of calcite of rhombohedral form.

fontanelle′ (*Zool.*). A gap or space in the roof of the cranium.

food body (*Bot.*). A soft mass of cells, containing oil and other nutrient substances, attached to the outside of the seed coat; it is eaten by ants, which drag the seed along, leave it when they have eaten the food body, and so assist dispersal.

food-chain (*Zool.*). A series of animals in a community successively dependent on one another for food, and always based on a herbivorous species.

food-cycle (*Zool.*). The sum-total of the food-chains in a given community.

food pollen (*Bot.*). Pollen formed by some flowers, which attracts insects; it may be incapable of bringing about fertilisation and may be formed in special anthers. Insects seeking food pollen help in conveying good pollen to other flowers.

food preservatives (*Chem.*). Substances preventing the fermentation and putrefaction of foodstuffs; e.g sulphurous acid, sodium benzoate.

food vacuole (*Zool.*). In the cytoplasm of some *Protozoa*, a space surrounding a food-particle and filled with fluid

fool-proof. Said of apparatus which cannot damage itself, other apparatus, or personnel, however inaccurately or erroneously operated.

foolscap (*Paper*). A standard size of printing paper 13½×17 in. (U.S., 13×16 in.); *foolscap writing* is 13¼×16½ in.

fool's gold (*Min.*). See **iron pyrite.**

foot, footage (*Acous.*). The pitch of the longest open pipe in a rank which can be operated by the lowest key on a manual is measured by its *footage*; thus an 8-foot stop is in unison with the keys of the manual, while a 4-foot stop sounds an octave higher, etc. For the pedals the unison stops are 16-foot, because that is the length of the open pipe with the lowest unison note.

foot (*Bot.*). A specialised part of the young sporophyte in the *Bryophyta* and *Pteridophyta*, attached to the gametophyte, and serving as an absorbing organ obtaining and conveying nourishment to the young plant.

foot (*Typog.*). The margin at the bottom of a book page.

foot (*Zool.*). A locomotor appendage: in *Crustacea*, any appendage used for swimming or walking: in *Arachnida*, *Myriapoda*, and *Insecta*, the tarsus: in *Echinodermata*, the podia (see **podium**): in *Mollusca*, a median ventral muscular mass, used for fixation or locomotion: in land Vertebrates, the podium of the hind limb, or of both limbs in *Tetrapoda*.

foot-and-mouth disease (*Vet.*). An acute febrile contagious disease of cloven-footed animals, due to infection by a filterable virus; characterised by a vesicular eruption on the mucous membrane and skin, especially in the mouth and in the clefts of the feet.

foot block (*Carp.*). An *architrave block* (q.v.).

foot blower (*Glass*). A man who blows a small ball which is applied to the stem of a glass article and then opened out to form a foot.

foot-board (*Rail.*). See **foot-plate.**

foot bolt (*Join.*). A robust form of tower bolt, fixed near the foot of a door in a vertical position.

foot brake (*Automobiles*). A pedal operating the brake shoes on all four wheels of a car, either through levers and cables, or by hydraulic means. See **hydraulic brake** (2).

footbridge (*Civ. Eng.*). A bridge for the use of pedestrians only.

foot-candle (*Illum.*). A unit of illumination; it is the illumination produced on the surface of a sphere, having a radius of 1 ft., by a source of one candle-power placed at the centre of the sphere; it is equal to a luminous flux density of 1 lumen per sq. ft. Sometimes called a CANDLE-FOOT.

foot cell (*Bot.*). A small, thick-walled segment of the hypha from which a conidiophore of a mould (*Aspergillus*) arises.

foot irons (*Build.*). Shaped iron bars which can be partly built into the joints of a manhole wall, leaving projecting steps for use by workmen descending the manhole. Also called STEP IRONS.

foot-pace (*Build.*). A *dais* (q.v.).

foot plate (*Build.*). A *hammer-beam* (q.v.).

foot-plate (*Rail.*). The platform on which the driver and fireman of a locomotive stand.

foot-pound (*Eng.*, *Phys.*). The unit of work in the British system of units. It is equal to the work done in raising a mass of one pound through a vertical distance of one foot against gravity.

foot-rail (*Rail.*). A *flanged rail* (q.v.).

footrill (*Mining*). An adit or tunnel, driven into a hillside, through which trains of tubs or trucks are drawn.

foot rot (*Vet.*). Ulceration of the skin of the coronary band of sheep due to infection by *Fusiformis necrophorus*.

foot run (*Build.*, *Civ. Eng.*). A term meaning foot of length, as in speaking of a loading or of a price *per foot run*.

foot screws (*Surv.*). See **plate screws.**

foot-stall (*Build.*). The base of a pillar.

footstep bearing (*Eng.*). A thrust bearing used to support the lower end of a vertical shaft.

footstone (*Build.*). The lowest coping-stone over a gable.

foot switch (*Elec. Eng.*). A switch arranged for operation by the foot.

foot-ton (*Eng.*, *Phys.*). 2240 *foot-pounds* (q.v.).

foot valve (*Eng.*). (1) The non-return or suction valve fitted at the bottom of a pump barrel, or in the valve chest of a pump.—(2) A non-return valve at the inlet end of a suction pipe.

footwall (*Geol.*, *Mining*). The lower wall of country rock in contact with a vein or lode. The upper wall is the *hanging wall.*

footway (*Mining*). A colliery shaft in which ladders are used for descending and ascending.

footage (*Acous.*). See **foot.**

footage (*Cinema.*). The length of a sound-film in feet, the standard speed being 90 ft. per minute through all cameras and projectors; 400 ft. of sub-standard film are equivalent in projection time to 1000 ft. of standard film.

footage number (*Cinema.*). Before development, all negative film is exposed in a machine which exposes a sequence number (*footage number*) on the edge of the film, so that every foot of film is identifiable, both as a negative and after printing.

footing (*Build.*, *Civ. Eng.*). The lower part of a column or wall, standing immediately upon the foundation; usually enlarged locally in order to distribute the load over a greater area.

footing (*Elec. Eng.*). The foundation which is set in the ground to support a tower of an overhead transmission line.

footing (*Hyd. Eng.*). The lowest and, usually, flattest part of the slope of a sea embankment.

footing resistance (*Elec. Eng.*). The ohmic resistance between a transmission-line tower and the earth.

forage mites (*Vet.*). Acari of the family *Tyroglyphidae*, which commonly infest the skin of animals and birds.

fora'men (*Bot.*). See **micropyle.**

foramen (*Zool.*). An opening or perforation, especially in a chitinous, cartilaginous, or bony skeletal structure.

foramen lacerum, las'— (*Zool.*). An opening of the Vertebrate skull in the side of the brain-case, which is situated between the alisphenoid and the orbitosphenoid, and through which pass the third, fourth, fifth ophthalmic, and sixth cranial nerves.

foramen magnum (*Zool.*). The main opening at the back of the Vertebrate skull, by which the spinal cord issues from the brain-case.

For'aminif'era (*Zool.*). An order of *Sarcodina*, the members of which have numerous fine anastomosing pseudopodia and a shell which is usually calcareous; the ectoplasm is sometimes vacuolated.

forb (*Bot.*). Any herb other than a grass.

Forbes's zones of depth (*Ocean.*). A series of depth zones having distinct faunae, especially in European seas; i.e. the *littoral zone*, the *laminarian* *zone*, the *corallin zone*, and the *zone of deep-sea corals*.

force (*Mech.*). That which, when acting on a body which is free to move, produces an acceleration in the motion of the body. The unit of force is that which produces unit acceleration in unit mass. See **dyne, poundal.**

force diagram (*Struct.*). A diagram in which the internal forces in a framed structure, assumed pin-jointed, are shown to scale by lines drawn parallel to the members themselves. Also called a RECIPROCAL (or STRESS) DIAGRAM.

force feed (*Eng.*). Lubrication of an engine by forcing oil to main bearings and through the hollow crankshaft to the big-end bearings.

force piece or **fore set** (*Mining*). Timber set to support roof at the working face.

force pump (*Eng.*). Any pump which delivers liquid under a pressure greater than its suction pressure. It consists of a barrel fitted with a solid plunger, and a valve chest with suction and delivery valve.

force pump (*Gas Fittings, Plumb.*). An air pump used to clean out gas and other service pipes by blowing air through them.

forces, composition of (*Mech.*). See **composition of forces.**

forces, polygon of (*Mech.*). A polygon whose sides are parallel and proportional to the forces acting at a point, the directions of the forces being cyclic around the polygon. The polygon is closed if the forces are in equilibrium, otherwise the closing side of the polygon is parallel and proportional to the equilibrant of the forces.

forces, resolution of (*Mech.*). The process of substituting two forces in different directions for a single force, the latter being equal to the resultant of the two components. If these are at right-angles to each other, the one which makes an angle θ with the original force P is equal to $P \cos \theta$, the other being $P \sin \theta$.

forces, triangle of (*Mech.*). A particular case of the polygon of forces drawn for three forces in equilibrium at a point. See **forces (polygon of).**

forced-circulation boilers (*Eng.*). Steam boilers in which water and steam are continuously circulated over the heating surface by pumps (as opposed to natural circulation systems) in order to increase the steaming capacity. See **Velox boiler, Löffler boiler.**

forced commutation (*Elec. Eng.*). The usual process of commutation, in which the change of direction of the current in the coil actually undergoing commutation is assisted by flux from a commutating pole.

forced-draught (*Elec. Eng.*). Said of electrical apparatus cooled by ventilating air supplied under pressure from some external source.

forced draught (*Eng.*). An air supply to a furnace driven or induced by fans or steam jets (as opposed to the *natural* draught created by a chimney) in order to obtain a high rate of combustion. See **closed stokehold, induced draught, balanced draught.**

forced-draught furnace (*Eng.*). A furnace, but more particularly a boiler furnace, arranged to work under forced draught.

forced-flow boilers (*Eng.*). See **forced-circulation boilers.**

forced lubrication (*Eng.*). The lubrication of an engine or machine by oil under pressure. See **force feed, full force feed.**

forced movements (*Physiol.*). See **tropism.**

forced oscillations (*Radio*). Oscillatory currents whose frequency is determined by factors other than the constants of the circuit in which they are flowing; e.g. those flowing in a resonant circuit coupled to a fixed frequency oscillator. Cf. *free oscillations*.

forced vibrations (*Phys.*). Vibrations which result from the application of a periodic force to a body capable of vibrating. The amplitude of forced vibrations becomes very great when resonance occurs, that is, when the frequency of the applied force equals the natural frequency of the vibrator, particularly if the damping is small.

forceps (*Anat.*) That part of either of the two ends of the *corpus callosum* of the brain which diverges into the adjacent brain tissue on each side.

forceps (*Med.*). A pincer-like instrument with two blades, for holding, seizing, or extracting objects. *Obstetrical forceps* have large blades, which, applied to the foetal head, aid delivery.

forceps (*Zool.*). In *Dermaptera*, the pincer-shaped cerci: in *Arachnida* and *Crustacea*, the opposable distal joints of the chelae: in *Echinodermata*, the distal opposable jaws of pedicellariae. —*adj.* **forcip'ulate.**

forcing. The process of hastening growth by artificial means (frames, glass-houses, soil-heating).

forcing set (*Mining*). A pump for forcing water to a higher level or to the surface.

for'cipate (*Bot.*). Having the form of a pair of pincers.

forcipate, forcip'ulate (*Zool.*). Said of pedicellariae the jaws of which are longer than they are broad.

forcip'iform (*Zool.*). Said of pedicellariae in which the jaws cross at their lower ends.

Forcip'ula'ta (*Zool.*). An order of *Asteroidea*, in which the dorsal surface is beset with small spines surrounded by numerous forcipulate pedicellariae; the tube-feet terminate in suckers.

fore-and-aft level (*Aero.*). See **longitudinal clinometer.**

forebay (*Hyd. Eng.*). A reservoir at the head of a pipe line.

fore-brain (*Zool.*). In Vertebrates, that part of the brain which is derived from the first or anterior brain-vesicle of the embryo, comprising the olfactory lobes, the cerebral hemispheres, and the thalamencephalon: the first or anterior brain-vesicle itself.

forecast (*Meteor.*). A statement of the anticipated weather conditions in a given region, usually for a period of 12, 24, or 36 hours; made from a study of current synoptic charts.

fore-drift (*Mining*). The one of a pair of parallel headings which is kept a short distance in advance of the other.

fore-edge (*Bind., Typog.*). The outside margin of a book page; the edge opposite to the back: the outer edge of a volume. Cf. *head, tail.*

fore-gut (*Zool.*). That part of the alimentary canal of an animal which is derived from the anterior ectodermal invagination or stomodaeum of the embryo.

fore observation (*Surv.*). Any observation made, with a surveying instrument, in the direction of progress of the survey. Cf. *back observation.*

fore plane (*Join.*). A bench plane intermediate in size between the jack and the jointing plane.

forepoling (*Mining*). A method of progressing through loosely consolidated ground by driving poles forward over frames.

fore runner tip (*Bot.*). A leaf tip which becomes active while the rest of the leaf is developing.

fore set (*Mining*). See **force piece.**

fore shift (*Mining*). The first or morning shift of mine workers.

fore-shore. That area of shore which is uncovered between high water and low water.

fore sight (*Surv.*). The levelling staff reading as taken forward to a station which has not been passed by the instrument. The last reading taken by the levelling instrument at any given set-up is invariably a *fore sight.* See also **back sight** and **intermediate sight.**

foredge (*Bind., Typog.*). See **fore-edge.**

Foreland Grits (*Geol.*). A series of reddish sandstones and grits resembling Old Red Sandstone, of Lower Devonian age; occur in N. Devon and adjacent parts of N. Somerset. They are the oldest Devonian rocks exposed in these parts.

Foreman Series (*Geol.*). A non-marine formation of Upper Jurassic age occurring in the Cordilleran geosyncline, as in northern California. Marine invertebrates occur in certain beds.

forest climax (*Bot.*). A climax community composed of trees.

Forest Marble (*Geol.*). A shelly oölitic limestone in the Great Oölite Series of the Cotteswold Hills, between the Bradford Clay and Cornbrash.

forfex (*Zool.*). See **forceps.**

forfic'iform (*Zool.*). Said of pedicellariae in which the jaws do not cross.

forfic'ulate (*Bot*). Shaped like scissors.

forge (*Met.*). A plant where forging is carried out.

forge pigs (*Met.*). Pig-iron suitable for the manufacture of wrought-iron.

forge scale (*Eng.*). The iron oxide coating which forms on iron and steel during forging.

forge tests (*Eng.*). Rough workshop tests made to check the malleability and ductility of iron and steel.

See **bending test** **ramshorn test**
compression do. **rivet** do.
drifting do. **welding** do.

forged work (*Eng.*). Wrought-iron work shaped by forging, as distinct from cast or riveted work.

forging (*Eng.*). The operation of shaping hot metals by means of hammers or presses. It includes hand-hammer, steam-hammer, press and drop forging.

forging machines (*Eng.*). Power hammers and presses used for forging and drop forging. See **drop forging.**

fork (*Horol.*). In lever escapements, the end of the lever which receives the impulse pin.

fork (*Mining*). (1) A tool with a long wooden handle and prongs for loading lump coal.—(2) A double-pronged clip on a tub or wagon for the haulage rope or chain.—(3) *In fork*, in check; e.g. to keep the water in a mine *in fork* is to check its inflow.

fork, tuning (*Acous.*). See **tuning fork.**

forked, forking (*Bot.*). Dividing into two (or more) distinct branches which diverge as they elongate.

forked channel (*Elec. Comm.*). A channel which divides for either simultaneous or alternative reception from one transmitting system.

forked circuit (*Elec. Comm.*). The same as *divided circuit.*

forked lightning. A popular name given to a lightning stroke; the name derives from the branching of the stroke channel which is commonly observed.

forked tenon (*Join.*). A joint formed by a slot mortise astride a tenon cut across the length of a member.

forking (*Bot.*). See **forked.**

forkstaff plane (*Join.*). A plane adapted for shaping convex cylindrical work.

form (*Civ. Eng.*). See **mould.**

form (*Crystal.*). A complete assemblage of crystal faces similar in all respects as determined by the symmetry of a particular class of crystal structure. Thus the *cube*, consisting of six similar square faces, and the *octahedron*, consisting of eight faces, each an equilateral triangle, are crystal *forms.* The number of faces in a form ranges from one (the pedion) to forty-eight (the hexakis-octahedron). A natural crystal may consist of one form or many.

form, cable (*Elec. Comm.*). See **cable form.**

form drag (*Aero.*). That part of the drag represented by the components of the pressures at points on the surface of an aerofoil, resolved normal to the surface. Also called PRESSURE DRAG.

form factor (*Elec. Eng.*). The ratio of the r.m.s. value of an alternating wave to its mean value taken over half a cycle. See **field-form factor.**

form genus (*Gen.*). A group of species which have similar morphological characters, but which are not certainly known to be related in descent. The species are *form species.*

form grinding (*Eng.*). See **profile grinding.**

form species (*Bot.*). See under **form genus.**

form tool or forming cutter (*Eng.*). Any cutting tool which produces a desired contour on the work-piece by being merely fed into the work, the cutting edge having a profile similar to, but not necessarily identical with, the shape produced. See **chaser.**

formwork (*Civ. Eng.*). *Shuttering* (q.v.).

formal'dehyde (*Chem.*). H·CHO, b.p. −21° C., a gas of pungent odour, readily soluble in water, and usually used in aqueous solution. Formaldehyde easily polymerises to *paraformaldehyde* (q.v.) or metaformaldehyde. It is produced by oxidation of methyl alcohol, or by the oxidation of ethylene in the presence of a catalyst. It forms with ammonia *hexamethylene-tetramine* (q.v.). It is a disinfectant and hardens albuminous substances; of great importance in plastics manufacture.

formaldehyde resins (*Chem.*). Synthetic resins which are condensation products of formaldehyde with phenols, urea, etc.

for'malin (*Chem.*). The term for a commercial 40% aqueous formaldehyde solution.

formant (*Acous.*). A specific type of wave-forms produced by the human voice and by certain musical instruments.

format (*Print.*). The general appearance or style of a book, including size, quality of paper, type face, and binding.

formates (*Chem.*). The salts of *formic acid* (q.v.).

formation (*Bot.*). See **association.**

formation (*Geol.*). A non-committal term for one of the larger stratigraphical divisions, more accurately designated *stage, series,* or *system.*

formation (*Surv.*). The surface to which earthwork will have to be carried in a bank, or down to which it will have to be excavated in a cut, in the process of executing such a work as the construction of a road or railway. Permanent-way materials are laid upon formation.

formation level (*Surv.*). The height above datum of any given point on formation.

formative region (*Bot.*). The growing point of a stem or root.

formative stage of growth (*Bot.*). The stage in development when a cell is formed from a pre-existing cell.

formative-trophic (*Zool.*). In development, pertaining to stimuli which assist indirectly in the production of structures which are qualitatively different, or to the effects of such stimuli. Cf. *augmentative-trophic reaction.*

forme (*Typog.*). Type matter assembled and locked up in a chase ready for printing.

formed plate (*Elec. Eng.*). A type of plate used in lead-acid accumulators; made by electrolytically converting the substance of which the plate is made into active material.

former (*Elec. Eng.*). A tool for giving a coil or winding the correct shape; it sometimes consists of a frame upon which the wire can be wound, the frame afterwards being removed.

former-wound coil (*Elec. Eng.*). An armature coil built to the correct shape by means of a former, it being then dropped into the slots on the armature.

formic acid (*Chem.*). HCOOH, a colourless liquid, of pungent odour, corrosive, m.p. 9° C., b.p. 101° C., prepared by absorption of carbon monoxide in soda-lime at 210° C.

formication (*Med.*). The sensation such as would be produced by ants crawling on the skin.

forming cutter (*Eng.*). See **form tool.**

formol titration (*Chem.*). A method of estimating volumetrically the amount of amino acids present in a solution. It is based upon the fact that amino acids and their derivatives possess both a carboxyl and an amino group which neutralise each other, and that by the addition of formaldehyde the amino group is converted into a methylene derivative without basic properties, by which reaction it becomes possible to titrate subsequently the carboxyl in the usual manner.

formula. A fixed rule or set form.—(*Chem.*) The representation of the nature and number of the atoms present in a molecule of a compound by means of letters and figures, e.g. H_2SO_4, C_2H_5OH.—(*Maths.*) A rule expressed in algebraic symbols.—(*Med.*) A prescription.

fornicate (*Bot.*). Arched and hood-like.

fornix (*Zool.*). In the brains of higher *Vertebrata*, a tract of fibres connecting the posterior part of the cerebrum with the hypothalamus.

for'sterite (*Min.*). An end-member of the olivine group of minerals, crystallising in the orthorhombic system. Chemically, forsterite is silicate of magnesium, Mg_2SiO_4.

forsterite-marble or **ophical'cite** (*Geol.*). A characteristic product of the contact metamorphism of magnesian (dolomitic) limestones containing silica of organic or inorganic origin. The dolomite splits up into magnesia, CO_2 and $CaCO_3$. The first combines with the silica to form forsterite, while the calcium carbonate recrystallises as marble.

Forstner bit (*Carp.*). A patent brace-bit for sinking blind holes in timber.

Fort Pierre Shales (*Geol.*). Marine shales containing shell-banks of lamellibranchs (*Lucina*) deposited during Cretaceous (Montanan) times in the region of the Great Plains of the U.S.A. See also **tepee buttes.**

Fortin's barometer (*Meteor.*). A pattern of mercury barometer suited for accurate readings of the pressure of the atmosphere. The zero of the scale is indicated by a pointer inside the mercury cistern, the bottom of which is flexible and may be moved by an adjusting screw until the mercury surface just touches the pointer.

forward eccentric (*Eng.*). On a steam-engine having link motion reverse gear, the eccentric which drives the valve when the engine is going ahead. See **link motion.**

forward lead (*Elec. Eng.*). See **forward shift.**

forward perpendicular (*Ship Constr.*). The forward side of a ship's stem post when this is truly perpendicular to the longitudinal base line; but in cases when the stem post is 'raked,' i.e. angled to the base line, it is the perpendicular intersecting the forward side of the stem post at the summerload water line.

forward shift (*Elec. Eng.*). A movement of the brushes of a commutator machine around the commutator, from the neutral position, and in the same direction as that of rotation. Also called **forward lead.**

forwarding (*Bind.*). The operations entailed in bookbinding, until a book has been placed in its covers. See **finishing.**

Fosalsil (*Build.*). A heat-insulating, fire-resisting material of great mechanical strength made from moler, and used in the form of hollow blocks for partitions.

fossa (*Zool.*). A ditch-like or pit-like depression, as the *glenoid fossa.*

fossette (*Zool.*). In general, a small pit or depression: in some *Arthropoda*, the socket which receives the base of the antennule.

fossicker (*Mining*). One who searches for small amounts of mineral.

fossil (*Geol.*). A relic of some former living thing—plant or animal—embedded in, or dug out of, the superficial deposits of past geological periods. Fossils usually occur as the hard parts of organisms, such as bones or shells, and as moulds, casts, and impressions preserved in rocks. Rarely, creatures having no hard parts, such as jellyfishes, sea-cucumbers, etc., have been recognised in rocks as ancient as the Cambrian; by contrast, complete extinct mammals, including mammoths, occur frozen in the gravels of Pleistocene age in Siberia. See also **palaeontology** and **palaeobotany.**

fossil meal (*Build.*). A diatomaceous earth used in the manufacture of Fosalsil.

fosso'rial (*Zool.*). Adapted for digging.

Foster's reactance theorem (*Elec. Comm.*). An expression for the generalised impedance of a number of tuned circuits, in series or parallel, which indicates that such impedances exhibit resonant and anti-resonant frequencies which are in order.

foto (*Photog.*). A variant spelling of *photograph.*

Föttinger coupling (or **transmitter**), fĕt'ing-er (*Eng.*). A hydraulic coupling, gear, or clutch for transmitting power from, e.g., an engine to a ship's propeller; it consists essentially of an outward-flow water turbine driving an inward-flow turbine, within a common casing.

Föttinger speed transformer (*Eng.*). A hydraulic reduction gear formerly used in marine propulsion, comprising a centrifugal pump and turbine runner in a single unit, giving a speed reduction of 5.1.

Foucault current, foo-kō (*Elec. Eng.*). See **eddy current.**

Foucault's measurement of the velocity of light (*Light*). One of the first successful attempts to obtain an accurate result for this important constant. Foucault, in 1862, made use of a rapidly rotating mirror sending light to a distant fixed concave mirror which reflected it back. Measurement of the displacement of the reflected image gave a value of $2{\cdot}986 \times 10^{10}$ cm. per sec. for the velocity of light *in vacuo.*

Foucault's pendulum (*Astron.*). An instrument devised by Foucault in 1851 to demonstrate the rotation of the earth; it consists of a heavy metal ball suspended by a very long fine wire; the plane of oscillation slowly changes through 15° sin (latitude) per sidereal hour.

foul air flue (*Build.*). A ventilating flue through which vitiated air from a room is drawn.

foul clay (*Build.*). A brick earth composed of silica and alumina combined with only a small percentage of lime, magnesia, soda, or other salts. Such a clay lacks sufficient fluxing material to fuse its constituents at furnace temperature, and is improved by the addition of sand or loam, lime or ashes. Also called PURE CLAY, PLASTIC CLAY, STRONG CLAY.

foulard (*Textiles*). A light-weight dress fabric with a printed pattern, made either of silk or of super-quality cotton.

fouling (*Eng.*). (1) Coming into accidental contact with.—(2) Deposition or incrustation of foreign matter on a surface, as of carbon in an engine cylinder, or marine growth on the bottom of a ship or on structures subject to the action of sea-water.

fouls (*Mining*). The cutting-out of portions of the coal-seam by 'wash outs' or barren ground.

found (*Glass*). The name for the melting operation which the raw materials undergo in a furnace.

foundation (*Build.*, *Civ. Eng*). The formation, either natural or artificial, upon which a building or construction rests.

foundation cylinder (*Eng.*). A large steel or iron cylinder sunk into the ground to provide a solid foundation for bridge piers, etc. in soft ground.

foundation piles (*Civ. Eng.*). Piles driven into the ground to provide an unyielding support for a structure.

foundation ring (*Eng.*). In a locomotive boiler, a rectangular iron ring of rectangular section, to which the lower edges of the inner and outer plates of the fire box are secured.

founded (*Civ. Eng.*). Said of a caisson which has been sunk to a firm level.

founder (*Vet.*). See **laminitis.**

foundering (*Geol.*). Subsidence due to two causes: downwarping, resulting in the development of a monoclinal fold; and displacement along faults which hade inwards towards one another, as in rift valleys. *Cauldron subsidence* (q.v.) is a special case.

foundry (*Eng*). A workshop in which metal objects are made by casting in sand or loam moulds. See **moulding, moulding sands.**

foundry (*Print*). That department of a printing establishment where work in connexion with electrotype and stereotype plates is carried out.

foundry ladle (*Eng.*). A steel ladle lined with fireclay; used for transporting molten metal from a foundry cupola to the moulds. Small ladles are carried by hand, large ones by a truck or crane. See **hand shank.**

foundry pig-iron (*Eng.*). Bars of cast-iron 2-3 ft. long and 3-4 in. diameter, as bought by an iron foundry.

foundry pit (*Eng.*). A large hole in the floor of a foundry, which serves the purpose of a moulding box for very large or deep castings.

foundry stove (*Eng.*). A large oven for drying moulds and cores, heated either externally by hot gases or internally by a fire-basket.

fount or **font** (*Typog.*). A complete set of type of the same face and size, containing proportionate weights of the individual characters.

four-centred arch (*Build.*). A pointed arch struck from four centres.

four-electrode valve (*Thermionics*). Any thermionic valve containing a cathode and three other electrodes. See **bigrid-valve, co-planar grid-valve, screened grid-valve.**

four-part vault (*Build.*). A vault formed at the intersection of two barrel vaults.

four-phase system (*Elec. Eng.*). A name sometimes given to a two-phase system in which the mid-points of the two phases are connected to form a neutral point.

four-stroke (or 4-stroke) cycle (*I.C. Engs.*). An engine cycle completed in four piston strokes (i.e. in two crankshaft revolutions), consisting of suction or induction, compression, expansion or power stroke, and exhaust. See **Otto cycle, Diesel cycle.**

four-wire circuit (*Elec. Comm.*). A duplex or quasi-duplex circuit in which the return speech-currents are separated from the go speech-currents by segregating them on separate pairs of conductors.

four-wire repeater (*Elec. Comm.*). A repeater for insertion into a four-wire telephone circuit, in which the two amplifiers, one for amplifying in each direction, are kept separate.

four-wire system (*Elec. Eng.*). A system of distribution of electric power requiring four wires. In a three-phase system, the four wires are connected to the three line terminals of the supply transformer and the neutral point; and in the two-phase system, the wires are connected to the ends of the two transformer windings.

fourchette, foor-shet′ (*Anat.*). The posterior junction of the labia minora.

fourchettes (*Gloves*). The forked pieces placed between the fingers.

fourdrin′ier (*Paper*). The standard type of paper machine, introduced by the brothers Fourdrinier about 1800.

Fourier integral, foor-yā (*Elec. Comm*). The expression of a non-repeated and isolated waveform in the form of a summation of adjacent frequency components, from zero to infinity, with a spectral distribution of energy content.

Fourier series (*Maths.*). The expansion of a function $f(x)$ in the form of the uniformly converging series: $a_0+\Sigma(a_n \cos nx+b_n \sin nx)$, where x lies between θ and π, and $f(x)$ has a finite number of maxima and minima values and a finite number of discontinuities in the range. These conditions are sufficient but not necessary.*—(*Elec. Comm.*) The expression of a steadily repeated wave form in terms of a fundamental and harmonics, the latter having particular amplitudes and initial phases with respect to the fundamental.

fourteen-inch wall (*Build.*). See **brick-and-a-half wall.**

fourth pinion (*Horol*). The pinion on which the fourth wheel is mounted.

fourth rail (*Elec. Eng*). A conductor-rail on an electric traction system. When there are two running rails and two conductor-rails, the fourth rail generally carries the return current, instead of its being allowed to return along the running rails.

fourth-rail insulator (*Elec. Eng.*) An insulator for supporting a fourth rail in an electric-traction system.

fourth ventricle (*Zool.*). In Vertebrates, the cavity of the hind-brain.

fourth wheel (*Horol*). The wheel in a watch which drives the escape pinion. If the train is suitable for a seconds hand (i.e. the fourth wheel makes one turn per minute), the hand is carried on an extension of the fourth wheel arbor.

fourth wire (*Elec. Eng.*). A name sometimes given to the neutral wire in a 3-phase, 4-wire distribution system.

fo′vea (*Zool.*). A small pit or depression.—*adj* **foveate.**

fovea centra′lis (*Zool.*). A slight depression at the centre of the macula lutea (see **yellow spot**).

foveo′la (*Bot.*, *Zool.*). A small pit or depression.—*adjs.* **fo′veolar, fo′veolate.**

fovil′la (*Bot.*). The material inside a pollen grain.

fowl cholera (*Vet.*). See **cholera (fowl, duck).**

fowl paralysis (*Vet.*). See **neurolymphomatosis.**

fowl plague (*Vet.*). An acute contagious filterable-virus infection of birds.

fowl pox (*Vet.*). Avian diphtheria. An acute contagious disease of birds due to infection by a filterable virus; characterised by hyperplastic nodules on the skin or diphtheritic inflammation of the mouth.

Fowler position (*Med.*). The semi-sitting position in which the patient is placed in bed after an abdominal operation, in order to prevent infective fluids reaching the upper part of the abdominal cavity.

fox (*Furs*). The dressed skin of one of the various species of fox. The European fox (*Vulpes vulpes*) has a reddish fur; the Silver or Black fox, a variety of the American fox, has a black fur, sprinkled with silver; the Arctic fox has a downy fur of light bluish-grey, often dyed; the Cross fox has an orange-yellow fur marked by a cross on the shoulders; Greenland and Alaskan foxes (Blue fox) are slaty-brown in colour.

foxtail saw (*Join.*). A dovetail saw.

foxtail wedging (*Join.*). The tightening-up of a tenon in a blind mortise by inserting small wedges in saw-cuts in the end of the tenon before inserting the latter in the mortise. The operation of driving the tenon into position then forces the wedges into the saw-cuts and spreads the fibres of the tenon, giving a secure hold resisting withdrawal. Also called FOX WEDGING or FOX TENONING.

Fox Hills Sandstone (*Geol.*). An aeolian sandstone which succeeds the Fort Pierre Shales in the Cretaceous succession of Wyoming, etc.

foxiness (*Timber*). A term applied to a form of decay which affects hardwoods, causing local reddish-brown staining.

foyaite, fō'ya-īt (*Geol.*). A widely distributed variety of nepheline-syenite, described originally from the Foya Hills in Portugal. Typically it contains about equal amounts of nepheline and potash feldspar, associated with a subordinate amount of coloured mineral such as aegirine.

f.p. Abbrev. for *freezing-point.*

F.P. (*Ship Constr.*). Abbrev. for *forward perpendicular.*

fraction of saturation (*Meteor.*). See **relative humidity.**

fractional crystallisation (*Chem.*). The separation of substances by the repeated partial crystallisation of a solution.—(*Geol.*) The formation, at successively lower temperatures, of the component minerals in a magma, coupled with the tendency for the components which crystallise at high temperatures to separate, on account of their high specific gravity, thus giving a concentration in the lower parts of a magma body.

fractional distillation (*Chem.*). Distillation process for the separation of the various components of liquid mixtures. An effective separation can only be achieved by the use of *fractionating columns* (q.v.) attached to the still.

fractional pitch (*Eng.*). (Of a screw-thread cut in the lathe) a pitch not an integral multiple or submultiple of the pitch of the lathe-head screw. See **even pitch.**

fractional test meal (*Med.*). See **Rehfuss test.**

fractionating column (*Chem.*). A vertical tube or column attached to a still and usually filled with rings or intersected with bubble plates. An internal reflux takes place, resulting in a gradual separation between the high- and the low-boiling fractions inside the column, whereby the fractions with the lowest boiling-point distil over. The efficiency of the column depends on its length and on the number of bubble plates used.

fractionation (*Chem.*). See **fractional distillation.**

fracture (*Min.*). The broken surface of a mineral as distinct from its cleavage. The fracture is described, in different cases, as conchoidal (shell-like), platy, or flat, smooth, hackly (like that of cast-iron), or earthy. Thus calcite has a perfect rhombohedral cleavage (i.e. it splits readily parallel to the six faces of the rhombohedron), but has a conchoidal fracture.

fraenot'omy (*Surg.*). See **frenotomy.**

frae'num (*Zool.*). See **frenum.**

fragil'itas os'sium (*Med.*). Osteogenesis imperfecta. A condition, sometimes hereditary, in which a child is born with abnormally brittle -bones, multiple fractures occurring.

fragment (*Bot.*). A piece detached from a chromosome.

fragmental deposits (*Geol.*). These include epiclastic and pyroclastic rocks, i.e. all those which consist of fragments of rocks or minerals covering the whole range of grain size, and resulting from normal disintegration of rocks, or from shattering by volcanic action.

fragmentation (*Bot., Cyt.*). (1) See **amitosis.**—(2) The break-up of an algal filament into a number of parts, each capable of growing into a new filament. —(3) The separation of a portion from the main body of a chromosome.

fragmentation of the myocardium (*Med*). Transverse fissuring of the muscle fibres of the heart, occurring after violent death or in a diseased heart.

Fram floor (*Build.*). A patented form of fire-resisting floor made of reinforced hollow fireclay blocks.

framboesia, frambesia, —bē'zi-a (*Med.*). *Yaws* (q.v.).

frame (*Cinema.*). The unit picture in a cinematograph film, which is locked in position in the picture gate in the camera or projector during photography or projection.

frame (*Struct., etc*). See **framework.**

frame (*Television*). The picture formed by a single traverse of the scanning spot over the whole field of a television image.

frames (*Civ. Eng.*). The centring used in concrete construction.

frame antenna (*Radio*). An antenna comprising a loop of one or more turns of conductor wound on a frame, its plane being oriented in the direction of the incoming waves, or, in the case of transmission, in the direction of maximum radiation. The transmitter or receiver is connected across the two ends of the loop. Also called COIL ANTENNA, LOOP ANTENNA.

frame development (*Photog*). Development of lengths of cinematograph film by winding them round a flat frame, for immersion in the minimum quantity of developer. Cf. *drum development, continuous development.*

frame (or **loop**) **direction-finder** (*Radio*). A simple type of direction-finder using a loop, preferably screened to obviate antenna effect, the polar response of which is a figure of eight; the loop is rotated until the received signal vanishes, when the axis of the frame is in line with the direction of arrival of the wave. See **sense.**

frame frequency (*Television*). The number of times per second which a television image is scanned. Also called PICTURE FREQUENCY.

frame-high (*Build.*). At the level of the top of window or door frames.

frame level (*Masonry*). A mason's level.

frame line (*Cinema.*). The thin black line dividing the frames in the positive projection print of a motion picture.

frame noise (*Cinema.*). In sound-film reproduction, noise arising from the film being displaced in the sound-gate, so that the scanning light is interrupted by the frame lines. The resulting modulation contains frequencies which are multiples of the frame frequency, normally 24 per second, and is inseparable from other frequencies recorded on the sound-track.

frame-saw (*Tools*). A thin-bladed saw, which is held taut in a special frame. Also called SPAN SAW.

frame-synchronising impulse (*Television*). An impulse transmitted at the end of each complete frame-scanning operation, to synchronise the framing oscillator at the receiver with that at the transmitter.

frame turner (*Ship Constr.*). A tradesman engaged in turning and bevelling ships' frames, when red hot, to the shape of the ship's form.

frame-type switchboard (*Elec. Eng.*). See **skeleton-type switchboard.**

frame weir (*Civ. Eng.*). A type of movable weir consisting of a wooden barrier supported against iron frames placed at intervals across a river, and capable of being lowered on to the bed of the river in flood-time, or of being entirely removed.

framework (*Struct., etc.*). The supporting skeleton of a structure.

frames per second (*Cinema.*). The rate of taking or projecting motion-pictures. On projection, each frame may be flashed one or more times on the screen, the increase diminishing the flicker.

framed (*Carp.*). Said of work assembled with mortise and tenon joints.

framed and braced door (*Join.*). A boarded door secured in a frame consisting of two stiles, and top, middle, and bottom rails, with diagonal braces between.

framed floor (*Carp*). A floor in which the bridging joists are supported at intervals by binding joists, which in turn are supported at intervals by girders. Cf. *double floor.*

framed grounds (*Join.*) Grounds used in good work around openings such as door openings, the heads being tenoned into the posts on each side.

framed, ledged, and braced door (*Join.*). A boarded door secured in a frame consisting of two stiles and a top-rail, and braced on one side with middle and bottom rails and diagonal braces.

framing (*Cinema.*). The vertical adjustment of the picture gate in a projector, so as to get the image on the screen exactly on the desired area without appreciable top or bottom clipping or view of the frame lines.

framing (*Struct., etc.*). The operation of assembling into final position the members of a structure.

framing (*Television*). The process of adjustment of the picture-repetition frequency in a television receiver so as to keep the picture stationary on the screen.

framing chisel (*Carp., Join.*). See **mortise chisel.**

framing oscillator (*Television*). The oscillator which generates the frame-scanning voltage or current.

framing timber (*Build.*). The Australian equivalent of *carcassing timber.*

Francis water turbine (*Eng.*). A reaction turbine in which the water flows radially inwards into guide vanes, and thence into the runner, which it leaves axially.

Frankfort black (*Dec.*). An alternative term for *drop black.*

franking (*Join.*). The operation of notching a sash-bar to make a mitre joint with a transverse bar.

Franklin antenna (*Radio*). A directive antenna comprising a number of radiating elements uniformly spaced along a line at right-angles to the direction of maximum radiation. Each element consists of a vertical wire several half-wavelengths long, the radiation from alternate half-wavelengths being suppressed, to secure maximum radiation along the horizontal direction.

frank'linite (*Min.*). Zinc-manganese spinel, occurring rarely as at the type-locality, Franklin Furnace, New Jersey.

frass (*Zool.*). Faeces; excrement.

Fraunhofer lines, frown'hō-fer (*Light*). Dark lines in the solar spectrum, produced by selective absorption in the relatively cool gaseous envelope surrounding the incandescent photosphere. See [A], [B], [C], etc.

fraz'il ice (*Meteor.*). Ice, in the form of small spikes and plates, formed in rapidly flowing streams, where the formation of large slabs is inhibited.

Fredericksburg Series (*Geol.*). The middle of the three divisions of the Comanchean in southern U.S.A. and Mexico; succeeded by the Washita and underlain by the Trinity Series; together with the former constitutes the great Mesocretaceous limestone formation of Mexico.

free (*Bot.*). (1) Not joined laterally to another member of the same kind.—(2) Said of gills of agarics which reach the stipe but are not joined to it.

free association (*Psycho-an.*). The method used in psychotherapy for making unconscious processes conscious. Associations to ideas are allowed to arise spontaneously in the mind, without conscious direction or selective criticism when factors previously unknown and unconscious may be revealed; these are often accompanied by an affect of pain or disgust. See **abreaction.**

free balloon (*Aero.*). Any balloon floating freely in the air, not propelled or guided by any power or mechanism, either within itself or from the ground.

freeboard (*Ship Constr.*). An assignment made by law to prevent overloading of a ship; calculated from statutory tables based on the vessel's form. Permanent markings are made on the ship's side to indicate the depth to which a ship may be loaded, and severe penalties are incurred by any overloading.

free cell formation (*Bot*). The formation of daughter cells which do not remain united.

free cementite (*Met.*). Iron carbide in cast-iron or steel other than that associated with ferrite in pearlite.

free central placentation (*Bot.*). The grouping of the ovules on the surface of a placenta which stands up from the base of the ovary and is not united with the walls of the chamber, either at the side or at the top.

free-cutting brass (*Met.*). α-β Brass containing about 2-3% of lead, to improve the machining properties. Used for engraving and screw machine work.

free-cutting steel (*Met.*). Steel in which the phosphorus is increased to 0·15% and the sulphur to 0·2%, to induce a certain degree of brittleness which facilitates rapid machining.

free end (*Struct*). The end of a cantilever which is not fixed or built in.

free energy (*Chem.*). The capacity of a system to perform work, a change in free energy being measured by the maximum work obtainable from a given process.

free ferrite (*Met.*). Ferrite in steel or cast-iron other than that associated with cementite in pearlite.

free-handle (*Elec. Eng.*). See **free-trip.**

free-hearth electric furnace (*Elec. Eng*). A direct-arc furnace in which one electrode forms a part of the bottom of the hearth.

freemartin (*Zool.*). In cattle, a sterile female intersex occurring as co-twin with a normal bull-calf.

free-needle surveying (*Surv.*). Traverse work done with a compass, the bearing of each line from the magnetic meridian being read in turn.

free nuclear division (*Cyt*). Nuclear division unaccompanied by the formation of cell walls.

free oscillations (*Radio*). Oscillatory currents whose frequency is determined by the constants of the circuit in which they are flowing; e.g. those resulting from the discharge of a condenser through an inductance. Cf. *forced oscillations.*

free path (*Chem.*). See **mean free path.**

free pole (*Elec. Eng.*). A magnet pole which is imagined, for theoretical purposes, to exist separately from its corresponding opposite pole.

free radical (*Chem.*). A group of atoms which normally exists only in combination with other atoms, brought into independent existence by special conditions.

free-running speed (*Elec. Eng.*). The speed which a vehicle or train will attain when propelled by a constant tractive effort; i.e. the speed at which the applied tractive effort exactly equals the forces resisting motion. Also called BALANCING SPEED.

free-sprung (*Horol.*). A watch is said to be *free-sprung* when no index and curb pins are available for the correction of its rate. The balance and spring are so proportioned and adjusted as to give the best possible performance under all conditions. Chronometers and chronometer watches are always free-sprung.

freestone (*Build.*). A building-stone which can be worked with a chisel without tending to split into definite layers.

free stuff (*Timber*). *Clear stuff* (q.v.).

free-trip (*Elec. Eng.*). Said of certain types of circuit-breaker or motor starter in which the tripping mechanism is independent of the closing mechanism, and will therefore allow the switch to trip while the latter is being operated. Also FREE-HANDLE. Cf. *fixed-trip*.

free vibrations (*Phys.*). The vibrations which occur at the natural frequency of a body when it has been displaced from its position of rest and allowed to vibrate freely without the application of any periodic force.

free-wheel (*Automobiles*). A one-way clutch, usually depending on the wedging action of rollers, placed in the transmission line, so as to transmit torque only when the engine is driving.

free-wheel (*Bicycles*). This has a drive actuated by pawls depressed by light springs. The pawls engage the ratcheted inside edge of the sprocket when pedalling takes place, but overrun the ratchet when it stops.

Freeman's white (*Paint.*). A non-poisonous white lead paint, made of sulphate of lead, zinc oxide, and barytes; highly resistant to discoloration by sulphurous fumes.

freeze (*Cinema.*). Stoppage of action by artists in sound-film production so that the equivalent of a still picture is obtained; or in order that the subsequent action may be continued without a change in the position of the artists.

freezing (*Heat*). The conversion of a liquid into the solid form. This process takes place at a definite temperature for each substance, this temperature being known as the *freezing-point*. The freezing of a liquid invariably involves the extraction of heat from it, known as *latent heat of fusion*. See **latent heat, depression of freezing-point.**

freezing mixture (*Chem.*). A mixture of two substances, generally of ice and a salt, used to produce a temperature below 0° C.

freezing-point (*Heat*). The temperature at which a liquid solidifies, which is the same as that at which the solid melts (the *melting-point*). The freezing-point of water is used as the lower fixed point in graduating a thermometer. Its temperature is defined as 0° C. or 32° F. See also **water** and **depression of freezing-point.**—(*Met.*) The temperature at which a metal solidifies. Pure metals, eutectics, and some intermediate constituents freeze at constant temperature; alloys generally solidify over a range.

freezing-point method (*Chem.*). See **cryoscopic method.**

freibergite, frī′-ber-git (*Min.*). An obsolete name for argentiferous tetrahedrite.

freight car (*Rail.*). The American term for a goods wagon.

frem′itus (*Med.*). Palpable vibration, especially of the chest wall, during speech or coughing; variations in intensity are of diagnostic value.

Fremont test (*Met.*). A type of impact test in which a beam specimen notched with a rectangular groove is broken by a falling weight.

Frémy's salt, frā-mē (*Chem.*). Potassium bifluoride, potassium hydrogen fluoride, or acid potassium fluoride.

French arch (*Build.*). A brick arch, flat at the top and bottom, constructed with ordinary bricks not worked to wedge shape but laid so as to slope outwards from the middle of the arch.

French bit (*Carp.*). A boring tool having a flat blade, shaped at the two cutting edges in continuous curves, from the point to and beyond a place of maximum diameter; used in a lathe-head for drilling hard wood.

French casement (*Build.*). A pair of glazed folding doors.

French chalk (*Min.*). The mineral talc ground into a state of fine subdivision, its softness and its perfect cleavage contributing to its special properties when used as a dry lubricant.

French cross-head (*Surv.*). A form of cross-staff consisting of an octagonal metal box with slits in the opposite sides, so that the instrument may be used for setting out angles of 90° or 45°.

French curve. A drawing instrument used to guide the pen or pencil in drawing curved lines It consists of a thin flat sheet of celluloid, wood, or other material cut to curved profiles at the edges.

French doors (*Build.*). *French windows* (q.v.).

French drain. A drain formed by partly filling a trench at the bottom with loose broken bricks or rubble.

French fliers (*Carp.*). Steps in an *open newel stair* (q.v.) with *quarter-space landings* (q.v.).

French foot (*Hosiery*). A type of hosiery in which the foot is produced in one piece, the design of the leg portion being carried round the foot.

French moult (*Vet.*). A defective development of the first plumage of birds leading to the shedding of the wing and tail primaries; particularly observed in aviary-bred budgerigars.

French polish (*Dec.*). A solution of shellac dissolved in methylated spirit and coloured with dragon's blood. Applied to wood surfaces to produce a high polish on them.

French roof (*Build.*). A *mansard roof* (q v.).

French stuc (*Build.*). Plasterwork finished to present a surface resembling that of stonework.

French system of drawing (*Textiles*). See **porcupine system.**

French truss (*Eng.*). A symmetrical roof truss for large spans, composed of a pair of braced isosceles triangles based on the sloping sides of the upper chord, their apices being joined by a horizontal tie. Also called BELGIAN TRUSS, FINK TRUSS.

French white (*Paint.*). See **silver white.**

French window (*Build.*). A glazed casement, serving as both window and door.

frenchman (*Plast.*). A joint-trimming tool, used for pointing.

frenot′omy, fraenot′omy (*Surg.*). Cutting of the frenum of the tongue for tongue-tie.

fren′ulum (*Zool.*). In some *Lepidoptera*, a bunch of strong bristles arising from the costal border of the hind-wing, which engages the fore-wing and so locks the two wings together during flight: in some *Scyphozoa*, a thickening of the sub-umbrella: more generally, a membranous fold.

fre′num (*Zool.*). A membranous or ligamentous structure which checks the movement of a part: in *Cirripedia*, a tegumentary fold at the base of the mantle: in some insects, a membranous or chitinous fold or ridge extending from the scutellum to the base of the fore-wing: a frenulum.—*adj.* **frenate.**

frequency (*Phys., etc.*). The number of vibrations, or waves, or cycles, of any periodic phenomenon per second. The frequency is the reciprocal of the period or periodic time. Also PERIODICITY.

frequency (*Bot.*). The relative number of any given species in a given place.

frequency (*Elec.*). The frequency at which an electric current alternates; measured in *cycles per second* (*hertz*).

See **alien—**
angular—
carrier—
cut-off—
dot—
limiting—
radio—
turnover—*
side—

frequency band (*Radio*). The interval in the frequency spectrum occupied by a modulated signal. In the case of sinusoidal amplitude modulation, it is twice the maximum modulating frequency.

frequency changer (*Elec. Eng.*). A machine designed to receive power at one frequency and deliver it at another frequency.—(*Radio*) A combination of oscillator and modulator valves used in a superheterodyne receiver to change the incoming signal from its original carrier frequency to a fixed intermediate carrier frequency. Also called FREQUENCY CONVERTER.

frequency demultiplication (*Radio*). The process of producing a current whose frequency is an exact sub-multiple of another frequency. It is achieved by means of a series of oscillators, the harmonic of one being locked with the fundamental of the next. Also FREQUENCY DIVISION.

frequency-discriminating filter (*Elec. Comm.*). The same as an *electric wave filter*, but implying the essential feature of discrimination amongst component frequencies of electric signals, in that some bands of frequencies are passed with minimum and uniform attenuation, while frequencies not in these nominal bands are highly attenuated or cut off, or vice versa.

frequency distortion (*Radio*). Impairment of the quality of the reproduced signal, arising from the unequal transmission of the different frequency components thereof.

frequency division (*Radio*). See **frequency demultiplication.**

frequency doubler (*Radio*). A frequency multiplier in which the output current or voltage has twice the frequency of the input.

frequency doubling (*Acous.*). The introduction of marked double-frequency components through lack of polarisation in an electromagnetic or electrostatic transducer, in which the operating forces are proportional to the square of the operating currents and voltages respectively.

frequency factor (*Bot.*). The percentage occurrence of a species in a plant community.

frequency meter (*Elec. Eng.*). An indicating instrument for measuring the frequency of an alternating voltage. See **integrating frequency meter.**

frequency modulation (*Radio*). Variation of the frequency of a transmitted wave in accordance with the impressed modulation.

frequency multiplier (*Radio*). Any four-terminal device in which the output current or voltage has a frequency which is an integral multiple of that of the input. A saturated iron-cored inductance, or a thermionic valve working on the non-linear part of its characteristic, can be used, together with the appropriate frequency-selecting circuits, to produce this result. Also called STATIC FREQUENCY CHANGER.

frequency of infinite attenuation (*Elec. Comm.*). A frequency at which a filter inserted in a communication channel provides a maximum attenuation, theoretically infinite with loss-free inductances and condensers. Such large attenuation is generally provided by an anti-resonant series arm, or by an acceptance resonant shunt arm.

frequency relay (*Elec. Eng.*). A relay which comes into operation when the frequency of a system departs from a certain predetermined value.

frequency response (*Acous.*). The response, measured by the ratio expressed in decibels, of the output power-level to the input power-level of a transmission or reproducing system, or any section thereof, the response being plotted on a logarithmic frequency-base. The resulting curve exhibits the frequency-distortion present in the system or part of the system, the power-levels being so defined that the response of the complete system is the sum of the responses of its several sections.

frequency stabilisation (*Radio*). The prevention of changes produced in the frequency of oscillation of a self-oscillating circuit by changes in supply voltage load impedance, valve parameters, etc.

frequency transformer (*Elec. Eng*) A static piece of apparatus (e.g. a transformer or mercury-arc convertor) which receives power at one frequency and delivers it at another frequency. Sometimes called a STATIC FREQUENCY CHANGER.

frequency tripler (*Elec. Eng*). A static frequency transformer consisting of a specially designed electromagnetic transformer which produces an output frequency of three times the input frequency.

fresco (*Paint.*). A method of painting on plastered walls with lime-fast colours, while the plaster is still wet.

fresh-air inlet (*San. Eng.*). A fitting, usually placed at the intercepting chamber, admitting fresh air into a drainage system to dispel the foul gases.

fresh-water sediments (*Geol*) These include those of all the main types that accumulate in other environments, and cover the whole range of grain size. Fresh-water conditions were widespread in N.W. Europe in later Tertiary times (Aquitanian-Oligocene), characteristic deposits being the Bovey Tracey pipe-clays and lignites, and the Bembridge fresh-water limestones. These are lacustrine deposits, while fluviatile and fluvio-glacial deposits also fall in this main category.

Fresnel's bi-prism, frā-nel (*Light*). An isosceles prism having an angle of nearly 180°, used for producing interference fringes from the two refracted images of an illuminated slit.

Fresnel's mirrors (*Light*). Two plane mirrors inclined at an angle of a little less than 180°, used for producing interference fringes from the two reflected images of an illuminated slit.

Fresnel's reflection formula (*Light*). A formula giving the fraction of the incident light reflected at the surface of a transparent medium. The fraction equals

$$\tfrac{1}{2}\left\{\frac{\sin^2(i-r)}{\sin^2(i+r)}+\frac{\tan^2(i-r)}{\tan^2(i+r)}\right\},$$

where i and r are the angles of incidence and refraction respectively.

Fresnel's rhomb (*Light*). A glass rhomb which is used for obtaining circularly polarised light from plane-polarised light by total internal reflection. The rhomb is so constructed that two such reflections at an angle of 54° are obtained, each of which introduces a phase difference of one-eighth of a period between the two components obtained from the incident plane-polarised light.

fret (*Furn.*). Pierced carving done with a fret-saw.

fret-saw (*Carp.*). See **compass saw.**

fret-work (*Build.*). A mode of glazing in which diamond-shaped panes (quarrels) are connected together by leaden cames to form a window.

fretted lead (*Plumb.*). Strip-lead of suitable section for use as *cames* (q.v.).

Freud's theory of the libido, froid (*Psycho-an.*).

According to this theory, the libido (energy attaching to the sexual instinct) becomes organised at different stages of development along different routes, e.g. oral, anal, phallic and genital, each phase having its own well-defined characteristics. Mental mechanisms common to these phases are found also in the psychoneuroses and psychoses, thus showing a definite correlation between these disorders and arrested mental development in any of these phases, e.g.

early oral	arrest	correlates with	schizophrenia
late oral	do.	do.	melancholia
early anal	do.	do.	paranoia
late anal	do.	do.	obsessional neurosis
phallic	do.	do.	hysteria.

friability test (*Civ. Eng*). A test for determining the suitability (that is, its resistance to crushing) of any given stone for use in asphalt work. A sample is heated for 15 minutes in a sand bath at 350° F., and should then not disintegrate on receiving a blow from a hammer.

friction (*Mech.*). The resistance to motion which is called into play when it is attempted to slide one surface over another with which it is in contact. The frictional force opposing the motion is equal to the moving force up to a value known as the *limiting friction*. Any increase in the moving force will then cause slipping. *Static friction* is the value of the limiting friction just before slipping occurs. *Kinetic friction* is the value of the limiting friction after slipping has occurred. This is slightly less than the static friction. The *coefficient of friction* is the ratio of the limiting friction to the normal reaction between the sliding surfaces. It is constant for a given pair of surfaces.

friction (*Med.*). (1) The sound produced by the rubbing together of two inflamed surfaces, as in pleurisy or pericarditis.—(2) Rubbing of a part, as in massage.

friction and windage loss (*Elec. Eng.*). Losses in an electrical machine due to friction of sliding parts (see **friction loss**) and also to air resistance. These losses are frequently considered together in designing and testing electrical machinery.

friction clutch (*Eng.*). A device for connecting or disconnecting two co-axial shafts, under any conditions of relative rotation. It consists of a pair of opposed members, between which the drive is transmitted through the friction of their contact surfaces, and which may be separated by a lever system.

See	**band clutch**	**disc** (or **plate**) **clutch**
	block do.	**multiple disc** do.
	cone do.	**split-ring** do.

friction compensation (*Elec. Eng*). A small torque, additional to the main torque, provided in a motor-type integrating meter in order to compensate for the effect of friction of the moving parts.

friction drag, surface (*Aero.*). See **surface friction drag.**

friction drive (*Eng.*). A drive in which one wheel causes rotation of a second wheel with which it is pressed into contact, through the agency of the friction forces at the contact surfaces.

friction gear (*Eng.*). A gear in which power is transmitted from one shaft to another through the tangential friction set up between a pair of wheels pressed into rolling contact. One of the contacting surfaces is usually fabric-faced. Suitable only for small powers.

friction glazing (*Paper*). A method of glazing in which one or more of the calender cylinders revolve at a speed greater than that of the others. By this means a very high polish is obtained.

friction horse-power (*Eng.*). That part of the gross or indicated horse-power developed in an engine cylinder which is absorbed in frictional losses; the difference between the indicated and the brake horse-power. Abbrev. **F.H.P.**

friction loss (*Elec. Eng.*). The power absorbed in the bearings, commutator, or slip-ring surfaces, or at any other sliding contacts of an electric machine.

friction pile (*Build., Civ. Eng.*). A pile which supports its load only by the friction over its sides.

friction rollers (*Eng.*). See **anti-friction bearing.**

frictional damper (*Eng.*). A device consisting of a supplementary mass frictionally driven from a crankshaft at a point remote from a node, which dissipates vibrational energy in heat.

frictional electricity (*Elec.*). A name given to electric charges produced by the rubbing together of certain insulating materials (e.g. ebonite and silk, or glass and fur).

frictional machine (*Elec. Eng.*). See **electrostatic generator.**

frictional-rest escapement (*Horol.*). See **escapement.**

Friedel and Crafts' synthesis (*Chem.*). The synthesis of benzene hydrocarbons or their homologues by the action of alkyl halides on aromatic hydrocarbons in the presence of anhydrous aluminium chloride.

Friedreich's ataxia, frēd′rihh (*Med.*). A hereditary nervous disease in which there are irregular, unco-ordinated movements of the voluntary muscles, a slow, staggering, reeling gait, and various deformities—the result of degenerative changes in the nerve tracts of the spinal cord.

frieze (*Arch., Build.*). (1) The middle part of an entablature, between the architrave and the cornice.—(2) The decorated upper part of a wall, below the cornice.

frieze (*Textiles*). A heavy woollen material with a rough surface, made from coarse yarns of mixed colours which give a rough tweed effect.

frieze-panel (*Join.*). An upper panel in a six-panel door.

frieze rail (*Join.*). The rail next to the top rail in a six-panel door.

frig-bob saw (*Quarrying*). A long handsaw used in Bath stone quarries.

frigidity (*Psychol.*). In women, decrease or absence of the normal sexual response; usually dependent on strongly repressed inhibitions and phantasies of instinctual desire.

frill (*Bot.*). A thin sheet of interwoven hyphae forming a horizontal circular flange around the stem of an agaric. Also called ARMILLA.

frilling (*Photog.*). The crinking of the emulsion on a plate, resulting in detached folds and wrinkles.

fringe (*Photog.*). A defect in colour photography due to lack of registration of the elementary colours (e.g. owing to parallax). See also **colour fringes.**

fringe (*Textiles*). Loose threads at the end or edge of a cloth.

fringing (*Elec. Eng.*). The spreading of the lines of force of a magnetic field, at the edges of an air-gap in a magnetic circuit.

fringing coefficient (*Elec. Eng.*). A coefficient used in making magnetic circuit calculations, in order to allow for the effect of fringing of the flux.

fringing reefs (*Ocean.*). Platforms of coral formation stretching out from the land. See **coral reef.**

Frisbie's feeder (*Glass*). A device whereby a bucket of coal is forced up into the *eye* (q.v.) of a pot-furnace from below.

frisket (*Print.*). A thin iron frame attached to the tympan of a hand press, holding the sheet of paper in position and protecting its edges. Seldom used.

frit (*Pot.*). See Supplement.

frit, lead (*Chem.*). *Lead disilicate* (q.v.).

frizing (*Leather*). The process of removing a thin layer from the grain surface, in order to facilitate staining.

frog (*Build.*). The depression made in one or both of the larger sides of some bricks in order to form a key for the mortar at the joints.

frog (*Elec. Eng.*). See **trolley-frog.**

frog (*Rail., etc.*). The point of intersection of the inner rails, where a train or tram crosses from one set of rails to another. The frog is in the form of a V. See **turnout.**

frog (*Vet.*). A V-shaped band of horn passing from each heel to the centre of the sole of a horse's foot.

frog (*Weaving*). A metal stop used on a power loom to stop the machine if the shuttle is trapped in the warp.

Frohlich's syndrome, frė'lihh (*Med.*). See **dystrophia adiposogenitalis.**

Froin's syndrome (*Med.*). The presence of yellow cerebro-spinal fluid, which has a high content of protein but no cells, below the site of obstruction (e.g. by a tumour) of the spinal cord.

frond (*Bot.*). (1) A general term for the leaf of a fern.—(2) A flattened expanded thallus of a seaweed.—(3) A similar thallus in a liverwort.—(4) A general term for a leaf-like structure of obscure morphological status.

frondes'cent, fron'dose (*Bot.*). Leaf-like: well provided with leaves.

frons (*Zool.*). In Insects, an unpaired sclerite of the front of the head: in higher Vertebrates, the front of the head above the eyes.—*adj.* **frontal.**

front (*Carp.*). The sole face of a plane.

front (*Meteor.*). The line of separation between masses of air at different temperatures. There is usually some rainfall at a front.
See **cold—** **warm—**

front cavity (*Bot.*). The opening of a stoma nearest the epidermis.

front contact (*Teleph.*). In a relay assembly, a contact with which a moving contact makes contact on the operation of the relay.

front hearth (*Build.*). The part of the hearth extending beyond the chimney breast.

front, wave (*Acous.*). See **wave front.**

frontage line (*Build.*). The *building line* (q.v.).

frontal (*Zool.*). (1) A paired dorsal membrane bone of the Vertebrate skull, lying between the orbits.—(2) Pertaining to the frons.

frontal plane (*Zool.*). The median horizontal longitudinal plane of an animal.

frontispiece (*Print.*). An illustration facing the title-page of a book.

frontoclyp'eus, frunt'— (*Zool.*). A sclerite of the head in Insects, formed by the fusion of the frons and the clypeus.

frontogen'esis, frontol'ysis (*Meteor.*). Respectively, the intensification or realisation of a front, and its weakening or disappearance.

fron'ton (*Build.*). The cornice and pediment, supported on consoles over the entrance to a building.

frost (*Meteor.*). A *frost* is said to occur when the air temperature falls below the freezing-point of water (0° C. or 32° F.). See **hoar frost.**

frost, geological action of. Frost is one of the most active agents causing rock disintegration, through the expansion which takes place when water in crevices, joints, and other fractures freezes. Rocks just above the ice- or snow-level become soaked by melt waters when exposed to the sun; frost action comes into play at night. Frost is thought to be the active agent in corrie formation according to the 'bergschrund hypothesis.' See also **solifluction.**

frosted lamp (*Illum.*). A filament-lamp the bulb of which is etched or sand-blasted in order to break up any direct rays of light from the filament. See **inside-frosted lamp.**

froth (*Chem.*). See **foam.**

froth flotation (*Mining*). The separating of finely crushed minerals from one another by causing some to float and others to sink in a froth. Oils and various chemicals are used to activate, make floatable, or to depress the minerals.

frother (*Met.*). A substance used to promote the formation of a foam in the flotation process.

Froude brake, frood (*Eng.*). An absorption dynamometer consisting of a rotor inside a casing, itself free to rotate, the space between the two being filled with water. The energy is dissipated in eddy formation and heat, the torque absorbed being measured by the torque necessary to prevent rotation of the casing.

Froude's transition curve (*Surv.*). A transition curve the equation to which is that of a cubic parabola, the offset y from the straight produced being given by $y=\frac{x^3}{6lr}$, where x=distance from tangent point, l=length of transition, r=radius of the circular arc.

frow'y (*Timber*). Said of timber which is soft and brittle.

frozen (*Cinema.*). Said of arc carbons when they have fused together so that an arc cannot be struck by the mechanism.

frozen bearing (*Eng.*). A seized bearing. See **seizure.**

fructicole (*Bot.*). Living on fruits; said of parasitic fungi.

fructification (*Bot.*). (1) A general term for the body which develops after fertilisation and contains spores or seeds.—(2) Any spore-bearing structure, whether formed after fertilisation or by purely vegetative development.

fruc'tosans (*Chem.*). The anhydrides of fructose; e.g. inulin.

***l*-fructose** (*Chem.*). Fruit-sugar or laevulose, $C_6H_{12}O_6$, anhydrous rhombic crystals, m.p. 95° C. It is a *ketohexose* (q.v.), is prepared by heating inulin with dilute acids, and is always found together with *d-glucose* (q.v.) in sweet fruit juices.

frue vanner (*Mining*). A wide inclined rubber belt down which flows a stream of water. The belt passes over pulleys with a side shake. Used for washing light minerals away from heavier ones.

frugivorous, froo-jiv'— (*Zool.*). Fruit-eating.

fruit (*Bot.*). (1) The same as *fructification*.—(2) The structure which develops from the ovary of an angiosperm after fertilisation, with or without additional structures formed from other parts of the flower.

fruit body (*Bot.*). A well-defined group of fungal spores and the hyphae which bear and surround them.

frus'tule (*Bot.*). The cell of a diatom, consisting of two silicified valves fitting one into the other, like a box and its lid, and the living contents.

frutes'cent (*Bot.*). Shrubby.

fru'ticose (*Bot.*). (1) Bushy.—(2) Said of a lichen thallus which is attached by its base, and stands out from the substratum, branching, and having a bushy appearance.

frying, fry (*Acous.*). (1) The noise, consequent on extraneous noises, accidentally added to the sounds being recorded on a wax record for gramophone manufacture.—(2) The noise which arises when excessive current is passed through the carbon granules in a telephone transmitter.

frying arc (*Elec. Eng.*) See **hissing arc.**

F.S. (*Civ. Eng.*). Abbrev. for *factor of safety.*

fuchsine, fook'sēn (*Chem*). Magenta, the hydrochloride of rosaniline, a basic triphenylmethane dyestuff, dark green crystals, dissolving in water to form a purple-red solution.

fuchsite, fook'zīt (*Min.*). A variety of muscovite (white mica) in which chromium replaces some of the aluminium.

fucivorous, fū-siv'— (*Zool.*). Seaweed-eating.

Fucoid Beds (*Geol*). A division of the Cambrian System of the N.W. Highlands of Scotland, part of the Durness Limestone Series. Markings resembling 'seaweeds' were observed on some of the bedding planes, hence the name.

fudge (*Typog.*). A space reserved in a newspaper for late news. Also known as STOP PRESS.

fuel cell (*Chem.*). A galvanic cell in which the oxidation of a fuel is utilised to produce electricity.

fuel oils. Oils obtained as residues in the distillation of petroleum; used, either alone or mixed with other oils, for domestic heating and for furnace firing (particularly marine furnaces).

fuel tanks (*Aero*). The tanks in which the supply of fuel is carried. The *main tanks* carry the main supply, the *auxiliary tanks* the reserve supply; *gravity tanks* are those from which the supply to the carburettor is by gravity; *service tanks* are those from which the carburettor is fed directly; *slip tanks* are those which can be jettisoned if necessary.

fugacious (*Bot.*). (1) Lasting for only a short time.—(2) Soon falling from the parent plant.

fugacity (*Chem.*). The tendency of a substance to expand or escape; it is that value of the pressure which would permit the application of simple laws. Cf. *activity* (2).

fugitom'eter (*Chem.*). An apparatus for testing the fastness of dyed materials to light.

fugue, fūg (*Psycho-path.*). 'Flight.' A condition, seen in hysteria and also in organic mental disorder, in which a hypnoidal state develops and the individual attempts to resolve his unconscious conflict by an escape from reality; he may wander about for days without clear knowledge of his actions and behaviour.

fulcrum (*Bot.*). An outgrowth from the wall of the zygospore in some moulds.

fulcrum (*Mech.*). The point of support, or pivot, of a lever.

fulcrum (*Vet.*). An instrument used for obtaining leverage on forceps during the extraction of a horse's teeth.

fulcrum (*Zool.*). A ridge-like ganoid scale, in some Fish: in the mouth-parts of *Rotifera*, a segment of the incus: in some Vorticellids, a small spine.

ful'gurites or **lightning tubes** (*Min.*). Tubular bodies produced by lightning in loose unconsolidated sand; caused by the vitrification of the sand grains, forming quartz glass. Although of very narrow cross-section, some specimens have been found to exceed 20 ft. in length.

fuliginous, fū-lij'— (*Bot.*). Soot-coloured.

full (*Eng.*). A workshop term which, applied to a dimension, is generally understood to mean $\frac{1}{64}$ inch in excess of the nominal size. The opposite of *bare.*

full annealing (*Met.*). (Of steel) heating above the critical range, followed by slow cooling, as distinguished from (1) annealing below the critical range, and (2) normalising, which involves air-cooling.

full availability, limited availability (*Auto. Teleph.*). The extents to which a call can be extended, by an automatic switch, over a number of possible routes to the required subscriber.

full bound or whole bound (*Bind.*). Said of a volume the sides and back of which are covered with leather or cloth.

full-centre arch (*Build.*). A semicircular arch or vault.

full-fashioned (*Hosiery*). Said of knitted articles made in flat pieces and subsequently joined at the edges by seaming.

full feel (*Textiles*). A term descriptive of cloth which is pleasant to handle.

full-force feed (*Eng.*). An engine lubrication system in which oil is forced to main bearings, connecting-rod big-end bearings, and thence, by drilled holes or attached pipes, to the gudgeon pins and cylinder walls.

full gear (*Eng.*). (Of a steam-engine valve gear) the position giving maximum valve travel and cut-off for full power.

full-load (*Eng.*). The normal maximum load under which an engine or machine is designed to operate continuously.—(*Elec. Eng.*) The normal rated output of an electric machine or transformer.

full moon (*Astron.*). The instant when the moon is directly opposite the sun, in elongation 180°, and therefore fully illuminated, appearing as a bright circular disc.

full-pitch winding (*Elec. Eng.*). An armature winding in which the span of the coils is equal to a pole pitch.

full-plate watch (*Horol.*) A watch in which the top plate is circular and the balance is mounted above the plate.

full point (*Typog.*). A mark of punctuation (.), the full stop.

full satellite exchange (*Auto. Teleph.*). A small automatic telephone exchange which is entirely dependent for completion of calls on its parent or main exchange.

full shroud (*Eng.*). A gear-wheel in which the shrouding extends up to the tips of the teeth. See **shroud.**

full thread (*Eng.*). A screw-thread cut to the depth proper to its size and pitch.

full-wave rectification (*Elec. Eng., Radio*). Rectification in which current flows, during both half-cycles of the alternating voltage, through different rectifying devices alternately; e.g. in a double diode.

Fullerboard (*Diel.*). An early variety of *pressboard* (q.v.).

Fuller cell (*Elec. Eng.*). A double fluid variety of the bichromate cell.

Fuller faucet (*Plumb.*). A faucet in which a rubber ball is used to close the opening and so to stop the flow.

Fullerphone (*Elec. Comm.*). An army system of telegraphy which uses buzzer signals for keying and listening, and direct currents for actual transmission, thus making the system untappable.

fullering (*Eng.*). The operation of (1) caulking a riveted joint to make it pressure-tight; (2) grooving forged work by a *fullering tool* (q.v.).

fullering tool (*Eng.*). A tool for assisting in producing circumferential grooves on circular work; it consists of a split block internally radiated, which is placed round the work and hammered.

fullers' earth (*Geol.*). A non-plastic clay consisting essentially of the mineral montmorillonite, and similar in this respect to bentonite. Used originally in 'fulling,' i.e. absorbing fats from wool, hence the name. The Fullers' Earth of English stratigraphy is a small division of the Jurassic System in the S. Cotteswolds, lying immediately above the Forest Marble. A valuable deposit of fullers' earth occurs in the Lower Greensand at Nutfield in Surrey.

fulling (*Textiles*). See **milling.**

fulminating gold (*Chem.*). A yellow precipitate formed when a solution of gold chloride is treated with ammonia; it is explosive.

Fultograph (*Radio*). An early form of still-picture transmission system in which the picture was reproduced by the electrolytic action at the contact of a stylus with chemically prepared paper carried on a rotating drum.

ful′vous (*Bot., Zool.*). Tawny.

fumaginous, fū-maj′— (*Bot.*). Of a smoky colour.

fumar′ic acid (*Chem.*). HOOC·CH:CH COOH, small prisms which do not melt, but sublime at about 200° C., with the formation of maleic anhydride. Fumaric and maleic acid are stereoisomers, fumaric acid being the *trans*-form.

fu′maroles (*Geol.*). Small vents on the flanks of a volcanic cone, or in the crater itself, from which gaseous products emanate.

fume cupboard (*Chem*). A glass chamber or cupboard where laboratory operations involving obnoxious fumes are carried out.

fu′migants (*Chem.*). Substances which, when volatilised, are capable of destroying vermin, insects, bacteria, moulds, or which act as disinfectants. Examples are hydrogen cyanide and ethylene oxide for vermin and insects, and formaldehyde (disinfectant).

fuming (*Photog.*). Exposure of albuminised papers to ammonia gas, for facilitating photographic processes.

fuming liquids (*Chem.*). Liquids which give off vapours which unite with water to form a mixture or compound with a lower vapour pressure than water.

fuming (or **Nordhausen**) **sulphuric acid** (*Chem.*). A solution of sulphur trioxide in concentrated sulphuric acid.

function (*Biol.*). The normal vital activity of a cell, tissue, or organ.

functional (*Biol.*). Carrying out normal activities; active (as opposed to *passive*).

functional disease. Disease characterised by impaired function as opposed to one characterised by impaired structure (*organic disease*).—(*Bot.*) A plant disease due to some disturbance in the organisation or working of the plant, and not to parasitic attack.

fundamental colours. See **primary colours.**

fundamental complex (*Geol.*). A name (really a misnomer) applied to the highly crystalline Pre-Cambrian rocks of N.W. Scotland termed the Lewisian (or Hebridean); it comprises schists and gneisses of several kinds. As some of these were derived from pre-existing rocks, they are not *fundamental.*

fundamental component (*Elec. Eng.*). The harmonic component of an alternating wave which has the lowest frequency and which usually represents the major portion of the wave.

fundamental frequency (*Elec. Eng.*). The frequency of the fundamental component of an alternating wave.

fundamental frequency of antenna (*Radio*). The lowest frequency at which an antenna is resonant, when not loaded with terminal inductance.

fundamental interval (*Heat*). The number of degrees between the two fixed points on a thermometer scale.

fundamental mode (*Radio*). The mode of oscillation of an antenna at its fundamental frequency. In the case of an earthed antenna, it is characterised by a single node of current (at the extreme end of the antenna).

fundamental stage of growth (*Bot.*). The formation of new protoplasm.

fundamental tissue (*Bot.*). Ground tissue.

fundamental units (*Phys.*). The units of length, mass, and time upon which a system of units is based. Thus, the c.g.s. system of units is based on the *centimetre*, the *gram*, and the *second.*

fundamental wavelength (*Radio*). (1) The wavelength in free space corresponding to the fundamental frequency of an antenna.—(2) The main or operating wavelength in the case of a transmitter radiating harmonics.

fundus (*Anat*). See **eye-ground.**

fundus (*Zool.*). The proximal swollen bulb of the palpal organ of a male Spider.

fungal cellulose, fungus cellulose (*Bot*). A carbohydrate, akin to cellulose, present in the walls of some fungi.

Fungi, fun′jī (*Bot.*). One of the main groups of the *Thallophyta*, distinguished from the algae chiefly by the absence of chlorophyll; they cannot carry on photosynthesis, and live as saprophytes or parasites The *Fungi* probably include at least 100,000 species showing great diversity in their morphology.

Fungi Imperfecti (*Bot.*). A large assemblage of fungi having a septate mycelium, but, so far as is known, reproducing only by asexual spores. All seem devoid of sexuality or of anything resembling that.

fun′gicide (*Bot., etc*). A substance which kills fungi.

fu′nicle (*Bot.*). The small stalk which unites the ovule to the placenta.

funicle (*Zool.*). In Insects, those joints of the antenna which intervene between the club and the ring-joints, or between the club and the pedicel.

funic′ular railway (*Civ. Eng.*). A form of *cable railway* (q.v.).

funiculi′tis (*Med.*). Inflammation of the vas deferens of the testis.

funic′ulose (*Bot.*). Forming ropes of intertwined hyphae.

funic′ulus (*Zool.*). In some Invertebrates (as *Polyzoa*), thickened strands of mesoderm attaching the digestive organs to the body-wall: more generally, any small cord, as a tract of nerve fibres in the central nervous system.—*adj.* **funicular.**

fu′niform (*Bot*). Rope-like.

funnel cell (*Bot.*). A cell in the palisade layer of a leaf, which is widest just beneath the epidermis, and narrows off below.

funnel-shaped (*Bot.*). Tubular below, expanding upwards, and, sometimes, having lobes on the upper edge.

fuor (*Carp.*). A strengthening piece nailed to a decayed rafter.

fur (*Zool.*). In Mammals, the thick undercoat of short, soft, silky hairs.—(*Furs*) Any skin covered with soft hairs; the term thus excludes the skins of cattle, goats, and sheep (other than young lambs).

fu′ral (*Chem.*). See **furfural.**

fu′ran group (*Chem.*). A group of heterocyclic compounds derived from furan, C_4H_4O, a compound containing a ring of four carbon atoms and one oxygen atom.

fur′ca (*Zool.*). Any forked structure: in *Insecta*, a median thoracic apodeme having two arms and a single base: in *Diptera*, a short rod with two arms, which forms the principal skeleton of the oral lobes of the proboscis: in *Vertebrata*, a divergence of nerve fibres: in *Crustacea*, a pair of divergent processes at the end of the abdomen.

furcate (*Bot., Zool.*). Divided into two branches or diverging parts.

fur′cula (*Zool.*). In *Collembola*, the leaping apparatus, consisting of a pair of partially fused appendages arising from the fourth abdominal somite: in Birds, the partially fused clavicles: more generally, any forked structure.

furfur (*Med.*). A scale of epidermis: dandruff.

furfura'ceous (*Bot.*). Covered with bran-like particles: scurfy.

fur'fural (*Chem.*). Fural or furfuraldehyde, $C_4H_3O{\cdot}CHO$, a colourless liquid, b.p. 162° C., obtained by distilling pentoses with diluted hydrochloric acid. Used as a solvent, particularly for the selective extraction of crude rosin, also as raw material for synthetic resins.

furlong. A distance of 10 Gunter's chains, i e. 220 yards or one-eighth of a mile.

furnace.

(*Elec. Eng.*). See **electric furnace.**

(*Glass*). See **pot furnaces.**

(*Met.*). See **batch—**
blast—
continuous—
crucible—
cupola—
muffle—
open-hearth—
reheating—
reverberatory—
See also Supplement.

furnace clinker (*Build.*). The final residue from the combustion of coke or coal which has been burnt and re-burnt so as to consume the maximum of combustible matter in it. It is useful as an aggregate in the manufacture of concrete.

furnace linings (*Met*). The interior portions of metallurgical furnaces which are in contact with hot gases and the charge, and must therefore be constructed of materials resistant to heat, abrasion, chemical action, etc. See **refractories.**

furniture (*Build.*). A general name for all metal fittings for doors, windows, etc.

furniture (*Typog.*). Lengths of wood or hollow rectangles of metal, less than type height, used in a forme for making margins, etc. They are made to standard point widths and lengths.

furred (*Plumb.*). A term applied to pipes and boilers in which *furring* (q.v.) has developed.

furrier's bat (*Furs*). A shaped wooden instrument inserted in a skin when opening up.

furring (*Carp.*). See **firring.**

furring (*Plast.*). A wood-strip and plasterwork lining to a wall, which leaves an air-space between the plastering and the brickwork.

furring (*Plumb.*). The hard lime deposit formed on the inner surface of pipes and boilers in which hard water is heated.

furrowed (*Masonry*). A term applied to margin-drafted ashlars having parallel vertical grooves cut in the face.

furrowing (*Bot.*). The formation of a septum by the development of a ring of thickening on the inside of the cell wall, and the gradual closing of this ring by the walls growing in until the cavity of the cell is cut in two.

further outlook (*Meteor.*). A general forecast given for a period additional to that covered by the more detailed forecast.

furtherance (*Mining*). A money bonus paid to a coal-miner because of special difficulties in working.

fu'runcle (*Med.*). See **boil.**

furunculo'sis (*Med.*). The condition of having several boils.

fusain' (*Min.*). 'Mineral charcoal,' one of the important constituents of coal, which in household coal alternates with durain, etc., and gives rise to the characteristic stratification. Fusain consists of plant remains from which the volatiles have been eliminated. Mackenzie Taylor has shown that fusain may be produced from peat under a thin cover of marine clay, without considerable rise in temperature or increase of pressure.

fuscous (*Bot.*). Dingy-brown.

fuse (*Elec. Eng.*). A device used for protecting electrical apparatus against the effect of excess current; it consists of a piece of fusible metal, which is connected in the circuit to be protected, and which melts and interrupts the circuit when an excess current flows. The term fuse also includes the necessary mounting and cover (if any).

See **bi-metal—**
carbon tetrachloride—
cartridge—

home-office—
horn break—
immersed liquid-quenched—
liquid-quenched—
oil-quenched—
open—
screw-plug cartridge—
semi-immersed liquid-quenched—

fuse (*Mining, etc.*). A small waterproof canvas tube containing gunpowder surrounding a central tape arranged to burn at a given speed for setting off charges of explosive.

See **instantaneous—**
percussion—
safety—
time and percussion—

fuse-board (*Elec. Eng.*). See **distribution fuse-board.**

fuse box (*Elec. Eng.*). A term sometimes used to denote a distribution fuse-board when it is enclosed in a box.

fuse-carrier (*Elec. Eng., etc.*). A carrier for holding a fuse-link; arranged to be easily inserted between fixed contacts, so that a replacement of the fuse-link can be quickly carried out. Also called a FUSE-HOLDER.

fuse-element, fuse-link, or **fuse** (*Elec. Eng., etc*). The essential part of a fusible cut-out.

fuse-holder (*Elec. Eng.*). See **fuse-carrier.**

fuse-link (*Elec. Eng., etc.*). See **fuse-element.**

fuse-switch (*Elec. Eng.*). A *switch-fuse* (q.v.).

fuse tongs (*Elec. Eng.*). Tongs with insulating handles, used for withdrawing or replacing fuses on high-voltage circuits.

fused ring (*Chem*). See **condensed nucleus.**

fusee, fū-zē' (*Horol*). A spirally grooved pulley of gradually increasing diameter, used to equalise the pull of the main-spring. The fusee is connected to the main-spring barrel by a chain or gut line. The great-wheel is attached to the fusee. When the barrel is fully wound, the pull of the spring is taken on the small diameter of the fusee, and as the barrel gradually turns, the chain unwraps off the fusee on to the barrel. The theoretical outline of the fusee is that of a rectangular hyperbola, and at any instant the pull in the chain multiplied by the radius of the fusee at the point where the chain is leaving is a constant product.

fusee arbor (*Horol.*). The arbor on which the fusee is mounted.

fusee barrel (*Horol.*). A barrel for use with a fusee. The pull from the barrel is transmitted from the fusee by means of a chain or gut line, thence to the train. Winding takes place from the barrel edge, the winding operation being by key on the square of the fusee arbor.

fusee chain (*Horol.*). A fine-linked chain which connects the fusee to the barrel.

fusee engine (*Horol.*). A special lathe for the cutting of fusees.

fu'sel oil (*Chem.*). Mainly inactive amyl alcohol, $(CH_3)_2{\cdot}CH{\cdot}CH_2{\cdot}CH_2OH$, accompanied by active amyl alcohol, usually occurring in the products of alcoholic fermentation.

fu'selage (*Aero.*). The main structural body of an aeroplane, carrying the main planes, tail, etc., and providing the accommodation for the occupants and load.

fusible alloys or **metals** (*Met.*). Alloys of bismuth, lead, and tin (and sometimes cadmium or mercury) which melt at temperatures between 180° C. and 60° C.; used as solders and for safety devices in fire extinguishers and boilers, etc.

fusible cut-out (*Elec. Eng., etc.*). See **fuse.**

fusible plug (*Eng.*). A plug containing a metal of low melting-point, screwed into the crown of a boiler fire box to prevent serious over-heating of the plates if the water-level falls below them.

fu'siform (*Bot.*, *Zool.*). Elongated and tapering towards each end; shaped like a spindle.

fusing-factor (*Elec. Eng.*). The minimum current required to blow a fuse, expressed as a ratio to the rated current.

fusing point (*Met.*). See **melting-point.**

fusion (*Heat*). The conversion of a solid into the liquid state; the reverse of *freezing*. Fusion of a substance takes place at a definite temperature, the melting-point, and is accompanied by the absorption of latent heat of fusion.

fusion-cones (*Heat*). See **Seger cones.**

fusion welding (*Elec. Eng.*). A process of welding metals in which the weld is carried out solely by the melting of the metals to be joined, without any mechanical pressure.

fu'soid (*Bot.*). Rounded in section, widest in the middle and tapering to each end, and not markedly elongated.

fu'sospirillo'sis (*Med.*). Vincent's angina. Infection of the throat with the fusiform bacillus and spirilla described by Vincent.

fu'sospi'rochaetosis, fusospirochetosis,—kē-to'sis (*Med.*). Infection with fusiform bacilli and spirochaetes.

fust (*Arch.*). The shaft of a column.

fust (*Build.*). An ancient term for a roof ridge.

fustian (*Textiles*). A term including a number of cotton fabrics differing widely in structure and appearance, but all heavily wefted; they are used for clothing and furnishings. See **corduroy, moleskin, swansdown, velveteen.**

fuze. A variant spelling of *fuse*.

fuzz (*Acous.*). A type of extraneous noise introduced on a wax blank in the process of recording, and made evident by reproduction.

fuzzy (*Cinema.*). Said of (1) a sound-track when it visibly indicates lack of sharpness; (2) any acoustic reproduction which is characterised by high-order harmonic alien tones.

g. (*Chem.*). An abbrev. for *gram.*

g (*Chem.*) A symbol for *osmotic coefficient.*

g (*Phys*). The symbol used for the acceleration due to gravity.

γ (*Phys*). A symbol for: (1) *Ratio of specific heats of a gas*; (2) *Surface tension.*

γ- (*Chem.*). (1) Substituted on the carbon atom of a chain next but two to the functional group.—(2) Substituted on one of the central carbon atoms of an anthracene nucleus —(3) Substituted on the carbon atom next but two to the hetero-atom in a heterocyclic compound.—(4) A stereo-isomer of a sugar.

γ-rays (*Phys*) See **gamma rays.**

G (*Chem*) (In names of dyestuffs) yellow.

G (*Chem.*). A symbol for *thermodynamic potential, Gibbs' function, free energy.*—G. N. Lewis.

G (*Diel.*). See **conductance.**

[G] (*Light*). A pair of Fraunhofer lines in the deep blue of the solar spectrum. One, of wavelength 4308·081 A, is due to iron; the other, of wavelength 4307·907 A, is due to calcium.

G (*Phys.*). The symbol used for the *constant of gravitation.* See **gravitation.**

G (*San. Eng.*). The common abbrev. for *gulley.*

Gm (*Radio*) See **mutual transconductance.**

G-acid (*Chem.*) 2-Naphthol-6,8-disulphonic acid; an intermediate for dyestuffs.

Γ (*Chem.*). A symbol for *surface concentration excess.*

Ga (*Chem.*). The symbol for *gallium.*

gab (*Masonry*). A pointed tool for working hard stone.

gab'ardine (*Textiles*). A twill fabric made from worsted warp and a cotton weft, the former only appearing on the surface; used for dress purposes and light rainproof overcoatings. All-cotton gabardine is also used for the latter purpose.

gabbart scaffold (*Build.*). Scaffolding in which sawn timbers are used instead of round poles.

gabbro (*Geol.*). The name of a rock clan, and also of a specific igneous rock type. The rock gabbro is a coarse-grained plutonite, consisting essentially of plagioclase, near labradorite in composition, and clinopyroxene, with or without olivine in addition. The gabbro clan includes also norite, eucrite, troctolite, kentallenite, etc., together with their medium- and fine-grained equivalents.

gabers scaffold (*Build.*). A *gabbart scaffold* (q.v.).

gab'ion (*Civ. Eng.*). A long wicker basket, containing earth or stones, deposited with others to serve the same purposes as *fascines* (q.v.).

gable (*Build.*). A triangular part of an outside wall, between the sides of the roof and the line of the eaves.

gable board (*Build.*). A *barge board* (q.v.).

gable-end (*Build.*). An end wall surmounted by a gable.

gable moulding (*Build.*). A moulding used to decorate a gable.

gable roof (*Build.*). A ridge roof terminating in a gable-end.

gable shoulder (*Build.*). The projecting masonry or brickwork supporting the foot of a gable.

gable springer (*Build.*). The concrete, brick, or tile corbel supporting the gable shoulder.

gable tiles (*Build.*). Purpose-made arris tiles to cover the intersection between gable and roof.

gable window (*Build.*). A window built in the gable of a house.

ga'blet (*Arch., etc.*). A small decorated gable over a niche or other opening.

gablock. See **gavelock.**

gad (*Mining*). A short pointed chisel used for breaking or loosening rock: a steel wedge for breaking coal.

gadget. A small mechanical device.—(*Glass*) A tool for holding the stem of a piece of ware which is in course of treatment.

gad'olinite (*Min.*). A rare accessory mineral occurring in pegmatites as greenish- or brownish-black crystals of composition represented by $Be_2FeY_2Si_2O_{10}$, i.e. silicate of beryllium, iron, and yttrium, often with cerium.

gadolin'ium (*Chem*). Symbol, Gd. A rare metallic element; trivalent; a member of the rare earth group. At. no. 64, at. wt. 157·31. Only known in combination; obtained from the same sources as europium.

gaffer (*Cinema.*). The foreman electrician in a sound-film studio.

gaffer haulier (*Mining*). The man in charge of horse or pony traffic between the face and the mechanical haulage way.

gag (*Mining*). An obstruction in the clack valve or bucket of a pumping set.

gagger (*Foundry*). A *lifter* (q.v). See also **dabber.**

gaging (*Mining*). A heap of rubbish placed at the entrance of a disused roadway underground.

gahn'ite (*Min.*). A mineral belonging to the spinel group; occurs as grey octahedral cubic crystals. Also known as ZINC-SPINEL (see **spinel**), the composition being zinc aluminate, $ZnO \cdot Al_2O_3$.

gain (*Carp.*). A notch or mortise cut in a timber to support the end of a beam.

gain (*Mining*). A cutting made in the side of a roadway underground to facilitate the construction of a dam or air stopping.

gain (*Elec. Comm.*). The reverse of *loss*; generally provided by the insertion of an amplifier into a transmission circuit, or by matching impedances by a loss-free transformer. Measured in népers or decibels, and defined as the increase in power-level in the load, i.e. the ratio of the actual power delivered to that which would be delivered if the source is correctly matched, without loss, to the load in the absence of the amplifier.

gain (*Radio*). Of a directional antenna, the ratio (expressed in decibels) of the voltage produced at the receiver terminals by a signal arriving from the direction of maximum sensitivity of the antenna to that produced by the same signal in an omnidirectional reference antenna (generally a half-wave dipole). In the case of a transmitting antenna, the ratio of the field strength produced at a point along the line of maximum radiation by a given power radiated from the antenna to that produced at the same point by the same power from an omnidirectional antenna.

gain amplifier (*Cinema.*). The thermionic amplifier following the photo-electric cell amplifier and preceding the power stages in sound-film projection equipment.

gain control (*Radio*). The means of variation of the degree of amplification of an amplifier.

gaining (*Carp.*). The operation of cutting notches in timbers.

gait or **gaiting** (*Weaving*). The operation of preparing a loom for weaving, i.e. placing the warp in position, as well as the healds and reed.

gaize (*Build.*). A friable argillaceous sandstone which under heat treatment is converted into a pozzolana.

Gala Beds (*Geol.*). The highest division of Lapworth's Moffat Shales occurring in the central part of the Southern Uplands of Scotland; equivalent to the higher part of the Llandovery Series of the Silurian System.

galac'tagogue or **galac'tagog** (*Med.*). Promoting the secretion of milk (Greek, *gala*, gen. *galaktos*): any medicine which does this.

galac'tans (*Chem.*). The anhydrides of galactose. They comprise many gums, agar, and fruit pectins, and occur in algae, lichens, mosses.

galac'tic circle (*Astron.*). The great circle of the celestial sphere in which the latter is cut by the galactic plane: hence the primary circle to which the galactic co-ordinates are referred.

galactic concentration (*Astron.*). The tendency, first noted by Herschel, of the stars both bright and faint to crowd towards the galactic plane; hence a statistical criterion as to whether or not a given type of celestial object belongs to our stellar system.

galactic co-ordinates (*Astron.*). Two spherical co-ordinates referred to the galactic circle; the origin of galactic longitude is the point of intersection of the galactic circle with the celestial equator; galactic latitude is measured positively from the galactic plane towards the north galactic pole; these co-ordinates are not affected by the precession of the equinoxes.

galactic plane (*Astron.*). The plane passing as nearly as possible through the centre of the belt known as the Milky Way or Galaxy; hence the fundamental plane in sidereal astronomy.

galac'tite (*Min.*). A mineral of the zeolite group, intermediate in composition between natrolite and mesolite. Actually, the species was erected on the basis of an erroneous analysis.

galac'tocele (*Med.*). A cystic swelling in the breast, due to retention of milk as the result of a blockage of a milk duct.

galactophori'tis (*Med.*). Inflammation of the milk ducts.

galactoph'orous (*Zool.*). See **lactiferous.**

galactorrhoe'a or **galactorrhe'a** (*Med.*). Excessive secretion of milk by the breast, causing it to overflow through the nipple.

galac'tose (*Chem.*). A hexose of the formula $CH_2OH{\cdot}(CHOH)_4{\cdot}CHO$; thin needles; m.p. 166° C.; dextro-rotatory. It is formed together with *d*-glucose by the hydrolysis of milk-sugar with dilute acids. Stereoisomeric with glucose, which it strongly resembles in properties. Present in certain gums and seaweeds as a polysaccharide *galactan.*

galacto'sis (*Zool.*). See **lactation.**

Gal'alith (*Plastics*). A non-thermosetting plastic of the casein type. See **Erinoid.**

galate'a (*Textiles*). A cotton fabric with coloured stripe fast to washing; used for shirtings, nurses' uniforms, etc.

Gal'axy (*Astron.*). The name given to the belt, of milky white appearance, which encircles the heavens, nearly in a great circle; now known to be formed of individual stars in countless numbers. Also called the MILKY WAY.

gal'bulus (*Bot.*). A strobilus with fleshy cone scales, as in juniper.

gale (*Meteor.*). A wind having a velocity of about 40 miles per hour or more, at a height of 32 ft. (10 metres) above the ground. On the Beaufort scale a gale is a wind of force 8.

gale warning (*Meteor.*). A notice of the probability of gales issued by the Meteorological Office to certain ports and fishing stations, which then hoist a black cone, apex up if the gale is expected from the north, apex down if from the south.

ga'lea (*Zool.*). (1) A movable spinneret borne by the chelicerae of certain *Arachnida.*—(2) Any helmet-shaped structure: in *Insecta*, the outer distal lobe of the maxilla.

gal'eate or **gal'eiform** (*Bot., Zool.*). Shaped like a helmet or a hood.

gale'na or **lead glance** (*Min.*). Lead sulphide, PbS; the commonest ore of lead, occurring as grey cubic crystals, often associated with zinc-blende, in mineralised veins. Silver sulphide, argentite, which is isomorphous with galena, may be present to the extent of two or three ounces per ton, but may rise to 1%. See also **silver lead ore.**

galeric'ulate (*Bot.*). Covered by a cap-like lid.

galer'iform (*Bot.*). Cap-shaped.

galets (*Masonry*). See **spalls.**

gall (*Bot.*). An abnormal growth formed on a plant following attack by a parasite.

gall (*Vet.*). An injury of the skin of animals due to the pressure of harness.

gall flower (*Bot.*). An imperfectly developed flower of the fig tree, in which the eggs of the gall wasp are laid.

gall (*Mining*). Rent to the Crown for an area of mineral property.

gall (*Physiol.*). See **bile.**

gall-bladder (*Zool.*). In *Vertebrata*, a lateral diverticulum of the bile-duct in which the bile is stored.

gall sickness (*Vet.*). See **anaplasmosis.**

gall-stones (*Med.*). Biliary calculi. Pathological concretions in the gall-bladder and bile passages. They have not a uniform composition but some constituents may be preponderant; e.g. cholesterol, or calcium carbonate and phosphate.

gallery (*Build.*). An elevated floor projecting beyond the walls of a building and supported on pillars, brackets, or otherwise, so as to command a view upon the main floor, as at a theatre, etc.

gallery (*Elec. Eng.*). A device for attaching to a lampholder in order to provide a support for a glass shade or reflector which is too large or heavy to be supported by the shade-carrier ring.

gallery (*Mining*). A tunnel or passage in a coal-mine.

gallet (*Masonry*). A splinter of stone.

galleting (*Masonry*). See **garreting.**

galley (*Typog.*). A long steel tray open at one end, in which type matter is held after setting. Corrections and deletions are more easily made to type in galley form than in page form, and are generally marked on the galley proof or slip, itself commonly referred to as a *galley.*

gallic acid (*Chem.*). $C_6H_2(OH)_3COOH$, 3, 4, 5-trihydroxy-benzoic acid; crystallises with 1 H_2O; thin needles; decomposes at about 200° C. into CO_2 and pyrogallol. Occurs in nut-galls, tea, divi-divi, and other plants; it is obtained from tannin by hydrolysis.

Gallifor'mes (*Zool.*). An order of *Alectoromorphae*, possessing a schizognathous palate, a simple rhamphotheca, and ten carpal remiges; the feather tracts are well defined and the feet well adapted for running. Game birds (which seek their food—berries, seeds, buds, and insects—on the ground), Brush-turkeys, Curassows, Turkeys, Pheasants, Partridge, Grouse, and Quail.

gal'lium (*Chem.*). Symbol, Ga. A metallic element in the third group of the periodic system. At. no. 31, at. wt. 69·9, sp. gr. 5·885. The metal is grey.

galloon' (*Arch.*). Decorated work for a band or moulding, to which is applied a row of small round balls.

galloon (*Textiles*). Narrow tape woven from fine cotton yarns, or from a silk warp and cotton weft; used as bindings.

galloping (*I.C. Engs.*). An American term descriptive of the irregular running of a petrol-engine supplied with an over-rich mixture.

gal'lotan'nin (*Chem.*). See **tannin.**

Galloway boiler (*Eng.*). A cylindrical boiler of the Lancashire type, in which the two furnace tubes unite, at a short distance from the grates, into a single arched oval flue, crossed by water tubes.

Galloway tubes (*Eng.*). The inclined water tubes which cross the flue of a Galloway boiler in order to assist circulation and increase the heating surface.

gallows bracket (*Carp.*). A framed wooden bracket for carrying a load at its outer end.

gallows timber (*Mining*). A timber framework or set for roof support.

galmei (*Min.*). An obsolete name for the basic metasilicate of zinc, *smithsonite.*

galon' (*Textiles*). A narrow lace resembling insertion but having one or both edges scalloped.

Galton's laws (*Gen.*). (1) Of ancestral inheritance: 'Any organism of bisexual parentage derives one half of its inherited qualities from its parents (one fourth from each parent), one fourth from its grandparents, one eighth from its great-grandparents, and so on. These successive fractions, whose numerators are one and whose denominators are the successive powers of two, added together equal one, or the total inheritance of the organism, thus: $\frac{1}{2}+\frac{1}{4}+\frac{1}{8}+. . .=1$.'—(2) Of filial regression: 'The offspring of exceptional parents tend to regress toward mediocrity in proportion to the degree of parental exceptionalness' (Lull).

galvan'ic cell (or battery) (*Elec. Eng.*). An obsolete name for a *primary cell* or a battery of such cells; the name is derived from Galvani.

galvanic electricity (*Elec. Eng.*). An obsolete term for electric current, as opposed to static electricity.

galvanised iron (*Build.*). Iron which has been subjected to *galvanising* (q.v.); widely used, especially in corrugated form (see **corrugated iron**), for minor roofing purposes, e.g. on wooden buildings, etc.

galvanising (*Met.*). The coating of steel or iron with zinc, generally by immersion in a bath of zinc, covered with a flux, at a temperature of 425-500° C. The zinc may also be electrodeposited from cold sulphate solutions. The zinc is capable of protecting the iron from atmospheric corrosion even when the coating is scratched, since the zinc is preferentially attacked by carbonic acid, forming a protective coating of basic zinc carbonates.

gal'vanism. (1) An obsolete term for the science of electric currents.—(2) Curative treatment by unidirectional currents.

gal'vanocaut'ery (*Surg.*). Cautery by a wire heated by the passage of a galvanic current.

gal'vanochem'istry (*Chem.*). See **electrochemistry.**

galvanom'eter (*Elec. Eng., etc.*). An electrical instrument for measuring small electric currents.

See **absolute—**

galvanometer constant (*Elec. Eng.*). A number by which the scale reading of a galvanometer must be multiplied in order to give a reading of current in amperes or other suitable units.

galvanometer shunt (*Elec. Eng.*). A shunt connected in parallel with a galvanometer in order to reduce its sensitivity. See **universal shunt, Ayrton shunt.**

gal'vanoplasty (*Met., etc.*). See **electroforming.**

gal'vanoscope (*Elec. Eng.*). A term sometimes used to denote an instrument for detecting, but not measuring, an electric current.

galvanos'tegy (*Chem.*). Electrolytic tinning, as a protection against hardening in the nitrite process.

gal'vanotax'is, gal'vanotro'pism (*Biol., Bot.*). Response or reaction of an organism to an electrical stimulus.—*adjs.* **galvanotac'tic, galvanotropic.**

Gambia fever (*Vet.*). A chronic trypanosomiasis of domestic animals of West Africa due to infection by *Trypanosoma dimorphon.*

gamboge gum (*Chem.*). A natural gum, of grey or brown colour; sp. gr. 1·03, acid value 68-89, saponification value 115-150; used as a pigment.

gambrel roof (*Build.*). A *mansard roof* (q.v.).

gametan'gium (*Bot.*). The organ in which the gametes are formed.

gam'etes (*Biol.*). Reproductive cells which will unite in pairs to produce zygotes; germ-cells.—*adj.* **gam'etal.**

game'tic number (*Cyt.*). The number of chromosomes present in the nucleus of a gamete.

gam'etids (*Zool.*). In *Protozoa*, cells budded off from the body of a sporont and destined to become gametes.

game'tocyst (*Zool.*). In *Protozoa*, a cyst in which union of gametes takes place. Also called GAMOCYST.

game'tocyte (*Zool.*) In *Protozoa*, a phase developing from a trophozoite and giving rise to gametes; a gamete mother-cell.

game'togen'esis (*Zool.*). The formation of gametes from gametocytes.

game'togo'nium (*Zool.*). See **gametocyte.**

game'tonu'cleus (*Zool.*). The nucleus of a gamete: a nucleus functioning as a gamete.

gam'etophyte (*Bot.*). The plant which bears the gametangia and gametes—*adj.* **gametophyt'ic.**

gam'etophyt'ic budding (*Bot.*). The formation of gemmae on a prothallus.

gametrop'ic (*Bot.*). Said of the movements of organs before or after fertilisation.

Gamlan Shales (*Geol.*). A series of grey shales, typically exposed in the valley of the Gamlan on the south side of the Harlech Dome; of Middle Cambrian age, and the highest division of the Harlech Series of North Wales.

gamma (*Photog.*). The slope of the linear portion of the H & D curve for a photographic emulsion, i.e. the measure of contrast obtained in a given film emulsion after a specified processing.

gamma brass, gamma constituent in brass (*Met.*). The γ constituent in brass is hard and brittle and is stable between 60% and 68% of zinc at room temperature. γ-Brass is an alloy consisting of this constituent.

gamma control (*Cinema.*). The necessity of adjusting the extent of development (in developing cinematograph films with sound-tracks) within fine limits in order to minimise amplitude distortion arising from non-linearity in the gamma curve of the emulsion.

gamma infinity (*Photog.*). Abbrev. for the maximum gamma obtainable with prolonged development.

gamma iron (*Met.*). The polymorphic form of iron stable between 906° C. and 1408° C. It has a face-centred cubic lattice and is non-magnetic. Its range of stability is lowered by carbon, nickel, and manganese, and it is the basis of the solid solutions known as austenite.

gamma rays (*Phys.*). Short, highly penetrating X-rays emitted by radioactive substances during their spontaneous disintegration.

gamo- (Greek *gamos*, marriage). A prefix used in the construction of compound terms; e.g. *gamogenesis* (q.v.).

gamo'bium (*Zool.*). In metagenesis, the sexual generation. Cf. *agamobium.*

gam'ocyst (*Zool.*). See **gametocyst.**

gamogast'rous (*Bot.*). Said of a syncarpous gynaeceum in which the ovaries are fused, the styles and stigmas free.

gamogen'esis (*Biol.*). Reproduction by union of sexual elements.—*adj.* **gamogenet'ic.**

gam'ogen'ic (*Bot.*). Formed after a sexual act.

gamog'ony (*Zool.*). In *Sporozoa*, formation of gametes or gametocytes by a gamont; sporogony.

gam'ont (*Zool.*). In *Sporozoa*, an individual destined to produce gametes; sporont.

Gamopet'alae (*Bot.*). See **Sympetalae.**

gamopet'aly (*Bot.*). The condition when the corolla consists of a number of petals united by their edges.—*adj.* **gamopet'alous.**

gam'ophase (*Bot.*). The haploid phase in the life-cycle.

gam'ophyll'ous (*Bot.*). Having the perianth members united.

gam'osep'alous (*Bot.*). Having the sepals united by their edges.

gam'oste'ly (*Bot.*). The fusion of steles.—*adj.* **gamoste'lic.**

gam'otro'pism (*Zool.*). The tendency shown by gametes to attract one another.

gam'ut (*Acous.*). The range of frequencies required in a specified type of reproduction; e.g. speech or music.

gang (*Mining*). A train or journey of tubs or trucks.

gang boarding (*Build.*). A board with battens nailed across to form steps; used as a gangway during building operations.

gang condenser (*Radio*). An assemblage of two or more variable condensers mechanically coupled to the same control mechanism.

gang milling (*Eng.*). The use of several milling cutters on one spindle to produce a surface with a required profile or to mill the face and sides of the work at one operation.

gang mould (*Build., Civ. Eng.*). A mould in which a number of similar concrete units may be cast simultaneously.

gang rider (*Mining*). See **dukey.**

gang saw (*Timber*). An arrangement of parallel saws secured in a frame to operate simultaneously in sawing a log into strips.

gang switches (*Elec. Eng*). A number of switches mechanically connected together so that they can all be operated simultaneously.

gang tool (*Eng.*). A tool holder having a number of cutters; used in lathes and planes, each tool cutting a little deeper than the one ahead of it. See also **gang milling.**

ganging (*Radio*). Mechanical coupling of the tuning controls of two or more resonant circuits.

ganging oscillator (*Radio*). An oscillator giving a constant output, whose frequency can be rapidly varied over a wide range; used for testing the accuracy of adjustment of a system of ganged circuits over their tuning range.

gang'lion (*Med.*). A localised cystic swelling formed in connexion with a tendon sheath, commonly on the back of the hand.

ganglion (*Zool.*). An aggregation of nerve cells from which nerve fibres lead out.—*adjs.* **gang'liar, gang'liate, gang'lionated, gang'lioid, gang'liform, ganglion'ic.**

ganglionec'tomy or **gangliec'tomy** (*Surg.*). Surgical removal of a nerve ganglion, or of a ganglion arising from a tendon sheath.

gang'lioneuro'ma (*Med.*). A tumour composed of ganglion nerve cells, nerve fibres, and fine fibrous tissue, usually arising in connexion with sympathetic nerves (e.g. in the medulla of the suprarenal gland).

ganglioni'tis (*Med.*). Inflammation of a nerve ganglion.

gango'sa (*Med.*). A progressive, destructive ulceration of the nose, the palate, and the pharynx, occurring as a late sequel of yaws.

gan'grene (*Med.*). Death of a part of the body, associated with putrefaction; due to infection or to cutting off of the blood supply.

gangue (*Met.*). The portion of an ore which contains no metal.—(*Mining*) Valueless minerals in a lode or vein.

Ganguillet and Kutter's formula, gahn^{g}-gee'yā, koo'ter (*Hyd*). An expression giving the value of *C* in *Chezy's formula* (q.v.) as:

$$C=\frac{41{\cdot}6+\dfrac{1{\cdot}811}{n}+\dfrac{0{\cdot}00281}{i}}{1+\left(41{\cdot}6+\dfrac{0{\cdot}00281}{i}\right)\dfrac{n}{\sqrt{m}}},$$

where n = a coefficient of roughness for the pipe or channel.

gangway (*Build.*). Rough planks laid to provide a footway for the passage of workmen on a site.

gangway (*Mining*). An elevated roadway: a main haulage road.

gann'ister (*Geol*). A particularly pure and even-grained siliceous grit or loosely cemented quartzite, occurring in the Upper Carboniferous of the Midlands, and highly prized in the manufacture of silica-bricks.

Gannister Measures (*Geol.*). A local name for the Lower Coal Measures of Upper Carboniferous age occurring in certain of the Midland coalfields, notably in the Sheffield district, in the York, Derby, and Notts coalfield. So called from the valuable gannisters occurring in this part of the succession.

ga'noid (*Zool.*). Formed of, or containing, ganoin. Said of fish scales of rhomboidal form, composed of an outer layer of ganoin and an inner layer of isopedin; hence said of Fish having these scales.

Ganoid'ei (*Zool.*). A name formerly used to indicate a group of Fish possessing ganoid scales and certain other common features; the group included the Sturgeons and Spoonbills, the Bow-fins, the Gar-pikes, and the Bichirs. See **Palaeopterygii, Ginglymodi, Protospondyli.**

ga'noin (*Zool.*). A calcareous substance secreted by the dermis and forming the superficial layer of certain fish scales; it was formerly supposed to be homologous with enamel, but this has now been disproved.

gantrees (*Weaving*). Wooden supports above a loom upon which the jacquard is carried.

gantry (*Build.*). A temporary erection having a working platform used as a base for building operations or for the support of cranes, scaffolding, or materials.

gap (*Aero.*). The vertical distance between one plane and that immediately below or above it.

gap (*Elec. Eng.*).

See **air- —**
anchor—
horn—
needle-point—
section—
spark—
sphere—

gap arrester (*Elec. Eng.*). A lightning arrester consisting essentially of a small air-gap connected between the circuit to be protected and earth; the gap breaks down on the occurrence of a lightning surge, and discharges the surge to earth. See **multigap arrester.**

gap bed (*Eng.*). A lathe bed having a gap near the headstock, to permit of turning large flat work of greater radius than the centre height.

gap bridge (*Eng.*). A bridge casting of the same cross-section as the bed in a gap-bed lathe, and used to close the gap.

gap extension coefficient (*Elec. Eng.*). See **extension coefficient.**

gap lathe (*Eng.*). A lathe with a *gap bed* (q.v.).

gap waxing (*Cables*). Waxing which occurs at the upper and lower boundaries of the helical space formed by consecutive turns of a paper tape. It is free from carbon.

gap window (*Build.*). A window which is long and narrow.

gape (*Zool.*). The width of the mouth when the jaws are open.

gapes (*Vet.*). See **syngamiasis.**

garage (*Build.*). A building designed to accommodate one or more automobiles.

garden-wall bonds (*Build*). Forms of bond used largely for building low boundary walls of single brick thickness when the load to be carried is that of the wall only and it is desired to show a fair face on both sides of the wall.

See **English—** **Sussex—**

garget (*Vet.*). See **mastitis.**

gargle (*Acous.*). A wow which has fluctuation changes ranging between about 30 and 200 per second.

gargoyle (*Build.*). A grotesquely shaped spout projecting from the upper part of a building, to carry away the rain water. Also spelt GURGOYLE.

garland (*Mining*). A collecting trough for water set in a colliery shaft. A frame to heighten and increase content of a truck.

garnet (*Min.*). A group of minerals which crystallise in the cubic system. Some species occur rarely in igneous rocks, but are characteristic of metamorphic rocks, such as garnet-mica-schist, garnet gneiss, and eclogite. Some species are of value as gems, rivalling ruby in colour. See also **andradite, grossularite, melanite, pyrope, spessartite.**

garnet hinge (*Join.*). A form of *strap hinge* (q.v.).

garnet paper (*Build.*). *Sandpaper* (q.v.).

gar'nierite (*Min.*). A bright-green nickeliferous silicate of magnesium, occurring in ultrabasic rocks as a decomposition product of olivine. In external form garnierite resembles chalcedony, and differs from chrysolite chiefly in this respect.

garnish bolt (*Build.*). A bolt whose head is chamfered or faceted.

garret (*Build.*). A top storey in a house, usually one built within the roof space.

garret window (*Build.*). A skylight of which the glazing is arranged to lie along the slope of the roof.

garreting (*Masonry*). A term applied to the process of inserting small stone splinters in the joints of coarse masonry. Also called GALLETING

Garstang Sandstone (*Geol.*). Another name for the St. Bees Sandstone, which represents the Bunter Sandstone in Cumberland, and is approximately 1000 ft. in thickness.

garter spring (*Eng.*). An endless band formed by connecting the two ends of a long helical spring; used to exert a uniform radial force on any circular piece round which it is stretched, as in a *carbon gland* (q.v.).

garth (*Arch.*). An enclosed area attached to a building and surrounded usually by a cloister.

Garth Hill Beds or **Garth Grit** (*Geol.*). The basal beds of the Arenig Series (Ordovician System) in North Wales. The typical Garth Grit is a pebbly grit containing the fossil *Bolopora undosa* and is often only a few inches thick. In Anglesey the basal beds representing the beach deposits of the Ordovician Sea thicken to 3000 ft.

Garton lightning arrester (*Elec. Eng.*). A form of gap lightning arrester in which the current flowing when the gap breaks down operates a solenoid which lengthens the gap and extinguishes the arc.

gas. (1) A state of matter in which a substance completely fills the region in which it is contained, no matter how small its amount.—(2) The term is sometimes reserved for a *gas* (1) at a temperature above the critical value. Also defined as a definitely compressible fluid. See **gas laws,** and the articles at **gases** (p. 368).

town—

gas (*Automobiles, etc.*). Abbrev. (used especially in America) for *gasolene* or *petrol* (q v.).

gas (*Mining*). The mixture of natural explosive gases met with in most coal-mines.

gas amplification (*Photo-electronics*). See **cell amplification.**

gas analysis (*Chem.*). The quantitative analysis of gases by absorption. A measured quantity of gas, 100 c.c., is brought into intimate contact with the various reagents, and the reduction in volume is measured after each absorption process Carbon dioxide is absorbed in a concentrated caustic potash solution, oxygen in alkaline pyrogallol solution, carbon monoxide in ammoniacal cuprous chloride solution, unsaturated compounds by absorption in bromine water, etc, hydrogen by combustion with a measured quantity of air over palladium asbestos. Nitrogen is estimated by difference.

gas-bag (*Aero.*). Any separate gas-containing unit of a rigid airship.

gas barrel (*Eng.*). Wrought-iron tube, first used for conducting gas from street mains into buildings; now used for a variety of purposes.

gas battery (*Elec Eng.*). See **Grove's gas cell.**

gas black (*Paint.*). A substance produced by carbonising natural gas; used as an adulterant in carbon-, animal-, and vegetable-blacks, especially in America.

gas-blast circuit-breaker (*Elec. Eng.*). A high-power circuit-breaker in which a blast of gas is directed across the contacts at the instant of separation in order to extinguish the arc. See **air-blast switch.**

gas bottles. A colloquial term for *gas cylinders.*

gas cable (*Cables*). Cable in which the insulation is dry paper (condenser tissue) and ionisation is prevented by admitting nitrogen or carbon dioxide inside the cable, at a pressure of 200 lb./in.^{2}. The lead sheath is reinforced by tapes of copper or stout paper.

gas carbon (*Chem.*). A hard dense deposit of almost pure carbon which slowly collects on the inside of a coal-gas retort.

gas carburising (*Met.*). The introduction of carbon into the surface layers of mild steel by heating in a current of gas high in carbon—usually hydrocarbons or hydrocarbons and carbon monoxide.

gas cell (*Chem.*). A galvanic cell in which at least one of the reactants is a gas.

gas circulator (*Build.*). A gas water-heater for domestic use.

gas coal (*Fuels*). Coal containing a high percentage of volatile hydrocarbons, gas-yielding constituents; suitable for making town gas.

gas coke (*Fuels*). See **coke (gas), coke (metallurgical).**

gas colic (*Vet.*). See **tympanites.**

gas constant (*Chem.*). For definition, see **perfect gas.** Its value is 0·08209 litre-atmospheres per gram-molecule, or $8{\cdot}315 \times 10^7$ ergs per gram-molecule, or 1·988 calories per gram-molecule.

gas coulometer (*Elec. Eng.*). A voltameter (coulometer) in which the quantity of electricity passing is measured by determining the volume of gas evolved.

gas cylinders (*Gases*). Solid drawn steel cylinders in which gases (except acetylene) are stored under high pressure for convenience of transport; made in accordance with B.S.I. Specifications.

gas detector (*Mining*). An apparatus for detecting and estimating the amount of gas in a mine.

gas discharge lamp (*Illum.*). See **electric discharge lamp.**

gas-discharge tube (*Thermionics*). Generally, any tube in which an electric discharge takes place through a gas. Specially, a tube comprising a heated cathode, a grid, and an anode enclosed in an atmosphere of gas at low pressure, generally mercury vapour, argon, or neon. Also called GAS-FILLED RELAY, GAS-FILLED TRIODE, GRID GLOW TUBE. See also **thyratron.**

gas drain (*Mining*). A tunnel or borehole for conducting gas away from old workings.

gas-electric generating set (*Elec. Eng.*). A name often given to a small electric generating set driven by a gas or petrol engine.

gas engine (*Eng.*). An internal-combustion engine, running on the constant volume or Otto cycle, in which gaseous fuel, such as town or producer gas, is mixed with air to form a combustible mixture in the cylinder and fired by spark ignition.

gas evolution (*Met.*). The liberation of gas in the form of bubbles during the solidification of metals. It may be due to the fact that the solubility of a gas is less in the solid and molten metal respectively, as when hydrogen is evolved by aluminium and its alloys, or to the promotion of a gas-forming reaction, as when iron oxide and carbon in molten steel react to form carbon monoxide. See also **blowholes, unsoundness.**

gas exhauster (*Eng.*). A large low-pressure rotary vane pump or centrifugal blower for exhausting gas from the retorts in a gas-works.

gas-filled filament lamp (*Illum.*). A filament lamp in which the filament is mounted in a bulb containing an inert gas.

gas-filled photo-cell (*Photo-electronics*). A photo-electric cell in which the anode and the photo-cathode are enclosed in an atmosphere of gas at low pressure. It is more sensitive than the corresponding high-vacuum cell owing to the formation of positive ions by collision of the photo-electrons with the gas molecules.

gas-filled relay (*Elec. Eng.*). A grid-controlled thermionic tube, usually of the mercury-vapour type, when used as a relay. See also **gas-discharge tube.**

gas fire (*Build.*). A domestic heater in which hollow fireclay bars are rendered incandescent by Bunsen flames which they surround.

gas focusing (*Cathode Ray Tubes*). A means of focusing the beam in a cathode ray tube by the action of a small amount of residual gas in the envelope, which on becoming ionised by collision forms a core of positive ions along the centre of the beam and provides the necessary focusing field.

gas gangrene (*Med.*). Rapidly spreading infection of a wound with gas-forming anaerobic bacteria, causing gangrene of the infected part.

gas generator (*Chem.*). Chemical plant for producing gas from coal, e.g. water-gas by alternating combustion of coal and reduction of steam.

gas gland (*Zool.*). A structure in the wall of the air-bladder in certain Fish which is capable of secreting gas into the bladder. See **rete mirabile.**

gas governor (*Gas Fittings*). A form of automatic tap which controls the pressure, volume, or temperature of the gas supply on consumers' premises.

gasholder. See **gasometer.**

gas lamp (*Illum.*). A lamp in which the illumination is provided by the burning of gas, usually town gas.

gas laws (*Phys.*). Boyle's law, Charles' law, and the pressure law, which are included in the equation $Pv=RT$, where P is the pressure, v the volume of one gram-molecule, T the absolute temperature, and R the gas constant, the value of which is $8{\cdot}315\times10^7$ ergs. A gas which obeys the gas laws perfectly is known as a *perfect gas.*

gas-light paper (*Photog.*). Bromide paper so slow in its speed that it can be normally handled in gas or moderate electric light.

gas-lighter (*Elec. Eng.*). See **electric gas-lighter.**

gas lime (*Chem.*). The spent lime from gas-works after being used for the absorption of hydrogen sulphide and carbon dioxide in the gas purifiers.

gas liquor (*Chem.*). The aqueous solution of ammonia and ammonium salts condensed from coal-gas.

gas mantle or **incandescent mantle** (*Illum.*). A small dome-shaped structure of knitted or woven ramie or rayon, supported at the open end by a ring of refractory material. The structure is impregnated with a solution of the nitrates of cerium and thorium, then dried, and the textile fabric burned off. The structure that remains consists of a mixture of oxides, 1% cerium and 99% thorium.

gas mask (*Chem.*). A device for protection against poisonous gases, which are absorbed by activated charcoal or by other reactive substances, e.g. soda-lime. The choice of the absorbing material depends on the nature of the gas to be counteracted. See also **contex*.**

gas oil (*Fuels*). A petroleum distillate obtained after kerosene, flash point 168° F.; used for carburetting water-gas in gas plants, and for driving road and stationary diesel engines. Also called DIESEL OIL, SOLAR OIL.

gas-pipe tongs (*Gas Fittings*). A wrench used for turning pipes when screwing them into, or out of, coupling pieces.

gas pliers (*Eng.*). Stout pliers with narrow jaws, the gripping faces of which are concave and serrated, to provide a secure grip on pipes, nipples, etc.

gas pump (*Eng.*). See **Humphrey gas pump.**

gas purifiers (*Gas*). A section of a gas-works plant in which the gas is freed from hydrogen sulphide by passing it through layers of hydrated oxide of iron.

gas radiator (*Build.*). A flueless heater resembling a steam or hot-water radiator but equipped with Bunsen burners at the base.

gas regulator (*Eng.*). (1) An automatic valve for maintaining a steady gas pressure in supply mains.—(2) The throttle valve of a gas engine.

gas scrubber (*Chem.*). An apparatus for the purification of gas from tarry matter and other undesirable impurities, e.g. ammonia, hydrogen sulphide, etc.

gas show (*Geol.*). A surface indication of the escape of natural gas from underground reservoirs; of importance in oil-field exploration.

gas starter (*Aero.*). An engine starter working on the principle of supplying the normal explosive mixture to the cylinder from an external source and exploding it at the beginning of the power stroke.

gas stocks and dies (*Eng.*). Stocks and dies (see **dies** (2), **die-stock**) for cutting screw-threads on gas barrel or piping.

gas tar (*Chem., etc.*). Coal-tar condensed from coal-gas, consisting mainly of hydrocarbons. Distillation of tar provides many substances, e.g. ammoniacal liquor, 'benzole,' naphtha, and creosote oils, with a residue of pitch. Dehydrated, it is known as ROAD TAR, and used as a binder in road-making.

gas thermometer. See **air thermometer.**

gas thread (*Eng.*). See **British Standard pipe thread.**

gas turbine (*I.C. Engs.*). A machine consisting of a combustion chamber, to which air is supplied by a compressor and heated at constant pressure by oil fuel, and a turbine, in which the hot gases expand and do work. Still experimental.

gas warfare (*Mil.*). See **chemical warfare*.**

gas well (*Geol.*). A deep boring, generally in an oil-field, which yields natural gas rather than oil. See **natural gas.**

gases, density of (*Chem., Phys.*). According to the *gas laws* (q.v.), the density of a gas is directly proportional to the pressure and inversely proportional to the absolute temperature. At 0° C. and 76 cm. of mercury the densities of gases range from 0·0899 gm. per litre for hydrogen to 6·99 gm. per litre for phosphorus chlorofluoride.

gases, elasticity of (*Phys.*). See **elasticity of gases.**

gases, expansion of (*Phys.*). All gases have very nearly the same coefficient of expansion, namely ·00366 per °C. when kept at constant pressure. See **absolute temperature, gas laws.**

gases, kinetic theory of (*Phys.*). The conception of gas molecules as elastic spheres whose bombardment of the walls of the containing vessel due to their thermal agitation causes the pressure exerted by the gas. The theory gives a simple explanation of the gas laws and has yielded valuable results concerning gaseous viscosity and molecular dimensions.

gases, liquefaction of (*Phys.*). To liquefy a gas, it must be cooled below its critical temperature and, in some cases, compressed. For the so-called 'permanent' gases, oxygen, nitrogen, hydrogen, and helium, having very low critical temperatures, the problem of liquefaction becomes one of obtaining low temperatures. This is done mainly by allowing the compressed gas to expand through a nozzle, cooling occurring by the Joule-Thomson effect.

gaselier′ (*Gas Fittings*). An ornamental pendant for a number of lights.

gaseous fuel (*Eng.*). Any combustible gas which can be burned economically in an engine or furnace, such as coal gas, natural gas, producer gas, etc.

gash veins (*Geol.*). Veins formed in limestone joints that had been somewhat widened by solution prior to the deposition of the vein stuff, which may include blende and galena. The veins run also along the bedding planes.—(*Mining*) Mineralised veins of shallow depth, often of considerable width at surface (outcrop).

gasket (*Eng.*). (1) A flat sheet of asbestos compound, sometimes sandwiched between thin copper sheets; used for making gas-tight joints between engine cylinders and heads, etc.—(2) Jointing or packing material, such as cotton rope impregnated with graphite grease; used for packing stuffing-boxes on pumps, etc.

gasket (*Plumb.*). Hemp or cotton yarn wound round the spigot end of a pipe at a joint, and rammed into the socket of the mating pipe to form a tight joint.

gasket iron (*Plumb.*). A flat tool with blunt end, used for ramming a gasket into position.

gaskin (*Plumb.*). A *gasket* (q.v.).

gas′olene, gas′oline (*Chem.*). American term for low-boiling petroleum distillates, boiling range about 14° C. to 90° C. Also called PETROLEUM ETHER.

gasolene (or **gasoline**) **engine** (*Eng.*). American term for *petrol engine* (q v.).

gasom′eter or **gasholder** (*Gas*). A bell-shaped structure floating in a tank of water, in which gas is collected for distribution. When dry gasholders are used, they are sealed with tar or grease.

Gas′parcolor (*Photog.*). A subtractive colour photographic process using multi-coated base for positive prints.

gasserec′tomy (*Surg.*). Excision of the Gasserian ganglion, sometimes performed for the relief of trigeminal neuralgia (tic douloureux).

Gasse′rian ganglion (*Zool.*). In Vertebrates, a large ganglion of the fifth cranial nerve, near its origin.

gassing (*Aero.*). See **inflation.**

gassing (*Elec. Eng.*). The evolution of gas which takes place in an accumulator towards the end of its charging period.

gassing (*Textiles*). The process of passing yarns through a flame in order to remove outstanding fibres and enhance the appearance; generally applied to folded yarns.

gassing of copper (*Met.*). A process which denotes the brittleness produced when copper containing oxide is heated in an atmosphere containing hydrogen. The hydrogen diffuses into the metal and combines with oxygen, forming steam which cannot diffuse out. A high steam pressure is built up at the crystal boundaries and the cohesion is diminished.

gastero-. Prefix. See **gastr-, gastro-.**

Gas′teromyce′tes (*Bot.*). A subdivision of the *Autobasidiomycetes*, including about 800 species, in which the hymenium is enclosed in a peridium until after the spores are ripe.

gas′terozo′oid (*Zool.*). In colonial *Hydrozoa*, a hydroid person of normal structure with a mouth surrounded by tentacles.

gastr-, gastro- (Greek *gaster*, gen. *gastros*, stomach) A prefix used in the construction of compound terms; e g. *gastroduodenal* (q.v.).

gastrae′a (*Zool.*). The original hypothetical ancestor of the *Metazoa*, resembling a gastrula (Haeckel).

gastral (*Zool.*). See **gastric.**

gastral layer (*Zool.*). In *Porifera*, the inner cell-layer consisting of choanocytes.

gastral′gia (*Med.*). Pain in the stomach.

gastra′lia (*Zool.*). The abdominal ribs of some Vertebrates: sponge spicules occurring in the gastral layer.

gastrec′tomy (*Surg.*). Surgical removal of the whole, or part, of the stomach.

gas′tric (*Zool.*). Pertaining to, or in the region of, the stomach.

gastric filaments (*Zool.*). In some *Coelenterata*, endodermal filaments projecting into the enteron and containing cnidoblasts which kill any living prey that enters the stomach.

gastric juice (*Chem.*). Human gastric juice consists principally of water (99·44%), free HCl (0·2%), and small quantities of NaCl, KCl, $CaCl_2$, $Ca_3(PO_4)_2$, $FePO_4$, $Mg_3(PO_4)_2$, and organic matter including enzymes.

gastric mill (*Zool.*). In *Malacostraca*, the proventriculus, which is provided with muscles and ossicles for trituration of food and is sometimes known as the stomach.

gastric shield (*Zool.*). A hard plate in the stomach of *Pelecypoda*, against which the crystalline style is worn away.

gastri′tis (*Med.*). Inflammation of the mucous membrane of the stomach.

gas′trocele (*Med.*). Hernia of the stomach.

gas′trocen′trous (*Zool.*). Said of vertebrae in which the basiventrals are small or absent and their place as constituents of the centrum is taken by the interventrals.

gastrocnemius, gas-trŏ-nĕ′mi-us (*Zool.*). In land Vertebrates, a muscle of the shank.

gas′trocoel (*Zool.*). See **archenteron.**

gastrocol′ic (*Med.*). Pertaining to, or connected with, the stomach and the colon.

gas′trodu′ode′nal (*Med.*). Pertaining to, or connected with, the stomach and the duodenum.

gas′trodu′odeni′tis (*Med.*). Inflammation of the mucous membrane of the stomach and the duodenum.

gas′trodu′odenost′omy (*Surg*). A communication between the stomach and the duodenum, made by operation.

gas′tro-enteri′tis (*Med*). Inflammation of the mucous membrane of the stomach and the intestines.

gastro-enterost′omy (*Surg.*). A communication between the stomach and the small intestine, made by operation.

gas′trogastrost′omy (*Surg.*). A communication, made by operation, between the upper and lower parts of the stomach when these are pathologically separated by a stricture.

gas′trojeju′nal (*Med.*). Pertaining to, or connected with, the stomach and the jejunum.

gas′trojejunost′omy (*Surg.*). A communication between the stomach and the jejunum, made by operation.

gastrolienal, —li-ĕ′nal (*Med*). Pertaining to the stomach and the spleen.

gas′troliths (*Zool.*). In *Crustacea,* two calcareous masses found in the anterior part of the proventriculus prior to a moult.

gas′tromyot′omy (*Surg.*). Incision of the muscle of the stomach round a gastric ulcer.

gas′tropex′y (*Surg.*). The operation of suturing the stomach to the abdominal wall for the treatment of gastroptosis.

Gastrop′oda (*Zool.*). A class of asymmetrical *Mollusca,* in which the foot is broad and flat, the mantle is undivided, and the shell is in one piece only, usually conical. Limpets, Whelks, Snails, and Slugs.

gas′tropore (*Zool.*). In *Hydrocorallinae,* an opening in the common skeleton through which a gastrozooid protrudes.

gas′tropto′sis (*Med.*). Abnormal downward displacement of the stomach in the abdominal cavity.

gas′troscope (*Med.*). An instrument for inspecting the interior of the stomach and by means of which a photograph of the lining of the stomach may be taken.

gas′trostax′is (*Med.*). Bleeding or oozing of blood from the stomach, the mucous membrane of which is intact.

gastros′tegite (*Zool.*). In *Ophidia,* a ventral scale. Also called GASTROSTEGE.

gastrost′omy (*Surg.*). The operative formation of an opening into the stomach through which food may be passed when the normal channels are obstructed.

gastrot′omy (*Surg.*). Incision of the stomach wall.

Gas′trotrich′a (*Zool.*). A class of *Trochelminthes* having no crown, ciliary rings, or mastax; sensitive and locomotor peribuccal flagella occur; there are two ventral bands of cilia; the anus and the urinary and genital ducts open separately; the tail is short; all members of the group are hermaphrodite and occur in fresh water.

gas′trovas′cular (*Zool.*). Combining digestive and circulatory functions, as the canal system of Ctenophores.

gas′trula (*Zool.*). In development, the double-walled stage of the embryo which succeeds the blastula.

gastrula′tion (*Zool.*). The process of formation of a gastrula from a blastula during development.

gate (*Build.*). A hinged or sliding barrier closing an opening to an enclosure.

gate (*Cinema.*). The location of the film in a projector, printer, or camera when it is being acted on or scanned.

See **film—** **sound—**

gate (*Eng.*). (1) A valve controlling the supply of water in a conduit.—(2) A frame in which saws are stretched to prevent buckling.

gate (*Foundry*). In a mould, the channel or channels through which the molten metal is led from the runner, down-gate, or pouring-gate to the mould cavity. Also called GEAT, GIT, SPRUE.

See **bottom—** **spinner—**
drop— **spray—**
horn— **riser.**

gate (*Hyd. Eng.*). A movable barrier for stopping or regulating the flow in a channel.

gate-backed or **ladder-backed** (*Furn.*). Said of chairs and settees having back-frames of horizontal slats or bars.

gate by-pass switch (*Elec. Eng.*). A switch fitted in an electric lift-car so that the operator can render the gate or door locks inoperative in cases of emergency.

gate-chambers (*Hyd. Eng.*). Recesses in the side walls of a lock to accommodate the gates when open.

gate-change gear (*Automobiles*). A multi-speed gear-box in which the control lever is positioned by, for example, an H-shaped slot or gate, through which it works, the five members of the slot corresponding to three forward speeds, one reverse speed, and neutral.

gate closer (*Elec. Eng.*). A device for automatically closing the gates of a lift-car. Also called DOOR CLOSER.

gate contact (*Elec. Eng.*). See **gate switch.**

gate-end (*Mining*). The coal-face end of a gateway.

gate-end box (*Elec. Eng.*). A cable box used in mining work for making a joint between one of the main supply cables and a trailing cable for use near the coal face.

gate hook (*Build.*). The part of a gate hinge which is secured to the post and about which pivots the leaf supporting the gate.

gate interlock (*Elec. Eng.*). A combination of a gate or door switch with an automatic gate or door lock.

gate leg (*Furn.*). A framed and hinged leg to open out for the support of a table flap.

gate operator (*Elec. Eng*). A power-operated device for closing the gates of a lift-car.

gate pier (*Build.*). A post similar to a *gate post* (q.v.), but of brick, stone, or concrete instead of timber.

gate post (*Build.*). A timber post from which a gate is hung, or one against which it shuts. See also **gate pier.**

gate stick (*Moulding*). A stick placed vertically in the cope while it is rammed up; on removal it provides the gate or runner passage into the mould. Also called RUNNER STICK.

gate switch (*Elec. Eng.*). See **door switch.**

gateway or **gate road** (*Mining*). A road through the worked-out area (goaf) for haulage in longwall working of coal.

gated throttle (*Eng.*). On supercharged or super-compression aero engines, a slot interrupted by a stop, beyond which the throttle lever must not be moved below the rated altitude.

gatherer (*Glass*). A person who gathers a charge of glass on a blowpipe or gathering iron for the purpose of forming it into ware or feeding a charge to a machine for that purpose.

gathering (*Bind.*). Collecting and arranging in proper sequence the folded sections forming a volume.

gathering (*Build.*). The contracting portion of the chimney passage to the flue.

gathering (*Paint.*). A defect in distempered surfaces; owing to irregular absorption, the surfaces present a patchy appearance.

gathering ground (*Civ. Eng.*). A *catchment area* (q.v.).

gathering pallet (*Horol.*). In the striking mechanism of a clock or repeater watch, a revolving finger which lifts the rack one tooth for each blow struck; a single-toothed wheel.

gathering rack (*Horol*). See **rack.**

Gaucher's disease, gōsh′ā (*Med.*). A disease which occurs in families and is characterised by anaemia and haemorrhages, associated with enlargement of the spleen, in which peculiar large cells containing lipoid appear.

gauge, gāj. (1) An object or instrument for the measurement of dimensions, pressure, volume, etc. See **pressure-gauge, water-gauge.**—(2) An accurately dimensioned piece of metal for checking the dimensions of work or less precisely made gauges. See **limit gauge, master gauge, plug gauge, ring gauge.**—(3) A tool used for measuring lengths, as a *micrometer gauge* (q.v.).—(4) The diameter of wires and rods. See **Birmingham Wire Gauge, Brown & Sharpe Wire Gauge.**—(5) The distance between the inside edges of the rails of a permanent way.—(6) The proportion of gypsum in a lime plaster.—(7) The position of one ship with regard to another.

gauge (*Build.*). (1) The distance between centres (as measured across the courses) of the nails securing the slates on, for example, a roof.—(2) The margin or exposed width of a slate or tile in coursed work.

gauge (*Textiles*). The term relates to the fineness of a woven or knitted fabric and generally indicates the number of needles per inch in hosiery.

gauge cocks (*Eng*). Small test cocks fitted to the side of a vessel in order to ascertain the liquid level therein, as on many steam boilers.

gauge-concussion (*Rail.*). The lateral impact of the wheel flanges against the rails due to side-sway of the carriage.

gauge door (*Mining*). A door underground for controlling the supply of air to part of the mine.

gauge glass (*Eng.*). The glass tube, or pair of flat glass plates, fitted to a water-gauge to provide a visual indication of the water-level in the tank or boiler. See **water-gauge.**

gauge glass tubing (*Glass*). Glass tubing, sometimes of special composition, able to resist the action of pressure of steam and water at high temperatures.

gauge pile (*Civ. Eng.*). A *guide pile* (q.v.).

gauge pot (*Build.*). A small receptacle for cement grout, facilitating pouring of small quantities.

gauge pressure (*Eng.*). (Of a fluid) the pressure as shown by a pressure-gauge, i.e. the amount by which the pressure exceeds the atmospheric pressure, the sum of the two giving the absolute pressure.

gauge rod (*Build.*). A rod used in laying gradnated courses of slates.

gauged arch (*Build.*). An arch built from special bricks cut with a bricklayer's saw and rubbed to exact shape on a stone.

gauged mortar (*Build.*). Mortar made of cement, lime, and sand, suitable proportions for general building work being 1 : 1 : 5.

gauged stuff (*Plast.*). A stiff plaster used for cornices, mouldings, etc.; made with lime putty to which plaster of Paris is added to hasten setting. Also called PUTTY AND PLASTER.

gauging-board (*Build.*). A platform on which the constituents of a concrete may be mixed.

gaul (*Plast*). A hollow spot in the *setting* (q.v.).

Gault (*Geol*). A blue-to-grey clay lying between the Lower Greensand and the Chalk in the Cretaceous System. Minutely zoned by means of the ammonites it contains. Of great value in brick-making. The type sections are on the coast at Folkestone. See also **Upper Greensand.**

gaults (*Build*). Very hard, heavy, and durable bricks, white or whitish in colour; made from Gault clay.

gauss, gows (*Elec. Eng.*). The c.g.s. electromagnetic unit of magnetic flux density; it is equal to one line (or maxwell) per sq. cm.

Gauss eyepiece (*Light*). A form of eyepiece used in optical instruments, such as spectrometers and refractometers, to facilitate setting the axis of the telescope at right-angles to a plane reflecting surface. Light enters the side of the eyepiece and is reflected down the telescope tube by a piece of unsilvered glass, being then reflected back into the eyepiece by the plane surface.

gauton (*Mining*). A narrow groove cut in the floor of a roadway in a coal-mine.

gauze (*Textiles*) A light-weight fabric of open texture in which the crossing ends pass from one side to the other of the standing ends; used as a dress fabric, for mosquito netting, etc. See **leno** and (for *imitation gauze*) **mock leno.**

gauze brushes (*Elec. Eng.*). Brushes (made of copper gauze) for collecting current from the commutator of an electric machine; they carry a higher current density than carbon brushes, but give less satisfactory commutation, and are little used.

gavel (*Masonry*). A mallet used for setting stones.

gavelock. An iron crowbar. Also spelt GABLOCK.

gawl (*Mining*). An irregular or uneven line of coal face.

Gay-Lussac tower (*Chem.*). Name for a tower of a sulphuric acid plant used for the recovery of the nitrogen oxides from the gases which leave the lead chambers.

Gay-Lussac's law. (1) GAY-LUSSAC'S LAW OF VOLUMES. When gases react, they do so in volumes which bear a simple ratio to one another and to the volumes of the resulting substances in the gaseous state, all volumes being measured at the same temperature and pressure.—(2) *Charles's law* (q.v.).

Gay-Lussite or **gaylussite** (*Min.*). A rare grey hydrated carbonate of sodium and calcium, occurring in lacustrine deposits.

gaze′bo (*Build.*). A summerhouse resembling a temple in form and commanding a wide open view.

G.B. surface contact system (*Elec. Eng.*). A surface contact system used for tramway traction; in it a magnetised contact chain under the car causes the operation of a finger in the stud and makes the stud alive.

Gd (*Chem.*). The symbol for *gadolinium.*

Gd. A. (*Build.*). Common abbrev. for *gauged arch* (q.v.).

Ge (*Chem.*). The symbol for *germanium.*

gean′ticline (*Geol.*). A major geological structure of the largest size, essentially anticlinal, resulting from mountain-building movements operating on the site of a former geosyncline.

gear (*Eng.*). (1) Any system of moving parts transmitting motion; e.g. levers, gear-wheels, etc.—(2) A set of tools for performing some particular work.—(3) A mechanism built to perform some special purpose; e.g. *steering gear,* *valve gear*.—(4) The position of the links of a steam-engine valve motion, as ***astern gear***, ***mid-gear***, etc.—(5) The actual gear ratio in use, or the gear-wheels involved in transmitting that ratio, in an automobile gear-box, as ***first gear***, *third gear*, etc.

See **bevel—**
differential—
epicyclic—
friction—
helical—
internal—
skew bevel—
spiral—
spur—
synchromesh—
worm—

gear cluster (*Eng.*). A set of gear-wheels integral with, or permanently attached to, a shaft, as on the lay shaft of an automobile gear-box.

gear cutters (*Eng.*). Milling cutters, hobs, etc., having the requisite tooth form for cutting teeth on gear-wheels.

gearman (*Mining*). One who rides on a *donkey* (q.v.).

gear pump (*Eng.*). A small pump consisting of a pair of gear-wheels in mesh, enclosed in a casing, the fluid being carried round from the suction to the delivery side in the tooth spaces; used for lubrication systems, etc.

geared lathe (*Eng.*). A lathe provided with a *back gear* (q.v.) or a multi-speed gear-box between the driving motor and the head.

geared locomotive (*Elec. Eng.*). An electric locomotive in which the motors drive the axles through reduction gears.

geared quill drive (*Elec. Eng.*). A form of quill drive used in electric locomotives; the quill, instead of carrying the motor armature, carries a gear-wheel which is geared to a pinion on the armature shaft.

geared turbo-generator (*Elec. Eng.*). An electric generator driven through a reduction gear from a steam-turbine, the object being to enable both machines to operate at their most economical speeds.

gearing (*Eng.*). Any set of gear-wheels transmitting motion. See **gear.**

gearing-down (*Eng.*). A reduction in speed between a driving and a driven wheel or unit; e.g. between the engine of an automobile and the road wheels.

gearing-up (*Eng.*). Raising the speed of a driven unit above that of its driver by the use of gears; opposite of *gearing-down*.

gearless locomotive (*Elec. Eng.*). An electric locomotive in which the motor armatures are mounted directly on the driving axle.

gearless motor (*Elec. Eng.*). A traction motor mounted directly on the driving axle of an electric locomotive.

geat (*Foundry*). See **gate.**

Gedin'nian Stage (*Geol.*). The lowest division of the marine Devonian rocks in the Ardennes and Rhineland.

gegenions, gā'gen-ī'onz (*Chem.*). The simple ions, of opposite sign to the colloidal ions, produced by the dissociation of a colloidal electrolyte.

gegenpol, gā'gen-pōl (*Cyt.*). The pole of a resting nucleus which lies farthest from the centrosome. Cf. *pol*.

gegenschein, gā'gen-shin (*Astron.*). (*Ger.*, counter-glow). A term applied to a faint illumination of the sky sometimes seen in the ecliptic, diametrically opposite the sun, and connected with the zodiacal light.

gehlenite, gā'len-īt (*Min.*). A tetragonal silicate of calcium and aluminium ($Ca_2Al_2SiO_7$); an end-member of an isomorphous series collectively known as mellilite.

Gehrcke oscilloscope, gār'ke (*Elec. Eng.*). A form of oscilloscope in which the discharge between two aluminium electrodes contained in a tube at low pressure is viewed by means of a rotating mirror, which indicates the wave form of the voltage producing the discharge.

Geissler discharge, gis'ler (*Elec. Eng.*). The electric discharge taking place in a Geissler tube.

Geissler pump (*Chem.*). A glass vacuum pump which operates from the water supply.

Geissler tube (*Elec. Eng.*). A vacuum tube having a moderate degree of exhaustion (about 0·01 atmosphere), so that an electric discharge taking place in it will be brightly luminous but broken up by dark spaces.

geit'onogam'y (*Bot.*). Cross pollination between two flowers on the same plant.

gel (*Chem.*). The apparently solid, often jelly-like, material formed from a colloidal solution on standing. A gel offers little resistance to liquid diffusion and may contain as little as 0·5% of solid matter. Some gels, e.g. gelatin, may contain as much as 90% water, yet in their properties are more like solids than liquids.

gel'atine, gel'atin (*Chem.*). A colourless, odourless, and tasteless glue, prepared from albuminous substances, e.g. bones and hides. Used for foodstuffs, photographic films, glues, etc.

gelatine, bichromated (*Photog.*). See **bichromated gelatine.**

gelatine filter (*Photog.*). A filter which has the dye performing the filter action carried in gelatine. This is affected by moderate heat.

gelat'ino-chloride process (*Photog.*). The use of gelatine emulsion on printing-out paper (P.O.P.).

gem gravels (*Geol.*). Sediments of the gravel grade containing appreciable amounts of gem minerals, and formed by the disintegration and transportation of pre-existing rocks, in which the gem minerals originated. They are really placers of a special type, in which the heavy minerals are not gold or tin, but such minerals as garnets, rubies, sapphires, etc. As most of the gem minerals are heavy and chemically stable, they remain near the point of origin, while the lighter constituents of the parent rocks are washed away, a natural concentration of the valuable components resulting.

gem'el window (*Build.*). A two-bay window.

geminate (*Bot.*). (1) Paired, twinned.—(2) With two branches arising from the same node, on the same side of the stem.

Gemini (*Astron.*). Twins. Third sign of the *Zodiac* (q.v.).

gem'ini (*Bot.*). Bivalent chromosomes.

gemma (*Bot.*). (1) A small multicellular body, consisting of thin-walled cells, produced by vegetative means, and able to separate from the parent plant and form a new individual.—(2) A non-motile asexual spore in some algae.—(3) A thick-walled resting spore formed by some fungi.—*pl.* **gemmae.**

gemma (*Zool.*). A bud that will give rise to a new individual.

gemma cup (*Bot.*). A cup-shaped or crescent-shaped outgrowth from the thalli of some liverworts, with gemmae in the hollow.

gemma'ceous or **gem'miform** (*Bot.*). Like a small bud.

gemma'tion (*Bot.*, *Zool.*). Budding; gemma-formation. See **gemma.**

gemmif'erous or **gemmip'arous** (*Bot.*, *Zool.*). (1) Producing gemmae.—(2) Producing buds.

gem'miform (*Zool.*). A term applied to pedicellariae having a long stiff stalk, the jaws of which are each provided with a poison gland; found in *Echinoidea*.

gem'mule (*Zool.*). In fresh-water *Porifera*, an aggregation of embryonic cells within a resistant case, which is formed at the onset of hard conditions when the rest of the colony dies down and which gives rise to a new colony when conditions have once more become favourable.—*n.* **gemmula'tion.**

-gen (*Chem.*). Suffix meaning *producer, generator*; used to denote the parent substance of a compound or group; e.g. hydrogen, chromogen, antigen.

ge'na (*Zool.*). In general, the side of the head; in *Insecta*, a lateral cephalic sclerite extending from the eye to the gular region.—*adj.* **ge'nal.**

genes, jēnz (*Cyt.*, *Gen.*). In the modern chromosome theory, hypothetical units supposed to be arranged in linear fashion on the chromosomes, each representing a unit character.

gene-mutation (*Gen*). A heritable variation caused by spontaneous changes at single points in the chromosomes.

gene string (*Cyt.*, *Gen.*). A hypothetical component of a chromosome, consisting of a series of genes arranged like a string of beads.

gen'era. *Pl.* of *genus.*

general inference (*Meteor.*). A description of the existing pressure distribution over a wide area, together with a general forecast of the weather.

general lighting (*Elec. Eng.*). A system of lighting employing fittings which emit the light in approximately equal amounts in an upward and a downward direction.

general paralysis of the insane (*Med.*). G.P.I A form of insanity, due to a syphilitic infection of the brain, in which there is progressive deterioration of mental and physical powers and of morals, delusions of grandeur being a prominent feature.

general stain (*Microscopy*). A stain which gives the same depth of colour to all structures in the specimen. Cf. *specific stain.*

generalised root system (*Bot.*). A root system in which the tap root and the lateral roots are all well developed.

generating circle (*Eng.*). Any circle in which a point on the circumference is used to trace out a curve when the circle rolls along a straight line or curve. See **cycloid.**

generating line (*Eng.*). A straight or curved line rotated about some axis in order to generate a surface.

generating plant (*Elec. Eng.*). The equipment necessary for the generation of electrical energy, including the electrical equipment as well as the prime movers. See **automatic generating plant.**

generating set (*Elec. Eng.*). An electric generator, together with the prime mover which drives it.

See **gas-electric—** **steam-electric—**
hydro-electric—

generating-station (*Elec. Eng.*). A building containing the necessary equipment for generating electrical energy. Also called **SUPPLY-STATION.**

See **hydro-electric—** **steam—**
internal-combustion—

generation (*Biol.*). Origin: production: the individuals of a species which are separated from a common ancestor by the same number of broods in the direct line of descent.

generative apogamy (*Bot.*). See **reduced apogamy.**

generative cell (*Bot.*). A cell in a pollen grain of Gymnosperms which divides to give a stalk cell and a body cell.

generator (*Elec. Eng.*). See **electric generator.**

generator bus-bars (*Elec. Eng.*). Bus-bars in a generating-station to which all the generators can be connected.

generator-field control (*Elec. Eng.*). See **variable-voltage control.**

generator panel (*Elec. Eng.*). A panel of a switchboard upon which are mounted all the switches, instruments, and other apparatus necessary for controlling a generator.

genesis (*Biol.*). The origin, formation, or development of a group, a species, an individual, an organ, a tissue, or a cell.—*adj.* **genet'ic.**

genet (*Furs*). The dressed skin of the genet, one of the cat family; the Mediterranean genet is grey with black blotches, and has a long tail, ringed white and black.

genet'ics (*Biol.*). The study of variation and heredity.

genetic complex (*Gen.*). The sum-total of the hereditary factors contained in the chromosomes and in the cytoplasm; it is equivalent to the sum of the *genom* and the *plasmon.*

genetic spiral (*Bot.*). A hypothetical line drawn on a stem passing by the shortest path through the points of insertion of successive leaves.

genetic variation (*Gen.*). Variation due to differences in the gametes.

Geneva movement (*Cinema.*). Intermittent drive for projection machines, involving a star-wheel and cam.

Geneva stop work (*Horol.*). See **stop work.**

genial (*Zool.*). Pertaining to, or situated on, the chin.

genic balance (*Gen.*). The hypothesis that the characters of an organism are each determined by the interactions of a large but unknown number of genes, some affecting development in one direction and some in another, so that the ultimate result is a balance struck between the total effects.

genic'ular (*Zool.*). Pertaining to, or situated in, the region of the knee.

genic'ulate (*Bot.*, *Zool*) Bent rather suddenly, like the leg at the knee; as *geniculate antennae.*

geniculate ganglion (*Zool*). In higher Vertebrates, a ganglion of the facial nerve.

ge'nio- (Greek *geneion*, chin). A prefix used in the construction of compound terms; e.g. *genioglossal*, pertaining to the chin and the tongue.

ge'niohy'oid (*Zool*). In some Vertebrates, a muscle running from the hyoid to the tip of the lower jaw.

ge'nioplas'ty (*Surg.*). Plastic surgery of the chin.

genit-, genito- (Latin *gignere*, *genitum*, to beget) A prefix used in the construction of compound terms; e.g. *genitoanal*, pertaining to the genitals and the anus.

genita'lia (*Zool.*). The gonads and their ducts and all associated accessory organs.

gen'itals (*Zool.*). The reproductive organs: the external parts of the reproductive organs.—*adj.* **genital.**

genital atrium (*Zool.*). In *Platyhelminthes* and some *Mollusca*, a cavity into which open the male and female genital ducts.

genital bursae (*Zool.*). In *Ophiuroidea*, cavities open to the exterior into which the gonads open.

genital operculum (*Zool.*). In some *Arachnida*, a small plate covering the openings of the genital ducts.

genital plate (*Zool.*). In *Echinoidea*, the interradial plates which bear the genital openings.

genital pleurae (*Zool.*). In *Balanoglossida*, a pair of lateral folds in the branchial region of the trunk, behind which the gonads are situated.

genital rachis (*Zool.*). In *Echinodermata*, a ring of primary genital cells from which the gonads arise.

genital stolon (*Zool.*). In *Echinodermata*, a collection of primary genital cells in the axial organ connected with the genital rachis.

genito-urinary (*Med.*). Pertaining to the genital and the urinary organs.

Genoa cord (*Textiles*). A cotton fabric of corduroy type, with a twill back.

Genoa velvet (*Textiles*). A silk fabric with a cut warp pile, formed by means of wires upon a foundation texture similar in appearance to a twill.

Genoa velveteen (*Textiles*). A cotton fabric with a cut weft pile and twill back.

genom (*Cyt.*, *Gen.*). The total chromosome content of the nucleus of a gamete.

gen'omere (*Gen.*). A hypothetical particle, which, with other similar particles, make up a gene.

gen'otype (*Bot.*, *Zool.*). A group of individuals all of which possess the same factorial constitution.

genotyp'ic (*Gen.*). Determined by the genes.

genre, zhahn^{g}r (*Photog.*). Pictorial composition, with natural figures and objects of emotional value in excess of photographic values.

ge'nu (*Zool.*). A knee-like structure, i.e. a bend in a nerve tract.

genu recurva'tum (*Med.*). The condition in which there is hyperextension of the knee-joint.

genu valgum (*Med.*). Knock-knee. The condition in which the angle between the femur and the tibia is so altered that the leg deviates laterally from the mid-line.

genu varum (*Med.*). Bow leg. The reverse of genu valgum, the altered angle between the femur and the tibia being such that the legs bow outwards at the knee.

genuine tissue (*Bot.*). Tissue derived from the division of a mass of related cells, with subsequent differentiation of the daughter cells.

ge'nus (*Biol.*). A taxonomic category of closely related forms, which is further subdivided into species.—*pl.* **gen'era.**—*adj* **gener'ic.**

gen'ys (*Zool.*). In Vertebrates, the lower jaw.

geo- (Greek *gē*, earth, land). A prefix used in the construction of compound terms; e.g. *geobiotic* (q.v.).

ge'obiot'ic (*Zool.*). Terrestrial: living on dry land.

ge'ocarp'y (*Bot.*). The ripening of fruits underground, the young fruits being pushed into the soil by a post-fertilisation curvature of the stalk.

geocen'tric (*Astron.*). The term applied to any system or mathematical construction which has as its point of reference the centre of the earth.

geocentric altitude (*Surv.*). The *true altitude* (q.v.) of a heavenly body as corrected for *geocentric parallax* (q.v.).

geocentric latitude. See under **latitude and longitude (terrestrial).**

geocentric (or **diurnal**) **parallax** (*Astron.*). The apparent change of position of a heavenly body due to a shift of the observer by the rotation of the earth; hence only observed in bodies (e.g. the moon and sun) sufficiently close for the earth's radius to subtend a measurable angle when seen from the body.—(*Surv.*) The correction which must be applied to the altitude of a heavenly body in the solar system as observed, in order to give the altitude corrected to the earth's centre. Its value is given by

$$p = +P \cdot \cos a,$$

where p=geocentric parallax, P=*horizontal parallax* (q.v.), and a=observed altitude corrected for refraction.

ge'ochem'istry (*Chem.*). The study of the chemical composition of the earth's crust.

ge'odes (*Geol.*). Large cavities in rocks, lined with crystals that were free to grow inwards.—(*Mining*) Rounded nodules of ironstone with hollow interior.

geod'esy or **geodet'ic surveying.** The branch of surveying concerned with extensive areas, in which, in order to obtain accurate results, allowance must be made for the curvature of the earth's surface.

Geodetic (*Aero.*). A proprietary term referring to the principle of having only fully stressed metal in the construction of girders; unstressed metal is removed from panels, leaving a lattice structure.

geog'nosy (*Geol.*). An old term for absolute knowledge of the earth, as distinct from geology, which includes various theoretical aspects.

geographical latitude. See under **latitude and longitude (terrestrial).**

geographical mile. The length of one minute of latitude, a distance varying with the latitude, and having a mean value of 6076·8 ft.—(U.S.) One minute of longitude at the equator, i.e. 6087·1 ft.

geographical race (*Zool.*). A collection of individuals within a species, which differ constantly in some slight respects from the normal characters of the species, but not sufficiently to cause them to be classified as a separate species, and which are peculiar to a particular area.

ge'oid (*Surv.*). The figure of the mean sea-level surface assumed to be continued across the land. It is approximately an oblate ellipsoid of revolution.

geo-isotherms (*Geol.*). Surfaces of equal temperature in the lithosphere below ground-level.

geological time (*Geol.*). The time extending from the end of the Formative Period of earth history to the beginning of the Historical Period. It is conveniently divided into several Periods, each being the time of formation of one of the Systems into which the Stratigraphical Column is divided. Thus the *Carboniferous Period* is the interval of time during which the rocks including the Carboniferous Limestone, Millstone Grit, and Coal Measures in Britain, and the Mississippian and Pennsylvanian strata in the U.S.A., were in the process of formation. The complete list of Periods from the oldest to the youngest is:—Pre-Cambrian, Cambrian, Silurian, Devonian, Carboniferous, Permian, Triassic, Jurassic, Cretaceous, Tertiary, and Quaternary. The position of any rock in this time sequence is fixed by the fossils it contains. The absolute measurement of geological time is a baffling problem, but the ages of igneous rocks can be measured by highly specialised chemical methods, one being based on the estimation of the minute quantities of helium spontaneously generated in certain radioactive minerals (see **pleochroic haloes**). Baron G. de Geer has used the examination of the laminations in varve clays to measure the time which has elapsed since the Pleistocene glaciation.

geology. The science which investigates the history of the earth's crust, from the earliest times to the commencement of the Historical Period. It deals with the compositions, arrangement, and origins of the rocks of the earth's crust, and with the processes involved in the evolution of its present structure. Geology is now divided into several branches: *physical geology*, the study of the processes of sedimentation and denudation, the work of the atmosphere, water, ice, rivers, and the sea, the study of rock structures; *petrology*, the study of the nature, composition, textures, and origins of igneous, metamorphic, and sedimentary rocks and of the metallic ores; *mineralogy*, the study of the compositions, physical characters (including crystal form) of the natural minerals; *stratigraphy* or *historical geology*; and *palaeontology* (with *palaeobotany*), which traces the history of life on this planet and the structures and relationships between the several kinds of organisms.

geometrical attenuation (*Acous.*). The reduction in intensity of a sound-wave solely on account of the distribution of energy in space; e.g. due to inverse-square law, or progression area along the axis of a horn.—(*Radio*) The reduction in field strength of an electromagnetic wave as it progresses from the source on account of spreading out.

geometrical optics (*Light*). The study of optical problems based on the conception of light rays. See **physical optics.**

geometrical stair (*Build.*). A stair arranged about a well-hole and curved between the successive flights.

ge'onas'ty (*Bot.*). Curvature towards the ground.

ge'ophi'lic (*Bot.*). Growing in soil.

ge'ophi'lous (*Bot.*). Having a short stout stem with rather large leaves, borne at soil level.—(*Zool.*) Living on, or in, the soil.

geophys'ics. The science concerned with the physical characteristics and properties of the earth; it makes use of the data available in geodesy, seismology, meteorology, and oceanography, as well as that relating to atmospheric electricity, terrestrial magnetism, and tidal phenomena. Applied geophysics has, by means of electrical, magnetic, gravitational, seismic, and other methods, achieved many discoveries of geological and economic importance below the earth's surface.

geophysical prospecting (*Mining*). Prospecting by measuring differences in the density, electrical resistance, or magnetic properties of the earth's crust.

ge'ophyte (*Bot.*). A plant which perennates by means of subterranean buds.—*adj.* **ge'ophyt'ic.**

geopla'giotrop'ic (*Bot.*). Growing in a direction at an angle to the ground surface.

georgette' (*Textiles*). A light-weight silk fabric with a crêpe effect, used as dress material. A similar material is made from fine hard-twisted cotton yarns.

Georgian glass (*Build.*). A reinforced fire-resisting glass.

Georgian Series (*Geol.*). See **Waucobian Series.**

geosyn'cline (*Geol.*). A long, relatively narrow area of marine sedimentation, within which the maximum thickness of sediment is found in the central zone, which also experiences the maximum depression. Thus the floor of the geosyncline is synclinal in form, but ultimately it may be silted up to sea-level, even in the centre. Buckling of a geosyncline, involving intense folding and transportation along thrust-planes during earth movements, is believed to be the prime cause of mountain-building.

geotax'is, geotax'y (*Biol.*). The response of an organism to the stimulus of gravity.—(*Bot.*) The movement of the entire plant from one place to another as a reaction to the stimulus of gravity.—*adj.* **geotac'tic.**

geothermal gradient (*Mining*). The rate at which the temperature of the earth's crust increases with depth.

ge'otome (*Bot.*). An instrument used for taking soil samples without disturbing the surrounding soil.

geotro'pism (*Biol.*). Geotaxis.—(*Bot.*) The reaction of a plant member to gravity, shown by a curvature caused by one side growing faster than the other, tending to bring the axis of the member into line with the direction of gravity.—*adj.* **geotropic.**

Gephyre'a (*Zool.*). A loose term used by some zoologists to embrace the *Echiuroidea* and the *Sipunculoidea*, to which are sometimes added the *Priapuloidea*. Owing to the dubious nature of the affinities between these groups, the *Gephyrea* are now considered to be an obsolete group.

gephy'rocer'cal (*Zool.*). (Of a secondarily simplified type of tail-fin) resembling the diphycercal type but derived from the homocercal or heterocercal type by reduction.

geranial (*Chem.*). See **citral.**

Gerhardt's test (*Chem.*). A test for detecting diacetic acid in the urine, based upon the formation of a deep-red colour when ferric chloride is added and all precipitated phosphates are filtered off.

Gerlach compensator (*Acous.*). The realisation of an acoustic pressure by balancing it against the pressure arising in a gold foil in a magnetic field carrying a current which is adjustable in magnitude and phase.

Gerlier's disease, jer-lyā (*Med.*). Paralysing vertigo. A disease, endemic in the Canton of Geneva and in the north of Japan, in which a sudden attack of pain in the neck and back is accompanied by dizziness and temporary paralysis.

germ (*Zool.*). The primitive rudiment which will develop into a complete individual, as a fertilised egg or a newly formed bud.

germ band (*Zool.*). In Insects, a ventral plate of cells, produced in the egg by cleavage, which later gives rise to the embryo.

germ cells (*Zool.*). In *Metazoa*, special reproductive cells which are liberated by the organism and in which the qualities of the organism are inherent. Gametes; spermatozoa and ova, or the cells which give rise to them.

germ centre (*Zool.*). See **Flemming's germ-centres.**

germ layers (*Zool.*). The three primary cell-layers in the development of *Metazoa*, i.e. ectoderm, mesoderm, and endoderm.

germ nucleus (*Zool.*). See **pronucleus.**

germ plasm (*Gen.*). In early theories of inheritance, a specific nuclear substance which was supposed to be the bearer of the hereditary characters and to remain unchanged in spite of the differentiation of the body. Also called GONOPLASM.

germ pore (*Bot.*). (1) A thin, usually rounded area in the wall of a pollen grain through which the pollen tube emerges.—(2) A similar spot in a spore wall from which the germ tube develops.

germ sporangium (*Bot.*). A sporangium formed at the end of a germ tube produced by a zygospore.

germ stock (*Zool.*). The stolon of *Urochorda.*

germ track (*Zool.*). The sequence of cell-generations through which the germ cells are connected with the fertilised ovum.

germ tube (*Bot.*). The tubular outgrowth put out by a germinating spore, from which the thallus develops by subsequent branching or on which a germ sporangium is formed.

germ vitellarium (*Zool.*). An organ of some *Turbellaria*, part of which functions as a gonad and part as a vitelline gland.

germ yolk gland (*Zool.*). See **germ vitellarium.**

german (*Mining*). A straw tube filled with gunpowder and used as a fuse. Not used in coal-mines.

German lapiz (*Min.*). See **Swiss lapiz.**

German measles (*Med.*). See **rubella.**

German nozzle (*Eng.*). See **parabolic nozzle.**

German siding (*Build.*). Weather-boards finished with a hollow curve along the outside of the top edge, and rebated along the inside of the lower edge.

German silver (*Met.*). A series of alloys containing copper, zinc, and nickel within the limits, copper 52-80%, zinc 10-35%, and nickel 5-35%. Large numbers of compositions are made, and the alloys are used for fittings of all kinds in ships, trains, automobiles, and buildings, as base metals for electroplating, and, on account of their low temperature coefficient, for electrical resistances. Also called NICKEL SILVER.

germa'nium (*Chem.*). Symbol, Ge. A very rare metallic element in the fourth group of the periodic system. Greyish-white in appearance. At. no. 32, at. wt. 72·5, sp. gr. 5·47, m.p. about 950° C. Germanium occurs only in a few rare minerals, such as argyrodite.

ger'marite (*Min.*). A name (which should not be used) applied to a slightly altered hypersthene.

germa'rium (*Zool.*). The formative area of an ovary, in which the growth and maturation of the germ cells takes place.

germen (*Bot.*). See **ovary** (1).—(*Zool.*) The primary mass of undifferentiated cells which will give rise to the germ cells. Cf. *soma*.

germinable (*Bot.*). Able to germinate if placed under suitable conditions.

germinal aperture or **germinal pore** (*Bot.*). See **germ pore.**

germinal cells (*Zool.*). See **germ cells.**

germinal disc (*Zool.*). The flattened circular region at the top of a megalecithal ovum, in which cleavage takes place.

germinal epithelium (*Zool.*). A layer of columnar epithelium which covers the stroma of the ovary.

germinal layers (*Zool.*). See **germ layers.**

germinal spot (*Zool.*). The nucleolus of the *germinal vesicle* (q.v.).

germinal vesicle (*Zool.*). The nucleus of the oöcyte.

germination (*Bot.*). The beginnings of growth in a spore or seed.

germipar'ity (*Zool.*). Reproduction by formation of germs.

geron'tic (*Zool.*). Pertaining to the senescent period in the life-history of an individual.

gerontol'ogy (*Med.*). The scientific study of old age and of diseases peculiar to this period of life.

gers'dorffite (*Min.*). Metallic grey sulphide-arsenide of nickel, occurring as cubic crystals or in granular or massive forms.

ges'so. A pasty mixture of whiting, prepared with size or glue, applied to a surface as a basis for painting or gilding.

gestalt (*Psychol.*). German, 'form,' 'pattern,' 'configuration.' An organised whole, e.g. a living organism, a melody, a picture, the solar system, in which each individual part affects every other, the whole being more than a sum of its parts. The *Gestalt School of Psychology* was founded by Wertheimer, Köhler, and Koffka, who conducted experiments, on humans and animals, in the fields of perception, learning, and intelligence. They demonstrated the tendency of the mind to perceive situations as a whole (a 'pattern,' *gestalt*), rather than as a number of isolated elements or sensations.

gestation (*Zool.*). In Mammals, the act of retaining and nourishing the young in the uterus; pregnancy.

get (*Mining*). To win or mine.

getter (*Build.*). A familiar name applied to a workman engaged in loosening the earth in an excavation.

getter (*Thermionics*). A substance used in the manufacture of high-vacuum devices for the removal of the last traces of gas after pumping. Generally a piece of magnesium which is electrically heated to incandescence.

geyser, gā'— *or* gī'— (*Build.*). A water-heating appliance providing supplies of hot water rapidly for domestic purposes, the source of heat being gas or electricity.

geyser or **gusher** (*Geol.*). A volcano in miniature, from which hot water and steam are erupted periodically instead of lava and ashes during the waning phase of volcanic activity. Named from the Great Geyser in Iceland, though the most familiar example is probably 'Old Faithful' in the Yellowstone Park, Wyoming. The eruptive force is the sudden expansion which takes place when locally heated water, raised to a temperature above boiling-point, flashes into steam. Until the moment of eruption this had been prevented by the pressure of the super-incumbent column of water in the pipe of the geyser, which is usually terminated upwards by a sinter crater.

gey'serite (*Min.*). See **sinter.**

ghaut (*Build.*). A landing-stage stair on a riverside.

Ghon's focus (*Med.*). The first part of the lung to be infected in pulmonary tuberculosis, constituting the primary lesion of the disease.

ghost (*Cinema.*). Vertical streaks on high-lights in a projected picture, arising from incorrect phasing of the rotary shutter with respect to the moving film.

ghost or **ghost line** (*Met.*). In steel, a band in which the carbon content is less than that in the adjacent metal and which therefore consists mainly of ferrite.

ghost circuit (*Teleph.*). A double phantom circuit made from one phantom circuit in each leg.

ghost crystal (*Min.*). A crystal within which may be seen an early stage of growth, outlined by a thin deposit of dust or other mineral deposit.

ghost image (*Light*). The image arising from a mirror when the rays have experienced reflection within the glass between the surface and the silvering.—(*Television*) See **double image.**

giant cells (*Zool.*). Cells of unusual size, as the myeloplaxes of bone-marrow: certain cells of the excitable region of the cerebrum: certain cells sometimes found in lymph-glands: large multinucleate cells of the thymus gland and of the spleen pulp: abnormally large neurocytes in *Annelida*.

giant fibres (*Zool.*). In some *Invertebrata*, certain enlarged nerve-fibres of the ventral nerve cord, which are believed to serve for the occasional violent discharge of nervous energy in case of emergency.

giant star (*Astron.*). See **dwarf star.**

gi'antism, gigan'tism (*Med.*). Uniformly excessive growth of the body, due to overactivity of the anterior lobe of the pituitary gland.

Gianuzzi's crescents, jan-oot'sē (*Zool.*). Groups of serous or mucous cells lying next to the basement membrane, in the salivary glands of Vertebrates.

giardiasis, jar-di'a-sis (*Med.*). Infestation of the intestinal tract with the flagellate protozoon *Giardia lamblia*, sometimes causing severe diarrhoea.

gib (*Eng.*). (1) A metal piece used to transmit the thrust of a wedge or cotter, as in some connecting-rod bearings.—(2) A brass bearing surface let into the working face of a steam-engine cross-head.

gibs (*Mining*). See **sprags.**

gib-headed key (*Eng.*). A key for securing a wheel, etc. to a shaft, having a head formed at right-angles to its length.

Gibbs' adsorption theorem (*Chem.*). Solutes which lower the surface tension of a solvent tend to be concentrated at the surface, and conversely.

Gibbs' function (*Chem.*). See **thermodynamic potential.**

Gibbs' phase rule (*Chem.*). See **phase rule.**

Gibbs-Helmholtz equation (*Chem.*). An equation of thermodynamics,

$$-\Delta A = -\Delta U + T \cdot \frac{d(-\Delta A)}{dT},$$

where $-\Delta A$=decrease in free energy; $-\Delta U$=decrease in intrinsic energy; T=the absolute temperature. It is applied to the voltaic cell in the form

$$yFE = -q + yFT \cdot \frac{dE}{dT}.$$

where y=the number of gram equivalents of chemical change; F=the faraday; E=the e.m.f. of the cell; $-q$=the heat of reaction.

gibbous, gib'us (*Astron.*). The word applied to the phase of the moon, or of a planet, when it is between either quadrature and opposition, and appears less than a circular disc but greater than a half disc.

gibbous, gibbose (*Bot.*). (1) Swollen, especially to one side.—(2) Pouched.—(3) Convex above and flat below; hump-backed.

gibbsite (*Min.*). Hydrated oxide of aluminium, $Al_2O_3 \cdot 3H_2O$, occurring as minute mica-like crystals, concretional masses, or incrustations. An important constituent of bauxite. Also called HYDRARGILLITE.

giblet check (*Build.*). An exterior rebate for a door which opens outwards.

Gibraltar fever (*Med.*). See **undulant fever.**

gid (*Vet.*). See **coenurosis.**

Gies' biuret reagent (*Chem*). A reagent for testing the presence of proteins by the biuret reaction; it consists of a solution of 10% KOH and 0·075% copper sulphate.

Giffard's injector (*Eng.*). The original steam *injector* (q.v.).

gig (*Mining*). A mine cage or skip.

gig stick (*Plast.*). A rod pivoted at one end and carrying a horsed-up mould at the other, to facilitate running circular work.

gigan'tism (*Bot*). Abnormal increase in size, often associated with polyploidy.—(*Med.*) See **giantism.**

giggering (*Bind.*). A method of producing lines on the back of a volume by means of a catgut cord.

gilbert (*Elec. Eng.*). The c.g.s. unit of magnetomotive force; it is equal to $4\pi/10$ ampere-turns.

gilder's wax (*Dec.*). Wax dressing for protecting and improving brilliance of gilding.

gilding (*Bind.*). The application, to the back of a book, of wording or designs executed from gold-leaf. Also, the application of *gilt edges* (q.v.).

gilding (*Dec.*). The operation of finishing painted surfaces with oil gold-size and finally coating with gold-leaf.

gilding metal (*Met.*). Copper-zinc alloy containing 5% zinc.

Giles valve (*Elec. Eng.*). A form of lightning arrester in which condensers are used in conjunction with ordinary spark-gaps.

gill (*Bot.*). One of the vertical plates of tissue that bears the hymenium in an agaric.

gill (*Zool.*). A membranous respiratory outgrowth of aquatic animals, usually in the form of thin lamellae or branched filamentous structures: in *Salpida*, the dorsal hyperpharyngeal bar which represents the remnant of the branchial chamber.

gills (*Heating*). Ribs which project from heating surfaces and serve to increase the effective radiation area.

gill arch (*Zool.*). In Fish, the incomplete jointed skeletal ring supporting a single pair of gill slits: one segment of the branchial basket.

gill bars (*Zool.*). See **gill rods.**

gill basket (*Zool.*). In Fish and Cyclostomes, the skeletal framework which supports the gills and gill slits.

gill book (*Zool.*). The book-like respiratory lamellae of *Xiphosura* borne by the opisthosoma, of which they represent the appendages. Also called BOOK GILL.

gill cavity (*Bot.*). A ring-shaped hollow in the young fruit body of an agaric, within which the early stages of the organisation of the gills are completed.

gill clefts (*Zool.*). See **gill slits.**

gill cover (*Zool.*). See **operculum.**

gill net (*Ocean.*). A fixed vertical net, having the head-rope buoyed and the bottom-rope weighted, in the meshes of which fish become entangled by their gill covers.

gill plume (*Zool.*). See **ctenidium.**

gill pouch (*Zool.*). One of the pouch-like gill slits of *Cyclostomata*.

gill rakers (*Zool.*). In some Fish, small processes of the branchial arches, which strain the water passing out via the gill slits and prevent the escape of food-particles.

gill rods, gill bars (*Zool.*). In *Cephalochorda*, chitinoid bars which support the pharynx.

gill slits, gill clefts (*Zool.*). In Vertebrates, the openings leading from the pharynx to the exterior on the walls of which the gills are situated.

gil'sonite (*Min.*). See **uintaite.**

gilt-edges (or **-top**) (*Bind.*). Said of a book having all three edges (or merely the top) decorated with burnished gold.

gil'vous (*Bot.*). Brownish.

gimbals (*Horol.*). See **gymbals.**

gimlet (*Carp.*). A small hand tool for boring holes in wood. It has a grooved shank with rough-pitch screw at the point, and is held and operated by a wooden cross-handle.

gimp (*Acous.*). A type of extraneous noise arising in wax recording, becoming apparent on reproduction.

gimp (*Textiles*). A fancy yarn consisting of a core of hard twisted thread, the covering being formed by one or more soft spun threads.

gimped (*Bot.*). Crenate.

gin. A colourless potable spirit, containing about 80% of proof spirit. It is prepared by rectifying the distillate obtained in the manufacture of whisky, and then further distilling with aromatic substances such as juniper berries, coriander, orris, almonds, etc.

gin (*Eng.*). (1) A hand hoist which consists of a chain or rope barrel supported in bearings and turned by a crank.—(2) A portable tripod carrying lifting tackle.

gin (*Mining*). A drum framework and pulleys for hoisting mineral from a shallow shaft.

gin-pit (*Mining*). A shallow shaft operated by a gin.

ginger-beer plant (*Bot.*). A symbiotic association of a yeast and a bacterium, which ferments a sugary liquid containing oil of ginger, giving ginger beer. Often known popularly as CALIFORNIAN BEES, and by similar names.

gingham (*Textiles*). A coloured cotton cloth, generally with a check pattern; used for summer dresses, aprons, etc.

ginging (*Civ. Eng.*, *Mining*). The process of lining a shaft with bricks or masonry: the lining itself.

gin'gival (*Zool.*). (In Mammals) pertaining to the gums.

gingivi'tis (*Med.*). Inflammation of the gums.

Ginglymo'di (*Zool.*). An order of *Neopterygii*, characterised by the possession of a cylindrical elongate body, a rounded tail fin, small dorsal and anal fins at the extreme hinder end of the body, ganoid scales and opisthocoelous vertebrae. North American fresh-water forms. Gar Pikes.

gingly'mus (*Zool.*). An articulation which allows motion to take place in one plane only; a hinge-joint.—*adj.* **gingly'moid.**

ginney (*Mining*). A journey set or train of tubs, trams, or trucks, or a self-acting incline, in a coal-mine.

ginney tender (*Mining*). A man working on an endless chain haulage.

Giorgi units, jor'ji. See **metre-kilogram-second system of units.**

gir'andole (*Furn.*). A large candelabra: a tall stand for candelabra or lamp.

gir'asol (*Min.*). A variety of fire opal of a bright hyacinth-red colour; the finest specimens show a faint bluish opalescence emanating from the centre of the stone.

girder (*Bot.*). An arrangement of the mechanical tissue of a stem or leaf in such a way that effective support is given to the member.

girder (*Eng.*). A beam, usually steel, to bridge an open space. Girders may be rolled sections, built up from plates, or of lattice construction.

See **box—** **plate—**
box plate— **H-beam.**
lattice—

girder bridge (*Civ. Eng.*). A bridge in which the loads are sustained by beams (generally compound) resting across the bridge supports.

girder casing (*Build.*). Material totally enclosing the projecting part of a girder below the general ceiling surface.

girdle (*Zool.*). In *Vertebrata*, the internal skeleton to which the paired appendages are attached, consisting typically of a U-shaped structure of cartilage or bone with the free ends facing dorsally.

girdles (*Mining*). A thin bed or layer of stone.

girdle structure (*Bot.*). A type of leaf structure in which the tubular photosynthetic cells are arranged in radial rows or in a curved pattern converging towards the central strands of vascular tissue.

girdling (*Bot.*). The condition when a leaf trace arises in the stem on the opposite side from the leaf to which it belongs, and curves widely through the cortex before entering the leaf base.

Girod furnace, zhē-rō (*Elec. Eng.*). An old form of direct-current arc furnace in which the arc is maintained between an electrode and the charge.

girt (*Struct.*). A small girder.

girt (*Timber*). The circumference of a round timber.

girt strip (*Carp.*). See **ribbon strip.**

git (*Foundry*). See **gate.**

give-and-take lines (*Surv.*) Straight lines drawn on a plan of any area having irregular boundaries, each line following the trend of a part of the boundary so that any small piece that it cuts off the area is balanced by an equal piece added by it. See **equalisation of boundaries.**

Givetian Stage, zhē-vet'— (*Geol.*). A division of the marine Devonian System which includes the massive Middle Devonian limestones, well exposed at the type locality of Givet-sur-Meuse. The limestones of Brixham, Torquay, and Plymouth are of the same age.

gizzard (*Zool.*). See **proventriculus.**

Gjer's kiln, gyer (*Met.*). A shaft furnace in which ores are calcined.

Gl (*Chem.*). The symbol for *glucinum*, an alternative name for *beryllium.*

glabres'cent (*Bot.*). (1) Almost but not quite without hairs.—(2) Becoming almost hairless as it matures.

glab'rous (*Bot.*). Without hairs on the surface; hairless.—(*Zool.*) Having a smooth surface.

glacé kid, glas'ā (*Leather*). Goat skin chrome-tanned and finished with a gloss; used for boot-uppers and fancy goods.

glacial acetic acid (*Chem.*). Pure concentrated acetic acid. Owing to its comparatively high m.p. (16·6° C.) it solidifies easily, forming ice-like crystals.

glacial action (*Geol.*). This comprises: (1) the grinding, scouring, plucking, and polishing effected by the ice, armed with rock fragments frozen into it; (2) the accumulation of the rock debris resulting from these processes. The extent to which melt-waters derived from the ice are responsible for both aspects of glacial action is an open question.

glacial denudation (*Geol.*). Disintegration of rocks consequent upon glacial conditions. The extent to which the enormous amount of erosion in the Pleistocene Period was directly the work of ice is a disputed question, some believing that ice affords a protective covering, and that the erosion is effected by melt-waters, chiefly during the retreat of the ice-sheets. See also **frost (geological action of).**

glacial deposits (*Geol.*). These include spreads of boulder clay, sheets of sand and gravel occurring as outwash fans, outwash deltas, and kames; also deposits of special topographical form, such as drumlins and eskers.

glacial phosphoric acid (*Chem.*). A name sometimes used for *meta-phosphoric acid.*

glacial sands (*Geol.*). These cover extensive areas in advance of sheets of boulder clay, and together with glacial (largely fluvioglacial) gravels represent the outwash from great ice-sheets. During the interglacial periods, too, much sand and gravel was deposited during the Pleistocene.

glaciation (*Geol.*). The subjection of an area to glacial conditions, with the development of an ice-sheet on its surface. Britain was subjected to glaciation during the Pleistocene Period, the area north of a line joining the Thames to the Severn being covered by ice-sheets which originated in the mountainous areas of Scotland and Wales. Three great ice-sheets, the Cordilleran, the Keewatin, and the Labradoran, covered the northern half of N. America to beyond the Canadian border, with a marked protrusion southwards in the region of the Great Lakes. In this period four distinct glaciations were experienced, separated by Interglacial Periods. In countries near the Equator, glacial conditions were widespread in the Permo-Carboniferous Period. See **glacial action, glacier.**

glacier (*Geol.*). Usually defined as a river of ice. Three varieties may be recognised: (1) the valley glacier, such as the Mer de Glace; (2) the corrie glacier; (3) the Piedmont glacier, which overflows from a valley that it occupies and spreads out over the plain at its foot. A glacier is constantly fed by the accumulation of snow, which is compressed by pressure into ice that moves slowly downhill, carrying large amounts of detritus on its surface and embedded in the ice. This load of detritus forms the moraines.

glacier lake (*Geol.*). See **lakes.**

gla'cis (*Civ. Eng.*). An inclined bank.

glad'iate (*Bot.*). Shaped like a sword blade.

gladio'lus (*Zool.*). In some Mammals, a large bone formed by the fusion of the sternebrae.

glair (*Bind.*). A preparation made from the white of egg and vinegar, used as the adhesive for gold-leaf in gold-finishing and blocking.

gland (*Bot.*). A cell or group of cells, inside or on the surface of the plant, or a multicellular outgrowth of special form, secreting some substance, often oily or resinous, sometimes containing digestive enzymes.

gland (*Eng.*). (1) A device for preventing leakage at a point where a rotating or reciprocating shaft emerges from a vessel containing a fluid under pressure.—(2) A sleeve or nut used to compress the packing in a *stuffing-box* (q.v.).

gland (*Zool.*). A single epithelial cell, or an aggregation of epithelial cells, specialised for the elaboration of a secretion useful to the organism, or of an excretory product.

gland bolts (*Eng.*). Bolts for holding and tightening down a gland.

gland cell (*Zool.*). A unicellular gland, consisting of a single goblet-shaped epithelial cell producing a secretion, usually mucus.

glanders (*Med., Vet.*). A contagious disease of horses, mules, and asses, due to infection with *Bacillus mallei*; inflammatory thickenings appear in the nasal and upper respiratory passages and also in other parts of the body. It is communicable to man. See also **farcy.**

glan'dular (*Bot., Zool.*). Bearing glands: ending in a gland; of the nature of a gland.

glandular epithelium (*Zool.*). Epithelial tissue specialised for the production of secretions.

glandular fever (*Med.*). See **mononucleosis.**

glandular serrate (*Bot.*). Having a margin consisting of short teeth tipped with glands.

glandular tissue (*Zool.*). See **glandular epithelium.**

glans (*Bot.*). A hard, dry, indehiscent fruit, containing one or a few seeds, derived from an inferior ovary, and more or less surrounded by a cupule; the acorn is a familiar example.

glans (*Zool.*). A glandular structure.

Glase'rian fissure (*Zool.*). In Mammals, a fissure of the temporal bone, which receives the Folian process of the malleus.

glass. A hard, amorphous, brittle substance, made by fusing together one or more of the oxides of silicon, boron, or phosphorus, with certain basic oxides (e.g. sodium, magnesium, calcium, potassium), and cooling the product rapidly to prevent crystallisation or devitrification. The melting-point varies between 800° C and 950° C. Heat-resisting glass generally contains a high percentage of boric oxide. The tensile strength of glass resides almost entirely in the outer skin; if this is scratched or corroded the glass is much more easily broken.—(*Diel.*) Glass is used for insulating envelopes (lamp-bulbs, etc.), and also for line insulators. See also **natural glass** and **safety glass.**

glass (*Photog.*). See **black— focusing—**

glass-bulb rectifier (*Elec. Eng.*). A mercury-arc rectifier in which the arc takes place within a glass bulb. Cf. *steel-tank rectifier.*

glass, cover (*Microscopy*). See **cover glass.**

Glass-crete (*Build.*). A form of glass construction used for pavement lights, etc., in which glass blocks are reinforced by, and framed in, steelwork.

glass-cutter (*Build.*). A tool for cutting glass to size.

glass eye (*Vet.*). Blindness of animals.

glasspaper. Paper coated with glue on which is sprinkled broken glass of a definite grain size; used for rubbing down surfaces. Cf. *sandpaper.*

glass silk (*Acous.*). See **Euphon quilt.**

glass support-rod (*Illum.*). The glass rod which supports the filament of an electric filament lamp.

glass tile (*Build.*). A small glass sheet in a roof, bonded in with slates, plain tiles, or pantiles, to admit light within the roof space.

glassed (*Build.*). A term applied to stones such as granite and marble which are highly polished by being held against a revolving disc covered with felt.

glassine or **transparent parchment** (*Paper*). A transparent glazed wrapper paper; also used in manifold books.

glassy feldspar (*Min.*). Two varieties of potash feldspar occur as transparent colourless crystals: sanidine and adularia. They differ in crystal habit and various physical characters, but not in chemical composition. Transparent yellow orthoclase is also known, but is very rare.

Glauber salt, glow'ber (*Min.*). Properly termed *mirabilite* (hydrated sodium sulphate, $Na_2SO_4 \cdot 10H_2O$). A monoclinic mineral formed in salt lakes, deposited by hot springs, or resulting from the action of volcanic gases on sea water. Obtained from Austria and the Great Salt Lake (Utah).

glau'berite (*Min.*). Monoclinic sulphate of sodium and calcium, occurring with rock salt, anhydrite, etc. in saline deposits.

glauces'cent (*Bot.*). See **glaucous.**

glau'codote (*Min.*). A tin-white orthorhombic sulph-arsenide of iron and cobalt, occurring with cobaltite in Huasco Province, Chile. Also spelt GLAUCODOT.

glaucō'ma (*Med.*). An eye-condition in which, from various causes, the intra-ocular pressure rises, making the eyeball hard and causing partial or total loss of sight.

glau'conite (*Min.*). Hydrated silicate of potassium and iron, a green mineral that forms on submerged banks, such as the Agulhas Bank. Its occurrence in sands and sandstones is regarded, therefore, as a certain indication of accumulation under marine conditions. It occurs in pigmentary form, also commonly as casts of foraminiferal shells.

glauconit'ic sandstone (*Geol.*). See **Greensand.**

glau'cophane (*Min.*). A rare monoclinic amphibole, essentially metasilicate of sodium, magnesium, and aluminium, occurring in schists resulting from the regional metamorphism of soda-rich igneous rocks, such as spilites in Anglesey and elsewhere.

glau'cous (*Bot.*). Covered with a dull greenish grey waxy bloom.—*dim.* **glaucescent.**

glaze (*Build.*). A brilliant glass-like surface given to tiles, bricks, etc.—(*Paint.*) The colours employed in the operation of graining.—(*Pot.*) A more or less transparent, thin, glass-like, clear or coloured film, applied to the surface. See also **salt glaze.**

glazed boards (*Paper*). Similar to cardboards; made from wood pulp, etc., and given a high glaze by rolling.

glazed brick (*Build.*). A brick having a glassy finish to the surface produced by spraying it with special surface preparations before firing.

glazed door (*Build.*). A door fitted with glass panels.

glazed frost (*Meteor.*). A smooth layer of ice which is occasionally formed when rain falls and the temperature of the air and the ground is below freezing-point.

Glazement (*Build.*). A proprietary facing material for concrete or brickwork; it gives a glazed waterproof surface.

glazier (*Build.*). A workman who cuts panes of glass to size and fits them in position.

glazier's putty (*Build.*). A mixture of whiting and linseed oil, sometimes including white lead, forming a plastic substance for fixing panes of glass into frames.

glazing (*Build.*). The operation of fitting panes of glass into sashes.

glazing (*Photog.*). The application of a shining surface to photographic prints by first hardening with formalin and then squeegeeing on to plate-glass or ferrotype.

glazing (*Plumb.*). The process of passing a hot iron over the lead of a *wiped joint* (q.v.) in order to produce a smooth finish.

glazing bead (*Build.*). A bead nailed, instead of putty, into a sash rebate to secure a pane.

glazing colour (*Dec.*). A covering of transparent wash on a ground coat of paint.

gle'ba (*Bot.*). The spore-bearing tissue enclosed within the peridium of the fructification of *Gasteromycetes* and in truffles.

gleb'ulose (*Bot.*). Bearing rounded humps on the surface of the thallus.

gleeds (*Mining*). A glowing coal or small coke such as that used in nail-making.

gleet (*Med.*). Chronic discharge from the urethra as a result of gonococcal infection.

gleet (*Vet.*). A catarrh of the frontal and maxillary sinuses of the horse.

Glénard's disease, glā-nar (*Med.*). See **enteroptosis.**

Glengarriff Grits (or **Beds**) (*Geol.*). A great series, several thousand feet in thickness, of alternating bands of fine-grained grit and slate, of Devonian age, occurring typically in the Glengarriff district in Ireland.

Glenkiln Shales (*Geol.*). The lowest of the four stages into which Prof. C. Lapworth divided the Moffat Shales occurring in the central parts of the Southern Uplands of Scotland. Of Ordovician age, they are approximately equivalent to the Llandeilo Series.

gle'noid (*Zool*.). Socket-shaped: any socket-shaped structure; as the cavity of the pectoral girdle which receives the basal element of the skeleton of the fore-limb.

Glen Rose Limestone (*Geol.*). The calcareous member of the Trinity succession in U.S.A., reaching 650 ft. in Arizona.

Glenroy, Parallel Roads of (*Geol.*). The strand-lines of a glacial lake which occupied Glenroy during the Pleistocene Period, when the lower part of the valley was blocked by ice.

glia (*Zool.*). See **neuroglia.**

gli'adin (*Chem.*). A prolamin obtained from wheat and rye.

glider (*Aero.*). A heavier-than-air flying-machine not power-driven within itself, although it may be towed by a power-driven aeroplane.

gliders (*Furn.*). Dome-shaped metal pieces fastened to the feet of chairs, settees, etc., in place of casters.

gliding (*Aero*.). (1) Flying a heavier-than-air craft without assistance from its engine, either in a spiral or as an approach glide before flattening-out antecedent to landing.—(2) An aeronautic sport in which an engineless aeroplane (*glider*, q.v.) is catapulted or otherwise launched from a height or towed on level ground, and makes use of rising currents before finally landing.

gliding growth (*Bot*.). A process of adjustment in growing tissues in which the ends of elongating cells slide past one another, often becoming interlocked as elongation ceases.

gliding planes (*Geol.*). In minerals, planes of molecular weakness along which movement can take place without actual fracture. Thus calcite crystals or cleavage masses can be distorted by pressure and pressed into quite thin plates without actual breakage.

glioma, gli-o'ma (*Med.*). A general term applied to a variety of tumours arising from nervous tissue in the brain and, more rarely, in the spinal cord.

gliomato'sis (*Med.*). Diffuse overgrowth of neuroglia in the brain or in the spinal cord.

Glisson's capsule (*Zool*.). In higher Vertebrates, a coat of loose connective tissue enclosing the portal vein, the hepatic artery, and the bile-duct and their branches in the liver.

globe photometer (*Illum.*). See **Ulbricht globe photometer.**

globigeri'na ooze (*Geol.*). A deep-sea deposit covering a large part of the ocean floor (one-quarter of the surface of the globe); it consists chiefly of the minute calcareous shells of the foraminifer, *Globigerina*.

globoid (*Bot.*). A rounded inclusion in an aleurone grain, consisting of a double phosphate of calcium and magnesium, combined with globulins.

glob'ular, glob'ose, glob'ulose (*Bot.*). Nearly spherical.

globular cementite (*Met.*). In steel, cementite occurring in the form of globules instead of in lamellae (as in pearlite) or as envelopes round the crystal boundaries (as in hyper-eutectoid steel). Produced by very slow cooling, or by heating between 600° C. and 700° C.

globular lightning (*Meteor.*). See **ball lightning.**

globular pearlite (*Met.*). See **granular pearlite.**

glob'ulins (*Chem.*). Proteins insoluble in water but soluble in dilute salt solution, from which they can be salted out with magnesium sulphate. Globulin, fibrinogen, fibrin, myosin, legumin, edestin, and conglutin are globulins.

glob'ulites (*Geol.*). Crystallites (i.e. incipient crystals) of minute size and spherical shape occurring in natural glasses such as pitchstones.

glo'bus (*Zool*.). Any globe-shaped structure; as the *globus pallidus* of the Mammalian brain.—*adj.* **globate.**

globus hystericus (*Med.*). The sensation as of a lump in the throat experienced in hysteria.

glochid'iate (*Bot*.). Bearing bristles with hooked tips.

glochid'ium (*Bot.*). A hair with a hooked tip, formed on the spore masses of the water fern *Azolla*.

glochidium (*Zool*.). The modified larval form of *Unionidae* (fresh-water Mussels), characterised by a toothed bivalve shell and a prominent byssus thread; incubated within the gills of the mother, and afterwards parasitic on the gills or fins of Fish.—*adj.* **glochidiate.**

gloeocystid'ium, glē-ō-sis— (*Bot.*). A cystidium of horny or of gelatinous consistency.

Gloger's law (*Zool.*). Southern races of warm-blooded animals tend to be dark-coloured, especially black, brown, and dark-red, while northern races tend to be light-coloured and greyish.

glomer'ulate (*Bot.*). Bearing glomerules.

glom'erule (*Bot.*). A small ball-like cluster of spores.

glomeruli'tis (*Med*.). Inflammation of the glomeruli of the kidney.

glomer'ulonephri'tis (*Med.*). Inflammation of the kidney, the glomeruli being mainly affected.

glomer'ulus (*Bot.*). A cymose inflorescence in the form of a crowded head of small flowers.

glomerulus (*Zool.*). In *Hemichorda*, an organ containing a blood-plexus, situated in the proboscis; believed to be excretory: a capillary blood-plexus, as in the Vertebrate kidney: a nest-like mass of interlacing nerve-fibrils in the olfactory lobe of the brain.—*adj.* **glomer'ular.**

glo'mus (*Zool.*). In the pronephros, the glomeruli of the separate somites aggregated to form a single capillary mass.

glonoin (*Chem.*). Spirits of glonoin, a 1% solution of trinitroglycerine in alcohol.

glory (*Meteor.*). A small system of coloured rings surrounding the shadow of the observer's head, cast by the sun on a bank of mist, as in the *Brocken Spectre* (q.v.). The *glory* is produced by diffraction caused by the water droplets in the mist.

glory-hole (*Glass*). A subsidiary furnace, in which articles may be re-heated during manufacture.

gloss (*Dec.*). A brilliantly shiny surface on paint or varnish.

gloss-, glosso- (Greek *glossa*, tongue). A prefix used in the construction of compound terms; e.g. *glossoepiglottic*, pertaining to the tongue and epiglottis.

gloss paint (*Paint.*). Paint to which varnish is added as an ingredient in the manufacturing process.

glossa (*Zool.*). In Insects, one of an inner pair of lobes arising from the prementum, or the median structure formed by the fusion of these lobes: in Vertebrates, the tongue: any tongue-like structure.—*adjs.* **glossate, glossal.**

glossa'rium (*Zool.*). In certain *Diptera*, the glossa, which is narrow-pointed.

glossec'tomy (*Surg.*). Surgical removal of the tongue.

glossi'tis (*Med.*). Inflammation of the tongue.

glossody'nia (*Med.*). Pain in the tongue.

glossohy'al (*Zool.*). In some Fish, an anterior extension of the basihyal lying within the tongue.

glossophagine, —sof′a-jēn (*Zool.*). Securing food by the agency of the tongue.

glossophar′ynge′al (*Zool.*). Pertaining to the tongue and the pharynx: the ninth cranial nerve of Vertebrates, running to the first gill-cleft in lower forms, to the tongue and the gullet in higher forms.

glossople′gia (*Med*) Paralysis of the tongue.

glos′sospasm (*Med.*). Spasm of the muscles of the tongue.

glossothec′a (*Zool.*). In some pupal Insects, that part of the integument which covers the proboscis.

glost oven (*Pot.*). A furnace in which biscuit, after being dipped in slip, is fired and so glazed.

glottis (*Zool.*). In higher Vertebrates, the opening from the pharynx into the trachea.

glove leather (*Leather*). Usually goat and kid skins, prepared by tanning or chrome-tanning, or by a combination of these processes.

Glover tower (*Chem*). A tower of a sulphuric acid plant used to recover the nitrogen oxides from the Gay-Lussac tower, to cool the gases from the burners, to concentrate the acid trickling down the tower, to partly oxidise the gases from the sulphur burners, and to introduce the necessary nitric acid into the chambers by running nitric acid down the tower along with the nitrated acid from the Gay-Lussac tower.

glow discharge (*Elec. Eng.*). A silent discharge of electricity through a gas in a vacuum tube, the pressure being such that the discharge is luminous.

glow tube (*Thermionics*). A gas discharge tube in which the discharge is accompanied by a visible glow.

glu′cinum (*Chem.*) *Beryllium* (q.v.).

gluco. See **glyc-.**

***d*-glucon′ic acid** (*Chem.*). $CH_2OH(CHOH)_4COOH$, an oxidation product of *d*-glucose.

glu′cophore (*Chem.*). A group of atoms which causes sweetness of taste.

glucopro′teins (*Chem.*). Compounds formed by a protein with a substance containing a carbohydrate group other than a nucleic acid, e.g. mucin.

***d*-gluco′samine** (*Chem.*). $CH_2OH(CHOH)_3CHNH_2\cdot CHO$, an amino-sugar, it represents a link between the carbohydrates and the proteins.

glu′cosans (*Chem.*). The anhydrides of glucose, comprising cellulose, starch, dextrin, glycogen, etc.

***d*-glucose** (*Chem.*). Dextrose, grape-sugar; $C_6H_{12}O_6+H_2O$. It crystallises from water in six-sided plates, m.p. 86° C.; from methyl alcohol in small anhydrous prisms, m.p. 146° C. It is dextro-rotatory and is prepared by the hydrolysis of starch and other carbohydrates.

glu′cosides (*Chem.*). A group of complex organic compounds occurring in vegetable tissues, characterised by the formation on hydrolysis of a sugar, usually *d*-glucose.

glucosuria (*Med.*). See **glycosuria.**

glucuron′ic acid (*Chem.*). Glycuronic acid, $CHO\cdot(CHOH)_4\cdot COOH$. It can be prepared by reduction of the lactone of saccharic acid, and occurs in small amounts in the urine. It forms ethers or esters with phenols or aromatic acids, which are in this form removed from the body.

glue (*Carp., etc.*). A substance used as an adhesive agent between surfaces to be united. Glue is obtained from various sources, e.g. bones, gelatine, starch, resins, etc. Well-dried glue contains about 12-15% of moisture.

glue pot (*Carp., etc.*). A vessel in which glue is heated to a condition suitable for use. A mixture of glue and water is placed in an inner vessel, which is then suspended in water contained in an outer vessel, to which the heat is applied.

gluing (*Carp., etc.*). The operation of making one surface adhere to another by running glue between them, applying pressure, and then allowing the glue to set.

gluma′ceous (*Bot.*). Thin, brownish, and papery in texture.

glume (*Bot.*). A dry membranous bract associated with the flower of a grass. Several glumes, with the associated flowers, make up the *spikelet* (q.v.).

glumel′la (*Bot.*). See **palea.**

glumif′erous (*Bot.*). Having flowers enclosed by glumes.

glut (*Build.*). A *closer* (q.v.).

glutam′ic acid (*Chem.*). $HOOC\cdot CH_2\cdot CH_2\cdot CH(NH_2)\cdot COOH$, α-aminoglutaric acid, a mono-amino-dicarboxylic acid, obtained by the hydrolysis of albuminous substances.

glu′tamine (*Chem.*). The mono-amide of glutamic acid, $(NH_2)\cdot CO\cdot CH_2\cdot CH_2\cdot CH(NH_2)\cdot COOH$.

glute′al (*Zool.*). Pertaining to the buttocks.

glu′telins (*Chem.*). Simple proteins, insoluble in water and in neutral salt solutions, but soluble in dilute acids and alkalies; e.g. glutenin or oryzenin.

glu′ten (*Bot*). (1) A reserve protein found in plants.—(2) A sticky coating on the pilei of some agarics.*

glu′tenin (*Chem.*). A protein of the glutelin group, found in wheat.

glute′us (*Zool.*). In land Vertebrates, a retractor and elevator muscle of the hind-limb.

glu′tinous (*Bot.*). Covered by a sticky or clammy exudation.

glutton (*Furs*). See **wolverene.**

glyc-, glyco-, gluco- (Greek *glykos*, sweet). A prefix used in the construction of compound terms; e.g. *glycosuria.*

glycerides, glis′— (*Chem.*). A term for glycerine esters, the most important of which are the *fats* (q.v.).

glycerine, glycerin (*Chem.*). Glycerol, $CH_2OH\cdot CHOH\cdot CH_2OH$, a thick syrupy hygroscopic colourless liquid, m.p. 17° C., b.p. 290° C., obtained by the hydrolysis of oils and fats, or by the alcoholic fermentation of glucose in the presence of sodium sulphite solution, which reacts with the aldehydes formed, thus liberating a larger amount of glycerine. Glycerine is a trihydric alcohol, forming alcoholates, esters, and numerous derivatives. It is a raw material for *nitro-glycerine* (q.v.). printing inks, foodstuff preparations, etc.

glycerine litharge cement (*Chem.*). A mixture of litharge (lead oxide) and glycerine which rapidly sets to a hard mass of great strength. Time of setting depends largely on the quality and age of the litharge.

glycerol (*Chem.*). See **glycerine.**

glycerol-phthalic resins (*Plastics*). See **glyptal resins.**

gly′cine (*Chem.*). Aminoacetic acid.

gly′cocoll (*Chem.*). Aminoacetic acid.

gly′cogen (*Chem.*). $(C_6H_{10}O_5)x$, a starch found in the liver; sometimes called ANIMAL STARCH. Its hydrolysis by acids or by enzymes finally yields glucose. Glycogen plays an important rôle in animal metabolism.

glycogen mass (*Bot.*). See **epiplasm.**

gly′cols (*Chem.*). Dihydric alcohols, of the general formula $C_nH_{2n}(OH)_2$, viscous liquids with a sweet taste or crystalline substances. They give all the alcohol reactions and, having two hydroxyl groups in the molecule, they can also form mixed compounds; e.g. ester-alcohols.

glycol (*Chem.*). See **ethylene glycol.**

glycoproteins (*Chem.*). Glucoproteins.

glycosu′ria, glucosuria (*Med.*). The presence of sugar in the urine.

glycuronic acid (*Chem.*). Glucuronic acid.

glyox′al (*Chem.*). $CHO\cdot CHO$, a dialdehyde, existing in four modifications, viz. polyglyoxal $(CHO\cdot CHO)_n$ from which, by heating with P_2O_5, glyoxal $CHO\cdot CHO$ is obtained. This substance is a yellow liquid, m.p. 15° C., b.p. 51° C. (776 mm.), forming green vapours, but it is not stable, and polymerises to insoluble paraglyoxal, $(\mathrm{CHO{\cdot}CHO})_x$. There is also known a trimolecular form, $(\mathrm{CHO{\cdot}CHO})_3$.

glyoxal'ic acid (*Chem.*). $\mathrm{CHO{\cdot}COOH+H_2O}$ or $\mathrm{CH(OH)_2{\cdot}COOH}$, an aldehyde monobasic acid occurring in unripe fruit; rhombic prisms, soluble in water, volatile in steam, which can be obtained by the oxidation of ethyl alcohol with nitric acid, or by the hydrolysis of dichloracetic acid.

glyox'alines (*Chem.*). *Iminazoles* (q.v.).

glyoxyl'ic acid (*Chem.*). Glyoxalic acid.

glyph (*Arch*). A short upright flute.

glyptal resins (*Plastics*). Almost colourless, tacky, adhesive resins manufactured by heating together glycerol and phthalic anhydride at about 200° C. They are used as bonding materials for mica, and as additions to stoving lacquers. Modified glyptal resins, made by replacing part of the phthalic anhydride with other acids, are employed in the paint and varnish trade.

Glyptanite (*Diel.*). Micanite using glyptal as the bond.

gm. An abbrev. for *gram.*

Gmelin test, gmā'lin (*Chem.*). A test for the presence of bile pigments; based upon the formation of various coloured oxidation products on treatment with concentrated nitric acid.

gmelinite, gmel'— (*Min.*). A pseudohexagonal zeolite, white in colour and rhombohedral in form, resembling chabazite. Chemically it is hydrated silicate of aluminium, sodium, and calcium.

gnath-, gnatho-, nath-ō— (Greek *gnathos*, jaw) A prefix used in the construction of compound terms; e.g. *gnathopod* (q.v.).

gnathic (*Zool.*). Pertaining to the jaws: masticatory.

gnathites (*Zool.*). Mouth-parts, especially those of *Insecta.*

gnath'obase (*Zool.*). In *Arthropoda*, a masticatory process on the inner side of the first joint of an appendage.

Gnathobdel'lida (*Zool.*). An order of *Hirudinea* the members of which are all terrestrial or freshwater forms possessing botryoidal tissue; they have jaws but the proboscis is not protrusible; the blood is red; on animals of all kinds.

gnathochila'rium (*Zool.*). In *Diplopoda*, a flat plate forming the lower lip and representing the fused second pair of mouth-parts.

gnath'opod (*Zool.*). In *Arthropoda*, any appendage modified to assist in mastication.

gnathop'odite (*Zool.*). See **maxilliped.**

gnathoso'ma (*Zool.*). In *Acarina*, the segments of the mouth and its appendages.

gnathos'tegite (*Zool.*). In some *Crustacea*, a covering plate associated with the mouth-parts.

gnathosto'matous (*Zool.*). Having the mouth provided with jaws.

gnathotheca, —thē'ka (*Zool.*). The horny part of the lower beak of a Bird.

gneiss, nis (*Geol.*). A metamorphic rock of coarse grain size, characterised by a mineral banding, in which the light minerals (quartz and feldspar) are separated from the dark ones (mica and/or hornblende). The layers of dark minerals are foliated, while the light bands are granulitic. See also **metamorphism.**

gneissose texture, gneissic texture (*Geol.*). A rock texture in which foliated and granulose (granulitic) bands alternate; typical of rocks which have been recrystallised under directed pressure, during regional metamorphism.

gnomon, nō'mon (*Surv.*). An early instrument for determination of time and latitude, involving the measurement of the shadow of an upright rod as cast by the sun.

go (*Build.*). The *going* (q.v.

go-out (*Hyd. Eng.*). A sluice in an embankment impounding tidal waters, which can pass through it when the tide is out.

go-through machine (*Lace*). A lace machine of the Levers type but with extended combs, larger bobbins, and greater speed.

goaf (*Mining*). See **gob.**

goat pox (*Vet.*). An epidemic disease of goats due to infection by a filterable virus; characterised by fever and a papulo-vesicular eruption of the skin and mucous membranes.

gob or **goaf** (*Mining*). The space left by the extraction of a coal-seam, into which waste is packed.

gob fire (*Mining*). A fire occurring in a worked-out area, due to ignition of timber or broken coal left in the gob.

gob heading, gob road (*Mining*). A roadway driven through the gob after the filling has settled.

gob stink (*Mining*). A smell indicating spontaneous combustion or a fire in the goaf or gob.

gobber (*Mining*). A man employed to pack rubbish or waste into the gob.

gobbet (*Build.*). A stone block.

Gobelins tapestry, gō-blan^{g} (*Textiles*). A famous type of tapestry made in Paris since the reign of Louis XIV and named after its first supervisors, Giles and Jean Gobelins. Noted for its smooth surface, wonderful blend of colours, and its handsome borders.

goblet cell (*Zool.*). A goblet- or flask-shaped epithelial gland cell, occurring usually in columnar epithelium.

gobo (*Cinema.*). Sound-absorbing panel used in sound-film production for regulating the reflection of sound-waves on the set; intended to be outside the camera angle.

godroon' (*Arch.*). An ornamentation taking the form of a cable or bead.

goesover, gō-zō-ver (*Cinema.*). A shade to prevent light from the top lighting of a set from getting into the lens of a camera and causing fog.

goethite, gė'tīt (*Min.*). Orthorhombic hydrated oxide of iron with composition $\mathrm{Fe_2O_3{\cdot}H_2O}$. Externally resembles limonite, with which it is frequently misidentified. See **iron ores, limonite.**

going (*Build.*). The horizontal interval between consecutive risers in a stair.

going-barrel (*Horol.*). A barrel in which the winding takes place from the arbor. Power is transmitted direct from such a barrel to the train by teeth on the barrel.

going bord (*Mining*). A roadway to the coal face in bord and pillar working.

going fusee (*Horol.*). A fusee with maintaining power.

going light (*Vet.*). Emaciation; the term is frequently applied to tuberculosis of birds.

going part (*Weaving*). The part of a loom known as the *sley* or *batten.* It swings to and fro when the loom is at work and beats up the weft to the edge of the woven cloth.

going road (*Mining*). A working place in a coal-mine which is being pushed forward, as distinct from an old or disused place.

going rod (*Build.*). A rod used for setting out the going of the steps in a flight.

goitre, goiter (*Med.*). Morbid enlargement of the thyroid gland.

goitre, exophthalmic (*Med.*). See **Basedow's disease.**

goitrogenous, —troj'en-us (*Med.*). Producing, or tending to produce, goitre.

goitrous (*Med.*). Affected with, or pertaining to, goitre.

gold (*Met.*). A heavy, yellow, metallic element in the first group of the periodic system. Symbol, Au. At. no. 79, at. wt. 197·2, sp. gr. at 20° C. 19·3, m.p. 1063° C., specific electrical resistivity 2·42 microhms per cm. cub. Most of the metal is retained in gold reserves but some is used in jewellery, dentistry, and for decorating pottery and china. In coinage and jewellery the gold is alloyed with varying amounts of copper and silver. *White gold* is usually an alloy with nickel, but as used in dentistry this alloy contains platinum or palladium.

gold amalgam (*Min.*). A variety of native gold containing approximately 60% of mercury; discovered in Colombia and occurs also in the Mariposa district of California.

gold blocking (*Bind.*). The process of pressing a design upon gold leaf spread out on the cover of a book, the tools or dies, which are heated, leaving the desired impression. Also carried out by machine, the gold-leaf being fed from a spool.

gold cushion (*Bind.*). A small board, covered with rough calfskin, which is padded with a soft material. The gold leaf required for gold blocking is placed on the cushion ready for use.

gold-leaf (*Dec.*). Pure gold beaten out into extremely thin sheets, so that it may be applied to surfaces which are to be gilded.

gold-leaf electroscope (*Elec. Eng.*). An electroscope consisting of a glass jar which contains two pieces of gold-leaf attached to a metal rod passing through the top of the jar; if the metal rod becomes charged, the leaves repel each other and diverge.

gold number (*Chem.*). The weight in milligrams of a lyophilic colloid which is just insufficient to prevent the change from red to blue in 10 c.c. of colloidal gold solution after the addition of 1 c.c. of 10% sodium chloride solution.

gold paints (*Dec*). Paints made of bronze powders mixed with transparent varnish or amyl acetate.

gold-size (*Paint.*). A preparation, made up in different ways, which is used as a basis to secure gold-leaf on to surfaces which are to be gilded.

gold spring (*Horol.*) The delicate spring forming part of the detent escapement. One end is anchored to the detent, and the other end rests against the detent horn and projects just beyond it. On one vibration of the balance, the discharging pallet presses against the end of the gold spring and moves the whole detent, bringing about unlocking of the escape wheel. On the return vibration, the discharging pallet merely lifts the gold spring without causing movement of the detent.

gold toning (*Photog.*). The addition, by chemical means, of a gold film to the surface of the silver image of a photographic print.

golden beryl (*Min.*). A clear yellow variety of the mineral beryl, prized as a gemstone. Heliodor is a variety from S.W. Africa.

golden number (*Astron.*). A term derived originally from medieval church calendars, and still used to signify the place of a given year in the Metonic Cycle of nineteen years.

Goldschmidt alternator (*Radio*). A high-frequency alternator in which the stator and rotor carry a number of windings each tuned to successively higher frequencies. Currents of one frequency in one winding in, say, the rotor generate currents of higher frequency in the stator, which in turn generate currents of still higher frequency in the rotor, and so on. Frequencies up to 100 K.C. can be thus attained.

Goldschmidt process (*Chem.*). See **aluminothermic process.**

Golgi apparatus (*Cyt.*). A protoplasmic cell-inclusion which takes the form of scattered particles (*Golgi bodies*), or a continuous network, undergoes changes of form and position in secreting cells, and is actively concerned with cell-metabolism.

Golgi-Mazzoni corpuscles,—mat-sŏ′nē (*Zool.*). In Vertebrates, a type of sensory nerve-ending resembling an end bulb.

Golgi's organs (*Zool.*). In Vertebrates, a type of sensory nerve-ending occurring in tendons near the point of attachment of muscle fibres, and consisting of a terminal arborisation with irregular varicosities, enclosed in a fibrous capsule.

goliath Edison screw-cap (*Elec. Eng.*). An Edison screw-cap having a screw thread about 1½-in. diameter, with 4 threads per inch; used with large metal-filament lamps.

gompho′sis (*Zool.*). A type of articulation in which a conical process fits into a cavity; as the roots of teeth into their sockets.

gon-, go′no- (Greek *gonos*, offspring, birth) A prefix used in the construction of compound terms; e.g. *gonoduct* (q.v.)

gonad (*Zool.*). A mass of tissue arising from the primordial germ cells and within which the spermatozoa or ova are formed; a sex gland; ovary or testis.—*adj.* **gona′dial.**

gonal (*Zool.*). Forming or giving rise to a gonad; as the *gonal* ridge.

gonan′gium (*Zool.*). See **gonotheca.**

gonapoph′yses (*Zool.*). The external organs of reproduction in Insects; they consist usually of two pairs of chitinous processes in the male and three pairs in the female, arising from the ninth (male) or the eighth and ninth (female) somites of the abdomen; in the female they may be modified to form an ovipositor or a sting.

gones, gōnz (*Cyt.*). The groups of four nuclei or of four cells which are the immediate results of meiosis.

gong (*Horol.*). Rectangular steel strip bent into the form of a spiral which, after blueing, provides a deep note when struck; used in clocks when striking the hours.

go′ni- (Greek *gōnia*, angle; *gony*, knee). A prefix used in the construction of compound terms; e.g. *goniometer* (q.v.). Not to be confused with the prefix *gon-*, *gono-* (q.v.).

goniale, gŏ-ni-ah′le (*Zool.*). See **antarticulare.**

gonid′ial layer (*Bot.*). See **algal layer.**

gonid′iophore (*Bot.*). An old term for *conidiophore.*

gonid′ium (*Bot.*). (1) An algal cell occurring as part of the thallus of a lichen.—(2) An old term for *conidium.*—(3) A non-motile spore formed by some *Myxophyceae.*—(4) A gemma in some liverworts.

gonim′ic layer (*Bot.*). See **algal layer.**

gonim′ium (*Bot.*). A cell of one of the *Myxophyceae* when it occurs as a part of the thallus of a lichen.

gonim′oblast (*Bot.*). A short spore-bearing filament formed from the fertilised carpogonium of red algae, and bearing one or more carpospores.

go′nioautoi′cous (*Bot.*). Bearing the antheridium as a bud-like outgrowth from a branch bearing archegonia.

goniom′eter (*Min.*). An instrument for measuring the angles between crystal faces. For elementary purposes the contact goniometer, accurate to half a degree, is used; but for more precise work a reflecting goniometer is necessary. This utilises the reflection of light by crystal faces, arranged vertically and successively brought into alignment by rotating the crystal on the turntable of the instrument, the angle of rotation being accurately measurable by appropriate scales.

goniometer (*Radio*). A device used in connexion with the Bellini-Tosi direction-finding system. It comprises two coils placed at right-angles and connected to the two crossed loops respectively; a third rotatable coil, connected to the receiver, provides the variable relative coupling of the two loops to the receiver.

goni'tis (*Vet.*). Inflammation of the stifle joint of animals.

go'no-. Prefix See **gon-**.

go'noblast (*Zool.*). A reproductive cell.

gonoblast'id (*Zool.*). See **blastostyle.**

gonoca'lyx (*Zool.*). In some Centipedes, a pair of modified appendages belonging to the same somite as the genital opening

go'nocheme, —kēm (*Zool.*). A sexual medusoid of *Hydrozoa.*

gonochor'ism (*Zool.*). Sex-determination.

gonochoris'tic (*Zool.*). Having separate sexes.

gonococ'cus (*Med.*). The causative organism of *gonorrhoea* (q.v.) —*adj.* **gonococ'cal.**

go'nocoel, —sēl (*Zool.*). That portion of the coelom the walls of which give rise to the gonads: hence, the cavity of the gonads.

go'nocyte (*Zool.*). In *Porifera*, a sexual cell which will produce ova or spermatozoa.

gonoden'dra (*Zool.*). In some of the *Siphonophora*, branched and mouthless zooids bearing gonophores.

go'noduct (*Zool.*). A duct conveying genital products to the exterior: a duct leading from a gonad to the exterior.

go'nophore (*Zool.*). A sexual individual in metagenetic *Coelenterata.*

go'noplasm (*Bot.*). In some *Oömycetes*, the protoplasm which passes through the fertilisation tube and unites with that of the oösphere.—(*Zool.*) See **germ plasm.**

go'nopore (*Zool.*). The aperture by which the reproductive elements leave the body.

gonorrhoe'a, gonorrhe'a (*Med.*). A contagious infection of the mucous membrane of the genital tract with the gonococcus, contracted usually through promiscuous sexual intercourse.

go'nosome (*Zool.*). In colonial animals, all the individuals concerned with reproduction.

go'nostyle (*Zool.*). In *Siphonophora*, a process of the main stem of the colony bearing gonophores, and sometimes representing a mouthless polyp.

gonothe'ca (*Zool.*). The vase-like expansion of the perisarc which surrounds a blastostyle and gonophores.

gono'tokont (*Zool.*). See **auxocyte.**

go'notome (*Zool.*). A somite in an embryo which contains the anlage of a gonad.

gonozo'oid (*Zool.*). In *Siphonophora*, an individual bearing gonophores.

go'nys (*Zool.*). In Birds, the edge of the lower beak, reaching from the angle of the chin to the myxa.—*adj.* **gonyd'ial.**

Gooch crucible, Gooch filter (*Chem.*). A filter used in laboratories, which consists usually of a small porcelain cup the bottom of which is perforated with numerous small holes and covered with a thin layer of washed asbestos fibres, which act as a filtering medium.

good (*Paper*). Also known as *insides* (q.v.). A term used to describe the best sheets from the inside of a ream of paper.

good colour (*Print.*). A term which indicates consistent distribution of ink throughout a book. Every page must be of uniform blackness.

goods wagon (*Rail.*). A specially designed wagon intended for the transit of goods by rail.

goodness (*Radio*). See **mutual conductance.**

goose flesh. See **horripilation.**

gooseberry stone (*Min.*). The literal translation of the Latinised form *grossularite* (q.v.), so called from the occurrence of this green garnet in rounded crystals somewhat vaguely resembling gooseberries in form and colour.

Gordon's formula (*Civ. Eng.*). An empirical formula giving the collapsing load for a given column. It states that

$$P=\frac{fc\,.\,A}{1+c\left(\frac{l}{d}\right)^2},$$

where P = the collapsing load; fc = safe compressive stress for very short lengths of the material; A = area of cross-section; l = the length of the pin-jointed column; d = the least breadth or diameter of the cross-section; c = a constant for the material and the shape of cross-section.

gore (*Aero.*). One of the sector-like sections of the canopy of a parachute.

gorge (*Geol.*). A general term for all steep-sided, relatively narrow valleys, including canyons, overflow channels, etc.

gorge (*Build.*). A *drip* (q.v.).

gorse (*Mining*). A barrel or tub for carrying water underground

gos'larite (*Min.*). Zinc sulphate, a rare mineral precipitated from water seeping through the walls of lead-mines; formed by the decomposition of sphalerite.

gossan (*Mining*) The oxidised upper portion of a vein or lode of sulphide minerals. Sometimes devoid of values owing to action of circulating water.

gos'sypine (*Bot.*). Cottony.

goth (*Mining*). A sudden bursting or breaking of the roof or face.

Gothic (*Typog.*). Originally a term applied to black letter, or Old English type, it is now used to include all bold sanserif faces.

Gothlandian (*Geol.*). A proposed synonym for *Silurian*; but the latter claims precedence, and is more commonly used.

Gott's method (*Elec. Eng.*). A bridge method of finding the capacitance of a cable. The cable is made to form one arm of the bridge, the others being a standard condenser and two sections of a slide wire.

gotten (*Mining*). (1) An abandoned or exhausted mine.—(2) Coal ready to be filled underground into tubs or trains.

gouache, goo-ash' (*Dec.*). Opaque colours mixed with water, honey, and gum, applied in impasto style.

goufing (*Build.*). The process of strengthening wall foundations.

gouge, gowj (*Bind.*). A hand tool used to form curved lines.

gouge (*Carp., etc.*). A tool similar to a chisel, but having a curved blade and a cutting edge capable of forming a rounded groove.

gouge (*Mining*). See **salvage.**

gouge (*Surg.*). A hollow chisel for removing and cutting bone.

gouge-bit (*Carp.*). A wood-boring bit shaped like a gouge with a rounded end.

gouge slip (*Carp., etc.*). A shaped piece of oil-stone on which the concave side of the cutting edge of a gouge may be rubbed for sharpening purposes.

goundou (*Med.*). Dog nose; gros nez. Symmetrical bony overgrowth at the sides of the nose, thought to be a late sequel of yaws.

gourmandi'ser (*Bot.*). A strong, coarsely growing sucker, especially from the stock of a grafted plant.

gout (*Med.*). A disorder of metabolism in which there is an excess of uric acid in the blood; this is deposited, as sodium biurate, in the joints, bones, ligaments, and cartilages. In acute gout there is a sudden very painful swelling of the joint, usually of the big toe.

gout, avian (*Vet.*). A disease of domesticated birds characterised by the deposit of urates in the serous membranes and joints, and associated with excess protein in the food.

goutte d'eau, goot-dō (*Min.*). Literally 'drop of water'; an old term applied to the whitest of the Brazilian topaz crystals, which when cut and polished rival diamond in brilliancy, but lack the fire of the latter gem.

Goux pail, goo (*San. Eng.*). A pail lined with absorbent material; used in a conservancy closet.

governor (*Eng.*). A device for controlling the fuel or steam supply to an engine in accordance with the power demand, so that the speed is kept constant under all conditions of loading.

See **pendulum— shaft— spring-loaded—**

governor (or strapping) motion (*Cotton Spinning*). A mechanism forming part of a mule spinning-frame; it functions in regulating the revolutions of the spindle in building the cop bottom.

gowl (*Mining*). Said of roof and sides which cannot be kept from falling.

G.P.I. (*Med.*). Abbrev. for *general paralysis of the insane*.

G.P.M. (*Hyd.*). Abbrev. for *gallons per minute*.

Graafian follicle, grahf'i-an (*Zool.*). A vesicle, containing an ovum surrounded by a layer of epithelial tissue, which occurs in the ovary of higher *Vertebrata*.

grab, grab-bucket (*Civ. Eng.*). A steel bucket or cage made of two halves hinged together, so that they dig out and enclose part of the material on which they rest; used in mechanical excavators and dredgers. See **grabbing crane, grab-dredger.**

grab-dredger (*Civ. Eng.*). A dredging appliance consisting of a grab or grab-bucket suspended from the jib-head of a crane, which does the necessary raising and lowering. Also called a GRAPPLE DREDGER.

grabbing crane (*Civ. Eng.*). An excavator consisting of a crane carrying a large grab or bucket in the form of a pair of half-scoops, so hinged as to scoop or dig into the earth as they are lifted.

grab'en (*Geol.*). A geological structure resulting from the subsidence of a strip of country lying between two normal faults, hading towards one another. Cf. *horst faults*.

Gra'ber's organ (*Zool.*). A curious structure of unknown function, but believed to be sensory, found in Tabanid larvae.

gracilis, gras'il-is (*Zool.*). A thigh muscle of land Vertebrates.

gradate sorus (*Bot.*). A fern sorus in which the sporangia develop from the apex of the receptacle downwards.

grade (*Civ. Eng.*). The degree of slope, e.g. of a highway or railway. Better, GRADIENT.

grade of service (*Auto. Teleph.*). The proportion of calls in the busy hour which must fail to be completed through insufficiency of apparatus. See **overall grade of service.**

grade pegs (*Surv.*). Pegs driven into the ground as references, to establish gradients in constructional work. Better, GRADIENT PEGS.

graded brush (*Elec. Eng.*). A brush for collecting current from the commutator of an electrical machine; made up of layers of different materials, or of material which has different values of lateral and longitudinal resistance.

gradient (*Bot.*). The condition when the intensity of a stimulus acting on a plant gradually increases or decreases towards the position where the plant is.

gradient (*Phys.*). The rate of change of a quantity with distance, e.g. the temperature *gradient* in a metal bar is the rate of change of temperature along the bar.

gradient (*Surv.*). The ratio of the difference in elevation between two given points and the horizontal distance between them, or the distance for unit rise or fall. Also called INCLINE.

gradient post (*Rail.*). A short upright post fixed at the side of a railway at a point of change of gradient. It has arms set at slopes representing the gradients; the latter are indicated on the arms by figures giving the rise or fall in feet per 100 feet.

gradient pegs (or **posts**). *Grade pegs* (q.v.).

gradient wind (*Meteor.*). In a depression or an anticyclone, a flow of air, parallel to the isobars, which balances the pressure gradient by the centrifugal force exerted on account of the curved path of the air.

gra'dienter (*Surv.*) A micrometer head fitment to the vertical circle tangent screw of a theodolite by which the line of sight may be rotated through a known small angle, enabling the instrument to be used for tacheometric purposes.

gradine, grad-ēn' (*Arch.*). A tier of seats rising above one another in an amphitheatre.

grading (*Auto. Teleph.*). The scheme of connecting trunks or outlets so that a group of selectors is given access to individual trunks, while larger groups of selectors share trunks when all the individual trunks are found to be in use.

See **symmetrical— unsymmetrical— grade of service.**

grading (*Build.*). (1) The proportions of the different sizes of stone used in mixing concrete.—(2) The selection of these proportions.

grading (*Civ. Eng.*). The operation of preparing a surface to follow a given gradient.

grading (*Textiles*). The classification of textile fibres according to their condition, fineness, strength, and staple.

grading coefficient (*Elec. Eng.*). A figure denoting the ratio of the lower to the upper limit of current for motor starters.

grading group (*Auto. Teleph.*). The group of selectors which are concerned in one grading scheme.

grading instrument (*Surv.*). A general name for any instrument of the *gradiometer* (q.v.) class.

grading shield (*Elec. Eng.*). A circular conductor placed concentric with a string of suspension insulators on an overhead transmission line in order to equalise the potential across the individual insulator units. Also called an ARCING SHIELD.

grading, size- (*Chem.*). See **size-grading.**

gra'diograph (*Build.*). An instrument incorporating a level tube and straightedge; used to measure gradients in laying drain-pipes.

gradiom'eter (*Surv.*). An instrument for setting out long uniform gradients; it consists of a level that may be elevated or depressed, by known amounts, by means of a vertical tangent screw.

gradom'eter (*Surv.*). A name formerly applied to the type of instrument now known as a *gradiometer* (q.v.).

graduated circle (*Surv.*). A circular plate, marked off in degrees and parts of degrees, used on surveying instruments as a basis for the measurement of horizontal or vertical angles. See **horizontal circle, vertical circle.**

graduated courses (*Build.*). Courses of slates laid so that the gauge diminishes from eaves to ridge.

graduated vessels (*Chem.*). Vessels which are used for measuring liquids and are adapted to measure or deliver definite volumes of liquid.

graffito (*Dec., Pot., etc.*). See **sgraffito.**

graft (*Bot.*). A plant consisting of a rooted part (the *stock*) into which another part (the *scion*) has been inserted so as to make organic union.

graft (*Surg.*). A piece of skin, bone, or other tissue, taken from one part of the body and grafted to another.

graft hybrid, graft chimaera (*Bot.*). A plant composed of two sorts of tissue, differing in genetic constitution, and assumed to have arisen as a result of association following grafting.

grafting (*Bot.*). The insertion of a part of one plant into a part of another so that organic union followed by growth ensues.

grafting (*Carp.*). The operation of lengthening a timber by jointing another piece on to it.

Graham escapement (*Horol.*). The dead-beat clock escapement.

Graham's law (*Chem.*). The velocity of diffusion of a gas is inversely proportional to the square root of its density.

grain (*Bot.*). (1) See **caryopsis.**—(2) The pattern on the surface of worked wood due to variations in the size, in the shape and arrangement, and in the composition, of the cells forming the wood.

grain (*Geol.*). See **rift and grain.**

grain (*Photog.*). The element in the sensitive emulsion used for photographic purposes, its size depending on the temperature of deposition. On exposure, each grain becomes completely developable on the absorption of at least one photon of light. Hence the size of the grain and the concentration of silver salt in it largely determines the speed. The size of grain limits the possible magnification of the projected image.

grain (*Met.*). In pure metals *grain* is synonymous with *crystal*, and the same applies to alloys consisting of one constituent. When two constituents are present the grain is difficult to define, except when a *network structure* (q.v.) is formed.

grain (*Timber*). The arrangement of the fibres in a piece of timber.

grain growth (*Met.*). Associated with recrystallisation, this refers to an increase in the average grain size resulting from some crystals absorbing adjacent ones.

grain leather (*Leather*). The grain split of the hide of an ox or cow, grained and oiled; used for uppers of sports shoes of heavy type. See **grain split, graining.**

grain size (*Geol.*, *Met.*). The average size of the grains or crystals in a sample of metal or rock.

grain-size classification (*Geol.*). A scheme of rock classification based upon the average size of certain chosen components: thus each *clan* (q.v.) comprises *coarse-grained*, *medium-grained*, and *fine-grained* members.

grain-size control (*Met.*). Specifically, control of the rate at which the austenite grains grow when steel is heated above the critical range, by the addition of aluminium before casting.

grain split (*Leather*). The upper or hair-side section of a split hide or skin. See **flesh split.**

grains, brewers' (*Brew.*). Insoluble residue remaining in the mash tun after the wort has been run off; used for cattle food and as a manure.

grainer (*Paint.*). The brush used for graining.

graining (*Leather*). The process of bringing up the natural grain of a tanned skin by rolling it while damp.

graining (*Paint.*). The operation of brushing, combing, or otherwise marking a painted surface while the paint is still wet, in order to produce an imitation of the grain of wood.

graining boards (*Bind.*). Boards or metal plates with parallel lines in relief, running diagonally. Used to produce a diced effect on covers.

graining comb (*Paint.*). A steel or leather comb used in the operation of graining.

graith (*Mining*). A set of tools, picks, shovels, wedges, hammers, etc. used for work underground.

gram or **gramme.** The unit of *mass* (q.v.) in the metric system. It was originally intended to be the mass of 1 c.c. of water at 4° C. but it is now defined as one-thousandth of the mass of the International Prototype Kilogramme, a cylinder of platinum-iridium kept at Sèvres.

gram-atom (*Chem.*). The quantity of an element whose mass in grams is equal to its atomic weight.

gram-calorie (*Heat*). See **calorie.**

gram-equivalent (*Chem.*). The quantity of a substance or radical whose mass in grams is equal to its equivalent weight.

gram-molecular volume (*Chem.*). The volume of one gram-molecule of a gas at N.T.P.; for an ideal gas it is equal to 22·412 litres. Also called MOLAR VOLUME.

gram-molecule (*Chem.*). The quantity of a substance whose mass in grams is equal to its molecular weight.

Gram positive (*Bot.*). A term applied to bacteria which stain when treated with methyl violet, followed by iodine, and then by acetone or ethyl alcohol.

gramina'ceous, gramin'eous (*Bot.*). Relating to grasses.

gram'inico'lous (*Bot.*). Living on grasses; said especially of parasitic fungi.

graminiv'orous (*Zool.*). Grain-eating.

gram'matite (*Min.*). An obsolete name (which should not be used) for the mineral *tremolite*.

Gramme ring armature (*Elec. Eng.*). See **ring armature.**

Gramme winding (*Elec. Eng.*). See **ring winding.**

gramophone (*Acous.*). See **acoustic— radio—**

gramophone audiometer (*Acous.*). A quick method of testing the hearing of a large number of subjects, who are required to write down numbers perceived at diminishing intensities through head-telephones, the sounds being obtained from a gramophone record.

gramophone pick-up (*Radio*). The form of reproducer carried on the tone arm of a gramophone and connected to the low-frequency amplifying part of a radio receiver, enabling the record to be reproduced electrically through the loud-speaker.

gramophone record (*Acous.*). See **record.**

Grampound Grits (*Geol.*). Coarse arenaceous sedimentary rocks, occurring at Grampound and Probus and correlated with the Lower Devonian Meadfoot Beds in Devonshire.

Gramscatho Group (*Geol.*). See **Portscatho Beds.**

grand mal, grahn^{g} mal (*Med.*). General convulsive epileptic seizure, with loss of consciousness. See also **epilepsy, petit mal.**

grand period of growth (*Bot.*). The period in the life of a plant, or of any of its parts, during which growth begins slowly, gradually rises to a maximum, gradually falls off, and comes to an end; it is assumed that external conditions remain constant.

grand swell (*Acous.*). A swell-like balanced pedal for bringing in, as it is depressed, all the stops in an organ in a graded series.

Grand Canyon Series (*Geol.*). The Pre-Cambrian rocks exposed in the lowest parts of the Grand Canyon of Colorado. See also **Belt Series.**

grandfather-clock (*Horol.*). A long-case clock, about 6 ft. high, weight-driven, with seconds pendulum.

granddaughter-clock (*Horol.*). A long-case clock about 3½ ft. high, with movement usually provided with lever escapement; a grandfather-clock in miniature.

grandmother-clock (*Horol.*). 'Grannie.' A long-case clock, about 5 ft. high, suitable for the modern smaller type of house.

grandifo'liate (*Bot.*). Said of plants in which the leaves are much more conspicuous than the usually shortened stems.

grandrelle or **grandrille** (*Textiles*). Folded yarns composed of two or more cotton threads of different colours twisted together; used for shirting.

Grandry's corpuscles (*Zool.*). In Vertebrates, sensory nerve-endings in which the nerve loses its medullary sheath on reaching the capsule, and expands to plates which are inserted between tactile cells enclosed in a connective tissue sheath.

granell'ae (*Zool.*). In some *Sarcodina*, small oval strongly refracting particles mainly composed of barium sulphate.

granella'rium (*Zool.*). In some *Sarcodina*, the system of tubules containing granellae.

granite (*Geol.*). A coarse-grained igneous rock containing megascopic quartz, averaging 25%, much feldspar (orthoclase, microcline, sodic plagioclase), and mica or other coloured minerals. In the wide sense granite includes alkali-granites, adamellites, and granodiorites, while the *granite clan* includes the medium- and fine-grained equivalents of these rock types. Because of its extreme hardness granite is used largely for heavy engineering and building works and for road metalling.

granite-aplite (*Geol.*). See **aplite.**

granite-porphyry (*Geol.*). Porphyritic microgranite, a rock of granitic composition but with a groundmass of medium grain-size in which larger crystals (phenocrysts) are embedded. Occurs usually as minor intrusions.

granit'ic finish (*Build.*). A surface finish, resembling granite, given to cement work by the use of a suitable face mix.

granitic texture (*Geol.*). See **granitoid texture.**

gran'itoid texture (*Geol.*). A rock fabric in which the minerals do not possess crystal outlines but occur in shapeless interlocking grains. Such rocks are in the coarse grain-size group. Also called XENOMORPHIC GRANULAR.

granoblas'tic texture (*Geol.*). An arrangement of mineral grains in a rock of metamorphic origin similar to that of a normal granite but produced by recrystallisation in the solid and not by crystallisation from a molten condition.

granodi'orite (*Geol.*). An igneous rock of coarse grain-size, containing abundant quartz and a large excess (more than ⅔ of the total feldspar) of plagioclase over orthoclase, in addition to coloured minerals such as hornblende and biotite. Cf. *diorite.*

granolith'ic (*Build.*). A rendering of cement and fine granite chippings, used as a covering for concrete floors, on which it is floated in a layer 1 in. to 2 in. thick.

gran'ophyre (*Geol.*). An igneous rock of medium grain-size, in which quartz and feldspar are intergrown as in graphic granite.

Granton Sandstone (*Geol.*). An important sandstone (used as a building-stone) reaching a maximum thickness of 800 ft., and occurring in the Lower Carboniferous Series (Calciferous Sandstone Group) in the eastern parts of the Midland Valley of Scotland.

granular, granulate, granulose (*Bot.*). (1) Having the surface covered by tiny projecting points or very small warts.—(2) Composed of, or filled with, minute granules.

granular (or **globular**) **pearlite** (*Met.*). Pearlite in which the cementite occurs as globules instead of as lamellae. Produced by very slow cooling through the critical range, or by subsequent heating just below the critical range.

granularity (*Cinema.*). The extent of visibility of emulsion grains in a projected image.

granulated sugar (*Chem.*). A term for loose sugar crystals of grain-like appearance.

granulation tissue (*Med.*). A new formation of vascular connective tissue which grows to fill up the gap of a wound or ulcer; when healing is completed a white scar is left.

granules (*Astron.*). See **willow leaves.**

granules, carbon (*Teleph.*). See **carbon granules.**

gran'ulite (*Geol.*). A granular-textured metamorphic rock, a product of regional metamorphism, similar in composition to one or other of the several kinds of schists or gneisses but lacking the distinctive mineral banding of these rock types.

granulit'ic texture (*Geol.*). The texture of a granulite, sometimes referred to as *granulose* or *granoblastic*, is an arrangement of shapeless interlocking mineral grains resembling the granitic texture but developed in metamorphic rocks.

gran'ulitisa'tion (*Geol.*). The process in regional metamorphism of reducing the components of a solid rock to grains. If the reduction of the size of the particles goes farther, rock flour or mylonite is produced.

gran'ulocy'tope'nia (*Med.*). An abnormal diminution in the number of granulocytes in the blood.

granulo'ma (*Med.*). A localised collection of granulation tissue occurring in certain chronic infections, such as tuberculosis and syphilis.

granuloma annular'e (*Med.*). A condition in which rings of white cellular nodules appear on the back of the hands, and occasionally elsewhere.

granuloma inguina'le (*Med.*). Ulcerating granuloma; granuloma venereum. A chronic disease, occurring in the tropics, in which ulcerating nodules appear on the genital organs, the perineum, and the groins.

granulo'matous (*Med.*). Of the nature of, or resembling, granuloma.

granum (*Bot.*). A minute globule of pigment in the colourless stroma of a chromoplast.

grape-sugar (*Chem.*). *d-Glucose* (q.v.).

grapes (*Vet.*). Tuberculous granulomata on the pleura or peritoneum of cattle. In horses, the term is a synonym for *seborrhoea.*

grapher (*Elec. Eng.*). See **graphic instrument.**

graphic formula (*Chem.*). A formula in which every atom is represented by the appropriate symbol, valency bonds being indicated by dashes; e.g. H—O—H, the graphic formula for water.

graphic granite (*Geol.*). Granite of pegmatitic facies, in which quartz and alkali-feldspar are intergrown in such a manner that the quartz simulates runic characters. Also called RUNITE.

graphic instrument (*Elec. Eng.*). An electrical instrument in which the pointer consists of a pen moving over a paper chart so that a graphic record of the quantity measured is obtained. Also called RECORDING INSTRUMENT, RECORDER, GRAPHER, CHART-RECORDING INSTRUMENT.

graphic tellurium (*Min.*). An obsolete name applied in 1814 to the mineral *sylvanite* (q.v.). The crystals are frequently twinned in such a fashion as to resemble runic characters. See **graphic texture.**

graphic texture (*Geol.*). A rock texture in which one mineral intimately intergrown with another occurs in a form simulating ancient writing, especially runic characters; produced by simultaneous crystallisation of two minerals present in eutectic proportions. See **runite.**

graphical methods. The name given to those methods in which items, such as forces in structures, are determined by drawing diagrams to scale.

graphical reconstruction (*Zool.*). A method of preparing diagrammatic reconstructions or stereograms of the anatomy of an organ or animal in any desired plane from a given series of serial sections.

graphite (*Min.*). One of the two naturally occurring forms of crystalline carbon, the other being diamond. Sp. gr. 2·25; graphite contains also up to 5% of silica. It occurs as black, soft masses and, rarely, as crystals (of flaky structure and apparently hexagonal) in igneous rocks; in larger quantities in schists, particularly in metamorphosed carbonaceous clays and shales; also in contact metamorphosed coals and in meteorites. A well-known British locality is Borrowdale in Cumberland, where the amount available was sufficient for exploitation in the manufacture of black lead. Also called BLACK LEAD, PLUMBAGO (qq.v.). See **colloidal graphite***.

graphite (*Acous.*). The variety of fine carbon which is brushed on cut waxes in order that the surface may become conducting and may be electroplated.

graphite brush (*Elec. Eng.*). A brush, made of graphite, for collecting the current from the commutator of an electric machine. It has a higher conductivity and better lubricating properties than an ordinary carbon brush.

graphite paint (*Paint.*). Made of graphite, preferably silica-graphite, ground in oil; used for painting steel and iron structures as protection against corrosion from the atmosphere.

graphite resistance (*Elec. Eng.*). A resistance unit consisting of a rod of graphite, which has a high ohmic value; also a variable resistance made up of piles of graphitised discs of cloth under a variable pressure.

graphit'ic acid (*Chem.*). Graphite which has been treated with nitric acid and potassium chlorate for a prolonged period.

graphitic carbon (*Met.*). In cast-iron, carbon occurring as graphite instead of as cementite.

graphitic lubricants (*Lubricants*). Graphite used in various forms as a lubricant, especially where film lubrication is not feasible; used in natural flake form, or suspended in oil, grease, distilled water, or other medium in colloidal form

graphitised filament (*Illum.*). See **metallised filament.**

grappel (*Mining*). An extracting tool used in boring operations.

grapple dredger (*Civ. Eng.*). See **grab-dredger.**

grappler (*Build.*). A wedge-shaped spike with an eye at one end; it is driven into a joint of the brickwork as a support for the hooked end of one of the brackets in a bracket scaffold.

grap'tolite (*Geol.*). An animal of lowly organisation, extinct since the Silurian Period, belonging to a class *Graptolithina*, of the phylum *Coelenterata*. Graptolites are of the greatest value to stratigraphers for dating the Ordovician and Silurian Systems.

grass (*Mining*). At surface; at grass roots.

grass-bleached (*Paper*). A term applied to tissues of a specially white colour. The expression suggests the whiteness obtained in air-bleached linen.

grass disease (*Vet.*). A disease of milch cows, of unknown cause; characterised by tetany and deficiency of magnesium salts in the blood serum.

grassland climax (*Bot.*). A climax community consisting of grassland.

grass table (*Build.*). A *ground table* (q.v.).

grassing (*Linen*). A method of effecting mild bleaching by spreading linen material on grass and leaving it exposed to the atmosphere.

Grassot fluxmeter, gras'ō (*Elec. Eng.*). See **fluxmeter.**

grate (*Build.*). The cast-iron fire bars and frame of a fireplace.

grate (*Eng.*). That part of a furnace which supports the fuel. It consists of fire bars or bricks so spaced as to admit the necessary air. See **fire bars.**

grate area (*Eng.*). The area of the grate in a furnace burning solid fuel; for a boiler furnace, a measure of the evaporative capacity of the boiler.

grathe (*Mining*). To repair, or put in order, the plant in a coal-mine.

grat'icule (*Surv.*). See **reticule.**

grating (*Build.*). A perforated cover across a drain, gulley, air duct, etc.

grating (*Light*).
See **concave—** **diffraction—**

Gratz rectifier (*Elec. Eng.*). A circuit for connecting rectifying units (valves or metal rectifiers); the units are connected in the four arms of a bridge, in order to give full-waver ectification.

grave accent, grahv (*Typog.*). An indication of pronunciation (\`) used mostly in French and Italian. It should never be used over the last letter of a French word, where it is often put in mistake for the acute accent (´). In English poetry it marks a syllable ordinarily not pronounced: 'loathèd Melancholy.'

gravel (*Build.*). A natural mixture of sand, flints, and loam.

gravel (*Geol.*). The name of the aggregate consisting dominantly of pebbles, though usually a considerable amount of sand is intercalated. In the Stratigraphical Column gravels of different ages and origins occur abundantly, for example in South-Eastern England, where they consist chiefly of well-rounded flint pebbles originally derived from the Chalk. These gravels are mainly of fluviatile and fluvioglacial origin, but marine gravels are also common in the littoral zone. The indurated equivalent of gravel is conglomerate.

gravel (*Vet.*). Small calculi in the ureters or urinary bladder of animals.

gravel board or **gravel plank** (*Build.*). A long board standing on its edge at the bottom of a wooden fence, so that the upright boards of the fence do not have to reach down to the ground.

grav'eolent (*Bot.*). Having a strong rank odour.

graver (*Engraving*). See **burin.**

Graves's disease (*Med.*). See **Basedow's disease.**

grav'id (*Med., Zool.*). Pregnant: carrying eggs or young.

grav'ida (*Med.*). A pregnant woman.

gravid'ity (*Med.*). The state of being pregnant.

grav'imet'ric analysis (*Chem.*). The chemical analysis of materials by the separation of the constituents and their estimation by weight.

graving dock (*Civ. Eng.*). See **dry dock.**

grav'ipercep'tion (*Bot.*). The perception of gravity by plants.

gravitation (*Phys.*). The name given to that force of nature which manifests itself as a mutual attraction between masses, and whose mathematical expression was first given by Newton, in the law which states: 'Any two particles of matter attract one another with a force directly proportional to the product of their masses and inversely proportional to the square of the distance between them.' This may be expressed by the equation:

$$F = G\frac{m_1 m_2}{d^2},$$

where F is the force of gravitational attraction between bodies of mass m_1 and m_2, separated by a distance d. G is the constant of gravitation and has the value $6{\cdot}6576 \times 10^{-8}$ c.g.s. units.

gravitational astronomy (*Astron.*). The branch of astronomy which deals with the motions of the heavenly bodies under the forces of gravitation. It originated with Newton, and includes the theory of the motions of planets, satellites, comets, etc. within the solar system, and also the orbital motions of binary stars. Also called CELESTIAL MECHANICS.

gravitational differentiation (*Geol.*). The production of igneous rocks of contrasted types by the early separation of crystals such as olivine, pyroxenes, etc., which, sinking on account of their high specific gravity, become concentrated in the basal parts of intrusions. The ultramafic rocks such as peridotites and picrites originate in this way.

gravitational induction (*Bot.*). The development of a structure from the under side of a plant member.

gravity cell (*Elec. Eng.*). A two-fluid cell in which the electrodes are horizontal and the two electrolytes lie in separate layers on account of their difference in specific gravity.

gravity, centre of (*Mech.*). See **centre of gravity.**

gravity-controlled instruments (*Elec. Eng.*). Electrical measuring instruments in which the controlling torque is provided solely by the action of gravity.

gravity conveyor (*Eng.*). A conveyor in which the weight of the articles handled is sufficient to effect their transport from a higher to a lower point; as when they are allowed to slide down an inclined runway.

gravity dam (*Civ. Eng.*). A dam which is prevented by its own weight from overturning.

gravity diecasting (*Met.*). A process by means of which castings of various alloys are made in steel or cast-iron moulds, the molten metal being poured by hand. See **diecasting, pressure diecasting.**

gravity escapement (*Horol.*). An escapement in which a constant impulse is given to the pendulum by a weight which is lifted and which always falls through a constant distance. The best-known gravity escapement is the *double three-legged*, in which pivoted arms are lifted a constant height to give on falling a constant impulse to the pendulum. This escapement is used in the clock of Big Ben.

gravity fuel system (*I.C. Engs.*). The system by which petrol is supplied to a carburettor by placing the fuel tank above the level of the carburettor float chamber.

gravity plane (*Mining*). An inclined plane on which the descending full trucks pull up the ascending empty ones.

gravity switch (*Teleph.*). See **switch hook.**

gravity tanks (*Aero.*). See under **fuel tanks.**

gravity water system. A system in which flow occurs under the natural pressure due to gravity.

Grawitz's tumour, grah′vits (*Med.*). See **hypernephroma.**

gray. See **grey** and succeeding articles.

grease (*Lubricants*). A semi-solid form of lubricant, composed of emulsified mineral lubricating oil and soda or lime soap. Greases are known as cup grease, railway wagon axle grease, rolling mill grease, block grease, etc.; largely used in industrial plants, especially where leakage of lubricants must be prevented, and for lubrication under water.

grease (*Vet.*). Eczema on the posterior aspect of the fetlock of horses.

grease cup (*Eng.*). A lubricating device consisting of a cylindrical cup threaded internally and filled with grease. It is screwed down on to a drilled pad which has a nipple screwed into the bearing housing, thus feeding grease into the bearing.

grease gun. A device for forcing grease into bearings under high pressure. It consists of a cylinder from which the grease is delivered by hand pressure on the piston, intensified by a second plunger which forms the delivery pipe and which is pressed against a nipple screwed into the bearing.

greaseproof paper (*Paper*). (1) A vegetable parchment prepared by chemical treatment.—(2) An imitation vegetable parchment, transparency and grease-resisting properties being imparted by prolonged beating of the pulp.

grease-spot photometer (*Light*). A simple means of comparing the intensities of two light sources. A screen of white paper, rendered partially translucent by a spot of grease, is illuminated normally by the two sources, one on each side. The position of the screen is adjusted until the grease-spot is indistinguishable from its surround, when the illuminations on the two sides may be assumed to be equal. Also called BUNSEN PHOTOMETER. See **photometer.**

grease trap (*San. Eng.*). A trapped gulley receiving sink wastes, and specially designed to prevent obstruction of gulley or drain by congealed fatty matter.

greasy heels (*Vet.*). See **grease.**

great (*Acous.*). The principal division of a straight (church or concert) organ. It comprises ranks of pipes, not enclosed in chambers with swell shutters, which are most powerful and brilliant and which are normally played from the *great manual*, usually placed below the *swell manual* and above the *choir* or *accompaniment* manual, if such are present. The name *great* is retained in unit and cinema organs, in which, however, since here all ranks can be drawn on any manual, the word has no real meaning.

great circle (*Maths.*). The intersection of a sphere by a plane passing through its centre. The shortest distance between two points on the surface of a sphere is along the great circle passing through them.

Great Ice Age (*Geol.*). See **Pleistocene Period.**

Great Oölite Series (*Geol.*). Equivalent to the Bathonian Stage, so named to distinguish it from the Inferior Oölite beneath. Consists chiefly of oölitic limestones, well exposed on the long dip slope of the Mid-Cotteswolds. The Great Oölite proper lies between the Stonesfield Slate and the Bradford Clay.

great primer (*Typog.*). The old name for a type size now standardised as 18-point.

Great Scar Limestone (*Geol.*). Massive bedded Carboniferous Limestone occurring in the western part of the Pennine Hills, being well exposed on Ingleborough.

great wheel (*Horol.*). The first wheel in the train of a watch or clock; in going barrels it forms part of the barrel. The largest wheel in a watch or clock train.

Greaves-Etchell furnace (*Elec. Eng.*). A form of direct-arc electric furnace used in steel manufacture.

Grecian honeycomb (*Textiles*). A type of honeycomb structure woven from coarse soft cotton yarns; the material is used for towels and quilts.

green (*Civ. Eng.*). A colloquial term for concrete in the hardening stage, after pouring and before setting.

green algae (*Bot.*). See **Chlorophyceae.**

green bricks (*Build.*). Moulded clay shapes which after undergoing a burning process will become bricks.

green carbonate of copper (*Min.*). See **malachite.**

green cell (*Bot.*). A cell of the alga *Chlorella* living inside certain simple animals.

green flash (*Astron.*). A phenomenon sometimes seen in clear atmospheres at the instant when the upper rim of the sun finally disappears below the horizon as a bright green blob of light; green is the last apparent colour from the sun, because the more greatly refracted blue is dispersed.

green glands (*Zool.*). The antennal excretory glands of decapod *Crustacea.*

greenheart (*Timber*). A very strong yellowish-green timber from South America; it is largely used for piles and under-water work on account of its considerable resistance to the attack of the teredo.

green lead ore (*Min.*). An obsolete name for *pyromorphite*.

green sand (*Foundry*). Moulding sand rich in organic matter; the mould is poured in a moist state. Most suitable for small and medium-size work.

green sickness (*Med.*). See **chlorosis.**

greenstick fracture (*Med.*). Fracture of rickety bones, which break like a green stick.

greenstone (*Geol.*). An omnibus term lacking precision and applied indiscriminately to basic and intermediate igneous rocks of Lower Palaeozoic age in which much chlorite has been produced at the expense of the original coloured minerals, staining the rocks green.

green vitriol (*Min.*). A popular name for *melanterite* (q v.).

green wood (*Timber*). (1) Newly felled timber —(2) Timber which has not been fully seasoned.

Greenland spar (*Min.*). See **cryolite.**

green'ockite (*Min.*). Crystalline cadmium sulphide, occurring, as small yellow hexagonal crystals exhibiting polar symmetry, in cavities in altered basic lavas at Bishopton, Renfrewshire, Scotland.

Greensand (*Geol.*). See **Lower— Upper—**

Greenwich Civil Time, Greenwich Mean Time (*Astron.*). See **mean solar time, universal time.**

gregale, greg-ah'le (*Meteor.*). A north-easterly winter wind blowing in the central Mediterranean.

Greg'arinid'ea (*Zool.*). An order of *Telosporidia*, in which the adult trophozoite is an extra-cellular parasite, and in which reproduction is usually by sporogony only.

gregarin'iform (*Zool.*). Resembling the *Gregarinidea*; said of certain types of swarm-spores which lack organs of locomotion.

gregarin'ulae (*Zool.*). Zoospores without organs of locomotion.

grega'rious (*Bot.*). Growing in close companies, but not matted together.

Gregorian Calendar. The name commonly given to the civil calendar now used in Western Europe, which is the Julian calendar as reformed by decree of Pope Gregory the Great in 1582. The Gregorian reform omitted certain leap years, and brought the length of the year on which the calendar is based nearer to the true astronomical value. In England the Gregorian calendar was adopted by Act of Parliament which shortened the year 1752 by eleven days (by the omission of September 3-13 inclusive). Under the same Act, the year 1752 began on January 1 (instead of March 25, as formerly); this change had been effected in Scotland in 1600. See **New Style, Old Style.**

Gregorian telescope (*Astron.*). A form of reflecting telescope, very similar in principle to the Cassegrainian, in which the large mirror is pierced at the centre and the light is reflected back into an eye-piece in this centre by a small concave mirror on the principal axis and a little outside the focus.

greisen, gri'zen (*Geol.*). A pneumatolytic derivative of granite, in which feldspar has been suppressed and white mica produced in its place. A constant accessory is topaz, while fluorite is usually present. Common in some of the Cornish granites. See also **greisenisation, pneumatolysis.**

greisenisation (*Geol.*). A pneumatolytic process effected chiefly by fluoric flux rising along regional joints in granite and converting the latter over a limited distance into greisen.

grena (*Mining*). Uncleaned coal or ore.

grenade (*Ammunition*). A small H.E. smoke or signal bomb which is thrown by hand or projected by a rifle. See **rifle grenade.**

gren'adine (*Textiles*). An open-texture light-weight dress fabric with a stripe or check effect produced by the weave. Made from worsted or cotton yarn combined with silk or rayon.

Grenville Series (*Geol.*). Enormous sheets of limestone, marble, and dolomite with interbedded quartzites, sometimes graphitic, and hornblende-schists; over 90,000 ft. in thickness; occurring in Ontario, Quebec, and the Adirondacks, and considered to be the equivalents of the Huronian Series.

grey. In Britain the more commonly used of the variants *gray, grey*. In America the former is preferred.

grey (*Photog.*). Said of colours which possess only brilliance, i.e. they have no hue and are completely desaturated.

grey (*Textiles*). The term applied to yarn or cloth in the natural colour.

greys (*Mining*). A grey-coloured compact sandstone.

grey copper ore (*Min.*). See **tetrahedrite.**

grey iron (*Met*). Pig- or cast-iron in which nearly all the carbon not included in pearlite is present as graphitic carbon. See **mottled iron, white iron.**

grey key image (*Photog.*). A neutral image obtained in addition to the three images corresponding to the primary colours in colour photography; used to regulate the saturation or assist registration.

grey matter (*Zool*). An area of the central nervous system, mainly composed of cell bodies

grey metal (*Mining*). Greyish-coloured shale.

grey scale (*Photog*) A number of steps of grey, taken as an object, to be followed through a colour photographic process in order to ascertain whether the theoretical criteria are being achieved.

grey sour (*Textiles*). The name applied to one of the processes in preparing cotton goods for bleaching and dyeing. The material is treated with dilute acid to remove all traces of alkali.

grey surface (*Acous.*). A defect in gramophone-record pressing, resulting from insufficient temperature or pressure or from wearing of the sides of the grooves by the needle.

greywacke (*Geol*). An anglicised form of the German *Grauwacke*, a term applied to indurated sedimentary rocks, chiefly Palaeozoic, consisting of unsorted detritus of the grain-size of sandstone but containing fragments of feldspars and ferromagnesian minerals.

greywethers (*Geol.*). Grey-coloured rounded blocks of sandstone or quartzite left as residual boulders on the surface of the ground when less resistant material was denuded away. From a distance they resemble sheep grazing. See **sarsen.**

grid (*Build.*). A *grating* (q.v.).

grid (*Civ. Eng.*). A timber framework so built that a vessel may be floated in at high water and repairs undertaken as the tide falls.

grid (*Elec. Eng.*). A colloquial term used to denote the national network of 132 kV and 33 kV transmission lines interlinking the various generating stations and distribution companies in Great Britain. See **accumulator grid, resistance grid, damper.**

grid (*Eng.*). A grating made up of a number of parallel bars, such as that required to prevent foreign matter from entering a pump intake.

grid (*Surv.*). A network of lines superimposed upon a map and forming squares for referencing, the basis of the network being that each line in it is at a known distance either east or north of a selected origin.

grid (*Struct.*). The plan lay-out of a given steel-frame building.

grid (*Thermionics*). An electrode in a discharge tube whose primary function is to control the flow of current between two other electrodes. In a triode, it is the electrode between the cathode and the anode. It is usually in the form of a mesh or grid of wires.

grid base (*Thermionics*). The range of grid potential extending from the point at which the anode current is cut off to that at which grid current commences to flow.

grid bearing (*Surv.*). The horizontal angle between any given survey line shown on a map and the right- or left-hand border of the map. As the latter does not always represent the true meridian, the grid bearing of a line is not always the same as the true bearing.

grid bias (*Thermionics*). The mean potential of the grid over an a c. cycle.

grid bias modulation (*Radio*). A system of modulation in which the modulating signal is caused to control the grid bias of a valve to the grid of which a high-frequency carrier voltage is applied. Cf. *grid current modulation.*

grid bias resistance (*Radio*). A resistance included between the cathode and the negative terminal of the high-tension supply voltage, to which point the grid circuit is returned. The potential drop produced by the flow of anode current through this resistance furnishes the negative grid bias.

grid circuit (*Radio*). The circuit connected between the grid and the cathode of a thermionic valve.

grid condenser (*Radio*). A condenser connected between the grid and the remainder of the grid circuit.

grid conductance (*Thermionics*) The in-phase component of the grid input admittance, due to grid current, Miller effect, etc.

grid control (*Thermionics*). The control of anode current by means of the potential of the grid, especially in gas discharge tubes.

grid current (*Thermionics*). The current which flows from the grid to the cathode when the grid is made positive, or only slightly negative, with respect to the cathode.

grid current characteristic (*Thermionics*). The curve relating the grid current to the grid potential of a thermionic tube.

grid current modulation (*Radio*). A system of modulation in which the modulating signal is caused to control the flow of grid current in a valve to the grid of which is applied a high-frequency carrier voltage. Cf. *grid bias modulation.*

grid emission (*Thermionics*). The emission of electrons from the grid due to heating by the cathode or to electronic bombardment.

grid glow tube (*Thermionics*). See **gas discharge tube.**

grid-iron pendulum (*Horol.*). A form of compensation pendulum consisting of five parallel rods of iron and four of brass, the total length of each metal being in the inverse ratio of its coefficient of linear expansion.

grid leak (*Radio*). A high resistance connected across the grid condenser, or between the grid and the cathode, to provide a d.c. path from grid to cathode and prevent the accumulation of charge on the grid.

grid modulation (*Radio*). Any system of modulation in which the modulating signal is applied to the grid circuit of the modulated valve.

grid rectification (*Radio*). Rectification of high-frequency currents and voltages by means of the non-linearity of the grid current characteristic, more current flowing during the positive half-cycles than during the negative half-cycles.

grid resistance (*Elec. Eng.*). A resistance unit for heavy current work, e g. starters for railway motors; it is made up of a number of resistance grids placed side by side and mounted in a metal frame.

grid sweep (*Thermionics*). The range of voltage covered by the grid potential in going from its maximum positive (or minimum negative) to its maximum negative (or minimum positive) value. Cf. *grid swing.*

grid swing (*Thermionics*). The maximum excursion of the grid potential about its mean value. Cf. *grid sweep.*

gridaw (*Mining*). The framing at the top of a shaft for the pulley wheels or sheaves for the hoisting rope.

griffe (*Weaving*). A series of horizontal knives in a frame, which serve to raise and lower the warp threads in jacquard machines and in some dobby machines

Griffith's white (*Paint*). A white paint made with oxy-sulphide of zinc, instead of white lead, as a base.

Grignard reagents, grēn-yar′ (*Chem.*). Mixed organo-metallic compounds prepared by dissolving dry magnesium ribbon or filings in an absolutely dry ethereal solution of an alkyl bromide or iodide. Numerous compounds can be synthesised with Grignard reagents; e.g. hydrocarbons, ethers, alcohols, acids, ketones, aldehydes, etc.

grikes (*Geol*). Joint-fractures widened by solution, occurring in limestone terranes, of which they are characteristic, the surface in some cases resembling a much-crevassed glacier.

grill (*Struct.*). A layer of joists in a grillage foundation.

grillage foundation (*Struct.*). A type of foundation often used at the base of a column. It consists of one, two, or more tiers of steel beams superimposed on a layer of concrete, adjacent tiers being placed at right-angles to each other, while all tiers are encased in concrete.

grille (*Build.*) A plain or ornamental openwork of wood or metal, used as a protecting screen or grating.

grimes (*Mining*). A series of fractures in a seam, accompanied by pulverisation of the coal.

grinder (*Paper*). A large thick circular stone made from grit-stone, used in the manufacture of mechanical wood pulp.

grinder (*Radio*). A type of atmospheric disturbance of relatively long duration, best characterised by its name. Cf. *clicks, crashes.*

grinder's rot (*Med.*). Lung disease caused by inhalation of metallic particles by steel-grinders.

grinding (*Textiles*). Sharpening the wire teeth of a carding engine by means of revolving rollers covered with emery.

grinding-in (*Eng.*). The process of obtaining a pressure-tight seal between a conical-faced valve and its seating by grinding the two together with an abrasive mixture such as carborundum and oil.

grinding machine (*Eng.*). A machine tool in which flat, cylindrical, or other surfaces are finished by the abrasive action of a high-speed grinding wheel.

See **centreless grinding** **profile grinding**
cylindrical do. **thread** do.
surface grinding machine.

grinding slip (*Carp., etc.*). A shaped piece of oil-stone on which the curved sides of the cutting edges of tools may be rubbed for sharpening purposes.

grinding teeth (*Zool.*). The molars and premolars of Mammals.

grinding wheel (*Eng.*). An abrasive wheel for cutting and finishing metal. It is composed of an abrasive powder, such as carborundum or emery, held together by a bond or binding agent, which may be either a vitrified material or a softer material, such as shellac or rubber.

grip (*Build.*). A small channel cut to carry away rain water during construction of foundations. *

grip length (*Civ. Eng.*). The minimum length of reinforcing bar which requires to be embedded in concrete to ensure that the bond is sufficient for anchorage purposes.

gripes (*Vet.*). See **colic.**

grippers (*Print.*). Attachments which grip the edge of a sheet of paper when it is fed into the printing machine.

gripper edge (*Print.*). The edge of a sheet of paper caught by the grippers when it is fed into a cylinder machine.

grisaille, grē-zī'y' (*Dec.*). A process of painting in shades of grey, to give the appearance of modelling in relief.

grist (*Brew.*). A mixture of malts sufficient for one brewing.

grist case (*Brew.*). A conical chamber into which the mixture of malts passes, after being ground, preparatory to brewing.

grit (*Geol.*). Siliceous sediment, loose or indurated, the component grains being angular. Contrast *sand* and *sandstone*, in which the grains are rounded.

grit cell (*Bot.*). A stone cell occurring in a leaf or in the flesh of a fruit.

grit chamber (*Sewage*). A *detritus chamber* (q.v.).

grizzle (*Mining*). Coal so intermixed with iron pyrites as to make it of little value.

grizzle bricks (*Build.*). Bricks which are underburnt and of bad shape. They are soft inside and unsuitable for good work, but are often used for the inside of walls. Also called PLACE BRICKS, SAMEL BRICKS.

grizzly (*Mining*). Strong parallel iron bars for sizing broken rock.

grog (*Build.*). Bricks or waste from a clay-works broken down and added to clay to be used for brick manufacture.

grog (*Pot., etc.*). A refractory material consisting of graded broken ceramic, etc., mixed with clays, for making hard bodies.

grogginess (*Vet.*). Arthritis of the navicular joint of horses.

groin (*Build.*). The line of junction of the two constituent arches in a *groined arch* (q.v.).

groin rib (*Build.*). A projecting member following the line of a groin.

groined arch (*Build.*). An arch which is intersected by other arches cutting across it transversely.

Grolier, grō-lyā' (*Bind.*). The term used to designate a book ornamented with designs in gilt characterised by geometrical forms, arabesques, and leaf sprays; introduced by Jean Grolier (1479-1565).

grooved bit (*Carp.*). A wood-boring bit with a cylindrical shank in which is a helical groove.

grooved wire (*Elec. Eng.*). A special form of wire used for the overhead contact wire of electric traction systems, with grooves into which the supporting ears can be clipped. See **figure-eight wire.**

grooving (*Eng.*). Cracking of the plates of steam boilers at points where stresses are set up by the differential expansion of hot and colder parts.

grooving (*Furs*). Striping whole skins with grooves and stripes, two inches apart, to give the effect of reversal.

grooving (*Join.*). The operation of cutting a groove in the surface of work.

grooving plane (*Carp., etc.*). A plane specially adapted to the work of cutting grooves.

grooving saw (*Carp., etc.*). A circular saw which may be of the drunken type, used for cutting grooves.

gros nes, grō-nā (*Med.*). See **goundou.**

gross'ularite (*Min.*). A green garnet, the composition being represented by $3CaO{\cdot}Al_2O_3{\cdot}3SiO_2$; formed in the contact-metamorphism of impure limestone. Also called GOOSEBERRY STONE (q.v.).

ground (*Elec. Eng., Radio*). A term commonly used in America to denote *earth.*

ground (*Lace*). The mesh which forms a foundation for a pattern.

ground (*Mining*). The mineralised deposit and the rocks in which it occurs, e.g. payground, payable reef; barren ground, rock without value.

ground (*Paint.*). The first coat of paint applied as a basis for succeeding coats.

grounds (*Join.*). Strips of wood which are nailed to a wall or partition (fixing plugs being used when necessary) as a basis for the direct attachment of joinery.

ground air (*San. Eng.*). The air contained in the upper layers of the subsoil; it has a variable composition, including carbon dioxide, ammonia, and other gases resulting from oxidation of organic matters, and may be noxious.

ground auger (*Tools*). An auger specially adapted for boring holes in the ground, for artesian wells, etc.

ground engineer (*Aero.*). An individual, selected by the licensing authorities, who has power to certify the safety for flight of an aircraft, or certain specified parts of it, according to regulations laid down at the time.

ground floor (*Build.*). The tier of rooms in a building for which the flooring is on, or nearly on, a level with outside ground-level.

ground joist (*Carp.*). A horizontal timber supported off the ground at a basement or ground-floor level.

ground-laying (*Pot.*). Covering a surface with an even coat of colour, usually by dusting powder over an oiled surface.

ground-level (*Surv.*). The *reduced level* (q.v.) of the ground surface at a given point.

groundmass (*Geol.*). In igneous rocks which have crystallised in two stages the groundmass is the finer-grained portion, in which the phenocrysts are embedded. It may consist wholly of minute crystals, wholly of glass, or partly of both.

ground meristem (*Bot.*). Those parts of an apical meristem which give rise to ground tissue.

ground mould (*Civ. Eng.*). A timber piece or frame used as a templet to bring earthworks such as embankments to the required form.

ground noise (*Acous.*). Extraneous noise accompanying reproduced sound. It arises from the grain in photographic film, abrasive in gramophone records, thermionic valves, irregularities in magnetic tape records, etc.

ground plan (*Build., Civ. Eng.*). A drawing showing a plan view of the foundations for a building or of the layout of rooms, etc., on the ground floor.

ground plane. A term applied to any horizontal plane.

ground plate (*Build.*). The bottom horizontal timber to which the frame of a building is secured.

ground ray (*Radio*). See **direct ray.**

ground return (*Elec. Comm.*). See **earth return circuit.**

ground sill (*Carp.*). A *sleeper* (q.v.).

ground sills (*Hyd. Eng.*). Underwater walls built at intervals across the bed of a channel in order to prevent excessive scour of the bed or to increase the width of flow.

ground speed (*Aero.*). The speed of an aircraft relative to a point on the earth's surface. The actual speed of an aircraft is always relative to the air, which itself is usually moving relative to the ground.

ground table (*Build.*). The course of stones at the foundation of a building.

ground tissue (*Bot*). The general mass of parenchymatous tissue outside and between the vascular strands in a young stem or root.

ground water (*San. Eng.*). Water naturally contained in, and saturating, the subsoil.

ground wave (*Radio*). See **direct ray.**

groundwork (*Civ. Eng.*). The work involved in preparing a site for a foundation or to conform to a required profile.

groundwork (*Paint.*). The *ground* (q.v.).

ground glass (*Photog.*). A sheet of glass which has been uniformly sand-blasted to make it translucent; used in cameras, etc., for receiving real images while they are being focused.

grounded circuit (*Elec. Comm.*). A circuit which is deliberately connected to earth at one point or more, for safety or testing.

grounded work (*Join.*). Joinery attached to grounds.

group (*Chem*). (1) A vertical column of the periodic system, containing elements of similar properties.—(2) Metallic radicals which are precipitated together during the initial separation in qualitative analysis.—(3) A number of atoms which occur together in several compounds.

group automatic operation (*Elec. Eng.*). A method of automatic control sometimes employed with electric lifts; the pressing of a landing push-button calls the next available lift.

group delay (*Radio*). The time taken by an individual signal, such as a dot, to travel from the transmitter to the receiver. It is equal to the separation of the two stations, measured along the path of the waves, divided by the group velocity. Also called ENVELOPE DELAY, GROUP RETARDATION.

group drive (*Elec. Eng*). A method of electric motor drive, employed in factories, in which a motor drives a group of several machines.

group frequency (*Radio*). The frequency of repetition of the individual trains of waves emitted from a spark transmitter or other generator of damped waves.

group reaction (*Chem.*). The reaction by which members of a *group* (2, q.v.) are precipitated.

group retardation (*Radio*). See **group delay.**

group selector (*Auto. Teleph*). A selector which is first operated by a train of impulses, so that the wipers are lifted to a desired level of bank contacts, and then hunts by rotating the wipers over the contacts until a free outlet is found.

group velocity (*Radio*). The velocity of propagation of a pulse or group of waves. In an ionised medium it is lower than the phase velocity.

grouse disease (*Vet.*). A popular term for the specific infection of the intestines of grouse by the nematode worm *Trichostrongylus pergracilis.*

grout (*Civ. Eng.*). See **cement grout.**

groutnick (*Masonry*). A groove cut in a masonry joint to give access to grout.

grouting (*Build., Civ. Eng.*). The process of injecting cement grout into foundations, decayed walls, etc., for strengthening purposes. Also called CEMENTATION.

Grove cell (*Elec. Eng.*). A primary cell similar to a Bunsen cell but with a positive electrode of platinum instead of carbon.

Grove gas cell (*Elec. Eng.*). A primary cell with electrodes of platinum immersed in hydrogen and oxygen respectively and an electrolyte of acidulated water.

growing point (*Bot.*). The apical meristem of a growing axis, where active cell divisions occur and the differentiation of tissues begins.

growing zone (*Bot.*). That portion of an organ in which elongation proceeds.

growl (*Mining*). The noise heard when strata are being subjected to great pressure.

growth (*Biol.*). A change in the body of an organism, and in the cells composing it, accompanied by cell division, by the utilisation of material, and, nearly always, by increase in the size and weight of the organism or of the part under consideration. Once growth has occurred, its results cannot be reversed.

growth (*Met.*). (Applied to cast-iron) the tendency to increase in volume when repeatedly heated and cooled.

growth curvature (*Bot.*). A curvature in an elongated plant organ, brought about by one side growing faster than the other.

growth form (*Bot.*). See **life form.**

growth inhibiting substance (*Bot.*). A substance, formed inside plant cells, which slows or stops growth, often in some other part of the plant.

growth promoting substance (*Bot.*). A substance which promotes or accelerates growth. It may be formed inside the plant, or may be obtained from external sources.

growth ring (*Bot.*). The cylinder of secondary wood added during one season of growth, as seen in cross-section. A growth ring may not be the same as an *annual ring* (q.v.).

growth water (*Bot.*). See **available water.**

groynes (*Hyd. Eng.*). (1) Barrier walls, formed of piling, fascine work, or rubble, built out from river banks at right-angles to the flow, in order to reduce the channel and keep the scour of the water within definite bounds.—(2) Similar structures built on a sea-shore to check the erosive effects of currents and tides. Also called JETTIES.

grozing iron (*Plumb.*). A tool for smoothing joints made in lead piping.

grub axe (*Tools*). A tool for digging up roots; it has a broad chisel-shaped point on one side and a flat adze-like blade on the other.

grub saw (*Tools*). A hand-saw for cutting marble, having a steel blade stiffened along the back with wooden strips.

grubber (*Agric. Mach.*). A heavy type of cultivator in which the teeth are set rigidly in a frame.

Gru'ifor'mes (*Zool.*). An order of *Alectoromorphae* possessing a schizognathous palate. Rails, Coots, Water-hens, Trumpeters, Cranes, Sun-bitterns, and Fin-foots. Mainly marsh-living forms.

grummet (*Plumb.*). Hemp and red-lead putty mixed as a jointing material for water-tightness.

gru'mous (*Bot.*). Having flesh composed of little grains.

Gryphite Grits (*Geol*) A local name for part of the Inferior Oölite of the Cotteswolds in Gloucestershire. Actually, a limestone containing shells and shell-fragments (largely of *Gryphaea*) rendering the rock gritty; but not grit in the true petrological sense.

Gryptcrete (*Build.*). A proprietary fibrous plaster ceiling slab used in panel heating.

Guadaloupian (or **Guadeloupe**) **Group** (*Geol.*). Strata, referred to the Permian, occurring in Texas and New Mexico; they comprise the Delaware Mountain Series below and the Capitan Limestone above.

guag (*Mining*). The space left after the mineral has been extracted. Also called GUNIS.

guai'ac test (*Chem.*). A test for the presence of blood in gastric contents, based upon the oxidation of guaiac resin in ethereal solution to guaiaconic acid. The presence of blood is shown by a blue colour in the ether solution.

guai'acol (*Chem.*). $HO{\cdot}C_6H_4{\cdot}OCH_3$, the monomethyl ether of *catechol* (q.v.), found in beech-wood tar; a very unstable compound, with strong reducing properties.

guan'idine (*Chem.*). $HN{:}C(NH_2)_2$, imido-urea or the amidine of amidocarbonic acid; a crystalline compound, easily soluble in water, strongly basic.

guano (*Agric.*). The excrementitious deposit of certain sea-fowl, found on the coasts and islands of Central America, Africa, etc. It consists chiefly of calcium and tricalcium phosphate mixed with ammonium oxalate and ammonium hippurate.

guan'ophore (*Zool.*). See **xanthophore.**

guard or **guard wire** (*Auto. Teleph.*). The wire accompanying a speaking pair through an automatic telephone exchange; it is earthed while the speaking pair is being used by subscribers, thus indicating that the speaking pair cannot be engaged by any other circuit.

guard (*Build., etc.*). A protection on a scaffold to prevent persons from falling; on a machine, to prevent injury to the operator or others from gears, cutting tools, etc.

guard (*Civ. Eng.*). A *fender pile* (q.v.).

guards (*Bind.*). Narrow strips of paper or linen projecting between sections in a book, for the attachment of plates, maps, etc.

guard bead (*Join.*). A bead protecting the junction of sash and sill in a shop front against the entry of rain.

guard cell (*Bot.*). One of the two specialised epidermal cells which border on the pore of a stoma and together cause it to close or to open.

guard cradle (*Elec. Eng.*). A network of wires serving the same purpose as a *guard wire* (q.v.). Also called GUARD NET.

guard lock (*Hyd. Eng.*). A lock separating tidal waters from the water in a basin.

guard net (*Elec. Eng.*). See **guard cradle.**

guard pile (*Hyd. Eng.*). A *fender pile* (q.v.).

guard pin (*Horol.*). See **safety finger.**

guard plate (*Eng.*). A sheet steel plate fixed in front of moving parts of machinery to prevent injury to the operator.

guard polyp (*Zool.*). See **nematophore.**

guard post (*Civ. Eng.*). A *fender post* (q.v.).

guard rail (*Rail.*). See **check rail.**

guard ring (*Elec. Eng.*). A ring surrounding a charged body to ensure an even distribution of potential over the surface of the body by eliminating the effect of the edges.

guard wire (*Elec. Eng.*). An earth wire used on an overhead transmission line; it is arranged in such a position that, should a conductor break, it will immediately be earthed by contact with the wire. See **Price's guard wire.**

gubernac'ulum (*Zool.*). In Mammals, the cord supporting the testes, in the scrotal sac: in *Hydrozoa*, an ectodermal strand supporting the gonophore in the gonotheca: in *Mastigophora*, a posterior flagellum used in steering.—*adj.* **gubernac'ular.**

gudgeon (*Build.*). A metal pin used for joining adjacent stones.

gudgeon (*Join.*). The wrought-iron pin which is fastened to a gate-post or door frame, and about which the leaf of a strap-hinge turns.

gudgeon pin or **gudgeon wrist pin** (*Eng.*). The pin connecting the piston of an internal-combustion engine with the bearing of the little end of the connecting-rod. Also called PISTON PIN. See also **floating gudgeon pin.**

guest (*Zool.*). An animal living and/or breeding in the nest of another animal, as a myrmecophile in an ants' nest.

gug (*Mining*). A self-acting inclined roadway in a coal-mine.

guide (*Civ. Eng.*). A pile driven to indicate a site.

guide (*Rail.*). A *check rail* (q.v.).

guide bars (*Eng.*). Bars with flat or cylindrical surfaces provided to guide the crosshead of a steam-engine and so avoid lateral thrust on the piston rod. Also called SLIDE BARS.

guide bead (*Join.*). A bead fixed to the inside of a cased frame as a guide for the sliding sash. Also called INNER BEAD.

guide mill (*Met.*). A rolling-mill equipped with guides to ensure that the stock enters the mill at the correct point and angle.

guide piles (*Civ. Eng.*). Stout timber piles used at intervals along both sides of wide excavations where the sides are held firm by sheet piles and strong support is needed for the struts wedging the sides apart.

guide pulley (*Eng.*). A loose pulley used to guide a driving-belt past an obstruction or to divert its direction.

guide rail (*Rail.*). A *check rail* (q.v.).

guided waves (*Radio*). Electromagnetic waves which are guided along conductors or insulating surfaces, as distinct from those in free space.

guiding bed (*Mining*). A thin band of coal or shale which forms a connexion between two parts of a nipped-out seam.

Guignet's green, gē-nyā' (*Dec.*). A very permanent colour made from an oxide of chromium. Also called CHROME GREEN.

guilloche, gi-lōsh' (*Arch.*). An ornament in the form of interlaced bands, used to decorate borders or mouldings.

guillotine (*Join.*). A *trimming machine* (q.v.).

guillotine (*Paper*). A machine having a heavy steel blade, used for trimming books or cutting stacks of paper.

guillotine (*Surg.*). An instrument for cutting off tonsils.

guinea-pig paralysis (*Vet.*). See **paralysis (guinea-pig).**

gula (*Zool.*). In Vertebrates, the upper part of the throat: in Insects, an unpaired ventral cephalic sclerite lying behind the submentum.—*adj.* **gular.**

gulamen'tum (*Zool.*). In some Insects, the ventral sclerite formed by the fusion of the submentum and the gula.

gular (*Zool.*). In some lower Vertebrates, a bone developed between the rami of the lower jaw: in *Chelonia*, an anterior unpaired element of the plastron.

gulching (*Mining*). The noise which generally precedes a fall or settlement of overlying strata in a coal-mine.

Guldberg and Waage's law, goold'berg, vah'ge (*Chem.*). See **law of mass action.**

gullet (*Civ. Eng.*). A narrow trench dug the full depth of a proposed cutting (in the case of large cuttings). A track is laid along the bottom of this trench, and wagons carry away the earth as the trench is widened into the full cutting.

gullet (*Tools*). A depression cut in the face of a saw in front of each tooth, alternately on one side of the blade and then on the other.

gullet (*Zool.*). The oesophagus: in *Protozoa*, the cytopharynx.

gullet saw (*Tools*). A saw with gullets cut in front of each tooth. Also called BRIER-TOOTH SAW.

gullet tooth (*Tools*). A saw tooth with a gullet cut away in front of it.

gulleting (*Civ. Eng.*). The process of excavating road or railway cuttings in a series of steps worked simultaneously.

gulley (*San. Eng.*). A fitting installed at the upper end of a drain, to receive the discharge from rain water or waste pipes.

gulley grating (*San. Eng.*). A perforated cover for a gulley trap.

gulley trap (*San. Eng.*). A device installed at a gulley to imprison foul air within the drain pipe. Also called YARD TRAP.

gu'lose (*Chem.*). A monosaccharose belonging to the group of aldohexoses.

gum (*Mining*). Small coal, slack, or duff.

gums (*Chem.*). Non-volatile, colloidal plant products which either dissolve or swell up in contact with water. On hydrolysis they yield certain complex organic acids in addition to pentoses and hexoses.

gum arabic (*Chem.*). A fine, yellow or white powder, soluble in water; sp. gr. 1·355. It is obtained from certain varieties of acacia, the world's main supply coming from the Sudan and Senegal. Used in pharmacy for making emulsions and pills; also in glues and pastes. Also called ACACIA GUM, SENEGAL GUM.

gum bichromate process (*Photog.*). The use of gum as a vehicle for pigments and bichromate on printing papers, the exposed image being developed by water.

gum printing (*Photog.*). The use of gum and other colloids for adding pigments to bromide prints.

gums (*Zool.*). In higher Vertebrates, the thick tissue masses surrounding the bases of the teeth.

gum-boil (*Med.*). A small abscess on the palate, associated with a carious tooth, or the result of infection following upon local injury.

gumma (*Med.*). A mass of cellular granulation tissue, due to syphilitic infection in the late or tertiary stage.—*adj.* **gum'matous.**

gummed papers (*Paper*). Paper coated with adhesive (dextrine, gum arabic, etc.).

gummer (*Mining*). A man who clears the fine coal, gum, or dirt from the undercut made by a coal-cutting machine.

gumming (*Paint.*). The thickening which some oils undergo on exposure to the air, as a result of absorbing oxygen from it.

gumming-spade (*Mining*). A long-handled shovel used by a gummer.

gum'mosis (*Bot.*). A pathological condition shown by the conversion of cell walls into gum

gun. The generic term applied to all artillery weapons when assembled on their mountings or in their carriages.

gun (*Cathode Ray Tubes*). The assemblage of electrodes, comprising the cathode, anode, focusing and modulating electrodes, from which the electron beam is emitted before being subjected to deflecting fields.

gun (*Civ. Eng., Paint., etc.*). A *spray-gun* (q.v.).

gun (*Mining*). A bent bar of iron for connecting a horse's shaft to a tub or train.

gun carriage. The support provided for an artillery weapon, both for travelling and for firing See **mounting.**

guncotton (*Chem.*). A *nitrocellulose* (q.v.) with a high nitrogen content, probably the hexanitrate It burns readily and explodes when struck or strongly heated. Used for explosives.

gun current (*Cathode Ray Tubes*). The total electronic current flowing to the anode in a *cathode ray tube* (q.v.), part of which forms the *beam current* (q.v.).

gunmetal (*Met.*). A copper-tin alloy (i.e. bronze) containing copper 88, tin 10, and zinc 2% (Admiralty gunmetal), or copper 88, tin 8, and zinc 4%. Lead and nickel are frequently added, and the alloys are used as cast where resistance to corrosion or wear is required; e.g. in bearings, steam-pipe fittings, gears, etc.

gunstock stile (*Join.*). See **diminished stile.**

gunis (*Mining*). See **guag.**

gun'ite (*Civ. Eng.*). A mixture of sand and cement, mixed dry for use in a *cement gun* (q.v.).

Gunter's chain (*Surv.*). A chain having an overall length of 66 ft. It is preferred in Britain for land surveys because areas are more easily computed with it, since one acre equals 10 sq. chains; it is much used also in pegging out railway centre lines, because one chain is the tenth part of a furlong.

Gunzberg test, goonts'berg (*Chem.*). A test for the presence of free hydrochloric acid in gastric juice, based upon the appearance of a red colour on evaporation with an alcoholic solution of phloroglucinol and vanillin.

gurgoyle (*Build.*). See **gargoyle.**

gurlet (*Masonry*). A pickaxe having a sharply pointed peen and a bladed peen for cutting.

gurley (*Diel.*). The number of seconds required for the closed cylinder to fall under its own weight in the *Gurley densimeter* (q.v.).

Gurley densimeter (*Diel.*). An instrument consisting of an open cylinder having one end under water and the other end closed by the paper sample whose porosity is to be determined. The cylinder falls under its own weight and in so doing pushes air through the paper. If the paper is very dense the air is pushed through slowly and the cylinder takes longer to fall a given distance.

gusher (*Geol.*). See **geyser.**

guss (*Mining*). A rope used for drawing a basket of coal in a thin seam.

gusset or gusset plate (*Eng., Struct.*). A bracket or stay, cast or built up from plate and angle, used to strengthen a joint between two plates which meet at an angle, as the junction of a boiler shell with the front and back plates, or between connecting members of a structure.

gusset piece (*Build.*). A piece of timber covering the triangular end-gap between the roof slope and the horizontal gutter boarding behind a chimney stack.

gus'tatory (*Zool.*). Pertaining to the sense of taste.

gustatory calyculus (*Zool.*). See **taste-bud.**

gut (*Zool.*). The alimentary canal.

gut-tie (*Vet.*). Strangulation of a loop of intestine which has herniated through a rupture in the peritoneal covering of the right spermatic cord of castrated cattle.

gutta (*Bot.*). (1) An oil drop present in a spore or in a fungal hypha.—(2) A general term for a vacuole, when small.—(*Zool.*) A patch of colour or other marking, resembling a small drop, on the surface of an animal.—*pl.* **guttae.**—*adj.* **gut'tulate.**

gutta-percha. The coagulated latex of *Isonandra* (or *Palaquium*) *Gutta* and other trees such as *Bassia pallida*, *Mimusops balata*, and *Payena Leerii*, found chiefly in British Malaya and the East Indies.

Physical properties of deresinated gutta-percha: sp. gr. ·945, tensile strength about 6000 lb. per sq. in., dielectric strength about 280,000 volts per in., m.p. (Wendriner) about 95° C. Having a very high resistivity (50,000 megohms per cm. cub.) and dielectric constant of 3·0, and being waterproof, it is especially suitable, without lead sheath, for submarine cables. See also **balata.**

guttae (*Arch.*). An ornament in the form of a line of truncated cones used to decorate entablatures or hollow mouldings.

guttate (*Bot.*). Containing little drops of material.

guttation (*Bot.*). The exudation of drops of fluid from an uninjured part of a plant, commonly from the ends of the main veins of leaves.

gutter (*Bind.*). The margin of a sheet which, when folded, falls into the back of a book: the inner margins of two adjacent pages, lying along the back.

gutter (*Build., Civ. Eng.*). A channel along the side of a road, or around the eaves of a building, to collect and carry away surface waters.

gutter (*Hyd. Eng.*). A trench alongside a canal, for clay puddle.

gutter (*Mining*). A small airway made through a goaf or gob.

gutter bearer (*Carp.*). A timber about 2×1½ in. carrying gutter boarding.

gutter bed (*Plumb.*). A lead sheet fixed behind the eaves gutter and over the tilting fillet to prevent overflow from the gutter from soaking into the wall.

gutter boards (*Build.*). See **snow boards.**

gutter bolt (*Build.*). A securing bolt between the spigot and the socket ends at a joint in a cast-iron gutter.

gutter-pointed (*Bot.*). Acuminate, and with the point channelled above, forming a spout.

gut'tulate (*Bot.*). Containing a gutta or guttae.

guttural pouch (*Vet.*). A dilatation of the eustachian tube of the horse.

gut'turoliths (*Vet.*). See **chondroids.**

Gutzeit test, goot'zit (*Chem.*). A method for the determination of arsenic.

guy derrick (*Build., Civ. Eng*) A crane operating from a mast held in an upright position by guy-ropes.

guy-rope (*Civ. Eng.*). A rope holding a structure in a desired position.

guying (*Civ. Eng*). The operation of fixing a structure in position by means of guy-ropes.

Gwilt's rule (*Build.*). A rule for giving the thickness of walls of buildings. It states that

$$T=\frac{HL}{nD},$$

where T = thickness of wall in feet, H = height of wall in feet, L = length between party walls in feet, D = diagonal of face of wall $=\sqrt{H^2+L^2}$, $n=22$ for dwelling-houses of brick, 20 for warehouses of brick, 18 for public buildings of brick.

Gyffin Shales (*Geol.*). Shales, flags, and mudstones, 300 ft. thick, occurring in North Denbighshire, and of the same age as the Llandovery Series of the Welsh Borderland.

gymbals, gimbals (*Horol.*). Self-aligning bearings for supporting a chronometer in its box. Used to ensure that the chronometer is kept level, irrespective of the ship's motion.

gymnasium (*Build.*). A hall specially adapted to, and equipped for, the performance of physical exercises.

gymne'trous (*Zool.*). (Of Fish) lacking an anal fin

gymno- (Greek *gymnos*, naked). A prefix used in the construction of compound terms; e.g. *gymnorhinal* (q v.).

gymnoa'rian (*Zool.*). Said of gonads which are not enclosed within coelomic sacs. Cf. *cystoarian.*

Gym'noblaste'a (*Zool*). An order of *Hydrozoa* in which the polyps are colonial and the skeleton of the colony consists of a perisarc only; the medusae, when set free, are *Anthomedusae* (q.v.)

gym'noblas'tic (*Zool.*). Said of hydroid colonies in which the blastostyles are unprotected by gonangia. Cf. *calyptoblastic.*

gym'nocarp'ous (*Bot.*). Having the hymenium exposed from an early stage in its development.

gym'nocyte (*Biol.*). A cell without a cell-wall.

Gym'nolae'mata (*Zool.*). An order of *Ectoprocta*, in which the lophophore is circular and there is no epistome; found in estuaries and brackish water, but mainly in the sea.

Gym'nophio'na (*Zool.*). See **Apoda.**

gym'noplasm (*Biol.*). An amorphous mass of naked protoplasm.

gym'norhi'nal (*Zool.*). (Of Birds) having no feathers on the area surrounding the nostrils.

gym'noso'matous (*Zool.*). Having a naked body, as some *Mollusca* which lack both shell and mantle.

Gym'nosperm'ae (*Bot.*). One of the two main divisions of seed plants, with about 500 species, mostly conifers. They are distinguished by the production of their ovules and seeds on the surface of a fertile leaf, not enclosed in an ovary.

gymnosper'mous (*Bot.*). Having the seeds exposed, not contained in an ovary.

gym'nospore (*Zool.*). A protozoan spore which is not enclosed by a spore-case. Cf. *chlamydospore.*

gym'nosto'matous (*Zool.*). Lacking a *peristome* (q.v.).

gym'nosto'mous (*Bot.*). Lacking a peristome.

gyn-, gyno-, gynaec-, gynaeco- (Greek *gynē*, gen. *gynaikos*, woman). A prefix used in the construction of compound terms; e.g. *gynaecology* (q.v.).

gy'naecan'er (*Zool.*). A male ant which superficially resembles the female.

gynae'ceum (*Bot.*). (1) The group of archegonia in mosses.—(2) The carpel or carpels in a flower.

gynae'coid (*Zool.*). An egg-laying worker ant.

gynaecol'ogy or **gynecology** (*Med*). That branch of medical science which deals with the functions and diseases peculiar to women.

gynaecomast'ia or **gynecomastia** (*Med.*). Abnormal enlargement of the male breast.

gynae'cophore (*Zool.*). In some *Nematoda*, a canal on the lower side of the male, which accommodates the female.—*adjs.* **gynae'copho'ral, gynae'cophor'ic.**

gynan'drism (*Zool.*). See **hermaphroditism.**

gynan'dromorph (*Zool.*). An animal exhibiting male and female characters.

gynan'dromor'phism (*Zool.*). The occurrence of secondary sexual characters of both sexes in the same individual.

gynan'drous (*Bot.*). Having the stamens and styles united to form a column, as in the flowers of orchids.

gynase (*Zool.*). A hormone or enzyme which produces femaleness in an organism.

gyne (*Zool.*). A sexually perfect female ant; a queen ant.

gy'noba'sic (*Bot*). Having the style attached close to the base of the ovary.

gy'noba'sis or **gy'nophore** (*Bot*). An elongation of the receptacle of a flower, forming a short stalk to the ovary.

gy'nodioe'cious (*Bot.*). Said of a species in which some plants bear hermaphrodite flowers and others bear female flowers.

gy'nogen'esis (*Biol.*). A kind of pseudapogamy in which the male gamete enters the egg but nevertheless fails to bring about fertilisation, so that all further development takes place from the egg alone.

gy'nogonid'ia (*Zool.*). In some *Mastigophora*, female gametes formed after repeated division of parthenogonidia.

gy'nomonoe'cious (*Bot.*). Having hermaphrodite and female flowers on the same plant.

gy'nospore (*Bot.*). See **megaspore.**

gy'noste'mium (*Bot.*). The column (in flowers of orchids).

gypsum (*Min.*). Crystalline hydrated sulphate of calcium, $CaSO_4{\cdot}2H_2O$. Occurs massive as alabaster, fibrous as satin spar, and as clear, colourless, monoclinic crystals known as selenite. Used in the manufacture of plaster of Paris.

gypsum plant (*Bot.*). A plant which appears to flourish in a soil containing gypsum.

gyrate (*Bot.*). See **circinate.**

gyration, radius of (*Phys.*). See **radius of gyration.**

gy'ratory (*Mining*). A widely used form of rock-breaker in which an inner cone gyrates in a larger outer hollow cone.

gy'ro compass (*Ships, etc.*). A compass built up round a gyro wheel which is driven by an electric motor. It has a high degree of immunity to magnetic disturbances, and the orientation of the sensitive element is that of the gyro axle. The speed of the rotor is about 8600 r.p.m.

gyroplane (*Aero.*). A rotaplane.

gyroscope. A small heavy wheel or top rotated (usually electrically) at high speed in anti-friction bearings. Any alteration of the inclination of the axis of rotation is resisted by a turning movement (gyrostatic moment). It is therefore used as a compass, as a controlling device in aircraft and torpedoes, and, in large sizes, as a ship's stabiliser. Also called GYROSTAT.

gyrose (*Bot.*). Having a folded surface, marked with sinuous lines or ridges.

gyrostat. See **gyroscope.**

gyrus (*Zool.*). A ridge between two grooves: a convolution of the surface of the cerebrum.

H

h (*Phys.*). See **Planck's constant.**

H (*Chem.*). The symbol for hydrogen.

[H] (*Light*). One member of the strongest pair (H and K) of Fraunhofer lines in the solar spectrum, almost at the limit of visibility in the extreme violet. Their wavelengths are [H], 3968·625 A. ; [K], 3933·825 A. ; and the lines are due to ionised calcium.

H_α, H_β, H_γ, etc. (*Light*). The lines of the Balmer series in the hydrogen spectrum. Their wavelengths are: H_α, 6562·99 ; H_β, 4861·52 ; H_γ, 4340·67 ; H_δ, 4101·94 A.U. The series continues into the ultraviolet, where about 20 more lines are observable.

H-acid (*Chem.*). 1,8-Aminonaphthol-3,6-disulphonic acid, an intermediate for dyestuffs.

H and D number (*Photog.*). An expression for the speed of photographic emulsions. See **Hurter and Driffield curve.**

H-armature (*Elec. Eng.*). See **shuttle armature.**

H-beam (*Build.*, *Civ. Eng.*, *etc.*). A steel beam with a section shaped like the letter H, the cross-piece of which is relatively long. Also called H-GIRDER, I-BEAM, or simply a ROLLED STEEL JOIST.

H-hinge (*Join.*). A hinge which when opened has the shape of the letter H. Also called a PARLIAMENT HINGE.

H-paper (*Cables*). Höchstädter paper, a paper one side of which is coated with aluminium foil, the composite sheet being perforated to allow oil to flow freely.

H-piece (*Bot.*). A short lateral hypha connecting two longer hyphae, giving an H-like figure, and probably facilitating the flow of nutritive material about the mycelium.

H-section (*Elec. Comm.*). An electrical network derived from the T-section, in which half of each series arm is placed in the other leg of the circuit, making the section balanced.

H-type cable (*Cables*). A cable having a wrapping of H-paper round each core. There are single-core and three-core H-type cables. The benefit of H-paper in single-core cables is that no ionisation takes place between the core and sheath. In three-core cables no ionisation takes place in the fillings.

H-type pole (*Elec. Eng.*). A type of wooden support for overhead transmission lines, consisting of two poles placed vertically and braced together at the centre.

haar (*Meteor.*). A wet sea-fog advancing in summer from the North Sea upon the shores of England and Scotland.

haben'ula (*Zool.*). A strap-like structure: in particular, a nerve-centre of the diencephalon.—*adj.* **haben'ular.**

Haber process, hah'— (*Chem.*). A method of fixing nitrogen, in which nitrogen combines with hydrogen to form ammonia. The gases are circulated through a series of catalyst bombs at 400-500° C. and 200 atmospheres. The ammonia is washed out with water.

habit (*Crystal.*). A term used to cover the varying development of the crystal forms possessed by any one mineral. Thus calcite may occur as crystals showing the faces of the hexagonal prism, basal pinacoid, scalenohedron, and rhombohedron. According to the relative development or *dominance* of one or other of these forms, the habit may be prismatic, tabular, scalenohedral, or rhombohedral.

habit (*Zool.*). The established normal behaviour of an animal species.

habit-form (*Ecol.*). See **biological race.**

habit spasm (*Med.*). Tic. A repeated, rapidly performed, involuntary, and co-ordinated movement, occurring in a nervous person.

hab'itat (*Biol.*). The normal locality or place of abode of an organism; e.g. (*Bot.*) the place inhabited by a plant or by a plant community, together with all factors external to the plant or plants, and influencing their lives.

habitat form (*Bot.*). A plant showing features, such as luxuriant growth or dwarfing, which can be related to the place where it is growing.

habitat group (*Bot.*). A set of unrelated plants which inhabit the same kind of situation; e.g. water plants.

haboob' (*Meteor.*). A line-squall, with dust storms, blowing in the Sudan during the rainy season.

hack (*Bricks*). A long parallel bank, about 6 in. high, made of brick, rubbish, and ashes, on which bricks are laid in the course of manufacture, when it is intended to dry them in the open.

hack-barrow (*Bricks*). A barrow used to carry green bricks to the hack for drying.

hack-cap (*Bricks*). A small timber structure erected to provide cover for a hack.

hack-saw (*Eng.*). (1) A mechanic's hand-saw used for cutting metal. It consists of a steel frame, across which is stretched a narrow saw-blade of hardened steel.—(2) A larger saw, similar to the above, but power-driven through a crank and connecting-rod.

hacket (*Carp.*). A *hatchet* (q.v.).

hacking (*Bricks*). The operation of piling up green bricks on a hack to dry.

hacking (*Build.*). The process of making a surface rough, in order to provide a key for plasterwork.

hacking (*Masonry*). A course of stones in a rubble wall, the course being composed partly of single stones of the full height of the course and partly of shallower stones arranged two to the height of the course.

hacking hammer (*Plast.*). The hammer used in the operation of *hacking-off* (q.v.).

hacking-off (*Plast.*). The operation of removing old plaster from a surface which is to be replastered.

hacking-out knife (*Build.*). A knife used to remove old putty from sash rebates before reglazing.

hackling (*Linen*). The process of combing to which scutched flax is subjected in the hackling machine, in order to parallelise the long fibres and remove the short ones.

Hackworth valve gear (*Eng.*). A radial gear in which an eccentric opposite the crank operates a link whose other end slides along an inclined guide, the valve rod being pivoted to a point on the link.

hade (*Geol.*, *etc.*). The angle of inclination of a fault-plane, measured from the vertical. If the angle is small the fault is of *low hade* (as in overthrusts). Cf. *dip*.

Hadfield's manganese steel (*Met.*). See **manganese steel.**

had'rocen'tric vascular bundle (*Bot.*). A concentric vascular bundle in which the xylem is surrounded by phloem.

had'romal, had'romase (*Bot.*). An enzyme present in some fungi which enables them to decompose wood.

had'rome (*Bot.*). The conducting tissues of the xylem.

Haeckel's law, heck'l (*Biol*). See **biogenetic law.**

haem-, haema-, haemo-, haemat-, haemato- (Greek *haima*, gen. *haimatos*, blood). A prefix used in the construction of compound terms; e.g. *haemotoxin*, a poison which produces haemolysis.

hae'mad (*Zool.*). Situated on the same side of the vertebral column as the heart.

hae'mal, haematal, haemic (*Zool.*). Pertaining to the blood or to blood-vessels.

haemal arch (*Zool.*). A skeletal structure arising ventrally from a vertebral centrum, which encloses the caudal blood-vessels.

haemal canal (*Zool.*). The space enclosed by the centrum and the haemal arch of a vertebra, through which pass the caudal blood-vessels.

haemal spine (*Zool.*). The median ventral vertebral spine formed by the fusion of the haemapophyses, below the haemal canal.

haemal system (*Zool.*). The system of vessels and channels in which the blood circulates.

haemangio'ma (*Med.*). Angioma. A tumour composed of blood-vessels irregularly disposed and of varying size.

hae'mapoi'esis (*Zool.*) The formation of blood.

hae'mapoph'yses (*Zool.*). A pair of plates arising ventrally from the vertebral centrum, and meeting below the **haemal** canal to form the haemal arch and spine.

haemarthro'sis (*Med.*). A joint containing blood which has effused into it

haematem'esis (*Med.*). The vomiting of blood, or of blood-stained contents of the stomach.

hae'matin (*Chem.*). *Protohaematin, oxyhaematin.* A compound of *protoporphyrin* (q.v.) and ferric iron; it combines with globin to form methaemoglobin. It can be reduced to reduced haematin (*haemochrome, heme*) which contains divalent iron, and unites with globin to give haemoglobin.

haematin'ic (*Med.*). Pertaining to the blood.

hae'matite (*Min.*). Oxide of iron, Fe_2O_3, crystallising in the trigonal system. It occurs in a number of different forms: kidney iron-ore massive, as found in the iron mines in Lancashire and Cumberland; specular iron-ore in groups of beautiful, lustrous, rhombohedral crystals as, for example, from Elba; bedded ores of sedimentary origin, as in the Carboniferous Limestone of S. Wales; and as a cement and pigment in sandstones. The Clinton ore is the most important oölitic haematite in the U.S.A. (see **Clinton Limestones**). The Wabana ore in Newfoundland is also haematitic in part, but most of the iron produced in N. America comes from the 'iron ranges' of the Lake Superior district, especially the Mesabi Range, Minn.

haemato'bium (*Zool.*). An organism living in blood. —*adj.* **haemato'bic.**

haemat'oblast (*Zool.*). A primitive blood cell, which may develop into an erythrocyte or a leucocyte: a blood platelet.

hae'matocele, —sēl (*Med.*). An effusion of blood localised in the form of a cyst in a cavity of the body.

hae'matochrome (*Bot., Zool.*). A red colouring matter produced by a number of green algae, especially when exposed to drought, and by certain *Phytomastigina.*

hae'matocol'pomet'ra (*Med.*). Accumulation of menstrual blood in the vagina and uterine cavity.

hae'matocol'pos (*Med.*). Accumulation of menstrual blood in the vagina, due to an imperforate hymen.

haemat'ocry'al (*Zool.*). See **cold-blooded.**

hae'matodo'cha (*Zool.*). In male Spiders, a distensible blood-cavity which forms part of the palpal organ.

hae'matogen'esis (*Zool.*). See **haemopoiesis.**

haematog'enous. Having origin in the blood.

haematol'ogist (*Med.*). One who specialises in the study of the blood and its diseases.

haemato'ma (*Med.*). A swelling composed of blood effused into connective tissue.

haematome'tra (*Med.*). Accumulation of menstrual blood in the uterus, due to blocking of the outlet.

haematomye'lia (*Med.*). Haemorrhage into the substance of the spinal cord.

haematoph'agous (*Zool.*). Feeding on blood.

hae'matopor'phyrin (*Chem.*). An iron-free pigment obtained from haemoglobin by the action of conc. hydrochloric acid. It is 1·3·5 8-tetramethyl-2-4-di-(hydroxyethyl)-6·7-dipropionic acid-porphin.

hae'matorra'chis (*Med.*). Haemorrhage into the vertebral canal but outside the spinal cord.

hae'matosal'pinx (*Med.*). Collection of blood in a Fallopian tube.

haemato'sis (*Zool.*). See **haemapoiesis.**

haemat'other'mal (*Zool.*). See **warm-blooded.**

haematox'ylin (*Micros.*). A colouring matter extracted from logwood; much used to stain microscopic preparations.

haemat'ozo'on (*Zool.*). An animal living parasitically in the blood.

haematu'ria (*Med.*). Presence of blood in the urine.

haemendothelio'ma (*Med.*). A tumour composed of cells derived from the lining endothelium of blood-vessels.

haemic. See under **haemal.**

haemin (*Chem.*). The hydrochloride of *haematin* (q.v.), $C_{34}H_{32}N_4O_4FeCl$, brown crystals. Its molecule contains four pyrrole radicals.

haemochromato'sis (*Med.*). Bronzed diabetes. A disease in which the iron-containing pigment, haemosiderin, is deposited in excess in the organs of the body, giving rise to cirrhosis of liver, enlargement of spleen, diabetes, skin pigmentation.

haemochro'mogen (*Chem.*). (1) A compound of haematin and any nitrogenous (amino) substance.—(2) A compound of reduced haematin and denatured globin which polymerises at *p*H5 to form haemoglobin, and is formed from haemoglobin by the action of dilute alkali.

hae'mocoele. *Primary body cavity* (q.v.).

haemocy'anin (*Zool.*). A blue respiratory pigment, containing copper, in the blood of *Crustacea* and *Mollusca*. It has respiratory functions similar to haemoglobin.

hae'mocytes (*Zool.*). The corpuscles found floating in haemolymph.

hae'mocytol'ysis (*Zool.*). The solution of red blood corpuscles. Also called HAEMOLYSIS, ERYTHROCYTOLYSIS.

haemoge'nia (*Med.*). See **purpura haemorrhagica** and **thrombocytopenia.**

haemoglo'bin (*Zool.*). A respiratory pigment occurring in the erythrocytes of all *Craniata*, and in the blood plasma of certain *Invertebrata*. It belongs to the group of conjugated proteins and has the empirical formula $(C_{759}H_{1203}N_{210}S_2FeO_{204})_4$, and a molecular weight of about 68,000. It combines readily with oxygen to form oxyhaemoglobin, but has a still greater affinity for carbon monoxide.

haemoglobinae'mia (*Med.*). The abnormal presence of haemoglobin in the blood, as a result of destruction of red blood cells.

haemoglobinaemia, paralytic (*Vet.*). Azoturia. An acute degeneration of the muscles of horses, characterised by lumbar paralysis and haemoglobinuria.

haemoglobinom'eter (*Med.*). An instrument for measuring the percentage of haemoglobin in the blood.

haemoglobinu'ria (*Med.*). The presence of haemoglobin in the urine, as a result of excessive destruction of red blood cells.

haemoglobinuria, paroxysmal (*Vet.*). See **haemoglobinaemia (paralytic).**

hae'molymph (*Zool.*). The watery fluid, containing leucocytes, believed to represent blood, found in the haemocoelic body-cavity of certain Invertebrates.

haemol'ysins (*Chem.*). A group of immune bodies causing the dissolution of red blood cells.

haemol'ysis. See **haemocytolysis.**

haemolyt'ic anaemia (*Med.*). Anaemia due to excessive destruction of red blood cells.

hae'mopericar'dium (*Med.*). The presence of blood in the pericardial sac.

haemophil'ia (*Med.*). A hereditary disorder in which bleeding after injury persists, owing to delayed coagulation of the blood. The disorder is transmitted through females to males.

haemopneumotho'rax, hē'mō-nū'— (*Med*) The presence of blood and air in the pleural cavity.

haemopoie'sis (*Zool.*). See **haemapoiesis.**

haemop'tysis (*Med*). The spitting of blood, or of blood-stained sputum.

haem'orrhage (*Med.*). Bleeding; escape of blood from a ruptured blood-vessel.

haemorrha'gic septicaemia (*Vet.*). See **pasteurellosis.**

haem'orrhoid (*Med.*). Pile (usually in plural, *haemorrhoids*). Varicose dilatation of the haemorrhoidal veins at the lower end of the rectum and the anus

hae'mosidero'sis (*Med.*). Deposition, in the tissues of the body, of the iron-containing pigment *haemosiderin*, after excessive destruction of red blood cells. See also **haemochromatosis.**

haemosta'sis (*Med.*). The arrest of bleeding.

haemostat'ic (*Med.*). Arresting or checking bleeding: an agent which does this.

haemotro'pic (*Zool.*). Affecting blood.

Haffield Breccia (*Geol*) The equivalent of the *Trappoid Breccia* of Permian age in the Malvern Hills, formed as scree material under desert conditions.

Haffkine's vaccine (*Med.*). A prophylactic vaccine for immunisation against plague.

Haffotty Shales (*Geol.*). A local name for the Manganese Shale Group in the Harlech Series of the Cambrian System in N. Wales.

hafnium (*Chem*). Symbol, Hf. A metallic element in the fourth group of the periodic system At. no. 72, at. wt. 178·6, sp. gr 13·31, m p. about 2000°. It occurs in zirconium minerals.

haft (*Bot.*). (1) A leaf stalk with a thin strip of green tissue running along each side forming a wing.—(2) The stalk of a spatulate leaf.—(3) The claw of a petal.

haft (*Tools*). A tool handle.

hag principle (*Mining*). The system under which the skilled miner employs an unskilled helper. *Hagging* implies 'sweating.'

hagger (*Mining*). See **hewer.**

Hagley Ashes (*Geol.*). These are of volcanic origin and occur in the Bala Series in the Ordovician System of S. Shropshire, west of the Longmynd. A much attenuated representative of part of the great Snowdonian Volcanic Series of N. Wales.

ha-ha (*Build.*). A fence sunk below ground-level so as to give an uninterrupted view.

Haigh fatigue-testing machine (*Eng.*). A machine for testing the resistance of materials to fatigue under alternating direct stress; the specimen is loaded by means of a powerful electromagnet, excited by an alternating current.

hail, hailstones (*Meteor.*). Precipitation in the form of hard pellets of ice, called *hailstones*, which often fall from cumulo-nimbus clouds and accompany thunderstorms. Hailstones are formed when raindrops are swept up by strong air-currents into regions where the temperature is below freezing-point. In falling, the hailstone grows by condensation from the warm moist air which it encounters.

Hailes Sandstone (*Geol.*). See **Granton Sandstone.**

hair (*Anat.*, *Zool.*). A slender, elongate structure, mostly composed of *keratins* (q.v.), arising by proliferation of cells from the Malpighian layer of the epidermis in Mammals: more generally, any thread-like outgrowth of the epidermis.

hair (*Bot.*). See **trichome.**

hair (*Plast*). Hair obtained from the hides of cattle; used for reinforcing plaster undercoats and for reducing cracking due to shrinkage.

hair cloth (*Textiles*). A material generally composed of coarse hair and cotton yarn; used as a stiffening for coats.

hair compasses (*Instruments*). A drawing instrument consisting of a pair of dividers having needle points, one of which has a fine-screw adjustment for varying the distance between them.

haircords (*Textiles*). Cotton fabrics of light weight, in which fine cords are produced by running two fine threads together at frequent intervals. The warp, for example, often has alternate single and double ends.

hair hook (*Plast.*). A tool used for mixing hair with plaster; it consists of a long handle having at one end a few prongs projecting at right-angles.

hair hygrometer (*Meteor.*). A form of hygrometer which is controlled by the varying length of a human hair with humidity. It is not an absolute instrument, but it can be used at temperatures below freezing-point, and it can be made self-recording.

hairline (*Textiles*). The name given to fine lines of solid colour in a fabric; the direction is usually lengthwise of the cloth.

hairline letter (*Typog.*). A fine-faced type used for business stationery, titles, etc.

hair pencil (*Paint.*). A fine brush made from camel or sable hairs, or from the hairs of some other animals; used for lettering, graining, and other decorative work.

hair-pin winding (*Elec. Eng.*). A form of winding used for the armatures of electric machines; it is partly formed and pushed into the slots from one end, the other ends being subsequently welded or otherwise connected together.

hair pit (*Bot*) See **cryptostoma.**

hair side (*Leather*). The surface of a skin or hide from which the air has been removed.

hair space (*Typog.*). The thinnest of the spaces used between words. It is about 1-point wide.

hairspring (*Horol.*). The balance spring.

hake (*Bricks, etc.*). A *hack* (q.v.) built to dry tiles in the course of their manufacture.

halation (*Photog.*). Fogging of an emulsion due to light reflection and dispersion within the emulsion. Reduced by *backing* (q.v.) the glass or film with light-absorbing material having approximately the same refractive index as the support.

Haldane apparatus (*Chem.*). An apparatus for the analysis of air; used also for the analysis of mine gases.

half-anchor ear (*Elec. Eng.*). An anchor ear to which only one anchoring wire is attached.

half-bed, half-joint (*Masonry*). In pricing the labour charge for stonework, each horizontal surface on a stone is spoken of as a *half-bed*, as it contributes one-half to the cost of preparing each bed joint; similarly, *half-joint* refers to the vertical jointing surfaces.

half-blind dovetail (*Join.*). A *lap dovetail* (q.v.).

half-bound (*Bind.*). Said of a book having its back, a portion of the sides, and the corners bound in one material (originally leather) and the remainder of the sides in some other material (e.g. cloth or paper).

half-brick wall (*Build.*). A wall built entirely of stretchers and therefore 4½ in. thick.

half-case (*Typog.*). (1) A type case of the usual width, but half the length; used for holding display type or special letters.—(2) See **double case.**

half-cell (*Elec. Eng.*). See **single-electrode system.**

half-closed slot (*Elec. Eng.*). See **semi-closed slot.**

half-coiled winding (*Elec. Eng.*). A form of single-layer winding in which there is only one group of coils per pole per phase. Also called a HEMITROPIC WINDING

half-column (*Build.*). An *embedded column* (q.v.) of which half projects.

half coupling (*Eng.*). See **flange coupling.**

half-deflection method (*Elec. Eng.*). A method of finding the internal resistance of a cell when the value is known to be high. A second cell, a galvanometer, and a resistance are connected in series with the cell under test, and the value of the resistance required to give a galvanometer deflection of half the value obtained with the cell alone is found.

half-dressed warp (*Weaving*). A warp that has been wound on a beam without separation of the threads by the dents of the reed, etc. (as in a 'dressed' warp).

half-element (*Elec. Eng.*). See **single-electrode system.**

half-header (*Build.*). A half-brick used at the corner of a wall to close the course.

half-hour rating (*Elec. Eng.*). A form of rating for electric machinery supplying an intermittent load. It indicates that the machine delivers the specified rating for a period of half an hour without exceeding the specified temperature rises. Cf. *one-hour rating.*

half inferior (*Bot.*). Said of a flower in which the receptacle forms a cup which is adherent to the base of the ovary and partly up its side.

half landing (*Build.*). A *half-space landing* (q.v.)

half-lap coupling (*Eng.*). The connexion of two co-axial shafts by cutting away a short length of the ends of each to the diametrical plane, so as to form a *half-lap joint* (q.v.), and either riveting together or enclosing in a keyed-on sleeve or muff.

half-lap joint (*Carp., etc.*). The name of the joint formed by the process of *halving* (q.v.).

half-lattice girder (*Struct.*). A *Warren girder* (q.v.).

half-life (*Chem.*). The period of time in which the activity of a radioactive substance falls to half its original value. It may have a value ranging from 3×10^{10} years to 0·002 second.

half-normal bend (*Elec. Eng.*). A bend serving to connect two lengths of the conduit used in electrical installation work which are at an angle of 135°.

half-pace (*Build.*). (1) A landing at the end of a flight of steps.—(2) A raised floor in a window bay.

half-period zones (*Light*). A conception, due to Huyghens, whereby an optical wave front is considered to be divided into a number of concentric annular zones, so that, at a given point in front of the wave, the illumination from each zone is half a period out of phase with that from its neighbour. The use of half-period zones facilitates the study of diffraction problems.

half-principal (*Carp.*). A short rafter which does not reach the ridge of a roof.

half race (*Bot.*). A race of plants in which only a few of the seedlings show the characters of the race (the rest having the ordinary characters of the species), and in which selection does not lead to the fixing of a pure race.

half-rip saw (*Join.*). A hand-saw designed for cutting timber along the grain and having slightly smaller teeth than the rip saw.

half roll (*Aero.*). See **roll.**

half-round chisel (*Eng.*). A *cold chisel* (q.v.) having a small half-round cutting edge; used for chipping semi-circular grooves such as oilways.

half-round file (*Eng.*). A file whose cross-section has one flat and one convex face.

half-round screws (*Eng.*). See **button-headed screws.**

half-sawn (*Masonry*). Said of a granite face as left from the saw.

half secret dovetail (*Join.*). A *lap dovetail* (q.v.).

half-section (*Elec. Comm.*). A section of an electric wave filter divided in the centre so as to form an L-network. It has the same cut-off frequency but half the attenuation, if the image impedances are correctly matched.

half shroud (*Eng.*). A gear-wheel shroud extending only up to half the tooth height. See **full shroud, shroud.**

half-socket pipe (*San. Eng.*). A drain-pipe having a socket for the lower half only.

half-space landing (*Build.*). A landing extending across the full width of a staircase.

half-speed shaft (*I.C. Engs.*). The camshaft of an internal-combustion engine, which runs at half the speed of the crankshaft.

half stuff (*Paper*). Raw materials which have been converted into pulp by the breaker.

half-timber (*Timber*). One part of a baulk which has been divided in halves along its length

half timbering (*Build.*). An early mode of house-building in which the foundations and principal members were of stout timber, and walls were formed by filling the spaces between members with plaster.

half-title (*Typog.*). The title of a book printed on the leaf preceding the title-page.

half-tone process (*Photog., Print.*). A process of photographic reproduction in which the varying tones of the original are photographically translated into dots of uniform tone but varying size. This dot image is etched into relief for letterpress printing (*half-tone block*), or photolithographed on a grained zinc or aluminium plate for offset printing.

half-watt lamp (*Illum.*). A name sometimes given to gas-filled lamps from the fact that the consumption approaches half a watt per candle-power.

half-wave antenna (*Radio*). An antenna whose overall length is one half-wavelength. The voltage distribution is from a maximum at the top to a minimum in the middle and a maximum at the base.

half-wave plate (*Light*). A plate of doubly refracting, uniaxial crystal cut parallel to the optic axis, of such thickness that, if light is transmitted normally through it, a phase difference of half a period is introduced between the ordinary and extraordinary waves. A half-wave plate is used in Laurent's polarimeter.

half-wave rectification (*Radio, Elec. Eng.*). Rectification in which current flows only during the positive (or negative) half-cycles of the alternating voltage. The commonest form of rectification of radio signals. Also called SINGLE-WAVE RECTIFICATION.

half-wave suppressor coil (*Radio*). An inductance coil inserted at half-wavelength intervals along an antenna wire; used in some forms of directional antenna to suppress radiation in reverse phase from alternate half-wavelength sections of the wire.

half-wave transmission (*Elec. Eng.*). A method of transmission of electrical energy in which the natural period of oscillation of the transmission line is equal to four times the frequency of the transmitted currents.

hali-, halo- (Greek *hals*, salt). A prefix used in the construction of compound terms.

halides, hā'lidz *or* hal'— (*Chem.*). Fluorides, chlorides, bromides, and iodides.

haliplank'ton (*Ecol.*). The plankton of the seas.

halistere'sis (*Med.*). Softening of bone due to disappearance of lime salts from it.

halite (*Min.*). Common or rock salt. The naturally occurring form of sodium chloride, crystallising in the cubic system; represented in the Purbeck Series by clay pseudomorphs, and forming deposits of considerable thickness in close association with anhydrite and gypsum in the Permian and Triassic rocks of this and other countries. Deposits of commercial value occur in Cheshire, Lancashire, Co. Antrim, and Somerset, the salt being pumped out as brine from the Keuper Marl; the Stassfurt deposits in Germany and those of Wieliczka in Poland are famous. In the U.S.A valuable salt deposits occur in the Salina beds of Silurian age, worked in Michigan, New York, Ohio, etc.; also in the overlying Mississippian. Salt of Permian age is important in Kansas and Oklahoma. Salt domes occur in Louisiana and Texas.

halito'sis (*Med.*). Offensively smelling breath.

Hall effect (*Elec. Eng.*). A change in the distribution of current in a strip of metal, due to a magnetic field.

Hall process (*Met.*). A process for the extraction of aluminium by the electrolysis of a fused solution of alumina in cryolite at a temperature of approximately 1000° C. The aluminium is molten at this temperature and settles to the bottom of the bath, from which it is drawn off. Contains up to 99·8% aluminium.

Hallade recorder (*Eng.*). An instrument for recording vibration of rolling-stock due to track irregularities, etc., in planes parallel, transverse, and perpendicular relative to the track.

hälleflin'ta, hel'e— (*Geol.*). An old name for very fine-grained, compact, and tough volcanic ashes.

Haller's organ (*Zool.*). In some *Acarina* (*Ixodidae*), a cavity filled with comb-like teeth and communicating with the exterior by a slit-like opening, situated on the upper side of the tarsus of the first leg; believed to be olfactory.

halloy'site (*Min.*). One of the so-called clay minerals, apparently amorphous; consists of hydrated aluminium silicate.

hallucination (*Psychol.*). A perception of sensation for which there is no objective reality, such as hearing voices, seeing persons or things, etc., which do not exist outside fantasy.

hallux (*Zool.*). In land Vertebrates, the first digit of the hind-limb.

hallux flexus (*Med.*). A late stage of hallux rigidus, the big toe being rigidly flexed on the sole.

hallux rigidus (*Med.*). Rigid stiffness of the big toe, due to osteoarthritis of the joint between the toe and the foot.

hallux valgus (*Med.*). A deformity of the big toe, in which it turns towards and comes to lie above the toe next to it; usually associated with bunion.

hallux varus (*Med.*). A rare deformity of the big toe, in which it diverges from the toe next to it.

halo (*Meteor.*). A bright ring or system of rings often seen surrounding the sun or moon. The *large halo*, of radius 22°, is due to light refracted at minimum deviation by ice crystals in high cirrostratus clouds. The *small halo*, termed a corona, a few degrees in radius, is formed by diffraction by water droplets in the atmosphere.

halos, pleochroic (*Geol.*). See **pleochroic halos.**

ha'lobion'tic (*Ecol.*). Strictly confined to salt water.

halobiot'ic (*Zool.*). Living in salt water, especially in the sea.

halochro'mism (*Chem.*). The formation of coloured salts from colourless organic bases by the addition of acids.

halogena'tion (*Chem.*). The introduction of halogen atoms (Cl, Br, I) into an organic molecule by substitution or addition.

hal'ogens (*Chem.*). A group consisting of the non-metallic elements, fluorine, chlorine, bromine, and iodine.

haloid acids (*Chem.*). A group consisting of hydrogen fluoride, hydrogen chloride, hydrogen bromide, and hydrogen iodide.

halolim'nic (*Zool.*). Originally marine but secondarily adapted to fresh water

ha'lophile (*Ecol.*). A fresh-water species capable of surviving in salt water.

ha'lophobe (*Bot.*). A plant which will not grow in a soil containing any appreciable amount of salt.

ha'lophyte (*Bot.*). A plant which will live in a soil containing an appreciable amount of common salt or of other inorganic salts.

halophyt'ic vegetation (*Bot.*). A population consisting of halophytes.

hal'otri'chite (*Min.*). Hydrated sulphate of iron and aluminium, occurring rarely as yellowish fibrous silky colourless crystals in rocks that have been affected by the action of sulphuric acid around fumaroles. Also called IRON ALUM.

hal'teres, —tērz (*Zool.*). A pair of capitate threads which take the place of the hind wings in *Diptera*, and are believed to assist the insect to maintain its equilibrium while flying; balancers.

halvans (*Mining*). Inferior ore: the refuse made during ore mining.

halving (*Carp., etc.*). A method of jointing (e.g two timbers); it consists in cutting away half the thickness from the face of one, and the remaining half from the back of the other, so that when the two pieces are put together the outer surfaces are flush.

ham (*Radio*). The recognised description of an amateur operator of a radio transmitter.

Ham Hill Stone (*Geol.*). The representative of the lower part of the Upper Lias, between the Dorset coast and the Mendip Hills.

ham'ate, ham'ulose (*Bot.*). Said of (1) a narrow leaf hooked at the tip; (2) a trichome similarly bent.

Hamilton Group (*Geol.*). The highest division of the Middle Devonian rocks of N. America, consisting of marine sandy shales and sandstones succeeded by deltaic flagstones (Hudson River bluestone).

hamiros'trate (*Zool.*). Having a hooked beak, as Vultures.

hammer (*Eng.*).

See **ball-pane—**
boilermaker's—
coppersmith's—
power—
rawhide—
sledge—

hammer (*Horol.*). In striking or chiming clocks, the weighted mass which strikes the gong, rods, tubes, or bells.

hammer-axe (*Tools*). A tool with a double head—axe at one side and hammer at the other side of the handle.

hammer-beam (*Build.*). A short cantilever beam projecting into a room or hall from the springing level of the roof, strengthened by a curved strut underneath, and carrying a hammer-beam roof.

hammer-beam roof (*Carp.*). A type of timber roof existing in various forms, all affording good headroom beneath. It consists essentially of arched ribs, supported on hammer beams at their feet, and carrying the principal rafters, strengthened sometimes by a collar-beam and/or struts.

hammer blow (*Eng.*). The alternating force between a locomotive driving-wheels and the rails, caused by the centrifugal force of the balance weights used to balance the reciprocating masses.

hammer break (*Elec. Eng.*). A name given to the electromagnetic trembler device used on an electric bell or the primary of an induction coil.

hammer-dressed (*Masonry*). A term applied to stone surfaces left with a rough finish produced by the hammer.

hammer drill (*Mining*). A compressed-air rock drill in which the piston is not attached to the steel or borer but moves freely.

hammer-headed (*Tools*). A term applied to masons' chisels intended to be struck by a hammer rather than by a mallet.

hammerman (*Eng.*). (1) The operator of a power-driven hammer.—(2) A smith's mate or 'striker.'

hammer mill (*Agric. Mach.*). A mill in which the foodstuffs for animals are pulverised; they are beaten against the sides of a metal drum by steel hammers.

hammer rod (*Horol.*). The vertical rods connecting the lifting cams of a turret clock to the hammers.

hammer scale (*Eng.*). The scale of iron oxide which forms on work when heated for forging.

hammer stalk (*Horol.*). The rod to which a hammer is fastened in a striking or chiming clock.

hammer tail (*Horol.*). An extension of the hammer stalk which is in contact with the pins in the pin wheel or barrel, when the hammer is lifted.

hammer toe (*Med.*). A deformity of any toe, especially the second, in which the toe, flexed on itself, is, at its junction with the foot, bent towards the instep.

Hammond organ (*Acous.*). An electronic organ, operated by manuals and pedals, in which the sounds are synthesised from fundamentals generated by a series of electromagnetic generators and reproduced through loudspeakers.

Hamstead Beds (*Geol.*). The highest division of the Oligocene of the Hampshire Basin, lying above the Bembridge Beds, and consisting of black and green clays containing non-marine shells and plant remains, and a few feet of blue marine clays at the top.

ham'ula (*Zool.*). The *retinaculum* (q.v.) of *Collembola.*

ham'ulus (*Zool.*). Any small hook-like structure: the hooked end of a barbicel.—*adjs.* **ham'ular, ham'ate.**

hance (*Arch.*). That part of the intrados, close to the springing of an elliptical or many-centred arch, which forms the arc of smaller radius.

Hancock jig (*Mining*). A movable screen which is moved up and down in water by means of cams in order to separate heavy minerals from gangue or waste.

hand (*Join.*). A term used to indicate the mode of hanging a door. The door is *right-* or *left-handed,* according as the hinges are on the right or left when opening the door towards oneself.

hands (*Horol.*). The pointers used to indicate the rate of progress of a wheel in a train: the pointers used to indicate the time on a dial of a clock or watch.

hand-axe (*Tools*). A light axe for single-handed operation.

hand-brace (*Carp.*). See **brace.**

hand camera (*Photog.*). A portable camera, without rigid support on a stand or tripod; normally exposed while held in the hand.

hand feed (*Eng.*). The hand operation of the feed mechanism of a machine tool, as distinct from an automatic feed. See **feed.**

hand float (*Plast.*). A flat rectangular piece of wood with a handle on one side, used for floating.

hand hole (*Eng.*). A small hole, closed by a removable cover, in the side of a pressure vessel or tank; it provides means of access for the hand to the inside of the vessel.

hand ladle (*Foundry*). A small foundry ladle supported by a long handle of steel bar. See also **hand shank.**

hand-lamp (*Illum.*). A portable electric-light fitting suitable for carrying in the hand. Also called INSPECTION-LAMP, PORTABLE-LAMP.

hand-lead (*Surv.*). A small lead used for attachment to a lead-line measuring within 100 fathoms.

hand letters (*Bind.*). Letters formed of brass at the end of hand tools, with which the finisher impresses the title on the back or side of a bound volume.

hand level (*Surv.*). An instrument capable of being held and adjusted in the hand, so as to provide a horizontal line of sight whereby differences in level may be found.

handmade paper (*Paper*). Paper made by dipping a mould into rag pulp and, by skilful shaking, distributing it into a sheet. The wet sheets are piled up between felts. Handmade paper is used when durability and stylish appearance are required.

hand press (*Print.*). A press operated by hand; now used chiefly for proof-pulling.

hand-rail (*Join.*). A rail fixed at the side of a stair whose slope it follows.

hand-rail bolt (*Join.*). A rod which is threaded and fitted with a nut at both ends; used to draw together the mating surfaces of a butt joint, such as that between adjacent lengths of hand-rail. The rod passes through holes in the members, and at one end the nut, a square one, is housed in a square mortise which prevents it from turning. At the other end the nut is circular, with notches cut in its periphery, to afford a means of screwing it into its mortise.

hand-rail plane (*Join.*). A plane having a specially shaped sole and cutting-iron, adapting it to the finishing of the top surface of a hand-rail.

hand-rail punch (*Join.*). A small tool which is inserted in the notches in the periphery of the circular nut of a *hand-rail bolt* (q.v.) and is used to tighten it up.

hand-rail screw (*Join.*). A small rod, taper-threaded at each end, used to connect adjacent lengths of hand-rail as an alternative to the *hand-rail bolt* (q.v.). Also called a DOWEL SCREW.

hand-regulated arc lamp (*Illum.*). An arc lamp in which the striking of the arc and the adjustment of the carbons to give the correct arc length are carried out entirely by hand.

hand rest (*Eng.*). A support, shaped like a letter T, on which a turner rests a hand tool, during wood-turning or metal-spinning in a lathe.

hand roller (*Typog.*). A roller used for inking type-matter on the hand press, preparatory to pulling a proof.

hand-rope operation (*Elec. Eng.*). A method of control of electric lifts; a rope is passed through the car and attached to control equipment mounted at the top of the shaft.

hand-saw (*Tools*). A saw fitted with a handle at one end by which it may be operated.

hand screw (*Join.*). A *clamp* (q.v.).

hand-set (*Typog.*). Said of type-matter which has been composed by hand, as opposed to that set by a *composing machine* (q.v.),

hand shank (*Foundry*). A *foundry ladle* (q v) supported at the centre of a long iron bar, formed into a pair of handles at one end for control during pouring ; carried by two men.

hand tools (*Eng.*). All tools used by fitters when doing hand work at the bench, as hammers, files, scrapers, etc.

hand wheel (*Horol.*). A grooved pulley provided with a cranked handle and mounted on a universal form of vice, used for driving a lathe or other tool by hand.

hand winding (*Elec. Eng.*). The process of winding a machine by the insertion of the coils, turn by turn, into the slots ; used in cases where it is not convenient to use former-wound coils.

handle (*Tools*). The part of a tool by which it is grasped.

handle-type fuse (*Elec. Eng.*). A fuse in which the carrier containing the fuse-link is provided with a handle to facilitate withdrawal and replacement.

handlers (*Leather*). The name for a series of pits in which hides are laid flat after the first stage of tanning.

hang-over (*Elec. Comm*). The delay in restoration of speech-operated switches, as in the *Vodas*, to ensure the non-clipping of weak final consonants of words.

hangar (*Aero.*). A special construction for the accommodation of aircraft.

hanger (*Build.*). An overhanging bracket for the support of a gutter at the eaves.

hanger (*Elec. Eng.*) (1) Plates of glass or other material standing on edge in an accumulator cell, and supporting the accumulator-plates by means of their lugs.—(2) A fitting used for supporting the overhead contact wire of a traction system from a transverse wire or structure.

See **bridge—** **straight-line—**
car-shed—

hanger (*Eng.*). (1) A bracket, usually of cast-iron, bolted to a wall or to the underside of a girder, to hold a bearing for supporting overhead shafting.—(2) A bracket, usually of steel strip, used to support a pipe from a roof.

hanger-on (*Mining*). A man who attaches or detaches the tubs or trams on an endless-rope haulage in a coal-mine. A *hitcher* performs a similar task at the shaft bottom. See **clipper.**

hanging battens (*Illum.*). A suspended row of lamps used in stage lighting.

hanging buttress (*Masonry*). A buttress carried upon a corbel at its base.

hanging post (*Build.*). A *hingeing post* (q.v.).

hanging sash (*Join.*). A sash arranged to slide in vertical grooves, and counterweighted so as to be balanced in all positions.

hanging steps (*Build.*). Steps which are built into a wall at one end and are unsupported at the other end.

hanging stile (*Join.*). That stile of a door to which the hinges are secured.

hanging tie (*Struct.*). A tie which is supported by some kind of *anti-sag bar* (q.v.) to prevent sagging under its own weight.

hanging valley (*Geol.*). A tributary valley not graded to the main valley by reason of the over-deepening of the latter. The two are connected by rapids or waterfalls.

hanging wall (*Mining*). The wall of a lode vein or reef which overhangs as one walks along the strike in a drive or stope.

hangings (*Build.*). A term applied to materials, such as wall-papers, used as wall coverings.

Hangman Grits (*Geol.*). A thick series of sandstones and grits, of Old Red Sandstone facies and Devonian age, named from a headland in N. Devon.

hank (*Textiles*). A general term for a reeled length of yarn. In calculating the counts of yarn, a definite length is assigned to the hank for each type of yarn. See **counts of yarn.**

Hanot's cirrhosis, an-ō (*Med.*). A fine cirrhosis of the liver, which is greatly enlarged, associated with jaundice.

hapan'thous (*Bot.*). Flowering once and then dying.

haplite (*Geol.*). See **aplite.**

haplo- (Greek *haploos*, single, simple). A prefix used in the construction of compound terms; e g. *haplobiont* (q.v.)

haplobi'ont (*Bot.*) A plant which has only one kind of individual in its life-history.—*adj.* **haplobion'tic.**

hap'locaules'cent (*Bot.*). Having a single axis.

hap'lochlamyd'eous chimaera (*Bot.*). A periclinal chimaera in which one component is present as a single cell layer, forming the epidermis.

hap'lodip'lont (*Bot*). A sporophyte in which the cells contain the haploid chromosome number.

Haplodo'ci (*Zool.*). An order of *Neopterygii*, characterised by the possession of only three gill arches, a large flattened head and an elongate body ; scales are reduced or absent ; carnivorous tropical and temperate forms. Toad-fish.

hap'lodont (*Zool*). Having molars with simple crowns.

hap'loid (*Cyt.*) (Of the reduced number of chromosomes characteristic of the germ cells of a species) equal to half the number in the somatic cells. Cf. *diploid*.

haploid apogamety, haploid apogamy (*Bot.*). See **reduced apogamy.**

Hap'lomi (*Zool.*) An order of *Neopterygii*, characterised by the possession of abdominal pelvic fins, an air-bladder communicating with the gullet by a pneumatic duct, and soft fin-rays ; the mesocoracoid is absent ; mainly fresh-water forms. Pikes and Mud-fish.

haplont (*Bot.*). A plant which has sexuality, and in which the zygotic nucleus only is diploid ; all other nuclei are haploid.

hap'lophase (*Biol.*). The period in the life-cycle of any organism when the nuclei are haploid. Cf. *diplophase*.

haplo'sis (*Cyt.*). The halving in the number of the chromosomes at meiosis.

Hap'losporid'ia (*Zool.*). An order of *Neosporidia*, most of the members of which infest Fish and aquatic Invertebrates ; the spores possess cases but have no polar capsules.

haplostem'onous (*Bot.*). Having a single whorl of stamens.

haploxylic, —zil'ik (*Bot.*). Said of a leaf containing one vascular strand.

happiness (*Psychol.*). A feeling-tone experienced when all instinctive emotions are expressed in harmony with the conscious aims and ideals of the individual.

hap'teron (*Bot.*). A cell or a cellular organ which attaches a plant to a support. The term is used especially in speaking of the attachment organs of the lower plants.

hap'totro'pism (*Bot.*). One-sided growth leading to curvature (*haptotropic curvature*) ; being the response of an elongated plant organ which has been stimulated by touch or slight pressure.

harbour (*Civ. Eng.*). A sheltered area of water giving safe anchorage to ships, and generally provided with facilities for loading and unloading.

hard (*Hyd. Eng.*). A layer of gravel or similar materials put down on swampy or sodden ground to provide a way for passage on foot.

hards (*Cinema.*). A colloquialism for lights, such as arc lamps, which give a hard or harsh type of lighting.

hard bast (*Bot.*). Sclerenchyma present in phloem.

hard core (*Build.*, *Civ. Eng.*). Lumps of broken brick, hard natural stone, etc., used to form the basis of a foundation for road or paving.

hard-facing (*Met.*). The process of welding on to the surface of soft steel or other metals a layer of a hard material, such as alloy steel or Stellite, capable of resisting abrasion.

hard finish (*Plast.*). A coat of fine stuff applied with a trowel.

hard glass (*Chem.*). A trade term indicating a borosilicate glass—a hard glass whose hardness is principally due to the presence of boron compounds. Such glass is used in laboratories when a glass resistant to heat and to chemical action is required.

hard heading (*Mining*) Sandstone or other hard rock met with in making headings or tunnels in a coal-mine.

hard kiln (*Pot*). A muffle kiln fired at a temperature between that of the enamel and gloss kilns.

hard lead (*Met.*). Metal in which the high degree of malleability characteristic of pure lead is destroyed by the presence of impurities, of which antimony is the most common.

hard lighting (*Photog*) The lighting of objects to be photographed in such a way that there is strong contrast between light and shade, with strong demarcations. The opposite of *soft lighting*.

hard packing (*Typog*) Hard paper employed to cover the cylinder of a printing press when printing on hard, smooth papers from engravings, etc.; used in order to obtain a sharp impression.

hardpan (*Civ. Eng.*). A rock layer beneath soft soil; or a layer of hardened subsoil.

hard-paste (*Pot*). See **paste.**

hard plaster (*Plast.*). A hard-setting form of plaster of Paris.

hard plating (*Met*). Chromium plating deposited in appreciable thickness directly on to the base metal, that is, without a preliminary deposit of copper or nickel The coating is porous, but offers resistance to corrosion and to wear owing to the hardness of the coating.

hard soaps (*Chem.*). See **soaps.**

hard stocks (*Bricks*) Bricks which are sound but have been overburnt and are not of good shape and colour; used in the middle of thick walls and for footings and pavings.

hard tube (*Thermionics*) A high-vacuum discharge-tube.

hard twist (*Textiles*). A yarn with more than the usual amount of twist, which has been inserted in order to secure the desired effects in particular fabrics.

hard valve (*Thermionics*). The same as *hard tube* (q.v.).

hard waste (*Cotton Spinning*). Waste yarn from cop bottoms and waste made during winding, warping, reeling, and weaving.

hard water (*Chem.*). Water having magnesium and calcium salts in solution and offering difficulty in making a soap lather. See **permanent hardness, temporary hardness.**

hardwood (*Timber*). A dense, close-grained wood from deciduous trees such as oak, beech, ash, teak.

hardening (*Met.*). The process of making steel hard by cooling from above the critical range at a rate that prevents the formation of ferrite and pearlite and results in the formation of martensite. May involve cooling in water, oil, or air, according to composition and size of article.

hardening (*Photog.*). The use of formalin for hardening gelatine emulsion, making it insoluble and more permanent. See also **differential hardening.**

hardening media (*Met.*). Liquids into which steel is plunged in hardening. They include cold water, various oils, and water containing sodium chloride or hydroxide to increase the cooling power.

hardening of oils (*Chem.*). The hydrogenation of oils in the presence of a catalyst, usually finely divided nickel, in which the unsaturated acids are transformed into saturated acids, with the result that the glycerides of the unsaturated acids become hard. This process is of great importance for the foodstuffs industries, e.g. margarine is prepared in this way.

hardenite (*Met.*). An obsolete term for martensite, the hard constituent in hardened steel.

Harder's glands (*Zool.*). In most of the higher Vertebrates, an accumulation of small glands near the inner angle of the eye, closely resembling the lacrimal gland.

Hardgrave Sandstone (*Geol.*). A marine sandstone of Upper Liassic age, marking the commencement of the marine transgression in Jurassic times in the Cordilleran geosyncline. Succeeds the non-marine Trail Group.

hardness (*Met*). Signifies, in general, resistance to deformation. It is actually measured by determining the resistance to indentation, as in the Brinell, Rockwell, Vickers diamond pyramid, and scleroscope hardness tests. The values of hardness obtained by the different methods are to some extent related to each other, and to the ultimate tensile stress of non-brittle metals.—(*Min.*) The resistance which a mineral offers to abrasion. The absolute hardness is measured with the aid of a sclerometer. The comparative hardness is expressed in terms of Mohs' scale, and is determined by testing against ten standard minerals: (1) talc, (2) gypsum, (3) calcite, (4) fluorite, (5) apatite, (6) orthoclase, (7) quartz, (8) topaz, (9) corundum, (10) diamond. Thus a mineral with 'hardness 5' will scratch or abrade fluorite, but will be scratched by orthoclase. Hardness varies on different faces of a crystal, and in some cases (e.g. kyanite) in different directions on any one face.

hardness test (*Met.*, *Min.*).
See **Brinell— Rockwell— scleroscope—**

Hardraw Scar Limestone (*Geol.*). A limestone occurring near the base of the Yoredale Series in the higher part of the Lower Carboniferous of the Pennines, north of the Craven faults.

hare (*Furs*). The skin of the hare is generally dressed and dyed to imitate fox fur or that of some other animal whose fur is valued. The Belgian hare is a fancy breed of the domestic rabbit.

harelip (*Med.*). A congenital cleft in the upper lip, often associated with cleft palate.

Harford Sands (*Geol.*). White or pale-brown sand partially cemented by carbonate of lime, occurring immediately above the freestones of Cleeve Hill, Cheltenham, and in nearby localities. Named from Harford, near Bourton-on-the-Water.

harl, harling (*Build.*). Scottish terms for *rough-cast, rough-casting.*

Harlech Dome (*Geol.*). A major geological structure, involving the Cambrian and Ordovician strata of Merionethshire, which dip outwards in all directions from a point near Harlech, the type area of the Harlech Series.

Harlech Series (*Geol.*). A very thick series of alternating massive grits, feldspathic and conglomeratic in part, and shales, the complete succession being (1) Llanbedr Slates, (2) Rhinog Grits, (3) Manganese Shale Group, (4) Barmouth Grits, and (5) Gamlan Shales. The series is poorly fossiliferous, but the Gamlan Shales are known to be Middle Cambrian, and the rest may be Lower Cambrian in age.

harmattan′ (*Meteor.*). A dusty, dry north-easterly wind blowing over W. Africa during the dry season.

harmonic (*Acous.*). Any overtone in a single musical note of complex wave-form which has a frequency which is an exact multiple of the pitch frequency or fundamental, even when the latter is not present objectively. The overtones are counted in order of frequency above, but excluding, the lowest of the detectable frequencies in the note; the label of the harmonic is always its frequency divided by the fundamental. See **overtone.**

harmonic (*Elec. Eng.*). A component of an alternating wave with a frequency which is a multiple of the fundamental frequency. A harmonic having a frequency of *three* times the fundamental frequency, for instance, is called a *third harmonic*.

harmonic (*Radio*). Radiation from a transmitter at a frequency which is an integral multiple of the fundamental frequency.

harmonic analyser (*Elec. Eng*). An apparatus for determining the magnitude and phase angle of the constituent harmonics of an alternating wave form. See **electric harmonic analyser.**

harmonic antenna (*Radio*). An antenna whose overall length is an integral number (greater than one) of quarter-wavelengths.

harmonic distortion (*Elec. Comm.*). Amplitude distortion in which the production of harmonics is of greater importance than inter-modulation products.

harmonic excitation (*Radio*). (1) Excitation of an antenna on one of its harmonic modes.—(2) Excitation of a transmitter from a harmonic of the master oscillator.

harmonic filter (*Radio*). See **filter.**

harmonic generator (*Radio*). See **frequency multiplier.**

harmonic interference (*Radio*). Interference caused by harmonic radiation from a transmitter.

harmonic motion, simple (*Phys.*). See **simple harmonic motion.**

harmonic selective signalling (*Teleph.*). The ringing of subscribers on a party line by alternating currents of selected frequencies, each subscriber having apparatus which responds to his allocated frequency only.

harmonic suppressor (*Radio*). Any device (usually a filter) for suppressing the radiation of harmonics from a transmitter, or for preventing the interference caused thereby.

har′motome (*Min.*). A member of the zeolite group, hydrated silicate of aluminium and barium, crystallising in the monoclinic system, though the symmetry approaches that of the tetragonal system. Best known by reason of the distinctive cruciform twin groups that are not uncommon.

Harnage Shales (*Geol.*). A division of the Caradoc Series of the Ordovician of S. Shropshire.

harness (*Aero.*). The entire system of screened ignition leads enclosed within their screening tubes to prevent electromagnetic radiation from affecting the radio-receiving equipment.

harness (*Weaving*). The part of a jacquard machine by which the warp threads are operated in weaving; it consists of strong cords placed in position by a comber board. Also, the healds in a tappet or dobby loom.

harness cord (*Weaving*). Strong varnished linen twine, used to connect the figuring hooks with the mails that lift the warp threads in a jacquard loom.

harp pendant (*Gas Fittings*). A gas pendant carrying the burner at the centre of a suspended loop.

harpactoph′agous (*Zool.*). Predatory.

harriers (*Mining*). Trammers, putters, or drawers employed to convey trucks or tubs from the working face. They may help load the trucks.

Harris process (*Met.*). An alternative method of softening lead. Arsenic, antimony, and tin are oxidised by adding sodium nitrate and lead oxide, and the oxides formed are caused to react with sodium hydroxide and chloride to form arsenates, antimonates, and stannates.

harrow (*Agric. Mach.*). A type of light cultivator without wheels; it is dragged over the ground for the purpose of pulverising and levelling it, or for covering seed. See **chain harrow.**

Hartfell Shales (*Geol.*). The second division of the Moffat Shales in the Southern Uplands of Scotland, a condensed sequence of graptolitic shales equivalent to part of the Bala Series of the Ordovician System.

Hartley oscillator (*Radio*). A triode valve oscillator circuit consisting essentially of a parallel resonant circuit connected between the grid and anode, the cathode being connected to a tapping-point along the coil.

Hartman dispersion formula (*Light*). An empirical expression for the variation of the refractive index μ of a material with the wavelength of the light:

$$\mu = \mu_0 + \frac{c}{(\lambda - \lambda_0)^a},$$

μ_0, c, λ_0, and a being constant for a given material. For glass, a may be taken as unity. See also **Cornu-Hartman formula.**

Hartnell governor (*Eng*). An engine governor in which the vertical arms of two or more bell-crank levers support heavy balls, the horizontal arms carrying rollers which abut against the central spring-loaded sleeve operating the engine-governing mechanism.

Hartshill Quartzite (*Geol.*). The basal division of the Cambrian System, occupying the same stratigraphical position as the Wrekin and Malvern Quartzites; extensively quarried for road metal in the neighbourhood of Nuneaton, Warwickshire.

hartshorn, spirits of (*Chem.*). See **spirits of hartshorn.**

Hartwell Clay (*Geol.*). The local equivalent of the Portland Sand occurring in the Aylesbury district.

Harvard (*Textiles*). A heavy-weight cotton shirting material with a twill weave, and, generally, a fancy stripe.

Harvard twill (*Textiles*). The 2-and-2 twill.

Harvard classification (*Astron.*). A method of classifying stellar spectra, employed by the compilers of the Draper Catalogue of the Harvard Observatory and now in universal use. It consists of the sequence O B A F G K M N R (sometimes called the *main sequence*), with further subdivision of the classes by numbers.

harvest mite (*Vet.*). Larval forms, known as *Trombicula* (*Leptus*) *autumnalis*, of a species of mite known as *Trombidium holosericeum*. The larval forms sometimes penetrate the skin of man, animals, and birds.

harvest moon (*Astron.*). The name given in popular language to the full moon occurring nearest to the autumn equinox. Owing to certain relations holding at that time between its daily motions, it rises on several successive nights almost at the same hour, instead of progressively later, and was formerly therefore of use to harvesters working after sunset.

harvester-thresher (*Agric. Mach.*). A machine, mounted on a chassis, which performs the operations of a binder and a thresher.

Harvey meter (*Photog.*). A meter for calculating the photographic exposure to be given, taking into account prevailing conditions.

harz jig (*Mining*). A fixed screen through which water is made to pulsate by means of a plunger in order to separate heavy minerals from gangue or waste.

hasp (*Build.*). A fastening device in which a slotted plate fits over a staple and is secured to it by means of a padlock or peg.

Hassal's corpuscles (*Zool.*). Nests of flattened, concentrically arranged epithelial cells occurring in the medulla of the thymus gland of higher Vertebrates.

hastate (*Bot.*). Having two somewhat out-turned lobes at the base of a leaf; halbert-shaped.

Hastings Beds, Hastings Sands Group (*Geol.*). The lower of the two major divisions of the Wealden Series, comprising the Fairlight Clay, Ashdown Sands, Wadhurst Clay, and Tunbridge Wells Sand. By some regarded as the highest division of the Jurassic System; by others as the lowest Cretaceous series.

Hastings Series (*Geol.*). See **Timiskaming Group.**

hat-leather packing (*Eng.*). An L-section leather ring, gripped between discs to form a piston, or similarly attached to the ram of a hydraulic machine to prevent leakage.

hatch (*Build.*). A door closing only the lower half of a door opening.

hatchet (*Carp., etc.*). A small axe used for splitting or rough-dressing timber.

hatchet iron (*Plumb.*). A particular form of *copper bit* (q.v.) having an edged end instead of a point.

hatchet stake (*Eng.*). A smith's tool having a sharp horizontal edge when supported by the anvil; used for bending sheet metal. See **stake.**

Hatschek's nephridium (*Zool.*). In *Cephalochorda*, an anterior dorsal nephridium opening into the pharynx just behind the mouth.

Hatschek's pit (*Zool*). In *Cephalochorda*, a small depression arising from the left head cavity and opening into the cavity of the oral hood.

hauerite, how'er-it (*Min.*). A rare brownish-black sulphide of manganese, occurring as small cubic crystals in clay or schist.

haul (*Civ. Eng.*). In the construction of an embankment by depositing material from a cutting, the *haul* is the sum of the products of each load by its haul distance.

haul (*Mining*). To pull along the level by animals or mechanical means.

haul (*Teleph.*). The relative length of a trunk line.

haul distance (*Civ. Eng.*). The distance, at any particular time, that excavated material has to be carried before deposition in order to form an embankment.

hauling rope (*Civ. Eng.*). See **traction rope.**

haulm, hawm (*Bot.*). A stem of a grass. *

haunch (*Join.*). The part forming a stub tenon, left near the root of a haunched tenon. Also called a HAUNCHEON.

haunches (*Build., Civ. Eng.*). See **flanks.**

haunched tenon (*Join.*). A tenon from the width of which a part has been cut away, leaving a haunch near its root.

hauncheon (*Join.*). See **haunch.**

haunching (*Join.*). A mortise cut to receive the haunch of a haunched tenon.

hausmannite, hows'— (*Min.*). A blackish-brown crystalline form of manganese oxide, occurring (rarely) with other manganese ores, as in the Lake Superior district.

haustel'lum (*Zool.*). In *Diptera*, the distal expanded portion of the proboscis.—*adj.* **haustellate.**

haustor'ium (*Bot.*). (1) A lateral hypha produced by the mycelium of a parasitic fungus, which obtains nutriment from the host.—(2) A modified root or shoot of a higher plant living as a parasite, serving to attach the parasite to the host, and to obtain nourishment from it.—(3) The same as the foot of the embryo of a fern.

haut-pas, haute-pace, ō pa, ōt— (*Build.*). A *half-pace* (q.v.).

haüynite or **haüyne,** hoi'nit, hoin (*Min.*). A feldspathoid, crystallising in the cubic system, consisting essentially of silicate of aluminium and sodium, with sodium sulphate; occurs as small blue crystals, chiefly in soda-trachytes.

haven cap (*Paper*). A standard size of brown paper, 21 × 26 in.

Haver'sian canals (*Zool.*). Small channels pervading compact bone and containing blood-vessels.

Haversian fringes (*Zool.*). Long finger-shaped projections of the surface of synovial membranes.

Haversian lamellae (*Zool.*). In compact bone, the concentrically arranged lamellae which surround a Haversian canal.

Haversian spaces (*Zool.*). In the development of bone, irregular spaces formed by the internal absorption of the original cartilage bone.

Haversian system (*Zool.*). In compact bone, a Haversian canal with the Haversian lamellae which surround it.

hawk (*Plast.*). A small square board used to carry plaster or mortar; held by means of a central handle on its under surface.

hawk's eye (*Min.*). A dark-blue form of silicified crocidolite found in Griqualand West; when cut *en cabochon*, it is used as a semi-precious gemstone.

hawser (or **hawse-**) **pipe** (*Ship Constr.*). A tubular casting fitted to the bows of a steamer, through which the anchor chain or cable runs out.

hay-band (*Foundry*). See **straw-rope.**

hay-elevator (*Agric. Mach.*). A mechanically driven endless band, fitted with prongs, on to which hay is forked for transport to a rick.

hay-fever (*Med.*). Paroxysmal attacks of running at the nose, associated with congestion and irritation of the nasal mucous membrane and of the eyes, due to specific sensitivity to grass pollens.

hay-loader (*Agric. Mach.*). A machine towed behind a hay wagon and worked by its land wheels. It picks up the hay, and conveys it to the wagon by means of a trough and reciprocating rake-bars.

hay-stacker (*Agric. Mach.*). A machine which throws hay on to a rick with an action like a catapult.

hazard (*Build.*). A fire risk in connexion with a building.

See **external—** **internal—**

hazel rods (*Eng.*). Thin hazel rods used as handles for smiths' tools (e.g. chisels) to absorb the shock when struck by the sledge-hammer.

Hb (*Chem.*). A symbol for a molecule of haemoglobin minus the iron atom.

H.B.S. (*Carp.*). The common abbrev. for *herring-bone strutting* (q.v.).

He (*Chem.*). The symbol for *helium.*

H.E. shell (*Ammunition*). Shell designed to cause damage to personnel and material, both by fragmentation of the shell body and by the force of explosion.

head. A generic term for the essential part of an apparatus or machine, as distinguished from other parts which are subsidiary to the main function but assist its action. See specific senses below.

head (*Arch.*). The capital of a column.

head (*Bind., Typog.*). The top edge of a volume: the top margin of a sheet. See **fore-edge, tail.**

head (*Bot.*). (1) A group of sterigmata and conidia crowded into a dense mass, of rounded outline.—(2) A dense inflorescence of small, crowded, usually sessile flowers, surrounded by an involucre.

head (*Build.*). See **lintel.**

head (*Carp., Join.*). The upper end of a vertical timber.

head (*Eng.*). (1) Any part having the shape or position of a head, e.g. the *head* of a bolt.—(2) Any part or principal part analogous to a head, e.g. the head of a hammer or a lathe.

head (*Hyd. Eng.*). The energy possessed per unit weight of a fluid, due to (1) its elevation above some datum, (2) its velocity, (3) its pressure.

head (*Mining*). (1) An advance main roadway driven in solid coal.—(2) The top portion of a seam in the coal face.—(3) The difference in air pressure producing ventilation.—(4) The whole falling unit in a stamp battery, or merely the weight at the end of the stem.

heads (*Build.*). A term applied to the tiles forming a course around the eaves.

headband (*Bind.*). A decorative band of silk or other material at the head of a book, between the back and the cover.

head-bay (*Hyd. Eng.*). The part of a canal lock immediately above the head-gates.

headframe (*Mining*). The steel or timber frame at the top of a shaft, which carries the sheave or pulley for the hoisting rope, and serves various other purposes.

head-gates (*Hyd. Eng.*) The gates at the high-level end of a lock.

headgear (*Mining*). See **headframe.**

head hitcher (*Mining*). The man in charge of signals, loading, and unloading at shaft bottom in a mine.

head kidney (*Zool.*). In some Invertebrates, an anterior larval nephridium: in Vertebrates, the pronephric kidney, usually present in the embryo only.

head-lamp (*Illum.*). (1) A lamp and reflector for projecting a beam of light ahead of an automobile, locomotive, etc.—(2) A lamp for strapping to the forehead (e.g. that used by surgeons).

headline (*Typog.*) The line of type placed at the top of a page, giving either the title of the book or the chapter heading.

head metal (*Foundry*). The metal contained in the runner bush, or in the riser of a mould.

head moulding (*Build.*). A moulding situated above an aperture.

head nailing (*Build.*). The method of nailing slates on a roof in which nails are driven in the slates near their heads or higher edges. Cf. *centre nailing.*

head of drain (*San. Eng.*). The highest point in a system of drain pipes.

headphones (*Radio*). Telephone receivers attached to a band or strap and worn about the head.

head race (*Hyd. Eng.*). A channel conveying water to a hydraulically operated machine.

head-rail (*Join.*). The horizontal member of a door-case.

head resistance (*Aero.*). See **drag.**

headroom (*Build.*). The uninterrupted height within a building on any floor, or within a staircase, tunnel, doorway, etc.

headstock (*Eng.*). In general, a device for supporting the end or head of a member or part; e.g. (1) the part of a lathe that carries the spindle, (2) the part of a planing machine that supports the cutter or cutters, (3) the supports for the gudgeons of a wheel, (4) the movable head of some measuring machines.—(*Textiles*) The part of a machine which contains the main gearing and the drive for a beam.

head tree (*Carp.*). A timber block placed on the top of a post, so as to provide increased bearing surface.

head valve (*Eng.*). The delivery valve of a pump, as distinct from the suction or *foot valve* (q.v.).

head wall (*Build.*). A wall built in the same plane as the face of a bridge arch.

headway (*Build.*). *Headroom* (q.v.).

heads-and-feet printing (*Cinema.*). The practice of printing positives with the negative film going backwards as well as forwards, to reduce wear of the negative.

header (*Build.*). A whole brick which has been laid so that its length is at right-angles to the face of the wall.

header (*Eng.*). A box or manifold supplying fluid to a number of tubes or passages, or connecting them in parallel.

header or **heading man** (*Mining*). The man in charge of driving a heading.

header joist (*Carp.*). A *trimmer* (q.v.).

heading (*Build.*). A *heading course* (q.v.).

heading (*Civ. Eng.*). A relatively small passage driven in the line of an intended tunnel, the latter being afterwards formed by enlarging the former.—(*Mining*) Passage-way through solid coal.

heading bond (*Build.*). The form of bond in which every brick is laid as a header, each 4½ in. face breaking joint above and below; used for footings and corbellings but not for walling.

heading chisel (*Carp., Join.*). A *mortise chisel* (q.v.).

heading course (*Build.*). An external or visible course of bricks which is made up entirely of headers.

heading joint (*Join.*). A joint between the ends of boards abutting against each other.—(*Build., Masonry*) A joint between adjacent stones in the same course.

heading man (*Mining*). See **header.**

heading tool (*Eng.*). A tool for swaging bolt heads, or for forming bolt heads, etc., in hand forging.

Headon Beds (*Geol.*). A Tertiary formation occurring in the Hampshire Basin, usually referred to the Oligocene, though the Lower Headon Beds are regarded as the highest part of the Bartonian cycle of the Eocene. The formation comprises fresh-water limestones, marls, lignitic sands, and (in the Middle Headon) marine glauconitic sandy clays.

heald (*Textiles*). (1) The part of the loom mechanism used to raise and lower the warp in a tappet or dobby loom. It consists of an eye (formed of twine or wire) through which a thread is drawn.—(2) The shaft upon which a large number of healds are mounted.

healding (*Weaving*). See **looming.**

healing (*Build.*). The operation of covering a roof with tiles, lead, etc.

heapstead (*Mining*). The buildings and surface works around a colliery shaft.

hearing (*Acous.*). The subjective appreciation of externally applied sounds.

hearing loss (*Acous.*). The diminution of hearing acuity as compared with the acuity of the average ear. Measured by the area of the normal audition diagram which is not appreciated. See also **relative hearing loss.**

heart (*Zool.*). A hollow organ, with muscular walls, which by its rhythmic contractions pumps the blood through the vessels and cavities of the circulatory system.

heart-block (*Med.*). The condition in which a lesion of the special tissue that conducts the contraction impulse from the auricle to the ventricle results in a different rate of contraction of these two parts of the heart.

heart bond (*Masonry*). A form of bond having no through-stones, headers consisting of a pair of stones meeting in the middle of the wall, the joint between them being covered by another header stone.

heart-burn (*Med.*). A burning sensation felt at any point in the mid-line between the Adam's-apple and the lower end of the sternum; a symptom of functional dyspepsia.

heart cam (*Horol.*). A cam in the form of a heart, used in stop watches and chronographs to bring the recording hand instantly back to zero, on pressing the button. Also called HEART PIECE.

heart shake (*Timber*). A shake starting at the heart of a log.

heartwater (*Vet.*). A filterable-virus infection of cattle, sheep, and goats of South Africa which is transmitted by the tick *Amblyomma hebraeum.*

heart wood (*Bot.*). The dense, and often dark-coloured wood which lies in the inner part of a trunk or branch, making up the bulk of such a member; *heart wood* furnishes good timber, both for colour and durability.

hearth (*Build.*). The floor of the fireplace.

hearth (*Glass*). That part of the furnace in which heat is developed for the purpose of melting glass.

hearth (*Met.*) In reverberating furnaces, the bottom on which the charge is placed, either for smelting, or heating solid metals. In blast-furnaces, the part below tuyeres where molten metal (or matte) and slag collect.

hearting (*Build.*) The operation of building the inner part of a wall, between its facings.

heat (*Phys.*). That which when given to a body raises its temperature, and when taken from a body lowers its temperature. Heat is a form of energy into which mechanical energy may be converted. For some of the chief branches in the study of heat see **temperature, thermometry, heat units, specific heat, latent heat, calorimetry, mechanical equivalent of heat, radiant heat, radiation, conductivity (thermal).**

heat (*Eng.*). The term sometimes used for *temperature*; e.g. forging or welding *heat.*

heat (*Zool.*). The period of sexual desire.

heat balance (*Eng.*). A heat-energy account drawn up for a boiler or engine trial, showing how the heat energy supplied is expended by the plant.

heat coil (*Elec. Comm.*). A small protective resistance coil, which heats on prolonged excess current in telephone and telegraph lines, melts a small quantity of solder, and disconnects the line, so preventing possible damage to apparatus.

heat-cramps (*Med.*). See **cramps.**

heat drop (*Eng.*). See **adiabatic heat drop.**

heat index (*Astron.*). The difference between the radiometric magnitude of a star (as determined by some heat-measuring instrument, such as the thermo-couple) and its visual magnitude; hence an indication of the proportion of heat to light received from a star.

heat insulation (*Build.*). The property, possessed in varying degrees by different materials, of impeding the transmission of heat.

heat of formation (*Chem.*). The net quantity of heat evolved during the formation of one gram-molecule of a substance from its component elements.

heat of solution (*Chem.*). The quantity of heat evolved or absorbed when a substance is dissolved in a large volume of a solvent.

heat regenerators (*Chem.*). Stoves which are alternately heated by the waste gases from an industrial process and used to heat up the incoming gases.

heat-resisting steel (*Met.*). A steel with high resistance to oxidation, and moderate strength at high temperatures, i.e. above 500° C. Alloy steels, of a wide variety of compositions, which usually contain large amounts of one or more of the elements chromium, nickel, or tungsten, are used.

heat run (*Elec. Eng.*). A test in which an electric machine or other apparatus is operated at a specified load for a long period in order to ascertain the temperature which it reaches.

heat spot (*Zool.*). An area of the skin sensitive to heat owing to the presence of certain nerve-endings beneath the skin.

heat-stroke (*Med.*). Heat hyperpyrexia. The combination of coma, convulsions, a high temperature (even as high as 110° F.), and other symptoms, as a result of exposure to excessive heat.

heat treatment (*Met.*). Generally, any heating operation performed on a solid metal; e.g. heating for hot-working, or annealing after cold-working. Particularly, the thermal treatment of steel by normalising, hardening, tempering, etc.; used also in connexion with aluminium and other precipitation-hardening alloys.

· **heat transfer.** See **conduction of heat, convection of heat, radiation.**

heat units. See **calorie, British Thermal Unit.**—**heat value.** See **calorific value.**

heater (*Build.*). Appliance for heating a building.

heater (*Thermionics*). The conductor carrying the current for heating an equipotential cathode, generally enclosed by the cathode.

heating coefficient (*Elec. Eng.*). A term sometimes used to denote the temperature rise of a piece of electrical apparatus; expressed in degrees per watt of heat dissipated from a surface.

heating curves (*Met.*). Curves obtained by plotting time against temperature for a metal heating under constant conditions. The curves show the absorption of heat which accompany melting, polymorphic changes in pure metals, and various transformations in alloys.

heating-element (*Elec. Eng.*). The heating-resistor, together with its former, of an electric heater, electric oven, or other device in which heat is produced by the passage of an electric current through a resistance.

heating limit (*Elec. Eng.*). See **thermal limit.**

heating-resistor (*Elec. Eng.*). The wire or other suitable material used as the source of heat in an electric heater.

heaves (*Geol., Mining*). (1) The slip along a fault (horizontal components).—(2) Risings of the floor of a mine.

heaves (*Vet.*). See **emphysema (cutaneous).**

heavier-than-air craft (*Aero.*). See **aerodyne.**

heaviness (*Aero.*). See **nose— tail—**

Heaviside (or **Kennelly-Heaviside**) **layer** (*Radio*). An ionised region of the upper atmosphere which reflects the waves from a transmitter on the earth. It is now known that there are at least two such layers, existing at different heights. See also **Appleton layer, E-layer.**

Heaviside unit function (*Elec. Comm.*). A *step* (q.v.) in which the change in amplitude is unity.

heavy crop (*Geol.*). In the systematic examination of a sediment the small quantity of accessory minerals it contains is separated from the predominant quartz by passing the whole through bromoform. Quartz and feldspar are lighter than the latter and therefore float on its surface; but the accessory minerals, such as zircon, rutile, anatase, brookite, kyanite, and iron ores, sink to the bottom of the container and may be separated for detailed examination. The grains heavier than bromoform constitute the *heavy crop,* which provides valuable evidence of the provenance of the sediment.

heavy hydrogen (*Chem.*). See **deuterium.**

heavy joist (*Carp.*). A term sometimes applied to a timber beam between 4 in. and 6 in. wide and 8 in. or more deep.

heavy minerals (*Geol.*). Small crystals or grains of minerals, with a specific gravity greater than that of bromoform, occurring, usually in small quantities, in sediments and their indurated equivalents.

heavy spar (*Min.*). See **barytes.**

heavy water (*Chem.*). Deuterium oxide, ${}^2_1H_2O$. Its chemical properties are the same as those of normal (light) water, but it differs in physical properties, e.g. it is about 10% denser; m.p. 3·80° C., b.p. 101·42° C. Its concentration in ordinary fresh water is about 1:6000, which value may be increased by electrolysis.

he'bephre'nia (*Psychiatry*). A type of schizophrenia, characterised mainly by marked emotional disturbances, by wild outbursts of excitement alternating with periods of weeping and depression. Eventually it entails a poverty of emotional life, accompanied by delusions and hallucinations. Tends to occur at an earlier age than the catatonic or paranoid types.

Heb'erden's nodes (*Med.*). Small bony knobs occurring on the bones of the fingers of old people.

heb'etate (*Bot.*). Bearing a blunt or soft point.

heb'etude (*Med.*). Lethargy and mental dullness, with impairment of the special senses.

Hebridean Gneiss, Lewisian Gneiss (*Geol.*). The crystalline gneissose Pre-Cambrian rocks of the N.W. Highlands of Scotland, consisting chiefly of orthogneisses covering a wide range of composition and including also paragneisses and schists of sedimentary origin, such as the Loch Maree Series. The Lewisian rocks are the oldest in Britain. In addition to forming the island of Lewis and the greater part of the Hebrides, they outcrop in the coastal belt of the mainland, southwards from Cape Wrath.

hebronemi'asis, cutaneous (*Vet.*). See **bursattee.**

heck (*Join.*). A door latch.

heck (*Cotton*). The traverse guide of a warping machine.

hecto-ampere balance (*Elec. Eng.*). A Kelvin current balance having a range from 6 to 600 amperes.

hectocot'ylus (*Zool.*). In some male *Cephalopoda*, one of the tentacles modified for the purpose of transferring sperm to the female.

heddle (*Weaving*). The name formerly applied to a heald shaft. See **heald.**

hed'enbergite (*Min.*). An important lime-iron pyroxene, $CaFeSi_2O_6$, occurring as black crystals, and also as a component in many of the rock-forming clinopyroxenes.

hedgehog transformer (*Radio*). A form of audio transformer, used in the early types of receiver, in which the core consists of a bundle of iron wires which are bent back over the windings to form a closed magnetic circuit. Also used with early power transformers.

Hedley's dial (*Surv.*). A form of compass adapted for taking inclined sights; it consists of a pair of sighting vanes (or a telescope capable of rotation about a horizontal axis), carrying with them a vertical graduated arc moving over a fixed reference mark.

hedon'ic glands (*Zool.*). In some Reptiles, glands of the skin which secrete a pleasant-smelling substance during the breeding season.

hed'rioblast (*Zool.*). See **medusoid.**

heel (*Build.*). The lower end of a timber, as opposed to the head, or upper end.

heel (*Carp., Join., etc.*). The back end of a plane.

heel (*Elec. Eng.*). See **leaving edge.**

heel-post (*Hyd. Eng.*). The vertical post at one side of a lock-gate, about which the lock-gate swings. Also called a QUOIN-POST.

heel strap (*Build.*). A wrought-iron strap fastening the foot of a principal rafter to the tie-beam in a timber truss. The strap is U-shaped, and is threaded at the ends to take a cover plate so that the joint is completely encircled.

heel (*Hyd. Eng.*). The angle of inclination of a floating vessel from the vertical.

heeling error (*Ships*). The error in a ship's compass due to variation of the effect of the vertical component of the earth's field caused by the heeling over of the ship; it can be corrected by a group of vertical permanent magnets.

Hefner candle (*Illum.*). The standard of luminous intensity used in Germany, being the light produced by a Hefner lamp burning under specified conditions. It is equal to 0·9 international candle.

Hefner lamp (*Illum.*). A flame lamp of specified dimensions burning amyl acetate. See **Hefner candle.**

Hegar's dilators (*Med.*). A series of bougies of varying sizes for dilating the opening of the uterus into the vagina.

Hehner's test, hā'ner (*Chem.*). A test for the presence of formaldehyde in milk. It is based upon the appearance of a blue or violet ring when the milk is mixed with a dilute ferric chloride solution, and concentrated sulphuric acid is added to form a layer beneath the milk.

height (*Build., Civ. Eng.*). The rise of an arch.

height above base (*Surv.*). A term used in reference to vertical heights above an arbitrary datum, employed when this is more convenient than Ordnance Datum.

height board (*Carp.*). A gauge for the treads and risers of a timber staircase.

height of instrument (*Surv.*). (1) In levelling or trigonometrical survey work, the vertical distance of the plane of collimation of the level, or the horizontal axis of the theodolite above datum.—(2) In tacheometry, the vertical distance of the horizontal axis of the instrument above ground-level.

Heine-Medin disease, hī'ne mā-dĕn (*Med.*). Acute anterior *poliomyelitis* (q.v.).

Hel'berger furnace (*Elec. Eng.*). A form of electric crucible furnace.

Helderberg (or **Helderbergian**) **formation** (*Geol.*). The lowest formation of the Devonian System of N. America, typically exposed in the Helderberg Mts. of New York, where the strata rest conformably on the uppermost Silurian.

heleoplank'ton (*Ecol.*). The mixture of true plankton and benthon found in small ponds and pools.

heli'acal rising, heliacal setting (*Astron.*). The rising or setting of a star or planet simultaneously with the setting of the sun; much observed in antiquity as a basis for a solar calendar for agricultural purposes, it is now quite obsolete as a special study.

helian'thine (*Chem.*). $(CH_3)_2N\cdot C_6H_4\cdot N{:}N\cdot C_6H_4\cdot SO_3H$, *p*-dimethylamino-azobenzene-*p*-sulphonic acid, a chrysoidine dye. The sodium salt of this acid is methyl orange, used as an indicator.

helic-. See **helix.**

helical gears (*Eng.*). Gear-wheels in which the teeth are not parallel with the wheel axis, but *helical* (i.e. parts of a helix described on the wheel face), being therefore set at an angle with the axis. See **double-helical gears.**

helical hinges (*Join.*). A type of hinge used for hanging swing-doors which have to open both ways.

helical spring (*Eng.*). A spring formed by winding wire into a helix along the surface of a cylinder; sometimes erroneously termed a *spiral spring* (q.v.).

hel'icoid (*Biol.*). Coiled like a flat spring.

helicoid cyme (*Bot.*). A sympodium in which the branches all develop on the same side of the relatively main axis, but not in the same plane.

helicoid dichotomy (*Bot.*). A branch system with repeated dichotomies, giving each time a weak and a strong branch, the latter always on the same side.

helicop'ter (*Aero.*). A heavier-than-air flying-machine, whose chief support in flight is derived from the reaction of the air upon a system of power-driven revolving planes or rotors.

helicot'rema (*Zool.*). An opening at the apex of the cochlea, by which the scala vestibuli communicates with the scala tympani.

helio- (Greek *hēlios*, sun). A prefix used in the construction of compound terms pertaining to the sun; e.g. *heliometer* (q.v.).

heliocentric parallax (*Astron.*). See **annual parallax.**

he'liodor (*Min.*). A beautiful variety of clear yellow beryl occurring near Rössing in S.W. Africa; much prized as a gemstone.

he'liograph (*Surv.*). An instrument similar to the heliostat but fitted with a spring device by which it can be made to flash long or short flashes.

heliom'eter (*Astron., etc.*). An instrument for determining the sun's diameter and for measuring the angular distance between two celestial objects in close proximity. It consists of a telescope with its object glass divided along a diameter, the two halves being movable, so that a superposition of the images enables a value of the angular separation to be deduced from a reading of the micrometer.

helion filament (*Elec. Eng.*). An electric-lamp filament consisting of carbon with an outer coating of silicon.

he'liophyte (*Bot.*). A plant able to live with full exposure to the sun.

helio-sci'ophyte (*Bot.*). A plant which can live in shade, but does better in the sun.

he'liostat (*Astron.*). An instrument designed on the same principle as the coelostat, but with certain modifications that make it more suitable for reflecting the image of the sun than for use on a larger region of the sky; hence used, in conjunction with a fixed instrument, especially for photographic and spectroscopic study of the sun.—(*Surv.*) An instrument used to reflect the sun's rays in a continuous beam, so as to serve as a signal enabling a station to be sighted over long distances.

heliotax'is, heliotro'pism (*Biol.*). Response or reaction of an organism to the stimulus of the sun's rays.—*adj.* **heliotac'tic.**

heliothe'rapy (*Med.*). The treatment of disease by the exposure of the body to the rays of the sun.

he'liotrope (*Min.*). See **bloodstone.**

heliotrope (*Surv.*). A form of *heliograph* (q.v.).

heliotro'pin (*Chem.*). A synonym for *piperonal* (q.v.).

heliotro'pism (*Biol.*). See **heliotaxis.**

Heliozo'a (*Zool.*). An order of *Sarcodina*, the members of which generally occur in fresh water and have numerous fine radial axopodia, which do not anastomose; the ectoplasm is usually vacuolated; there is no shell or central capsule.

helium (*Chem.*). Symbol, He. An inert element in Group O of the periodic system, the lightest of the rare gases. At. no. 2, at. wt. 4·002, valency 0. It is colourless, odourless, and monatomic. M.p. below −272·2° C., b.p. −268·9° C., density 0·17847 gm. per litre at N.T.P. Helium constitutes about 1 part in 200,000 by volume of the atmosphere and occurs in various natural gases, especially in the U.S.A. It is extracted by liquefaction processes, for use in filling airships.

helium diving bell. A *diving bell* (q.v.) in which the nitrogen in the compressed-air is replaced by helium, thus reducing tendency to the *bends* (q.v.), and permitting effective operation at greater depths than normal. Used as a technique in rescuing men from submarines.

helium stars (*Astron.*). Those stars, of spectral type B in the Harvard classification, whose spectrum shows only dark lines, in which those due to the element helium predominate.

he'lix (Latin *helix*, gen. *helicis*, a spiral). A line, thread, or wire curved into a shape such as it would assume if wound in a single layer round a cylinder; a form like a screw-thread.

helix (*Radio*). An obsolescent term for an inductance coil of helical form, especially the air-spaced coil used for tuning a transmitting antenna.

helix (*Zool.*). A spirally coiled structure.

Heller's test (*Chem.*). A test for the identification of albumins, based upon the fact that many proteins are precipitated when their aqueous solution is floated over concentrated mineral acids.

Hellesen cell (*Elec. Eng.*). A dry cell with zinc and carbon electrodes and a depolariser of manganese dioxide.

helm (*Meteor.*). The *helm wind, cloud,* and *bar* constitute a phenomenon on the western slope of Crossfell Range, Cumberland. The cold wind blows down under the cloud and ends under the bar, which is a further parallel and whirling cloud.

Helmert's formula (*Phys.*). An expression giving the value of g, the acceleration due to gravity, for a given latitude and altitude:

$$g = 980{\cdot}616 - 2{\cdot}5928 \cos 2\lambda + 0{\cdot}0069 \cos^2 2\lambda - 0\,0003086H,$$

where λ is the latitude and H is the height in metres above sea-level, g being in cm. per sec. per sec.

helmet (*Elec. Eng.*). The iron cap or pole piece sometimes fitted to a lodestone to form an armed lodestone.

helmet (*Civ. Eng.*) A cast-iron *dolly* (q.v.) used at the head of a reinforced concrete pile, the two being separated by a sand cushion.

helmet (*Zool.*) In some species of *Bucerotidae* (Hornbills), a casque-like structure at the base of the upper bill: in *Insecta*, the galea.

helmet-shaped (*Bot.*). Arched and hollow like a helmet.

Helmholtz galvanometer (*Elec. Eng.*). A type of tangent galvanometer in which an approximately uniform field is produced by having two coils parallel to each other, a few inches apart.

Helmholtz resonance (*Acous.*). The type of acoustic resonance arising in a flask-shaped cavity (Helmholtz resonator) and, by extension, in flat cavities, such as a recessed window or the cavity in front of a microphone diaphragm.

Helmholtz resonator (*Acous.*). An acoustic resonator in which the mass reactance of a short column of air neutralises at a fairly definite frequency the reactance of the stiffness of the volume contained in an enclosure, which communicates with the open air only through the said column. Used at one time for analysing complex sounds.

Helmin'thes (*Zool.*). A name formerly used in classification to denote a large group of worm-like Invertebrates now split up into *Platyhelminthes*, *Nematoda*, and several smaller groups.

helminthi'asis (*Med.*). Infestation of the body with parasitic worms.

hel'minthoid (*Bot.*). Shaped like a worm.

hel'ophyte (*Bot.*). A bog plant.

hel'otism (*Zool.*). See **dulosis.**

helve (*Tools*). The handle of an axe, hatchet, or similar chopping tool.

helve hammer (*Eng.*). An obsolete form of trip hammer, used in forging.

Helvetia leather (*Leather*). See **crown leather.**

hem-, hema-, hemo-. Prefix. Variant of *haem-, haema-, haemo-* (q.v.). See **haemorrhage, haemorrhoid,** etc.

hemely'tra (*Zool.*). The fore wings of *Heteroptera*, which are thickened at their bases like elytra while the distal portion remains membranous.

hemeralo'pia (*Med.*). Day-blindness, objects sometimes being better seen in a dull light. The term is wrongly used also to mean night-blindness (see **nyctalopia**).

hemi- (Greek *hemi*, half). A prefix used in the construction of compound terms; e.g. *hemianopia* (q.v.).

hemianaesthe′sia, hemianesthe′sia (*Med.*). Loss of sensibility to touch on one side of the body; usually connotes also loss of sensibility to pain and temperature.

hemianalge′sia (*Med.*). Loss of sensibility to pain on one side of the body.

hemiangiocar′pic, hemiangiocar′pous (*Bot.*) Descriptive of the fruit body of a fungus when the hymenium begins its development inside a closed chamber, but is exposed at maturity.

hemiano′pia, hemianop′sia (*Med.*). Loss of half of the field of vision.

hemiatax′y, hemiatax′ia (*Med.*). Loss of co-ordination of the muscles of one side of the body.

hemiat′rophy (*Med.*). Wasting of muscles of one side of the body, or of one half of a part of the body.

hemiaut′ophyte (*Bot.*). A parasite which contains chlorophyll and can make some carbohydrate material.

hemiblas′tula (*Zool.*). An abnormal blastula produced by the destruction of one of the two primary blastomeres and the cultivation of the other.

hem′ibranch, —brank (*Zool.*). The single row of gill lamellae or filaments, borne by each face of a gill-arch in Fish: a gill-arch with respiratory lamellae or filaments on one face only.

hemicarp (*Bot.*). See **mericarp.**

hemiceph′alous (*Zool.*). Said of dipterous larvae which possess a reduced head or jaw capsule which is incomplete posteriorly and can be retracted into the thorax.

Hemichor′da (*Zool.*). A subphylum of *Chordata*, lacking any bony or cartilaginous skeletal structures; without tail or atrium; having a reduced notochord in the pre-oral region, and a superficial central nervous system; the three primary coelomic cavities persist in the adult.

hemichore′a (*Med.*). Chorea affecting one side of the body.

hemicolloid (*Chem.*). A particle up to 250 A ($2{\cdot}5\times10^{-6}$ cm.) in length, and consisting of 20-100 molecules.

hemicra′nia (*Med.*). Headache affecting one side of the head.

hemicryp′tophyte (*Bot.*). A plant which develops its resting buds just above or below the surface of the soil, where they are protected by litter or by a thin layer of soil.

hemicrys′talline rocks (*Geol.*). Those rocks of igneous origin which contain some interstitial glass, in addition to crystalline minerals. Cf. *holocrystalline rocks.*

hemicy′clic (*Bot.*). Said of a flower which has some of its parts inserted in spirals and some in whorls.

hemiem′bryo (*Zool.*). An abnormal embryo, of which one half in the sagittal plane is complete and normal while the other half is composed of dead tissue; obtained by the destruction of either of the first two blastomeres and the cultivation of the other.

hemigas′trula (*Zool.*). An abnormal embryo representing half of a complete gastrula, together with dead tissue obtained by the destruction of one of the first two blastomeres and the cultivation of the other.

hemignathous, —gnā′thus (*Zool.*). Having jaws of unequal length.

hemihe′dral forms (*Crystal.*). Crystal forms the faces of which are parallel to, and have the same indices as, certain *holohedral forms* (q.v.); but in consequence of a lower degree of symmetry, half the faces are suppressed. Thus the tetrahedron (four faces) in the cubic system may be regarded as the hemihedral form of the octahedron (eight faces).

hemikaryot′ic (*Cyt.*). Having the haploid number of chromosomes.—*n.* **hemikar′yon.**

hemimetabol′ic (*Zool.*). Showing incomplete metamorphosis, but possessing provisional organs in the larval condition which are wanting in the imago, and which adapt the larva to an aquatic life; as *Odonata*. Cf. *paurometabolic.*

hemimor′phism (*Min.*). The development of polar symmetry in minerals, in consequence of which different forms are exhibited at the ends of bi-terminated crystals. Hemimorphite shows this character in a marked degree.

hemimor′phite (*Min.*). An orthorhombic hydrous silicate of zinc; one of the best minerals for demonstrating polar symmetry, the two ends being distinctly dissimilar. In U.S.A. called CALAMINE or ELECTRIC CALAMINE.

hemimor′ula (*Zool.*). An abnormal embryo with animal and vegetative cells and a segmentation cavity obtained by the destruction of one of the first two blastomeres and the cultivation of the remaining one.

Hemimyaria, —mi-ā′ri-a (*Zool.*). See **Salpida.**

hemiparasite (*Bot.*). See **facultative saprophyte.**

hemipe′nes (*Zool.*). In *Squamata*, the paired eversible copulatory organs.

hemiple′gia (*Med.*). Paralysis of one side of the body.

hemipneustic, —pnū′stik (*Zool.*). (Of *Inserta*) having one or more pairs of spiracles closed. Cf. *holopneustic.*

Hemip′tera (*Zool.*). An order of *Exopterygota*, having two pairs of wings of variable character; the mouth-parts are symmetrical and adapted for piercing and sucking, being formed into a beak with fused palpless stylets; in some forms the females are wingless; many are ectoparasitic, others feed on plant juices. Bugs, Cicadas, Aphids, Plant Lice, Scale Insects, Leaf Hoppers, White Flies, Black Flies, Green Flies, Cochineal Insects.

hemipterygoid, hem-i-pter′— (*Zool.*). In some Birds, a separated portion of the pterygoid which fuses with the palatine.

hemisap′rophyte (*Bot.*). See **facultative parasite.**

hemisection (*Surg.*). The cutting through of half of a part; e.g. of the spinal cord.

hem′isome (*Zool.*). The lateral symmetrical half of an animal.

hemisphere. The half of a sphere, obtained by cutting it by a plane passing through the centre. As applied to the Earth, the term usually refers to the *Northern* or the *Southern hemisphere*, the division being by the equatorial plane.

hemisphere (*Zool.*). One of the cerebral hemispheres (see **cerebrum**).

hemithyroidec′tomy (*Surg.*). Surgical removal of one half of the thyroid gland.

hemitropic winding (*Elec. Eng.*). See **half-coiled winding.**

hemorrhage (*Med.*). See **haemorrhage.**

hemorrhoid (*Med.*). See **haemorrhoid.**

hemp (*Textiles*). The name applied to a number of different types of fibres (common hemp, sunn, manila, sisal), useful chiefly for the making of ropes. The seeds of common hemp (*Cannabis sativa*) yield an oil used in paints, varnishes, and soaps.

Hempel pipette (*Chem.*). A glass pipette used for the measurement of the volume of a gas.

hench (*Build.*). The narrow side of a chimney shaft.

Hendre Shales (*Geol.*). Dark-coloured graptolitic shales lying below the Mydrim Limestone in the Ordovician System of the more westerly parts of S. Wales.

Hengistbury Head Beds (*Geol.*). A series of glauconitic sands and clays occurring in the Bournemouth district; of Eocene age.

Henle's layer, hen'le (*Zool.*). The outermost layer of the inner root sheath of a hair, composed of oblong horny cells with obscure nuclei.

Henle's loop (*Zool.*). The loop formed by a uriniferous tubule when it enters the medulla of the Mammalian kidney and turns round to pass upwards again to the cortex.

Henle's membrane (*Zool.*). A fenestrated membrane which lies immediately outside the endothelium lining a vein or an artery.

Henle's sheath (*Zool.*) In Vertebrates, a prolongation of the perineurium which invests the branches of nerves.

Hennebique pile, en'bĕk (*Civ. Eng.*). A type of reinforced concrete pile having the main bars grouped symmetrically about the centre of the pile and bound together at intervals by means of straps or wire lacing.

He'noch's purpura (*Med.*). A disease characterised by purpura, urticaria, swollen joints, and abdominal pain.

Henrici's notation, hen-rē'chō (*Eng.*). See **Bow's notation.**

Henrietta (*Textiles*). A dress material made from a silk warp and fine Botany weft; woven with the weft Prunelle twill, the picks per inch greatly exceeding the ends per inch.

henry (*Elec. Eng.*). The practical unit of inductance; it is equal to 10^9 electromagnetic units of inductance, or to 10^8 interlinkages per ampere.

henrymeter (*Elec. Eng.*). An obsolete apparatus for measuring inductance; in it an alternating current was passed through the inductance under test and a standard inductance in series, the voltage drop across the two being compared.

Henry's law (*Chem.*). The amount of a gas absorbed by a given volume of a liquid at a given temperature is directly proportional to the pressure of the gas.

Hensen's cells (*Zool.*). In Mammals, large pointed cells, forming a single or double row between Deiter's cells and Claudius' cells, in the cochlea.

Hensen's line (*Histol.*). In striated muscle, an indefinite clear line running transversely across the dark area of each fibre.

he'par sul'phuris (liver of sulphur) (*Chem.*). A reddish-brown product obtained when potassium carbonate and sulphur are heated together.

hepat-, hepato- (Greek *hēpar*, gen. *hēpatos*, the liver). A prefix used in the construction of compound terms; e.g. *hepatitis*.

hepatec'tomy (*Surg.*). Surgical removal of part of the liver.

hepat'ic (*Bot.*). (1) A liverwort.—(2) Dull purplish-red.

hepatic (*Med.*). Pertaining to the liver.

Hepat'icae (*Bot.*). A group of the *Bryophyta* in which the plant which bears the sexual organs is either a dichotomosing thallus or a shoot with a dorsiventral arrangement of the leaves. The capsule usually contains elaters mixed with the spores, and seldom contains a columella. Many of the thalloid forms are known as *liverworts*.

hepatisation (*Med.*). Pathological change of tissue so that it becomes liver-like in consistency; as of the lung in pneumonia.

hepati'tis (*Med.*). Inflammation of the liver.

hepatogenous, —toj'en-us (*Med.*). Having origin in the liver.

hepatolentic'ular degeneration (*Med.*). Wilson's disease. Progressive lenticular degeneration. A progressive disease of the nervous system characterised by involuntary movements, muscular rigidity, difficulty in speech and swallowing, and wasting, associated with cirrhosis of the liver.

hep'atolith (*Med.*). A gall-stone present in the liver.

hepato'ma (*Med.*). A tumour composed of liver tissue.

hepatomeg'aly, hepatomega'lia (*Med.*). Enlargement of the liver.

hepatonephri'tis (*Med.*). Coincident inflammation of the liver and the kidney.

hepatopan'creas (*Zool.*). In many Invertebrates (as *Mollusca, Arthropoda, Brachiopoda*), a glandular diverticulum of the mesenteron, frequently paired, consisting of a mass of branching tubules, and believed to carry out the functions proper to the liver and pancreas of higher Vertebrates.

hepatopex'y (*Surg.*). Fixation of the liver by suturing it to the abdominal wall.

hepatopor'tal system (*Zool.*). The portal circulation of the liver in Vertebrates. Also HEPATIC PORTAL SYSTEM (see **portal system**).

hepatopto'sis (*Med.*). Displacement of the liver downwards into the abdominal cavity.

hepatorrhex'is (*Med.*). Rupture of the liver.

hepatot'omy (*Surg.*). Incision of the liver.

hept- (Greek *hepta*, seven). A prefix used in the construction of compound terms.

hepta- (*Chem.*). Containing seven atoms, groups, etc.

heptam'erous (*Bot.*). Having parts in sevens.

heptane (*Chem.*). C_7H_{16}, a paraffin hydrocarbon, a colourless liquid, b.p. 98° C., sp. gr. 0·68. There are nine paraffins with this formula. The foregoing properties relate to *normal* heptane, which is a constituent of petrol and resembles hexane in its chemical behaviour.

heptava'lent or **septava'lent** (*Chem.*) Capable of combining with seven hydrogen atoms or their equivalent.

heptode (*Thermionics*). A seven-electrode valve containing a cathode, anode, and five grids; used as a frequency changer. The cathode and first two grids form an oscillating triode system which generates the local oscillation, the remaining four electrodes forming a screened-grid system of variable emission, the signal being applied to the fourth grid. Also called PENTAGRID.

heptoses (*Chem.*). A sub-group of the monosaccharoses containing seven oxygen atoms, of the general formula $HO{\cdot}CH_2{\cdot}(CHOH)_5{\cdot}CHO$.

Heraeus lamp (*Med.*). A special form of mercury-vapour lamp, used for medical purposes on account of its high proportion of ultra-violet rays.

herb (*Bot.*). A flowering plant of small or rather small stature, of which the aerial shoots last only as long as is necessary to develop the flowers and the fruits.—*adj.* **herba'ceous.**

herba'ceous (*Bot.*). Soft and green, containing little woody tissue.

herbaceous perennial (*Bot.*). A herb possessing some more or less modified underground stem system, which lasts for a number of years, and sends up each season one or more flowering shoots which die down after flowering and fruiting is completed.

herba'rium (*Bot.*). A collection of dried plants: by extension, the place where such a collection is kept.

Herbst's corpuscle (*Zool.*). A simple form of *Pacinian corpuscle* (q.v.), with fewer tunics and a core of cubical cells surrounding the nerve expansion.

her'cogamy, her'kogamy (*Bot.*). The condition of a flower when the stamens and stigmas are so placed that self-pollination is not possible.

her'cynite (*Min.*). See under **spinel.**

hereditary (*Biol.*). Inherited: capable of being inherited: passed on or capable of being passed on from one generation to another.

heredity (*Biol.*). That factor in evolution which causes the persistence of characters in successive generations.

Hering furnace (*Elec. Eng.*). A special form of electric furnace for melting metals; in it circulation of the molten charge is effected by making use of the pinch effect.

hermaph'rodite (*Bot.*). See **monoclinous.**

hermaphrodite (*Zool.*). Having both male and female reproductive organs in one individual. —*n.* **hermaphroditism.**

hermaphrodite duct (*Zool.*). In *Gastropoda*, the duct by which the ova and spermatozoa pass from the ovotestis to the albumen gland.

Hermel'lifor'mia (*Zool.*). An order of *Cryptocephala*, of tubicolous habit, in which the palps are large and subdivided but have become fused with the peristomium, which forms a huge bilobed hood on the edges of which the palps appear as a series of ridges.

Hermetex (*Build.*). A plastic asbestos preparation used for repairing roofs.

hernia (*Med*). Protrusion of a viscus, or part of a viscus, through an opening or weak spot or defective area in the cavity containing it; especially of an abdominal viscus.

herniot'omy (*Surg.*). Cutting operation for hernia.

heroin, her'ō-in (*Chem.*). A morphine alkaloid occurring in hashish. It is diacetylmorphine. Heroin is a dangerous drug of addiction, its distribution being limited by law. Its physiological action is narcotic, resembling that of morphine.

Héroult furnace, ā-roolt (*Met.*). An electric-arc furnace used in melting steel and other metals The metal in the hearth acts as conductor for current flowing between electrodes, which enter through the roof. Three electrodes of graphite or amorphous carbon are used, and arcs are formed between each electrode and the bath of metal.

Héroult process (*Met.*). An electrolytic process for the manufacture of aluminium from a solution of bauxite in fused cryolite.

her'pes simplex (*Med*). An eruption of vesicles round the mouth occurring in febrile diseases, due to infection with a filter-passing virus.

herpes zoster (*Med.*). Shingles. A painful eruption of crops of firm vesicles along the course of a nerve, the posterior root ganglia of which are inflamed.

herring-bone ashlar (*Masonry*). A block of stone tooled in grooves of herring-bone design.

herring-bone bond (*Build.*). A form of *raking bond* (q.v.) in which the bricks are laid with rake in opposite directions from the centre of the wall, so as to form a herring-bone pattern. This bond is also used for brick pavings, and has the advantage of making effective bond in the middle.

herring-bone gear (*Eng.*). A *double helical gear* (q.v.).

herring-bone structure (*Geol.*). This results from the twinning on the front (ortho-) pinacoid of pyroxenes possessing a schiller structure parallel to the basal pinacoid. The schiller structure appears as a fine striation; the basal pinacoids slope in opposite directions; therefore in appropriate sections the schiller structure simulates a herring's bones, the twin plane being the ' back-bone.'

herring-bone strutting (*Carp.*). Small struts fixed diagonally in pairs, crossing one another, between adjacent floor-joists. See **bridging.**

herring-bone (or **feather**) **twills** (*Weaving*). A fancy twill effect made by stripes in which the diagonal line is run alternately to the right and left. Usually based upon the 2-and-2 twill.

Hertfordshire Puddingstone (*Geol.*). See **puddingstone.**

Hertwig's rule, hert'vihh (*Zool.*). The nucleus always seeks to place itself in the centre of its sphere of activity.

hertz (*Elec. Comm.*). The unit of frequency, one cycle per second.

Hertzian oscillator (*Radio*). An idealised system envisaged by H. Hertz, comprising two point charges of opposite sign and separated by an infinitesimal distance, whose electric moment varies harmonically with time.

Hertzian radiator (*Radio*). The original form of radiator used by H. Hertz, comprising two flat metal plates, arranged in line and connected by straight conductors to a spark gap placed midway between them.

Hertzian waves (*Radio*). Electromagnetic waves having frequencies between zero and approximately ten thousand million cycles per second; especially those towards the upper limit of this range.

herzenber'gite, herts'— (*Min.*). A rare decomposition product of tin ores, having the composition, tin sulphide, SnS; described originally from a locality in Bolivia.

hesper'idene (*Chem*). See ***d*-limonene.**

hesperid'ium (*Bot*) A fruit like an orange; a fleshy fruit covered by a firm rind, derived from a syncarpous superior gynaeceum, and owing its fleshy material to large numbers of hairs projecting into the loculi and becoming filled with juice as the fruit ripens.

Hess's law (*Chem.*). The net heat evolved or absorbed in any chemical change depends only on the initial and final states, being independent of the stages by which the final state is reached.

Hessbit (*Build.*). A proprietary form of *sarking felt* (q.v.).

hessian (*Textiles*) A strong plain-weave jute fabric, used for packing material, sacks, etc., and for serving electric cables.

hessite (*Min.*). Telluride of silver, a metallic grey cubic mineral occurring in silver ores in various parts of the world, notably at Savodinski in the Altai Mts in Siberia.

Hessle Boulder Clay (*Geol.*). A boulder clay occurring in northern England east of the Pennines, deposited by ice moving southwards from the Southern Uplands of Scotland and Northumberland; later in date than the main glaciation.

hessonite or **cinnamon stone** (*Min.*). A variety of garnet containing a preponderance of the grossularite molecule, and characterised by a pleasing reddish-brown colour.

het'acrolite or **het'erolite** (*Min.*). A very rare double oxide of zinc and manganese, occurring in ore deposits as black tetragonal and fibrous crystals.

heter-, hetero- (Greek *heteros*, other, different). A prefix used in the construction of compound terms; e.g. *heteromastigote*, having two or more different types of flagella.

het'eracanth (*Zool.*). Having dorsal fin spines, which, in the depressed position, turn slightly to one side or the other, alternately. Cf. *homacanth.*

heteran'drous (*Bot.*). Having stamens which are not all of the same size.

hetero-agglutination (*Physiol.*, *Zool.*). (1) The adhesion of spermatozoa to one another by the action of a substance produced by the ova of another species.—(2) The adhesion of erythrocytes to one another when blood of different groups is mixed. Cf. *iso-agglutination.*

heteroauxin, —awk'sin (*Bot.*). A substance, found in urine, which stimulates growth in plants; it appears to be identical with β-indolylacetic acid.

het'erobares (*Chem.*). Atoms having different atomic weights.

heteroblas'tic (*Zool.*). Showing indirect development.

heterobrach'ial (*Cyt.*). Said of a chromosome bent into two parts of unequal length.

heterocar'pous (*Bot.*). Having more than one kind of fruit.

heterocer'cal (*Zool.*). Said of a type of tail-fin, found in adult Sharks, Rays, Sturgeons, and many other primitive Fish, in which the vertebral column bends abruptly upward and enters the epichordal lobe, which is larger than the hypochordal lobe.

heterochlamyd'eous (*Bot.*). Having a distinct calyx and corolla.

heterochromat'ic photometry (*Photog*). The measurement of colours of different hue.

heterochro'mia i'ridis (*Med.*). Difference of colour in the same iris or in the two irides of the same person.

heterochro'mosome (*Cyt.*). An ordinary typical chromosome, as opposed to a sex chromosome

heteroch'ronism (*Zool.*). Departure from the normal time-schedule in development.

heterochro'sis (*Zool.*). Abnormal coloration.

heterocoelous, —sē'lus (*Zool.*). Said of vertebral centra in which the anterior end is convex in vertical section, concave in horizontal section, while the posterior end has these outlines reversed.

Het'erocotyle'a (*Zool.*). An order of *Trematoda* in which the ventral sucker is always posterior, and the genital openings, whether separate or united, are always ventral, and usually anterior; generally ectoparasitic, or in the oral, nasal, or branchial cavities or the urinary bladder of Fish, Amphibia, Reptiles, and Crustacea.

heterocot'ylised arm (*Zool.*). See **hectocotylus.**

heterocy'clic compounds (*Chem.*). Cyclic or ring compounds containing carbon atoms and other atoms, e.g. O, N, S, as part of the ring.

het'erocyst (*Bot.*). An enlarged thick-walled cell occurring in a filament of a member of the *Myxophyceae*; of obscure function.

heterodac'tylous (*Zool.*). (Of Birds) having the first and second toes directed backwards, the third and fourth forwards, as the Trogons.

het'erodont (*Zool.*). (Of teeth) having different forms adapted to different functions.

heterodynam'ic (*Biol.*). Of unequal potentiality, as *heterodynamic centrosomes.*

heterodynamic hybrid (*Gen.*). A hybrid which resembles in many of its characters either the male or the female parent.

heterodyne detector (*Radio*). A detector employing the *heterodyne principle* (q.v.).

heterodyne interference (*Radio*). Interference arising from the simultaneous reception of two stations the difference between whose carrier frequencies is an audible frequency.

heterodyne oscillator (*Radio*). An oscillator in which the output is obtained by heterodyning two oscillators of different frequency. The output frequency can be varied over a large percentage range by a small percentage change in frequency of one of the two oscillators.

heterodyne principle (*Radio*). The principle of the production of beats having a frequency equal to the difference between two higher frequencies. See also **heterodyne reception.**

heterodyne reception (*Radio*). A system of reception of continuous waves in which the incoming signal is combined with a locally generated oscillation having a slightly different frequency from that of the signal. The combined wave is applied to a rectifying device, the output from which contains a component having a frequency equal to the difference between the two original frequencies, which may be made audible. Also called BEAT RECEPTION.

heterodyne wavemeter (*Radio*). A calibrated oscillator which is adjusted to the same frequency as that of the signal to be measured, so that the heterodyne note or difference frequency falls to zero.

heterodyne whistle (*Radio*). The continuous beat-frequency note produced by the heterodyning of two oscillations which are of slightly different frequency.

heteroecious, het-er-ē'si-us *or* —shus (*Bot.*). Said of a parasitic fungus which forms one or more kind of spores upon one host, and one or more distinct kinds of spores upon a second host which is not of the same species as the first.—(*Zool.*) Said of parasitic forms which have different hosts at different stages in the life-history.

heteroecism, —ē'sizm (*Bot.*). A condition found in some parasitic fungi, almost all belonging to the *Uredinales*. The parasite lives for a portion of its life-cycle in one host, and a portion in a second host belonging to a distinct species.

heterogametan'gic (*Bot.*). Having gametangia of more than one kind.

heterogam'ete (*Zool.*). See **anisogamete.**

heterogamous (*Bot.*). Having pistillate, staminate, hermaphrodite, and neuter flowers (or any two or three of these types) present in one inflorescence.

heterog'amy (*Biol.*). Metagenesis; the condition of producing gametes of more than one type.—*adj.* **heterogamous.**

heteroge'neous (*Chem.*). Said of a system consisting of more than one phase.

heterogen'esis (*Zool*). Metagenesis: abiogenesis. —*adj.* **heterogenet'ic.**

heterogeny (*Zool.*). Cyclic reproduction in which several broods of parthenogenetic individuals alternate with one or more broods of sexual forms.

heterogony (*Zool.*). Reproduction by both parthenogenesis and amphigony.

heterogy'nous (*Zool.*). With two different types of female.

heteroi'cous (*Bot.*). Said of *Bryophyta* which have more than one kind of arrangement of the antheridia and archegonia on the same plant.

het'eroion, —ō-i-on (*Chem*). A charged particle produced by the adsorption of a simple ion on a large, complex molecule.

heterokar'yote (*Zool.*). Having two different kinds of nuclei.

heterokine'sis (*Cyt.*). Differential division of chromosomes.

heterokon'tan (*Bot.*). Said of a motile plant or spore-bearing flagella not all of the same length.

heterolecithal, —les'-i-thal (*Zool.*). With unequally distributed yolk.

heterolite (*Min.*). See **hetaerolite.**

heteromas'tigote (*Zool.*). Having one or more anterior flagella directed forwards and a posterior flagellum directed backwards.

heterom'erism (*Zool.*). In metameric animals, the condition of having unlike somites; cf. *homoeomerism.*—*adj.* **heteromeric.**

heteromer'ous (*Bot.*). Said of a lichen thallus in which a layer of algal cells lies between two layers composed of fungal hyphae.

Heterometab'ola (*Zool.*). See **Exopterygota.**

heterometabol'ic (*Zool.*). Showing incomplete metamorphosis, i.e. a direct or simple metamorphosis, as in most members of the *Exopterygota.*

Hetero'mi (*Zool.*). An order of *Neopterygii* in which the air-bladder, if present, is without a pneumatic duct; the pelvic fins, if present, are abdominal; deep-sea forms about which little is known. Spiny Eels, Thornbacks.

heteromor'phic (*Zool., etc.*). Said of chromosome pairs which differ in size or form, or both; cf. *homomorphic.*—*n.* **heteromorphism.**

heteromorphic alternation (*Bot.*). See **antithetic alternation of generations.**

heteromorpho'sis (*Zool.*). The regeneration of a part in a different form from the original part: the production of an abnormal structure; cf. *homomorphosis.*—*adj.* **heteromorphous.**

heteromor'phous (*Bot.*). (1) Existing in more than one form.—(2) Having more than one kind of flower on the same plant.

heteromorphous rocks (*Geol.*). Rocks of closely similar chemical composition, but containing different mineral assemblages.

Heteronemertin'i (*Zool.*). An order of *Dimyaria* in which the mouth is behind the brain, the proboscis lacks stylets, and the cerebral ganglia and lateral nerves lie between the outer longitudinal and the circular muscles of the body-wall; marine forms.

heterone'reis (*Zool.*). In free-swimming *Polychaeta*, a special sexual form with enlarged parapodia.

heteron'omous (*Zool.*). Subject to different laws, especially of growth and specialisation. Cf. *autonomous.*

heteropel'mous (*Zool.*). Having bifid flexor tendons of the digits of the hind foot.

heteroph'agous (*Zool.*). (Of Birds) having young in a very immature condition.

heteropho'ria (*Med.*). Latent squint revealed by passing a screen before each eye. See also **esophoria** and **exophoria.**

het'erophyl'ly (*Bot.*). The occurrence of more than one kind of foliage leaf on the same shoot; also ANISOPHYLLY.—*adjs.* **heterophyllous, anisophyllous.**

hetero'pic (*Geol.*). Said of two formations deposited contemporaneously, but of different facies. Cf. *isopic.*

heteroplas'ma (*Zool.*). In tissue culture, a medium prepared with plasma from an animal of a different species from that from which the tissue was taken. Cf. *autoplasma, homoplasma.*

heteroplas'tic (*Zool.*). In experimental zoology, said of transplantation in which transplant and host belong to different genera or species. Cf. *autoplastic transplantation, homoioplastic, xenoplastic.*

het'eroplasty (*Med*). The operation of grafting on one person body-tissue removed from another.

het'eroploid (*Cyt.*). Possessing an additional chromosome, i.e, above the characteristic number.

heteropo'lar (*Chem.*). Having an unequal distribution of charge, as in a semipolar bond.

heteropolar generator (*Elec. Eng.*). An electromagnetic generator of the usual type, i.e. one in which the conductors pass alternate north and south poles, or in which alternate poles pass the conductors.

heteropycnosis, —pik-nō'zis (*Cyt.*). The tendency of sex-chromosomes to undergo precocious condensation in the growth stages, shown by the fact that some portions are densely staining.

hetero'sis (*Zool.*). Cross-fertilisation: in metameric animals, the modification of a merome in form or position, or both, from the type. Cf. *homoeosis.*

Heteroso'mata (*Zool.*). An order of *Neopterygii* in which the body is flattened from side to side, both eyes being on the same side of the head; the fin-rays are spiny and an air-bladder is lacking; bottom-living marine forms. Plaice, Sole, Topknot, Halibut, Flounder, Dab, Megrim, Witch, Scald-fish, Turbot, Brill.

het'erosporan'gy (*Bot.*). The formation of more than one kind of sporangium containing more than one kind of spore.

het'erospo'ry (*Bot.*). The formation of more than one kind of spore.—*adj.* **heterosporous.**

heterostatic method (*Elec. Eng.*). A method employed in using the quadrant electrometer, the needle being maintained at a high potential independently of the quadrants.

heterosty'lous (*Bot.*). Having styles of one length in some flowers, and of a different length in others.

heterosynap'sis (*Cyt.*). Pairing of two dissimilar chromosomes. Cf. *homosynapsis.*

heterothal'lism (*Bot.*). The existence of physiological differences between the mycelia of many species of fungi, most commonly shown by the inability of the mycelium to manifest sexual activities unless it is brought into contact with another mycelium of distinct character.

het'erotopes (*Chem.*). Atoms having different atomic numbers and, therefore, occupying different positions in the periodic system; they are separable by chemical means.

heteroto'pia (*Med.*). Displacement of a group of cells of an organ from their normal position during the course of development.

Het'erotrich'a (*Zool.*). An order of *Ciliata* the members of which are generally of swimming habit, although some are sedentary; they always possess a permanent gullet with an undulating membrane.

het'erotrich'ous (*Zool.*). Having cilia or flagella of two or more different kinds.

heterotrichous thallus (*Bot.*). An algal thallus consisting of a prostrate portion, lying on a substratum, and a series of filamentous branches standing out into the water.

heterotro'phic (*Bot.*). Unable to make food from simple beginnings, and therefore dependent for food upon dead or living organisms of another species, and ultimately on the green plant.

heterotro'pic chromosome (*Cyt.*). See **sex chromosome.**

het'erotype division (*Bot.*). The nuclear division in meiosis in which the number of chromosomes is halved.

heterotyp'ic (*Zool.*). Differing from the normal condition. Cf. *homotypic.*

heterotypic division (*Zool*). See **meiosis.**

het'eroxeny, —zē-ni (*Bot.*). See **heteroecism.**

heterozygo'sis (*Biol.*). See **heterosis.**

heterozy'gous (*Gen.*). Possessing both the dominant and recessive characters of an allelomorphic pair; cf. *homozygous.*—*n.* **heterozygote.**

heulandite, hū'— (*Min.*). One of the best-known zeolites, beautifully crystalline, occurring as coffin-shaped monoclinic crystals in cavities in decomposed basic igneous rocks. In composition similar to plagioclase, but with a high content of water.

Heurtley hot-wire magnifier, hėrt'lē (*Teleg.*). A device for magnifying weak telegraph currents The incoming currents deflect hot-wires across a cooling air-blast, the consequent unbalance currents of the Wheatstone bridge, of which the hot-wires form arms, becoming the magnified signals.

hewer (*Mining*). A man engaged in getting or mining hand-wrought coal.

hewettite, hū'— (*Min.*). A very rare hydroxide of vanadium and calcium, occurring as slender orthorhombic crystals in the vanadium deposits of Peru.

hewing. The operation of dressing timber by the use of an axe or hatchet.

Hewlett disc insulator (*Diel.*). A disc-form of suspension-type insulator.

hewn stone (*Masonry*). Blocks of stone whose faces have been hammer-dressed.

hex- (Greek *hex*, six). A prefix used in the construction of compound terms; e.g. *hexactinal*, having six rays.

hexa- (*Chem.*). Containing six atoms, groups, etc.

hex'acanth (*Zool.*). Having six hooks; as a stage in the life-history of some Tapeworms.

Hexac'tinel'lida (*Zool.*). A class of *Porifera*, usually distinguished by the possession of a siliceous skeleton composed of triaxial spicules, and large thimble-shaped flagellated chambers.

hexaflu'orophospho'ric acid (*Chem.*). HPF_6. Produced by the action of strong hydrofluoric acid on difluorophosphoric acid. Also referred to as PHOSPHOROFLUORIC ACID.

hexagon voltage (*Elec. Eng.*). The voltage between two lines, adjacent as regards phase-sequence, of a six-phase system.

hexagonal system (*Crystal.*). A crystal system in which three equal coplanar axes intersect at an angle of 60°, and a fourth, perpendicular to the others, is of a different length.

hexahy′droben′zene (*Chem.*). *Cyclohexane* (q.v.).

hexahy′drophe′nol (*Chem.*). *Cyclohexanol* (q.v.).

hexahy′dropyr′idine (*Chem.*). *Piperidine* (q.v.).

hexam′erous (*Bot.*). Having parts in sixes.

hexameth′ylene (*Chem.*). *Cyclohexane* (q.v.).

hexamethylene-tetramine (*Chem.*). $(CH_2)_6N_4$, a condensation product of formaldehyde with ammonia, a crystalline substance with strong antiseptic properties. It forms addition products with iodine, hydrogen peroxide, and numerous other substances.

Hexam′ine (*Chem.*). A trade-name for *hexamethylene-tetramine* (q.v.).

hexane (*Chem.*). C_6H_{14}. There are five compounds with this formula: normal hexane, a colourless liquid, of ethereal odour, b.p. 69° C., sp. gr. 0·66, is an important constituent of petrol and of solvent petroleum ether or ligroin.

hexaphase (*Elec. Eng.*). A term sometimes used instead of *six-phase.*

hex′apod (*Zool.*). Having six legs.

hexap′terous (*Zool.*). Having six wing-like processes.

hex′arch (*Bot.*). Having six strands of protoxylem

hex′astyle (*Arch.*). A portico formed of six columns in front.

hex′ava′lent (*Chem.*). Capable of combining with six hydrogen atoms or their equivalent.

hexone bases (*Chem.*). Protein derivatives comprising the amino acids arginine, lysine, and histidine. The name is now obsolescent.

hexoses (*Chem.*). A sub-group of the monosaccharoses containing six oxygen atoms, of the general formula $HO{\cdot}CH_2(CHOH)_4{\cdot}CHO$ and $HO{\cdot}CH_2{\cdot}(CHOH)_3{\cdot}CO{\cdot}CH_2OH$. The first formula signifies an *aldohexose* (q.v.), the second one a *ketohexose* (q.v.).

Heyde meter, hid′e (*Photog.*). A meter for estimating photographic exposures, taking into account prevailing conditions.

Heyland a.c. generator (*Elec. Eng.*). A self-excited a.c. generator in which the excitation is obtained by a special arrangement of transformers and commutator connected to the armature.

Heyland diagram (*Elec. Eng.*). A particular application of the circle diagram of an a.c. circuit to represent the behaviour of an induction motor.

Hf (*Chem.*). The symbol for *hafnium.*

Hg (*Chem.*). The symbol for *mercury.*

hia′tus (*Zool.*). A large gap or opening.

H.I.B. (*Build.*). A common abbrev. for *hoop-iron bond* (q.v.).

Hibbert cell (*Elec. Eng.*). A standard cell similar to a Clark cell but having an electrolyte of zinc chloride instead of zinc sulphate.

hi′bernac′ula (*Zool.*). In certain fresh-water *Polyzoa,* external buds which are arrested in development and which enable the colony, which has died down at the onset of winter, to regenerate in spring.

hibernating glands (*Zool.*). Vascular reserves of fatty tissue occurring in some hibernating Mammals.

hibernation (*Zool.*). The condition of partial or complete torpor into which some animals relapse during the winter season.—*v.* **hibernate.**

hiccup (*Med.*). Sudden spasm of the diaphragm followed immediately by closure of the glottis.

hick joint (*Build.*). A *flat joint* (q.v.) formed in fine mortar when pointing, after the old mortar has been raked out of the joints.

Hicks hydrometer (*Elec. Eng.*). A form of hydrometer used for finding the specific gravity of the electrolyte in an accumulator, in order to determine the state of its charge; the hydrometer consists of a glass tube containing a number of coloured beads, which float at different specific gravities.

hid′denite (*Min.*). See **spodumene.**

hidro′sis (*Zool.*). Formation and excretion of sweat.

Hiduminium R.R. alloys (*Met.*). See **R.R. alloys.**

hiemal aspect, hi-ē′mal (*Bot.*). Appearance and condition of the plants of a community in winter.

high (*Typog.*). Type or blocks which are higher than the rest of the forme are said to be *high.*

highs (*Acous.*). The same as *top.*

high brass (*Met.*). Copper-zinc alloy containing 34% zinc. Possesses high tensile strength. Used for springs, screws, rivets, etc.

high conductivity copper (*Met.*). Metal of high purity, having an electrical conductivity not much below that of the international standard, which is a resistance of 0·15328 ohms for a wire one metre long and weighing one gramme.

high-definition (*Television*). A term arbitrarily applied to those systems of television which employ one hundred or more scanning lines per frame.

high-duty cast-iron (*Met.*). Cast-iron with a tensile strength greater than 17 tons per sq. in. Produced by using large proportions of steel scrap, casting in hot moulds, inoculation, superheating, alloying additions, and heat-treatment.

high explosive (H.E.). A material which can produce detonation, as opposed to one producing explosion only; i.e. it must exert violent disruptive effect. See **detonator, H.E. shell.**

high-fidelity (*Acous.*). An inexact term generally meaning sound reproduction of a superior, but undefined, quality.

high frequency (*Radio*). A term loosely used to denote any frequency above the audible range, i.e. above ten kcps., but more especially those frequencies which are used for radio communication. See also **audio frequency, carrier frequency, intermediate frequency, radio frequency, video frequency.**

high-frequency alternator (*Radio*). Any alternator giving an output whose frequency is above 10 kcps. See **Alexanderson alternator, Bethenod-Latour alternator, Goldschmidt alternator.**

high-frequency amplification (*Radio*). Amplification at frequencies used for radio transmission. In a receiver, any amplification which takes place before detection or frequency conversion.

high-frequency choke (*Radio*). An inductance coil designed to have a high impedance at high frequencies.

high-frequency condenser microphone (*Acous.*). See **condenser microphone.**

high-frequency induction furnace (*Met.*). Essentially an air transformer, in which the primary is a water-cooled spiral of copper tubing, and the secondary the metal being melted. Currents at a frequency above about 500 cps. are used to induce eddy currents in the charge, thereby setting up enough heat in it to cause melting. Used in melting steel and other metals. See also **coreless induction furnace.**

high-frequency resistance (*Radio*). The resistance of a conductor or circuit as measured at high frequency. It is in general greater than the low frequency or d.c. resistance, owing to eddy current and dielectric losses. Also called RADIO-FREQUENCY RESISTANCE.

high-frequency transformer (*Radio*). A transformer designed to operate at high frequencies.

high-frequency treatment (*Med.*). The treatment of diseases by high-frequency currents, usually trains of heavily damped oscillations.

high-gloss (*Paint*). A term applied to paint drying with a brilliant finish like that of enamel paint.

high-intensity carbon arc (*Cinema.*). Projection arc carbons taking current up to 200 amperes and having cerium fluoride cores.

high-light (*Photog.*). That part of a photographic object or image which indicates a light source or reflection of illumination which is relatively high compared with the surrounding average.

high machine (or **mill**) **finish** (*Paper*). See **calendered paper.**

high-pass filter (*Elec. Comm.*). An electric wave filter in which currents with frequencies higher than a nominal cut-off frequency are passed with minimum attenuation, while frequencies below this frequency are highly attenuated.

high-power modulation (*Radio*). A system of modulation which takes place in the final stage of a transmitter, immediately before the high-frequency current enters the antenna. Cf. *low-power modulation.*

high-pressure cylinder (*Eng.*). The cylinder of a compound or multiple expansion steam-engine in which the steam is first expanded.

high-pressure gas systems. These utilise coal-gas under high pressure, in conjunction with air at atmospheric pressure, for industrial heating purposes; used where accurate control of furnace temperature is required.

high-speed circuit-breaker (*Elec. Eng.*). A circuit-breaker in which special devices are used to ensure very rapid operation; used particularly in connexion with d.c. traction systems.

high-speed emulsion (*Photog.*). An emulsion which is specially designed for short exposures and low illumination; e.g. for cinematography and scientific applications.

high-speed engines (*I.C. Engs.*). Said of engines having a piston speed in excess of about 1500 ft. per minute.

high-speed steam-engine (*Eng.*). A vertical steam-engine, generally compound, using a piston valve, or valves, whose moving parts are totally enclosed and pressure-lubricated. See **quick-revolution engine.**

high-speed steel (*Met.*). A hard steel used for metal-cutting tools. It retains its hardness at a low red heat, and hence the tools can be used in lathes, etc. operated at high speeds. It usually contains 12 to 18% tungsten, up to 5% chromium, 0·4 to 0·7% carbon, and small amounts of other elements (vanadium, molybdenum, etc.).

high-stop filter (*Elec. Comm.*). An electric wave filter in which currents of frequencies higher than a nominal cut-off frequency are highly attenuated, while those with frequencies below this are passed with minimum attenuation.

high-strength brass (*Met.*). A type of brass based on the 60 copper-40 zinc composition, to which manganese, iron, and aluminium are added to increase the strength. The names *delta metal* and *manganese bronze* denote varieties in which iron and manganese are the principal additions, but most varieties now contain all three elements.

high-tension (*Elec. Eng.*). See **high-voltage.**

high-tension battery (*Elec. Comm.*). See **B-battery.**

high-tension detonator (*Elec. Eng.*). An old form of detonator in which the charge was fired by means of an electric spark. Cf. *low-tension detonator.*

high-tension ignition (*Elec. Eng.*). An ignition system for internal-combustion engines which employs a spark from a high-tension magneto or an induction coil.

high-tension magneto (*Elec. Eng.*). The usual form of magneto used for producing the high-voltage spark required for the ignition of an internal-combustion engine.

high-test cast-iron (*Met.*). See **high-duty cast-iron.**

high-vacuum tube (or **valve**). See **hard tube.**

high-voltage (*Elec. Eng.*) A term used to denote any voltage above 650 volts; sometimes called HIGH-TENSION.

high-voltage test (*Elec. Eng.*). The application of a voltage greater than working voltage to a machine, transformer, or other piece of electrical apparatus, in order to test the adequacy of the insulation.

high warp (*Textiles*). A large number of threads per inch in the warp of a fabric.

higher critical velocity (*Hyd.*). The critical velocity of change from viscous to eddy flow.

Highfield booster (*Elec. Eng.*). An automatic battery booster consisting of a generator, a motor, and an exciter. Automatic regulation is carried out by balancing the exciter voltage against that of the battery.

Highgate resin (*Min.*). A popular name for fossil gum-resin occurring in the Tertiary London Clay at Highgate in North London.

Highland Boundary Fault (*Geol.*). One of the most important dislocations in the British Isles, extending from the Clyde to Stonehaven and separating the Highlands of Scotland from the Midland Valley. It was initiated in Middle Old Red Sandstone times but movement has taken place along it subsequently.

Hildebrand electrode (*Chem.*). See **hydrogen electrode.**

hile (*Bot.*). See **hilum.**

hill-and-dale recording (*Acous.*). The same as *contour recording* (q.v.).

hill diarrhoea (*Med.*). A peculiar form of diarrhoea occurring, during the hot season, in Europeans living in high altitudes in India, Ceylon, and elsewhere.

hills, origin of (*Geol.*). In the general lowering of ground-level by denudation, rivers work quickly downward in grading themselves to the existing base level. Between the river valleys, higher ground is left upstanding as hills. Again, some areas may be afforded protection by a capping of rock which is resistant to denudation; such areas will form hills as the surrounding ground is more rapidly lowered. Some hills are directly of volcanic origin, formed by the eruption of lava and ash. Even when the volcanic rocks of an area have been completely covered up by the sediments of a later geological period, in the process of re-excavation the igneous rocks tend to form hills on account of their durability, as in the Lake District and North Wales. See also **escarpment.**

Hilton Shales or **Hilton Plant Beds** (*Geol.*). Grey shales occurring above the Penrith Sandstone, in the Permian rocks west of the Pennines, and containing plant remains.

hi'lum or **hile** (*Bot.*). (1) The lateral depression in which the flagella are inserted in reniform zoospores.—(2) The scar left on the testa when the seed separates from its stalk.—(3) A small granule in the centre of a starch grain.

hilum or **hilus** (*Zool.*). A small depression in the surface of an organ, which usually marks the point of entry or exit of blood-vessels, lymphatics, or an efferent duct.

Hinchman Tuff (*Geol.*). A tuff laid down under marine conditions during Corallian times in the Cordilleran geosyncline. It is succeeded by the non-marine Foreman Series.

hind-brain (*Zool.*). In Vertebrates, that part of the brain which is derived from the third or posterior brain-vesicle of the embryo, comprising the cerebellum and the medulla oblongata: the posterior brain-vesicle itself.

hind-gut (*Zool.*). That part of the alimentary canal of an animal which is derived from the posterior ectodermal invagination or proctodaeum of the embryo.

hindered settling (*Mining*) The settling of crushed ore in a suspension of such ore (or of sand) and water.

hinge (*Bot.*). A thin strip in the wall of a guard cell, about which movement can occur.

hinge (*Carp., Join.*). A means of connecting two members, such as a door and its frame, so that the one may swing in relation to the other.

hinge (*Zool.*). The flexible joint between the two valves of the shell in a bivalve Invertebrate, such as a pelecypod Mollusc or a Brachiopod: any similar structure: a joint permitting of movement in one plane only.

hinge-bound door (*Join.*) A door which will not close easily or fully owing to the hinges being too deeply sunk.

hinge ligament (*Zool.*) The tough uncalcified elastic membrane which connects the two valves of a bivalve shell.

hinge line (*Zool.*). The line of junction of the two valves in a bivalve shell.

hinge tooth (*Zool.*). A small sharp projection of the shell near the hinge in bivalves

hingeing post (*Build.*). The post from which a gate is hung. Also called SWINGING POST.

Hinkes-Bird bead (*Join.*). A *deep bead* (q.v.).

hip (*Build.*). The outer angle (more than 180°) formed by the inclined ridge between two intersecting roof slopes. Cf. *valley*.

hip hook (*Build.*). A strap of wrought-iron fixed at the foot of a hip rafter and bent into the form of a scroll, as a support for the hip tiles.

hip iron (*Build.*). A *hip hook* (q.v.).

hip-knob (*Build.*). A finial surmounting the peak of a gable or a hipped roof.

hip rafter (*Carp.*). See **angle rafter.**

hip roll (*Carp.*). A timber of circular section with a vee cut out along its length, so as to adapt it for sitting astride the hip of a roof.

hip roof (*Build.*). A *hipped roof* (q.v.).

hip tile (*Build.*). A form of arris-tile laid across the hip of a roof.

hipped end (*Build.*). The triangular portion of roof covering the sloping end of a hipped roof.

hipped roof (*Build.*). A pitched roof having sloping ends in place of gable ends.

hippocam'pus (*Zool.*). In the Vertebrate brain, a tract of nervous matter running back from the olfactory lobe to the posterior end of the cerebrum.—*adj.* **hippocampal.**

hippocrep'iform (*Bot.*). Shaped like a horseshoe.

hippo-lasso (*Vet.*). An apparatus applied to the legs and over the back of a horse to prevent kicking during an operation.

hippu'ric acid (*Chem.*). Benzoyl-aminoacetic acid, $C_6H_5CO{\cdot}NH{\cdot}CH_2{\cdot}COOH$, rhombic crystals, m.p. 187° C., occurring in the urine of many animals.

Hippurite Limestone (*Geol.*). A massive limestone of Cretaceous age, stretching from S. France into Italy and Greece, and linking up with the Nubian Sandstone of N. Africa; characterised by the presence of *Hippurites*, an aberrant lamellibranch.

hippus (*Med.*). Rhythmical alternate contraction and dilatation of the pupil of the eye.

Hirsch'sprung's disease (*Med.*). A condition occurring in children in which there is great hypertrophy and dilatation of the colon.

hirsute (*Bot.*). Well covered with long but not very stiff hairs.—(*Zool.*) Hairy: having a covering of stiff hair or hair-like feathers.

hirsuties, hėr-sū'shi-ēz (*Med.*). Excessive hairiness.

hirudin, hi-rū'din (*Zool.*). An anticoagulin present in the salivary secretion of the leech.

Hi'rudin'ea (*Zool.*). A class of *Annelida* the members of which are ectoparasitic on a great variety of aquatic and terrestrial animals; they possess anterior and posterior suckers, and most of them lack setae; hermaphrodite animals with median genital openings; the development is direct. Leeches.

His's bundle (*Zool.*) In the Mammalian heart, a bundle of small parallel muscle fibres extending from the wall of the right auricle to the septum between the ventricles: the auriculo-ventricular bundle.

hispid (*Bot.*). Well covered with stiff hairs or bristles.

hiss (*Thermionics*). See **valve hiss.**

hissing arc (*Elec. Eng.*). An arc, between incorrectly adjusted carbon electrodes, which produces a hissing sound, the current being too great for the size of the arc crater. Sometimes called FRYING ARC in U.S.A.

his'tidine (*Chem.*). α-Amino-β-imidazole-propionic acid, a protein derivative belonging to the group of hexone bases.

histio'ma, histo'ma (*Med.*). Any tumour derived from fully developed tissue, such as fibrous tissue, cartilage, muscle, blood-vessels.

his'toblast (*Zool.*). One of the formative cells composing an *imaginal bud* (q.v.).

his'tocyte (*Zool.*). A tissue-cell as opposed to a germ-cell.

his'togen (*Bot.*). A more or less well-defined region within a plant where tissues undergo differentiation.

histogen'esis (*Zool.*). Formation of new tissues.

histohae'matin (*Zool.*). A respiratory pigment.

histol'ogy (*Zool.*). The study of the minute structure of tissues and organs.

histol'ysis, *or* —li'zis (*Bot.*). The breakdown, and sometimes liquefaction, of a cell or tissue.—(*Zool.*) Dissolution and destruction of tissues, as in the metamorphosis of *Endopterygota.*

histo'ma (*Med.*). See **histioma.**

his'tones (*Chem.*). A group of simple proteins ranking in complexity between protamines and albumins. They are strongly basic, and often occur combined with nucleic acid, or with haematin. They are soluble in water but insoluble in dilute ammonia.

historical geology. See under **geology.**

histozo'ic (*Zool.*). Living in the tissues of the body, amongst the cells.

hit-and-miss ventilator (*Build.*). A ventilating device consisting of a slotted plate over which may be moved another slotted plate, so that the openings for access of air may be more or less restricted as required.

hitch (*Mining*). A fault of minor importance, usually not exceeding the thickness of a seam.

hitcher (*Mining*). See **hanger-on.**

H.M.D. (*Hyd.*). An abbrev. for *hydraulic mean depth* (q.v.).

H.N.W. (*Build.*). An abbrev. for *head, nut, and washer.*

Ho (*Chem.*). The symbol for *holmium.*

Hoar Edge Grits (*Geol.*). The basal member of the Caradocian Series in the Caradoc district of S. Shropshire.

hoar-frost (*Meteor.*). A deposit of ice crystals formed on objects, especially during cold clear nights when the dew-point is below freezing-point. The conditions favouring the formation of hoar-frost are similar to those which produce *dew* (q.v.).

hoarding or **hoard** (*Build.*). A close-boarded fence of temporary character erected around a building site on which erection, demolition, or repair work is in hand.

hoary (*Bot.*). Covered with short greyish-white down.

hob or **hobbing cutter** (*Eng.*). A gear-cutting tool resembling a milling cutter or a worm gear, whose thread is interrupted by grooves so as to form cutting faces.

hobbing machine (*Eng*). A machine for cutting teeth on gear blanks, for the production of spur, helical, and worm gears by means of a hobbing cutter or *hob* (q.v.).

hobbles (*Vet.*). An apparatus applied to the legs of a horse for casting.

Höchstädter cable, hersh'stet-er (*Elec. Eng.*). A high-voltage multi-core cable in which a thin metallised sheath is placed over the insulation of each core, in order to control the distribution of electric stress in the dielectric and ensure that it is purely radial.

Höchstädter paper (*Cables*). See **H-paper.**

hock (*Zool.*). The tarsal joint or ankle of a Mammal.

hod (*Build.*). A three-sided container, supported on a long handle, used for carrying bricks and mortar on the site.

hod-boy or **hodder** (*Mining*). See **carting boy.**

Hodge's pessary (*Surg.*). A ring-shaped pessary for correcting backward displacement of the uterus.

Hodgkin's disease (*Med.*). See **lymphadenoma.**

hod'ograph (*Mech.*). A curve used to determine the acceleration of a particle moving with known velocity along a curved path. The hodograph is drawn through the ends of vectors drawn from a point to represent the velocity of the particle at successive instants.

hoe coulter (*Agric. Mach*). A coulter in the form of a small hoe; used on a drill to make a shallow trench for the seed.

Hofmann's reaction (*Chem*). A method of preparing primary amines from the amides of acids by the action of bromine and then of caustic soda. The number of carbon atoms in the chain should not be more than six, and the resulting amine has one carbon atom less than the amide from which it has been prepared.

Hofmeister series, hōf'mīs-ter (*Chem.*). The simple anions and cations arranged in the order of their ability to coagulate solutions of lyophilic colloids.

hog or **hogget** (*Textiles*). The name applied to wool from a year-old sheep which forms the first clipping.

hog-back girder (*Struct.*). A *hogging girder* (q.v.).

hog's back ridge (*Build.*). A purpose-made ridge tile having a rounded top.

hog-frame (*Struct.*). A term applied to some forms of truss which are shaped so as to bulge on the upper side.

hogget (*Textiles*). See **hog.**

hoggin or **hogging** (*Build.*). A mixture of gravel and clay, used for paving garden paths, etc.

hogging girders (*Civ. Eng.*). Girders which bulge along their top edges so as to be convex upwards.

hoist (*Mining*). An engine with a drum, used for winding up a load from a shaft. See **winding engine.**

hoisting. The process of lifting materials by mechanical means.

hoisting machine (*Eng.*). See **crab, differential pulley block, hydraulic lift, jack, jigger, lift, winch.**

hoisting-motor (*Elec. Eng.*). See **lift motor.**

hol-. Prefix. See **holo-.**

Holarc'tic region (*Zool.*). One of the primary faunal regions into which the surface of the globe is divided. It includes North America to the edge of the Mexican plateau, Europe, Asia (except Persia, Afghanistan, India south of the Himalayas, and the Malay peninsula), Africa north of the Sahara, and the Arctic islands.

hol'ard (*Bot.*). The whole of the water contained in the soil.

holaspid'ean (*Zool.*). Said of Birds which possess a single row of large scales covering the posterior surface of the tarsometatarsus.

Holbric (*Build.*). A patent *hollow block* (q.v.).

hol'codont (*Zool.*). Having the teeth inserted in a continuous groove.

hold (*Cinema.*). The retention of an image on the screen longer than is natural; generally obtained by repeated printing of a frame in the negative on the positive.

hold (*Ship Constr.*). A compartment within a ship's hull for the carriage of cargo. Below the lowermost deck it is termed *hold*; above this, *'tween decks*. For identification the holds are numbered from the fore end of the ship.

holdfast (*Bot.*). Any organ other than a root which attaches a plant (especially one of the lower plants) to a substratum.

holdfast (*Join*). A wrought-iron spike with a holed flange parallel to its length, used for fixing joinery.

hold-on coil (*Elec. Eng*). An electromagnet which holds the moving arm of a motor starter, or other similar device, in the 'on' position; if the current in the coil is reduced or interrupted the arm returns to the 'off' position under the action of a spring.

Holden permeability bridge (*Elec. Eng.*). A permeability bridge in which the standard bar and the bar under test carry magnetising coils, and are connected by yokes to form a closed magnetic circuit. The magnetising currents are varied until there is no magnetic leakage between the yokes.

holderbat (*Build.*). A metal collar formed in two half-round parts, capable of being clamped together around a rain-water, soil, or waste pipe, and having a projecting leg on one part for fixing to a wall.

holding time (*Teleph.*). The total time that a trunk line is in use for a call, including operator's time for connecting and subscriber's conversation.

holding-up (*Eng.*). The action of pressing a heavy hammer against the head of a rivet while closing or forming the head on the shank.

hole (*Civ. Eng.*). (1) A bore-hole.—(2) A depression for accommodating a blasting charge.

holing (*Build.*). The operation of piercing slates to receive nails.

hollander or **beating engine** (*Paper*). A trough containing a beating roll with bars set parallel to the axis; used for reducing materials prepared in the breaker to the condition requisite for producing a particular class of paper.

hollands (*Textiles*). A linen fabric of rather coarse texture; used (glazed) principally for window-blinds and linings.

hollow (*Join.*). (In mouldings, grooves, etc.) a concave profile or sinking.

hollows (*Join.*). The general name for planes having a convex sole and cutting iron for forming hollow surfaces. Cf. *rounds*.

hollows (*Pattern-making*). Fillets, or curves of small radius, uniting two surfaces intersecting at an angle; added to a pattern to give strength to the casting and facilitate withdrawal of the pattern from the mould.

hollow bed (*Masonry*). A bed joint in which, owing to the surfaces of the stones not being plane, there is contact only at the outer edges.

hollow blocks (or tiles) (*Build.*). Hollow burnt-clay or terra-cotta blocks (or tiles) much used as a building material for forming floors, or for external or partition walls.

hollow fusee (*Horol.*). A fusee with its top pivot sunk into the body in order to reduce the height of the movement.

hollow mandrel lathes (*Eng.*). The term formerly applied to lathes capable of having bar stock fed through the mandrel for repetition work.

hollow newel (*Build.*). The well-hole of a winding stair.

hollow pinion (*Horol.*). A pinion drilled throughout its length.

hollow plane (*Join.*). See **hollows.**

hollow quoin (*Hyd. Eng.*). A quoin accommodating the heel-post of a lock-gate in a vertical recess.

hollow roll (*Plumb.*). A joint between the edges of two lead sheets on the flat, made by turning up each edge at right-angles to the flat surface, bringing the two turned-up parts together, and shaping them over to form a hollow roll.

hollow tile (*Build.*). See **hollow blocks.**

hollow walls (*Build.*). *Cavity walls* (q.v.).

hollow-ware presser (*Pot.*). A machine for shaping bowls, cups, and other hollow ware.

hollowing plane (*Join.*). See **hollows.**

Hollybush Limestone (*Geol.*). A limestone of marine origin, occurring in the Lower Carboniferous of the Glasgow district.

Hollybush Sandstone (*Geol*.) A glauconitic sandstone of Cambrian age, lying on the basal quartzite of this System in the Malvern Hills. Occupies a comparable stratigraphical position to the Comley Sandstone.

Holmgren's canaliculi (*Zool.*). A system of fine canals which permeate the cytoplasm of the cell-body in some nerve cells.

holmium (*Chem.*). Symbol, Ho. A metallic element, a member of the rare earth group. At. no. 67, at. wt. 163·5. It occurs in euxenite, samarskite, gadolinite, and xenotine, and has not been obtained in the free state.

holo-, hol- (Greek *holos*, whole). A prefix used in the construction of compound terms; e.g. *holochlamydate*, having the mantle edge whole and unnotched.

holoaxial, hō-lō-ax'— (*Crystal.*). A term applied to those classes of crystals characterised by axes of symmetry only; such crystals are not symmetrical about planes of symmetry.

holobasid'ium (*Bot.*). A basidium which is not septate.

holoben'thic (*Zool*.). Passing the whole of the life-cycle in the depths of the sea.

holoblas'tic (*Zool.*). Said of ova which exhibit total cleavage.

ho'lobranch, —brank (*Zool.*). In Fish, a branchial arch carrying two rows of respiratory lamellae or filaments, one on the posterior and one on the anterior face.

holocar'pic (*Bot.*). Having the whole thallus transformed at maturity into a sporangium or a sorus of sporangia.

Holocep'hali (*Zool.*). A subclass of *Selachii*, characterised by the absence of a spiracle and by the possession of only four gill clefts, which are covered by an opercular fold. Chimaeras.

holoceph'alous (*Zool.*). Said of ribs which have a single head.

holocrystalline rocks (*Geol.*). Those igneous rocks in which all the components are crystalline; glass is absent. Cf. *hemicrystalline rocks.*

holoentoblas'tia, hō-lō-ent—(*Zool.*). An abnormal echinoderm larva, produced by cultivation in strong salt solution, in which the ectoderm is reduced to a small button at the animal pole.

hologam'etes (*Zool.*). Gametes as large as the ordinary energids of the species, and not formed by a special act of fission. Cf. *merogametes.*

ho'logam'y (*Bot.*). A fusion between two mature cells, each of which has been completely changed into a gametangium.—(*Zool.*) The condition of having gametes which resemble in size and form the ordinary cells of the species: union of such gametes. Cf. *merogamy.*

hologen'ic (*Zool.*). Said of induction in which the whole soma is primarily affected. Cf. *merogenic.*

holog'nathous (*Zool.*). Having the jaw composed of a single piece.

holohe'dral forms (*Crystal.*). Crystal forms exhibiting the highest possible symmetry in their respective systems.

Holomastigi'na (*Zool.*). An order of *Zoomastigina* the members of which have many flagella; they are capable of ingesting food by amoeboid action at any point of the body.

holomas'tigote (*Zool.*). Having numerous flagella scattered evenly over the body.

Holometab'ola (*Zool.*). See **Endopterygota.**

holometabol'ic (*Zool.*). Showing a complete metamorphosis, as most members of the *Endopterygota*; cf. *heterometabolic*.—*n.* **holometab'olism.**

holoneph'ros (*Zool.*). A continuous excretory organ of Vertebrates, extending the length of the body cavity; from it, according to some authorities, the parts of the Vertebrate kidney have been derived.

holophyt'ic (*Bot., Zool*.). Able to manufacture food from the simplest beginnings by photosynthesis, and neither parasitic nor saprophytic.

holopneu'stic, hō-lop—(*Zool.*). (Of *Insecta*) having all the spiracles open. Cf. *hemipneustic.*

holop'tic (*Zool.*). Having the eyes of the two sides meeting in front.

holorhi'nal (*Zool.*). Having the posterior margin of the nares rounded.

holoschisis, —ski'sis (*Zool*.). See **amitosis.**

ho'losty'ly (*Zool.*) In Vertebrates, a type of jaw suspension in which the PPQ bar fuses with the cranium, the hyoid arch playing no part in the suspension.

Ho'lothuroi'dea (*Zool.*). A class of *Echinodermata* having a sausage-shaped body without arms; the tube feet possess ampullae and may occur on all surfaces; the anus is aboral, the madreporite internal; the skeleton is reduced to small ossicles embedded in the soft integument; free-living mud-feeders. Sea Cucumbers.

Ho'lotricha, —trik'a (*Zool.*). An order of *Ciliata* the members of which have cilia approximately of equal length all over the body; in some forms the cilia are restricted to special regions.

holotrich'ous (*Zool.*) Bearing cilia of uniform length over the whole surface of the body.

ho'lotype (*Zool.*). The original type specimen, from which the description of a new species is established.

holozo'ic (*Zool.*). Devouring other organisms, as most animals.—*n.* **holozoon.**

Holtz machine (*Elec. Eng.*). An early form of influence machine having one fixed and one moving plate; for starting, an initial charge must be given.

ho'macanth (*Zool.*). Having dorsal fin spines which, in the depressed position, cover one another completely. Cf. *heteracanth.*

Home Office fuse (*Elec. Eng.*). A fuse constructed in accordance with the Home Office regulation as regards prevention of accidental contact with live parts and possible dangers should the fuse blow when it is being replaced.

Home Office switch (*Elec. Eng.*). See **earthed switch, shock-proof switch.**

home recorder (*Acous.*). A simplified type of gramophone disc-recorder, in which a record can be cut on a metal, celluloid, or composition surface, and reproduced with simple processing (e.g. rubbing with acetic acid) to harden the surface.

homeopathy. See **homoeopathy.**

ho'meothrausmat'ic (*Geol.*). Said of orbicular rocks in which the composition of the cores of the orbs resembles that of the groundmass in which they are embedded. *Allothrausmatic* is the term applied to those rocks in which the two compositions are different. See also **isothrausmatic.**

ho'meotyp'ic division (*Biol*). See **mitosis.**

homo- (Greek *homos*, same). A prefix used in the construction of compound terms; e g. *homolecithal*, having the yolk evenly distributed.

homoblas'tic (*Zool.*). Showing direct development: originating from similar cells.

homocer'cal (*Zool.*). Said of a type of tail-fin, found in all the adults of the higher Fish, in which the vertebral column bends abruptly upwards and enters the epichordal lobe, which is equal in size to the hypochordal lobe.

homochlamyd'eous (*Bot.*). Having a perianth consisting of members all of the same kind, not distinguishable into sepals and petals.

homoch'romy (*Zool.*). The resemblance of the colour of an animal to the colour of its surroundings.

homocy'clic (*Chem.*). Containing a ring composed entirely of atoms of the same kind.

ho'modont (*Zool.*). Said of teeth which all have the same characteristics.

homodro'mous (*Bot.*). Having the leaves inserted on spirals all running in a uniform direction.

homodynam'ic hybrid (*Gen*). A hybrid having an equal grouping of characters derived from both its parents, and so differing from both in appearance.

ho'modyne reception (*Radio*). A system of reception employing an oscillating valve adjusted to exactly the same frequency as the carrier of the incoming signal.

homoeom'erism (*Zool.*). In metameric animals, the condition of having all the somites alike; cf. *heteromerism.—adj.* **homoeomeric.**

homoeop'athy or **homeopathy.** A system of medicine, founded by Dr Samuel Hahnemann (1755-1843), the basic principle of which is *Similia similibus curentur* (=let likes be cured by likes). By experiment Hahnemann found that (1) a disease is characterised by a definite symptom complex, (2) it can be effectively treated by the drug which produces in a healthy individual the most similar symptom complex, and (3) for a given disease the proven drug is best administered in extreme dilution (expressed by the term *potency*, e.g. thirtieth potency).

homoeo'sis (*Bot.*). A type of variation in which a plant member takes on the characteristics of a member of different nature, as when a petal is changed into a stamen.

homoeosis (*Zool.*). In metameric animals, the assumption by a merome of the characters of the corresponding merome of another somite. Cf. *heterosis.*

homogame'tic (*Zool*). Having all the gametes alike.

ho'mogam'ous (*Bot.*). (1) Having all the flowers in an inflorescence alike, all being either hermaphrodite, staminate, pistillate, or neuter.—(2) Having the anthers and stigmas ripe at the same time.

homog'amy (*Zool.*). Inbreeding, usually due to isolation.

homoge'neous (*Chem.*). Said of a system consisting of only one phase, i.e. a system in which the chemical composition and physical state of any physically small portion are the same as those of any other portion.

homogeneous (*Zool.*). Homogenous.

homogeneous light. The same as *monochromatic light.*

homogen'esis (*Zool.*). The reproductive cycle in which the offspring resemble the parents.

homogeny, —moj'en-i (*Zool.*). Similarity of individuals or of parts, due to common descent.—*adj.* **homogenous.**

ho'moimer'ous (*Bot.*). Said of a lichen thallus in which the algal and fungal components are mixed and not arranged in layers.

homoi'oplas'tic (*Zool*). In experimental zoology, said of transplantation in which transplant and host belong to the same species. Cf. *autoplastic, heteroplastic, xenoplastic.*

homoi'other'mal (*Zool.*). See **warm-blooded.**

homol'ogous (*Bot., Zool.*). Of the same essential nature, and of common descent.

homologous alternation of generations (*Bot*). The doctrine that the sporophyte originated as a modification of the gametophyte, and not as a new phase introduced into the life-cycle.

homologous chromosomes (*Cyt.*). Each pair of chromosomes which associate at synapsis, these being the corresponding members of the two sets derived from the gametes.

homologous series (*Chem*). A series of organic compounds each member of which differs from the next by the insertion of a $-CH_2-$ group in the molecule. Such a series may be represented by a general formula and shows a gradual and regular change of properties with increasing molecular weight.

homologous variation (*Bot*). The occurrence of similar variations in related species.

homol'ogy (*Bot , Zool.*). The state of being homologous.—*n.* **ho'mologue.**

homomor'phic (*Cyt.*). Said of chromosome pairs which have the same form and size.

ho'momorpho'sis (*Zool*). The regeneration of a part in the same form as the original part. Cf. *heteromorphosis.*

homomor'phous (*Bot , Zool.*). Alike in form.

ho'monym (*Zool*) A name which is given to an animal and which is unsuitable because it is already in use to designate some other animal.

homophyl'lous (*Bot.*). Having foliage leaves all of the same kind.

homoplas'ma (*Zool*). In tissue culture, a medium prepared with plasma from another animal of the same species as that from which the tissue was taken. Cf. *autoplasma, heteroplasma.*

homoplas'tic (*Bot*). Of the same structure and manner of development but not descended from a common source.

ho'moplas'ty (*Zool.*). Similarity between two different organs or organisms, due to convergent evolution.

homopo'lar (*Chem.*). Having an equal distribution of charge, as in a covalent bond.

homopolar generator (*Elec. Eng.*). A d.c. generator in which the poles presented to the armature are of the same polarity, so that the e.m.f. generated in the conductors is always in the same direction.

homop'terous (*Zool.*). Having both pairs of wings similar: pertaining to the *Homoptera.*

homosexual'ity (*Psycho-path.*). A general term denoting sexual attraction for the same sex; it may be active and conscious, or repressed and unconscious. Homosexuality is a phase through which everyone passes before maturing to heterosexuality.

homosporan'gic (*Bot.*). Having only one kind of sporangium.

homospo'rous (*Bot.*). Having spores all of the same kind.

ho'mostyled (*Bot.*). Having styles all of the same length.

homosynap'sis (*Cyt.*). Pairing of two similar chromosomes. Cf. *heterosynapsis.*

homotax'is (*Geol.*). A term introduced by Huxley to indicate that two strata occurring in different areas shared the same faunal characters and were therefore of the same age in the geological sense. A faunal element may originate in, and be dispersed from, a certain locality A. In the course of time it reaches locality B, and, eventually, the more distant C. The sediments accumulating in these three localities which contain the remains of this same organism are *homotaxial* but not strictly contemporaneous, as time has been spent in migrating from A to B and from B to C.

homothal'lism (*Bot.*). The condition when a fungal mycelium is able to develop functional sexual organs on its own branches, and does not co-operate with another mycelium of the same species but of different physiological nature.

homother'mous (*Zool.*). See **warm-blooded.**

homotyp'ic (*Zool.*). Conforming to the normal condition. Cf. *heterotypic.*

homotypic division (*Cyt.*). See **mitosis.** Cf. *heterotypic division.*

homozygo'sis (*Gen.*). The condition of having inherited a given genetical factor from both parents, and therefore of producing gametes of only one kind as regards that factor: genetical stability as regards a given factor.—*n.* **homozy'gote.**—*adj* **homozy'gous.**

hone (*Tools*). A smooth stone used, either dry or moistened with oil or water, to give a fine keen edge to a cutting tool.

honestone or **whetstone** (*Geol.*). The term is applied (more frequently in the past than in the present) to fine-textured even-grained indurated sedimentary rocks which may be used as oil-stones for imparting a keen edge to cutting tools. Honestone has been largelv replaced now by emery and Carborundum.

honey. The concentrated secretion deposited as a food store by *Apis mellifera*; results from enzyme action upon nectar; rich in invert sugar.

honeycomb (*Textiles*). Fabric with a cell-like appearance resembling honeycomb, used for towels and quilts. Generally woven from coarse soft yarns in compact structures, known respectively as *ordinary honeycomb, Brighton honeycomb,* and *Grecian honeycomb.*

honeycomb coil (*Radio*). An inductance coil in which the wire is wound in a zig-zag formation around a circular former. The adjacent layers are staggered, so that the wires cross each other obliquely in order to reduce the capacity effects between turns.

honeycomb slating (*Build.*). This is similar to drop-point slating; the tiles, however, have their bottom corners removed.

honeycomb wall (*Build.*). A wall built so as to leave regular spaces, each course consisting usually of bricks laid stretcherwise but not touching at the ends, the course above it being arranged so that bricks cover the gaps in the course below. See **sleeper wall.**

honey dew (*Zool.*). A sweet substance secreted by certain *Aphididae*; believed to be emitted through the anus.

honey guide (*Bot.*). A patch or streak of colour on a petal, different from the general colour, possibly serving to direct insects to the nectaries, or as a guide for their landing on the flower.

honey-leaf (*Bot.*). A nectary with a strong development of the lamina of the petal.

Hong-Kong foot (*Med.*). Ringworm of the foot.

honing (*Eng.*). The process of finishing cylinder bores, etc. to a very high degree of accuracy by the abrasive action of stone slips held in a revolving head.

honing machine (*Eng.*). A machine for honing the bores of engine cylinders, etc. by the action of revolving abrasive stones. See **honing.**

hood (*Build.*). (1) A cowl for a chimney.—(2) A cap for a pile.

hood (*Zool.*). In *Tetrabranchiata*, a thickened anterior region of the body, in contact with the edge of the shell and forming an operculum when the animal withdraws: in the Cobra, an expansible region just behind the head: the head in any animal if it differs markedly in coloration from the rest of the body: a crest-like eminence on the head.—*adj.* **hooded.**

hood, lens (*Photog.*). See **lens hood.**

hood mould (*Build.*). A projecting moulding above a door or window opening.

hoof (*Zool.*). In certain Mammals, a horny proliferation of the epidermis, enclosing the toes.

hook bolt (*Build.*). A galvanised-iron bolt formed out of rod which is bent at one end into a hook serving as the head, and threaded at the other to take a nut; used for fixing corrugated sheeting.

hook-down (*Typog.*). See **hook-up.**

hook joint (*Join.*). A *hooked joint* (q.v).

hook-out blind (*Build*). An outside roller blind fitted with metal side arms and bottom rail so that the blind may be supported away from the window.

hook rebate (*Join.*). The S-shaped rebate formed on the meeting edges of a *hooked joint* (q v).

hook, switch (*Teleph.*). See **switch hook.**

hook-up (*Elec. Comm.*). The same as *lash-up.*

hook-up, hook-down (*Typog.*). The end of a line turned over and bracketed in the line above or below. Often used in setting up hymns or poetry.

hooked disseminule (*Bot*). A fruit, seed, or spore bearing outgrowths in the form of hooks; these become attached to the bodies of animals and assist in dissemination.

hooked joint (*Join.*). A form of joint used between the meeting edges of a door and its case when an airtight or dustproof joint is necessary; the meeting edges on the door have a projection on them fitting into a corresponding recess in the case.

Hooke's joint (*Eng.*). A piece of universal joint consisting of two horseshoe-shaped forks, each pivoted to a separate central member carrying two pins at right-angles. See **universal joint.**

Hooke's law (*Mechs.*). 'In an elastic material, strain is proportional to stress.' The value of the stress at which a material ceases to obey Hooke's law is known as the *elastic limit.* See **elasticity.**

hoop iron. Thin strip-iron used for securing barrels, and also for various purposes in the building trades; e g. as reinforcement in brick walls (see **hoop-iron bond).**

hoop-iron bond (*Build.*). A bond sometimes formed at the junctions of walls not built at the same time; made by using long strips of hoop iron, usually $2 \times \frac{1}{16}$ in., half built into the old wall and half into the new one.

hoop stretchers (*Furs*). Hoops of flexible wood on which large skins are stretched to dry.

Hoopes process (*Met.*). A process for the refining of aluminium electrolytically to a purity of 99·99%. Metal made by the Hall process is alloyed with 33% of copper and made the anode in a non-aqueous electrolytic bath composed of alumina and fluorides of barium, sodium, and aluminium. When current is passed between the hearth and carbon electrodes on top of the bath, aluminium dissolves from the anode alloy and pure metal accumulates at the cathodes.

hooping (*Civ. Eng.*). Reinforcing bars for ferro-concrete, bent either to a circular or helical shape.

hoose (*Vet.*). See **husk.**

Hope sapphire (*Min.*). Synthetic stone having the composition of spinel and a blue colour which turns purple in artificial light. First produced in the attempts to synthesise sapphire.

Hope Shales (*Geol.*). A local name for the Lower Llanvirn Shales containing the zone fossil *Didymograptus bifidus*, in S. Shropshire.

Hope's Nose Limestone (*Geol.*). A massive, well-bedded, and richly fossiliferous limestone, of Middle Devonian age, occurring at Hope's Nose (Point), Torquay.

hopeite, hō′pit (*Min.*). Hydrous phosphate of zinc, occurring very rarely in zinc mines as orthorhombic grey crystals.

Hopkins-Cole reaction (*Chem.*). A reaction given by proteins, consisting in the appearance of a reddish-violet ring when a mixture of a protein solution and a solution of glyoxylic acid is brought into contact with concentrated sulphuric acid.

Hopkinson test (*Elec. Eng.*). A method of testing two similar d.c. machines on full load without requiring a large consumption of power from the supply; one machine fed from the supply drives the other as a generator, which returns power to the supply.

Hoplocar′ida (*Zool.*). A division of *Crustacea* in which there are six abdominal somites, and the anterior thoracic limbs have a two-jointed protopodite, while in the posterior ones it is three-jointed; the carapace leaves at least four thoracic somites distinct; the ocular and antennular somites of the head are free and movable; the protopodite of the antenna is two-jointed.

hopped wort (*Brew.*). See **wort.**

hopper (*Build.*). A draught-preventer at the side of a hopper light.

hopper (*Mining*). A container or bin for broken ore.

hopper barge (*Civ. Eng.*). A vessel divided into compartments fitted with flap doors at the bottom, so that after being loaded by a stationary dredger it can convey the dredged material to a place of deposit.

hopper dredger (*Civ. Eng.*). The type of bucket-ladder or suction dredger which not only dredges material from below but has hopper compartments fitted with flap-doors at the bottom; into these compartments the material is discharged as it is dredged, and from them it is deposited after the vessel has moved to the place of deposit.

hopper light (*Build.*). A window-sash arranged to open inwards about hinges on its lower edge.

hopper window (*Build.*). A hopper light fitted at the sides with hoppers. Also called a HOSPITAL WINDOW.

hops (*Brew.*). The amentaceous fruit *strobiles* of the hop (***Humulus lupulus***), a perennial climbing moraceous herb, which is boiled with wort, in order to impart the bitter flavour characteristic of beer; hops also act as a preservative. See **wort.**

hopsack (or **mat**) **weave** (*Textiles*). A development of the plain weave in which two or more threads of warp and weft interlace alike. Twilled varieties are sometimes produced. Also termed BASKET WEAVE, CELTIC WEAVE.

hor′dein (*Chem.*). A prolamin obtained from barley. It is a typical gliadin.

horde′olum (*Med.*). See **sty.**

horizon (*Astron.*). That great circle, of which the zenith and the nadir are the poles, in which the plane tangent to the earth's surface, considered spherical, at the point where the observer stands, cuts the celestial sphere.

horizon (*Optics*). The more or less coloured visual impression experienced subjectively by blind persons.

horizon (*Surv.*). A plane perpendicular to the direction of gravity at the point of observation.

horizon, artificial (*Astron.*). A device for measuring altitudes with a sextant on occasions when a sea horizon is not available. It consists of a reflecting surface, generally a bath of mercury, in which the image of the sun or a star is substituted for the line of the horizon.

horizon, geological (*Geol.*). The term is synonymous with *stratigraphical level*, and has reference to the systematic position of a stratum on the geological time-scale. Thus if a certain shale is referred to the horizon of ***Didymograptus murchisoni***, it implies that it occurs at a particular level in the Llanvirn Series of the Ordovician System: it will contain the fossil remains of this particular graptolite or, in rocks of different lithology, traces of other creatures living at the same time.

horizon glass (*Surv.*). See **sextant.**

horizontal (*Bot.*). Spreading at a right-angle to a support.

horizontal antenna (*Radio*). An antenna comprising a system of one or more horizontal conductors, radiating or responsive to horizontally polarised waves.

horizontal axis (*Surv.*). See **trunnion axis.**

horizontal circle (*Surv.*). The graduated circular plate used for the measurement of horizontal angles by theodolite.

horizontal component (*Elec. Eng.*). The component of the earth's magnetic field which acts (i.e. exerts a force on a unit pole placed in it) in a horizontal direction.

horizontal draw-out metal-clad switchgear (*Elec. Eng.*). Metal-clad switchgear in which the switch itself can be isolated by removing it along suitable guides in a horizontal direction from the fixed portion of the panel.

horizontal engine (*Eng.*). Any engine in which the cylinder is horizontal; most commonly large low-speed steam- and gas-engines.

horizontal escapement (*Horol.*). See **cylinder escapement.**

horizontal parallax (*Surv.*). The value of the geocentric parallax for a heavenly body in the solar system when the body is on the observer's horizon.

horizontal polarisation (*Radio*). The state of polarisation of an electromagnetic wave when the electric field is directed horizontally.

horizontal sheeting (*Civ. Eng.*). Long horizontal poling boards placed on each side of a trench excavated in bad ground and strutted apart. Short vertical walings are introduced when the trench has been sunk about 3 ft.

hor′mocyst (*Bot.*). A short hormogonium enclosed in a thick stratified sheath.

hor′mogone (*Bot.*). A short length of filament in the ***Myxophyceae***, which breaks free and can grow into a new filament.

hormone (*Physiol.*). An internal secretion produced by the endocrine or ductless glands of the body and exercising a specific stimulatory (Greek *hormōn*, 'urging on,' 'stirring up') physiological action on other organs to which it is carried by the blood. Important hormones are thyroxine, adrenaline corticosterone, insulin, oestradiol.

horn (*Acous.*). An acoustic device for coupling high mechanical impedances, such as sound-reproducing diaphragms, with the low radiation impedance of the outer air.

See **conical—**
corner—
folded—
re-entrant—
tractrix—

horn, horn loudspeaker (*Cinema.*). The term *horn* is colloquially applied to any radiating receiver, whether possessing a horn or not, but strictly a *horn loudspeaker* is one possessing a horn as the radiating element.

horn (*Elec. Eng.*). See **arcing horn, pole horn.**

horn (*Eng.*). Any projecting part, such as the two jaws of a horn-plate carrying a locomotive axle-box.

horn (*Zool.*). Keratin: one of the pointed or branched hard projections borne by the head in many Mammals; any conical or cylindrical projection of the head resembling a horn: in some Birds, a tuft of feathers on the head: in some Gastropods, a tentacle; in some Fish, a spine.—*adjs.* **horned, horny.**

horns (*Join.*). The ends of the head in a door or window frame when these project beyond the outer surfaces of the posts.

horn arrester (*Elec. Eng.*). A lightning arrester consisting of a horn gap which arcs over on the occurrence of a lightning surge, but which rapidly extinguishes the arc on account of the special shape of the electrodes.

horn balance (*Aero.*). An extension on a control surface, at the outermost end. Arranged to act in opposition to the main surface, partially to balance it and reduce the effort necessary to manipulate it.

horn-break fuse (*Elec. Eng.*). A fuse fitted with arcing horns to assist in the rapid extinction of any arc which may be formed.

horn centre (*Drawing*). A small transparent disc of celluloid or horn, used by draughtsmen to provide a substance into which the point of the compasses may be placed, in lieu of the paper beneath, at points which are to be much used as centres for describing arcs.

horn gap (*Elec. Eng.*). A spark gap of gradually increasing length, such that an arc struck across it gets longer and finally extinguishes itself.

horn gate (*Foundry*). Horn-shaped in-gates or sprues, radiating from the bottom of a runner, which supply several small moulds made in the same moulding box. See **in-gate.**

horn lead (*Min.*). The translation of the French term *plomb corné*, sometimes applied to the mineral *phosgenite* (q.v.).

hornsilver (*Min.*). See **cerargyrite.**

hornstone (*Geol.*). An old name for rocks differing widely in composition and origin, characterised by their flinty, compact appearance. The term *hornfels* is still used for fine-textured contact-altered argillaceous rocks.

hornblende (*Min.*). An important rock-forming mineral of complex composition, essentially silicate of calcium, magnesium, and iron, with smaller amounts of potash, soda, and hydroxyl; crystallises in the monoclinic system; occurs as black crystals or grains in many different types of igneous and metamorphic rocks, including hornblende-granite, syenite, diorite, andesite, etc., and hornblende-schist and amphibolite.

hornblende-gneiss (*Geol.*). A coarse-grained metamorphic rock, containing hornblende as the dominant coloured constituent, together with feldspar and quartz, the texture being that typical of the gneisses. Differs from hornblende-schist in grain size and texture only.

hornblende-granite (*Geol.*). A type of granite, usually adamellite or granodiorite, containing hornblende as an essential constituent; with decreasing quartz, grades through tonalite into normal diorite.

hornblende-schist (*Geol.*). A type of green schist, formed from basic igneous rocks by regional metamorphism, and consisting essentially of sodic plagioclase, hornblende, and sphene, frequently with magnetite and epidote. See also **glaucophane.**

Horner's syndrome (*Med.*). The combination of small pupil, sunken eye, and drooping of upper eyelid, due to paralysis of the sympathetic nerve in the region of the neck.

horological (*Bot.*). Said of a flower which opens and shuts at a definite time of day.

horology. The science of time-measurement, or of the construction of timepieces.

horrip'ila'tion (*Med.*). Erection of the hairs on the skin, giving rise to the sensation known as *goose flesh.*

horse (*Carp.*). (1) One of the *strings* (q.v.) supporting the treads and risers of a stair.—(2) A trestle for supporting a board or timber while it is being sawn.

horse (*Mining*). A mass of barren or country rock occurring in a lode or reef.

horse (*Plast.*). The wooden backing to a zinc mould used in forming cornices.

horse (*Plumb.*). A wooden finial which is to be covered with lead.

horse-flesh ore (*Min.*). A name applied by Cornish miners to the mineral *bornite* (q.v.) on account of its reddish-brown colour.

horse gear (*Agric. Mach., etc.*). See **bullock gear.**

horse latitudes (*Meteor.*). See under **trade winds.**

horse mower (*Agric. Mach.*). This consists of a cutter bar, four or five feet long, hinged at one end to a two-wheeled frame, and projecting from the side of the machine. The cutting is done by a scissors-like action, the power being transmitted from the landwheels of the machine.

horse path (*Hyd. Eng.*). A canal towing-path.

horse-power (*Eng.*). The engineering unit of power, equal to a rate of working 33,000 foot pounds per minute, 23·56 C.H.U. per minute, or 42·42 B.Th.U. per minute.

See **brake— indicated— cheval.**

horse pox (*Vet.*). A contagious filterable-virus infection of equines characterised by a papulo-vesicular eruption of the skin and mucous membranes.

horseshoe curve (*Surv.*). A curve whose arc subtends an angle of more than 180° at the centre, so that the intersection point lies on the same side of the curve as the centre.

horseshoe drain. A drain pipe, having a U-shaped section, used for agricultural drainage purposes.

horseshoe filament (*Illum.*). An electric lamp filament in the shape of a single half-turn.

horseshoe magnet (*Elec. Eng.*). A permanent or electromagnet bent into a shape approximately similar to that of a horseshoe.

horse-sickness, African (*Vet.*). A filterable-virus infection of equines of South Africa.

horsing-up (*Plast.*). A term applied to the building-up of the mould used in running cornices, etc.

horst faults (*Geol.*). Two parallel normal faults hading outwards and throwing in opposite directions, the resulting structure being termed a *horst.*

hose (*Tubing*). Flexible tubing made from canvas, leather, rubber, or other material suitable for the conveyance of a liquid; for steam, flexible hose is made of metal.

hose coupling (*Tubing*). Metal joints for connecting lengths of hose; the coupling generally used is a special form of thread, such as a V-thread, or a clip type in which the halves are secured by spring catches.

hose-proof (*Elec. Eng.*). Said of a type of enclosure for electrical apparatus so constructed as to exclude water when the apparatus is washed down with a hose.

hosiery. A term applied formerly to knitted articles intended for footwear, but now applied to all sorts of knitted fabrics.

hospital bus-bars (*Elec. Eng.*). A set of bus-bars provided in a power- or sub-station for temporary or emergency purposes.

hospital door (*Join.*). A door faced all over on both sides with plywood so as to present flush surfaces. Also called a FLUSH-FACED DOOR.

hospital switch (*Elec. Eng.*). (1) A switch used on tramway or railway controllers to cut a faulty motor out of circuit.—(2) Any switch for changing a circuit over to an emergency supply in case of failure of the main supply.

hospital window (*Build.*). See **hopper window.**

host (*Biol.*). An organism which, temporarily or permanently, supports another organism (parasite) at its own expense.

hot (*Elec.*). Said of a conductor which is charged to a dangerously high potential. Colloquial.

hot-air engine (*Eng.*) An internal-combustion engine in which the working fluid, air, is alternately heated and cooled by a furnace and regenerator; impracticable except for small powers.

hot-air heaters (*Build.*). Heaters employed in the pipeless system of heating buildings; they supply warm air through gratings in the floor or openings in the walls, thereby encouraging a natural circulation.

hot-air seasoning (*Timber*) See **desiccation.**

hot-blast stoves (*Met.*). Large stoves, filled with a brick chequerwork, used for pre-heating the air blown into the blast-furnace.

hot-cathode discharge lamp (*Illum.*). A discharge lamp employing a heated cathode to increase its efficiency, improve the starting, and reduce the voltage drop across the tube.

hot-cathode rectifier (*Thermionics*). A rectifier which includes a cathode heated by some agent other than the rectified current, from which electrons are thermionically emitted. The term usually refers to a mercury-vapour rectifier with separately heated cathode, in contradistinction to the pool type.

hot-ground pulp (*Paper*). Mechanical wood pulp prepared rapidly from the raw wood, using the minimum of water.

hot plate (*Elec. Eng.*). An electrically heated plate maintained at a moderate temperature so that dishes placed upon it may be kept warm; not intended for boiling purposes. Cf. *boiling plate.*

hot-pressed (*Paper*). Paper finished by glazing with hot plates.

hot pressing (*Acous.*). A water-wave effect produced on the surface of a gramophone record by exposure to the air before it is sufficiently cool.

hot-rolled (*Paper*). Paper glazed by means of steam-heated cylinders.

hot saw (*Eng.*). A metal-cutting circular saw used to cut off the ends of heated steel forgings, billets, etc., in a steelwork.

hot-short or **red-short** (*Met.*). Said of metals that tend to be brittle at temperatures at which hot-working operations are performed, and which can only be worked with difficulty, if at all.—*ns.* **hot-shortness, red-shortness.**

hot spot (*Cables*). A location in a cable at which thermal generation is high. Thermal instability at the point usually occurs.

hot spot (*I.C. Engs.*). Part of the wall surface of the induction manifold of a petrol-engine on which the mixture impinges; heated by exhaust gases to assist vaporisation and distribution.

hot top (*Met.*). Refractory insulation at the top of an ingot mould, the function of which is to maintain a reservoir of molten metal at the top of the ingot until the main part has completely solidified. See **ingot** and **ingot mould.**

hot well (*Eng.*). The tank or pipes into which the condensate from a steam-engine or turbine condenser is pumped, and from which it is returned by the feed pump to the boiler.

hot-wire (*Elec. Eng.*). Said of an electrical indicating instrument whose operation depends on the thermal expansion of, or change in resistance of, a wire or strip when it carries a current. See **hot-wire ammeter,** etc.; also **Cardew voltmeter.**

hot-wire ammeter (*Elec. Eng.*). An ammeter operating on the hot-wire principle (see **hot-wire**); of use chiefly for very high frequencies.

hot-wire anemometer (*Meteor.*). An instrument which measures wind velocities by using their cooling effect on a wire carrying an electric current, the resistance of the wire being used as an indication of the velocity.

hot-wire arc lamp (*Illum.*). A form of clutch arc lamp in which the clutch controlling the movement of the carbons is operated by the expansion of a wire, according to the current passing through it.

hot-wire detector (*Radio*). A fine wire which is heated by the passage of high-frequency currents, producing a change in its d.c. resistance.

hot-wire magnifier, Heurtley (*Teleg.*). See **Heurtley hot-wire magnifier.**

hot-wire microphone (*Acous.*). A microphone detector which depends on the cooling of a heated wire by the passage of a sound-wave. Used in the neck of a Helmholtz resonator for detecting acoustic impulses from distant gunfire.

hot-wire oscillograph (*Elec. Eng.*). An oscillograph in which a moving mirror is supported by an arrangement of wires carrying the current to be measured, and which is deflected as a result of the thermal expansion of these wires.

hot-wire voltmeter (*Elec. Eng.*). A voltmeter operating on the *hot-wire* (q.v.) principle. See **Cardew voltmeter.**

hot-wire wattmeter (*Elec. Eng.*). A wattmeter in which the deflection is indicated by means of a mirror mounted on an arrangement of fine wires carrying currents proportional to the main current in the circuit and to the voltage, and which is deflected as a result of the thermal expansion of the wires.

hot-working (*Met.*). The process of shaping metals by rolling, extrusion, forging, etc. at elevated temperatures. The hot-working range varies from metal to metal, but it is, in general, a range in which recrystallisation proceeds concurrently with the working, so that no strain-hardening occurs.

hour angle (*Astron.*). The angle, generally measured in hours, minutes, and seconds of time, which the declination circle of a heavenly body makes with the observer's meridian at the celestial pole; it is measured positively westwards from the meridian from 0 to 24 hours.

hour circle (*Astron.*). (1) As applied to the celestial sphere, a synonym for *declination circle.*—(2) As applied to an instrument, the graduated circle of an equatorial telescope which reads sidereal time and right ascension.

hour-counter (*Elec. Eng.*). See **time-meter.**

hour-glass piston (*I.C. Engs.*). A petrol-engine piston provided with a waisted central portion to reduce the area in contact with the cylinder wall and so reduce friction.

hour-glass stomach (*Med.*). Constriction of the middle part of the stomach, due either to spasm of stomach muscle or to the formation of scar tissue in connexion with a gastric ulcer, the constriction in the latter case being permanent.

hour-meter (*Elec. Eng.*). See **time-meter.**

hour rack (*Horol.*). The toothed quadrant in a striking clock, one tooth of which is picked up by the gathering pallet for each hour struck.

hour wheel (*Horol.*). The wheel in the motion work which carries the hour hand.

house (*Build.*). A building which is intended for human habitation or activities.

house (*Zool.*). In *Protozoa*, a loose-fitting shell with a wide mouth: in *Larvacea*, the test, which is loose-fitting and not attached to the animal.

houseboat. A boat which serves as a dwelling.

housebreaker. One employed in the demolition of buildings.

housemaid's knee (*Med.*). Inflammation of the bursa in front of the patella of the knee.

house service meter (*Elec. Eng.*). An integrating meter for measuring the electrical energy consumption of a domestic installation.

house style (*Typog.*). See **style of the house.**

housed joint (*Furn., etc.*). A fitted joint, such as a tenon in its mortise.

housed string (*Carp.*). A string which has its upper and lower edges parallel to the slope of the stair, and houses, in grooves specially cut in the inner side, the ends of the steps. Also called a CLOSE STRING.

housing (*Carp., Join.*). A method of jointing two timbers in which the whole of the end of one is fitted into a corresponding blind mortise cut in the other.

ho'ven (*Vet.*). See **bloating.**

Howard protective system (*Elec. Eng.*). A form of earth-leakage protection sometimes applied to a.c. machines and equipment. It consists of a current transformer connected between the frame of the machine and earth; if a current flows through the transformer a relay is operated, which opens the main circuit-breaker.

howitzer (*Artillery*) An artillery weapon employed against targets under cover. By decreasing the propellent charge and increasing the elevation, a steeper angle of descent for the shell can be obtained.

howlback (*Acous.*). The audible oscillation arising from acoustic or mechanical feed-back from a loudspeaker to a microphone in the same reproducing system.

howler (*Teleph.*). A device which uses acoustic feed-back between a telephone transmitter and a telephone receiver to maintain a continuous oscillation, and so provides suitable currents for testing telephonic apparatus.

H.P. Abbrev. for *horse-power.*

H.S.L.-type cable (*Cables*). One in which each core has H-paper wrapping and separate lead sheath.

hub (*Plumb.*). See **socket.**—(*Surv.*) See **change point.**

hub, airscrew (*Aero.*). See **airscrew hub.**

hübnerite or **huebnerite,** hüb'ner-it (*Min.*). Tungstate of manganese, one of the end members of a variable series (the other being *ferberite,* tungstate of iron), commonly known as wolfram or wolframite. A product of pneumatolysis; associated with such minerals as scheelite, cassiterite, etc.

huckaback (*Textiles*). A linen or cotton cloth with a spongy structure, used for towels and glass-cloths. Sometimes made from a combination of linen and cotton.

Hudson River Bluestone (or **Flagstone**) (*Geol.*). Well-bedded flags of non-marine deltaic origin occurring in the Hamilton division of the Middle Devonian of N. America.

hue. A particular shade or tinge of a colour; the attribute of colour which differentiates it from grey of equal brilliance.

hue sensibility (*Optics*). The ability of the eye to distinguish small differences of colour.

huebnerite (*Min.*). See **hübnerite.**

Hughes printing telegraph (*Teleg.*). An obsolescent system of transmitting and printing telegraph signals; it uses a piano keyboard to prepare contacts, which are scanned by a rotating switch-arm.

hull (*Ship Constr.*). A term used in its widest sense to signify the ship itself exclusive of masts, funnels, and top hamper. In a more restricted sense, it means the shell of the ship. It is also used to distinguish between ship and engines.

hullite (*Min.*). See **chlorophaeite.**

hum (*Acous.*). The singing note emitted from a sound reproducer, due to alternating components in the power supplies to the amplifiers, or to insufficient smoothing of rectified supplies. See also **sprocket hum.**

hum-bucking coil (*Acous.*). In an electrodynamic receiver, a coil carrying partially smoothed rectified current, arranged to neutralise the currents in the operating coil which would give rise to hum in addition to the required reproduction.

hum note (*Acous.*). The pitch of the note of the sound from a bell which persists after the strike note has died away.

human fat (*Chem.*). Fat occurring in the human body has the following characteristics: m.p. 17·5° C., iodine value 57-66, saponification number 193-199. See also **fats*.**

hu'meral (*Zool.*). (In Vertebrates) pertaining to the region of the shoulder: (in *Insecta*) pertaining to the anterior basal angle of the wing: in *Chelonia,* one of the horny plates of the plastron.

hu'merus (*Zool.*). The bone supporting the proximal region of the fore limb in land Vertebrates.—*adj.* **humeral.**

hu'mic acids (*Chem.*). Complex organic acids occurring in the soil and in bituminous substances formed by the decomposition of dead vegetable matter.

hu'micole, hu'mico'lous (*Bot.*). Growing on soil or on humus.

humid'ifier. An apparatus for maintaining desired humidity conditions in the air supplied to a building.

humidity (*Meteor.*). The *absolute humidity* (q.v.) of the air—that is, the quantity of water vapour present per unit volume; it is of less importance than the *relative humidity* (q.v.).

hu'mifica'tion (*Bot.*). The transformation of organic material into humus.

hu'mite (*Geol.*). A term applied by R. Potonié in 1924 to coals derived from humic material.

hu'moralism, hu'morism (*Med.*). The doctrine that diseases arise from some change in the humours or fluids of the body.

humour, humor (*Zool.*). A fluid; as the *aqueous humour* of the eye.

hump (*Bot.*). A tiny outgrowth on the side of a growing point, the rudiment of a future lateral member.

hump speed (*Aero.*). The speed, on the water, at which the water resistance of the floats or boat body of a seaplane or flying-boat is a maximum. After this is past the craft begins to be partially air-borne.

Humphrey gas pump (*Eng.*). A large water-pump in which periodic gas explosions are made to act directly on an oscillating column of water, thereby effecting a pumping cycle; used in water-works.

hu'mus (*Bot.*). Organic matter present in the soil, and so far decomposed that it has lost all signs of its original structure. It is colloidal, and dark-brown.

humus plant (*Bot.*). A flowering plant, often poorly provided with chlorophyll, which grows in deep humus, with its roots forming a mycorrhiza with a fungus.

hung (*Join.*). Said of a door or window-sash when it is hinged to its frame so as to be capable of being opened or shut within it.

hung sash (*Join.*). A *hanging sash* (q.v.).

Hungarian cat's-eye (*Min.*). An inferior greenish cat's-eye obtained in the Fichtelgebirge in Bavaria. No such stone occurs in Hungary.

hunter (*Horol.*). A watch case with a hinged metal cover over the dial.

hunter's moon (*Astron.*). The name given in popular language to the full moon which occurs next after the harvest moon, and to which the same phenomena apply in a lesser degree.

hunting (*Elec. Eng.*). A phenomenon which sometimes takes place when two or more synchronous machines are operated in parallel; it consists of a periodic variation of their speed above and below normal, together with corresponding variations in current flow between the machines.—(*Eng.*) A periodic variation in the speed of a governed engine, due to governor inertia, lag, or friction in the mechanism.—(*Aero.*) A similar oscillation arising in an aircraft during flight.

hunting selector (*Auto. Teleph.*). A selector of the uniselector or single-motion type which either hunts for a subscriber's line, when the subscriber desires connexions, or hunts for a free outlet before permitting the subscriber to dial. The hunting may be effected by self-interruption, or by taking timed impulses from a source in the exchange.

hunting tooth (*Eng.*). An extra tooth added to a gear-wheel in order that its teeth shall not be an integral multiple of those in the pinion.

Huntington's chorea (*Med.*). Hereditary *chorea* (q.v.) occurring in adults; associated with progressive mental deterioration.

Huppert's test (*Chem.*). A test for the presence of bile based upon precipitation of the bile acids with calcium hydroxide or chloride and ammonium carbonate, with a subsequent colour test of the acidified precipitate in acetic acid and in chloroform solution.

Huronian System (*Geol.*). A major division of the Pre-Cambrian rocks of the Canadian Shield, typically exposed on the northern shores of Lake Huron and following the Timiskaming Series unconformably. The Huronian comprises two Series, the Bruce below, followed unconformably by the Cobalt.

hurricane (*Meteor.*). A wind of force 12 on the Beaufort scale—i.e. a velocity of 75 miles per hour. The name was originally restricted to cyclones occurring in the West Indies, in which the wind often attains a velocity of 130 miles per hour and causes great havoc.

hurricane deck (*Ship Constr.*). A term, not normally in use, for a superstructure deck Sometimes termed FLYING DECK. It is independent of the ship from the point of view of strength.

hurter (*Build.*). A cast-iron, timber, stone, or concrete block, which is so placed as to protect a quoin from damage from passing vehicles.

Hurter and Driffield (H. and D.) curve (*Photog.*). The characteristic curve exhibiting the properties of a photographic emulsion, from which can be deduced the inertia of the film and its speed. See also **gamma.**

hushing or **hush** (*Mining*). A washing away of the surface soil to lay bare the rock formation for prospecting.

husk (*Vet.*). Parasitic bronchitis; lungworm disease. Bronchitis or bronchopneumonia of cattle or sheep due to infection of the bronchi by nematode worms.

hutch (*Mining*). (1) A small train or wagon.—(2) A basket for coal.—(3) A compartment of a jig used for washing ores.—(4) The concentrate which passes through a jig screen.

hutch-mender (*Mining*). A repairer of tubs or hutches broken in a mine.

Hutchinson's teeth (*Med.*). Narrowing and notching of the permanent incisor teeth, occurring in congenital syphilis.

Huxley's layer (*Zool.*). The middle layer of the inner root sheath of a hair, composed of polyhedral nucleated cells containing eleidin.

Huxley's membra'na preformati'va (*Zool.*). A fine homogeneous membrane supposed to exist between the ameloblasts and the forming enamel, during the development of the teeth in Mammals.

Huyghens' eyepiece, hī'genz (*Light*). A combination of two plano-convex lenses placed with their plane sides towards the observer, at a distance apart equal to half the sum of their focal lengths, which are in the ratio of three to one, the shorter focus lens being nearer the observer. Huyghens' eyepiece is often used in microscopes, but is not suited for use with cross-wires or an eyepiece scale.

hyacinth (*Min.*). See **jacinth.**

Hyades, hī'ad-ēz (*Astron.*). The name of a star cluster, of the 'open' type, situated in the constellation Taurus; visible to the naked eye.

hyal-, hyalo- (Greek *hyalos*, clear stone, glass) A prefix used in the construction of compound terms; e g. *hyalite* (q.v.).

hy'aline (*Zool.*). Clear, transparent: without fibres or granules; e.g. *hyaline cartilage.*

hy'alite (*Min.*). A colourless transparent variety of *opal* (q.v.), occurring as globular concretions and crusts. Also called MÜLLER'S GLASS.

hy'alogen'esis (*Cyt.*). The secretory process in a cell.

hyal'ogens (*Cyt.*). The particles formed by the secretory process in a cell.

hyalog'raphy (*Photog.*). A process for transferring photographic images to glass; effected generally by applying a bichromate print with a bitumen resist to the glass and subsequently etching.

hy'aloid (*Zool.*). Clear, transparent; as the *hyaloid membrane* of the eye which envelops the vitreous humour.

hyal'ophane (*Min.*). One of the rarer feldspars, consisting of the components of orthoclase and celsian (baryta-feldspar) in combination, and intermediate in composition between these two minerals. It occurs in colourless crystals in dolomite in manganese mines in Sweden, apparently as a contact mineral.

hyalopilit'ic texture (*Geol.*). A texture of andesitic volcanic rocks in which the groundmass consists of small microlites of feldspar embedded in glass.

hy'aloplasm (*Cyt.*). Clear non-granular protoplasm.

hyalop'terous (*Zool.*). Having transparent wings.

hyalospo'rous (*Bot.*). Having hyaline one-celled spores.

hy'brid (*Gen.*). An organism which is the offspring of a union between two different races, species, or genera.—*v.* **hybridise.**—*n.* **hybridisation.**

hybrid coil (*Elec. Comm.*). A coil, comprising four equal windings and an additional winding, used for the separation of incoming and outgoing currents in a two-wire repeater, so that feed-back and consequent oscillation is inhibited.

hybrid rocks (*Geol.*). Rocks which originate by interaction between a body of magma and its wall-rock or roof-rock, which may be another igneous rock, or sedimentary, or metamorphic. See **contaminated rocks.**

hybrid vigour (*Bot.*). The notable increase in strength of growth often exhibited by a hybrid.

hy'dathode (*Bot.*). A water pore, usually at the end of a vein of a leaf, from which liquid water is exuded.

hy'datid cyst (*Zool.*). A sac or vesicle containing a clear watery fluid and encysted, immature larval Cestodes.

hy'datid'iform mole (*Med.*). An affection of the chorionic villi (vascular tufts of the foetal part of the placenta) whereby they become greatly enlarged, the whole of the enlarged villi resembling a bunch of grapes.

hydr-, hydro- (Greek *hydōr*, gen. *hydatos*, water). A prefix used in the construction of compound terms relating to water; e.g. *hydraemia* (q.v.).

Hydra (*Zool.*). A type of solitary non-metagenetic Coelenterate occurring commonly in fresh water; its name is used in the construction of various terms. See **hydroid, Hydrozoa.**

hydracids (*Chem.*). A term formerly applied to acids which do not contain oxygen.

hydracryl'ic acid (*Chem.*). β-Hydroxypropionic acid, $CH_2(OH)\cdot CH_2\cdot COOH$.

hydrae'mia, hydre'mia (*Med.*). A watery state of the blood.

hy'dragogue (*Med.*). Having the property of removing water: a purgative drug which produces watery evacuations.

Hydralime (*Build.*). A proprietary brand of slaked lime.

hydram'nios (*Med.*). Excess of fluid in the amniotic sac of the foetus.

hy'drant. A form of connexion incorporated in a water main to enable a hose to be attached and a continuous supply of water to be obtained for the purpose of extinguishing fires or washing down streets.

hy'dranth (*Zool.*). In *Hydrozoa*, a nutritive polyp of a hydroid colony.

hydrar'gillite (*Min.*). See **gibbsite.**

hydrar'gyrism (*Med.*). The state of being poisoned by mercury and its compounds.

hydrarthro'sis (*Med.*). Swelling of the joint, due to the accumulation in it of clear fluid.

hy'drates (*Chem.*). Salts which contain water of crystallisation. See also **water of crystallisation.**

hydrate of lime, hydrated lime (*Build.*). See **caustic lime.**

hydration (*Geol.*). The addition of water to anhydrous minerals, the water being of atmospheric or magmatic origin. Thus anhydrite, by hydration, is converted into gypsum; and feldspars into zeolites.

hydration (*Paper*). The process of converting raw material into pulp by prolonged beating, thus incorporating water into the fibres. This process is used for the production of hard or transparent paper. See **rattle.**

hy'dratu'ba (*Zool.*). In *Scyphozoa*, the unsegmented polyp stage. Cf. *scyphistoma.*

hydraulics. The science relating to the flow of fluids.

hydraulic accumulator (*Eng.*). A device for storing water under high pressure in order to equalise the load on a pump supply machinery whose demand is intermittent. It consists of a hydraulic ram loaded with a heavy weight.

hydraulic belt (*Eng.*). An endless belt of porous material driven at high speed, with its lower end under water, thus acting in the same way as a *chain pump* (q.v.).

hydraulic brake (*Eng.*). (1) An absorption dynamometer. See **Froude brake.**—(2) A motor-vehicle brake in which the shoes are expanded by small pistons operated by oil-pressure and supplied by a pedal-operated master cylinder and piston.

hydraulic cartridge (*Civ. Eng.*). An apparatus for splitting rock, mass concrete, etc.; it consists of a long cylindrical body which has numerous pistons projecting from one side and moving in a direction at right-angles to the body (under hydraulic pressure from within the body), which is placed in a hole drilled to take it.

hydraulic cement (*Build.*, *Civ. Eng.*). A cement which will harden under water.

hydraulic dredger (*Civ. Eng.*). A *suction dredger* (q.v.).

hydraulic engineering. That branch of engineering chiefly concerned in the design and production of hydraulic machinery, pumping plants, pipe-lines, etc.

hydraulic glue. A glue which is able partially to resist the action of moisture.

hydraulic gradient (*Hyd.*). In respect of any system of fluid flow, the *hydraulic gradient* is the imaginary curve the ordinate to which at any point is the sum of the position and pressure heads at the point.

hydraulic jack (*Eng.*). A *jack* (q.v.) in which the lifting head is carried on a plunger working in a cylinder, to which oil or water is supplied under pressure from a small hand-operated pump.

hydraulic leather. A flexible leather prepared by being heavily treated, after tanning, with cod oil and then stoved; while hot, it may be shaped to requirements.

hydraulic lift (*Eng.*). A lift or elevator operated either directly by a long vertical ram, working in a cylinder to which water is admitted under pressure, or by a shorter ram through ropes. See **jigger.**

hydraulic lime (*Build.*, *Civ. Eng.*). A lime which will harden under water.

hydraulic main (*Gas*). A large horizontal steel pipe, into which the individual retorts of a gas-works discharge the products of distillation through dip pipes which dip into a layer of liquor maintained at constant level. It acts as a reservoir for tar, and provides a liquid seal between the retorts and the remainder of the plant.

hydraulic mean depth (*Hyd.*). The ratio between the sectional area of flow through a pipe or channel and the wetted perimeter.

hydraulic mining or **hydraulicking** (*Mining*). The operation of breaking down and working a bank of gravel or alluvial deposit by means of jets of water under high pressure.

hydraulic mortar (*Build.*, *Civ. Eng.*). A mortar which will harden under water.

hydraulic motor (*Eng.*). A multi-cylinder reciprocating engine, generally of radial type, driven by water under pressure.

hydraulic packing (*Eng.*). L- or U-section rings providing a self-tightening packing under fluid pressure; used on rams and piston-rods of hydraulic machines. See **hat leather packing, U-leather.**

hydraulic press (*Eng.*). A type of *hydrostatic press* (q.v.) for exerting large forces (for steel pressing, baling, etc.). Consists of a ram or piston, working in a cylinder to which high-pressure water is admitted, and carrying a head or platform between which and a stationary table the work is pressed.

hydraulic ram (*Eng.*). (1) The plunger of a hydraulic press.—(2) A device whereby the pressure head produced when a moving column of water is brought to rest is caused to deliver some of the water under pressure.

hydraulic riveter (*Eng.*). A machine for closing rivets by hydraulic power; it consists of a small ram which acts on the rivet either directly or through hinged jaws.

hydraulic squeezer (*Moulding*). See **squeezer.**

hydraulic stowing (*Mining.*). The filling of worked-out portions of a mine with water-borne waste material. The water drains off and is pumped to surface.

hydraulic test (*Eng.*). A test for pressure-tightness and strength applied to boilers, etc.; water is slowly pumped into the vessel until the internal pressure exceeds the working pressure by a specified margin.

hydraulicity (*Build.*, *Civ. Eng.*). The property of a lime, cement, or mortar which enables it to set under water or in situations where access of air is not possible.

hydraulicking (*Mining*). See **hydraulic mining.**

hy'drazides (*Chem.*). The mono-acyl derivatives of hydrazine.

hy'drazine hydrate (*Chem.*). $N_2H_4{\cdot}H_2O$. Diacid base. Strongly basic and forms salts with the acids. Attacks glass, rubber, and cork. Very powerful reducing agent.

hydrazines (*Chem.*). Derivatives of hydrazine, $H_2N{\cdot}NH_2$, a fuming, strongly basic liquid, b.p. 113°, in which one or more of the hydrogen atoms have been replaced by alkyl radicals. Hydrazine is a powerful reducing agent.

hydraz'o compounds (*Chem.*). Symmetric derivatives of hydrazine, colourless, crystalline, neutral substances, obtained by the reduction of *azo-compounds* (q.v.).

hydrazo'ates (*Chem.*). Salts of hydrazoic acid. See also **azides.**

hydrazo'ic acid (*Chem.*). N_3H. The aqueous solution is a strong monobasic acid and forms azides with many common metals.

hy'drazones (*Chem.*). The condensation products of aldehydes and ketones with hydrazine, water being eliminated from the two molecules.

hydremia (*Med.*). See **hydraemia.**

Hy'drida (*Zool.*). See **Eleutheroblastea.**

hy'drides (*Chem.*). Compounds formed by the union of hydrogen with other elements. Those of the non-metals are generally liquids or gases, certain of which dissolve in water (oxygen hydride) to form acid (e.g. hydrogen chloride) or alkaline (e g. ammonia) solutions. The alkali and alkaline earth hydrides are crystalline, salt-like compounds, in which hydrogen behaves as the electronegative element.

hydriod'ic acid (*Chem*). HI. An aqueous solution of hydrogen iodide. Forms salts called *iodides* (q.v.), many with characteristic colours. Easily oxidised.

hydrion (*Chem.*). A synonym for *hydrogen ion.*

hydro-. Prefix. See **hydr-.**

hydro'a (*Med.*). A skin disease in which groups of vesicles appear on reddened patches in the skin, associated with intense itching.

hydrobo'rons (*Chem.*). Six hydroborons have been identified—B_2H_6, B_4H_{10}, B_5H_9, B_5H_{11}, B_6H_{10}, and $B_{10}H_{14}$. The simplest hydroboron, B_2H_6, is sometimes referred to as *boroethane.*

hydrobro'mic acid (*Chem*). HBr. An aqueous solution of hydrogen bromide.

hydrocal'umite (*Min.*). A mnemonic name applied by C. E. Tilley to a new mineral occurring in the metamorphic aureole of the dolerite at Scawt Hill, Antrim; it consists of hydrated calcium aluminate, and has the composition $4CaO{\cdot}Al_2O_3{\cdot}12H_2O$.

hydrocarbons (*Chem.*). A general term for organic compounds which contain only carbon and hydrogen in the molecule. They are divided into saturated and unsaturated hydrocarbons, aliphatic (paraffin or fatty) and aromatic (benzene) hydrocarbons.

hydrocarbons, native (*Geol.*). A series of compounds of hydrogen and carbon formed by the decomposition of plant and animal remains, including the several types of coal, mineral oil, petroleum, paraffin, the fossil resins, and the solid bitumens occurring in rocks. Many which have been allotted specific names are actually mixtures. By the loss of the more volatile constituents as natural gas, the liquid hydrocarbons are gradually converted into the solid bitumens such as ozokerite. See also **asphalt, bitumen, coal, mineral oils, tarpools.**

hydrocar'pic (*Bot.*). Said of aquatic plants which ripen their fruits under water, after pollination has occurred in the air above the water.

hydrocaul'is (*Zool.*). See **coenosarc.**

hy'drocele, —sēl (*Med.*). A swelling in the scrotum due to an effusion of fluid into the sac (tunica vaginalis) which invests the testis.

hydro-celluloses (*Chem.*). Products obtained from cellulose by treatment with cold concentrated acids. They still retain the fibrous structure of cellulose, but are less hygroscopic and have reducing properties.

hydroceph'alis (*Zool.*). The distal part of a polyp, with the mouth and tentacles.

hydrocephalus (*Med.*). An abnormal accumulation of cerebrospinal fluid in the cavities (ventricles) of the brain, distending them and stretching and thinning the brain tissue over them.

hydroceram'ic (*Pot.*). Porous unglazed pottery, used for filters and for cooling vessels.

hydroce'russite (*Min.*). A rare colourless anhydrous basic carbonate of lead occurring as an encrustation on native lead or on galena.

hydrochlor'ic acid (*Chem.*). HCl. Muriatic acid; spirits of salts. An aqueous solution of hydrogen chloride gas. Dissolves many metals forming chlorides and liberating hydrogen. Used extensively in industry for numerous purposes; e g. for the manufacture of chlorine.

hydrochor'ic (*Bot.*). Dispersed by water.

hydroclad'ia (*Zool.*). The hydranth-bearing branches of the main stem of the coenosarc in *Plumularidae.*

hy'drocoel, —sēl (*Zool.*). In *Echinodermata,* the *water-vascular system* (q.v.).

Hy'drocoralli'nae (*Zool.*). An order of *Hydrozoa,* in which the hydroid phase is predominant and colonial and develops polymorphic forms; the medusae are rudimentary and attached; there is a massive calcareous skeleton.

hydrocyan'ic acid (*Chem*). An aqueous solution of *hydrogen cyanide* (q.v.). Dilute solution called *prussic acid.* Monobasic. Forms cyanides. Very poisonous.

hy'drocyst (*Zool.*). See **dactylozooid.**

hydrodynamic governor (*Eng.*). A governor comprising a small centrifugal pump whose pressure head, varying with speed, is caused to act on a piston connected to the regulating valve. See **servomotor.**

hydroe'cium (*Zool.*). In some *Siphonophora,* a cavity at the upper end of the colony, into which the contractile stem with its cormidia can be retracted.

hydro-electric generating set (*Elec. Eng.*). An electric generator driven by a water turbine.

hydro-electric generating station (*Elec. Eng.*). An electric generating station in which the generators are driven by water turbines.

hydro-electric power station (*Elec. Eng.*). A *hydro-electric generating station* (q.v.).

hydro-extractor (*Eng.*). See **whizzer.**

hydrofluor'ic acid (*Chem.*). Aqueous solution of hydrogen fluoride. Dissolves many metals, with evolution of hydrogen. Etches glass owing to combination with the silica of the glass to form silicon fluoride. Hence it is stored in wax or gutta-percha vessels. Produced by the action of concentrated sulphuric acid on fluorides. See **etching test.**

hy'droflu'osilicic acid, —is'ik (*Chem.*). H_2SiF_6. Formed when silicon tetrafluoride is passed into water. With bases it forms fluosilicates. Easily decomposed into silicon tetrafluoride and hydrogen fluoride.

hy'drogel (*Chem.*). A gel the liquid constituent of which is water.

hy'drogen (*Chem.*). Symbol, H. The lightest element known, having both non-metallic and metallic properties. At. no. 1, at. wt. 1·008, valency 1. It is a colourless, odourless, diatomic gas, water being formed when it is burnt; m.p. −259·14° C., b.p. −252·7° C., density 0·08988 gm. per litre at N.T.P. It is widely distributed as water, in many minerals, as petroleum, and in living matter. Hydrogen is manufactured by heating water with iron at 100 atm. pressure, from water gas, and by the electrolysis of caustic soda solution. Hydrogen is used in the oxy-hydrogen blowpipe, for filling balloons, in the Haber process for the fixation of nitrogen, and in the hardening of fats (e.g. in the manufacture of margarine).

hydrogen bromide (*Chem.*). HBr. Hydrogen bromide gas can be made by direct combination of the two elements, particularly in the presence of a catalyst. Closely resembles hydrogen chloride, and forms bromides in the same way as hydrogen chloride forms chlorides.

hydrogen chloride (*Chem.*). HCl. A colourless gas which dissolves in water to form hydrochloric acid. Produced by the action of dilute sulphuric acid on chlorides.

hydrogen cooling (*Elec. Eng.*). A method of cooling rotating electric machines; the machine is totally enclosed and runs in an atmosphere of hydrogen.

hydrogen cyanide (*Chem.*). HCN. Deadly poisonous liquid, b.p. 26°, m p. $-13{\cdot}4°$ C., dielectric constant 95, ionisation constant $1{\cdot}3 \times 10^{-9}$ at 18° C. Dissolves in water to form hydrocyanic acid and prussic acid.

hydrogen dioxide (*Chem.*). See **hydrogen peroxide.**

hydrogen electrode (*Chem.*). A system consisting of a platinised platinum electrode, around which hydrogen is circulated, half immersed in an aqueous solution. It is largely used for the determination of *p*H-values.

hydrogen fluoride (*Chem*). HF. A liquid which fumes strongly in air. Dissolves in water to form hydrofluoric acid. A dangerous and difficult material to manipulate. Produced by the action of sulphuric acid on fluorides.

hydrogen iodide (*Chem.*). HI. A heavy colourless gas, formed by the direct combination of hydrogen and iodine; fumes strongly in air. Usually made by the decomposition of phosphorus iodide by the action of water. M.p. $-50°$, b.p. $-35°$ C. See **hydriodic acid.**

hydrogen ion (*Chem.*). An atom of hydrogen carrying a positive charge, i e a proton; in aqueous solution, hydrogen ions are hydrated, H_3O^+.

hydrogen ion concentration (*Chem.*). A measure of the acidity of a solution. In a neutral aqueous solution, it has a value of 10^{-7}. See ***p*H-value.**

hydrogen oxide (*Chem.*). Water.

hydrogen peroxide (*Chem.*). H_2O_2. A viscous liquid with strong oxidising properties. Powerful bleaching agent; and, as its decomposition products are water and oxygen, it is much used as a disinfectant. The strength of an aqueous solution is represented commercially by the number of volumes of oxygen which 100 c.c. of the solution will give on decomposition.

hydrogen phosphide (*Chem.*). PH_3. See **phosphine** (1).

hydrogen scale (*Chem.*). A system of relative values of electrode potentials, based on that for hydrogen gas, at a pressure of one atmosphere, against hydrogen ions at unit *activity* (2), as zero.

hydrogen sulphide (*Chem.*). H_2S. May be prepared by direct combination of the two elements or by the action of dilute hydrochloric or sulphuric acid on iron sulphide. It is readily decomposed. Reacts with bases forming sulphides and with some metals to produce metal sulphides and liberate hydrogen. Poisonous.

hydrogenation, hi-droj'— (*Chem.*). Chemical reactions involving addition of hydrogen, present as a gas, to a substance, in the presence of a catalyst. Important processes are:—the hydrogenation of coal, which is effected at high pressures (200 atm.) and high temperatures, resulting in the formation of liquid products; the hydrogenation of fats and oils; the hydrogenation of naphthalene and other substances.

Hydrogenite (*Chem.*). Commercial name for aluminium amalgam.

hydrographical surveying (*Surv.*). A branch of surveying dealing with bodies of water at the coast-line and in harbours, estuaries, and rivers.

hydrog'raphy. The study, determination, and publication of the conditions of navigable water, ocean or inland—viz. charting of coasts and rivers, supplying particulars of depth, bottom, tides, currents, etc.

hydrohae'matite or **turgite** (*Min.*). $Fe_2O_3{\cdot}nH_2O$. Probably a mixture of the two minerals *haematite* and *goethite*, the former being in excess. It is fibrous and red in the mass, with an orange tint when powdered.

hydroid (*Zool.*). Resembling Hydra.

hydroid person (*Zool.*). An individual of the asexual stage in *Coelenterata* which show alternation of generations.

hydrol (*Chem.*). A name that has been given to the simple water molecule H_2O.

hy'drolith (*Chem.*). Calcium hydride, CaH_2.

hydrol'ysis (*Chem.*). (1) The formation of an acid and a base from a salt by interaction with water; it is caused by the ionic dissociation of water.—(2) The decomposition of organic compounds by interaction with water, either in the cold or on heating, alone or in the presence of acids or alkalies; e.g. esters form alcohols and acids; disaccharoses on boiling with dilute acids yield monosaccharoses.

hydromag'nesite (*Min.*). Magnesium hydroxide and carbonate, occurring as whitish amorphous masses, or rarely as monoclinic crystals in serpentines. An alteration product of the magnesium silicate minerals in the ultramafic rocks.

Hydromedu'sae (*Zool.*). See **Hydrozoa.**

hydrome'lia (*Med.*). Dilatation of the central canal of the spinal cord.

hydrome'teor (*Meteor.*). Any weather phenomenon which depends on the moisture content of the atmosphere.

hydrom'eter (*Phys.*, *etc*). An instrument by which the specific gravity or density of a liquid may be determined by measuring the length of the stem of the hydrometer immersed, when it floats in the liquid with its stem vertical.

See **Hicks—** **Nicholson—** **Sikes—**

Hy'drone (*Chem.*). An alloy of sodium with lead, which generates hydrogen when in contact with water.

hydrone theory (*Chem.*). The theory that liquid water consists largely of associated molecules, H_4O_2, H_6O_3, etc.

hydronephro'sis (*Med.*). Distension of the kidney with urine held up as a result of obstruction elsewhere in the urinary tract.

hydroni'tric acid (*Chem.*). See **hydrazoic acid.**

hydropericar'dium (*Med.*). Collection of clear fluid in the pericardial sac.

hydroperitone'um (*Med.*). Ascites. Accumulation of clear fluid in the abdominal cavity.

hy'drophane (*Min.*). A variety of cachalong opal which, when dry, is almost opaque, with a pearly lustre, but becomes transparent when soaked with water, as implied in the name.

hydrophilic colloid (*Chem.*). A colloid which readily forms a solution in water.

hy'drophi'lous (*Bot.*). (1) Living in water.—(2) Pollinated by water.

hydropho'bia (*Med.*). *Rabies* (q.v.) in man.

hydrophobic colloid (*Chem.*). A colloid which forms a solution in water only with difficulty.

hydrophyl'lium (*Zool.*). In some *Siphonophora*, a leaf-like bract, believed to represent a modified medusoid, which hangs down over the cormidia and protects them from impact.

hy'drophyte (*Bot.*). A plant which lives on the surface of, or submerged in, water.

hydrophy'ton (*Zool.*). In a hydroid colony, the coenosarc together with the hydrorhiza.

hydroplane. (1) A motor-boat which skims the surface of the water.—(2) A planing surface which enables a submarine to submerge.

hy'dropore (*Zool.*). In the dipleurula larva of Echinoderms, the opening by which the right hydrocoel communicates with the exterior.

hy'dropote (*Bot.*). A cell, or a group of cells, occurring in a leaf submerged in water, easily permeable to water and dissolved salts.

hy'drops follic'uli (*Med.*). An ovarian cyst formed by the accumulation of clear fluid in a Graafian follicle.

hydroquinone' (*Chem.*). *Quinol* (q.v.).

hydrorhi'zae (*Zool.*). Root-like processes of the coenosarc by which some hydrozoan colonies are attached to their substratum.

hydrorrhoe'a (or **hydrorrhe'a**) **tu'bae intermit'tens** (*Med.*). The condition in which fluid from a hydrosalpinx intermittently escapes into the uterus and thence through the vagina.

hydrosal'pinx (*Med.*). Accumulation of clear fluid in a Fallopian tube which has become shut off as a result of inflammation.

hy'drosere (*Bot.*). A sere beginning in a wet habitat.

hydrosil'icons (*Chem.*). See **silicon hydrides.**

hy'drosol (*Chem.*). A colloidal solution in water.

hy'drosome (*Zool.*). A colony of hydranths.

hydrosphere. The water on the surface of the earth.

hydrostatics (*Phys.*). The mechanics of fluids at rest. See **hydraulics.**

hydrostat'ic joint (*Plumb.*). A joint of the spigot-and-socket type, formed in a large water-main by forcing sheet-lead into the socket under hydraulic pressure.

hydrostatic level (*Surv.*). A *water-level* (q.v.).

hydrostatic press (*Hyd.*). A hydrostatic machine for magnifying force, consisting of two connected cylinders (one much larger than the other) fitted with water-tight pistons enclosing water. A small force applied through a linkage to the piston in the smaller cylinder sets up a pressure in the water, and this pressure acting over the much greater area of the other piston gives rise to the magnified force. Also called BRAMAH'S PRESS.

hydrostatic test (*San. Eng.*). A test to find leakage in a drain. The latter is plugged at the outlet end and filled with water; any fall of level of the water indicates leakage.

hydrostatic valve (*Eng.*). Apparatus which tends to maintain an underwater body (e.g. a moving torpedo) at the desired depth.

hydrosul'phides (*Chem.*). Formed by the action of hydrogen sulphide on some of the hydroxides.

hydrosulphuric acid (*Chem.*). An aqueous solution of hydrogen sulphide.

hydrosulphurous acid (*Chem.*). See **hyposulphurous acid** (1).

hydrotax'is (*Biol.*). Response or reaction of an organism to the stimulus of moisture.—*adj.* **hydrotactic.**

hydrothe'ca (*Zool.*). The cup-like expansion of the perisarc which surrounds a hydranth.

hydrother'mal metamorphism (*Geol.*). That kind of change in the mineral composition and texture of a rock which was effected by water under conditions involving high temperatures.

hydrotho'rax (*Med.*). Clear fluid in the pleural cavity formed by transudation from blood-vessels.

hydrotro'pism (*Biol.*). See **hydrotaxis.**

hy'drovane (*Aero.*). A small planing surface, usually of aerofoil form, fitted to a land plane to help to preserve longitudinal stability when alighting on water in an emergency.

hydrox'ides (*Chem.*). Compounds of the basic oxides with water. The term *hydroxide* (a contraction of *hydrated oxide*) is applied to compounds that contain the $-OH$ or hydroxyl group.

hydrox'yl (*Chem.*). $-OH$. A monovalent group consisting of a hydrogen atom and an oxygen atom linked together.

hydroxyl'amine (*Chem.*). Hydroxy-ammonia, NH_2OH, rather explosive, deliquescent, colourless crystals, which may be obtained by the reduction of nitric oxide, ethyl nitrate, or nitric acid under suitable conditions; m.p. 33°, b.p. 58° at 22 mm. Its aqueous solution is alkaline and its salts are powerful reducing agents.

hydroxylamines (*Chem.*). Derivatives of hydroxylamine, NH_2OH, in which the hydrogen has been exchanged for alkyl radicals.

hydrozinc'ite or **zinc bloom** (*Min.*). A monoclinic hydroxide and carbonate of zinc, in some specimens partly replaced by copper. It is an uncommon ore, occurring with smithsonite in the oxide zone of some lodes.

Hydrozo'a (*Zool.*). A class of *Cnidaria*, in which alternation of generations typically occurs; the hydroid phase is usually colonial, and gives rise to the medusoid phase by budding; the polyp is without gastral ridges and filaments; the medusa has a velum and nerve-ring; the gonads are of ectodermal origin. Zoophytes.

hy'etograph (*Meteor.*). An instrument which collects, measures, and records the fall of rain (Greek *hyetos*, rain).

hygro- (Greek *hygros*, wet, moist). A prefix used in the construction of compound terms; e.g. *hygrometer* (q.v.).

hy'grodeik, —dīk (*Meteor.*). A psychrometer in a frame, with indexes for the rapid estimation of the relative humidity.

hygrom'eter (*Meteor.*). An instrument for measuring the amount of moisture in the atmosphere.

hygromet'ric movement (*Bot.*). Curvature or other change of form, commonly in dead plant material, caused by the entry of moisture into the material.

hygrom'etry (*Meteor.*). The measurement of the hygrometric state, or *relative humidity* (q.v.), of the atmosphere

hygropet'rical fauna (*Ecol.*). Animals living in the thin film of water surrounding stones not truly submerged.

hy'gropha'nous (*Bot.*). Darkening in colour following the entry of water into or between the cells; having a soaked appearance.

hy'grophile, hy'grophi'lous (*Bot.*). Living where moisture is abundant.

hy'grophobe (*Bot.*). Living best in dry situations, where moisture is scanty.

hygroscop'ic (*Bot.*). (1) Absorbing water readily, and showing a change of form as a result.—(2) Moving as a result of the loss, or of the intake, of water.

hygroscopic (*Chem.*). Tending to absorb moisture; in the case of solids, without liquefaction.

hygroscopic (or **imbibition**) **mechanism** (*Bot.*). A means of bringing about movement in plant material, depending upon the uneven swelling or shrinking following intake or loss of moisture from cell walls which are not of the same thickness throughout. Dead cell walls most often show this behaviour.

hygrotro'pism (*Zool.*). Reaction or response of an animal to the stimulus of atmospheric water vapour.

hyloph'agous (*Zool.*). Wood-eating.

hy'lophyte (*Bot.*). A plant characteristic of damp woods.

hylot'omous (*Zool.*). Wood-cutting.

hy'men (*Zool.*). In Mammals, a fold of mucous membrane which partly occludes the opening of the vagina in young forms.

hyme'nial layer (*Bot.*). See **hymenium.**

hymeni'tis (*Med.*). Inflammation of the hymen.

hyme'nium (*Bot.*). A layer of asci and paraphyses, more or less parallel with one another, in the fructification of an ascomycete: the layer of basidia, paraphyses, and sometimes of cystidia, covering the gills or lining the pores of an autobasidiomycete.

Hymenomyce'tes (*Bot.*). A large subdivision of the *Autobasidiomycetes*, with about 12,000 species, in which the hymenium is exposed to the air from an early stage in its development; the toadstools belong here.

hyme'nophore (*Bot.*). Any fungal structure which bears a hymenium.

Hymenop'tera (*Zool.*). An order of *Endopterygota* having usually two almost equal pairs of transparent wings, which are frequently connected during flight by a series of hooks on the hind-wing; mandibles always occur but the mouth-parts are often suctorial; the adults are usually of diurnal habit; the larvae show great variation of form and habit. Saw-flies, Gall-flies, Ichneumons, Ants, Bees, and Wasps.

hymenot'omy (*Surg.*). Surgical cutting of the hymen.

hyo- (Greek *hyoeidēs*, U-shaped). A prefix used (with reference to the shape of the hyoid apparatus in higher Vertebrates) in Zoology in the construction of compound terms; e.g. *hyoepiglottic*, pertaining to the hyoid and the epiglottis.

hy'oid (*Zool.*). In higher Vertebrates, a skeletal apparatus lying at the base of the tongue, derived from the hyoid arch of the embryo.

hyoid arch (*Zool.*). The second pair of visceral arches in lower Vertebrates and in the embryos of higher Vertebrates, lying between the mandibular arch and the first branchial arch.

hyoid segment (*Zool.*). Third segment of the head of a Vertebrate embryo, lying behind the mandibular somite and in front of the first metotic somite.

hyoideus, hī-oi'— (*Zool.*). In Vertebrates, the post-trematic branch of the facial (seventh cranial) nerve, which runs to the mucosa of the mouth and to the muscles of the hyoid region, and, in aquatic forms, to the neuromast organs of the region below and behind the orbit.

hy'omandib'ular (*Zool.*). In lower Vertebrates, a cartilage forming part of the jaw suspension: a bone formed by the ossification of part of this cartilage: more generally, pertaining to the hyoid and the mandible.

hyoplas'tron (*Zool*). In *Chelonia*, one of the plates composing the plastron, lying between the hypoplastron and the entoplastron.

hyoscine, hī'o-sēn (*Chem.*). *Scopolamine* (q.v.).

hyoscy'amine (*Chem.*). $C_{17}H_{23}O_3N$, a coca base alkaloid, optically active, stereoisomeric with atropine, forming colourless needles or plates, m.p. 109° C.; it can be prepared from *Datura stramonium.*

hyosta'pes (*Zool.*). See **extracolumella.**

hyoster'num (*Zool.*). See **hyoplastron.**

hyosty'ly (*Zool.*). A type of jaw suspension, found in some Fish, in which the upper jaw is attached to the cranium anteriorly by a ligament, posteriorly by the hyomandibular.—*adj.* **hyostylic.**

hy'pabys'sal rocks (*Geol.*). Literally, igneous rocks that are not quite abyssal (deep-seated), occurring as minor intrusions. One of the three main divisions (based on mode of occurrence) into which igneous rocks are grouped in some schemes of classification. A more precise classification is based on grain size.

hypae'thral (*Arch.*). Said of a building without a roof, or with an opening in its roof.

hypalge'sia (*Med.*). Diminished sensitivity to pain.

hypan'thium (*Bot.*). The flat or concave receptacle of a perigynous flower.

hypantho'dium (*Bot.*). The deeply hollowed receptacle of the fig, which provides the edible material.

hy'papoph'ysis (*Zool.*). An additional articular facet on a vertebra, as in Birds: a strong ventral process of the anterior vertebral centra of some Snakes, which represents the fused haemapophyses.

hyparte'rial (*Zool.*). Placed beneath an artery.

hypax'ial (*Zool.*). Below the axis, especially below the vertebral column, therefore ventral; as the lower of two blocks into which the myotomes of fish embryos become divided.

hyper- (Greek *hyper*, above). A prefix used in the construction of compound terms; e.g. *hyperphalangy*, having above the normal number of digits.

hyperacid'ity (*Med.*). Excessive acidity, especially of the stomach juices.

hyperacu'sis (*Med.*). Abnormally increased acuity of hearing.

hyperadren'alism (*Med.*). Abnormally increased activity of the adrenal gland.

hyperae'mia, hypere'mia (*Med.*). Congestion, or excess of blood, in a part of the body.

hyperaesthe'sia, hyperesthesia (*Med.*). Heightened sensitivity of the body to sensory stimuli.

hyperalge'sia (*Med.*). Heightened sensitivity to painful stimuli.

hyperapoph'ysis (*Zool.*). A dorsolateral posterior process of a vertebra.

hyperbi'lirubinae'mia, hyperbilirubinemia (*Med.*). Excess of the bile pigment *bilirubin* in the blood.

hyper'bola (*Maths.*). A conic section which may be defined as the locus of a point which moves so that the difference between its distances from two fixed points (the *foci*) is constant. The equation to a hyperbola is of the form:

$$\frac{x^2}{a^2}-\frac{y^2}{b^2}=1.$$

hyperbol'ic functions (*Maths.*). A set of six functions, analogous to the trigonometrical functions sin, cos, tan, etc. The hyperbolic sine is written *sinh* and may be defined by:

$$sinh\ x=\frac{e^x-e^{-x}}{2};$$

similarly: $$cosh\ x=\frac{e^x+e^{-x}}{2}.$$

The other four functions, *tanh*, *cosech*, *sech* and *cotanh* may be derived from sinh and cosh by the same rules as apply to the trigonometrical forms. In electrical communication they are useful in calculations involving the transmission of currents along wires and in filters.

hyperbolic (or **natural**) **logarithms** (*Maths.*). Logarithms to the base *e* (q.v.). To convert from natural logarithms to those to the base 10, or vice versa, the following rules are used:

$$\log_e x = 0{\cdot}434294 \log_{10} x,$$
$$\log_{10} x = 2{\cdot}302585 \log_e x.$$

hypercalcae'mia, hypercalce'mia (*Med.*). Rise in the calcium content of the blood beyond normal limits.

hypercap'nia (*Med.*). Excess of carbon dioxide in the lungs or the blood.

hyperchimae'ra (*Bot.*). A chimaera in which the components are intimately mixed.

hyperchlorhy'dria (*Med*). Increased secretion of hydrochloric acid by the acid-secreting cells of the stomach.

hypercholes'terolae'mia, hypercholes'terole'mia (*Med.*). Increase of cholesterol in the blood beyond normal limits.

hyperchromato'sis (*Cyt.*). Excess of chromatin in a cell.

hypercryalge'sia (*Med.*). Abnormally increased sensitivity to cold.

hypercye'sis (*Med.*). Superfoetation.

hyperdac'tyly (*Zool.*). The condition of having more than the normal number (five) of rows of phalanges.

hyperdip'loidy (*Cyt.*). The condition where the full chromosome complement is present, as well as a portion of one chromosome which has been translocated.

hyperem'esis (*Med.*). Excessive vomiting.

hyperemesis gravida'rum (*Med.*). Continued vomiting during pregnancy.

hyperemia (*Med.*). See **hyperaemia.**

hyperesthesia (*Med.*). See **hyperaesthesia.**

hyper-eutectoid steel (*Met*). Steel with more carbon than is contained in pearlite. In carbon steels a hyper-eutectoid steel is one containing more than 0 9% carbon.

hyperfo'cal distance (*Photog.*). The distance in front of a lens beyond which all objects are substantially in focus, as defined by the focus of a point source of light not exceeding the *circle of confusion* (q.v.).

hyperfrequency waves. Electromagnetic waves whose wavelength is of the order of twenty centimetres or less.

hypergame'sis (*Zool*). Utilisation by a female Insect, during oviposition, of surplus spermatozoa as nutriment.

hyperglycae'mia, hyperglyce'mia (*Med*). An increase in the sugar content of the blood beyond normal limits. See also **diabetes mellitus.**

hyperhidro'sis, hyperidro'sis (*Med.*). Excessive perspiration.

hyperin'sulinism (*Med.*). A condition in which the blood sugar falls below normal limits, due to oversecretion of insulin by the pancreas; usually associated with pancreatic tumours, which provide the excess insulin.

hy'perite (*Geol.*). An obsolete term, introduced by Elie de Beaumont, for gabbroic igneous rocks containing both ortho- and clino-pyroxene. Today hyperite would be called *hypersthene-gabbro* if the ortho-pyroxene is subordinate to clinopyroxene, and *norite* (q.v.) if the former is in excess.

hyperkerato'sis (*Med.*). Overgrowth of the horny layer of the skin.

hyperkine'sia (*Med.*). Excessive motility of a person, or of muscles.

hypermetamor'phic (*Zool.*). (Of *Insecta*) passing through two or more sharply distinct larval instars.—*n.* **hypermetamorphosis.**

hypermetro'pia (*Med.*). Long-sightedness. An abnormal condition of the eyes in which parallel rays of light come to a focus behind the retina instead of on it, the eyes being at rest.

hypermnesia, hī-per-nē'si-a (*Med.*). Exceptional power of memory.

hypernephro'ma (*Med.*). Grawitz's tumour. A tumour occurring in the kidney, thought by Grawitz to arise from adrenal tissue displaced there.

Hypernik (*Met.*). An iron-nickel magnetic alloy of Permalloy type containing 50% of each metal; it is melted and annealed in hydrogen, which increases the initial and maximum permeabilities.

hypero'pia (*Med.*). See **hypermetropia.**

hyperpar'asitism (*Zool.*). The condition of being parasitic on a parasite.—*n.* **hyperparasite.**

hyperphal'angy (*Zool.*). The condition of having more than the normal number of phalanges, as in Whales.

hyperpharynge'al (*Zool.*). Above the pharynx.

hyperpiesia, —pi-ē'zi-a (*Med.*). The condition in which the blood-pressure is persistently raised above normal, in the absence of chronic nephritis.

hyperpiesis, —pī-ē'zis (*Med.*). Blood-pressure raised above the normal.

hyperpitu'itarism (*Med.*). Overactivity of the pituitary gland: any condition due to overactivity of the pituitary gland; e.g. acromegaly, gigantism.

hyperpla'sia (*Med., Zool.*). Excessive multiplication of cells of the body: an overgrowth of tissue due to increase in the number of tissue elements: generally, overgrowth.—*adj.* **hyperplastic.**

hy'perploid (*Cyt.*). Having a chromosome number slightly exceeding an exact multiple of the haploid number.

hyperpnoe'a, hyperpnea, —pnē'a (*Med.*). Increase in the depth and frequency of respiration: overventilation of the lungs.

hyperpyrex'ia (*Med.*). A degree of body temperature greatly above normal (e.g. 105° F. or more). See **heat-stroke.**

hypersensitisation (*Photog.*). Treatment of a sensitive emulsion (e.g. by certain dyes or by ammonia) in such a way as to increase its speed.

hy'persthene, —sthēn (*Min.*). An important rock-forming silicate of magnesium and iron, $(Mg,Fe)SiO_3$, crystallising in the orthorhombic system; an essential constituent of norite, hypersthene-pyroxenite, hypersthenite, hypersthene-andesite, and charnockite.

hypersthene-gabbro (*Geol.*). See **hyperite.**

hypersthen'ic (*Med.*). Having increased strength or tonicity.—HYPERSTHENIC GASTRIC DIATHESIS, the constitutional disposition in which the stomach is short and overactive in secretion and movement.

hypersthe'nite (*Geol*). A coarse-grained igneous rock, consisting essentially of but one component, hypersthene, together with small quantities of accessory minerals.

hyperstomat'ic (*Bot*). Having stomata on the upper surface of the leaf.

hyperte'lorism (*Med.*). The condition of excessive width between two organs or parts.

hyper'tely (*Zool*). The progressive attainment of disproportionate size, either by a part or by an individual.

hypertension (*Med.*). Increase in tension: a blood-pressure higher than normal.

hyperthy'roidism (*Med.*). The condition which accompanies oversecretion of the thyroid gland. See also **Basedow's disease.**

hyperthy'rum (*Arch.*). The part of the architrave above a door or window opening.

hyperton'ic (*Chem*). Having a higher osmotic pressure than a standard, e.g. that of blood, or of the sap of cells which are being tested for their osmotic properties.

hypertricho'sis, hypertrichi'asis (*Med.*). Abnormal overgrowth of hair; excessive hairiness.

hypertroph'ic pylor'ic steno'sis (*Med.*). A disorder in children in which there is hypertrophy of the muscle in the pyloric region of the stomach, leading to obstruction to the passage of food into the small intestine and vomiting.

hyper'trophy (*Bot., Zool*). An abnormal, usually pathological, enlargement of a plant cell or of a plant member, or of an animal cell or an animal member.

hypervitamino'sis (*Med.*). The condition arising when too much of any vitamin (especially vitamin D) has been taken by a person.

hy'pha (*Bot.*). (1) One of the simple or branched filaments of the thallus (mycelium) of a fungus. —(2) A simple or branched filamentous outgrowth from internal cells in the thallus of a large seaweed.

hyphal body (*Bot*). A thin-walled multinucleate segment of a hypha, serving for propagation and reproduction in some fungi which live as parasites in insects.

hyphen (*Typog.*). A mark of punctuation (-) inserted in a word to aid pronunciation (e.g. re-echo), or between words to avoid misconception of meaning (e.g. poor-rate collection, poor rate-collection). Also used at end of line when a word commences in one line and carries over to the line following; certain well-established rules for the placing of the hyphen are followed in such cases (e.g. double letters are usually divided, diphthongs are not, standard prefixes and suffixes are separable).

Hy'phomyce'tes (*Bot.*). A subdivision of the *Fungi imperfecti*, including thousands of species, characterised by the formation of their spores on hyphae standing clear of the matrix on which the fungus is growing.

hyphomyce'tous (*Bot.*). (1) Relating to a Hyphomycete.—(2) Mould-like, cobwebby.

hyphopo'dium (*Bot.*). A more-or-less lobed outgrowth from a hypha, often serving to attach an epiphytic fungus to a leaf.

hypid'iomor'phic or **subhedral** (*Geol.*). A term referring to the texture of igneous rocks in which some of the component minerals show crystal contours, the others occurring in irregular grains. Cf. *idiomorphic*.

hyp'nocyst (*Bot.*). A resting spore formed by some algae.

hyp'nody (*Zool.*). The resting period in larval forms.

hypno'sis (*Psychol.*). A condition, induced in a person by suggestion, in which conscious control is discouraged and the person is in a state of relaxation favourable to sleep. In a light stage of hypnosis, the patient is in communication with the hypnotist, can answer questions put to him, and can produce more readily than in the conscious waking state forgotten memories of past painful events, with accompanying affect. (See **abreaction.**) In a deep stage of hypnosis, the person shows complete unconsciousness to his surroundings, including the hypnotist, and is in a state of waxy flexibility (see **flexibilitas cerea**).

hyp'nospore (*Bot.*). A thick-walled spore able to live for some time in an inert condition.

hypnot'ic (*Med.*). Of the nature of, or pertaining to, hypnosis: a medicinal agent which induces sleep.

hypnozy'gote (*Bot.*). A zygote which remains inert for some time after its formation.

hypo- (Greek *hypo*, under). A prefix used in the construction of compound terms; e.g. *hypotympanic*, below the tympanum.

hypo- (*Chem.*). A prefix which signifies that a compound or group contains fewer radicals or atoms than the normal number.

hypo (*Photog.*). A colloquial abbrev. for *sodium thiosulphate*, the normal fixing solution for silver halide emulsions, the unreduced silver being removed by the hypo.

hypo eliminator (*Photog.*). A chemical, e.g. percarbonate, for expediting washing of plates or films, and for the complete removal of the last traces of hypo, which otherwise would in course of time depreciate the silver image.

hypo-acidity (*Med.*). A deficiency of acid, especially in the gastric juice.

hypo-adren'alism (*Med.*). The condition in which the activity of the adrenal glands is below normal.

hypoaria, —ā'ri-a (*Zool.*). In some Fish, small lobes of the brain lying just below the corpora bigemina.

hypoascid'ium (*Bot.*). An abnormal cup-shaped outgrowth from a leaf, or a transformation of a leaf; the inner surface corresponds to the lower surface of the leaf.

hy'pobasal half (*Bot.*). The posterior portion of an embryo.

hypobasid'ium (*Bot.*). An enlarged cell of a hypha in which a nuclear fusion occurs before the true basidium is formed.

hy'poblast (*Zool.*). The innermost germinal layer in the embryo of a metazoan animal, giving rise to the endoderm and sometimes also to the mesoderm. Cf. *epiblast*.

hypobran'chial (*Zool.*). The lowermost element of a branchial arch.

hypocalcae'mia, hypocalcemia (*Med.*). A calcium content of the blood below normal limits.

hypocar'pogen'ous (*Bot.*). Flowering and fruiting underground.

hy'pocaust (*Build.*). A hollow space beneath the floor of a room or bath, serving as a flue for the hot gases from a furnace which, in circulating, give warmth to the room or bath.

hypocen'trum (*Zool.*). See **subnotochord.**

hypochlorhy'dria (*Med.*). Diminished secretion of hydrochloric acid by the acid-secreting cells of the mucous membrane of the stomach.

hypochlo'rites (*Chem.*). See **hypochlorous acid.**

hypochlo'rous acid (*Chem.*). HClO. An aqueous solution of chlorine monoxide. Monobasic acid which forms hypochlorites with bases. Weak acid, easily decomposed.

hypochlorous anhydride (*Chem.*). See **chlorine monoxide.**

hypochondri'asis (*Med.*). Morbid preoccupation with bodily functions and sensations, with the false belief that the latter indicate bodily disease.

hy'pochord (*Zool.*). See **subnotochord.**

hypochor'dal (*Zool.*). Below the notochord; said of the lower lobe of a caudal fin.

hypocleidium, —klā'di-um (*Zool.*). See **interclavicle.**

hypocot'yl (*Bot.*). The part of the axis of a seedling between the insertion of the cotyledons and the radicle.

hypocra'teriform (*Bot.*). Having the lower part cylindrical, widening upwards, and with the upper edge expanding more or less horizontally.

hypocrystalline rocks (*Geol.*). See **hemicrystalline rocks.**

hy'poderm, hypoder'mis (*Bot.*). A layer, one or more cells thick, of strongly constructed cells, lying immediately beneath the epidermis and reinforcing it.—(*Zool.*) In *Arthropoda* and other *Invertebrata* with a distinct cuticle, the epithelial cell-layer underlying the cuticle, by which the cuticle is secreted.—*adj.* **hypodermal.**

hypoder'mic (*Med.*). Under the skin: a medical agent injected under the skin.

hypodermocly'sis (*Med.*). The injection of fluid (e.g. salt solution) under the skin.

hypo-eutectoid steel (*Met.*). Steel with less carbon than is contained in pearlite, i.e. the iron-cementite eutectoid. In carbon steels, a hypo-eutectoid steel is one containing less than 0·9% carbon.

hypoge'al, hypogae'ous (*Bot.*). (1) Living beneath the surface of the ground.—(2) Germinating with the cotyledons remaining in the soil.

hypogen'esis (*Zool.*). Direct development without metagenesis.

hy'pogen'ous (*Bot.*). Placed on the under side.

hypoglos'sal (*Zool.*). Underneath the tongue: the twelfth cranial nerve of higher Vertebrates, running to the muscles of the tongue.

hypoglot'tis (*Zool.*). In *Vertebrata*, the under part of the tongue: in *Coleoptera*, part of the labium.

hypoglycae'mia, hypoglyce'mia (*Med.*). A concentration of sugar in the blood below normal limits.

hypog'nathous (*Zool.*). Having the under jaw protruding beyond the upper jaw: having the mouth-parts directed downwards.

hypogon'adism (*Med.*). The condition in which there is a deficiency of the internal secretion of the gonads.

hypogy'nous (*Bot.*). (1) Said of a flower in which the calyx, corolla, and androecium, or one or more of these, arise from the receptacle below the gynaecium.—(2) Said of the floral members so placed, provided they are not attached to the calyx or calyx tube.—(3) Said of an antheridium which develops in a branch arising from the stalk of the oögonium.

hypohidro'sis (*Med.*). Abnormal diminution in the secretion of sweat.

hypohy'al (*Zool.*). An element of the hyoid arch corresponding to the epibranchials of the branchial arches.

hypoid bevel gear (*Eng.*). A bevel gear in which the axes of the driving and driven shafts are at right-angles but not in the same plane, resulting in some sliding action between the teeth; used in the back-axle drive of some automobiles.

hypoischium, hī-pō-is′ki-um (*Zool.*). In some Lizards, an ossification of the posterior part of a ligament, which represents the part of the epipubis between the fenestrae and supports the ventral wall of the cloaca. Also called OS CLOACAE.

hypoma′nia (*Med*). Simple mania. A condition characterised by mental excitement in the absence of mental confusion or of symptoms of insanity.

hypomen′orrhoe′a, hypomenorrhea (*Med*). The condition in which the interval between two menstrual periods is increased to between 35 and 42 days.

hypom′eral bones (*Zool.*). In some Fish, slender bones developed in connexion with the hypomeres.

hy′pomere (*Zool.*). The lateral muscle-plate zone of the mesothelial wall of a developing Vertebrate.

hy′ponas′ty (*Bot.*). (1) The more vigorous growth of the under side of a flattened organ, usually causing some change in the position of that organ.—(2) Eccentric secondary thickening of the lower side of a stem or root, when this lies in an approximately horizontal posture.

hy′ponome (*Zool.*). In *Cephalopoda*, the funnel by which water escapes from the mantle cavity.

hypony′chium (*Zool.*). In *Mammalia*, the epidermal layer underlying the nail.

hy′popharе (*Zool.*). In the rhagon type of Sponge colony, the lower basal wall which is without flagellated chambers. Cf. *spongophare.*

hypopharynge′al (*Zool*). Below the pharynx, as the *hypopharyngeal* groove of *Cephalochorda.*

hypopharyngeal bone (*Zool*). In some Fish, one of a pair of elements constituting the fifth gill-arch.

hypophar′ynx (*Zool*). In Insects, a median tongue-like structure arising from the floor of the mouth.

hypophloeodal, —flē′dal (*Bot.*). Growing just within the surface of bark.

hypophos′phites (*Chem.*). See **hypophosphorous acid.**

hypophosphor′ic acid (*Chem.*). H_2PO_3, or $H_4P_2O_6$. Obtained by the slow oxidation of phosphorus in moist air. Stable at ordinary temperatures Hydrolysed by mineral acids, forming a mixture of phosphoric and phosphorous acids.

hypophos′phorous acid (*Chem.*). H_3PO_2. Feeble monobasic acid, which forms a series of salts called *hypophosphites*, oxidised to phosphates by oxidising agents.

hy′pophyll (*Bot.*). A scale leaf which subtends a cladode.

hypophyl′lous (*Bot.*). Attached to, or growing from, the under side of a leaf.

hypophysec′tomise (*Surg.*). To remove the pituitary gland.

hypophysec′tomy (*Surg.*). Surgical removal of the pituitary gland.

hypophys′ial cachexia (*Med.*). See **Simmonds' disease.**

hypoph′ysis (*Bot.*). (1) A cell between the suspensor and the embryo proper, in a flowering plant.—(2) A swelling beneath the sporangium.

hypophysis (*Zool.*). A downwardly growing structure: in *Cephalochorda*, the olfactory pit: in *Vertebrata*, the pituitary body.—*adj.* **hypophysial.**

hypopiesis, —pī-ē′zis (*Med.*). Abnormally low blood-pressure.

hypopitu′itarism (*Med.*). A general term for any condition caused by diminished activity of the pituitary gland; characterised usually by obesity and imperfect sexual development.

hypopla′sia (*Zool.*). Under-development: deficiency.—*adj.* **hypoplastic.**

hypoplas′tron (*Zool.*). In *Chelonia*, one of the plates composing the plastron, lying between the xiphiplastron and the hyoplastron.

hypopleu′ron (*Zool.*). In *Diptera*, a thoracic sclerite lying below the metapleuron and above the coxae of the mesothorax and the metathorax.

hy′poploid (*Cyt.*). Having a chromosome number a little less than some exact multiple of the haploid number.

hypopterono′sis cys′tica, hī-pō-ter— (*Vet.*). An inherited disease of the feather-follicles of canaries.

hypoptilum, hī-pō-tī′lum (*Zool.*). See **aftershaft.**

hy′popus (*Zool.*). In *Tyroglyphidae* (Cheese-mites) and allied forms, a stage in the development which appears when conditions are unfavourable, and which is responsible for the dispersal of the species to more favourable conditions.

hypopy′gium (*Zool.*). In certain male *Diptera*, an organ formed by the curvature beneath the body of the apical segments of the abdomen.

hypopy′on (*Med.*). A collection of pus in the anterior chamber of the eye, between the iris and the cornea.

hyporha′chis (*Zool.*). In Birds, a secondary feather shaft arising from the calamus, just proximally to the superior umbilicus.

hypospa′dias (*Med.*). A congenital deficiency in the floor of the urethra.

hypos′tasis (*Med.*). Sediment or deposit. Passive hyperaemia in a dependent part owing to sluggishness of the circulation.

hypostat′ic (*Gen.*). Recessive, when relating to one of two characters which are not allelomorphs.

hyposthe′nic (*Med.*). Having diminished strength or tonicity.—HYPOSTHENIC GASTRIC DIATHESIS, the constitutional disposition in which the stomach is long, sluggishly acting, and secretes little acid.

hypos′thenu′ria (*Med.*). The secretion of a pale urine of unusually low specific gravity.

hyposto′ma or **hy′postome** (*Zool.*). In some *Coelenterata*, the raised oral cone: in *Insecta*, the labrum: in *Crustacea*, the lower lip or fold forming the posterior margin of the mouth: in some *Acarina*, the lower lip formed by the fusion of the pedipalpal coxae.

hypostomat′ic (*Bot.*). Bearing stomata on the lower surface.

hyposto′matous (*Zool.*). Having the mouth placed on the lower side of the head, as Sharks.

Hypostomides, —stō′mi-dēz (*Zool.*). An order of *Neopterygii* in which the body is entirely covered by bony plates, the upper part of the snout is produced into a process, and an air-bladder is lacking; small tropical coastal fish. Dragon-fish.

hypostro′ma (*Bot.*). A stroma formed by a parasitic fungus beneath the surface of the epidermis of the host.

hy′postyle hall (*Arch.*). A hall having columns to support the roof.

hyposul′phates (*Chem.*). Salts of hyposulphuric acid.

hyposul′phites (*Chem.*). See **hyposulphurous acid.**

hyposulphu′ric acid (*Chem.*). Dithionic acid, $H_2S_2O_6$.

hyposul′phurous acid (*Chem.*). (1) $H_2S_2O_4$. Unstable. Powerful reducing agent. Salts are hyposulphites.—(2) An old term for *thiosulphuric acid*, $H_2S_2O_3$.

hypotar′sus (*Zool.*). In Birds, the fibulare.

hypotension (*Med.*). Low blood-pressure.

hypotenu′sal allowance (*Surv.*). The distance added to each chain length, when chaining along sloping ground, in order to give a length whose horizontal projection shall be exactly one chain. For the 100-link chain the hypotenusal allowance is 100 (sec. $\theta-1$), where θ is the angle of slope of the ground from the horizontal.

hypothal′amus (*Zool.*). In the Vertebrate brain, the ventral zone of the thalamencephalon.

hypothal′lus (*Bot.*). (1) A film of waste material left on the substratum as the plasmodium of a Myxomycete moves about —(2) The first-formed weft of hyphae in the development of the thallus of a lichen, often remaining at the base or edge of the thallus.

hypothe'ca (*Bot.*). The younger of the two valves in the cell-wall of a diatom.

hypothe'cium (*Bot.*). A layer of hyphae beneath the hymenium in an apothecium; the sub-hymenial layer.

hypothenusal allowance (*Surv.*). See **hypotenusal allowance.**

hypothesis. A reasonable explanation of observed phenomena, tentatively adopted to deduce critical conditions which can be tested experimentally, so as to ascertain whether the hypothesis is valid in the light of previous scientific experience.

hypothetical exchange (*Teleph.*). A telephone exchange which, until a new exchange is constructed, is made up from parts of existing exchanges, the subscribers being numbered according to the system required for the new exchange.

hypothy'roidism (*Med.*). The condition accompanying the diminished secretion of the thyroid gland. See also **cretinism** and **myxoedema.**

hypoton'ic (*Chem.*). Having a lower osmotic pressure than a standard, e.g. that of blood, or of the sap of cells which are being tested for their osmotic properties.

hypotrache'lium (*Arch.*). The junction between the shaft and capital of a column.

Hypotre'mata (*Zool.*). An order of *Euselachii* characterised by the possession of five ventral gill clefts, enlarged pectoral fins, a dorso-ventrally flattened body, and the absence of an anal fin. Skates and Rays.

hypotremat'ic (*Zool.*). In *Cyclostomata*, the lower lateral bar of the branchial basket.

Hypotricha, —trik'-a (*Zool*). An order of *Ciliata* the members of which are generally of creeping habit; they possess a permanent gullet with undulating membranes, and have a depressed body, with locomotor cilia on the ventral surface only.

hypotrich'ous (*Zool.*). Having cilia principally on the lower surface of the body.

hy'potro'phy (*Bot.*). Eccentric thickening of the under side of an approximately horizontal shoot or root.

hypovitamino'sis (*Med.*). The condition resulting from deficiency of a vitamin in the diet.

hypoxyloid, —zi'loid (*Bot.*). Forming a cushion-shaped or crust-like stroma.

hypso- (Greek *hypsos*, height). A prefix used in the construction of compound terms.

hyp'sochrome (*Chem.*). A radical which shifts the absorption spectrum of a compound toward the violet end of the spectrum.

hyp'sodont (*Zool.*). Said of Mammals having cheek teeth with high crowns, such that the bases of the infoldings of the enamel are hidden: used also of the teeth. Cf. *brachyodont.*

hyp'sograph (*Elec. Comm.*). A recording device for recording the transmission levels on a circuit, either during testing, or continuously during transmission of signals.

hypsom'eter (*Phys.*). An instrument used for determining the boiling-point of water, either with a view to determining altitude, by calculating the pressure, or for correcting the upper fixed point of the thermometer used.

hypsophyl'lary leaf (*Bot.*). A bract.

hypu'ral (*Zool.*). Below the tail: one of a set of large plates formed by the fusion of the haemal elements of the caudal vertebrae, and supporting the hypochordal lobe of the tail-fin in some Fish.

Hyracoi'dea (*Zool.*). An order of small eutherian Mammals having four digits on the fore limb and three on the hind limb, pointed incisor teeth with persistent pulps, lophodont grinding teeth, no scrotal sac and six mammae; terrestrial African forms. Dassies.

hyster-, hystero- (Greek *hystera*, womb). A prefix used in the construction of compound terms; e g. *hysterectomy* (q.v).

hysteran'thous (*Bot.*). Said of leaves which develop after the plant has flowered.

hysterec'tomy (*Surg.*). Removal of the uterus by operation.

hystere'sis (*Elec. Eng.*).
See **dielectric— magnetic—**

hysteresis coefficient (*Elec. Eng.*). See **Steinmetz coefficient.**

hysteresis curve (*Elec. Eng.*). A curve showing the relation between the magnetising force and flux density in a sample of iron or steel, the curve being taken with ascending and descending values of magnetising force, in order to illustrate the magnetic hysteresis loop.

hysteresis loop (*Elec. Eng.*). See **magnetic hysteresis loop.**

hysteresis loss (*Elec. Eng.*).
See **dielectric— magnetic—**

hysteresis tester (*Elec. Eng.*). A device, invented by Ewing, for making a direct measurement of magnetic hysteresis in samples of iron or steel.

hysteria (*Psycho-an.*). A psychoneurosis in which repressed complexes become split off or dissociated from the personality, forming independent units, partially or completely unrecognised by consciousness. It gives rise to hypnoidal states, such as amnesia, fugues, somnambulisms, etc., and may also be manifested by various physical symptoms, such as tics, paralysis, blindness, deafness, etc. See **conversion hysteria.** General features of this neurosis are an extreme degree of emotional instability and an intense craving for affection.

hysteria, canine (*Vet.*). A disease of dogs, of unknown cause, characterised by periodic attacks of abnormal mental behaviour varying from somnolence to hysteria.

hyster'iform, hyster'iaeform (*Bot.*). Having the shape of a long narrow ridge, with a longitudinal opening along the top.

hys'terocolpec'tomy (*Surg.*). Surgical removal of the vagina (or part of it) and the uterus.

hysterogen'ic (*Zool.*). Developing later.

hys'teropexy (*Surg.*). The fixation of a displaced uterus by surgical measures.

hysteroso'ma (*Zool.*). In *Acarina*, the region of the body comprising the metapodosoma and the opisthosoma.

hys'terothe'cium (*Bot.*). An elongated perithecium, remaining closed as it develops, and opening when ripe by a cleft at the top.

hysterot'omy (*Surg.*). Incision of the uterus.

Hythe Beds (*Geol.*). A division of the Lower Greensand occurring in the Weald of Kent and Sussex; it consists of glauconitic sands locally containing much chert, and in E. Kent stone bands (' Kentish rag ') interbedded with sands.

i (*Chem.*). A symbol for *van't Hoff's factor.*

i- (*Chem.*). An abbrev. for: (1) Optically inactive; (2) *iso-*, i.e. containing a branched hydrocarbon chain.

i (*Maths.*). The mathematical operator $i^2 = -1$, used in physics and mathematics. See ***j.***

I (*Chem.*). The symbol for *iodine.*

I (*Chem.*). A symbol for *ionic strength.*

I (*Eng.*). The symbol for *moment of inertia.*

I-beam (*Build., Civ. Eng., etc.*). See **H-beam.**

I.A. (*Phys.*). Abbrev. for *international Ångstrom* (q.v.).

iatrochemistry, ī-at′rō— (*Chem.*). The study of chemical phenomena in order to obtain results of medical value; practised during the sixteenth century.

I.C. engine. See **internal-combustion engine.**

ice (*Meteor.*). Ice is formed when water is cooled below its freezing-point. It is a transparent crystalline solid of specific gravity 0·916 and specific heat 0·50. On account of the fact that water attains its maximum density at 4° C., ice is formed on the surface of ponds and lakes during frosts, and thickens downwards.

ice action (*Geol.*). The work and effects of ice on the earth's surface. See **glacial action, glaciation, glacier.**

ice-apron, ice-breaker (*Civ. Eng.*). A construction covering the upstream side of a bridge pier, and serving to break floating ice, or in default of this, to afford protection against the thrust of the ice upon the pier.

iceberg (*Meteor.*). A large mass of ice, floating in the sea, which has broken away from a glacier or ice barrier. Icebergs are carried by ocean currents for great distances, often reaching latitudes of 40° to 50° before having completely melted. Approximately one-tenth of an iceberg shows above the surface.

iceblink (*Meteor.*). A whitish glare in the sky over ice which is too distant to be visible.

ice-breaker (*Civ. Eng.*). (1) An *ice-apron* (q.v.).—(2) A projecting pier so arranged in relation to a harbour entrance that floating ice is kept outside.—(3) A vessel specially equipped for clearing a passage through ice-bound waters.

ice calorimeter (*Heat*). See **Bunsen's ice calorimeter.**

ice colours (*Chem.*). Dyestuffs produced on the cotton fibre direct, by the interaction of a second component with a solution of a diazo-salt cooled with ice.

ice contact slope (*Geol.*). The steep slope or back face of a deltaic accumulation originally formed at an ice front and in contact with it.

Iceland agate (*Min.*). A name quite erroneously applied to the natural glass *obsidian* (q.v.).

Iceland spar (*Min.*). A very pure transparent and crystalline form of calcium carbonate, first brought from Iceland. It has perfect cleavage, is noted for its double refraction, and hence is used in construction of the nicol prism.

ich′nograph (*Build.*). A view showing the ground plan of a building or part of a building.

ichor, ī-kor (*Geol.*). The name applied by Sederholm to highly penetrating granitic liquids, charged with magmatic vapours (emanations), which he believed to operate in palingenesis.

ichor (*Med.*). A thin, watery discharge from a wound or a sore.—*adj.* **ichorous.**

ichthy-, ichthyo- (Greek *ichthys*, fish). A prefix used in the construction of compound terms; e.g. *ichthyopterygia.*

ich′thyic (*Zool.*). Pertaining to, or resembling, Fish.

ichthyopterygia, —op-ter-ij′i-a (*Zool.*). The paired fins of Fish.

ichthyo′sis (*Med.*). Xerodermia. A disease characterised by dryness and scaliness of the skin, due to lack of secretion of the sweat and the sebaceous glands.—(*Vet.*) A congenital hardening of the skin of calves.

i′cicling (*Paint.*). A varnishing defect in which some of the varnish flows to the lower edge of the work and there forms drops or icicles.

Icon′oscope (*Television*). A form of *electron camera* (q.v.) comprising a mosaic of photo-emissive material upon which the optical image is focused, and which is scanned by a cathode ray beam.

i′cositetrahe′dron (*Min.*). A solid figure having 24 trapezoidal faces, and belonging to the cubic system.

icter′ic (*Med.*). Of the nature of, or affected with, jaundice.

ic′terus (*Med.*). *Jaundice* (q.v.).

ictus (*Med.*). A stroke or sudden attack.

I.C.W. (*Radio*). Abbrev. for *interrupted continuous waves.*

id (*Psycho-an.*). A term originally introduced by Groddeck and later used by Freud to denote the sum total of the primitive instinctual forces in an individual. It subserves the pleasure-pain principle, in which the activities of the organism are concerned with the immediate increase of pleasurable and reduction of painful stimuli. It is dominated by blind impulsive wishing.

ideal articulation (*Teleph.*). The articulation of a circuit or system which would be obtained by a perfectly trained crew. See **crew factor.**

ideal gas (*Chem.*). See **perfect gas.**

ideal transducer (*Elec. Comm.*). Any transducer which converts without loss all the power supplied to it.

ideal transformer (*Elec. Comm.*). A transformer with infinite winding impedances, no leakage, and no self-capacity in its windings. Its correct introduction into a circuit entails no attenuation loss but provides a reflection gain, if the source and load impedances are not equal.

idealism or **mentalism.** The conception of natural phenomena as arising within the mind, the external world being ultimately unknowable to the human mind. The reverse of *positivism* (q.v.). See also **empiricism.**

I.D.F. (*Elec. Comm.*). Abbrev. for *intermediate distribution frame* (q.v.).

idio- (Greek *idios*, peculiar, distinct). A prefix used in the construction of compound terms; e.g. *idiomuscular.*

id′ioblast (*Bot.*). A non-chlorophyllous, thick-walled cell having supporting functions, usually elongated, and occurring among cells containing chlorophyll: more generally, a cell which differs in form, contents and wall-thickening from its neighbours.

idioblast (*Min.*). A crystal which developed in metamorphic rocks and is bounded by crystal contours; cf. *idiomorphic.*—*adj.* **idioblastic.** See also **porphyroblastic.**

idiochro′matin (*Cyt.*). A substance within the nucleus which controls the reproduction of the cell.

idiochromid′ia (*Zool.*). *Chromidia* (q.v.) which can replace or be reformed into the nucleus; generative chromidia.

idioglos′sia (*Med.*). The wrong use of consonants by a child, making speech unintelligible.

idiomor'phic (euhedral) crystals (*Geol.*). Rock minerals which are bounded by the crystal faces peculiar to the species. Cf. *allotriomorphic* (anhedral) and *hypidiomorphic* (subhedral).

idiomus'cular (*Zool.*). Said of a special type of muscular contraction produced by artificial stimulation.

idiop'athy (*Med.*). Any morbid condition arising spontaneously, having no known origin.—*adj.* **idiopath'ic.**

id'ioplasm (*Zool.*). Modified cytoplasm on the concave side of the Golgi platelets.

idioso'ma (*Zool.*). In *Acarina*, the prosoma plus the opisthosoma.

id'iosome (*Zool.*). A cell which differs markedly in size, form, or contents from its neighbours.

idiosphaerothe'ca (*Zool.*). See **acroblast.**

idiostat'ic method (*Elec. Eng.*). A method of using the quadrant electrometer in which the voltage is applied between the needle and one pair of quadrants.

idiot (*Med.*). A person so defective in mind from birth as to be unable to protect himself against ordinary physical dangers; one afflicted with the severest grade of feeble-mindedness.

idiother'mous (*Zool.*). See **warm-blooded.**

idioventric'ular (*Med.*). Pertaining to the ventricle of the heart alone.

id'iozome (*Zool.*). The attraction sphere or region of clear protoplasm surrounding the centrosome.

idle component (of current, voltage, volt-amperes) (*Elec. Eng.*). See **reactive component.**

idle current wattmeter (*Elec. Eng.*). A name sometimes given to an electrical measuring instrument for measuring reactive volt-amperes.

idle wheel (*Eng.*). A wheel interposed in a gear train, either to reverse rotation, or to obtain the required spacing of centres, without affecting the ratio of the drive. Also called IDLER.

idle wheel (*Horol.*). See **intermediate wheel.**

idle wire (*Elec. Eng.*). The part of the armature winding of an electric machine which does not actually cut the lines of force, i.e. that part comprising the end connexions.

idler (*Eng.*). See **idle wheel.**

idling (*I.C. Engs.*). The slow rate of revolution of an automobile or aero engine, when the throttle pedal or lever is in the closed position.

idling adjustment (*Automobiles, etc.*). A setting of the slow-running jet and throttle position of a carburettor, so as to give regular *idling* (q.v.).

i'docrase (*Min.*). A hydrated silicate of lime and alumina, crystallising in the tetragonal system. Also called VESUVIANITE.

i'doses (*Chem.*). Monosaccharoses belonging to the group of aldohexoses.

Idwall stone (*Geol.*). An oil-stone quarried near Snowdon.

i.f., I. F. (*Radio*). A frequently used abbrev. for *intermediate frequency.*

Igmerald (*Min.*). Trade-name for artificial emerald made at Bitterfeld in Germany, the first two letters of the name signifying Interessengemeinschaft.

igneous complex (*Geol.*). A group of rocks, occurring within a comparatively small area, which differ in type but are related by similar chemical or mineralogical peculiarities. This indicates derivation from a common source.

igneous (or magmatic) cycle (*Geol.*). The sequence of events usually followed in igneous activity; it consists of an eruptive phase, a plutonic phase, and a phase of minor intrusion.

igneous intrusions (*Geol.*). The several types of emplacement of igneous rocks. See **bathylith, dyke, sill.**

igneous magma (*Geol.*). The molten fluids and gaseous fractions generated within the earth, from which igneous rocks are considered to have been derived by crystallisation or other processes of consolidation.

igneous rocks (*Geol.*). Rock masses formed by the solidification of magma injected into the earth's crust, or extruded on its surface.

ignite (*Chem.*). To heat a gaseous mixture to the temperature at which combustion takes place, particularly by means of an electric **spark.**

igni'ter (*Civ. Eng.*). A blasting fuse or other contrivance used to fire an explosive charge.

ignition (*Elec. Eng., I C. Engs.*). The firing of an explosive mixture of gases, vapours, or other substances, by means of an electric spark.

See **battery—**
coil—
dual—
high tension—
low tension—
magneto—
firing order.

ignition advance (*Eng*). The crank angle before top dead-centre, at which the spark is timed to pass in a petrol or gas engine. See **ignition timing.**

ignition coil (*Automobiles*). An induction coil for converting the low-tension current supplied by the battery into the high-tension current required by the sparking-plug.

ignition lag (*Eng.*). (Of a combustible mixture in an engine cylinder) the time interval between the passage of the spark and the resulting pressure rise due to combustion.

ignition plug (*Elec. Eng.*). See **sparking-plug.**

ignition rating (*Elec. Eng.*). A special rating (in *ampere-hours*, q.v.) employed for accumulators used for supplying ignition systems; it is generally twice the continuous rating at a low discharge rate.

ignition rectifier (*Elec. Eng.*). A mercury-arc rectifier in which the cathode spot is initiated by a voltage impulse applied to a special electrode dipping into the mercury pool.

ignition system (*Automobiles*). (Of petrol or gas engines) the arrangement for providing the high-tension voltage required for the ignition. See **ignition coil, magneto ignition.**

ignition temperature (*Eng.*). See **flash point, spontaneous ignition temperature**; also Suppl.

ignition timing (*I.C. Engs.*). The crank angle relative to top dead-centre at which the spark passes in a petrol or gas engine. See **angle of advance.**

ignition voltage (*Elec. Eng.*). The voltage required to start the discharge in an electric discharge tube.

I.H.P. (*Eng.*). Abbrev. for *indicated horse-power.*

ijolite, ĕ'ō-lit (*Geol.*). A coarse-grained igneous rock, consisting of nepheline, aegirine-augite, with usually melanite garnet as a prominent accessory, occurring in nepheline-syenite complexes in the Kola Peninsula, White Sea, the Transvaal, and elsewhere.

Il (*Chem.*). The symbol for *illinium.*

ile-, ileo-, il'e-o *or* ēl'— *or* il'—. A prefix which refers to the part of the intestine of Vertebrates known as the *ileum* (q.v.); it is used in the construction of compound terms; e.g. *ileocolic*, pertaining to the ileum and the colon.

ileitis, —e-i'tis (*Med.*). Inflammation of the ileum.

ileocoli'tis (*Med.*). Inflammation of the ileum and the colon.

ileocolos'tomy (*Surg.*). The making of a communication between the ileum and the colon, by operation.

ileos'tomy (*Surg.*). An artificial opening in the ileum, made surgically.

i'leum (*Zool.*). In Vertebrates, the posterior part of the small intestine.

i'leus (*Med.*). Colic due to obstruction in the intestine; obstruction of the intestine.

ileus, paralytic (*Med.*) A condition in which, from various causes, there is extensive paralysis of the intestines, leading to persistent vomiting, pain being absent.

Ilfracombe Beds (*Geol.*). A local group of rocks belonging to the Devonian System, found in N. Devon and W Somerset.

Ilgner system (*Elec. Eng*). See **Ward-Leonard-Ilgner system.**

il'io- (*Zool.*). A prefix which refers to that part of the pelvic girdle of a Vertebrate known as the *ilium*; used in the construction of compound terms; e g. *iliofemoral,* pertaining to the ilium and the femur.

il'ium (*Zool.*). A dorsal cartilage bone of the pelvic girdle in Vertebrates.—*adj.* **iliac.**

ill-conditioned (*Surv*) A term used to describe triangles of such a shape that the distortion resulting from errors made in measurement and in plotting may be great, the criterion often used being that no angle in a triangle should be less than 30°.

illam (*Geol.*). A gem-bearing gravel occurring in Ceylon, and worked extensively for the gem-corundums, spinels, zircons, etc. which it contains; these have been derived from white pegmatite veins in the island.

illegitimate pollination (*Bot.*). The transfer of pollen from the anthers to the stigmas of the same flower when the general arrangement of the flower indicates that it is adapted for cross-pollination.

illinium or **florentium** (*Chem.*). Symbol, Il or Fr. A metallic element, a member of the rare earth group. At. no. 61, at. wt 147.

illuminated diagram (*Elec. Eng.*). A circuit diagram on a switchboard, or a track diagram in a railway signal box, so arranged that lamps behind the diagram illuminate any part of the circuit which is alive or any part of the track upon which a train is standing.

illuminated-dial instrument (*Elec. Eng*). An electric measuring instrument for switchboard use, having a scale of translucent glass illuminated from behind.

illuminating engineer (*Elec. Eng.*). An engineer whose work is concerned with the design and operation of lighting installations.

illumination (*Light*). The quantity of light or luminous flux falling on unit area of a surface. Illumination is inversely proportional to the square of the distance of the surface from the source of light, and proportional to the cosine of the angle made by the normal to the surface with the direction of the light rays. The unit of illumination is the *metre-candle* (or *lux,* q.v.) or the *foot-candle* (q v.).

illumination photometer (*Illum*). See **photometer.**

illuminom'eter (*Illum.*). A name sometimes given to certain types of photometer.

illusion (*Psychol.*). A false interpretation of something perceived through the special senses.

il'menite (*Min.*). An oxide of iron and titanium, crystallising in the trigonal system; a widespread accessory mineral in igneous rocks, especially in those of basic composition.

ilmenoru'tile (*Min.*). A black variety of titanium oxide, containing iron in the form of ferrous titanate, niobate, and tantalate; crystallises in the tetragonal system.

il'vaite (*Min.*). (Latin *Ilva*, Elba.) Silicate of iron and calcium, a little oxide of manganese frequently being present. It crystallises in the orthorhombic system. Also called DIEVRITE, YENITE.

image (*Light*). Optical images may be of two kinds, real or virtual. A *real image* is one which is formed by the convergence of rays which have passed through the image-forming device (usually a lens) and can be thrown on a screen, as in the camera and the optical projector. A *virtual image* is one from which rays appear to diverge. It cannot be projected on a screen or on a sensitive emulsion.

See **aerial—** **after—** **latent—**

image attenuation constant (*Elec. Comm.*). The real part of the transfer constant of a network.

image dissector (*Television*). A form of electron camera in which the optical image is focused on a photo-emissive surface, from which the electrons are emitted in straight lines in the form of the image. Suitably arranged electric or magnetic fields cause this pattern to sweep across a point anode, which thus effectively scans the image.

image dissector multiplier (*Television*). A combination of *image dissector* (q.v.) and *electron multiplier* (q v.) in one unit.

image frequency (*Radio*). A frequency which is as much greater (or less) than the local oscillator frequency as the signal frequency is less (or greater) in a supersonic heterodyne receiver.

image impedance (*Elec. Comm.*). The impedance which terminates a network without introducing reflection losses at the junction. This implies image termination at the other end of the network

image phase constant (*Elec. Comm.*). The imaginary part of the transfer constant of a network.

image response (*Radio*). The unwanted response of a supersonic heterodyne receiver to the image frequency.

imaginal bud (or **disc**), im-aj'in-al (*Zool.*). One of a number of masses of formative cells which are the principal agents in the development of the external organs of the imago, during the metamorphosis of the *Endopterygota.*

imagination (*Psychol.*). The faculty of forming images in the mind, either by revivifying and recasting past perceptional experience (*reproductive imagination*) or by creating virtually new concepts (*constructive imagination*). See also **phantasy.**

imag'o (*Zool*). The form assumed by an Insect after its last ecdysis, when it has become fully mature; final instar.—*adj.* **imaginal.**

imbalance (*Med.*). A lack of balance, as between the ocular muscles, or between the activities of the endocrines, or between parts of the involuntary nervous system.

im'becile (*Med.*). A person whose defective mental state (present since birth or an early age) does not amount to idiocy, but who is incapable of managing his own affairs.

imbibition (*Chem.*). The absorption or adsorption of a liquid by a solid or a gel, accompanied by swelling of the latter.

imbibition (*Photog.*). The mechanical printing of dye images. A relief or matrix is contacted with an absorbing surface, with a differential transference of dye, forming the positive image. Used in *Technicolor* (q.v.).

imbibition matrix (*Photog.*). A relief in gelatine capable of transferring, differentially, a dye to another absorbing surface, and providing a continuous print.

imbibition mechanism (*Bot.*). See **hygroscopic mechanism.**

imbowment (*Arch.*). A term sometimes applied to an arch or vault.

im'bricate, im'bricated (*Bot., Zool.*). Said of leaves, scales, etc. which overlap like the tiles on a roof.

imbricate aestivation (*Bot.*). Aestivation in which the perianth leaves overlap at the edges.

imbricate structure (*Geol.*). A structure produced in mountain-building by intense pressure, individual blocks of rock being thrust over each other, like a pack of fallen cards.

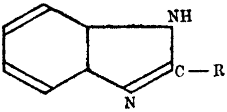
imbricated (*Build.*). Said of slates or tiles which are laid so as to overlap.

I.M.E.P. (*Eng.*). See **indicated mean effective pressure.**

Im'hoff tank (*Sewage*). A form of settling tank to which sewage is passed, the solid matter being exposed to a fermentation process, with the production of methane gas and an inoffensive sludge which can be easily dried.

im'ides (*Chem.*). Organic compounds containing the group —CO·NH·CO—, derived from acid anhydrides.

iminaz'oles (*Chem.*). Heterocyclic compounds produced by substitution in a five-membered ring containing two nitrogen atoms on either side of a carbon atom. Benziminazoles are formed by the condensation of *ortho*-diamines with organic acids, and contain a condensed benzene nucleus:



im'ino group (*Chem.*). The group  $\begin{matrix}R\\R'\end{matrix}\!\!>\!\mathrm{NH}$.

Imino compounds are secondary amines obtained by the substitution of two hydrogen atoms in ammonia by alkyl radicals.

imitation art paper (*Paper*). See **art paper.**

imitation backed cloths (*Textiles*). Worsted fabrics woven from one warp and one weft, but, owing to the distribution of threads, presenting the appearance of backed cloths; used for coatings.

imitation gauze (*Textiles*). See **mock leno.**

imitation parchment (*Paper*). A wood-pulp paper to which strength, transparency, and grease-proof properties have been imparted by prolonged beating of the pulp.

immar'ginate (*Bot.*). Lacking a distinct edge.

immediate germination (*Bot.*). The germination of a spore as soon as it is ripe, and not after a period of inactivity.

immersed (*Bot.*). (1) Embedded in the tissues of the plant.—(2) Arising beneath the surface of the substratum.

immersed liquid-quenched fuse (*Elec. Eng.*). A fuse in which liquid is used for extinguishing the arc, the fuse-link being totally immersed in the liquid.

immersible apparatus (*Elec. Eng.*). Electrical apparatus designed to operate continuously under water.

immersion (*Astron.*). The entry of the moon, or other body, into the shadow which causes its eclipse.

immersion heater (*Elec. Eng.*). An electric heater designed for heating water or other liquids by direct immersion in the liquid.

immiscibility (*Chem.*). The property of two or more liquids of not mixing and of forming more than one phase when brought together.

immune (*Med.*). Protected against any particular infection: one who is in this state.—*v.* **immunise,** to make immune against infection.—*n.* **immunisation,** the process of making a subject immune against a particular infection.—(*Bot.*) Treatment given to a plant to give it resistance to a parasite, or to increase its powers of resistance.

immune bodies (*Chem.*). A group of substances, produced in an organism by natural or artificial immunisation, which have a specific action on bacterial species.

immunotransfusion (*Med.*). The transfusion of blood to an infected person from a healthy person who has been immunised with a vaccine made of bacteria obtained from the infected person.

impact (*Mech.*). For the direct impact of two elastic spheres, the ratio of the relative velocity after impact to that before impact is constant and is called the *coefficient of restitution* for the material of which the spheres are composed. This constant has the value 0 95 for glass and 0·2 for lead, the values for most other solids lying between these two figures.

impact test (*Met*). Usually means a *notched-bar test* (q.v.), but it may also mean an Izod, Charpy, or Fremont test performed on unnotched specimens, or a test in which the suddenly applied load is in tension instead of bending.

impacted (*Med.*). Firmly fixed, pressed closely in; said of a tooth which has failed to erupt, or of a fracture in which the broken bones are firmly wedged together.

impage, im-pāj (*Join.*). A rail, or horizontal member of a door-frame.

imparipin'nate (*Bot.*). Said of a pinnate leaf which has a terminal leaflet.

impas'to (*Pot.*). Colour thickened with an appropriate vehicle applied in relief on the raw clay before firing.

impedance (*Elec. Eng., etc.*). The ratio of the r m.s. value of the voltage applied to an electric circuit, to the current flowing in the circuit. Sometimes called the APPARENT RESISTANCE.

See **acoustic—**
bilateral—
blocked—
conjugate—
control—
driving-point—
earth—
image—
iterative—
matching—
motional—
static—
synchronous—
transfer—
unilateral—

impedance bond (*Elec. Eng.*). A special rail-bond of high reactance and low resistance so designed that it will allow the passage of d c. traction current but not the a.c. used for signalling purposes.

impedance drop (or **rise**) (*Elec. Eng.*). A drop or rise in the voltage at the terminals of a circuit, caused by current passing through the impedance of the circuit.

impedance factor (*Elec. Eng.*). The ratio of the impedance of a circuit to its resistance.

impedance level (*Elec. Comm.*). See **characteristic impedance.**

impedance protective system (*Elec. Eng.*). A discriminative protective equipment in which discrimination is secured by a measurement of the impedance between the point of installation of the relays (impedance relays) and the point of fault. Also called DISTANCE PROTECTION.

impedance relay (*Elec. Eng.*). A relay, used in discriminative protective gear, whose operation depends on a measurement of the impedance of the circuit beyond the point of installation of the relay; if this falls below a certain value, when a fault occurs, the relay operates. Also called a DISTANCE RELAY.

impedance rise (*Elec. Eng.*). See **impedance drop.**

impedance transforming filter (*Elec. Comm.*). A filter network which has differing image impedances, and which can therefore act as a transformer over a band of frequencies.

impedance triangle (*Elec. Eng.*). The right-angled triangle formed by the vectors representing the resistance drop, the reactance drop, and the impedance drop of a circuit carrying an alternating current.

impedance voltage (*Elec. Eng.*). The voltage produced as a result of a current flowing through an impedance.

impeller (*Eng.*). The rotating member of a centrifugal pump or blower, which imparts kinetic energy to the fluid.

imperfect (*Struct.*). Said of a structural framework which has either more or fewer members than it would require to be perfect.

imperfect flower (*Bot.*). A flower in which either the stamens or the carpels are lacking, or, if present, non-functional.

Imperfect Fungi (*Bot.*). See **Fungi (Imperfecti).**

imperfect hybridisation (*Bot.*). An abortive attempt to form zygospores between the hyphae of two distinct species of *Zygomycetes*.

imperfect stage (*Bot.*). The conidium-bearing stage of a fungus.

imperforate (*Med*). Not perforated; closed abnormally.—(*Zool.*) Lacking apertures, especially of shells, said of gastropod shells which have a solid columella.

imperial (*Build.*). A domed roof shaped to a point at the top.

imperial (*Build.*). A slate size, 33 × 24 in.

imperial (*Paper*). A standard size of paper, 22 × 30 in.; U.S., 23 × 31 in.

imperial (*Textiles*). A heavy cotton fustian fabric, generally drab in colour and occasionally with a raised surface.

imperial cap (*Paper*). A standard size of brown paper, 22 × 29 in.

impermeable (*Chem., Geol.*). Not permitting the passage of liquids or gases.

impervious (*Build., etc.*). Said of materials which have the property of satisfactorily resisting the passage of water.

impervious (*Zool.*). Said of nostrils in which the nasal cavities are separated by a septum.

impetiginous, —ij'en-us (*Med*). Resembling, or of the nature of, impetigo.

impeti'go (*Med*). A contagious skin disease, chiefly of the face and hands, due to infection with pus-forming bacteria.

impetigo, bovine (*Vet.*). A contagious vesicular eruption of the skin of the teats of cows, due to infection by streptococci. Also known as FALSE COW-POX.

implex (*Zool.*). In *Arthropoda*, an inpushing of the integument for muscle attachment.

imposing stone (*Typog.*). A heavy iron-topped table on which type matter is locked up preparatory to printing. In the early days of printing, level stone-topped tables were used.

imposition (*Typog.*). The process of assembling type pages in their proper order on the stone, arranging appropriate furniture or spacing material, and locking the whole into a chase. The unit is now known as a *forme*, and from it a book section or signature is printed.

impost (*Build.*). The top member of a pier or pillar from which an arch springs.

impregnated carbon (*Illum.*). An arc-lamp carbon consisting of carbon intimately mixed with some other material in order to produce a flame arc.

impregnation (*Timber*). The process of saturating timber with creosote or some other preparation, in order to preserve it. See **creosoting cylinder, Bethell's process.**

impregnation (*Zool.*). The passage of spermatozoa from the body of the male into the body of the female.

impressed (*Bot.*). Having the surface marked by slight depressions.

impression (*Print.*). (1) All copies of a book printed at one time from the same type or plates. —(2) The pressure applied to a type forme by the cylinder or platen.

impressionism (*Photog.*). A style of photographic art in which the immediate impression is the primary value, as contrasted with *realism*, in which the presentation must bear leisurely scrutiny and be true to nature.

improving (*Met.*). See **softening.**

impulse (*Elec. Comm.*). A unidirectional flow of current of non-repeated wave-form, i.e. it consists of a transient and a component of zero frequency which is greater than zero.

See **break—** **make—**
dial—

impulse (*Horol.*). The force or blow imparted to the pendulum or balance by the escape wheel through the escapement.

impulse circuit (*Auto. Teleph.*). In an automatic switching exchange, a source of machine-generated impulse trains for operating step-by-step switches, controlled by relays.

impulse circuit-breaker (*Elec. Eng.*). A circuit-breaker, requiring only a small quantity of oil, in which the arc is extinguished by a mechanically produced flow of oil across the contacts.

impulse-driven clock (*Elec. Eng.*). A clock in which the hands are driven forward by current impulses originating usually from a master-clock.

impulse excitation (*Radio*). A method of exciting the grid of a thermionic tube in which the anode current is allowed to flow for only a very short period during each cycle.

impulse flashover voltage (*Elec. Eng.*). The value of the impulse voltage which just causes flashover of an insulator or other apparatus.

impulse frequency (*Teleph.*). The number of impulses per second in the impulse trains used in dialling and operating selectors. See **dot frequency.**

impulse generator (*Elec. Eng*). See **surge generator.**

impulse machine (*Auto. Teleph.*). A machine which generates accurately timed impulses for operating selector switches.

impulse period (*Teleph.*). The time between identical phases of a train of impulses: the time between the start of one impulse and the start of the next.

impulse pin (*Horol.*). The vertical pin in the roller of the lever escapement which receives the impulse from the pallets, via the notch in the lever. It also effects the unlocking, on the reverse vibration.

impulse plane (*Horol.*). That part of the pallet upon which a tooth of the escape wheel acts when giving impulse.

impulse ratio (*Auto. Teleph.*). The ratio of the time during an impulse to the total time of impulse plus interval before another impulse.

impulse ratio (*Elec. Eng.*). The ratio between the breakdown voltage of an insulator or piece of insulating material when subjected to an impulse voltage to the breakdown when subjected to a normal-frequency (50 cycle) voltage.

impulse-reaction turbine (*Eng.*). See **disc-and-drum turbine.**

impulse repeater (*Auto. Teleph.*). A relay mechanism for repeating impulses from one circuit into another.

impulse turbine (*Eng.*). A steam-turbine in which steam is expanded in nozzles and directed on blades carried by a rotor, in one or more stages, there being no change in pressure as the steam passes the blade-ring. See **combined-impulse turbine.**

impulse voltage (*Elec. Eng.*). A transient voltage lasting only for a few microseconds; very frequently used in high-voltage testing of electrical apparatus in order to simulate voltage due to lightning strokes or other similar causes.

impulsive current (*Elec. Comm.*). A current which comprises one or more impulses in one direction round a circuit, as in dialling.

in-. A prefix (derived from the Latin, meaning either 'in(to)' or 'not') used in the construction of compound terms; e.g. *incurvate*, curved inwards; *inco-ordination*, lack of co-ordination.

in-and-in (*Paper*). A method of packing paper too large to travel flat. The ream is divided in half, folded over, and interlocked.

in-and-out movement (*Cinema.*). That part of the intermittent motion in a motion-picture camera which inserts and withdraws the claws which pull the film into position at the gate.

in-between drawings (*Cinema.*). The drawings which are made to fit between key drawings, in number corresponding to the time intervals demanded by the rhythm, there being 24 frames to be photographed to correspond to the projection time of one second. After the drawings have been made in pencil, over illumination and the previous drawings, they are traced in black ink on thin sheets of celluloid, and coloured.

in-gate (*Foundry*). The channel, or channels, by which the molten metal is led from the runner hole into the interior of a mould.

ingate (*Mining*). The entrance from any point in a shaft to the workings of a mine.

in-line engine (*I.C. Engs.*). A multi-cylinder engine, consisting of a bank of cylinders mounted in line along a common crankcase.

in parallel (*Elec. Eng.*). See **parallel.**

in-phase (*Elec. Eng.*). Two alternating currents or voltages of the same frequency are said to be *in-phase* with each other when they reach their maximum values at the same instant.

in-phase component (*Elec. Eng.*) See **active component.**

in register (*Print., etc.*). See **register.**

in series (*Elec. Eng.*). See **series.**

in step (*Elec. Eng.*). See **step.**

in vitro (*Med.*). In a glass: in a test-tube; said especially of observations and experiments (e.g. on the action of drugs on bacteria) conducted outside the body.

in vivo (*Med.*). In the living body; said of observations of processes or actions (e.g. of drugs on bacteria) in the body.

In (*Chem.*). The symbol for *indium.*

in (*Timber*). See **eng.**

inactivation (*Chem.*). The destruction of the activity of a catalyst, serum, etc.

inactive gases (*Chem.*). See **rare gases.**

inanition (*Med.*). Exhaustion and wasting of the body from lack of food.

Inartic'ula'ta (*Zool.*). See **Ecardines.**

inarticulate (*Bot.*). Not jointed.

inband (*Masonry*). A header stone.

inband rybat (*Masonry*). A header stone laid to form the jamb of an opening.

inbreeding (*Zool.*). Breeding within the descendants of a foundation stock of related animals; endogamy.

inbye (*Mining*). The direction from a haulage way to a working face.

incandes'cence. The emission of light by a substance because of its high temperature, e.g. a glowing electric-lamp filament; or through ionisation or other cause, e.g. the glowing gas in a vacuum discharge tube. In the case of solids and liquids, there is a relation between the colour of the light and the temperature. Cf. *luminescence.*

incandescent lamp (*Illum.*). A lamp in which light is produced by heating some substance to a white or red heat; e.g. a filament lamp.

incandescent mantle (*Illum.*). See **gas mantle.**

incarna'tio un'guis (*Vet.*). Penetration of the heel-pad of dogs and cats by an abnormally incurved dew-claw.

incendiary. Tending to cause combustion.

incendiary bomb (*Ammunition*). **See Supplement.**

in'cept (*Bot.*). The rudiment of an organ.

incertum (*Masonry*). An early form of masonry work in which squared stones were used as a facing, with rubble filling as a backing.

inch, miner's (*Mining*). See **miner's inch.**

inch-tool (*Masonry*). A steel chisel having a cutting edge 1 in. wide, used by the mason for dressing stone.

inching starter (*Elec. Eng.*). An electric-motor starter in which provision is made for inching the motor, i.e. running it very slowly for such purposes as the threading of the paper in a printing press.

incidence, angle of (*Aero.*). See **angle of incidence.**

incidence indicator (*Aero.*). An instrument for measuring the angle between the longitudinal axis of an aircraft and its flight path. Not to be confused with *longitudinal clinometer.*

incipient plasmolysis (*Bot.*). The stage in plasmolysis when the cell wall is fully contracted, but when the protoplast has not yet shrunk away from the wall at any point.

incise (*Arch.*). To cut in: to carve.

incise, incised (*Bot.*). Cut sharply and rather deeply on the margin.

incised meander (*Geol.*). An intrenched winding or bend of a river, which results from renewed down-cutting at a period of rejuvenation.

incision (*Surg.*). The act of cutting into something: a cut made by a surgical knife.

inci'sors (*Zool.*). The front teeth of Mammals; they have a single root, are adapted for cutting, and are usually borne by the premaxilla.

incisu'ra (*Anat.*). A cut or notch. (Various notches in the body are thus designated.)

inclination (*Elec. Eng.*). See **dip.**

inclinato'rium (*Elec. Eng.*). See **dipping needle.**

incline (*Mining*). A sloping tunnel along which rails are laid from one level to another: a mechanically worked inclined haulage way in a coal-mine.

incline engine (*Mining*). A stationary haulage engine at the top of an incline.

incline man, incline braker (*Mining*). The man in charge of an incline in a coal-mine. Also called JINNIER.

inclined-carbon arc lamp (*Illum.*). An arc lamp in which the carbons are set at an angle to each other, as in some projector lamps and flame-arc lamps.

inclined-catenary construction (*Elec. Eng.*). A catenary construction for the overhead contact wire of an electric traction system; in it the catenary wire is not placed vertically above the contact wire.

inclined plane (*Mech.*). For a smooth plane inclined at an angle θ to the horizontal, the force parallel to the plane required just to move a mass up the plane is $mg \sin \theta$. The inclined plane may therefore be regarded as a machine having a velocity ratio of $\operatorname{cosec} \theta$.

inclined shore (*Carp.*). See **raking shore.**

inclining experiment (*Hyd. Eng.*). A practical method of determining the metacentric height and the height of the centre of gravity of a floating vessel; accomplished by observing the angle of heel of the vessel resulting from a measured transverse movement of a known weight across the deck.

inclinom'eter (*Surv., etc.*). An instrument for measuring ground and embankment slopes.

included (*Bot.*). Not projecting beyond the surrounding members.

included angle (*Surv.*). Either of the two angles between two survey lines meeting at a station.

inclusion. A particle or lump of foreign matter embedded in a solid.—Specifically (*Met.*), a particle of non-metallic material retained in a solid metal. Such inclusions are generally oxides, sulphides, or silicates of one or other of the component metals of the alloy, but may also be particles of refractory materials picked up from the furnaces or ladle lining.—(*Min.*) A foreign body (gas, liquid, glass, or mineral) enclosed by a mineral. See also **xenolith.**

inclusion (*Cyt.*). A body occurring in the cytoplasm of a cell. Inclusions may be of two kinds—*protoplasmic inclusions* (as the nucleus, the Golgi apparatus, etc.) and *deuteroplasmic inclusions* (as granules of secreted material, food particles, etc.).

inclusion bodies (*Med.*). Particulate bodies found in the cells of tissue infected with a filter-passing virus.

incoming (*Teleph.*). The indication of the direction of the passage of a call as it is set up, with respect to a position, a selector, or other apparatus in an exchange. Cf. *outgoing.*

incoming feeder (*Elec. Eng.*). A feeder in a substation through which power is received.

incompatibility (*Bot.*). (1) Any difference in the physiological properties of the protoplasts of a host and a parasite which limits or stops the development of the latter.—(2) Some difference, probably usually physiological, which prevents the completion of fertilisation.

incompetence (*Med.*). Inability to perform proper function; said especially of diseased valves of the heart which allow the blood to pass in the wrong direction; e.g. *aortic incompetence, mitral incompetence.*

Incomple'tae (*Bot.*). A group of dicotyledons in which the perianth is absent or incompletely developed; the group is not a natural one.

incomplete flower (*Bot.*). A flower in which the calyx and corolla (or one of these) are lacking.

incomplete metamorphosis (*Zool.*). In *Insecta*, a direct metamorphosis, i.e. a more or less gradual change from the immature to the mature state, a pupal stage being absent and the young forms resembling the parents, except in the absence of wings and mature sexual organs and occasionally in the possession of adaptive structure.

incomplete reaction (*Chem.*). A reversible reaction which is allowed to reach equilibrium, a mixture of reactants and reaction products being obtained.

incompressible volume (*Chem.*). See **co-volume.**

inconsequent drainage (*Geol.*). A river system which is essentially unrelated to the rocks over which it flows.

incontinence (*Med.*). Inability to retain voluntarily natural excretions of the body (e.g. faeces and urine): lack of self-control.

inco-ordination (*Med.*). Inability to combine muscular movements in the proper performance of an action, the component muscle groups working independently instead of together.

incras'sate, incras'sated (*Bot.*). Having thickened cell walls.

increaser (*Plumb.*). A coupling piece used to connect a large pipe to a small one.

incremental iron losses (*Elec. Eng.*). A term sometimes used to denote iron losses occurring in an a.c. machine due to frequencies higher than the fundamental; e.g. tooth pulsation losses.

incremental permeability (*Elec. Comm.*). The permeability of magnetic material when measured with small alternating magnetising forces, but polarised with a steady magnetising force. For small polarising magnetisations, the incremental permeability equals the initial permeability, which is always less than the differential permeability, but diminishes seriously when the polarising magnetisation approaches saturation.

incremental resistance (*Thermionics*). See **differential anode resistance.**

incrustation (*Bot.*). A coating of calcium carbonate, or less often of compounds of iron, on or in the walls of some *Algae.*

incrustation (*Masonry*). A term applied to a wall facing which is of different material from that forming the rest of the wall.

incubation (*Zool.*). The period intervening between the infection of a host by a parasitic organism and the appearance of the first symptoms: the process of causing eggs to hatch by the application of heat, natural or artificial.

in'cubous (*Bot.*). Said of the leaf of a liverwort when its upper border (the border towards the apex of the stem) overlaps the lower border of the next leaf above it and on the same side of the stem.

in'cudate (*Zool.*). (Of *Rotifera*) having the mallei reduced and the rami large and hooked.

incudec'tomy (*Surg.*). Removal of the incus by operation.

incumbent (*Bot.*). Said of a radicle which is bent over and lies on the back of one of the cotyledons.

incunab'ulum (*Print.*). Any book printed in the fifteenth century, i.e. in the infancy of printing.—*pl.* **incunabula.** (Lat. 'cradle.')

incur'rent (*Zool.*). Carrying an ingoing current; said of ducts, and, in certain *Porifera,* of canals leading from the exterior to the prosopyles or prosodi of the flagellated chambers.

incurved (*Bot.*). (1) Curved inwards.—(2) Campylotropous.

in'cus (*Zool.*). In Mammals, one of the ear-ossicles: in *Rotifera,* one of the masticatory ossicles of the mastax: more generally, any anvil-shaped structure.—*pl.* **incu'des.**

in'damines (*Chem.*). Derivatives of phenylated *p*-quinone-diimines. Important as intermediates in the production of azine and sulphide dyes.

indan'threne (*Chem.*). $C_{28}H_{14}O_4N_2$, N-dihydro-1, 2, 2′, 1′-anthraquinone-azine, an anthraquinone vat dyestuff, a dark-blue powder, practically insoluble in water and organic solvents; it is very stable and can be heated to 470° C. without melting or decomposition. Formed by fusion of 2-aminoanthraquinone with caustic potash at 200°-300° C., forming indanthrene A and indanthrene B, of which only the former is valuable. For dyeing purposes indanthrene is reduced by sodium hydrosulphite to the water-soluble salt of the dihydro derivative, and re-oxidised to indanthrene by exposure to air.

indecid'uate (*Zool.*). Said of Mammals in which the maternal part of the placenta does not come away at birth.

indefinite (*Bot.*). (1) Not fixed in number, but numerous.—(2) Not ending in a flower and theoretically capable of continued elongation.—(3) Racemose.

indehis'cent (*Bot.*). Not opening naturally when ripe.

indent (*Carp.*). A notch made in a timber.

indent (*Typog.*). To commence a line with a blank space, which in bookwork paragraphs may be 1, 1½, or 2 ems, according to the width of the line.

indentation test (*Build., Civ. Eng.*). A test for a paving, roofing, or roadmaking asphalt, in which a steady load is applied, under constant temperature conditions, to the asphalt surface, through the sector of a wheel resting upon it, the amount of indentation being measured after a fixed time.

indented bar (*Civ. Eng.*). A special type of reinforcing bar used in ferro-concrete work to provide a mechanical bond, and having for its full length a series of depressions and ridges all round. The depressions and ridges are arranged to be on opposite sides of the bar, so that the full section may be retained throughout the length.

indenter (*Civ. Eng.*). A roller having projections from its curved surface, so that, when it is rolled over newly laid asphalt paving, indentations shall be left in the latter surface to render it non-skid. Also called BRANDING IRON, CRIMPER.

independent axle-drive (*Elec. Eng.*). See **individual axle-drive.**

independent chuck (*Eng.*). A lathe chuck in which each of the four jaws is moved independently by a key; used for work of irregular shape, or when very accurate centring is necessary.

independent drive (*Radio*). A system in which the frequency of a transmitter is determined by an oscillator whose output is amplified and subsequently delivered to the antenna.

independent feeder (*Elec. Eng.*). A feeder in an electric-power distribution system which is used solely for supply to a substation or a feeding point, and not as an interconnector. Also called DEAD-ENDED FEEDER, RADIAL FEEDER.

independent heterodyne (*Radio*). An oscillator, electrically separate from the detector valve, employed for supplying the local oscillations used in heterodyne reception.

independent seconds watch (*Horol.*). A watch having an independent train for driving the seconds hand.

independent suspension (*Automobiles*). A springing system in which the wheels are not connected by an axle beam, but are mounted separately on the chassis through the medium of springs and guide links, so as to be capable of independent vertical movement.

independent time-lag (*Elec. Eng.*). See **definite time-lag.**

independent trip (*Elec. Eng.*). A tripping device for a circuit-breaker, starter, or similar apparatus, in which the current operating the device is independent of the current flowing in the circuit to which the device is connected.

independently heated cathode (*Thermionics*). See **equipotential cathode.**

indestructibility of matter (*Chem.*). See **law of conservation of matter.**

indeterminate (*Bot.*). (1) Without a distinct edge.—(2) Indefinite.

indeterminate (*Struct.*). Said of a structure which is *redundant* (q.v.). Cf. *determinate.*

index (*Horol.*). The regulating lever by means of which the rate of a watch may be adjusted. The lever is usually carried on the balance cock, and its short end carries the curb pins, the long end moving over a scale which indicates the amount of movement given to the curb pins. One end of the scale is marked *A* and the other end *R*. If the watch is losing the index is moved towards *A*, and vice versa.

index (*Paper*). A standard board size, 25½ × 30½ in.

index (*Surv.*). A simple plane table alidade, having sighting vanes at the ends.

index (*Typog.*). (1) The hand, or fist (☞).—(2) The detailed list of page references at the end of a book.

index, colour (*Photog.*). See **colour index.**

index error (*Surv.*). The observed angle of elevation shown on the vertical circle of a theodolite when the line of collimation is in fact horizontal.

index glass (*Surv.*). See **sextant.**

Index Limestone (*Geol.*). A thin yet constant limestone band in the Upper Limestone Group of the Lower Carboniferous rocks found in the Scottish Lowlands.

index of refraction or refractive index (*Light*). The ratio of the sine of the angle of incidence to the sine of the angle of refraction, for a ray of light passing through the surface separating two media. It is also equal to the ratio of the velocity of light in the first medium to that in the second. Unless otherwise stated, it is assumed that one of the media is a vacuum. μ or n is used as symbol for refractive index. See **Snell's law.**—(*Min.*) The determination of the refractive index by the immersion method or by the minimum deviation method with the aid of a spectrometer is a useful aid in the identification of mineral species.

indexing head (*Eng.*). A machine-tool attachment for rotating the work through any required angle, so that faces can be machined, holes drilled, etc., in definite angular relationship.

India paper (*Paper*). A thin, strong, opaque rag paper, made for Bibles and other books where many pages are required in a small compass.

india-rubber (*Chem.*). *Rubber* (q.v.).

india-rubber cable (or **wire**) (*Cables*). Cable or wire in which the insulation consists of pure or vulcanised india-rubber. A further protective or decorative cover of other material may be used in addition.

india-rubber gloves (*Elec. Eng.*). See **rubber gloves.**

Indian clinometer (*Surv.*). A clinometer adapted to plane-table work, consisting of a base adjustable for level and carrying upright sighting vanes at the two ends. The eye vane has simply a sighting hole, while the object vane has a long vertical slit in it, with graduations at the sides in degrees and natural tangents, the zero being horizontally in line with the eye hole, so that the inclination of a line of sight may be read off directly.

Indian cotton (*Textiles*). Cotton of ½ in. to 1 in. staple; chiefly used in India or exported to Japan. It is of low to medium quality.

Indian ink. Ink in a solid form made from lampblack mixed with parchment size or fish glue. Rubbed down in water it produces an intensely black permanent ink, used for line and wash-drawings, etc.

Indian Ocean. An ocean bounded by Africa, Asia, and Australia, and extending to the 40th parallel of south latitude. See **ocean depths,** etc.

Indian topaz (*Min.*). See **citrine.**

in'dianite (*Min.*). See **anorthite.**

in'dican (*Chem.*). (1) A glucoside, $C_{14}H_{17}NO_6$, which hydrolyses to glucose and indoxyl. It forms colourless leaflets, melting at 57° C. and soluble in water. It is obtained from the indigo and woad plants and from certain other *Leguminosae.*—(2) Indoxyl-sulphuric acid, $C_8H_6N{\cdot}O{\cdot}SO_2{\cdot}OH$, a normal constituent of urine.

indicanae'mia, indicane'mia (*Med.*). The presence of indican in the blood.

indicanu'ria (*Med.*). The presence of indican in the urine.

indicated horse-power (*Eng.*). (Of a reciprocating engine) the horse-power developed by the pressure-volume changes of the working agent within the cylinder; it exceeds the useful or brake horse-power at the crankshaft by the power lost in friction and pumping. Abbrev. **I.H.P.**

indicated mean effective pressure (*Eng.*). The average pressure exerted by the working fluid in an engine cylinder throughout the cycle, equal to the mean height of the indicator diagram in pounds per sq. in. Abbrev. **I.M.E.P.**

indicated thermal efficiency (*Eng.*). Of a reciprocating engine, the ratio between the heat energy equivalent to the indicated horse-power output and the heat energy supplied in the steam or fuel.

indicating instrument (*Elec. Eng.*). An electrical measuring instrument in which the value of the quantity being measured is indicated by the position of a pointer on a scale or by some similar device.

indicator (*Bot.*). A plant which grows under special conditions of climate, or on a particular soil, or in a particular community, and thus, by its presence, indicates the general nature of the habitat.

indicator (*Chem.*). (1) A substance whose colour depends on the acidity or alkalinity of the solution in which it is dissolved.—(2) Any substance used to indicate the completion of a chemical reaction, generally by a change in colour.

indicator (*Elec. Comm.*).
See **call—** **coded call—** **volume—**

indicator (*Elec. Eng.*). A signalling device, usually used in connexion with electric bells, to indicate in which of a number of circuits a signal has been made. Also called an ANNUNCIATOR.

See **charge—** **phase-sequence—**
leakage— **potential—**
maximum- **power-factor—**
demand— **indicating instrument.**

indicator (*Eng.*). An instrument for obtaining a diagram of the pressure-volume or pressure-time changes in an engine or compression cylinder during the working cycle.

See **cathode ray—** **optical—**

indicator (*Textiles*). An instrument of tachometer type used in cotton spinning to register the revolutions of a revolving shaft.

indicator card (*Eng.*). A specially prepared paper on which the diagram is drawn by a metallic style in the piston type of indicator.

indicator diagram (*Eng.*). A graphical representation of the pressure and volume changes undergone by a fluid, while performing a work-cycle in the cylinder of an engine or compressor, the area representing, to scale, the work done during the cycle. See **indicated mean effective pressure, light spring diagram.**

indicator exponent (*Chem.*). The *p*H-value at which the change of colour of an *indicator* (1) is most rapid.

indicator range (*Chem.*). The range of *p*H-values within which an *indicator* (1) changes colour.

indices of crystal faces (*Min.*). Numbers or letters used to define the position of crystal faces in space with reference to a set of chosen axes. With the Miller system of notation, the indices are the reciprocals of the parameters.

indicial admittance (*Elec. Comm.*). The current which flows in an electrical circuit when the Heaviside unit function electromotive force is applied. This determines the transient response of the circuit.

indic'olite or **indigolite** (*Min.*). A blue (either pale or bluish-black) variety of tourmaline.

indifferent (*Zool.*). Said of coloration in animals when it is inherited and is neither useful nor detrimental to the species; as the scarlet coloration of many deep-sea forms.

indifferent species (*Bot.*). A species which occurs in two or more distinct communities.

indigenous (*Zool.*). Native; not imported.

indigestion (*Med.*). A condition, marked by pain and discomfort, in which the normal digestive functions are impeded. The causes are very numerous.

in'digo (*Chem.*). $C_{16}H_{10}N_2O_2$, a dye occurring in a number of plants, especially in species of *Indigofera*, in the form of a glucoside. It is an indole derivative and its constitution is expressed by the following formula established by Baeyer:

Indigo is a very important blue vat dyestuff, and can be synthesised in various ways: (*a*) from *o*-nitrophenyl-acetic acid via *o*-aminophenyl-acetic acid, oxindole, isatin, isatin chloride; (*b*) from *o*-nitrobenzaldehyde and acetone via *o*-nitrophenyl-lactyl methyl ketone; (*c*) from aniline via phenylaminoacetic acid and indoxyl; (*d*) from naphthalene via phthalic acid, anthranilic acid, phenylglycine-*o*-carboxylic acid, indoxylic acid, indoxyl to indigo.

indigo copper (*Min.*). See **covellite.**

indig'olite (*Min.*). See **indicolite.**

indirect arc furnace (*Elec. Eng.*). An electric-arc furnace in which the arc is struck between two electrodes mounted above the charge, the latter being heated chiefly by radiation.

indirect fittings (*Illum.*). Lighting fittings which reflect practically all the light from the lamps contained in them into the upper hemisphere; used, therefore, for indirect lighting.

indirect heating (*Build.*). A system of heating by convection. Cf. *direct heating*.

indirect lighting (*Illum.*). A system of lighting in which more than 90% of the total light flux from the fittings is emitted in the upper hemisphere.

indirect ray (*Radio*). That ray of radiation which is reflected from the Heaviside layer on its way from the transmitter to the receiver. Also called INDIRECT WAVE, REFLECTED RAY, SKY WAVE, but preferably termed IONOSPHERIC RAY (or WAVE), the ray being strictly the geometrical path of the wave, perpendicular to the wave-front.

indirectly heated cathode (*Thermionics*). See **equipotential cathode.**

indirectly heated valve (*Thermionics*). A valve using an equipotential cathode.

indium (*Met.*). Symbol, In. A metallic element in the third group of the periodic system. At. no. 49, at. wt. 114·8, m.p. 155° C., sp. gr. 7·28 at 13° C., specific electrical resistivity 9 microhms per c.c. Found in traces in zinc ores The metal is soft and marks paper like lead; it forms compounds with carbon compounds.

individual (*Bot.*). Strictly, a plant derived from the development of a zygote; loosely, any separate plant.—(*Zool.*) A single member of a species: a single person or zooid of a colony of *Coelenterata* or *Polyzoa*: a single unit or specimen.

individual (or **independent**) **axle-drive** (*Elec. Eng.*). A term applied to the arrangement of an electric locomotive in which each driving axle is driven by a separate motor.

individual drive (*Elec. Eng.*). A system used for the electric operation of factories, in which each machine is driven by a separate electric motor. See also **individual axle-drive.**

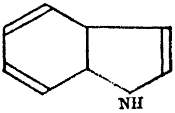
individual line (*Teleph.*). American name for *direct line* (q.v.).

individual psychology. The system of psychology, founded by Adler of Vienna, which stresses the feeling of inferiority as the main factor in neurosis, and the desire for power, as the driving force behind all psychic life, and even sexual life. Adler rejects Freud's conception of the unconscious and the libido, and sees in the goals of the future, rather than in the events in the past, evidence for the causation of neurosis.

individual trunk (*Auto. Teleph.*). A trunk which is used by one group only of a grading scheme.

individuation (*Zool.*). The formation of separate functional units which are mutually interdependent; as the formation of the zooids composing a colony.

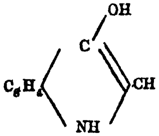
in'dole (*Chem.*). C_8H_7N, colourless plates, m.p. 52° C., b.p. (decomposition) 245° C., volatile in steam. Indole forms the basis of the indigo molecule, and its derivatives, e.g. skatole and tryptophane, are of importance in biochemistry as products formed by the decomposition of albuminous matter. It results from the condensation of a benzene nucleus with a pyrrole ring, and is thus



indolent (*Med.*). Causing little or no pain; e.g. *indolent* ulcer.

indophe'nols (*Chem.*) Derivatives of phenylated *p*-quinone mono-imines; similar in constitution to the indamines; used for dyeing cotton and wool.

indox'yl (*Chem.*). An indole derivative, an isomer of oxindole, yellow crystals, m.p. 85° C. The formula of indoxyl is



It is a very unstable compound which easily resinifies, and is readily oxidised to indigo by atmospheric oxygen.

induced charge (*Elec. Eng.*) An electric charge produced on a conductor as a result of a charge on a neighbouring conductor

induced current (*Elec. Eng.*). The current in an electric circuit which flows as a result of an induced e m f. in the circuit.

induced drag (*Aero.*). That fraction of the total drag of a part inevitably induced by its lift.

induced draught (*Eng.*). A forced draught system used for boiler furnaces, in which a fan placed in the uptake induces an air-flow through the furnace. See **balanced draught, exhausting fan.**

induced e.m.f. (*Elec. Eng.*). An e.m.f. produced in a circuit as a result of a change in the amount of magnetic flux linked with the circuit.

induced reaction (*Chem.*). A chemical reaction which is accelerated by the simultaneous occurrence in the same system of a second, rapid reaction.

inductance (*Elec. Eng.*).

See **inductor** **self-—**
distributed— **variable—**
mutual—

inductance coil (*Elec. Eng.*). See **inductor.**

inductance coupling (*Radio*). Coupling between two circuits by the inclusion of an inductance common to both.

inductance factor (*Elec. Eng.*). A term sometimes used to denote the ratio of the reactive current to the total current in an a.c. circuit, i.e. the *sine* of the angle of lag.

induction (*Elec. Eng.*). A term sometimes used to denote the density of an electric or magnetic field.

See **electromagnetic—** **mutual—**
electrostatic— **self-—**

induction (*Zool.*). The production of a definite condition by the action of an external factor.

induction coil (*Elec. Eng., etc.*). A transformer with a few turns on the primary and a large number of turns on the secondary, designed so that a high secondary voltage is produced when the current in the primary is broken, either automatically, as in the Ruhmkorff coil, or at timed intervals, as in the coil used for ignition in I.C. engines.

induction coil (*Teleph.*). The small transformer located in a subscriber's telephone circuit, on his premises, for isolating the microphone current from his receiver.

induction compass (*Aero.*). See **earth inductor compass.**

induction furnace (*Elec. Eng.*). An electric furnace for melting metals; in it the heat is produced by currents induced in the charge itself.

See **coreless—** **Ajax-Wyatt furnace.**
core-type—

induction generator (*Elec. Eng.*). An electric generator similar in construction and operation to an induction motor; in order to generate, it must be driven above synchronous speed and must be excited from the a.c. supply into which it is delivering power.

induction instrument (*Elec. Eng.*). An electrical measuring instrument in which the pointer is moved as the result of the interaction between an alternating flux produced by the quantity to be measured and currents induced by this flux in a disc.

induction lamp (*Elec. Eng.*). See **neon induction lamp.**

induction machine (*Elec. Eng.*). See **electrostatic generator.**

induction (or **inlet) manifold** (*I.C. Engs.*). In a multi-cylinder petrol-engine, the branched pipe which leads the mixture from the carburettor to each of the cylinders.

induction meter (*Elec. Eng.*). The most common type of a.c. integrating meter; it is a motor meter in which the torque is produced as the result of the interaction between an alternating flux and currents induced in a disc by this flux.

induction motor (*Elec. Eng.*). An a.c. motor in which currents in the primary winding (connected to the supply) set up a flux which causes currents to be induced in the secondary winding (usually the rotor); these currents interact with the flux to produce rotation. Also called ASYNCHRONOUS MOTOR.

See **double squirrel-cage—** **slip-ring—**
polyphase— **squirrel-cage—**
single-phase— **synchronous—**

induction motor-generator (*Elec. Eng.*). A motor-generator set driven by an induction motor.

induction period (*Chem.*). The interval of time between the initiation of a chemical reaction and its actual occurrence.

induction, photochemical (*Chem.*). See **photochemical induction.**

induction port, —valve, etc. (*I.C. Engs.*). The port, valve, etc., through which the charge is induced into the cylinder during the suction stroke; commonly called the INLET PORT (VALVE, etc).

induction regulator (*Elec. Eng.*). A voltage regulator having a winding connected in series with the supply; voltages are induced in this winding from a primary winding connected across the supply, and regulation of the voltage is carried out by varying the relative position of the two windings.

See **single-phase—** **three-phase—**

induction relay (*Elec. Eng.*). A relay, for use in an electrical circuit, in which the contacts are closed as the result of the interaction between an alternating flux and currents induced in a disc by this flux.

induction stroke (*I.C. Engs.*). The suction stroke, charging stroke, or intake stroke, during which the working charge or air is induced into the cylinder of an engine.

inductive (*Elec. Eng.*). Said of an electric circuit or piece of apparatus which possesses self or mutual inductance

inductive capacity (*Diel.*). Dielectric constant.

inductive coupling (*Elec. Comm.*). Coupling between two circuits by means of mutual inductance.

inductive drop (*Elec. Eng.*). Voltage drop produced in an a.c. circuit owing to its self or mutual inductance.

inductive load (*Elec. Eng*). See **lagging load.**

inductive reactance (*Elec. Eng.*). Reactance in an a.c. circuit caused by its inductance.

inductive reaction (*Radio*). See **electromagnetic reaction.**

inductive reasoning. The mental process which recognises uniformity in a set of observations, and thereby forms rules (scientific laws) which describe features in the observations which are revealed by the specified conditions.

inductive resistor (*Elec. Eng.*). A resistor having appreciable inductance.

inductor (*Chem.*). A substance which accelerates a slow reaction between two or more substances by reacting rapidly with one of the reactants.

inductor (*Elec. Eng.*). (1) A piece of apparatus used in an electric circuit because of the fact that it possesses inductance. Also called INDUCTANCE, INDUCTANCE COIL, REACTANCE COIL, CHOKING COIL.—(2) One of the rotating masses of magnetic material used to produce the necessary flux changes in an inductor generator.

inductor generator (*Elec. Eng.*). An electric generator in which the field and armature windings are fixed relative to each other, the necessary changes of flux to produce the e.m.f. being produced by rotating masses of magnetic material.

inductor loudspeaker (*Acous.*). A cone loudspeaker with an electromagnetic drive, in which the magnetic flux passes across gaps in which the driving pin attached to the apex of the cone is free to move. On the pin are located magnetic elements slightly displaced from the centre of the gaps, so that fluctuations in magnetic flux pull the pin normally to the direction across the gap.

in'dulines (*Chem.*). A sub-group of the azine dyestuffs, containing three or four amino groups, belonging to the class of diphenylamine dyestuffs; it is formed by the interaction of aniline hydrochloride and aminoazobenzene.

indumen'tum (*Bot.*). The general downy or hairy covering of a plant.—(*Zool.*) A covering of hair or feathers.

induplicate aestivation (*Bot.*). A form of valvate aestivation in which the edges of the perianth segments are turned inwards.

in'durated. Hardened, made hard.—*n.* **induration.**

indu'sium (*Bot.*). A protective structure associated with the sorus in a fern. It may be a group of hairs or of scales; it may be a cup-shaped structure around the base of the sorus; and it is frequently an umbrella-like scale completely covering the sorus.

indusium (*Zool.*). In some *Insecta*, a third embryonic envelope lying between the chorion and the amnion in the early stages of development of the egg: a cerebral convolution of the brain in higher Vertebrates: an insect larva case. —*adjs.* **indu'siate, indu'siform.**

industrial frequency (*Elec. Eng.*). A term used to denote the frequency of the alternating current used for ordinary industrial purposes, usually 50 or 60 cycles.

industrial reflector (*Illum.*). A lighting fitting, usually of conical shape and whitened or polished internally, suitable for industrial lighting.

inequality (*Astron.*). The term used to signify any departure from uniformity in orbital motion; it may be (1) *periodic*, that is, completing a full cycle within a specified time and then repeating it; (2) *secular*, that is, increasing steadily in magnitude with time.

inequi- (Latin *in*, not; *aequus*, equal). A prefix used in the construction of compound terms; e g. *inequivalve.*

ineq'uipo'tent (*Zool.*). Possessing different potentialities for development and differentiation.

ineq'uivalve (*Zool.*). Having the two valves of the shell unequal.

inert (*Chem.*). Not readily changed by chemical means.

inert cell (*Elec. Eng.*). A dry cell containing ingredients which only form an electrolyte when water is added.

inert filler (*Paint.*). A substance added to paint as an adulterant or to give it body; e.g. barytes, china clay, French chalk, gypsum, whiting.

inert gases (*Chem.*). See **rare gases.**

inertia (*Photog*). The exposure, in candle-metre-seconds, which is indicated for zero density when the linear portion of the gamma curve for an emulsion is extended.

inertia (*Mech., Phys.*). Reluctance of a body to change its state of rest or of uniform velocity in a straight line. Inertia is measured by *mass* when linear velocities and accelerations are considered; and by *moment of inertia* (q.v.) for angular motions (i.e. rotations about an axis).

inertia governor (*Eng.*). A shaft type of centrifugal governor employing an eccentrically pivoted weighted arm, which responds rapidly to speed fluctuations by reason of its inertia and in such a way as to suppress them.

inertia starter (*I.C. Engs.*). A device for turning an aero engine for starting purposes. A light flywheel is accelerated by hand, through gears, to a high speed, and a slow-speed shaft driven by it is then clutched in to the engine crankshaft.

infantile paralysis (*Med.*). See under **poliomyelitis.**

infan'tilism (*Med.*). A disturbance of growth, the persistence of infantile characters being associated with general retardation of development of mind and body.

infarct (*Med.*). That part of an organ which has had its blood supply cut off, the area so deprived undergoing necrosis.

infarction (*Med.*). The formation of an infarct: the infarct itself.

infection (*Med.*). The invasion of body tissue by living micro-organisms, with the consequent production in it of morbid change: a diseased condition caused by invasion of the body with living micro-organisms: the infecting micro-organism itself.

infection tube (*Bot.*). The germ-tube which penetrates the host from the germinating spore of a parasitic fungus.

infecundity (*Med.*). Sterility, barrenness.

infer-, infero- (Latin *inferus*, beneath). A prefix used in the construction of compound terms; e.g. *inferoposterior*, behind and below.

inferior (*Bot.*). (1) Said of the annulus of an agaric when it is placed low down on the stipe.—(2) Said of the gynaeceum of a flower when it is enclosed by the receptacle, so that the calyx, corolla, and stamens are developed above it.—(3) Said of the calyx, corolla, and stamens of a hypogynous flower.

inferior (*Zool.*). Lower; under; situated beneath; as the *inferior* rectus muscle of the eyeball. Cf. *superior.*

inferior conjunction (*Astron.*). See **conjunction.**

inferior figures or **letters** (*Typog.*). Small figures or letters set below the general level of the line; used mostly in chemical formulae, e.g. C_6H_5.

Inferior Oölite Series (*Geol.*). A local division of the rocks belonging to the Middle Jurassic System found in Gloucestershire and Wiltshire, which consist in part of oölitic limestones.

inferior planets (*Astron.*). See **planet.**

inferiority complex (*Psychol.*). Generally, a persisting state of feelings of inferiority; specifically (*Adler and the individual psychologists*), feelings of inferiority arising from some organ or limb defect: (*the Freudian school*) feelings of inferiority resulting from deprivation of love in childhood, this being frequently the main factor in the development of a psychoneurosis.

infero-. Prefix. See **infer-.**

inferobran′chiate (*Zool.*). Having the gills hidden under the margin of the mantle.

inferred zero (*Elec. Eng.*). See **suppressed-zero instrument.**

infestation (*Med.*). The condition of being occupied or invaded by parasites, usually parasites other than bacteria.

infibulation (*Med.*). The fastening of the external genital organs with a clasp.

infilling (*Build.*). Material, such as hardcore, used for making up levels; e.g. under floors.

infiltration (*Med.*). (1) The accumulation of abnormal substances (or of normal constituents in excess) in cells of the body.—(2) The gradual spread of infection in an organ (e.g. tuberculous *infiltration* of the lung).

infinite attenuation (*Elec. Comm.*). The property of some filters of providing a theoretically infinite attenuation for one or more specified frequencies, against which strong discrimination is required. See also **frequency of infinite attenuation.**

infinite gamma (*Photog.*). The same as *gamma infinity.*

infinite line (*Elec. Comm.*). A line of uniform constants which appears to be infinitely long, so that the end termination does not appreciably affect the sending impedance: a short line which is terminated in its characteristic impedance, so that none of the transmitted power is reflected back.

infinity plug (*Elec. Eng.*). A plug in a resistance box which, when withdrawn, breaks the circuit, i.e. introduces an infinite resistance.

infirmary (*Med.*). An institution for the surgical and/or medical treatment of disease.

inflammable air (*Chem.*). A general term once used to describe combustible gases such as hydrogen, hydrocarbons, etc. Now obsolete.

inflammation (*Med.*). The reaction of living tissue to injury or to infection, the affected part becoming red, hot, painful, and swollen, due to hyperaemia, exudation of lymph, and escape into the tissue of blood cells.

inflation (*Aero.*). The process of filling an airship or balloon with gas. Sometimes called GASSING.

inflected arch (*Civ. Eng.*). See **inverted arch.**

inflexed (*Bot., Zool.*). Curved or bent inwards.

infloresʹcence (*Bot.*). (1) In flowering plants, the part of the shoot which bears flowers.—(2) In *Bryophyta*, that part of the plant body which is differentiated to bear the antheridia and archegonia.

influence factor (*Teleph.*). See **telephone interference factor.**

influence line (*Struct., etc.*). An *influence line* for a structure is a curve the ordinate to which at any point represents the value of some variable (such as the bending moment) at another particular point in the structure, due to the presence of a unit load at the point where the ordinate is taken.

influence machine (*Elec. Eng.*). See **electrostatic generator.**

influenza (*Med.*). An acute infectious epidemic disease, attacking especially the upper respiratory tract; now thought to be due to infection with a filter-passing virus.

influenza, equine (*Vet.*). An acute contagious infection of equines due to a filterable virus.

influenza, swine (*Vet.*). An acute contagious infection of swine due to a filterable virus.

infra- (Latin *infra*, below). A prefix used in the construction of compound terms; e.g. *infrahyoid*, beneath the hyoid.

infrabaʹsal (*Zool.*). In *Crinoidea*, one of a whorl of perradial plates lying below the basals.

infrabranʹchial (*Zool.*) Below the gills; as part of the mantle chamber in *Pelecypoda.*

infraclavʹicle (*Zool.*). In some Fish, a membrane bone of the pectoral girdle.

infraclavicʹular (*Zool.*). Situated below the clavicle.

inʹfradyne (*Radio*). A form of super-heterodyne receiver, in which the intermediate frequency is higher than that of the incoming signal.

infra-epimʹeron (*Zool.*). In Insects, the lower part of the epimeron when that sclerite is subdivided.

infra-episterʹnum (*Zool.*). In Insects, the lower part of the episternum when that sclerite is subdivided.

inframarʹginal (*Zool.*). Below the margin: a marginal structure: in *Chelonia*, one of certain plates of the carapace lying below the marginals: in some Echinoderms, one series of ossicles situated on the lower margin of each ray.

infra-neusʹton (*Ecol.*). Aquatic animals associated with the under side of the surface-film; e.g. some Mosquito pupae

infraproteins (*Chem.*). Protein derivatives obtained by hydrolysis.

infra-red (*Phys.*). A term applied to invisible radiation of wavelength longer than 7600 A., the limit of the visible spectrum at the red end. Infra-red rays are heat rays, and may be investigated by means of thermal detectors such as the bolometer and thermo-couple, or by specially sensitised photographic emulsions.

infra-red emulsion (*Photog.*). A photographic emulsion which is sensitive to infra-red light, and capable of registering images, using infra-red rays, of objects when other more actinic and visible rays are filtered out.

infructesʹcence (*Bot.*). The inflorescence after the flowers have fallen and fruits have developed.

infundibuʹliform (*Bot.*). Tubular below, gradually enlarging upwards, i.e. funnel-shaped.

infundibʹulum (*Zool.*). A funnel-shaped structure: in *Vertebrata*, a ventral outgrowth of the brain: a pulmonary vesicle: in *Cephalopoda*, the siphon: in *Ctenophora*, the flattened gastric cavity.—*adj.* **infundibʹular.**

Infusorʹia (*Zool.*). See **Ciliophora.**

Ingenhausz's experiment, ingʹen-hows (*Heat*). Rods of different metals are coated with paraffin wax and their ends immersed in hot water. The relative rate at which heat is conducted along the rods is shown by the rate of melting of the wax.

ingestion (*Zool.*). The act of swallowing or engulfing food material (*ingesta*) so that it passes into the body.—*v.* **ingest.**

ingle-nook (*Build.*). A fireside corner.

ingluvies, —gloo-vēz (*Zool.*). An oesophageal dilatation of Birds; the crop.

ingluviʹtis (*Vet.*). Inflammation of the crop, or ingluvies, of Birds.

ingoing (*Build.*). A Scottish term for a *reveal* (q.v.).

Ingold cutter (*Horol.*). A special cutter used to correct inaccuracies in the teeth of a wheel.

ingot (*Met.*). A metal casting of a shape suitable for subsequent rolling or forging.

ingot iron (*Met.*). Iron of comparatively high purity, produced, in the same way as steel, in the open-hearth furnace, but under conditions that keep down the carbon, manganese, and silicon content.

ingot mould (*Met.*). The mould or container in which molten metal is cast and allowed to solidify in order to form an ingot.

ingot stripper (*Met.*). Mechanism for extracting ingots from ingot moulds.

ingot structure (*Met.*). The general arrangement of crystals in an ingot, which consists typically of chill crystals, columnar crystals, and equi-axed crystals. According to the relation between the mass and the temperature of the molten metal and mould respectively, one or two types of crystals may be absent.

ingrain (*Dec.*) A cheap type of wallpaper which is made from wood pulp and coloured with soluble dyes during the process of manufacture.

ingrain carpet (*Textiles*). See **Kidderminster carpet.**

ingraves'cent (*Med*). Gradually increasing in severity.

ingui'nal (*Zool*). Pertaining to, or in the region of, the groin.

inguinodyn'ia (*Med.*). Pain in the groin.

inha'lant (*Zool.*). Pertaining to, or adapted for, the action of drawing in a gas or liquid; as the *inhalant* siphon in some *Mollusca.*

inhalation (*Med.*). The act of breathing in, or taking into the lungs: any medicinal agent breathed into the lungs.

inhalato'rium (*Med.*). An institution for treating disease by administering inhalations.

inherent regulation (*Elec. Eng*). The change in voltage which takes place at the terminals of an electric generator, convertor, or transformer when the load is changed from no load to full load, all other conditions remaining the same. It is usually expressed as a percentage of the normal terminal voltage. See **regulation, regulation down.**

inherited memory (*Zool.*). See **instinct.**

inhibition (*Zool.*). The stopping or deceleration of a metabolic process; cf. *excitation.—adj.* **inhibitory.**

inhibitor (*Bot.*). A substance which limits or destroys the catalytic activity of an enzyme.—(*Chem.*) A substance which arrests or prevents a chemical reaction.

inhibitory (*Zool.*). Said of a nerve the stimulation of which results in the regulation of the activities of a muscle or gland in the direction of decrease.

inhibitory phase (*Chem.*). The protective colloid in a lyophobic sol.

Ini'omi (*Zool.*). An order of *Neopterygii* characterised by the possession of black or silvery soft fragile bodies, frequently provided with light organs; the air-bladder is small or absent, and there is usually an adipose fin; abyssal forms. Lantern-fish, Lizard-fish.

in'ion (*Anat.*). The external bony protuberance on the occiput, at the back of the skull.

initial cell (*Bot.*). A cell which remains meristematic, divides repeatedly, and gives rise to many daughter cells from which, after further divisions, the permanent tissues of the plant are differentiated.

initial consonant articulation (*Acous.*). See **articulation.**

initial permeability (*Elec. Comm.*). The permeability of magnetic material as measured with small alternating magnetising forces, without polarisation.

initial spindle (*Cyt.*). See **netrum.**

initiator (*Chem.*). The substance or molecule which starts a chain reaction.

injected (*Bot.*). Having the intercellular spaces filled with water.

injection (*Geol.*). The emplacement of fluid rock matter in crevices, joints, or fissures found in rocks. See **intrusive rocks.**

injection (*I.C. Engs.*). The process of spraying oil-fuel into the cylinder of a compression-ignition engine by means of an injection pump.

injection complex (*Geol.*). An assemblage of rocks, partly igneous, partly sedimentary or metamorphic, the former in intricate intrusive relationship to the latter, occurring in zones of intense regional metamorphism. British examples have been described by H. H. Read from the Highlands of Scotland.

injection condenser (*Eng.*). See **jet condenser.**

injection lag (*I.C. Engs.*). In a compression-ignition engine, the time interval between the beginning of the delivery stroke of the fuel injection pump and the beginning of injection into the engine cylinder.

injection moulding (*Plastics*). A method for the fabrication of thermoplastic materials. The viscous resin is squirted, by means of a plunger, out of a heated cylinder into a water-chilled mould, where it is cooled and removed. There is little or no flash.

injection valve (*I.C. Engs.*). See **injector, atomiser.**

injector (*Eng.*) A device by which a stream of fluid, as steam, is expanded to increase its kinetic energy, and caused to entrain a current of a second fluid, as water, so delivering it against a pressure equal to, or greater than, that of the steam; the steam injector is commonly used for feeding boilers. See also **air-ejector, Giffard's injector.**

ink. *Writing ink* usually consists of a fluid extract of galls or of other suitable vegetable materials, with the addition of solutions of iron salts. *Coloured writing inks* are prepared by dissolving suitable dyes in water. *Marking inks* are made from solutions of silver or copper compounds, aniline being sometimes added. See also **Indian ink, printing ink.**

ink sac (*Zool.*) In some *Cephalopoda,* a large gland, opening into the alimentary canal near the anus, which secretes a dark-brown pigment (sepia).

inkers (*Print.*). On a printing machine, the rollers which apply ink to the type surface.

inkies (*Photog.*). Colloquialism for the incandescent lamps in a motion-picture studio.

inlaid parquet (*Build.*). A floor-covering laid, on the ordinary floor boarding, in panels formed of hardwood blocks pressed on to a backing of softwood, one or two feet square.

inlay (*Dec., Furn.*). Wood, metal, ivory, or other material cut to pattern and sunk in a counterpart design on wood, metal, etc.

inlet port,—valve, etc. (*I.C. Engs.*). See **induction port,** etc.

inlier, in'li-er (*Geol.*). An outcrop of older rock surrounded by those of younger age.

innate (*Bot.*). (1) Sunken into the thallus, or originating within the thallus.—(2) Said of an anther which has the filament joined to its base only.

inner bead (*Join.*). See **guide bead.**

inner conductor (*Elec. Eng.*). (1) The central conductor of a concentric cable.—(2) The neutral conductor of a three-wire system.

inner dead-centre (*Eng.*). (Of a reciprocating engine or pump), the piston position at the beginning of the outstroke, i.e. when the crank-pin is nearest to the cylinder.

inner endodermis (*Bot.*). The endodermis internal to the vascular tissues in a solenostele.

inner glume (*Bot.*). See **pale.**

innervation (*Zool.*). The distribution of nerves to an organ.

innings (*Civ. Eng.*). Lands reclaimed from the sea.

innocent (*Med.*). Not malignant; not cancerous. See **tumour.**

innom'inate (*Zool.*). Without a name; as the *innominate artery* of some Mammals, which leads from the aortic arch to give rise to the carotid artery and the subclavian artery; the *innominate vein* of *Cetacea, Edentata, Carnivora,* and *Primates*, which leads across from the jugular-subclavian trunk of one side to that of the other; the *innominate bone*, which is the lateral half of the pelvic girdle.

innovation (*Bot.*). The portion of a branch added during one season of growth.

inoc'ular (*Zool.*). Having the insertion of the antenna close to the eye.

inoculation (*Bot.*). (1) The conveyance of infection to a host plant by any means of transmission.—(2) The entry of the germ tube of a parasitic fungus into the host plant.—(3) The placing of spores or portions of growing fungi or bacteria in a culture medium.

inoculation (*Chem.*). The introduction of a small crystal into a supersaturated solution or supercooled liquid in order to initiate crystallisation.

inoculation (*Med.*). The introduction into an experimental animal, by various routes, of infected material or of pathogenic bacteria: the injection of a vaccine into a person for protection against subsequent infection with the organisms contained in the vaccine.

inoc'ulum (*Med.*). The material used in inoculation.

inop'erable (*Med.*). Not suitable for operation.

inoper'culate (*Bot.*). Lacking a lid to the sporangium.

inordinate (*Bot.*). Not arranged in any definite order.

inorganic chemistry (*Chem.*). The study of the chemical elements and their compounds, other than the compounds of carbon, with the exception of the oxides and sulphide, these generally being included in inorganic chemistry.

in'osite (*Chem.*). A synonym for *inositol* (q.v.).

ino'sitol (*Chem.*). $C_6H_6(OH)_6$. Four out of a possible nine stereoisomeric forms of hexahydroxy-*cyclo*hexane are known by this name: *meso*-inositol, *d*-inositol, *l*-inositol, *d-l*-inositol. The first-named is found in both animals and plants. Inositol is essential for the growth of certain yeasts.

input impedance (*Radio, Thermionics*). The impedance measured between the pair of terminals connected to the grid and cathode of a thermionic tube device, either directly or through a transformer or other coupling device. In the case of a thermionic tube alone, it is the impedance offered by the parallel combination of the conductance and capacitance paths between the grid and all other electrodes.

input transformer (*Elec. Comm.*). A transformer which is designed to operate between a stated source-impedance and the grid of a valve with a given response.

input voltage (*Radio*). The voltage impressed on the control electrode of a thermionic tube, either directly or through a transformer or like circuit.

in'quiline (*Zool.*). A guest animal living in the nest of another animal, or making use of the food provided for itself or its offspring by another animal.

insanity (*Psychiatry*). A medico-legal term used for any mental disorder, usually endogenous, which causes an individual to act against the social or legal demands of the society in which he lives. Not identical with *psychosis* (q.v.).

inscribe. To draw one plane figure so that it is enclosed within another.

insculpt', insculp'tate (*Bot.*). Bearing holes or depressions in the surface.

Insecta (*Zool.*). A subphylum of mainly terrestrial *Arthropoda* which breathe by tracheae; they possess uniramous appendages; the head is distinct from the thorax and bears one pair of antennae; there are three pairs of similar legs attached to the thorax, which may also bear wings; the body is sharply divided into head, thorax, and abdomen.

Insectiv'ora (*Zool.*). An order of small, mainly terrestrial Mammals having numerous sharp teeth, tuberculate molars, well-developed collar-bones, and plantigrade unguiculate pentadactyl feet; insectivorous. Shrews, Moles, and Hedgehogs.

insectiv'orous (*Zool.*). Insect-eating.

in'selberg (*Geol.*). A steep-sided eminence arising from a plain tract; often found in the semi-arid regions of tropical countries.—*pl.* **inselberge.**

insemination (*Zool.*). The approach of the spermatozoon to the ovum, and its subsequent entry, followed by the fusion of the male and female pronuclei.

insert (*Bind.*). See **inset.**

insert (*Cinema.*). A simple shot (e.g. close-up of a letter) which is inserted into a sequence, specifically to give information to the audience.

inserted (*Bot.*). Growing out of another member.

insertion (*Bot.*). (1) The place where one plant member grows out of another, or is attached to another.—(2) The manner of attachment.

insertion (*Lace*). Lace used in connexion with a fabric, often at or near the border, for the purpose of ornamentation. It is narrow, with a plain edge to permit of its insertion in the fabric.

insertion (*Zool.*). The point or area of attachment of a muscle, mesentery, or other organ.

insertion gain (*Elec. Comm.*). The gain in delivered power into a load from a source, because of the introduction of a matching network or transformer between the source and the load.

insertion joint (*Eng.*). Special material used for making watertight joints between the flanges of pipes; it consists usually of rubber-coated canvas or of pure rubber.

insertion loss (*Elec. Comm.*). The loss, in decibels, of the power supplied from a source to a load when a network or transformer is inserted between them.

insertion region (*Bot.*). The part of a chromosome where it is attached to a spindle fibre.

insesso'rial (*Zool.*). Adapted for perching.

inset or **insert** (*Bind.*). (1) An extra leaf or section loosely inserted in a book.—(2) One folded sheet put inside another; an *insetted* (or *inserted*) *book* is one having its sections placed one within the other.

inset (*Mining*). The opening from the mine shaft to a seam of coal.

inside (*Textiles*). In the lace industry the term is used comprehensively for the points, combs, guides, jacks, and trucks, which constitute the chief features of a lace machine.

inside callipers (*Eng*). *Callipers* (q.v.) with the points turned outwards, used for taking inside dimensions.

inside-colour-sprayed lamp (*Illum.*). An electric filament lamp the bulb of which is sprayed on the inside with a white or coloured material in order to diffuse the light and give it a coloured effect.

inside crank (*Eng.*). A crank, with two webs, placed between bearings, as distinct from an outside or overhung crank.

inside cylinders (*Eng.*). In a locomotive, those cylinders which are fixed inside the frame.

inside-frosted lamp (*Illum.*). An electric filament lamp the bulb of which is etched or sand-blasted on the inside in order to diffuse the light. Also called a PEARL LAMP.

inside lap (*Eng.*). See **exhaust lap.**

inside lead (*Eng.*). The amount by which the exhaust port of a steam-engine is opened by the slide valve, when the piston is at the bottom dead-centre.

insides (*Paper*). The eighteen quires inside a ream of paper, the top and bottom quires being known as *outsides*; composed entirely of 'good' sheets.

insidious (*Med*.). (Of a disease) coming on gradually.

insistent (*Zool.*). (In Birds) said of the hind toe when it is so placed that only the tip touches the ground.

insolation (*Med.*). Sunstroke. It results from exposure of the head and the neck to the direct rays of the sun, and is characterised by high fever, headache, and mental excitement, followed by unconsciousness.

insolation (*Meteor.*). The radiation received from the sun. This depends on the position of the earth in its orbit, the thickness and transparency of the atmosphere, the inclination of the intercepting surface to the sun's rays, and the *solar constant* (q.v.).

insol'ilith (*Geol.*). A pebble, more or less rounded, with a rough surface produced by cracking under exfoliation due to insolation. (Term applied (1934) by F. Raw to Triassic specimens.)

insoluble (*Chem*.). Incapable of being dissolved. Most insoluble salts have a definite, though very limited, solubility.

inspection chamber (*San. Eng.*). A pit formed at regular points in the length of a drain or sewer, in order to give access for purposes of inspection.

inspection fitting (*Elec. Eng.*). A bend, elbow, or tee used in a conduit wiring system, which is fitted with a removable cover to facilitate the drawing-in of the wires and subsequent inspection.

inspection gauges (*Eng.*). Gauges used by the inspection department of a works for testing the accuracy of finished parts before assembly.

inspection junction (*San. Eng.*). A special length of drain-pipe having a branch socket into which a short vertical pipe, reaching up to ground-level, can be fitted to provide a means of access for inspection.

inspection-lamp (*Illum.*). See **hand-lamp.**

inspection plug (*Elec. Eng.*). A plug fitted in the cover of an accumulator, through which the electrolyte can be inserted and its level observed.

inspersed (*Bot.*). Having granules penetrating the substance of the thallus.

inspiration (*Zool.*). The drawing-in of air or water to the respiratory organs.

inspissation (*Chem.*). The thickening of a liquid by evaporation.—(*Med.*) The thickening of pus as a result of the removal of fluid.

instability (*Aero.*). An aircraft possesses *instability* when any disturbance of its steady motion tends to increase, unless it is overcome by a movement of the controls by the pilot.

See **rolling—**
spiral—
weathercock—

instability (*Mech.*). See under **equilibrium.**

installation (*Elec. Eng.*). The wiring, and its associated apparatus, for the supply of electrical energy throughout a building.

instantaneous carrying-current (*Elec. Eng.*). (Of switches, circuit-breakers, and similar apparatus) the maximum value of current which the apparatus can carry instantaneously.

instantaneous fuse (*Demolitions*). A fuse for transmitting a detonating wave instantaneously from point to point. Cf. *safety fuse.*

instantaneous photography (*Photog.*). Photography using cameras with very short automatic exposures, as contrasted with time-exposures.

instantaneous recording (*Acous.*). A system of recording and reproducing which does not involve appreciable delay in processing.

instantaneous value (*Elec. Eng.*). A term used in connexion with alternating quantities (e.g. current, voltage, or power) to denote the value of the quantity concerned at some particular instant in the cycle.

instantaneous water-heater (*Build.*). A *geyser* (q.v.).

instar (*Zool.*). The form assumed by an Insect during a particular stadium.

instinct (*Psychol.*). An innate force in an organism attaching to certain biological ends, such as self-preservation and reproduction. These are the two most fundamental instincts; others are fear, pugnacity, curiosity, ambition, and acquisitiveness.

instinct (*Zool.*). A complex co-ordination of reflex actions which results in the achievement of adaptive ends without foresight or experience.

instrument (*Elec. Eng.*). A term generally employed to denote an indicating instrument but also used to denote other pieces of small electrical apparatus.

instrument room (*Teleg.*). The room in which is located, generally on racks, all the apparatus not immediately required by the operators.

instrument-transformer (*Elec. Eng.*). A transformer for use in conjunction with measuring instruments or similar apparatus. See **current-transformer, voltage-transformer.**

insufflation (*Med.*). The action of blowing gas, air, vapour, or powder into a cavity of the body; e.g. into the lungs.

in'sufflator (*Med.*). An instrument used for insufflation.

in'sula (*Zool.*). See **Reil's island.**

in'sulance (*Elec. Eng.*). See **insulation resistance.**

in'sulant (*Elec. Eng.*). See **insulating material.**

insulated (*Build.*). Said of any building or column which stands detached from other buildings.

insulated bolt (*Elec. Eng.*). A bolt having a layer of insulating material around its shank.

insulated clip (*Elec. Eng.*). A clip, incorporating an insulated eye, used for supporting flexible electrical connexions.

insulated eye (*Elec. Eng.*). An eye for supporting flexible electric connexions; it has an insulating bush to prevent these from making contact with the metal.

insulated hanger (*Elec. Eng.*). A hanger for the trolley wire of an electric traction system, which insulates the contact wire from the main supporting system.

insulated hook (*Elec. Eng.*). A hook terminating in an insulated eye through which flexible electric connexions may be passed and supported.

insulated neutral (*Elec. Eng.*). A term used to denote (1) the neutral point of a star-connected generator or transformer when it is not connected to earth directly or through a low impedance; (2) the middle wire of a three-wire distribution system when the wire is an insulated cable.

insulated pliers (*Elec. Eng.*). Pliers having the handles covered with insulating material; used by electricians in order to avoid electric shocks when working on live conductors.

insulated-return system (*Elec. Eng.*). A system of supply for an electric traction system, in which both the outgoing and the return conductors are insulated from earth.

insulated screw-eye (*Elec. Eng.*). A screw terminating in an insulated eye through which flexible electric connexions may be passed and supported.

insulated system (*Elec. Eng.*). A system of electric supply in which each of the conductors is insulated from earth for its normal voltage.

insulated wire (*Elec. Eng.*). A solid conductor insulated throughout its length.

insulating beads (*Elec. Eng.*). Beads of glass or similar material strung over a bare conductor in order to provide an insulating and heat-resisting covering which is also flexible.

insulating compound (*Elec. Eng.*). An insulating material which is liquid at fairly low temperatures so that it can be poured into joint-boxes of cables and other similar pieces of apparatus and then allowed to solidify.

insulating lacquer (*Elec. Eng.*). See **insulating varnish.**

insulating material (*Elec. Eng.*). Material which offers a high resistance to the passage of an electric current; usually of a vitreous or resinous nature. Also called DIELECTRIC, INSULANT, INSULATION, INSULATOR.

insulating oils (*Elec. Eng.*). Special types of oil having good insulating properties; used for oil-immersed transformers, circuit-breakers, etc.

insulating tape (*Elec. Eng.*). Tape impregnated with insulating compounds, frequently adhesive; used for covering joints in wires, etc.

insulating varnish (*Elec. Eng.*). A type of varnish which has high insulating properties. The lighter forms are often called INSULATING LACQUER.

insulating water-bottle (*Ocean.*). An instrument used for the accurate determination of the temperature of the sea at moderate depths. Also called NANSEN-PETTERSSON WATER-BOTTLE.

insulation resistance or **insulance** (*Elec. Eng.*). The resistance between two conductors, or between a conductor and earth, when they are separated only by insulating material. See **fault resistance.**

insulation test (*Elec. Eng.*). A test made to determine the insulation resistance of a piece of apparatus or of a system of electric conductors.

insulation tester (*Elec. Eng.*). An instrument for measuring insulation resistance. See **megger, ohmmeter.**

insulator (*Elec. Eng.*). An appliance used to insulate a conductor from earth, or from another conductor, and frequently also serving to support the conductor.

See **accumulator—**
cap-and-pin-type—
conductor-rail—
fog-type—

swan-neck—
tension—

insulator arcing horn (*Elec. Eng.*). A metal projection placed at the upper and lower ends of a suspension-type or other insulator, in order to deflect an arc away from the insulator surface.

insulator cap (*Elec. Eng.*). A metal cap placed over the top of a suspension insulator, which serves to attach it to the next insulator in the string.

insulator pin (*Elec. Eng.*). The central metal support of a pin-type insulator, or the metal projection on the under side of a suspension-type insulator, serving to attach it to the cap of the next unit in the string.

insulator rating number (*Diel.*). The voltage (in kilovolts) used in the 'thirty-seconds rain test.'

in'sulin (*Med.*). A hormone produced by the islets of Langerhans of the pancreas. It is a protein-like substance, readily destroyed by trypsin and pepsin, but when applied subcutaneously or intravenously it induces immediately combustion of the sugar content of the blood. It is obtainable in a crystalline form, and the following tentative empirical formula has been assigned to it: $C_{90}H_{138}O_{28}N_{22}S_2+6H_2O$.

intaglio, in-tal'yō (*Print.*). A printing process in which the ink-carrying areas of the printing surface are hollows below the surface. The thickness of the layer of ink transferred to the paper varies according to the depth of the hollow, giving very rich effects.

intake (*Build.*). A Scottish term for an *offset.*

intake (*Mining*). The road through which the fresh air is conducted to the working places in a mine.

intake belt course (*Masonry*). A projecting course of stones or bricks, serving as an intake at a place where the thickness of a wall is diminished.

integral calculus (*Maths.*). The inverse of the *differential calculus* (q.v.), its chief concern being to find the value of a function of a variable when its differential coefficient is known. This process, termed *integration*, is used in the solution of such problems as finding the area enclosed by a given curve, the length of a curve, or the volume enclosed by a given surface.

integral, Fourier (*Elec. Comm.*). See **Fourier integral.**

integrating meter (*Elec. Eng.*). An electrical instrument which sums up the value of the quantity measured with respect to time.

See **integrating frequency meter**
energy meter
volt-ampere-hour meter
reactive volt-ampere-hour meter.

integrating frequency meter (*Elec. Eng.*). A meter which sums the total number of cycles of an a.c. supply in a given time. Also called a MASTER FREQUENCY METER.

integrating photometer (*Illum.*). A piece of apparatus which, together with a photometer, enables the total luminous flux emitted from a source of light to be obtained from a single reading of the photometer.

integration (*Maths.*). See **integral calculus.**

integripal'lial, integripal'liate (*Zool.*). (Of Mollusca) having a smooth mantle line, i.e. with siphons small or absent.

integ'ument (*Bot.*). (1) One or more cell layers covering the ovule, leaving only a small pore, the *micropyle.*—(2) The seed-coat or testa.—*adj.* **integumented.**

integument (*Zool.*). A covering layer of tissue: especially, the skin.

intelligence quotient (*Psychol.*). The ratio, expressed as a percentage, of an individual's mental age to his actual age; the mental age being the age for which he scores 100% when tested in a specified manner, e.g. by the Binet tests. Abbrev. **I.Q.**

intelligibility (*Teleph.*). Intelligibility, intelligibility of words, and intelligibility of phrases, is the percentage of words correctly received in a continuous conversation, or of isolated words and isolated sentences, respectively, when these are called regularly over a telephone circuit.

intensification (*Photog.*). The increase of contrast in a negative or print, obtained by further deposit (e.g. of mercury) on the exposed parts.

intensity modulation (*Television*). Modulation of the luminosity of the fluorescent screen of a cathode ray tube by variation of the current carried in the beam. Cf. *velocity modulation.*

intensity of field (*Elec. Eng.*). The vector quantity by which an electric or magnetic field at a point is measured. Precisely, it is the same number of units of intensity as the force in dynes on a unit charge (unit electric charge or unit fictitious pole) placed at the point in the electric or magnetic field respectively.

intensity of magnetisation (*Elec. Eng.*). This is defined as the magnetic moment per cubic centimetre, and is proportional to the amount of additional magnetisation present in a magnetic circuit due to the presence in that circuit of material having a permeability greater than unity.

intensity of pressure (*Hyd.*). The pressure exerted by a fluid upon a unit area.

intensity of sound (*Acous.*). The magnitude of a sound-wave, measured by the transmitted power, in ergs per second, through a square centimetre which is normal to the direction of propagation.

intensive reflector (*Illum.*). A reflector for incandescent lamps, of such a shape as to produce an intense illumination at the point where it is required.

intention tremor (*Med.*). Tremor of the arms on carrying out a voluntary movement, indicative of disease of the nervous system.

inter- (Latin *inter*, between). A prefix used in the construction of compound terms; e.g. *intermandibular*, between the rami of the mandibles.

interaction factor (*Elec. Comm.*). That fraction of the insertion loss between a source and a load, when a network is interposed, which is not due to reflection at the ends of the network or to attenuation within it.

interaction loss (*Elec. Comm.*). The decibel loss in power level due to the *interaction factor* (q.v.).

interam'bula'crum (*Zool.*). In *Echinodermata*, especially *Echinoidea*, the region intervening between two ambulacral areas.—*adj.* **interambulacral.**

interbreeding (*Gen.*). Experimental hybridisation of different species or varieties of animals or plants.

intercalar'e (*Zool.*). A cartilage or ossification lying between the basiventrals, or between the basidorsals of the vertebral column: intercentrum.

intercala'rium (*Zool.*). In *Ostariophysi*, one of the Weberian ossicles.

interca'lary (*Bot.*). Lying between other bodies in a row, or placed somewhere along the length of a stem, filament, or hypha.

intercalary cell (*Bot.*). A small cell between two aecidiospores, which disintegrates as the spores ripen, and breaks down as they are set free.

intercalary meristem (*Bot.*). A meristem located somewhere along the length of a plant member, and by its activity giving *intercalary growth.*

intercalate' (*Zool.*). To add, to insert; as an *intercalated somite.*—*adj.* **interca'lary.**

intercel'lular (*Zool.*). Between cells, as the *intercellular* matrix of connective tissue.

intercellular mycelium (*Bot.*). The mycelium of a parasitic fungus which inhabits the intercellular spaces of the host plant.

intercellular space (*Bot.*). A space, usually containing air, between cells in a tissue. It may be formed by the partial separation of the cells, by the extensive separation of cells, or by the breakdown of cells.

intercen'trum (*Zool.*). In those types of vertebral column which possess two rings to each myotomic somite, the ring without arches. Also termed HYPAPOPHYSIS.

interceptor or **intercepting trap** (*San. Eng.*). A trap fitted in the length of a house drain, close to its connexion to the sewer, which provides a water seal against foul gases rising up into the drain. Also called a DISCONNECTOR.

interchange (*Cyt.*). The mutual transfer of portions between two chromosomes.

interchon'dral (*Zool.*). Said of certain ligaments and articulations between the costal cartilages.

interclav'icle (*Zool.*). In Vertebrates, a bone lying between the clavicles, forming part of the pectoral girdle.

intercolumniation (*Build.*). The distance between the columns in a colonnade, in terms of the lower diameter of the columns as a unit.

interconnected star connexion (*Elec. Eng.*). See **zigzag connexion.**

interconnecting (*Auto. Teleph.*). The commoning of outlets for the bank multiples of selectors on different shelves, when there is an insufficiency of outlets for full availability. See **grading.**

interconnector or **interconnecting feeder** (*Elec. Eng.*). A feeder which serves to interconnect two substations or generating stations, and along which energy may flow in either direction.

intercooler (*Eng.*). A cooler, generally consisting of water-cooled tubes, interposed between successive cylinders or stages of a multi-stage compresser or blower, to reduce the work of compression.

intercos'tal (*Zool.*). Between the ribs.

intercrystalline failure (*Met.*). This refers to metal fractures that follow the crystal boundaries instead of passing through the crystals, as in the usual transcrystalline fracture. It is frequently due to combined effect of stress and chemical action, but may be produced by stress alone when the conditions permit a certain amount of recrystallisation during the test.

interdeferen'tial (*Zool.*). Between the vasa deferentia.

interden'til (*Build.*). The space between successive *dentils* (q.v.).

interdigital cysts, —dij'it-al (*Vet.*). A vesicular eruption in the interdigital space of one or more feet of dogs; the cause is unknown.

interdor'sal (*Zool.*). An intercalary element lying between adjacent basidorsals of the vertebral column.

inter-electrode ' capacity (*Thermionics*). The capacity of the condenser system formed by any two of the electrodes of a thermionic tube. That of the anode-grid system is usually the most important.

interface (*Chem.*). The surface of separation of two phases.

interfacial surface tension (*Phys.*). The *surface tension* (q.v.) at the surface separating two non-miscible liquids.

interfascic'ular cambium (*Bot.*). A strand of cambium between two adjacent vascular bundles. The formation of interfascicular cambium is the first stage in the normal secondary thickening of a stem.

interference (*Aero.*). The aerodynamic influence of one body upon another. Usually, the head resistance, or drag, of two bodies placed close together will be greater than the total of their separate drags, because of interference.

interference (*Elec. Comm.*). The introduction of electromotive forces, and consequent currents in communication circuits, by electrostatic or electromagnetic induction from external currents (generally in power-lines or traction systems, or from disturbances on these).—(*Radio*) Any signal—whether naturally generated, such as atmospherics, or generated by radio transmitters or electrical machinery—other than that to which it is intended that a radio receiver should respond.

interference (*Phys.*). The effect of superposing two or more trains of waves of equal wavelength. The resultant amplitude is the algebraic sum of the amplitudes in the interfering trains. When two sets of circular waves interfere, a system of hyperbolic stationary nodes and antinodes is formed, which in optics are known as *interference fringes* (q.v.).

interference colours (*Light*). See **colours of thin films.**

interference factor (*Teleph.*). See **telephone interference factor.**

interference figure (*Min.*). The more or less symmetrical pattern of concentric rings or lemniscates, cut by a black cross or hyperbolae, exhibited by a section of anisotropic mineral when viewed in convergent light between crossed nicols. See also **uniaxial** and **biaxial crystal.** Sometimes called the DIRECTIONS IMAGE.

interference fringes (*Light*). Alternate light and dark bands which are seen when two beams of homogeneous light having a constant phase relation overlap and illuminate the same portion of a screen. For methods of producing and utilising optical interference fringes, see **Fresnel's bi-prism, Lloyd's mirror, Fabry and Pérot interferometer, Newton's rings.** See also **interference** (*Phys.*).

interfering (*Vet.*). An injury inflicted by a horse's foot on the opposite leg during progression.

interferom'eter (*Light*). An instrument used for comparing optical wavelength with a standard of length, by means of interference fringes. See **Fabry and Pérot interferometer, Michelson interferometer.** The name may also be applied to any measuring instrument which employs interference fringes. See **stellar interferometer.**

interfil'amen'tar (*Zool.*). Between the filaments; as the junctions between the filaments of the gills in *Pelecypoda.*

in'terfluve (*Geol.*). A ridge separating two parallel valleys.

interfron'tal (*Zool.*). In some *Amphibia,* a bone lying between the frontal and the nasals.

interglacial period (*Geol.*). A period of milder climate ensuing between two glacial periods.

intergranular corrosion (*Met.*). Corrosion in a polycrystalline mass of metal, taking place preferentially at the boundaries between the crystal grains. This leads to disintegration of the metallic mass before the majority of the metal has been attacked by the corrosive agent.

intergranular texture (*Geol.*). A texture characteristic of holocrystalline basalts and doleritic rocks, due to the aggregation of augite grains between feldspar laths arranged in a network.

inter'gular (*Zool.*). In *Chelonia,* an unpaired shield anterior to the gulars.

interhyal, —hi'al (*Zool.*). In some Fish, a small cranial bone lying between the hyomandibular and the rest of the hyoid.

interkine'sis (*Cyt.*). See **intermitosis.**

interlaced fencing (*Build.*). See **interwoven fencing.**

interlaced scanning (*Television*). A form of line scanning; the image is alternately scanned in two sets of lines in successive frames, the lines of one frame falling midway between those of the next.

interlamel'lar (*Zool.*). Between the lamellae; as the junctions between the lamellae of the gills, in certain *Pelecypoda.*

in'terlay (*Typog.*). Paper inserted between a printing plate and its mount in order to raise the plate to type height.

interlo'bar (*Med.*). Situated or happening between two lobes, especially between two lobes of the lung.

in'terlock (*Elec. Eng.*). An electrical or mechanical device used in connexion with electrical control gear to make the operation of one piece of the equipment dependent on that of another.

interlock (*Textiles*). A double-faced knitted fabric of smooth texture, generally made from single cotton yarn of fine counts.

interlock system (*Cinema*). The arrangement for the synchronous drive of cameras and sound recorders in the Western Electric system; in it all such drives are switched on to a special main from a three-phase generator, which is started by a motor and brings all the motors on the line up to speed in synchronism.

intermat (*Textiles*). A term applied to fibres which are liable to become matted easily; e.g. wool.

intermaxil'la (*Zool.*). See **premaxillary.**

intermaxil'lary (*Zool.*). Pertaining to the premaxilla: between the maxillaries.

intermediate (*Chem.*). A general term for any chemical compound which is manufactured from a substance (see **primary**) obtained from natural raw materials, and which serves as a starting material for the synthesis of some other product; e.g a number of substituted benzene-sulphonic acids are intermediates for dyestuffs.

intermediate circuit (*Radio*). A closed tuned circuit used for coupling an antenna to a transmitter or receiver.

intermediate constituent (*Met.*). A constituent of alloys that is formed when atoms of two metals combine in certain proportions to form crystals with a different structure from that of either of the metals. The proportions of the two kinds of atoms may be indicated by formulae, e.g. CuZn; hence these constituents are also known as *intermetallic compounds.*

intermediate distribution frame (*Teleph.*). A frame inserted between the main distribution frame and the exchange proper to combine additional circuits with the pairs, before they appear on the switchboard in front of the operators. Abbrev. **I.D.F.**

intermediate frequency (*Radio*). The frequency of the carrier wave of the output from the frequency changer of a supersonic heterodyne receiver. It is equal to the difference between (or in some cases the sum of) the frequencies of the incoming signal and that of the locally generated oscillation.

intermediate frequency amplifier (*Radio*). The amplifier in a supersonic heterodyne receiver which immediately follows the frequency changer. It amplifies the signal after its carrier frequency has been changed to the intermediate frequency, prior to its entry into the second detector.

intermediate frequency oscillator (*Radio*). An oscillator generating an oscillation with a frequency substantially the same as the intermediate frequency of a supersonic heterodyne receiver, such as is used for heterodyning continuous-wave telegraph signals in such a receiver.

intermediate frequency transformer (*Radio*). A transformer specially designed to operate at intermediate frequencies, such as is used as an interstage coupling in an intermediate frequency amplifier.

intermediate host (*Zool.*). In the life-history of a parasite, a secondary host—one which is occupied by the young forms, or by a resting stage between the adult stages in the primary host.

intermediate igneous rocks (*Geol.*). Igneous rocks containing from 55% to 66% silica, and essentially intermediate in composition between the acid (granitic) and basic (gabbroic or basaltic) rocks. See **syenite, syenodiorite, diorite.**

intermediate oxides (*Chem.*). Also called AMPHOTERIC OXIDES. See **amphoteric.**

intermediate rafter (*Build.*, *Civ. Eng.*). See **common rafter.**

intermediate sight (*Surv.*). Any levelling staff reading other than the first or last, at any given set-up of the levelling instrument, i.e. other than the back or fore sight respectively. See also **back sight** and **fore sight.**

intermediate switch (*Elec. Eng.*). A switch for controlling a circuit where more than two positions of control are required; it is connected between the two-way switches which must also be used in such a scheme.

intermediate waves (*Radio*). Electromagnetic waves whose wavelength lies in the range from 50 to 200 metres, between the short and medium wave-bands.

intermediate (or **idle**) **wheel** (*Horol.*). A wheel used to connect two other toothed wheels when their distance apart is such that without the use of an intermediate wheel their diameters would be too large. It has the effect of altering the relative direction of rotation of the followers.

intermedium (*Zool.*). A small bone of the proximal row of the basipodium, lying between the tibiale and fibulare, or between the radiale and ulnare.

intermen'strual (*Med.*). Occurring between two menstrual periods.

intermetallic compounds (*Met.*). See **intermediate constituents.**

intermission (*Med.*). Temporary cessation, as of fever or of the normal pulse.

intermito'sis (*Cyt.*). The period between two mitotic divisions of a cell.

intermittent claudication (*Med.*). Intermittent lameness. See **dysbasia angiosclerotica.**

intermittent earth (*Elec. Eng.*). An accidental earth connexion which is present intermittently and is therefore often difficult to locate.

intermittent fever (*Med.*). See **malaria.**

intermittent filtration (*Sewage*). The *land treatment* (q.v.) process of sewage purification, in which the land is drained artificially by ordinary earthenware pipes. Cf. *broad irrigation.*

intermittent loading, intermittently loaded cable (or **circuit**) (*Elec. Comm.*). A cable, generally for submarine telephony, in which the conductors are loaded continuously for sections of their length only. By staggering the intermittent loading on a number of conductors in a multi-cored cable, economy in weight and cost is effected.

intermittent printing (*Cinema.*). Printing by means of a step-by-step cinematograph printer, which prints a frame at a time.

intermittent rating (*Elec. Eng.*). A type of rating applied to electrical equipment to denote the maximum load with which the equipment can deal without exceeding certain specified temperature rise or other limits when operating intermittently. See **one-hour rating, half-hour rating.**

intermodil'lion (*Build.*). The space between successive *modillions* (q.v.).

intermodulation distortion (*Elec. Comm.*). Amplitude distortion in which the intermodulation products are of greater importance than the harmonic products, as in an audio-frequency amplifier for high-quality speech or music.

intermy'oto'mic (*Zool.*). Said of vertebrae which arise by the fusion of the cranial elements of one somite with the caudal elements of the somite next in front. Cf. *intrasegmental.*

intern, interne (*Med.*). An assistant physician or surgeon resident in a hospital.

internal capacity (*Thermionics*). The same as inter-electrode capacity, but especially applied to the anode-cathode capacity.

internal characteristic (*Elec. Eng.*). A curve showing the relation between the load on an electric generator and the internal e.m.f.

internal-combustion engine (*Eng.*). An engine in which heat is added to the working agent (air) by the combustion of a gaseous, liquid, or pulverised solid fuel within the cylinder, and converted into mechanical work through a piston. See **compression-ignition engine, Diesel engine, petrol engine, gas engine.**

internal compensation (*Chem.*). Neutralisation of optical activity within the molecule by the combination of two enantiomorphous groups.

internal conductor (*Elec. Eng.*). The inner conductor of a concentric cable. Also called INNER CONDUCTOR.

internal e.m.f. (*Elec. Eng.*). A term used to denote the e.m.f. generated in an electric machine; the voltage appearing at the terminals is the internal e.m.f. minus any voltage drop which takes place due to the current in the machine.

internal-expanding brake (*Eng.*). A wheel brake consisting of a drum against the inner surface of which two or more fabric-faced shoes may be forced or expanded by a cam or other device.

internal factor (*Bot.*). Any factor which depends on the genetic constitution of the plant and which influences its growth and development

internal flue (*Eng.*). A furnace tube, or fire tube, running through the water space of a boiler.

internal focusing telescope (*Surv.*). A modern form of surveying telescope in which focusing is effected by the movement of an internal concave lens fitted between the object glass and the eye-piece, both of which are fixed in position.

internal gear (*Eng.*). A spur gear in which teeth formed on the inner circumference of an annular wheel mesh with the external teeth of a smaller pinion. Both wheels revolve in the same direction.

internal grinding (*Eng.*). The grinding of internal cylindrical surfaces by an abrasive wheel, which is either traversed along the revolving work or (in addition) given a planetary motion, the work being fixed.

internal hazard (*Build.*). A fire risk in connexion with a building, arising from the building itself or its contents.

internal impedance (*Thermionics*). The impedance to alternating currents presented by the anode and cathode terminals of a thermionic tube under normal operating conditions. It is made up of the differential anode resistance in parallel with the inter-electrode capacities.

internal indicator (*Chem.*). An indicator which is dissolved in the solution in which the main reaction takes place.

internal phloem (*Bot.*). Phloem lying between the xylem and the centre of the stem.

internal screw-thread (*Eng.*). A screw-thread cut on the inside of a cylindrical surface, as distinct from an *external screw-thread.* Also called a FEMALE THREAD.

internal secretion (*Zool.*). A secretion which is poured into the blood-vessels, or into the canal of the spinal cord; a hormone. Cf. *external secretion.*

internal stress (*Met.*). Residual stress existing between different parts of metal products, as a result of the differential effects of heating, cooling or working operations, or of constitutional changes in the solid metal.

internally fired boiler (*Eng.*). A boiler whose fire box or furnace is inside the boiler and surrounded by water, as in the Lancashire, marine, and locomotive types.

international ampere (*Elec. Eng.*). The current which, when passed through a solution of silver nitrate in water, will deposit silver at the rate of 0·001118000 gramme per second. The unit of current in common use.

international Ångström (*Phys.*). A unit which, although very nearly equal to the Ångström unit (10^{-8} cm.), is defined in a different way. It is such that the red cadmium line at 15° C. and 760 mm. pressure would have a wavelength of 6438 4696 I.A. This definition is not affected by future corrections of the wavelength of this line in Ångström units. Abbrev. **I.A.**

international candle or simply **candle** (*Illum.*). A unit of luminous intensity arrived at by common agreement between the National Physical Laboratory of Great Britain, the Laboratoire Central de l'Électricité of France, and the Bureau of Standards of the United States of America. It is equal to 0·98 of the old English *standard candle*, and was originally defined as the luminous intensity of a candle of specified weight burning at a specified rate; it was, however, replaced by standard lamps such as the Hefner amyl acetate lamp, the Vernon-Harcourt pentane lamp, and the Carcel lamp. Specially constructed electric lamps are now used as photometric standards, but the unit is still the *international candle*.

international circuit (*Teleph.*). A circuit connecting two trunk centres in different countries; used for international telephone connexions.

international ohm (*Elec. Eng.*). The unit of resistance in common use. It is the resistance offered, at the temperature of melting ice, to an unvarying electric current by a column of mercury 14·4521 grammes in mass, of uniform cross-sectional area, and 106·300 centimetres in length. See **B.A. ohm, legal ohm.**

international screw-thread (*Eng*) A metric system in which the pitch of the thread is related to the diameter, the thread having a rounded root and flat crest.

international units (*Elec. Eng*). A system of units based upon the internationally accepted values for the international ampere and the international ohm.

international volt (*Elec. Eng.*). The unit of potential difference in common use. It is the potential difference which, when applied to a conductor having a resistance of one international ohm, produces a current of one international ampere.

interne. See **intern.**

interneu'rals (*Zool.*). See **interspinals.**

in'ternode (*Bot.*). The length of a stem between two successive nodes.—(*Zool.*) The part of a nerve between two adjacent nodes of Ranvier.

interocep'tor (*Zool.*). A sensory nerve-ending, specialised for the reception of impressions from within the body. Cf. *exteroceptor*.

interoper'culum (*Zool.*). In Fish, a ventral membrane bone supporting the operculum.

interpari'etal (*Zool.*). A median dorsal membrane bone of the Vertebrate skull, situated between the parietals and the supraoccipital.

interpenetration twins (*Min.*). Two or more crystals united in a regular fashion, according to a fixed plan (the *twin law*), the individual crystals appearing to have grown through one another. Cf. *juxtaposition twins*.

interphase (*Chem.*). See **interface.**

interphase (*Cyt.*). See **intermitosis.**

interplane struts (*Aero.*). In a multiplane structure, those struts, either vertical or inclined, connecting the spars of any pair of planes, one above the other.

interplantation (*Zool.*). In experimental zoology, the culture of a part or organ in a cavity of the body of an older animal; cf. *explantation*.—*n.* **interplant.**

interpolation of contours (*Surv.*). The process of drawing contours by inferring their location from spot levels or from other contour lines, assuming the intervening ground to have uniform slope.

interpole (*Elec. Eng.*). See **compole.**

interpole motor (*Elec. Eng.*). An electric motor fitted with compoles (interpoles).

inter-radium (*Zool.*). In a radially symmetrical animal, the area between two adjacent radii.

inter-radius (*Zool.*). In a radially symmetrical animal, a radius which bisects the angle between two adjacent per-radii.

inter-renal body (*Zool.*). In selachian Fish, a ductless gland which lies between the kidneys and corresponds to the cortex of the suprarenal gland of higher Vertebrates.

interrupted (*Bot.*). Said of organs which are not evenly spaced out along an axis.

interrupted continuous waves (*Radio*). Electromagnetic waves radiated from an antenna driven from a valve oscillator the output from which is interrupted periodically at an audible frequency, so that the received signal is directly audible in the telephones after rectification, without heterodyning. Abbrev. **I.C.W.** Also called CHOPPED CONTINUOUS WAVES, TONIC TRAIN.

interrupted ringing (*Teleph.*). The signal to attract the attention of a subscriber to a call that is awaiting him; it is made more effective by the interruptions.

interruptedly pinnate (*Bot.*). Said of a pinnate leaf when pairs of small leaflets alternate with pairs of larger leaflets.

interrupter gear (*Aero.*). Any mechanism which is arranged to prevent the firing of a gun mounted on an aircraft when any part of the airscrew is in the line of fire. See **synchronising gear.**

interscap'ular (*Anat.*). Between the two shoulder blades

intersection (*Surv.*). A method of plane table surveying in which the plane table is set up consecutively at each end of a measured base line; rays are drawn on paper at each set-up to show the direction of the point that it is required to fix on the plan, the intersection of these rays giving the position of the point. Also called TRIANGULATION.

intersection angle (*Surv.*). The angle of deflection, as measured at the intersection point between the straights of a railway or highway curve.

intersection point (*Surv.*). The point in which the straights of a railway or highway curve would meet if produced.

intersection theory (*Textiles*). A theory used to determine the number of threads per inch in a woven fabric of compact structure, the number being determined from the diameter of the yarn and the number of interlacings of the threads.

intersegmenta'lia (*Zool.*). In Insects, small detached sclerites occurring between adjacent segments.

interser'tal texture (*Geol.*). The texture characterised by the occurrence of interstitial glass between divergent laths of feldspar in basaltic rocks.

intersex (*Bot., Zool.*). An individual which exhibits characters intermediate between those of the male and those of the female of the same species.

intersheath (*Cables*). Cylindrical electrodes in the interior of a cable dielectric, used for the purpose of keeping the variation of stress a minimum. The intersheaths must be kept at certain potentials to achieve this purpose. See **stress.**

interspecif'ic (*Cyt.*). Said of a cross between two separate species.

interspersed (*Bot.*). Said of marginal ray cells which are scattered among other cells.

interspi′nals (*Zool.*). In Fish the basal element or elements of a pterygophore.

inter-station interference (*Radio*). Interference which arises from the presence of another transmitter on the same (or on an adjacent) wavelength as that to which a receiver is tuned, as distinguished from atmospheric interference.

interstitial, —stish′al (*Zool.*). Occurring in the interstices between other structures; as the *interstitial* cells of *Coelenterata*, which are small rounded embryonic cells occurring in the interstices between the columnar cells forming the ectoderm and endoderm.

intertentac′ular (*Zool.*). Between the tentacles; as the *intertentacular* organ of *Polyzoa*, consisting of a ciliated tube which lies between, and at the base of, the tentacles leading from the coelom to the exterior, and serves for the escape of the genital products.

inter-tie (*Carp.*). In a trussed partition or in half-timbered work, a horizontal timber framed between posts and located between floor levels.

intertrabec′ula (*Zool.*). In some Birds, a cartilaginous plate lying between the anterior ends of the trabeculae during the development of the skull.

intertrack bond (*Elec. Eng.*). A conductor for connecting electrically the rails of separate tracks on electric railways or tramways in order to reduce the total resistance of the return path.

intertrochanter′ic (*Anat.*). Situated between the two trochanters of the upper part of the femur.

Intertype (*Typog.*). A patented type-setting machine equipped with various main magazines and side magazines. A *mixer* enables matrices from several magazines to be mixed together in a line, so that almost any kind of composition, including display work, can be produced directly from the keyboard. The units of equipment are standardised and interchangeable.

interval (*Acous.*). The musical distance apart of two notes on a musical scale, precisely measured by the logarithm of their frequencies. They are described by the number of notes on a stated scale which they span; they may be major, minor, perfect, augmented, or diminished.

intervalve coupling (*Radio*). The arrangement of circuit elements whereby changes of anode current in one valve are caused to produce changes of grid potential of another.

intervalve transformer (*Elec. Comm.*). A transformer which is designed to operate between the anode circuit of a valve and the grid of another valve with a specified response.

intervalve transformer coupling (*Elec. Comm.*). The use of an iron-cored transformer, the primary in the anode circuit of one valve and the secondary connected to the grid of the next valve, for coupling thermionic valves in an amplifier.

inter-vari′etal (*Gen.*). Said of a cross between two varieties of the same species.

interven′tral (*Zool.*). An intercalary element lying between adjacent basiventrals of the vertebral column.

interwoven fencing (*Build.*). Solid wood fencing built up of very thin boards interlaced. Also called INTERLACED FENCING or WOVENBOARD.

interxylary phloem, —zi′la-ri (*Bot.*). A strand of secondary phloem surrounded by secondary xylem.

intestine (*Zool.*). In Vertebrates, that part of the alimentary canal leading from the stomach to the anus: in Invertebrates, that part of the alimentary canal which corresponds to the Vertebrate intestine, or was thought by the early investigators so to correspond.—*adj.* **intestinal.**

in′tima (*Zool.*). The innermost layer of an organ or part; e.g. the innermost layer of the wall of a blood-vessel.

in′tine (*Bot.*). (1) The inner layer of the wall of a pollen grain.—(2) The endospore in spores of *Bryophyta*.

intra- (Latin *intra*, within). A prefix used in the construction of compound terms; e.g. *intranuclear*, within the nucleus.

intra-annular tautomerism (*Chem.*). The redistribution of bonds in a ring of carbon or other atoms, as in the benzene nucleus.

intracap′sular (*Anat.*). Situated within a capsule, especially within the ligamentous joint capsule enveloping the head and neck of the femur.

intracav′itary (*Med.*). Applied within cavities of the body, said, e.g., of radium applied in the cavity of the uterus.

intracel′lular (*Biol.*). Within the cell.

intracer′ebral (*Anat.*). Situated in the substance of the brain.

intracervi′cal (*Anat.*). Situated in, or applied to, the canal of the cervix uteri (the lowest part or neck of the uterus).

intracra′nial (*Anat.*). Situated within the skull.

intrader′mal (*Anat.*). Situated in, or introduced into, the skin.

intra′dos (*Build., Civ. Eng.*). The inferior surface of an arch. See **soffit.**

intrafu′sal (*Zool.*). Situated within the spindle; as the fibres in a neurotendinous junction, or the fasciculi in a neuromuscular spindle.

intrahepat′ic (*Anat.*). Situated or occurring in the substance of the liver.

intralamel′lar tissue (*Bot.*). See **trama.**

intramam′mary (*Anat.*). Situated or occurring in the breast.

intramat′rical (*Bot.*). Said of a parasitic fungus which lives inside the host cell, or in the matrix.

intramedul′lary (*Anat.*). In the substance of the medulla oblongata (the brain stem): situated or occurring in the substance of the spinal cord.

intramercu′rial planet (*Astron.*). A hypothetical planet, to which the name Vulcan was given, believed by some to exist between the Sun and Mercury. Its existence was postulated to explain certain motions of Mercury's perihelion, which have since been accounted for by Einstein's theory of gravitation.

intramolec′ular respiration (*Bot.*). See **anaerobic respiration.**

intra-oc′ular (*Anat.*). Situated within the eyeball.

intraperitone′al (*Anat.*). Situated in, or introduced into, the peritoneal cavity.

intrapleu′ral (*Zool.*). Within the thoracic cavity.

intrasegmen′tal (*Zool.*). Said of vertebrae which arise by the fusion of the cranial and caudal elements of the same somite. Cf. *intermyotomic*.

intratar′sal (*Zool.*). Within the tarsus: in Reptiles, a joint of the tarsus.

intrathe′cal (*Anat.*). Within the sheath of membranes investing the spinal cord.

intrathy′roid (*Zool.*). Within the thyroid: a cartilage lying between and joining the laminae of the thyroid cartilage, during the early stages of development.

intratrache′al (*Anat.*). Within, or introduced into, the trachea.

intratu′bal (*Anat.*). Situated within a Fallopian tube.

intra-u′terine (*Anat.*). Situated within, or developing within, the uterus.

intrave′nous (*Anat.*). Within, or introduced into, a vein.

intrave′sical (*Zool.*). Within the bladder.

intra-vi′tam staining (*Biol.*). The artificial staining of living cells.

intravitel′line (*Zool.*). Within the yolk of an ovum.

intraxylary phloem, —zi′lar-i (*Bot.*). See **internal phloem.**

intricate (*Bot.*). Intertwined, entangled.

intrinsic (*Zool.*). Said of appendicular muscles of

Vertebrates which lie within the limb itself, and originate either from the girdle or from the limb-bones. Cf. *extrinsic*.

intrinsic brilliancy, —brilliance, —brightness (*Light*). The quotient obtained by dividing the luminous intensity (luminosity) of a surface from a given direction by the area of the surface normal to that direction. Expressed in candle-power or lumens per sq. in., sq. cm., or sq. ft.

intrinsic energy (*Chem.*). The store of energy possessed by a material system. It is not usually possible to determine its absolute magnitude, but changes in its value can be measured. Changes in the intrinsic energy of a system depend only upon the initial and final conditions, and are therefore independent of the paths of change.

introfaction (*Chem.*). The change in the fluidity and wetting properties of an impregnating material produced by an introfier, which tends to convert a colloidal solution into a molecular solution.

intro'itus (*Anat.*). The entry to any cavity; usually said of the vagina.

introjection (*Psycho-an.*). A mental swallowing. The function of the mind whereby it incorporates objects with their accompanying characteristics from the outside world and adopts them as its own; specially well marked at the oral phase of development; also an important factor in the development of the *superego* (q.v.), when the child introjects the moral standards of its parents.

intromission (*Med.*). The insertion of one part into another, especially of the penis into the vagina.

intromit'tent (*Zool.*). Adapted for insertion, as the copulatory organs of some male animals.

introrse' (*Bot.*). Said of an anther which opens towards the centre of the flower.

introrse (*Zool.*). Directed or bent inwards.

introspection (*Psychol.*). The habit, which may become pathological, of 'looking within' one's self, i.e. of preoccupying one's self with one's own feelings, thoughts, experiences, etc.

introversion (*Med.*). The turning inside-out of an organ.

in'trovert (*Psychol.*). An individual interested mainly in his own mental processes and attitudes and in the way in which he is regarded by others; given to introspection and phantasy; shy and retiring in manner. Introverts are generally deep thinkers, philosophers, and mystics; cf. *extravert*.—*n.* **introversion.**

introvert (*Zool.*). A structure or part of the body which may be involuted; as the proboscis of a nemertinean worm.

intrusions (*Geol.*). Bodies of igneous rocks of varying size and structure which, in the condition of magma, were intruded into the pre-existing rocks of the earth's crust. Such rocks are referred to as *intrusive rocks*. Cf. *extrusive rocks*.

intubation (*Med.*). The introduction of a tube, especially through the larynx into the trachea, to facilitate the passage of air into the lungs.

intumes'cence (*Bot.*). A localised pathological swelling consisting chiefly of parenchyma.

intumescence (*Chem.*). The swelling of crystals on heating, often with the violent escape of moisture.

intumescence (*Med.*). The process of swelling: the swelling itself.

in'tussuscep'tion (*Bot.*). Growth of the cell wall by the interpolation of sub-microscopic particles between those already present in the wall.

intussusception (*Med.*). The pushing down, or invagination, of one part of the intestine into the part below it.

intussuscep'tum (*Med.*). The part of the intestine which has been invaginated into the part below it. See **intussusception.**

intussuscip'iens (*Med.*). The part of the intestine receiving the intussusceptum.

in'ulin (*Chem.*). A polysaccharose obtained from the tubers of the dahlia and the roots of chicory (*Chicorium intybus*); it is hydrolysed by water into *d*-fructose.

in'ulinase (*Chem.*). An enzyme hydrolysing inulin.

invader (*Bot.*). A plant occurring in a community to which it does not belong.

invagination (*Zool.*). Insertion into a sheath: the development of a hollow ingrowth: the pushing-in of one side of the blastula in embolic gastrulation; cf. *evagination*.—*adj.* **invaginate.**

Invar (*Met.*). Iron-nickel alloy. Based on composition 36% nickel 64% iron, but contains other elements. Coefficient of thermal expansion is very small. Used for measuring-tapes, tuning-forks, pendulums, and in instruments.

invariable plane (*Astron.*). A certain plane, containing the centre of the sun, which remains absolutely unchanged by any mutual action between the planets in the solar system; defined by the condition that, if the radius vector to each planet be projected on to this plane and its areal constant multiplied into each planet's mass, then the sum of all the products shall be a maximum.

invariant (*Chem.*). Possessing no *degrees of freedom* (1).

invasion (*Bot.*). The movement of plants from one area to another, and their establishment in the latter.

inverse (*Bot.*). Said of the condition of an embryo in which the radicle is turned towards a point in the seed at the opposite end to the hilum.

inverse networks (*Elec. Comm.*). Networks the product of whose impedances is resistive at all frequencies.

inverse power factor (*Elec. Eng.*). A term sometimes used to denote $\sec \phi$ ($=1/\cos \phi$).

inverse segregation (*Met.*). A type of segregation in which the content of impurities, inclusions, and alloying elements in metals tends to decrease from the surface to the centre. See also **segregation, normal segregation.**

inverse-speed motor (*Elec. Eng.*). See **series-characteristic motor.**

inverse time-lag (*Elec. Eng.*). A time-lag which is approximately proportional to the inverse of the current causing its operation. Also called INVERSE TIME-ELEMENT, INVERSE TIME-LIMIT.

inversion. (1) (*Cyt.*) The reversal in position of a portion of a chromosome.—(2) (*Bot.*) The turning inside-out during development of a colony in some algae that form coenobia.

inversion (*Chem.*). The formation of a laevo-rotatory solution of fructose and glucose by the hydrolysis of a dextrorotatory solution of sucrose (cane-sugar).

inversion (*Meteor.*). Inversion of the usual temperature gradient in the atmosphere, the temperature increasing with height. Inversions are of frequent occurrence near the ground on clear nights and in anticyclones, often causing dense smoke fogs over cities.

inversion (*Radio, Teleph.*). The inversion of the order of speech-frequencies by effectively replacing each frequency by its difference from 3000 cycles per second before transmission, restoration being effected at the receiving end. Used, with or without carrier wobble, as a secrecy system on short-wave radio-telephony, since the resultant output is only intelligible after the second inversion.

inversion of relief (*Geol.*). A condition whereby synclinal ridges are separated by anticlinal depressions.

invert (*Civ. Eng., Plumb., etc.*). The lowest part of the inner surface of the cross-section of a non-vertical drain or sewer.

invert sugar (*Chem.*). The product obtained by the hydrolysis of cane-sugar with acids; it is a mixture of equal parts of *d*-fructose and *d*-glucose. Most fruits contain invert sugar, and honey averages over 70%.

in'vertase (*Chem.*). An enzyme which hydrolyses **cane-sugar**; it is present in all yeasts except *S. capsularis* and *S. octosporus*, both wine yeasts. The process is known as inversion. Also called SACCHARASE, SUCRASE.

inverted (*Bot.*). (1) See **anatropous.**—(2) See **inverse.**

inverted amplification factor (*Thermionics*). The ratio of the differential change in grid voltage, per unit differential change in anode voltage, necessary to maintain a constant grid current in a thermionic triode.

inverted arc lamp (*Illum.*). A d.c. arc lamp having the positive carbon above the negative carbon so that the greater part of the light, which comes from the negative crater, shall be directed upwards—as required for indirect lighting.

inverted arch (*Civ. Eng.*). An arch having the crown below the line of the springings, e.g. the floor of a tunnel, in order to distribute the pressure of the walls over a greater area. Also called an INFLECTED ARCH.

inverted-brush contact (*Elec. Eng.*). A laminated switch-contact in which the laminations are carried on the fixed, instead of on the moving, contact.

inverted commas (*Typog.*). Quotation marks. If *double quotes* (“ ”) are used to indicate a quotation, then *single quotes* (‘ ’) are used for any quotation occurring within the passage quoted; or the reverse procedure may be adopted.

inverted engine (*Aero.*). An incline engine having its cylinders below the crankshaft. Adopted in certain types of aircraft to improve the forward view of the pilot.

inverted-L antenna (*Radio*). An antenna comprising a vertical uplead joined to one end of a horizontal conductor.

inverted loop (*Aero.*). A manœuvre of an aeroplane consisting of a complete revolution about a lateral axis, with the normally upper surface of the machine on the outside of the path of the loop. Must be commenced while flying inverted.

inverted machine (*Elec. Eng.*). Any electric machine in which the usual arrangement of the stator and rotor windings is inverted; e.g. an induction motor in which power is supplied to the rotor, the stator winding being short-circuited.

inverted rectifier (*Elec. Eng.*). A mercury-arc or other form of rectifier when it is arranged to convert from d.c. to a.c. Also called an INVERTER.

inverted repulsion motor (*Elec. Eng.*). A repulsion motor in which the supply is taken to the armature through the brushes, the stator winding being short-circuited.

inverted rotary convertor (*Elec. Eng.*). A rotary convertor used to convert from d.c. to a.c.

inverted syphon (*Civ. Eng.*). See **syphon** (2).

inverted thermionic valve (*Thermionics*). A triode in which the control electrode is on the opposite side of the anode to the cathode, or on the opposite side of the cathode to the anode. The latter arrangement is also called a LUNAR GRID VALVE.

inverted-V antenna (*Radio*). A directional antenna comprising two wires, each several quarter wavelengths long and of equal length, arranged in the form of a V with the apex uppermost, joined at the top and connected to ground at one end through a suitable terminating resistance, the other end being connected to the transmitter or receiver. The direction of maximum radiation or reception is horizontal and in the plane of the wires.

inverter, invertor (*Elec. Eng.*). See **inverted rectifier.**

inverter, invertor (*Radio*). An arrangement of modulators and filters for inverting speech or music.

investing bone (*Zool.*). See **membrane bone.**

investment (*Zool.*). The outer layers of an organ or part, or of an animal.

invol'ucel (*Bot.*). The group of bracts sometimes present at the base of a partial umbel.

involu'cral bract (*Bot.*). One of the leafy members forming an involucre.

in'volucre (*Bot.*). (1) A short tube around the archegonia and the calyptra in *Bryophyta*.—(2) A crowded group of bracts around the base of a capitulum or other dense inflorescence.

involu'crum (*Med.*). Sheath of new bone formed round bone which has died as the result of infection of the bone.

involucrum (*Zool.*). In *Orthoptera*, the metanotum: in some *Hydrozoa*, a cup-like structure into which nematocysts may be retracted.

involuntary (*Zool.*). Outside the control of the will; as the movements of the intestines in peristalsis, the beat of the heart, the contraction of plain muscle.

involuntary muscle (*Zool.*). See **unstriated muscle.**

in'volute (*Bot.*). Having the margins rolled inwards.

involute and evolute (*Geom.*). The *evolute* of a given curve is the locus of its centre of curvature. The *involute* of a curve is another curve of which it is the evolute. A curve has an infinite number of involutes but only one evolute.

involute (*Zool.*). Tightly coiled; said of Gastropod shells.

involute connexion (*Elec. Eng.*). A special form of curved end connexion for the winding of an electric machine.

involute gear teeth (*Eng.*). Wheel teeth whose flank profile consists of an involute curve given by the locus of the end of a string uncoiled from a base circle; the commonest form of tooth.

involution (*Zool.*). In *Protozoa*, the condition of forms which are structurally deformed owing to an unfavourable environment, but which are capable of recovery if restored to a suitable environment.

involution period (*Bot.*). The resting period of a spore, seed, or other plant organ which remains inactive for a time.

involutional melancholia (*Psychiatry*). A type of melancholia which occurs at the involutional period and when the glands and internal secretions are beginning to fail. In women this disorder is often associated with the climacteric. It is characterised by a state of anxiety and agitation, accompanied by delusions of a depressive hypochondriacal nature, and a feeling of unreality and absorption with death.

Io (*Chem.*). The symbol for *ionium*.

i'odates (*Chem.*). Salts of iodic acid.

iod'azide (*Chem.*). N_3I. An iodine azide.

iodic acid (*Chem.*). HIO_3. Formed by the direct oxidation of iodine with nitric acid. White crystalline solid, which partly melts at 110° C., forming a liquid and a solid. Soluble in water. Forms iodates.

iodic anhydride (*Chem.*). I_2O_5. Also called IODINE PENTOXIDE. Forms iodic acid when dissolved in water.

i'odides (*Chem.*). Salts of hydriodic acid. Most metallic iodides liberate free iodine and leave behind the metal or metallic oxide when heated. See **hydriodic acid.**

iodine (*Chem.*). Symbol, I. A non-metallic element in the seventh group of the periodic system, one of the halogens. At. no. 53, at. wt. 126·92, valencies 1, 3, 5, 7. It forms blackish scales with a violet lustre and a characteristic smell; m.p. 113·5° C., b.p. 184·35° C., sp. gr. 4·94 at 20° C. It is widely but sparingly distributed as iodides, and is a constituent of the thyroid gland.

The important commercial sources are crude Chile saltpetre (caliche) and certain seaweeds; it is used as an antiseptic and in organic synthesis.

iodine monochloride (*Chem.*). ICl. There are two forms, α and β, dependent on the method of cooling. The first occurs when the substance is strongly cooled, red needles, m.p. 27·2° C.; the β-form, when slowly cooled, brown-red crystals, m.p. 13·9° C.

iodine oxides (*Chem.*). Iodine has four oxides with the empirical formulae, I_2O_4, I_4O_9, I_2O_5, IO_4. They differ in marked degree from those of the other halogens. The oxide I_2O_5 has acidic properties; stable, and with water yields iodic acid, HIO_3.

iodine pentafluoride (*Chem.*). IF_5. Colourless liquid, formed with incandescence by the direct combination of fluorine and iodine, m.p. −8°, b p. 97° C.

iodine pentoxide (*Chem.*). See **iodic anhydride.**

iodine trichloride (*Chem.*). ICl_3. Brown rhombic tablets, a powerful disinfectant.

iodine value (*Chem.*). The number of grams of iodine absorbed by 100 grams of a fat or oil It gives an indication of the amount of unsaturated acids present in fats and oils.

i'odism (*Med.*). The condition resulting from overdosage of, or sensitivity to, iodine; characterised by running at the eyes and the nose, salivation, and skin eruptions.

iodo-bismuthous acid (*Chem.*). $HBiI_4{\cdot}4H_2O$ A monobasic acid formed when bismuth triodide unites directly with hydrogen iodide.

io'doform (*Chem.*). CHI_3, yellow hexagonal plates, of peculiar odour, m.p. 119° C., volatile in steam, an important antiseptic. It is prepared by warming alcohol with iodine and alkali; or by an electrolytic method, in which a current is passed through a solution containing KI, Na_2CO_3, and alcohol, the temperature being about 65° C.

i'olite (*Min.*). See **cordierite.**

i'on (*Chem.*). A charged atom, molecule, or radical whose migration effects the transport of electricity through an electrolyte or, to a certain extent, through a gas.

ion'ic beam (*Thermionics*). A term frequently applied to a beam of electrons, as in a cathode ray tube, but more properly to a beam of positively charged molecular particles.

ionic current (*Thermionics*). A current carried by positively charged ions in a gas at low pressure. Especially applied to the small current which flows from the filament to the grid of a thermionic tube when the grid is made very negative and the vacuum is not perfect.

ionic focusing (*Cathode Ray Tubes*). The same as *gas focusing.*

ionic mobility (*Chem.*). The velocity of an ion under unit potential gradient, i.e. in a field of 1 volt per centimetre.

ionic modulation (*Radio*). A system used for modulating waves of very short wavelength (of the order of a few centimetres); the waves are propagated through an ionised gas, whose degree of ionisation is varied in accordance with the impressed modulation, thereby varying the absorption of the transmitted waves.

ionic product (*Chem.*). The product of the activities (see **activity, 2**) of the ions into which a pure liquid dissociates.

ionic strength (*Chem.*). Half the sum of the terms obtained by multiplying the *activity* (2) of each ion in a solution by the square of its valency; it is a measure of the intensity of the electrical field existing in a solution.

ionic theory (*Chem.*). The theory that substances whose solutions conduct an electric current undergo electrolytic dissociation on dissolution. This assumption explains both the laws of electrolysis and the abnormal colligative properties, such as osmotic pressure, of electrolyte solutions.

ionic valve (*Thermionics*). (1) An obsolete term for a thermionic valve.—(2) A form of cold cathode rectifier tube comprising two electrodes in the form of a point and a spiral of wire respectively, enclosed in an atmosphere of gas at low pressure. Also called LODGE VALVE.

ionisation. The production of ions from an electrically neutral substance.

ionisation (*Cables*). A term erroneously used to indicate any variation of power factor with the stress or applied voltage. Correctly used to indicate the production of free ions in the gaseous voids in a cable.

ionisation (*Chem.*). See **electrolytic dissociation.**

ionisation by collision (*Phys.*). See **collision (ionisation by).**

ionisation constant (*Chem.*). The ratio of the product of the activities (see **activity, 2**) of the ions produced from a given substance to the activity of the undissociated molecules of that substance.

ionisation current (*Thermionics*). The current passed by an ionisation gauge.

ionisation gauge (*Thermionics*). A small thermionic triode whose envelope is connected to a chamber in which it is desired to measure the amount of residual gas. Current is passed from the anode to the cathode, the grid being made negative, and the amount of the grid current is measured, giving an indication of the degree of vacuum.

ionisation manometer (*Thermionics*). An ionisation gauge in which the grid current meter has been calibrated to read gas pressure directly.

ionisation temperature (*Astron.*). A critical temperature, different for different elements, at which the constituent electrons of an atom will become dissociated from the nucleus; hence a factor in deducing stellar temperatures from observed spectral lines indicating any known stage of ionisation.

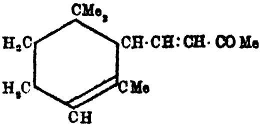
ionised (*Chem., Phys.*). (1) Electrolytically dissociated.—(2) Converted into an ion by the loss of an electron.

ionised gas detector (*Radio*). An early form of detector in which a discharge through an ionised gas is triggered by the arrival of a signal.

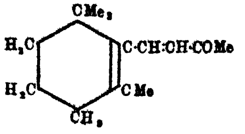
io'nium (*Chem*). A radioactive isotope of thorium, with a half-life of 8×10^4 years. Symbol, Io.

ionones, ī'-on-ōnz (*Chem.*). Isomers of *irone* (q.v.), compounds related to the terpenes, possessing an odour of violets; they can be synthesised from citral by condensation with acetone, forming pseudo-ionones, ring formation in which can be effected by boiling with sulphuric acid. There are two isomers, viz.:

α-Ionone



β-Ionone



ionosphere, ī-on′-ō— (*Radio, etc.*). The region above the earth's surface in which ionisation takes place, with diurnal and annual variations which are regularly associated with ultra-violet radiation from the sun, and sporadic variations arising from hydrogen bursts from sunspots. Layers or regions possessing defined characteristics are known as the *B-*, *C-*, *D-*, *E-*, and *F-layers* (qq.v.).

ionospher′ic ray (wave) (*Radio*). See **indirect ray.**

ionot′ropy (*Chem.*). Ionic tautomerism, caused by an alteration in the position of the charge on an ion.

iontophore′sis, ī-on′— (*Med.*). The therapeutic introduction, by the passage of an electric current, of various ions into the tissues of the body.

I.P.T. thermometers (*Chem.*). Thermometers conforming to the standards laid down by the Institute of Petroleum Technologists.

I.Q. (*Psychol.*). Abbrev. for *intelligence quotient* (q.v.).

Ir (*Chem.*). The symbol for *iridium.*

I.R. (*Chem.*). An abbrev. for *insoluble residue.*

I.R. drop (*Elec. Eng.*). The voltage drop due to a current flowing through a resistance.

I^2R loss (*Elec. Eng.*). The loss caused by the flow of a current *I* through a resistance *R*.

irestone (*Mining*). A hard basic crystalline rock. Trap rock or greenstone.

i′rid-, i′rido- (Greek *iris*, gen. *iridos*, rainbow). A prefix used in the construction of compound terms (e.g. *iridochoroiditis*, q.v.), particularly with reference to the *iris* (q.v.) of the eye.

iridal′gia (*Med.*). Pain in the iris of the eye.

iridec′tomy (*Surg.*). Excision of part of the iris of the eye.

iridenclei′sis (*Med.*). The incarceration of part of the iris in a wound in the cornea.

iridere′mia (*Med.*). Aniridia. Apparent complete absence of the iris of the eye (a narrow rim always persists).

irides′cence (*Phys.*). The production of fine colours on a surface; due to the interference of light reflected from the front and back of a very thin film.

irides′cent clouds (*Meteor.*). High clouds of the cirro-cumulus type which show colours, generally delicate pink and green, in irregular patches. It is thought that the effect is caused by the diffraction of sunlight by supercooled water droplets.

irid′ium (*Met.*). A brittle, steel-grey metallic element. Symbol Ir, at. wt. 193·1, at. no. 77, sp. gr. at 20° C. 22·4, m.p. 2454° C., specific electrical resistivity 6 microhms per cm. cub. Alloyed with platinum or osmium to form hard, corrosion-resisting alloys, used for pen-points, watch and compass bearings, crucibles, standards of length.

iridium lamp (*Illum.*). An early form of electric filament lamp employing iridium wire as the filament.

iridochor′oidi′tis (*Med.*). Inflammation of the iris and of the choroid of the eye.

iridocolobo′ma (*Med.*). Congenital absence of part of the iris, a gap or fissure being present in it.

iridocycli′tis (*Med.*). Inflammation of the iris and of the ciliary body of the eye.

ir′idocyte (*Zool.*). A reflecting cell containing guanin, found in the integument of Fish and of certain Cephalopods, to which it gives an iridescent appearance.

iridodial′ysis (*Med.*). Separation of the iris from its attachment to the ciliary body of the eye.

iridodone′sis (*Med.*). Tremulousness of the iris.

iridokerati′tis (*Med.*). Inflammation of the iris and of the cornea.

iridople′gia (*Med.*). Paralysis of the sphincter, or circular muscle, of the iris.

iridos′mine (*Min.*). Osmiridium.

iridot′omy (*Surg.*). Surgical cutting of the iris.

i′ris (*Anat., Zool.*). (1) In the Vertebrate eye, that part of the choroid, lying in front of the lens, which takes the form of a circular curtain with a central opening.—(2) In Insects, a dense layer of pigment enveloping the margin of the lens and the proximal ends of the visual cells of certain types of ocelli.—*adj.* **iridial.**

iris (*Min.*). A form of quartz showing chromatic reflections of light from fractures, often produced artificially by suddenly cooling a heated crystal. Also called RAINBOW QUARTZ.

iris diaphragm (*Photog.*). A continuously variable hole, forming an adjustable stop for a lens; usually integral with the lens mounting.

iris-in, iris-out (*Photog.*). Terms indicating the opening or closing of an extra iris diaphragm, which is placed at some distance behind the lens in a camera, so that the exposed area of the emulsion opens up and closes from the centre.

irisa′tion (*Meteor.*). Same as *iridescence.*

Irish moss (*Chem.*). Kelp (*Chondrus crispus*) found on the coasts of Ireland and New England. It contains fucose.

iri′tis (*Med.*). Inflammation of the iris.

iron (*Met.*). A metallic element in the eighth group of the periodic system. It exists in three forms; see **alpha iron, gamma iron, delta iron.** Symbol Fe, at. wt. 55·84, at. no. 26, sp. gr. at 20° C. 7·87, m.p. 1535° C., specific electrical resistivity 9·8 microhms per cm. cub. As basis metal in steel and cast-iron, it is the most widely used of all metals. See **iron ores.**

iron alum (*Min.*). See **halotrichite.**

iron arc (*Optics*). An arc between iron electrodes, used for obtaining light containing standardised lines, for spectrometer and spectrograph calibrations.

ironclad electromagnet (*Elec. Eng.*). An electromagnet in which the return path for the flux is formed by an iron covering surrounding the winding.

ironclad switchgear (*Elec. Eng.*). See **metalclad switchgear.**

iron glance (*Min.*). From the German *Eisenglanz*, a name often applied to specular iron-ore (haematite).

iron loss (*Elec. Eng.*). Energy loss caused in electric machines and apparatus by alternating flux in the iron of the magnetic circuit. See **eddy-current loss, hysteresis loss**; and cf. *parasitic loss.*

iron meteorites (*Geol.*). A popular name for those meteorites which consist essentially of nickel-iron, in the form of kamacite, taenite, plessite, etc.

iron monoxide (*Chem.*). See **ferrous monoxide.**

iron-nickel accumulator (*Chem.*). See **Edison accumulator.**

iron ores (*Geol.*). Rocks or deposits containing iron-rich compounds in workable amounts; they may be primary or secondary; they may occur as irregular masses, as lodes or veins, or interbedded with sedimentary strata. See **chalybite, chamosite, goethite, haematite, limonite, magnetite.**

iron pan (*Min.*). A hard layer often found in sands and gravels; caused by the precipitation of iron salts from percolating waters. It is formed a short distance below the soil surface.

iron pattern (*Foundry*). A pattern made of cast-iron; used when a large number of castings is required from it, and long life is necessary. See **double contraction.**

iron paving (*Civ. Eng.*). A type of road surfacing formed of cast-iron slabs studded on their upper surface to reduce skidding.

iron pentacarbonyl (*Chem.*). $Fe(CO)_5$. Formed at ordinary temperatures when carbon monoxide is passed over finely divided iron. A liquid which readily decomposes.

iron protoxide (*Chem.*). See **protoxide of iron.**

iron py'rite (*Min.*). 'Fool's gold.' Sulphide of iron, crystallising in the cubic system. It is brassy-yellow in colour and of very common occurrence. Also called MUNDIC.

iron salts (*Chem.*). See under **ferrous** and **ferric.**

ironstone (*Min.*). Carbonate of iron, clay, and carbonaceous matter, found in nodules, layers, or beds in the coal measures.

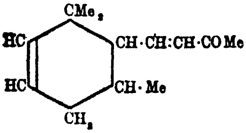
ironstone china (*Pot.*). A body compounded of china stone and clay, flint and ironstone slag.

iron tetracarbonyl (*Chem.*). $Fe(CO)_4$. Formed when carbon monoxide is passed over heated finely divided iron. It is gaseous.

iron tubing (*Eng*). Wrought-iron lap-welded, or seamless, steel tubing; used for boiler tubes.

ironwork (*Build.*). A term applied to essentially ornamental work in iron, such as that used for gates, hinges, knockers, etc.

irone' (*Chem.*). $C_{13}H_{20}O$, a methyl ketone of the terpene group, the odoriferous principle of the iris root and of the violet. Its formula is



irregular (*Biol.*). Asymmetric.—(*Bot*) (1) Not arranged in an even line or circle.—(2) Not divisible into halves by an indefinite number of longitudinal planes.

irregular-coursed (*Masonry*). Said of rubble walling built up in courses of different heights.

irregular nebulae (*Astron.*). A classification applied to a large number of nebulae of varied shapes, not similar or well defined like the spiral or planetary nebulae. The best-known example is the Great Nebula in Orion. Also called DIFFUSE NEBULAE.

irregular variables (*Astron.*). See **variable stars.**

irreversible colloid (*Chem.*). See **lyophobic colloid.**

irreversible conduction current (*Diel.*). A current of constant value which flows when voltage is applied but does not return when the dielectric condenser is short-circuited.

irreversible reaction (*Chem.*). A reaction which takes place in one direction only, and therefore proceeds to completion.

irreversible steering (*Automobiles*). A steering gear in which it is impossible for road shocks on the wheels to cause motion at the steering wheel; a condition rarely attained.

irrigation (*Civ. Eng.*). The storage of flood waters by means of dams, so that water shall be available for distribution over the surrounding country during the dry season.

irrigation (*Sewage*). The method of sewage disposal by *land treatment* (q.v.).

irritability (*Biol.*). One of the characteristic properties of living matter, namely, the ability to receive and respond to external stimuli.

irritant (*Biol.*). Any external stimulus which produces an active response in a living organism.

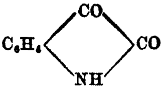
ir'rorate (*Bot.*). As if covered with dew.

irrotational field (*Elec. Eng.*). A field in which the *circulation* (q.v.) is everywhere zero.

Irwin hot-wire oscillograph (*Elec. Eng.*). See **hot-wire oscillograph.**

isal'lobar (*Meteor.*). The contour line on a weather chart, signifying the location of equal changes in the barometer over a specified period, in contrast with the absolute reduced barometric readings.

i'satin (*Chem.*).



the lactam of *o*-amino-benzoylformic acid, obtained by oxidising indigo or indoxyl with nitric acid; it can be synthesised by numerous methods, and is an important intermediate for the manufacture of indigo. Isatin crystallises in reddish monoclinic prisms.

ischaemia, ischemia, is-kĕ'mi-a (*Med.*). Permanent or temporary deficiency of blood in a part of the body.—*adj.* **ischaemic.**

ischiop'odite (*Zool.*). The proximal joint of the endopodite of the walking-legs or maxillipeds of certain *Crustacea.*

ischiorec'tal (*Anat.*). Pertaining to the ischium of the pelvic bone and to the rectum.

ischiorectal abscess (*Med.*). An abscess forming in the tissues between the ischium and the rectum.

is'chium (*Zool.*). A posterior bone of the pelvic girdle in Vertebrates.—*adjs.* **ischial, ischiadic.**

i'serine (*Min.*). Probably a ferruginous rutile, though formerly considered to be a variety of ilmenite. Found at Iserwiese (Bohemia).

isid'ium (*Bot.*). A branched outgrowth, recalling coral in form, arising from the thallus of a lichen.

i'singlass (*Chem.*). Fish glue. A white solid amorphous mass, prepared from fish bladders; chief constituent, gelatin. It has strong adhesive properties. Used in various food preparations, and in the fining of beers, wines, etc.

isinglass gold-size (*Dec.*). Refined isinglass dissolved in hot water, mixed with methylated spirits; used in gilding on glass.

island (*Highways*). See Supplement.

island universe (*Astron.*). The name applied to a spiral nebula by those holding the cosmological theory that these nebulae are not connected with the galactic system, each constituting a separate stellar system, comparable in size and unity with our own.

iso- (*Chem.*). A prefix indicating: (1) The presence of a branched carbon chain in the molecule; (2) An isomeric compound.

i'so- (Greek *isos*, equal). A prefix used in the construction of compound terms; e.g. *isodactylous*, having all the digits of equal size.

iso-agglutination (*Physiol.*, *Zool.*). (1) The adhesion of spermatozoa to one another by the action of some substance produced by the ova of the same species.—(2) The adhesion of erythrocytes to one another within the same blood-group. Cf. *hetero-agglutination.*

i'sobar (*Chem.*). A curve relating quantities measured at the same pressure.—(*Meteor.*) A line drawn on a map through places having the same atmospheric pressure at a given time.

i'sobares (*Phys.*). Atoms having different chemical properties but the same atomic weight. Thus titanium and chromium each have an isotope of atomic weight 50. Isobares have the same nuclear mass but different nuclear charges and therefore different numbers of extra-nuclear electrons. See **isotopes.**

isobaromet'ric (or isobaric) charts (*Meteor.*). Maps on which isobars are drawn. See **isobar.**

i'sobases (*Geol.*). Lines drawn through places where equal depression of the land mass took place in Glacial times, as a result of the weight of the ice load.

i'sobilat'eral (*Bot.*). Divisible into symmetrical halves by two distinct planes.

isobor'neol (*Chem.*). A secondary alcohol of the terpene series, m.p. 212° C., very volatile. It is a stereo-isomer of borneol, $C_{10}H_{17}OH$, and on oxidation yields camphor.

isobrach'ial (*Bot.*). Said of a chromosome which is bent into two equal arms.

isobutyl alcohol (*Chem.*). $(CH_3)_2:CH\cdot CH_2OH$, b.p. 107° C., partly miscible with water; formed during the fermentation of sugar.

isocer'cal (*Zool.*). Said of a type of secondarily symmetrical tail-fin (in Fish) in which the areas of the fin above and below the vertebral column are equal.

isochela, —kē'la (*Zool.*). A chela having the two opposable joints of approximately equal size.

i'sochore (*Chem.*). A curve relating quantities measured under conditions in which the volume remains constant.

isochromat'ic (*Photog.*). Practically the same as *orthochromatic* (q.v.).

isoch'ronism (*Phys.*). Regular periodicity, as the swinging of a pendulum.—(*Horol.*) For a clock pendulum, isochronism implies that the time of vibration should be the same whatever the amplitude (see **circular error**), and for the balance that the time of vibration should be the same whatever the arc of vibration. In practice, the balance approaches nearer to true isochronism than does the pendulum.—*adj.* **isoch'ronous.**

isocli'nal fold (*Geol.*). A fold partially overturned, so that both limbs dip in the same direction. See **folding.**

isoco'ria (*Anat.*). Equality in the size of the pupils of the eye.

isocy'anides (*Chem.*). *Iso*nitriles or carbylamines. Compounds of the formula R·N:C. They are colourless liquids, only slightly soluble in water with a feebly alkaline reaction, having a nauseous odour, obtained by the action of chloroform and alcoholic potash upon primary amines. They are very stable towards alkali, form additive compounds with halogens, HCl, H_2S, etc., and can be hydrolysed into formic acid and a primary amine, containing one carbon atom less than the original compound.

isocyclic compounds (*Chem.*). *Carbocyclic compounds* (q.v.).

isodact'ylous (*Zool.*). Having all the digits of a limb the same size.

isodiamet'ric, isodiamet'rical (*Bot.*). Of the same length vertically and horizontally.

i'sodimor'phous (*Chem.*). Existing in two isomorphous crystalline forms.

i'sodisperse' (*Chem.*). Dispersible in solutions having the same *p*H-value.

isod'omon (*Masonry*). An ancient form of masonry in which the facing consisted of squared stones laid in courses of equal height, and the filling of coursed stones of smaller size.

i'sodont (*Zool.*). Having all the teeth similar in size and form.

isodul'cite (*Chem.*). See **rhamnose.**

isodynamic lines (*Magn.*). Lines on a magnetic map which pass through points having equal strengths of the earth's field.

isoelec'tric point, ī'sō-el— (*Chem.*). The *p*H-value at which the charge on a colloid is zero. It may also be considered as the *p*H-value at which the ionisation of an ampholyte is at a minimum. It has a definite value for each amino acid and protein.

isogametan'gic (*Bot.*). Having gametangia all of the same size and form.

isogam'ete (*Bot., Zool.*). One of a pair of uniting gametes of similar size and form.—*adjs.* **isogamous, isogamic.**

isog'amy (*Bot., Zool.*). The union of a pair of gametes of similar size and form.

isogenet'ic (*Zool.*). Having a similar origin.

isogen'ic (*Bot.*). Propagating entirely by means of apogamy.

isogenomat'ic (*Cyt., Gen.*). Said of chromosome complements which are composed of similar genoms.

isogon'ic line, i'sogon. An imaginary line drawn through points of equal magnetic declination at any time.

isoha'line (*Ocean.*). A line drawn on a map through points of equal salinity in the sea.

i'sohel (*Meteor.*). A line drawn on a map through places having equal amounts of sunshine.

isohy'dric (*Chem.*). Having the same *p*H-value, or concentration of hydrogen ions.

isohy'et (*Meteor.*). A line drawn on a map through places having equal amounts of rainfall.

isokon'tan (*Bot.*). Bearing two (or more) flagella of equal length.

isolated phase switchgear (*Elec. Eng.*). Switchgear in which all the apparatus associated with each phase is segregated in separate cubicles or on separate floors of the switch-house.

isolating link (*Elec. Eng.*). A link suitable for disconnecting a circuit when it is dead.

isolating switch (*Elec. Eng.*). See **isolator.**

isolation transect (*Bot.*). A belt of land to which grazing animals are admitted under observation, so that the effect of grazing on the vegetation may be studied.

isolator (*Elec. Eng.*). A switch suitable for disconnecting a circuit under no-load conditions or when only magnetising or charging currents are flowing. Also called ISOLATING SWITCH.

isolecithal, ī-so-les'— (*Zool.*). Said of ova which have yolk distributed evenly through the protoplasm.

i'sologues (*Chem.*). Compounds having a similar molecular structure but containing different atoms of the same valency.

isomas'tigote (*Zool.*). Having two or four flagella of equal length.

i'somer (*Chem.*). Any compound having the same percentage composition and the same molecular weight as another, but of different constitution.

isom'erism (*Chem.*). The existence of more than one substance having a given molecular composition and molecular weight. This phenomenon is frequently met among organic compounds and among complex inorganic salts.

isomerous (*Bot.*). Equal in number to the members of another whorl.

isomet'ric contraction (*Zool.*). The type of contraction involved when a muscle is held so that it cannot change its length.

isometric projection (*Drawing*). A method of drawing a pictorial view of a solid object by representing it as placed so that three mutually perpendicular axes in it are equally inclined to the plane of projection.

isometric system (*Crystal.*). The cubic system.

isomor'phic alternation of generations (*Bot.*). See **homologous alternation of generations.**

isomor'phism (*Biol.*). Apparent likeness between individuals belonging to different species or races.—(*Crystal.*) The name given to the phenomenon whereby two or more minerals, which are closely similar in their chemical constitution, crystallise in the same class of the same system of symmetry, and develop very similar forms.—*adjs.* **isomorphic, isomorphous.**

isomorphous mixture (*Chem.*). See **mixed crystal.**

i'soneph (*Meteor.*). A line drawn on a map through places having equal amounts of cloudiness.

isoni'triles (*Chem.*). *Isocyanides* (q.v.).

isopach'yte (*Geol.*). A line drawn on the map through places where a particular stratum has the same thickness.

i'sopaque (*Photog.*). The line or contour giving equality of opacity; applied to spectrograms to determine colour-sensitivity of photographic materials.

isope'din (*Zool.*). The thin layer of bone forming the inner layer of some Fish scales.

i'sophase (*Gen.*). The condition when one hereditary factor influences the development of several characters.

iso'pic (*Geol.*). Said of two formations deposited contemporaneously and of the same facies. Cf. *heteropic.*

Isop'oda (*Zool.*). An order of *Peracarida,* in which the carapace is absent, the eyes are sessile or borne on immovable stalks, and the uropods are usually lamellar; the body is depressed and the legs used for walking; they show great variety of form, size, and habit; some are terrestrial, plant-feeders or ant-guests, others are marine, free-living and feeding on seaweeds or ectoparasitic on fish. Woodlice, etc.

isopo'dous (*Zool.*). Having the legs all alike.

i'sopogo'nous (*Zool.*). Said of feathers which have the two vanes alike in size and form.

i'soprene (*Chem.*). $CH_2{\cdot}C(CH_3){\cdot}CH{:}CH_2$, a diolefine, a colourless liquid, b.p. 37° C., obtained by the destructive distillation of rubber, from amyl alcohol, from propylene, synthetically from methane in the presence of catalysts, or by several other methods. It is a compound of particular importance for the synthesis of rubber.

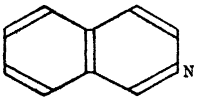
iso**pro'pyl group** (*Chem.*). The monovalent radical $(CH_3)_2CH-$.

iso**propyl alcohol** (*Chem.*). $(CH_3)_2CHOH$, a colourless liquid, miscible with water, b.p. 81° C.

Isop'tera (*Zool.*). An order of social *Exopterygota* living in large communities which occupy nests excavated in the soil or built up from mud and wood; five different polymorphic forms or castes occur in each species; the mouth-parts are adapted for biting and both pairs of wings, if present, are membranous and can be shed by means of a basal suture; soft-bodied forms with short anal cerci. White Ants, Termites.

i'sopyknos'copy (*Chem.*). The determination of the end-point of a volumetric titration from the specific gravity of the titrated solution.

iso**quin'oline** (*Chem.*). The formula is



It is an isomer of quinoline and a condensation product of a benzene ring with a pyridine ring. It forms colourless crystals, m.p. 23° C., b.p. 240° C.

isorea'gent (*Bot.*). A variety or microspecies.

isoseismal line, —siz'mal. A line drawn on a map through places recording the same intensity of earthquake shocks. See **earthquake.**

Isospon'dyli (*Zool.*). An order of *Neopterygii,* characterised by the possession of abdominal pelvic fins, an air-bladder communicating with the gullet by a pneumatic duct, a well-developed mesocoracoid and soft fin-rays. Herring, Salmon, Trout, Sardine, Pilchard, Anchovy, Wide-mouth, Smooth-head, and Lady Fish.

i'sospores (*Zool.*). In *Radiolaria,* agametes produced in schizogony.

isospo'rous (*Bot.*). Having asexually produced spores of one kind only.

isos'tasy (*Geol.*). A condition, which has been presumed to exist in the earth's crust, whereby equal earth masses underlie equal areas down to an assumed level of compensation.

isostem'onous (*Bot.*). Having as many stamens as petals.

isoster'ic (*Chem.*). Consisting of molecules possessing similar electronic structures.

isoten'iscope (*Chem.*). An instrument for the static measurement of vapour pressure by observing the change of level of a liquid in a U-tube.

i'sotherm (*Meteor.*). A line drawn on a map through places having equal temperatures.

isothermal (*Chem.*). (1) Occurring at constant temperature.—(2) A curve relating quantities measured at constant temperature.

isothermal change (*Phys.*). A change in the volume and pressure of a substance which takes place at constant temperature. For gases, Boyle's law applies to isothermal changes.

isothermal charts (*Meteor.*). Maps on which isotherms are drawn.

isothermal efficiency (*Eng.*). (Of a compressor) the ratio of the work required to compress a gas isothermally to the work actually done by the compressor piston or impeller.

isothermal lines (or **curves**) (*Phys.*). Curves obtained by plotting pressure against volume for a gas kept at constant temperature. For a gas sufficiently above its critical temperature for Boyle's law to be obeyed, such curves are rectangular hyperbolas.

isothrausmat'ic (*Geol.*). Said of orbicular igneous rocks in which the composition of the cores of the orbs is identical with that of the groundmass in which they are embedded. Cf. *homeothrausmatic.*

isoton'ic (*Chem.*). Having the same osmotic pressure, e g. as that of blood, or of the sap of cells which are being tested for their osmotic properties.

isotonic contraction (*Zool*). The type of contraction involved when a muscle, in shortening, does external work.

i'sotopes (*Chem., Phys.*). Substances having identical chemical properties but different atomic weights. Thus, zinc is composed of a mixture of substances having integral atomic weights 64, 66, 67, 68, and 70, in such proportions as to give the mean value 65·38 for the atomic weight of zinc. Isotopes have the same number of extra-nuclear electrons and the same nuclear charge but they have different nuclear masses. See **isobares.**

isotop'ic symbols (*Chem.*). Numerals attached to the symbol for a chemical element, with the following meanings—*upper left,* mass number of atom; *lower left,* nuclear charge of atom; *lower right,* number of atoms in molecule—e.g. ${}^{2}_{1}H_2$, ${}^{24}_{12}Mg$.

isotrop'ic (*Phys.*). Said of a substance which possesses the same properties in all directions.—*n.* **isotropy.**

isotro'pous (*Zool.*). (Of ova) lacking any predetermined axes.—*n.* **isotropy.**

isth'mus (*Zool.*). A neck connecting two expanded portions of an organ; as the constriction connecting the mid-brain and the hind-brain of Vertebrates.

Italian asbestos (*Min.*). A name often given to tremolite asbestos to distinguish it from Canadian or chrysotile asbestos. It is extensively quarried in Piedmont and Lombardy.

Italian blind (*Build.*). An outside roller-blind similar to the hook-out blind but having the side arms attached to the blind and capable of sliding up and down on side rods. Also called a CANALETTE BLIND.

Italian cloth (*Textiles*). (1) A fabric composed of a cotton warp and a fine Botany weft, used for linings.—(2) A grey cotton cloth which has been mercerised, dyed, and schreinered. The weave is 5-end sateen.

Italian pink (*Paint.*). See **Dutch pink.**

Italian roof (*Build.*). A *hipped roof* (q.v.).

italic, italics (*Typog.*). A sloping style of type, thus *Italic.* It should be indicated in manuscript by one line under the word or words.

Italit (*Build.*). A proprietary corrugated asbestos-cement roofing material.

itch, depluming (*Vet.*). Infection of the plumage of birds by scabies mites of the genus *Cnemidocoptes.*

it'er (*Zool.*). A canal or duct, as the reduced ventricle of the mid-brain in higher Vertebrates.

iterative impedance (*Elec. Comm.*). The termination impedance of a network which makes the input impedance of the network equal to the said termination.

Ith'aca Group (*Geol.*). A subdivision of the Senecan Series as exposed in the gorge of Fall Creek, Ithaca, N.Y.

ivory (*Zool.*). The dentine of teeth, especially the type of dentine composing the tusks of elephants, which in transverse sections shows striae proceeding in the arc of a circle and forming, by their decussations, small curvilinear lozenge-shape spaces.

ivory black (*Chem.*). A name applied to the product obtained by digesting bone black or carbon with hydrochloric acid to remove calcium phosphates.—(*Dec.*) A colouring pigment obtained from charred scraps of ivory ground in oil.

ivorytype (*Photog.*). See **eburneum process.**

I.W. (*Chem.*). An abbrev. for *isotopic weight.*

ix'iolite (*Min.*). See **tapiolite.**

Izod test (*Met.*). A notched-bar or impact test in which a notched specimen held in a vice is struck on the end by a striker carried on a pendulum; the energy absorbed in fracture is obtained from the height to which the pendulum rises.

j. The mathematical operator $j^2 = -1$, used in electrical engineering. j means the graphical rotation of a vector, representing a sinusoidal alternating current or voltage, 90° positively (anti-clockwise). The reactances of inductances and capacitors, $j\omega L$ and $1/j\omega C$, include j to denote that the currents in these lag and lead respectively by 90°. Consistency in algebraic manipulations of quantities in the form $a+jb$, representing vectors, is achieved by extracting terms which contain j and those which do not, remembering that $j^2 = -1$, $j^3 = -j$, etc., an important facility in calculating alternating quantities in electrical engineering. The deduction that $j = \sqrt{-1}$ has no meaning. See ***i*** and **vector quantity.**

jω (*Maths.*). The Heaviside operator, p, which is retained through mathematical processes.

J (*Chem.*). In names of dyestuffs, a symbol for yellow.

J (*Chem.*). A symbol for *gram-equivalent weight.*

J (*Eng.*). The symbol used to denote the polar moment of inertia of a shaft.

J (*Heat*). The symbol for Joule's equivalent, i.e. the *mechanical equivalent of heat* (q.v.).

J-acid (*Chem.*). 2,5-Aminonaphthol-7-monosulphonic acid, an intermediate for dyestuffs, prepared by melting 2-naphthylamine-5,7-disulphonic acid with caustic soda.

Jablochkoff' candle (*Illum.*). An early form of arc lamp, in which the carbons were placed side by side and separated by plaster of Paris.

ja'cinth or **hy'acinth** (*Min.*). The aurora-red variety of transparent zircon, used as a gemstone. A cinnamon-coloured variety of grossularite from Ceylon is also called *hyacinth.*

jack (*Eng.*). A portable lifting machine for raising heavy weights through a short distance, consisting either of a screw raised by a nut rotated by hand gear and a long lever, or a small hydraulic ram. See **hydraulic jack.**

jack (*Lace*). A frame containing horizontal bars that support wires fixed vertically, against which bobbins containing yarn can revolve freely.

jack (*Teleph.*). The unit of the vertical face of a telephone switchboard for the insertion of plugs. The tip, ring, and sleeve of a plug make temporary contact with corresponding springs in the jack when the plug is inserted.

See **answering—**
branching—
break—
line—
outgoing—
slipper—
test—

jacks (*Textiles*). (1) Levers that, in conjunction with a tappet or dobby motion, raise and lower the heald shafts in a loom.—(2) In lace machines, elements (such as interceptor wires, etc.) which control threads.

jack arch (*Build.*). A *flat arch* (q.v.).

jack frame (*Cotton Spinning*). The last of a series of four fly frames, which is used only to prepare rovings for the spinning of very fine counts.

jackhammer (*Mining*). A hand-held compressed-air hammer drill for rock-drilling.

jack-in-the-box (*Cotton Spinning*). A term sometimes used to indicate the differential motion that controls the winding speed of a fly frame.

jack off (*Lace*). To wind a length of yarn from a jack of flanged bobbins, for transfer to brass bobbins.

jack plane (*Carp.*). A bench plane about 16 in. long, used for bringing the work down to approximate size, prior to finishing with a trying or smoothing plane.

jack-rafter (*Carp.*). A short rafter connecting a hip-rafter and the eaves, or a valley-rafter and the ridge.

jack shaft (*Elec. Eng.*). An intermediate shaft used in locomotives having collective drive; the jack shaft is geared to the motor shaft and carries cranks which drive the coupling rods on the driving wheels.

jack-timber (*Carp.*). A timber used in a narrowing situation, such as a rafter in a hip roof, where it has to be shorter than its fellows. Also called a CRIPPLE-TIMBER.

jacket (*Eng.*). An outer casing or cover constructed round a cylinder or pipe, the annular space being filled with a fluid for either cooling, heating, or maintaining the cylinder contents at constant temperature; e.g. the water *jackets* of an I.C. engine.

jacket (*Print.*). The wrapper, or dust cover, in which a book is enclosed. Book-jackets are usually artistically designed, and executed in colour, to enhance the appeal of the volume.

jacking delivery motion (*Cotton Spinning*). A term sometimes applied to the mechanism which provides for the delivery of a small quantity of additional roving by the front rollers, after stoppage at the end of the run of the mule carriage, to compensate for extra twist then inserted.

jacking motion (*Cotton Spinning*). The mechanism employed to stop the front rollers in a mule spinning frame, before the carriage completes its outward run.

jacking-up (*Eng.*). The process of lifting an object by means of a jack.

Jacksonian epilepsy (*Med.*). A convulsion of a limited group of muscles spreading gradually from one group to the other, usually without loss of consciousness; the result of a lesion (e.g. tumour) of the brain.

ja'cobsite (*Min.*). An oxide of magnesium, iron, and manganese, which crystallises in the cubic system (usually in the form of distorted octahedra).

Jacobson's cartilage (*Zool.*). In some Vertebrates, a cartilage of the nasal region supporting Jacobson's organs.

Jacobson's commissure (*Zool.*). In lower Vertebrates, a connexion between the fifth and ninth cranial nerves.

Jacobson's glands (*Zool.*). In some Vertebrates, nasal glands the secretion of which moistens the olfactory epithelium.

Jacobson's organ (*Zool.*). In some Vertebrates, an accessory olfactory organ developed in connexion with the roof of the mouth.

jac'onet or **jacconette'** (*Textiles*). A plain, light-bleached cotton cloth, with smooth finish; for Indian markets, etc. Also, a thin material of rubber and linen used for medical dressings when water- or damp-proofing is required.

jacot tool, jak'ō (*Horol.*). A tool used by watchmakers for polishing and burnishing pivots.

jacquard, ja-kard (*Weaving*). A machine introduced in 1801 by the French inventor Joseph Marie Jacquard to be used, in conjunction with a loom, to operate the shedding and control the figuring when more than 20 lifts of warp are necessary. Machines vary in size from 100 needles and hooks up to 1600. See **cards.**

jactitation (*Med.*). Restless tossing of a patient severely ill: a twitching or convulsion of a muscle or of a limb.

jacupiran'gite (*Geol.*). A name applied by Derby in 1891 to a type of nepheline-gabbro consisting of titanaugite, biotite, iron ores, and nepheline, the last being subordinate to the mafic minerals.

jade (*Min.*). A general term loosely used to include various mineral substances of tough texture and of a green colour. It properly embraces nephrite and jadeite, but green varieties of sillimanite, pectolite, serpentine, vesuvianite, and garnet are sometimes included.

jadeite, jā'dīt (*Min.*). A metasilicate of sodium and aluminium which crystallises in the monoclinic system. It is green in colour and has long been prized in the Orient. The finest material comes from Mogaung, Upper Burma.

Jäderin wires, yā'der-in (*Surv.*). Apparatus devised by Prof. Jäderin of Stockholm for base-line measurement. It consists of separate steel and brass wires, extended under constant tension over reference tripods in the line of the base. The coefficients of expansion and lengths at a certain temperature of the two wires having been found, the temperatures of the wires themselves may be deduced from the difference of the measurement of the same distance by the two wires; and these temperatures being known, the length of the base may be very accurately obtained.

jag-bolt (*Eng.*). See **rag-bolt.**

jail fever (*Med.*) See **typhus fever.**

jalousies, zhal'oo-sēz (*Build.*). Hanging or sliding wooden sun-shutters giving external protection to a window, and allowing for ventilation through louvres or holes cut in the shutters themselves. Also called VENETIAN SHUTTERS.

jamaicin (*Chem.*). See **berberine.**

jamb (*Build.*). The side of an aperture.

jambs (*Acous.*). The vertical plane surfaces for locating the draw-stops at the sides of the manuals on an organ console.

jamb linings (*Join.*). The panelling at the sides of a window recess, running from the floor to the level of the window head. Cf. *elbow linings.*

jamb post (*Carp.*). An upright member on one side of a doorway opening.

jamb stone (*Build.*). A stone forming one of the upright sides of an aperture in a wall.

jamesonite, jām'son-īt (*Min.*). See **feather ore.**

Ja'min interferometer (*Light*). A form of interferometer in which two interfering beams of light pursue parallel paths a few centimetres apart. The instrument is used to measure the refractive index of a gas, by observing the fringe shift when one of the light beams traverses a tube filled with the gas, while the other traverses a vacuum.

Jamin's chain, jaminian chain (*Bot.*). A series of short threads of water separated by bubbles of air, in the vessels of plants.

jamming (*Radio*). Interference, intentional or otherwise, with the transmission from a station, caused by another station working on the same wavelength.

Jandus arc lamp (*Illum.*). A form of enclosed-flame arc lamp, which has an arrangement for circulating the enclosed gases in order to avoid deposits on the globe.

jan'iceps (*Med.*). A foetal monstrosity in which two heads are fused so that the faces look in opposite directions.

Japan camphor (*Chem.*). Camphor.

Japan wax (*Chem.*). A natural wax obtained from sumach, m.p. 50° C. It has a high content of palmitin.

Japanese paper (*Paper*). Japanese hand-made paper prepared from mulberry bark. The surface is similar to that of vellum.

Japanese river fever (*Med.*). See **shimamushi fever.**

Japanese tissue (*Photog.*). An unsized paper for photographic work.

Japanese vellum (*Paper*). An expensive hand-made paper, prepared from the inner bark of the mulberry tree. Thicker than *Japanese paper.*

japanners' gold-size (*Dec.*). See **gold-size.**

japanning (*Dec.*). The process of covering metal, slate, papier-mâché, etc., with thick copal-oil varnish, which is then stoved at a temperature of about 200° F. The term is also applied to the process of making *patent leather* (q.v.).

jar (*Civ. Eng.*). A special coupling-piece between adjacent boring rods, allowing for relative movement as the rods fall. This permits the drill-bit at the lower end to strike the ground freely, otherwise the weight of the rods, in the case of a deep boring, would be sufficient in itself to break them as they were dropped.

jar-ramming machine (*Moulding*). See **jolt-ramming machine.**

jar (*Elec. Eng.*). A unit of capacitance once used in the British Navy; equal to 1/900 micro-farad. See **Leyden jar.**

jargon aphasia (*Med.*). Rapid unintelligible utterance, due to a lesion in the brain.

jargons, jargoons (*Min.*). A name given in the gem trade to the zircons (chiefly of golden-yellow colour) from Ceylon. They resemble diamonds in lustre but are less valuable. See also **jacinth.**

jar'osite (*Min.*). A hydrated silicate of iron and potassium crystallising in the trigonal system.

jarrah (*Timber*). A dense wood from Australia. It is of a deep-red colour, and is used for making piles, heavy framing, and wood paving-blocks.

jasp-opal (*Min.*). See **opal jasper.**

jaspé, jas'pā (*Textiles*). A plain-woven cotton cloth with a shaded effect, usually embroidered or printed; used for bedspreads, curtains, etc. The warp threads are in pairs, the threads forming a pair or tape being of different colours.

jas'pelline (*Textiles*). A light covert cloth made from Botany warp and fine woollen weft; used for coatings.

jasper (*Min.*). An impure opaque silica, commonly red owing to the presence of iron oxides in the silica.

jasper (*Pot.*). A hard body containing barytes and barium carbonate, capable of being coloured throughout or by means of slip, and of being polished on the lapidary's wheel; usually decorated with relief ornament in a different colour.

jatrorrhi'zine, jateorhizine (*Chem.*). An alkaloid of the *iso*quinoline group, obtained from the Calumba root, *Jateorhiza columba.* It has not been obtained in the free state. Salts, however, are known; e.g. the iodide, $C_{20}H_{20}O_5NI+H_2O$, which crystallises in reddish-yellow needles, m.p. 208°-210° C.

jaundice (*Med.*). Icterus. Yellow coloration of the skin and other tissues of the body, by excess of bile pigment present in the blood and the lymph.—ACHOLURIC JAUNDICE, see **spherocytosis.**—INFECTIOUS JAUNDICE, see **spirochaetosis icterohaemorrhagica.**

Javel water or **eau de Javelle,** zha-vel' (*Chem.*). A mixture of potassium chloride and hypochlorite in solution. Sometimes used for bleaching, and (*Photog.*) for clearing and reducing negatives, also for removing the last traces of hypo from emulsions.

jaw (*Eng.*). (1) One of a pair of members between which an object is held, crushed, or cut, as the *jaws* of a vice or chuck.—(2) One of a pair of members attached to an object, to locate it by embracing another object.

jaws (*Zool.*). In gnathostomatous Vertebrates, the skeletal framework of the mouth enclosed by flesh or horny sheaths, assisting in the opening and closing of the mouth, and usually furnished with teeth or horny plates to facilitate seizure of the prey or mastication: in Invertebrates, any similar structures placed at the anterior end of the alimentary tract.

jaw breaker (*Mining*). A rock-breaker with a vertical fixed jaw and an inclined swinging jaw.

jaw-foot (*Zool.*). See **maxilliped.**

jean (*Textiles*). A heavy cotton-twill material; used for overalls, boot-linings, corsets, etc. Usually of 2-and-1 warp face twill.

jeanette' (*Textiles*). A material of similar type to jean, but generally of lighter weight, and with a 2-and-1 weft face twill.

jedding axe (*Masonry*). An axe having one flat face and one pointed peen.

Jeffcott tacheometer (*Surv.*). A well-known form of *direct-reading tacheometer* (q.v.).

jejunec'tomy (*Surg.*). Excision of part of the jejunum.

jejuni'tis (*Med.*). Inflammation of the jejunum.

jeju'nocolos'tomy (*Surg.*). The formation, by operation, of a communication between the jejunum and the colon.

jeju'nojejunos'tomy (*Surg.*). The formation, by anastomosis, of a communication between two parts of the jejunum, thus short-circuiting the part in between.

jejunos'tomy (*Surg.*). The operative formation of an opening into the jejunum.

jejunot'omy (*Surg.*). Incision of the jejunum.

jeju'num (*Zool.*). In Mammals, that part of the small intestine which intervenes between the duodenum and the ileum.

jelly (*Cinema.*). A gelatine filter which is placed in front of moderately powered lamps to alter the spectral distribution of their light-emission.

jemmy (*Tools*). A small crowbar.

jenny (*Cinema.*). A portable electric generator; used for supplying suitable electric power in motion-picture production.

jerk-pump (*I.C. Engs.*). A timed fuel-injection pump in which a cam-driven plunger overruns a spill port, thus causing the abrupt pressure-rise necessary to initiate injection through the atomiser.

jerkin head (*Build.*). The end of a pitched roof which is hipped, but not down to the level of the feet of the main rafters, thus leaving a half-gable. Also called SHREAD HEAD.

jervine (*Chem.*). $C_{26}H_{37}O_3N+2H_2O$, an alkaloid of unknown constitution, isolated from white hellebore, long prisms, m.p. 238°-242° C. The alkaloid depresses the circulation.

jet. A fluid stream issuing from an orifice or nozzle.

jet (*I.C. Engs., etc.*). A small nozzle for spraying or for metering a fluid, as the *jets* fitted to a carburettor.

jet (or injection) condenser (*Eng.*). A steam condenser in which condensation of the exhaust steam is effected by the direct introduction of jets of cooling water into the steam space.

jet-wave rectifier (*Elec. Eng.*). A form of commutator rectifier in which a jet of mercury impinges on two stationary commutator segments. The requisite deflection of the jet from one segment to the other is effected by electromagnetic means, the jet carrying an alternating current and passing between the poles of a d.c. magnet.

jet (*Min.*). A hard coal-black variety of lignite, showing under the microscope the structure of coniferous wood.

jet shales (*Geol.*). Shales containing 'jet-rock,' found in the Upper Lias of the Whitby district and belonging to the Jurassic System.

jetting-out (*Build.*). The projection of, e.g., a corbel from the face of a wall.

jettison gear (*Aero.*). Apparatus for the rapid discharge of fuel in an emergency. Principally needed on aircraft with long air-endurance, which have to carry heavy loads of fuel during the early stages of a flight.

jetty (*Build.*). See **jutty.**—(*Hyd. Eng.*) See **groynes.**

Jew Stone (*Geol.*). A local division of limestones found in the rocks of the Rhaetic stage of the Jurassic System in Somerset. The rock shows the boring action of organisms.

jewel (*Horol.*). Natural ruby or sapphire, or synthetic stone, used for pivot bearings, also for the pallets and impulse pin. Owing to the high polish that can be obtained with such stones, combined with a hardness of surface, they provide wearing surfaces which have a long life and which cause little friction.

jewel setting (*Horol.*). The means of holding the jewel in the plate or cock.

jewelled (*Horol.*). Fitted with jewels. In watches (except in the lowest grades) the balance staff is always jewelled with two through holes and two end-stones. The pallet staff is also jewelled, but only the higher grades of watches have end-stones fitted. In watches with the club-tooth escapement, the pallets and impulse pin are invariably jewels. A '15-jewel' watch has the following jewels: balance staff 4, pallet staff 2, escape wheel 2, fourth wheel 2, third 2, pallets 2, impulse pin 1. Watches may have as many as 23 jewels. For platform escapements the holes are generally jewelled. In precision clocks, all the holes may be jewelled, and often the acting faces of the pallets are formed of inset jewels.

jib (*Eng.*). The boom of a crane or derrick. See **jib crane.**

jib barrow (*Eng.*). A wheelbarrow consisting of a platform without sides; used in foundries and workshops.

jib crane (*Eng.*). An inclined arm or jib attached to the foot of a rotatable vertical post and supported by a tie-rod connecting the upper ends of the two. The load rope or chain runs from a winch on the post, and over a pulley at the end of the jib.

jib door (*Join.*). A door which carries and continues the general decoration of the wall.

jib holeman (*Mining*). A man whose work it is to make recesses for the cutting disc at the end of coal-cutting machine faces.

jig (*Eng.*). An appliance used in a machine shop for accurately guiding and locating tools during the operations involved in producing interchangeable parts.

jig (*Mining*). See **Hancock—** **harz—**

jig or jigger (*Mining*). (1) A coupling or link for connecting tubs or waggons.—(2) Another name for *incline man.*

jig-back (*Civ. Eng.*). The type of *aerial ropeway* (q.v.) operated with a pair of carriers that travel in reverse directions, and are loaded or brought to rest alternately at the opposite stations, but which do not pass round the terminals. Also called the TO-AND-FRO AERIAL ROPEWAY.

jigger (*Eng.*). A hydraulic lift or elevator in which a short-stroke hydraulic ram operates the lift through a system of ropes and pulleys in order to increase the travel.

jigger (*Mining*). See **jig.**

jigger (*Pot.*). A template for forming a vessel on a potter's wheel.

jigger (*Radio*). An auto-transformer used for coupling the intermediate circuit of a spark transmitter to the antenna circuit. (Obsolete.)

jim-crow (*Eng.*). (1) A rail-bending device, operated by hand or by hydraulic power.—(2) A crowbar fitted with a claw.—(3) A swivelling tool-head used on a planing machine, cutting during each stroke of the table.

jimmy (*Tools*). A small crowbar.

jink (*Mining*). A coupling between two mine-tubs or trains in a set or journey.

jink-carrier (*Mining*). A lad employed to carry the loose couplings or jinks from one train of mine-tubs to another.

jinnier (*Mining*). See **incline man.**

jobbing founts (*Typog.*). Founts of type used for display purposes.

jobbing machines (*Print.*). The class of machines, usually platens, used for printing commercial or jobbing work.

jobbing work (*Typog.*). Small printed matter such as handbills, billheads, cards, etc.

jobs (*Textiles*). The term used for defective or damaged cotton fabrics; usually sold by weight.

Job's-tears (*Min.*). Rounded grains of chrysolite (olivine) found associated with garnet in certain localities.

jockey (or **monkey**) **pot** (*Glass*). A pot of small size that is set on top of another pot, for the purpose of melting special glasses not needed in great quantity. Several such pots may be set in the space of one full-sized pot.

jockey relay (*Teleg.*). A double moving-coil relay in which two independently suspended coils have different degrees of damping, so that when the signal-current is passed through both, antennae fixed to the fast-moving coil operate between antennae fixed to the slow-moving coil. The antennae therefore repeat signals which are the variations in the signal-current, independent of signal-current drift.

jockey wall (*Cinema.*). The same as *wild wall* (q.v.).

joggle (*Build.*). A shoulder formed on one structural member to support and take the thrust from another member.

joggle (*Carp.*). See **stub tenon.**

joggle (*Eng.*). (1) A small projection on a piece of metal fitting into a corresponding recess in another piece, to prevent lateral movement.—(2) A lap joint in which one plate is slightly cranked so as to allow the inner edges of the two plates to form a continuous surface.

joggle (*Masonry*). A piece or pin binding together adjacent stones in a course; similar to a *dowel* (q.v.) or *cramp* (q.v.).

joggle (*Ship Constr.*). A sharp distortion in a plate, angle, or other section, made purposely to permit overriding of contacting members. Usually made cold in a joggling machine, but occasionally made hot. The advantage is economic in that it reduces the amount of steel packing.

joggle beam (*Carp.*). A built beam whose parts are joggled into one another.

joggle joint (*Masonry*). A connexion between adjacent ashlars in which *joggles* (q.v.) are employed.

joggle-piece, joggle-post (*Carp.*). A *king-post* (q.v.).

joggle-truss (*Carp.*). A roof-truss formed with a king-post.

joggle work (*Masonry*). Coursed masonry in which slipping between the stones is prevented by the insertion of *joggles* (q.v.).

John o' Groats Sandstone (*Geol.*). A local group of red and yellow sandstones, found in the Middle Old Red Sandstones in the Orcadian region of northern Scotland.

Johne's disease (*Vet.*). A contagious infection of the small intestine of ruminants, due to *Mycobacterium paratuberculosis.*

Johnson noise (*Elec. Comm.*). Random noise-currents resulting from potential differences arising from the thermal agitation of electrons which are free to move in conductors. This noise is apparent with sufficient amplification, and therefore sets a natural limit to the lowest power-levels which can be used in electrical communication. See also **fluctuation noise.**

Johnston's organ (*Zool.*). In Insects, a sensory structure situated within the second antennal joint and believed to be auditory in function.

joiner's chisel (*Join.*). A *paring chisel* (q.v.).

joiner's cramp. See **cramp.**

joiner's gauge. A *marking gauge* (q.v.).

joinery. (1) The craft of working timber to form the finishings of a building, as distinct from *carpentry*.—(2) The material worked in this way.—*n.* **joiner.**

joint. A connexion made between two pieces.

joint (*Bind.*). One of the lateral projections formed on each side of a volume in the process of backing; along it the cover hinges. A linen strip pasted down the fold of the endpaper is called a *cloth joint.*

joint, joining (*Bot.*). A node.

joint (*Cables*). An arrangement for joining one cable to another.

joint (*Foundry*). The parting plane in the sand round a rammed mould, to enable the pattern to be withdrawn. It is covered with *parting sand* (q.v.) before the cope or top half is rammed.

joints, jointing (*Geol.*). Vertical, inclined, or horizontal divisional planes, found in almost all rocks; produced by tension or torsion. See **columnar structure, rift and grain.**

joint chair (*Rail.*). A type of chair used at the joint between successive lengths of rail and providing support for the ends of both lengths.

joint fastening (*Rail.*). A fish-plate or other means of fastening together the adjacent ends of successive lengths of rail.

joint fellon (*Vet.*). See **fellon.**

joint hinge (*Join.*). A *strap hinge* (q.v.).

joint-ill (*Vet.*). Pyaemia involving the joints of suckling animals. See also **pyosepticaemia.**

joint-mouse (*Med.*). A hard body, often a piece of cartilage, loose in the joint cavity; found especially in the joints of those suffering from osteo-arthritis.

joint runner (*Civ. Eng.*). An incombustible material used as packing in the bottom of the socket of a pipe, at a joint made with lead, in order to prevent the latter from running when molten. See **spigot-and-socket joint.**

jointed (*Bot.*). Said of an elongated plant member which is constricted at intervals and ultimately separates into a number of portions by breaking across the constrictions.

jointer (*Build.*). A tool used by bricklayers to form the mortar joint between the courses of bricks in pointing.

jointer plane (*Join.*). A *jointing plane* (q.v.).

jointing (*Build.*). The operation of making and/or finishing the joints between bricks, stones, timbers, pipes, etc.

jointing (*Eng.*). Material used for making a pressure-tight joint between two surfaces; e.g. asbestos sheet, corrugated steel rings, vulcanised rubber, etc. See **gasket, insertion joint.**

jointing (*Geol.*). See **joints.**

jointing plane (*Join.*). A bench plane, similar to the jack plane but larger (28 in. to 30 in. long), used for truing the edges of timbers which are to be accurately fitted together. Also called JOINTER PLANE, SHOOTING PLANE.

jointing rule (*Build.*). A straightedge about 6 ft. long, used as a guide when *pencilling* (q.v.).

jointless flooring (*Build.*). See **magnesite flooring.**

joist (*Build., Struct.*). A horizontal beam of timber or steel used with others as a support for a floor and/or ceiling.

joist, rolled-steel (*Eng.*). See **H-beam.**

jolley (*Pot.*). A machine for moulding hollow-ware.

Jolly's apparatus (*Chem.*). Apparatus for the volumetric analysis of air.

jolt- (or **jar-**) **ramming machine** (*Moulding*). A moulding machine (see **machine moulding**) in which the box, pattern, and sand are repeatedly lifted by a table operated by air pressure, and allowed to drop by gravity, the resulting jolt or jar packing or ramming the sand in an efficient manner. Also called JOLT-RAM MACHINE.

jolt-squeeze machine (*Moulding*). A moulding machine (see **machine moulding**) used for deep patterns; in it jolting is used to pack the sand on to the pattern followed by squeezing from the top to complete the ramming.

Joly screen (*Photog.*). A colour mosaic consisting of ruled lines.

Joly's steam calorimeter (*Heat*). An instrument used for measuring the specific heat of a body, by weighing the amount of steam condensed on it when suspended in a steam chamber.

Jona effect (*Cables*). See **stranding effect.**

jor'danon, Jordan's species (*Bot.*). A true breeding race of a species, but not sufficiently distinct to be given specific rank.

joria (*Textiles*). A fine type of East Indian wool, produced in the district of Joria.

Jos-pe (*Photog.*). An imbibition method of three-colour printing; gelatine matrices are formed with hardening developers, before they take up their respective dyes.

joule, jool (*Phys.*). A unit of energy equal to 10^7 ergs, derived from the practical system of electrical units. It may be defined as the energy dissipated in one second by a current of one ampere flowing across a potential difference of one volt. (Named after F. P. Joule, 1818-89; name pronounced jowl)

Joule effect (*Elec. Eng.*). The heating effect caused by an electric current flowing through a resistance.

Joule-Thomson (Joule-Kelvin) effect (*Heat*). The slight fall in temperature which occurs when a gas is allowed to expand without doing external work. The effect is due to energy absorbed in overcoming the cohesion of the molecules of the gas. The liquefaction of gases by the Lindé process depends on the Joule-Thomson effect.

Joule's equivalent (*Heat*). See **mechanical equivalent of heat.**

Joule's law (*Chem.*). (1) The intrinsic energy of a given mass of gas is a function of temperature alone; it is independent of the pressure and volume of the gas.—(2) The molecular heat of a solid compound is equal to the sum of the atomic heats of its component elements in the solid state.

Joule's law (*Elec. Eng.*). A law, enunciated by Joule, which states that the heat produced by a current I passing through a conductor of resistance R for a time t is proportional to I^2Rt.

journal (*Eng.*). That part of a shaft which is in contact with, and supported by, a bearing.

journey man (or rider) (*Mining*). A dukey-rider, i.e. a man working on a *dukey* (q.v.).

Joy's valve-gear (*Eng.*). A steam-engine valve-gear of the radial type used on some locomotives; in it motion is taken entirely from a point on the connecting-rod.

joystick (*Aero.*). Colloquialism for *control column.*

ju'gal (*Zool.*). A paired membrane bone of the zygoma of the Vertebrate skull, lying between the squamosal and the maxilla.

juggle (*Timber*). A log sawn to length, and either split or left in the round.

jug'ular (*Zool.*). Pertaining to the throat or neck region; e.g. a *jugular* vein.

ju'gulum (*Zool.*). In Insects, the jugum: in Birds, the region of the breast which merges into the neck.

ju'gum (*Bot.*). A pair of opposite leaves.

jugum (*Zool.*). In some *Lepidoptera*, a finger-shaped process arising from the posterior margin of the fore-wing; it serves to unite the two wings during flight.—*pl.* **juga.**

juice (*Cinema.*). Colloquialism for *electric current.* Hence *juicer* and *juice-gang* for the electricians in a motion-picture studio.

jula'ceous (*Bot.*). Cylindrical and smooth; resembling a catkin.

Julian calendar (*Astron.*). The system of reckoning years and months for civil purposes, based on a tropical year of 365·25 days; instituted by Julius Caesar in 45 B.C. and still the basis of our calendar, although modified and improved by the Gregorian reform.

Julian date (*Astron.*). The number of any given day, in a system of reckoning by successive days, independently of various calendars and chronological epochs; instituted by J. Julius Scaliger in 1582, it has no connexion whatever with the Julian calendar.

jump join (*Forging*). A butt joint made by *jumping up* (q.v.) the ends of the two pieces before welding them together.

jumper (*Civ. Eng.*). A pointed steel rod which is repeatedly dropped on the same spot from a suitable height (being turned slightly between blows), and which by pulverising the earth forms a borehole.

jumper (*Elec. Eng.*). (1) A short section of overhead transmission line conductor serving to form an electrical connexion between two sections of line.—(2) A section of conductor making connexion between the coaches of a multiple-unit electric train.

jumper (*Horol.*). A click in the form of a wedge which causes a star wheel to jump forward one space.

jumper (*Masonry*). A *through stone* (q.v.).

jumper (*Mining*) The borer, steel, or bit for a compressed-air rock drill.

jumper (*Teleph.*). A wire or pair of wires which are used for the arbitrary connexion between groups of circuits, e.g. the incoming subscriber's lines and the internal circuits in an exchange, the jumpers here being flexible pairs between the rows of terminals on opposite sides of a main frame.

jumper bar (*Mining*). A weighted steel bar with a cutting edge, raised and dropped by hand.

jumper-cable (*Elec. Eng.*). A cable for making electrical connexion between two sections of conductor-rail in an electric traction system.

jumper field (*Teleph.*). The cross-connexion or translation field in a director. Any space devoted to jumpers, i.e. temporary connexions, especially within a distribution frame.

jumper-top blast pipe (*Eng.*). A locomotive *blast pipe* (q.v.) in which the back pressure, and hence the draught, are automatically limited by the lifting of an annular valve, which increases the nozzle area.

jumping-figure watch (*Horol.*). A watch in which the time is indicated by figures on discs jumping into position in windows in the watch dial.

jumping-up (*Forging*). The operation of thickening the end of a metal rod by heating and hammering it in an endwise direction. Also called UPSETTING.

junction (*Rail.*). The place where two tracks connect.

junction-box (*Elec. Eng.*). A box, forming part of a distribution system, which contains switches, links, or fuses for connecting feeders and distributing mains.

junction circuit (*Teleph.*). A circuit between telephone exchanges, which is used by operators for connecting subscribers who have lines terminating in different exchanges.

junction point (*Surv.*). The common point between a circular curve and one of its transition curves.

Jungermanniales, yoong′ er-man-i-ā′-lēz (*Bot.*).

One of the main subdivisions of the *Hepaticae*. The plant body is either a thallus or a cylindrical branched leafy stem. The thallus is of simple construction, without air pores, and the antheridia and archegonia develop on or (rarely) in it. The capsule usually opens by four valves.

Jungner accumulator, yoong'ner (*Elec. Eng.*). A form of nickel-iron accumulator having an alkaline electrolyte.

junk ring (*Eng.*). A metal ring attached to a steam-engine piston for confining soft packing materials; or for similarly holding a cast-iron piston-ring in position

junket (*Chem.*) A product obtained from milk by the action of rennin.

junking (*Mining*). The process of cutting a passage through a pillar of coal.

Jupiter (*Astron.*). The largest planet in the solar system, the fifth in order of distance from the sun, having a mass about 318 times that of the earth, a sidereal period of 11·86 years, and nine satellites.

Juras'sic System (*Geol.*). The middle division of the Mesozoic era, named after the Jura Mts., where rocks of this age are found.

See **Corallian**
Cornbrash
Great Oölite Series
Inferior Oölite Series
Kimeridge Clay
Oxford Clay
Portlandian
Purbeckian.

jury strut (*Aero.*). A strut giving temporary support to a structure. Usually necessary in a biplane structure to support the wings during folding.

just scale, just temperament (*Acous.*). The same as *natural scale.*

justification (*Typog.*). The even spacing of words to a given measure of line.

jut window (*Build.*). A *bay-window* or *bow-window* (qq v.).

jute (*Textiles*). A bast fibre obtained from the Asian plants *Corchorus olitorius* and *C. capsularis*, and from the American plant *Abutilon theophrasti* (Indian Mallow). Used in the manufacture of cordage, carpets, canvas, hessian, etc.

jutting-out (*Build.*). Said of cornices, windows, etc. which project beyond the general wall-surface.

jutty (*Build.*). A projecting part of a building. Also called a JETTY.

jutty (*Mining*). In Derby and Notts, a small tub or truck used for gathering coal in thin seams.

juvenile (*Geol.*). Said of water and other volatile materials which are known to be emanations from a mass of molten rock matter or magma.

juvenile form (*Bot.*). A young plant which has leaves and other features different from those of a mature plant of the same species.

juvenile leaf (*Bot.*). The form of leaf found on a sporeling or seedling, when it differs markedly from the leaf of the adult plant.

juvenile stage (*Bot.*). A special stage in the life-history of some algae, from which the ordinary plant develops as a vegetative outgrowth.

juxtaposition twins (*Min.*). Two (or more) crystals united regularly, in accordance with a 'twin law,' on a plane (the 'composition plane') which is a possible crystal face of the mineral. Cf. *interpenetration twins.*

k (*Phys.*). A symbol for (1) the *Boltzmann constant* (q.v.); (2) the *radius of gyration* (q.v.).

k (*Chem.*). A symbol for the velocity constant of a chemical reaction.

κ- (*Chem.*). A symbol for: (1) *cata-*, i.e. containing a condensed double aromatic nucleus substituted in the 1.7 positions; (2) substitution on the tenth carbon atom.

K (*Chem.*). The symbol for *potassium.*

K (*Chem.*). A symbol for chemical equilibrium constant; K_s, solubility product.

[K] (*Light*). A very strong Fraunhofer line in the extreme violet. See **[H]**.

K-acid (*Chem.*). 1,8-Aminonaphthol-4,6-disulphonic acid, an intermediate for dyestuffs.

K-filter (*Elec. Comm.*). The same as *constant-k filter* (q.v.).

K-series (*Phys.*). The shortest wavelengths in the characteristic X-ray spectra of the elements. The *K-series* consist chiefly of two lines, K_α and K_β, which may be recognised in the spectra of elements from atomic number 10 to 90, there being a linear relation between the square root of the frequency of the radiation and the atomic number See **Moseley's law**, also **K, L, M . . . shells.**

K-term (*Astron.*). The name given to a term, extensively studied by the Japanese astronomer Kimura, which occurs in the mathematical expression of the variation of latitude.

Kahler's disease (*Med.*). Multiple myeloma. A disease in which tumours arising from cells of the bone-marrow appear in various parts of the skeleton.

Kahn's test (*Med.*). A precipitation test for syphilis, diluted antigen being added to inactivated blood serum.

kainite (*Min.*). Hydrous sulphate of magnesium, with potassium chloride, which crystallises in the monoclinic system. It usually occurs in the upper portions of salt deposits, e.g. at Stassfurt (Germany).

Kainozoic (*Geol.*). See **Cainozoic.**

kala-azar (*Med.*). Black fever. A disease due to infection with the protozoon *Leishmania donovani*; characterised by enlargement of the liver and spleen, anaemia, wasting, and fever.

Kalanite (*Cables*). A proprietary hard insulating material, not affected by oil, used for spreaders in cable joints.

Kaleoilres tape (*Cables*). A proprietary oil-resisting compounded linen tape; used in cable joints.

kalinite (*Min.*). Hydrous sulphate of potassium and aluminium, which probably crystallises in the monoclinic system. It has the same composition as potash alum. They both occur as an efflorescence upon argillaceous minerals, and in connexion with volcanoes.

kalioph'ilite (*Min.*). Silicate of potassium and aluminium, which crystallises in the hexagonal system. It commonly contains small amounts of nepheline. Also called PHACELLITE or FACELLITE.

kalliro'tron (*Radio*). An aperiodic combination of two triode valves for obtaining negative resistance.

kal'litype (*Photog.*). A process involving photoreduction of ferric to ferrous salts, which in turn can reduce silver salts.

kalym'mocytes (*Zool.*). In *Urochorda*, cells of the follicle which pass into the egg after maturation.

kam'acite (*Min.*). A variety of nickeliferous iron, found in meteorites.

kam'pylite, campylite (*Min.*). A variety of mimetite, composed of lead chloride and lead arsenate, crystallising, in the form of barrel-shaped crystals, in the hexagonal system.

Kanawha Series (*Geol.*). A group of productive coal measures occurring in the Pennsylvanian of the Appalachian region, and completely developed in Virginia. Sometimes known as the UPPER POTTSVILLE SERIES.

kandahar (*Textiles*). An East Indian wool of good quality, used in the manufacture of native Indian carpets.

kankar (*Geol.*). See **kunkar.**

ka'olin (*Geol.*). See **china clay.**

kaolinisation (*Geol.*). The processes whereby feldspars and other alumino-silicates are altered to kaolin, the active agents being, apparently, magmatic water and carbon dioxide.

ka'olinite (*Min.*). A finely crystalline form of hydrated aluminium silicate, $(OH)_4Al_2Si_2O_5$, occurring as minute monoclinic flaky crystals with a perfect basal cleavage, resulting chiefly from the alteration of feldspars under conditions of hydrothermal or pneumatolytic metamorphism. The kaolin group of minerals includes also the recently recognised isomers *dickite* and *nacrite.* (See Ross and Kerr, *Amer. Min.* 1930, vol. 15, p 34.)

Kaplan water turbine (*Eng.*). A propeller-type *water turbine* (q.v.) in which the pitch of the blades can be varied in accordance with the load, resulting in high efficiency over a large load-range.

Kapp coefficient (*Elec. Eng.*). A coefficient occasionally used in electric-machine design and embodying the form factor, distribution factor, etc. so that, when multiplied by the number of turns in series, the flux and 10^{-8}, it gives the r.m.s. value of the e.m.f.

Kapp line (*Elec. Eng.*). A unit of magnetic flux occasionally used in electric-machine design; equal to 6000 lines (maxwells).

Kapp phase advancer, Kapp vibrator (*Elec. Eng.*). A form of phase advancer for use with slip-ring induction motors. It consists of a small armature connected in each phase of the rotor circuit and allowed to oscillate freely in a d.c. field so that it has a leading e.m.f. induced in it.

karat. See **carat.**

karri (*Timber*). A dense wood from Australia, similar to jarrah. It is of a deep-red colour, and is used for making piles, heavy framing, and wood paving-blocks.

kary-, karyo- (Greek *karyon*, nucleus). A prefix used in the construction of compound terms; e.g. *karyoplasm*, nucleoplasm. See also under **caryo-.**

karyas'ter (*Cyt.*). A group of chromosomes arranged like the spokes of a wheel.

karyen'chyma (*Zool.*). See **karyolymph.**

karyogamy (*Biol.*). The union of two nuclei, especially gametic nuclei.

karyokine'sis (*Cyt.*). See **mitosis.**

kar'yolymph (*Bot.*). A colourless watery fluid, occupying most of the space inside the nuclear membrane; nuclear sap.

karyolysis (*Cyt.*). Dissolution of the nucleus by disintegration of the chromatin: gradual disappearance of the nucleus in a dead cell.

kar'yomere (*Cyt.*). A swollen condition sometimes seen in chromosomes towards the end of a nuclear division.

karyomi'crosome (*Cyt.*). A nuclear granule.

kar'yomite (*Cyt.*). See **chromosome.**

kar'yon (*Cyt.*). See **nucleus.**

kar'yophans (*Zool.*). In some *Ciliophora*, nuclear granules composing the spironeme and axoneme of the stalk.

kar'yoplasm (*Cyt.*). See **nucleoplasm.**

karyoplasmat'ic ratio (*Cyt*). The ratio between the volume of a nucleus and that of the cytoplasm in the same cell.

karyorrhex'is (*Cyt.*). Breaking up of the chromatin of the nucleus into darkly staining granules (in necrosis of the cell).

kar'yosome (*Cyt.*). A nucleus: a chromosome: an aggregation of chromatin in a resting nucleus: a type of nucleolus well shown by many of the lower plants, which stains with basic dyes and furnishes material for the chromosomes during mitosis. Cf. *plasmosome.*

karyothe'ca (*Cyt.*). See **nuclear membrane.**

kar'yotin (*Cyt.*). The substance which makes up the nuclear reticulum. See **chromatin.**

kashgar (*Textiles*). A white silky wool produced in Chinese Turkestan; exported principally to Russia.

kaspine leather (*Leather*). A white washable leather; used for gloves, etc.

kata- (Greek *kata*, down). A prefix used in the construction of compound terms; e.g. *katagenesis*. See also terms at **cata-.**

kata-positive (*Photog.*). The description of a positive on an opaque surface, such as paper, in contrast to a transparency on glass or film.

kata-thermometer (*Mining*). An instrument to measure the cooling power of air on the human body.

katabat'ic (*Meteor*). Said of a wind which is caused by the downward motion of air due to convection, as when cold air flows down into a valley from high ground.

katabi'ons (*Biol*). Organisms in which katabolic processes predominate over anabolic processes, as animals.

katab'olism (*Biol.*). The sum-total of the disruptive metabolic processes in an organism, organ, or cell. Cf. *anabolism.*

katad'romous, *or* —drō'mus (*Bot.*). Said of the venation in the royal fern, where the first nerves in each leaf segment come off on the basal side of the midrib.

katadromous (*Zool.*). (Of Fish) migrating to water of greater density than that of the normal habitat to spawn, as the Fresh-water Eel which migrates from fresh to salt water to spawn. Cf. *anadromous.*

katagen'esis (*Zool.*). Retrogressive evolution.

katakinet'ic (*Biol*). Tending to the discharge of energy. Cf. *anakinetic.*

katakinet'omeres (*Biol.*). Energy-poor, stable protoplasm molecules. Cf. *anakinetomeres.*

kataklastic structures (*Geol.*). Structures produced in a rock by the action of severe mechanical stress, during dynamic metamorphism. The constituent minerals generally show deformation and granulation.

katamor'phism (*Geol.*). The breaking-down processes of metamorphism, as contrasted with the building-up processes of anamorphism.

kat'aphase (*Cyt.*). The stages of mitosis from the formation of the chromosomes up to the division of the cell.

kat'aplexy (*Zool.*). The state of imitation of death, adopted by some animals when alarmed.

kat'astate (*Zool.*). A product of katabolism.

Katayama disease (*Med.*). A disease due to invasion of the body by the blood fluke *Schistosoma Japonicum*, characterised by urticaria, painful enlargement of liver and spleen, bronchitis, diarrhoea, loss of appetite, and fever lasting a few days to several weeks.

katharom'eter (*Chem.*). An instrument for the analysis of gases by means of measurements of thermal conductivity.

kauri gum, kow'ri (*Chem.*). A gum found in New Zealand, used for varnishes and linoleum cements. It is the resinous exudation of the *kauri pine* (*Agathis australis*), a tree whose timber is of value for general joinery and decorative purposes.

KC.P.S., kcps, kc/s (*Elec. Comm.*). Abbrevs. for *kilo-cycles per second.*

Keber's organ, kā'ber (*Zool.*). In some *Pelecypoda*, a glandular organ connected with the epithelial lining of the pericardial cavity.

kedge anchor (*Ships*). A small anchor used for steadying and warping purposes.

keel (*Aero.*). The longitudinal member along the under side of the hull of a rigid airship, or the under side of the envelope of a semi-rigid airship. It distributes the effect of the concentrated loads along the airship structure. See also **keelson.**

keel (*Bot.*). (1) See **carina.**—(2) A longitudinal narrow outgrowth from the under side of a leaf or leaf-like structure.—(3) Any prominent ridge.

Keele Series (*Geol.*). A local group of red and purple sandstones and marls, which constitutes the highest division of the Coal Measures in the North Staffs coalfield. They are barren red measures, deposited under semi-desert conditions.

keelson (*Aero.*). A longitudinal structural member inside the bottom of the hull of a flying-boat. It forms part of the main framework, connecting up the transverse members and bulkheads.—(*Ship Constr.*). (1) A term descriptive of the longitudinal strength members of a ship, which form the shell-plating stiffeners. A *flat keel* is the lower horizontal member of the ship's backbone; a *centre keelson* is the vertical member thereof; a *bar keel* is similar to the latter, external to the hull; *side keelsons* are vertical members, off the ship's centre line.—(2) The wrought-iron saddles or standards which support cylindrical boilers of the Scotch marine type. Sometimes called BOILER CRADLES.

Keene's cement (*Plast.*). A quick-setting hard plaster, made by soaking plaster of Paris in a solution of alum or borax and cream of tartar.

keeper (*Build.*). (1) The part of a Norfolk latch limiting the travel of the fall bar.—(2) The socket fitted on a door jamb to house the bolt of the lock in the shut position.

keeper (*Elec. Eng.*). See **armature.**

keeper, keep (*Eng.*). The lower part of the bearing in a railway-truck axle-box, which limits the downward movement of the box due to track irregularities.

keeving (*Mining*). See **tossing.**

Keewat'in Group (*Geol.*). A series of basic pillow lavas associated with sedimentary iron ores (worked in the 'Iron Ranges'); forms part of the Pre-Cambrian succession in the Canadian Shield. See also **Loganian System.**

kef'ir (*Chem.*). A fermentation product of milk in which the lactose has undergone both alcoholic and lactic fermentation simultaneously.

Keith and Flack's node (*Zool.*). A plexiform mass of special connective tissue, situated near the entrance of the superior vena cava, under the endocardium of the right auricle in the Mammalian heart; here the heart contractions originate.

kelat' (*Textiles*). A wool from Baluchistan, used for carpet making.

Kellaways Rock (*Geol.*). A calcareous sandstone, richly fossiliferous, which forms a basement bed to the Oxford Clay, resting directly on the Cornbrash, or separated therefrom by a variable thickness of clay, the *Kellaways Clay.*

Keller furnace (*Elec. Eng.*). A form of electric furnace for iron smelting, in which part of the heat is produced by the passage of the current through the charge and part by arcs between the electrodes and the charge.

Kelling's test (*Chem.*). A test for the detection of lactic acid in gastric juice, based upon the colouring effect produced by the addition of a few drops of a very dilute neutral ferric chloride solution.

ke'loid (*Med.*). A dense new growth of skin occurring in skin that has been injured.

kelp (*Bot.*). A general name for large seaweeds.

kelvin (*Elec. Eng.*). A name proposed for the kilowatt-hour but not in very common use.

Kelvin balance (*Elec. Eng.*). See **ampere-balance.**

Kelvin compass (*Ships*). A form of ship's compass having a very light card and a number of short parallel needles held by silk cords, as well as other special features. Also called THOMSON COMPASS.

Kelvin double bridge (*Elec. Eng.*). See **double bridge.**

Kelvin effect (*Elec. Eng.*). See **Thomson effect.**

Kelvin electrometer (*Elec. Eng.*). See **quadrant electrometer.**

Kelvin sounder (*Ocean.*). An apparatus which consists of a weight attached to a wire and carries a glass tube of small calibre open at one end and coated inside with a composition sensitive to sea water. This indicates the pressure and therefore the depth of water reached. Cf. *echo sounding.*

Kelvin's absolute scale of temperature (*Heat*). A temperature scale derived from thermodynamical considerations. This scale is such that, if reversible cycles are performed over equal ranges of temperature at various parts of the scale, equal amounts of work are done at each cycle. This scale agrees fairly well with the gas scale of temperature, particularly the hydrogen scale.

Kelvin's law (*Elec. Eng.*). A principle regarding the transmission of electrical energy. It states that the most economical size of conductor to use for a line is that for which the annual cost of the losses is equal to the annual interest and depreciation on that part of the capital cost of the conductor which is proportional to its cross-sectional area.

Kemble Beds (*Geol.*). A local division of the Great Oölite of Gloucester and the adjacent counties.

kemp (*Textiles*). A thick fibre, without scales, occurring in badly bred wools; it will not dye, but kempy wool is used for obtaining dress effects, the kemps showing white on a coloured foundation.

Kennack Gneiss (*Geol.*). Banded red and black gneisses which form part of the Lizard Complex of Cornwall; they result from the admixture of acid (granitic) and basic (basaltic) magma, intruded during a period of stress.

kennel lameness (*Vet.*). Chronic arthritis of dogs.

Kennelly-Heaviside layer (*Radio*). See **Heaviside layer.**

kenotron (*Thermionics*). A high-voltage diode rectifier.

kent cap (*Paper*). A standard size of brown paper, 18 × 21 in.

kental'lenite (*Geol.*). A coarse-grained, basic igneous rock, named from the type locality, Kentallen, Argyllshire; it consists essentially of olivine, augite, and biotite, with subordinate quantities of plagioclase and orthoclase in approximately equal amounts.

kentledge (*Civ. Eng., etc.*). Scrap iron, rails, heavy stones, etc., used as loading on a structure (e.g. upon the top section in sinking a cylinder caisson), or as a counterbalance for a crane.

kent'rogon (*Zool.*). A stage in the life-history of certain parasitic *Cirripedia* (e.g. *Sacculina*) which succeeds the Cypris stage and precedes the entry of the parasite into the body of the host.

ken'yte (*Geol.*). A fine-grained igneous rock, occurring as lava flows on Mt. Kenya, E. Africa, and in the Antarctic; essentially an olivine-bearing phonolite with phenocrysts of anorthoclase.

Ke'okuk Limestone (*Geol.*). A marine limestone with a rich fauna, notably of crinoids, occurring at the top of the Lower Mississippian of the Mississippi valley.

kep (*Build.*). A Scottish term denoting a door stop.

keps (*Mining*). Bearing-up stops for supporting a cage or load at the beginning or end of hoisting in a shaft.

kephalin (*Chem.*). See **cephalin.**

Kepler's laws (*Astron*). The three laws enunciated by Kepler which initiated the modern mathematical treatment of the planetary motions. Respectively, they state that: (1) Every planet moves in an ellipse having the sun in one focus; (2) the radius vector sweeps out equal areas in equal times; (3) the squares of the periodic times are proportional to the cubes of the mean distances.

kera-, kerat-, kerato- (Greek *keras*, horn). **A prefix** used in the construction of compound terms; e g. *keratogenous.* In medical terms, the prefix denotes the cornea. See also terms at **cera-, cerat(o)-.**

keraph'yllous (*Zool.*). (In ungulate Mammals) said of a layer intervening between the horny part of a hoof and the living tissue.

ker'asin (*Chem.*). See **cerebrosides.**

keratal'gia (*Med.*). Pain in the cornea of the eye.

keratecta'sia (*Med.*). Local bulging of part of the cornea.

keratec'tomy (*Surg.*). Excision of part of the cornea.

ker'atin (*Zool.*). An insoluble scleroprotein formed by the transformation of the eleidin granules in the superficial cells of the stratum granulosum of the Vertebrate integument; it constitutes the horny part of hoofs, nails, and hair, and contains a high percentage of sulphur, part of which is readily split off in the form of H_2S by hydrolysis.

keratinisa'tion (*Zool.*). Horn-formation: production of keratin.

kerati'tis (*Med.*). Inflammation of the cornea.

kerat'ocele (*Med.*). Protrusion of the innermost layer (Descemet's membrane) of the cornea through a corneal ulcer.

keratoco'nus (*Med.*). Conical cornea. Cone-shaped deformity of the cornea owing to (probably congenital) weakness and thinness of the centre.

keratoder'mia blennorrha'gica (*Med.*). Red patches on the skin which become hard, dry, yellow, and raised above the skin, occurring in gonorrhoea.

keratogenous,—toj'en-us (*Zool.*). Horn-producing: keratin-producing.

keratoglo'bus (*Med.*). Hemispherical protrusion of the whole cornea; e.g. in glaucoma in infants.

keratohy'alin (*Zool.*). In the skin of higher Vertebrates, a hyaline substance present as flakes or droplets in the stratum lucidum.

kerato'ma (*Med.*). A tumour of the skin in which overgrowth of the horny layer predominates.

keratomala'cia (*Med.*). A disease in which the cornea first becomes dry and lustreless and then softens; associated with deficiency of vitamin A in the diet.

ker'atophyre (*Geol.*). A fine-grained igneous rock of intermediate composition. It is essentially a soda-trachyte, containing albite-oligoclase or anorthoclase in a cryptocrystalline groundmass. The pyroxenes, when present, are often altered to chlorite or epidote.

keratoplas'ty (*Surg.*). The grafting of a new cornea on to an eye the cornea of which has become opaque.

Kerato'sa (*Zool.*). An order of *Demospongiae* in which the skeleton is composed of spongin fibres; includes the Bath Sponges.

ker'atoscleri'tis (*Med.*). Inflammation of the cornea and of the sclera of the eye.

kerato'sis (*Med.*). Overgrowth of the horny layer of the skin.

keratot'omy (*Surg.*). Incision of the cornea.

kerb (*Civ. Eng.*). A border stone edging a raised footpath or street refuge. Also spelt CURB and KIRB.

kerf (*Build.*). A heap of mixed clays and ashes left exposed to the action of the weather, sometimes for long periods, in order to produce a mixture suitable for brick-making.

kerf (*Carp.*). The cut made by a saw.

kerfed beam (*Build.*). A beam having, across the under side, a number of kerfs which permit the beam to bend.

ker'mes (*Zool.*). A dyestuff prepared from the dried females of *Kermes ilicis*, a Coccid insect.

ker'mesite (*Min.*). Oxysulphide of antimony, which crystallises either in the orthorhombic or the monoclinic system. It is a secondary mineral occurring as the alteration product of stibnite. Also called PYROSTIBNITE.

kern (*Typog.*). The portion of some type letters which projects beyond the body and rests on the body of the preceding or following letter; e.g. the tail of an italic *f*.

kernel (*Bot.*). (1) The seed inside the stony endocarp of a drupe.—(2) An old term for the nutritive tissue and asci inside a perithecium; other terms for this are CENTRUM, NUCLEUS.

Kernig's sign (*Med.*). A sign of meningitis. When the patient is lying on his back with the thigh bent at right-angles to the body, the leg cannot be bent straight at the knee.

kernite (*Min.*). Hydrated oxide of sodium and boron, crystallising in the monoclinic system. It is usually associated with ulexite and is a source of borates. Also called RASORITE.

kerosene (*Fuels*). A petroleum fraction with a boiling range of 150°-300° C., sp. gr. 0·78-0·82, flash-point not lower than 73° F.; used in lamps and stoves. Another type of *kerosene* (with higher volatility), known as *vaporising oil*, is used in some internal-combustion engines. Also called PARAFFIN OIL, LAMP OIL.

kerotype (*Photog.*). A printing process using an emulsion on a waxed support, the wax facilitating the transfer of the emulsion to another support.

Kerr cell, kar (*Television*). A device comprising an optically transparent medium, which may be solid or liquid, and which can be subjected to electrostatic stress by the application of a P.D. to suitably arranged electrodes. It has the property of rotating the plane of polarisation of plane-polarised light through an angle dependent on the applied P.D.

Kerr effect (*Television*). The rotation of the plane of polarisation of light, on transmission through electrically stressed media.

ker'santite (*Geol.*). A mica-lamprophyre, named from the type locality Kersanton, near Brest; it consists essentially of biotite and plagioclase feldspar. Cf. *minette*.

kersey (*Textiles*). A milled fabric, woollen or worsted, made from coarse crossbred wool. Usually of 2-and-2 twill weave.

ke'tenes (*Chem.*). Compounds of the general formula $R_2C{:}C{:}O$. The ketene series may be considered homologues of carbon monoxide. The first member of the series is ketene, $CH_2{:}CO$, which is readily obtainable by passing acetone vapours through a red-hot glass tube filled with broken tile. Acetone is then decomposed into ketene and methane. Ketenes form acids or acid derivatives on adding water, alcohols, ammonia, amines, etc. to one of their double bonds. They are liable to autoxidation; they react with other unsaturated compounds, forming four-membered rings. They are very unstable and polymerise easily.

ke'to form (*Chem.*). That form of a substance exhibiting keto-enol tautomerism which has the properties of a ketone.

keto-enolic tautomerism (*Chem.*). The formation by certain compounds of two series of derivatives, based upon their ketonic or enolic constitution. The enol-form is produced from the keto-form by the migration of a hydrogen atom, which forms a hydroxyl group with the ketone oxygen, accompanied by a change in the position of the double bond. Thus:

$$\underset{\text{keto-form}}{-CH_2-CO-} \rightleftarrows \underset{\text{enol-form}}{-CH{=}C(OH)-}$$

ketogen'ic (*Med.*). Capable of producing ketone bodies; e.g. *ketogenic diet*.

ketohex'oses (*Chem.*). $HO{\cdot}CH_2{\cdot}(CHOH)_3{\cdot}CO{\cdot}CH_2OH$, a group of carbohydrates, isomers of *aldohexoses* (q.v.). The formula contains three asymmetric carbon atoms, and numerous stereoisomers are possible. The most important ones are fructose, tagatose, and sorbose. They reduce an alkaline copper solution. Ketohexoses can be oxidised to acids containing fewer carbon atoms in the molecule.

ketonae'mia, ketone'mia (*Med.*). The presence of ketone bodies in the blood. See **ketosis.**

ke'tones (*Chem.*). Compounds containing a carbonyl group, $-CO-$, in the molecule attached to two hydrocarbon radicals. The general formula is

$$R-\underset{\underset{\displaystyle O}{\|}}{C}-R'$$

. Ketones are formed by the oxidation of secondary alcohols, by the dry distillation of the calcium or barium salt of an organic acid, by the catalytic condensation of acids or esters, by synthesis with Grignard reagents, and by the action of CO on sodium alkyls. Ketones are very reactive substances, forming additive compounds, e.g. with sodium bisulphite, etc. Important derivatives are the oximes, obtained by the action of hydroxylamine. Hydrogen reduces ketones to secondary alcohols. The simplest ketone is *acetone* (q.v.).

ketonu'ria (*Med.*). The presence of ketone bodies in the urine. See **ketosis.**

ke'toses (*Chem.*). A general term for monosaccharoses with a ketonic constitution. They always form mixtures of acids on oxidation, containing a smaller number of carbon atoms than the original ketose.

keto'sis (*Med.*). The excessive formation in the body (due to incomplete oxidation of fats) of ketone or acetone bodies (aceto-acetic acid and β-oxybutyric acid), accompanied by **ketonaemia** and **ketonuria**; occurs, e.g., in diabetes.

ke'toximes (*Chem.*). The reaction products of ketones with hydroxylamine, containing the oximino group $:N{\cdot}OH$ attached to the carbon atom.

kettle (*Met.*). An open-top vessel used in carrying out metallurgical operations on low-melting-point metals; e.g. in drossing and desilverising lead.

kettle-shaped (*Furn.*). Cupboards, chests, etc. with fronts having a double-ogee curve.

kettlestitch (*Bind.*). The stitch which is made at the head and tail of each section of a book to interlock the sections.

Kettleness Beds (*Geol.*). A little-used name for part of the Lias of Yorkshire, consisting chiefly of sandy shales and lying between the Staithes Beds and the Cleveland iron-ore.

Keuper Marl, koi'per (*Geol.*). A fine-grained siltstone, locally 3000 to 4000 ft. in thickness, forming the higher part of the Triassic System in N.W. Europe. Probably deposited under conditions similar to those applicable to the loess. It consists chiefly of red marls, with dolomite crystals and important salt deposits on different horizons. See also **Tea-green Marl.**

Keuper Series (*Geol.*). The upper series of rocks assigned to the Triassic System in N.W. Europe, lying above the Muschelkalk; it consists of sandstones and marls, deposited in England and Germany under desert conditions, though in the Alps these are represented by marine strata.

kevel (*Build.*). A hammer, edged at one end and pointed at the other, used for breaking and rough-hewing stone.

Kew Certificates (*Horol.*). Certificates of performance of watches and chronometers issued by the National Physical Laboratory, Teddington. (This work was originally undertaken at Kew, hence the name.) For an 'absolutely perfect' watch, 100 marks are awarded, made up as follows: 40 for a complete absence of variation of daily rate; 40 for absolute freedom from change of rate with change of position; and 20 for perfect compensation for effects of temperature.

Kew-pattern barometer (*Meteor.*). The Adie barometer. Specially graduated so that error arising from changes in the free level in the cistern is obviated.

Kew-pattern magnetometer (*Elec. Eng.*). A delicate type of reflecting magnetometer having a photographic recording arrangement for keeping record of changes in the earth's field.

Keweenaw'an Series (*Geol.*). Conglomerates, arkoses, red sandstones and shales of desert origin, associated with great thicknesses of basic lavas and intrusives. This is the youngest of the Pre-Cambrian formations in the Canadian Shield, and is comparable with the Torridonian of Scotland. The igneous rocks carry copper, silver, nickel, cobalt, and platinum.

key (*Bind.*). The name applied to a small tool used for securing the bands while a book is being sewn.

key (*Civ. Eng.*). One of the pair of wedge-shaped hardwood blocks used as *striking wedges* (q.v.).

key (*Eng.*). A piece inserted between a shaft and a hub to prevent relative rotation. It fits in a key-way, parallel with the shaft axis, in one or both members, the commonest form being the parallel key, of rectangular section.

See **dovetail—**
gib-headed—
round—
saddle—
sunk—
taper—
tangential—
woodruff—
feather
splines.

key (*Horol.*). The winder that fits on the square, or screws on to the barrel arbor. In the case of a fusee watch or a chronometer, the key fits on the square on the fusee arbor.

key (*Join.*). A portable tool which, when applied to a lock, enables the bolt to be shot.

key (*Photog.*). By analogy with music, the psychological fitness of brightnesses in a picture as a whole, or in relation to another.

key (*Plast.*). In any surface to be plastered, the roughening, lathing, or other preliminary process undertaken in order to give a grip to the coat of plaster and so enable it to adhere more satisfactorily.

key (*Teleg.*). The hand-operated device that opens and closes contacts which modulate currents with coded telegraph signals.

key (*Teleph., etc.*). A hand-operated device for changing circuits.

See **bug—**
lever—
listening—
locking—
non-locking—
plunger—
pneumatic—
ringing—

key boss (*Eng.*). A local thickening up of a boss or hub at the point at which a key-way is cut, to compensate for loss of strength due to the cut.

key chuck (*Eng.*). A jaw chuck whose jaws are adjusted by screws turned by a key or spanner. See **self-centring chuck.**

key-course (*Civ. Eng.*). The course of stones in an arch corresponding to the keystone.

key drawing (*Cinema.*). In animated cartoon production, *key drawings* indicate situations at special instants, such as at beats in the bar of music, after which the in-between drawings are made to fit with the timing.—(*Print.*) In lithography and line-colour block making, an outline drawing which serves as a guide in the making of the separate colour plates.

key drop (*Build.*). A guard plate covering a keyhole and falling into position by its own weight.

keyhole (*Cinema.*). A shaped mat for standing cameras on, in a motion-picture studio.

keyhole saw (*Carp.*). See **compass saw.**

key-industry animals (*Zool.*). In an animal community, the small rapidly reproducing animals at the base of any food-chain, which turn plant protein into animal protein.

key plan. A small-scale plan showing the relative disposition of a number of items in a scheme.

key plate (*Build.*). An *escutcheon* (q.v.).

key print (*Photog.*). The black-and-white print, additional to the primary colour prints, which is used to swamp colour fringes arising from parallax or mis-registration. The key print also controls the saturation.

key-seating (*Eng.*). A key-way, or the surface on to which a key is bedded.

key-seating machine (*Eng.*). A machine tool for milling key-ways in shafts, etc., by means of an end mill, the work being supported on a table at right-angles to the axis of the spindle. Feed is obtained by an automatic traverse of either the tool or the table.

keysender (*Auto. Teleph.*). A strip of plunger keys for transmitting marginal currents representing, in a code, dialled impulse trains; the operation of step-by-step switching apparatus is thereby speeded up. See **A-position keysending, B-position keysending.**

keystone (*Civ. Eng.*). The central voussoir at the crown of an arch.

keystone effect (*Cathode Ray Tubes*). An effect which occurs in tubes in which the screen (or mosaic in the case of an Iconoscope) is set at an angle to the cathode ray beam, a given angular deflection of the beam subtending different lengths of line in different parts of the screen. A square picture is thus reproduced as a *keystone* shape, unless special preventive measures are taken.—(*Cinema.*) When the line of projection in a cinema is not normal to the screen, the rectangular frame appears on the screen as an approximate keystone. This is obviated to some extent by tilting the screen towards normality, and shaping the picture on the screen with a black surround of the desired rectangular shape.

key strip, digit (*Auto. Teleph.*). See **digit key strip.**

key-way (*Eng.*). A longitudinal slot cut in a shaft or hub to receive a *key* (q.v.).

key-way tool (*Eng.*). A slotting machine tool used for the vertical cutting of key-ways, equal in width to that of the key-way. See **slotting machine.**

keyed pointing (*Build.*). Pointing which is finished with lines or grooves struck on the flat joint. See **flat pointing.**

keyed structure (*Geol.*). A term sometimes applied to the sutured mosaic of quartz grains closely interlocking in some metamorphic quartzites.

keying (*Eng.*). The process of fitting a key to the key-ways in a shaft and boss.

keying (*Radio, etc.*). The operation of starting or stopping a high-frequency current, for purposes of telegraphic signalling.

keying (*Typog.*). In mechanical type-setting, operating the keyboard either to produce a perforated spool of paper from which individual types are cast (e.g. Monotype), or to release matrices from which a single line of type is cast (e.g. Intertype, Linotype, etc.).

keyless ringing (*Teleph.*). The normal ringing in a manual exchange, whereby ringing current is applied automatically to a subscriber's line on insertion of a junction plug into a jack in the multiple; it is cut off when the subscriber loops his line and operates a relay.

keyless watch (*Horol.*). A watch that can be wound without the use of a key.

keyless work (*Horol.*). The mechanism which permits the winding of the spring, or setting of the hands of a watch.

khaki (*Textiles*). A dull, yellowish-brown colour, known as drab-mixture, used for field uniforms in the British Army.

kham'sin (*Meteor.*). A hot dry wind from the south, which blows over Egypt in front of depressions moving eastward along the Mediterranean.

khorasan' (*Textiles*). A high-class Persian wool from the province of Khorasan, suitable for combing.

Khorassar mortar (*Build.*). A mixture of one-third powdered brick and tiles and two-thirds fine sifted lime with water, used in constructing buildings requiring solidity. Also called TURKISH MORTAR.

Kiamitia Shales (*Geol.*). See **Kiowa Shales.**

kibble (*Mining*). A large bucket used in shaft-sinking.

kibbler (*Mining*). See **putter.**

kick (*Build.*). See **frog.**

kicking plate (*Join.*). A plate fixed on the face of the bottom rail of a door, to prevent the damage caused by persons kicking the door to open it.

kid (*Hyd. Eng.*). A bundle of brushes serving as a *groyne* (q.v.).

kid (*Leather*). A soft leather made from the skins of young goats (kids) or calves.

Kidderminster carpet. A compound fabric made from cotton or wool, and consisting of two or three plain cloths interwoven together, the pattern being produced by the interchanging of the cloths. Also called INGRAIN CARPET, SCOTCH CARPET.

kidney ore (*Min.*). A form of the mineral haematite, the sesquioxide of iron, which occurs in reniform masses, hence the name (Latin *ren*, kidney).

kidney piece (*Horol.*). A cam, shaped like a kidney, used in perpetual calendar work to give the equation of time.

kidney stone (*Min.*). A name given to *nephrite* (q.v.), which was once supposed to be efficacious in diseases of the kidney (Greek *nephros*, kidney).

kidney stones (*Med.*). Hard deposits formed in the kidney or bladder. The composition varies, and kidney stones have been found to consist of uric acid and urates, calcium oxalate, calcium and magnesium phosphate, silica and alumina, cystine, xanthine, fibrin, cholesterol and fatty acids.

kidney-worm disease (*Vet.*). Infection of the kidney of carnivora, equines, swine, and cattle by nematode worms of the genus *Dioctophyme.*

kier, kēr (*Textiles*). The boiler in which yarn and cloth are treated previous to bleaching or dyeing; it may be of the open or closed type.

kieselguhr, kē'zel-goor (*Min.*). See **diatomite.**

kieserite, kēz'— (*Min.*). Hydrous sulphate of magnesium which crystallises in the monoclinic system; found in large amounts in the salt deposits of Germany.

kieve, kēv (*Mining*). See **dolly tub.**

kill (*Cinema.*). Colloquialism for *extinguish lights.*

killas (*Geol.*). A Cornish mining term for the altered argillaceous and hornfelsic rocks found in contact with granite and often modified by emanations from it.

killed steel (*Met.*). Steel that has been *killed,* i.e. fully deoxidised before casting, by the addition of manganese, silicon, and sometimes aluminium. There is practically no evolution of gas from the reaction between carbon and iron-oxide during solidification. Sound ingots are obtained. See also **rimming steel.**

killing (*Paint*). The process of treating knots in resinous woods prior to painting, so as to prevent the resin or turpentine from exuding and ruining the paint.

kiln, kil *or* kiln (*Pot.*). A brick-built annular or tunnel furnace, in which pottery is fired. See **biscuit oven, glost oven, enamel kiln.**

kilo-. Prefix denoting 1000; used in the metric system.

kilo-cycles per second (*Elec. Comm.*). The unit of frequency in which there are 1000 complete cycles of oscillation per second. Abbrevs. **KC.P.S., kcps, kc/s.**

kilogram calorie (*Heat*). See **calorie.**

kilovar (*Elec. Eng.*). A unit of reactive volt-amperes equal to 1000 vars. Symbol, **kVAR.**

kilovolt-ampere (*Elec. Eng.*). A commonly used unit for expressing the rating of a.c. electrical machinery and for other purposes; it is equal to 1000 volt-amperes.

kilowatt (*Elec. Eng.*). A unit of power equal to 1000 watts and approximately equal to 1·34 horse-power.

kilowatt-hour (*Elec. Eng.*). The commonly used unit of electrical energy, equal to 1000 watt-hours. Often called simply a *unit,* and given the symbol **kWh** or **kwhr.** See **Board of Trade Unit.**

kilowatt-hour meter (*Elec. Eng.*). See **energy meter.**

kimberlite (*Geol.*). A type of mica-peridotite, occurring in volcanic pipes in South Africa, usually highly altered and containing xenoliths of many types of ultramafic rocks, and diamonds.

Kimeridge (or **Kimmeridge) Clay** (*Geol.*). A constant thick bed of black marine clay, stretching across England from the Dorset coast, through the Fens, to the Yorkshire coast near Scarborough; referred to the Upper Jurassic, and lying between the Corallian and the Portlandian Stage.

Kimeridge Coal (*Geol.*). A bed of bituminous shale, occurring in the Kimeridge Clay division of the Upper Jurassic; exposed on the Dorset coast, and capable of yielding oil on destructive distillation.

Kimeridgian (*Geol.*). A stage name of the Upper Jurassic System, applicable to rocks of the same age as the Kimeridge Clay, though not necessarily of the same lithology.

kinaesthet'ic (*Zool.*). Pertaining to the perception of muscular effort.

ki'nases (*Chem.*). Substances of biological origin, such as intestinal juice, which convert zymogens, proenzymes, or proferments into the true or active enzymes, and thus act as activators.

Kin'derhook Beds (*Geol.*). Marine strata which form the local basal member of the Lower Mississippian and are overlapped southwards by the Burlington Limestones, as in Arkansas.

Kinderscout Grit (*Geol.*). A coarse sandstone, one of the Millstone Grits in the Namurian Stage of the Upper Carboniferous rocks of Derbyshire.

kinema. A variant of *cinema* (q.v.); nearly obsolete.

kinematics. See **mechanics.**

Kinescope (*Television*). A cathode ray tube specially designed for the reproduction of television images.

kineso'dic (*Zool.*). Conveying motor impulses.

kinet-, kinet'o- (Greek *kinein*, to move). A prefix used in the construction of compound terms; e.g. *kinetoblast* (q.v.).

kinetic body (*Cyt.*). A tiny granular body lying where a chromosome is attached to the spindle.

kinetic constriction, ki'netochore, —kōr (*Cyt.*). The portion of a chromosome where the attachment is made to a spindle fibre.

kinetic energy (*Phys.*). The energy possessed by a moving body in virtue of its motion. For a body of mass m, moving with velocity v, the kinetic energy is $\frac{1}{2}mv^2$ units of work. For a body rotating with angular velocity ω about an axis for which its moment of inertia is I, the rotational kinetic energy is $\frac{1}{2}I\omega^2$.

kinetic friction (*Mech.*). See **friction.**

kinetic head (*Hyd.*). See **velocity head.**

kinetic theory of gases (*Phys.*). See **gases (kinetic theory of).**

kinet'oblast (*Zool.*). In certain types of active pelagic larvae, the outer locomotor layer of ciliated cells.

kinetochore (*Bot.*). See **kinetic constriction.**

kinetogen'esis (*Zool.*). A theory of the mechanism of evolution which postulates that animal structures have been directly or indirectly produced by animal movements.

kinet'omeres (*Biol.*). Molecules of protoplasm which may be energy-rich and reactive or energy-poor and stable. See **anakinetomeres, katakinetomeres.**

kinetonu'cleus (*Zool.*). In blood-living *Mastigophora*, a nucleus-like body situated between the nucleus and the blepharoplast, and believed to represent the parabasal body of other forms. Cf. *trophonucleus*.

king-bolt (*Build.*). A *king-rod* (q.v.).

king-closer (*Build.*). A three-quarter brick used to maintain the bond of the surface.

king-piece (*Carp.*). See **king-post.**

king-pile (*Civ. Eng.*). A pile driven down the centre of a wide trench so as to enable two short struts (butting on opposite sides of the pile) to be used, instead of one long one, for keeping the poling boards on opposite sides of the trench in position.

king-pin (*Automobiles*). The pin by which a stub axle is articulated to an axle-beam or steering head; it is inclined to the vertical to provide caster action. Also called SWIVEL-PIN.

king-post (*Carp.*). A vertical timber tie connecting the ridge and the tie-beam of a roof, shaped at its lower end to afford bearing to two struts supporting the middle points of the rafters. Also called a KING-PIECE, BROACH-POST, JOGGLE-PIECE, JOGGLE-POST, MIDDLE-POST.

king-posts (*Mining*). The vertical members of a stamp-battery frame which carry the cam-shaft.

king-post truss (*Carp.*). A timber roof-truss in which there is only one vertical member—the central king-post.

king-rod (*Build.*). A vertical steel rod connecting the ridge and tie-beam of a couple-close roof, to prevent sagging of the tie-beam when it is required to support ceiling loads.

king-tower (*Build.*). In a derrick tower gantry, that one of the three timber towers through which the weight of the derrick itself is transmitted directly to the foundation below. Also called the CRANE TOWER.

Kingston valve (*Eng.*). A sea-valve fitted to a ship's side for the purpose of admitting water to circulating pumps, or flooding or blowing out ballast tanks.

ki'noplasm (*Cyt.*). Protoplasm which appears to be composed of fibrils and which in cell-division composes the spindle fibres, attraction sphere, and astral rays.

kinsh (*Quarrying*). A crowbar.

Ki'owa Shales (*Geol.*). A shore facies of the lower Washita Series, lying above the Cheyenne Sandstone in Kansas. Also known as KIAMITIA SHALES.

kip (*Eng., etc.*). A unit of force equivalent to 1000 lb.

kip (*Leather*). The untanned hides of yearling cattle, or of adult cattle of any small breed; used for boot uppers.

Kipp's apparatus (*Chem.*). A generator for hydrogen sulphide, arranged so as to give a stream of the gas when required, by turning on a tap. May be used also as a laboratory supply of other gases

kirb (*Civ. Eng.*). See **kerb.**

Kirchhoff's law, kirhh'hōf (*Phys.*). A result due to Kirchhoff's researches on radiation by which he established that the ratio of the coefficient of absorption to the coefficient of emission is the same for all substances, and depends only on the temperature and frequency of the rays.

Kirchhoff's laws (*Elec. Eng.*). Two fundamental laws connected with the electric circuit. The first states that the sum of the potential differences in any closed loop of a circuit equals the sum of the electromotive forces in the loop, and the second states that the sum of the currents meeting at any point in a network must be zero.

Kirkby Moor Flags (*Geol.*). The highest beds in the rocks assigned to the Silurian System in Westmorland, consisting of about 2000 ft. of greenish and grey sandstones and flags.

kirkifier (*Radio*). A form of linear rectifier comprising a triode valve whose grid is maintained at a small positive potential with respect to the filament, the anode being used as the rectifying electrode.

Kirklington (or Kirklinton) Sandstone (*Geol.*). A local sandstone belonging to the Keuper series of rocks, in the Triassic System of Cumberland.

kish (*Met.*). Solid graphite which has separated from, and floats on the top of, a molten bath of cast-iron or pig-iron which is high in carbon.

kitchen midden (*Geol.*). The dump of waste material, largely shells and bones associated with ashes, marking the site of a kitchen in a settlement of early man.

kitchen range, kitchener. A coal-burning fire heating an oven for cooking purposes and a back boiler for domestic hot-water supply.

kite (*Aero.*). Any aerodyne anchored or towed by a line, not mechanically or power-driven. Derives its lift from the aerodynamic forces of the relative wind.—(*Meteor.*) Box-kites have been used for carrying meteorographs to high altitudes in order to record the weather conditions there. Altitudes exceeding 20,000 ft. have been reached by using several kites in tandem.

kite balloon (*Aero.*). A captive balloon shaped and balanced so as to be stable in the wind at any desired height.

kite winder (*Build.*). A *winder* (q.v.) used at the angle of a change of direction in a stair, and having consequently the shape of a kite in plan.

kitten skins (*Furs*). Small skins from young animals.

Kjeldahl flask, kel'dahl (*Chem.*). A glass flask with a round bottom and a long wide neck. Used in Kjeldahl's method for the estimation of nitrogen.

Kjeldahl's method (*Chem.*). A method for the quantitative estimation of nitrogen in organic compounds, based on the conversion of the organic nitrogen into ammonium sulphate, and subsequent distillation of ammonia after the solution has been made alkaline. The ammonia which distils over can be titrated.

Kjellin furnace, kel'ēn (*Elec. Eng.*). A form of electric-induction furnace having an iron core; used for melting ferrous metals.

Klangfilm (*Cinema.*). The German system of sound-film recording and reproduction.

kleinpflaster, klīn-pfl— (*Civ. Eng*). The method of laying road surfacing setts to form segments or arches on plan, as a result of which wheels cross joints obliquely.

Klemm's leather. Crown leather.

kleptomania (*Psycho-path*). A state characterised by the urge to steal objects, often unwanted ones. Occurs mainly among psychopathic types and child delinquents, often as a result of some unconscious sexual conflict coupled with a bad home environment.

klieg eyes, klĕg (*Cinema.*). The effect of strain on the eyes caused by the brilliance of flood-lights in film production.

Klieg light (*Cinema.*). A type of incandescent flood-lighting lamp for studio use.

klinker brick (*Build.*). A very hard type of brick much used in Holland and Germany, principally for paving purposes. See **adamantine clinkers, Dutch clinkers, terro-metallic clinkers.**

kli'nogeotrop'ic (*Bot.*). Said of an organ which takes up a stable position lying at an angle to the vertical.

kli'nostat (*Bot.*). An instrument on which a plant may be slowly rotated, and by means of which its reactions to gravity and other stimuli may be investigated.

klinotrop'ic (*Bot.*). Placed at a slant to the direction of a given stimulus.

klippen (*Geol.*). A structural term (*plural*) applicable in areas of complex tectonics to thrust masses of strata that map out like outliers; in effect, outliers capping hill-tops and lying on thrust-planes.—*sing.* **klippe.**

klirrfaktor (*Elec. Comm.*). The same as *non-linear distortion factor.*

K, L, M . . . shells (*Phys.*). Imaginary spheres surrounding the nucleus of an atom, on the surfaces of which groups of electrons may be considered to revolve. Starting with the innermost shell and moving outwards, the shells are called *K*, *L*, *M*, etc. The *K*-shell can contain no more than 2 electrons, the *L*-shell 8, the *M*-shell 18. The electrons in these inner shells are concerned in the production of X-rays. See **K-series, L-series, Bohr theory.**

kly'donogram (*Elec. Eng.*). The record obtained on the photographic plate of a klydonograph.

kly'donograph (*Elec. Eng.*). An instrument in which, a photographic plate having been placed between two electrodes, a voltage across the electrodes produces a figure on the plate. Often used for recording surge or impulse voltages.

kly'stron (*Radio*). An ultra-short-wave thermionic oscillator which uses a pair of rhumbatrons, as buncher and catcher respectively, to generate oscillation power by velocity-modulating a space-current of electrons.

knack'eries (*Vet.*). Places for the slaughter and disposal of animals which are not intended for human food.

knap (*Build.*). To break flints or road-stones by sharp blows from a hammer.

Knapen system (*Build.*). A method of treating damp walls. Holes, inclining upwards from the outside, are drilled into the wall for half its thickness; each hole is lined with a porous tube, whose dampness sets up a circulation of air into and out of the hole, tending to produce a drying effect.

knapper (*Build., Mining*). (1) A worker who knaps.—(2) A *knapping hammer* (q.v.).

knapping hammer (*Build.*). A hammer used for breaking and shaping stones and flints.—(*Mining*) A special hammer or a machine to break rock and produce a minimum of fine material.

knaur, nawr (*Bot*). A swollen outgrowth of some size, from the trunk of a tree.

knee (*Eng., Plumb.*). An elbow pipe (see **elbow**).

knee (*Furn.*). The point of outward curve in a cabriole leg, often decorated.

knee (*Join.*). A sudden rise in a handrail when it is convex upwards. Cf. *ramp.*

knee (*Zool*). In land Vertebrates, the joint between the femur and the crus.

knee brace (*Struct.*). A stiffening member fixed across the inside of an angle in a framework, particularly at the angle between roof and wall in a building frame.

knee-jerk (*Med.*). A normal reflex extension of the leg at the knee-joint, obtained by tapping the tendon below the patella.

knee rafter (*Carp.*). A rafter having its lower end bent downwards.

knee roof (*Carp.*). A *mansard roof* (q.v.).

kneeler (*Masonry*). (1) The return of the dripstone at the spring of an arch.—(2) Any of the steps of a corbie-step gable (obsolete).

knib (*Typog.*). The projecting portion of a setting-rule, by which the compositor lifts it out of the composing-stick.

knickerbocker (*Textiles*). A yarn with spots of different colours obtained by flecking the colouring material in carding.

knife-switch (*Elec. Eng.*). An electric-circuit switch in which the moving element consists of a flat blade which engages with fixed contacts. See **tandem knife-switch.**

knife tool (*Eng.*). A lathe tool having a straight lateral cutting edge, used for turning right up to a shoulder or corner.

knitted plush (*Hosiery*). A fabric with a looped (terry) or pile finish made from lustre yarn (usually rayon) on a circular spring needle machine.

knitted structure (*Geol.*). A structure found in serpentine, consisting of two sets of interlacing scales lying parallel to the original cleavage planes of a non-aluminous augite, from which it was derived.

knitting frame (or **loom**) (*Hosiery*). A type of knitting machine in which the needles are either of the 'bearded' or the 'latch' (self-acting) kind.

knob. A handle, usually rounded, on a lock, door, drawer, etc.

knob (*Bot.*). A root tuber in some orchids.

knob, draw (*Acous.*). See **draw knob.**

knob-twister (*Cinema.*). A casual reference to monitor man or recordist in motion-picture production.

knobbing (*Masonry*). The operation of breaking projecting pieces off stones in the quarry.

knock (*Eng., etc.*). See **knocking.**

knock-knee (*Med.*). See **genu valgum.**

knock-rating (*Eng*). The measurement of the *anti-knock value* (q.v.) of a volatile liquid fuel in terms of the percentage of octane in an octane-heptane mixture of equivalent knock-proneness. See **octane number.**

knocker-out (*Eng.*). The horns of a planing machine against which the tappets strike to reverse the motion of the table.

knocking, knock (*Eng.*). A periodic noise made by a worn bearing in a reciprocating engine, due to reversal of the load on the shaft or pin.—(*I.C. Engs.*) The characteristic metallic noise, often called 'pinking,' resulting from *detonation* (q.v.) in a petrol-engine.

knockings (*Masonry*). The stone pieces, smaller than spalls, knocked off in the process of chiselling or hammering.

knocking-down iron (*Bind.*). A piece of iron, fixed to the lying press, on which joints are beaten out and lacings flattened.

knop yarn (*Textiles*). A fancy yarn with *knops*, or lumps, at intervals. Made with one or two foundation threads, and a group of threads delivered at a faster rate. Temporary stoppage of the delivery of the foundation threads allows the other to form a *knop*. In addition, a binder thread is incorporated to hold the *knop* in position.

knot (*Bot.*). (1) A node in a grass stem.—(2) A hard and often resinous inclusion in timber, formed from the base of a branch which became buried in secondary wood as the trunk thickened.

knot (*Naut.*). (1) A division of a log-line, marked by pieces of cloth or knotted string at equal distances; equal to 47·33 ft. when used with a 28-second glass, and 50 75 ft if used with a 30-second glass.—(2) The speed of one nautical mile in an hour, used for expressing a ship's rate of travel.

knotter (*Paper*). An appliance for the removal of knots or unbeaten particles from the paper pulp

knotting (*Paint.*). The material used for covering over knots in wood, prior to painting.

Knowles cell (*Elec. Eng.*). A cell for the production of hydrogen and oxygen by the electrolysis of an alkaline solution.

knuckle (*Join.*). The parts of a hinge receiving the pin.

knuckle joint (*Eng*). A hinged joint between two rods, in which the ends are formed into an eye and a fork respectively and united by a pin.

knuckle pin (*Eng.*). A *wrist pin* (q v).

knuckling (*Vet*). Abnormal flexion of the fetlock joint of foals or calves.

knurled head (*Eng.*). See **milled head.**

knurling tools (*Eng.*). Small, hard steel rollers, serrated or cross-hatched on their peripheries, mounted on a pin carried by a holder. They are pressed against circular work in the lathe, to knurl or roughen a surface required to give a grip to the fingers, as the head of a 'milled' screw.

Kodak (*Photog.*). Trade-name of a range of photographic goods, including cameras.

Kohlrausch's law, kōl'rowsh (*Chem.*). When ionisation is complete, the conductivity of an electrolyte is equal to the sum of the conductivities of the ions into which the substance dissociates.

koilonychia, —ik'i-a (*Med.*). Spoon-shaped depression of the finger-nails.

Koipat'o Group (*Geol.*). Continental arkosic sands, more than 6000 ft. thick, constituting the basal member of the Triassic succession in the Cordilleran geosynclinal region in Nevada. See also **Star Peak Group.**

Kolliker's pit (*Zool.*). In *Cephalochorda*, the olfactory pit situated on the left side of the body at the anterior end.

Kone (*Acous.*). Trade-name of a loud-speaking sound reproducer, consisting of two large paper cones, one supported by the other, and driven by a balanced-armature movement at its apex.

konom'eter (*Mining*). An apparatus for measuring the dust in mine air.

Koot'enai Series (*Geol.*). Part of the Comanchean, of continental facies, including coal-seams, occurring in western Canada. Cf. the *Morrison Series* of Colorado.

Koplik's spots (*Med.*). Bluish-white specks on the inner side of the cheek, occurring in measles two to three days before the rash appears.

Kopp's law (*Chem.*). The specific heat of a solid element is the same whether it is free or combined in a solid compound.

körnchenkugeln, kėrn'hhen-koog-ln (*Zool.*). Phagocytic cells distended with tissue debris, especially muscle fragments, occurring in the blood of pupal Insects.

Kor'sakoff's syndrome, Korsakoff's psychosis (*Med.*). Mental confusion associated with multiple neuritis, usually due to chronic alcoholism.

Kowalev'sky's bodies (*Zool.*). In some *Myriapoda*, small glandular masses in which some of the arteries terminate.

Kr (*Chem.*). The symbol for *krypton.*

K.R.-law (*Teleg.*). See **C.R.-law.**

Kraemer-Sarnow test (*Build., Civ. Eng.*). A test for the determination of the melting-point of a bitumen for use in building or roadmaking. The melting-point is obtained as the temperature at which superincumbent mercury falls through a standard sample of the bitumen, heated under standard conditions.

kraft (*Paper*). Brown paper made from high-class sulphate wood pulp. Used extensively as a dielectric.

Kramer control (*Elec. Eng.*). A form of speed and power factor control for large induction motors in which the slip energy is supplied to a rotary convertor, the resulting d c. power being used to drive a motor either mounted on the main motor shaft or driving an alternator and returning power to the supply.

Krarup loading, cable, circuit (*Elec. Comm.*). See **continuous loading.**

krauro'sis (*Med*). Atrophy of the vulva, associated with narrowing of the vaginal orifice.

Krause's corpuscles, krowz (*Zool.*). In Vertebrates, a type of sensory nerve-ending found in the skin, in which the nerve breaks up into numerous branches, which surround a core of large cells in a connective-tissue capsule.

Krause's membrane (*Zool*). A transverse septum occurring in the middle of each of the clear areas of a striated muscle fibril.

Kremnitz white (*Paint.*). See **Vienna white.**

krem'nophyte (*Bot.*). A plant which grows against a steep wall.

Krems white (*Paint.*). See **Vienna white.**

Kretschmer's types (*Psychiatry*). Kretschmer, a German psychiatrist, found a correlation between physique and endogenous psychoses. According to their physique, he classified people into three groups: *asthenic*, *athletic*, and *pyknic* (qq.v.), with a fourth group, *dysplastic*, formed from a mixture of the others.

kril (*Zool.*). See under **Euphausiacea.**

krokid'olite (*Min.*). See **crocidolite.**

kro'mogram (*Photog.*). The set of three transparent positives which, when viewed simultaneously in a kromoskop, reproduces a coloured scene.

kro'moskop (*Photog.*). The apparatus for viewing kromograms.

Kru'kenberg's tumour (*Med.*). A solid tumour appearing in each ovary and believed to be always secondary to cancer of the stomach.

Kryptol (*Chem.*). A mixture of graphite, carborundum, and clay.

krypton (*Chem.*). Symbol, Kr. A zero-valent element, one of the rare gases. At. no. 36, at. wt. 83·7. It is a colourless and odourless monatomic gas; m.p. −169° C., b.p. −151·7° C., density 3·708 gms. per litre at N.T.P. It constitutes about one-millionth by volume of the atmosphere, from which it is obtained by liquefaction. It is used in certain gas-filled electric lamps.

Kultschitzky's cells (*Zool.*). In some Vertebrates, cells containing a large number of strongly basiphil granules, found in the epithelium lining the stomach, intestines, and pancreatic duct; believed to be of pathological origin.

Kümmell's disease, kim′el (*Med.*). Delayed collapse or crumbling of one or more spinal vertebrae after injury to the spine.

Kundt's rule, koont (*Light*). The refractive index of a medium on the shorter wavelength side of an absorption band is abnormally low, and on the other side abnormally high. This gives rise to *anomalous dispersion* (q.v.).

Kundt's tube (*Acous.*). A tube in which stationary waves are established, these being indicated by lycopodium powder, which congregates in a heap, or even a disc, at the nodes.

kunkar or **kankar** (*Geol.*). A vernacular Indian term for stone, now restricted to concretionary masses of calcium carbonate occurring in alluvium. Applied also to the red and variegated clay-like deposits of laterite in Ceylon.

kunzite, koonts′it (*Min.*). See **spodumene.**

kupfernickel, koop′fer— (*Min.*). See **niccolite.**

Kupffer's cells (*Zool.*). Large isolated phagocytic cells occurring on the walls of the liver sinuses in some Vertebrates.

Kutter's formula (*Hyd.*). See **Ganguillet and Kutter's formula.**

kVAR (*Elec. Eng.*). See **kilovar.**

kWh, kwhr (*Elec. Eng.*). See **kilowatt-hour.**

kyanising (*Build.*). The process of impregnating timber with a solution of corrosive sublimate as a preservative.

ky′anite or **cy′anite** (*Min.*). A silicate of aluminium which crystallises in the triclinic system. It usually occurs as long-bladed crystals, blue in colour, in metamorphic rocks. See also **disthene.**

ky′lite (*Geol.*). A medium- to coarse-grained gabbroic rock, intermediate in mineral composition between typical teschenite and picrite, containing less feldspar than the latter, but more than the former. Named from the Kyles of Bute.

ky′phoscolio′sis (*Med.*). A deformity of the spine in which dorsal convexity is increased, the spine being also bent laterally.

kypho′sis (*Med.*). A deformity of the spine in which the dorsal convexity is increased.

L, Λ

l. (*Chem.*). An abbrev. for *litre*.

l (*Chem.*). A symbol for: (1) Latent heat per gram; (2) mean free path of molecules; (3) (with subscript) equivalent ionic conductance, 'mobility.'

l- (*Chem.*). An abbrev. for *laevo-rotatory*.

L- (*Chem.*). A symbol for latent heat per mol.

L-acid (*Chem.*). Laurent acid, 1-naphthylamine-5-sulphonic acid, an intermediate for dyestuffs.

L-head (*I.C. Engs.*). A petrol-engine cylinder head carrying the inlet and exhaust valves in a pocket at one side; resembles an inverted L.

L-rest (*Eng., etc.*). A lathe rest used in hand turning, shaped like an inverted L.

L-series (*Phys.*). Groups of lines in the X-ray spectra of the elements next in order of wavelength to the *K-series* (q.v.), and having their origin in electron transitions to the K-shell. See **K, L, M . . . shells.**

L-type network (*Elec. Comm.*). A network with a single series arm and a single shunt arm.

Λ (*Chem.*). A symbol for equivalent conductance; Λ_0, at infinite dilution.

La (*Chem.*). The symbol for *lanthanum*.

Labarraque's solution, la-ba-rak' (*Photog.*). *Javel water* (q.v.).

label, label'lum (*Bot.*). The posterior petal of the flower of an orchid; since the flower is usually resupinate, the labellum appears to be anterior.

label (*Build.*). A projecting moulding above a door or window opening.

label-corbel table (*Build.*). A *dripstone* (q.v.) supported by a corbel.

label'lum (*Zool.*). A spoon-shaped lobe at the apex of the glossa in Bees.—*pl.* **labella.** In certain *Diptera*, a pair of fleshy lobes into which the proboscis (*labium*) is expanded distally.

la'bia (*Zool.*). Any structures resembling lips; as the lips of the vulva in *Primates*. See also the *sing.* form **labium.**—*adj.* **labial.**

labia majo'ra (*Zool.*). In Mammals, two prominent folds forming the outer lips of the vulva.

labia mino'ra (*Zool.*). In Mammals, the small inner lips of the vulva; nymphae.

labial palp (*Zool.*). In *Insecta*, the palpus of the second maxilla: in some *Pelecypoda*, a ciliated grooved muscular flap bordering the mouth.

la'biate (*Bot.*). Said of a corolla with one or more petals prolonged to form a lip.

labidoph'orous (*Zool.*). Possessing chelae or other forcipulate organs.

la'bile (*Chem.*). Unstable, liable to change.

labio- (Latin *labium*, lip). A prefix used in the construction of compound terms; e.g. *labiodental*, pertaining to the lips and teeth.

la'bioglos'sopharynge'al (*Anat.*). Pertaining to the lips, tongue, and pharynx.

labiosti'pes (*Zool.*). The prementum of *Insecta*.

la'bium (*Zool.*). In *Insecta*, the lower lip, formed by the fusion of the second maxillae: in the shells of *Gastropoda*, the inner or columellar lip of the margin of the aperture. See also the *pl.* form **labia.**

lab'oratory. A place where specific scientific research or testing is done, e.g. a chemistry *laboratory*, a works *laboratory*.

laboratory (*Cinema.*). The department in a film studio organisation where the exposed films are processed and printed.

labradores'cence (*Min.*). A brilliant change of colour caused in some stones, e.g. labradorite, by the presence of minute enclosed crystalline plates, or aligned rod-like inclusions.

lab'radorite (*Min.*). A plagioclase feldspar containing approximately equal amounts of the albite and anorthite molecules; occurs in basic igneous rocks; characterised by a beautiful play of colours in some specimens, due to schiller structure. Named from Labrador, whence fine specimens were sent over to Europe by Moravian settlers.

La Brea Sandstone (*Geol.*). A sandstone which succeeds the oil-bearing sands of Miocene age in Trinidad; it contains the well-known Pitch Lake, 104 acres in extent.

la'brum (*Zool.*). In *Insecta*, the plate-like upper lip; in the shells of *Gastropoda*, the outer lip or right side of the margin of the aperture.—*adj.* **labral.**

lab'yrinth (*Acous.*). A folded acoustic path which serves as an attenuating line; hence an acoustic termination for the rear sides of diaphragms.

labyrinth (*Zool.*). Any convolute tubular structure; especially, the bony tubular cavity of the internal ear in Vertebrates, or the membranous tube lying within it.

labyrinthec'tomy (*Surg.*). Surgical removal of the labyrinth of the ear.

labyrin'thiform (*Bot., etc.*). Marked by sinuous lines, maze-like.

labyrinthi'tis (*Med.*). Inflammation of the labyrinth of the ear.

labyrinth'odont (*Zool.*). Having the dentine of the teeth folded in a complex manner.

lac. A resinous substance, an excretion product of certain Coccid insects (*Gascardia, Tachardia,* etc.) in certain jungle trees; used in the manufacture of shellac. Chief source, India. See **shellac,** for which the name is frequently loosely used.

laccate (*Bot.*). Having a shining surface, as if varnished.

lac'colith (*Geol.*). A form of intrusion with domed top and flat base, the magma having been instrumental in causing the up-arching of the 'roof.' Cf. *phacolith*.

lace. See **lace (machine-made)** below.

lace fabrics (*Hosiery*). See **openwork.**

lace machine. One of several types of machine in which bobbins, combs, and carriages form the chief part in converting two series of threads into an ornamental fabric.

lace, machine-made (*Textiles*). An ornamental fabric such as net, fancy lace, embroidery, and curtain lace, in which the bobbin and warp threads are interwoven, looped, plaited, or twisted together, according to design.

laced valley (*Build.*). A valley formed in a tiled roof by interlacing tile-and-a-half tiles across a valley board.

lac'erate, lacin'iate, las— (*Bot.*). Irregularly cut, as if slashed or torn.

laceration (*Med.*). The action of tearing: an irregular wound from crushing or tearing.

lachrymal, lak'— (*Zool.*). See **lacrimal.**

lach'rymators (*Chem.*). See **tear gases.**

lacing (*Eng.*). The joining of the ends of leather driving-belts by leather or wire lacing; largely superseded by the use of *belt fasteners* (q.v.).

lacing cord (*Lace*). A pliable twine used for lacing together the jacquard cards in a lace machine.

lacing course (*Masonry*). A brickwork bond-course built into rubble or flint walls.

lacing-in (*Bind.*). The operation of attaching the boards to a book by lacing the ends of the bands through holes made in the boards to receive them.

lacin'ia (*Bot.*). Incision in a leaf, petal, etc.: slender lobe projecting from the margin of a thallus.—(*Zool.*) In *Insecta*, the inner distal lobe of the maxilla.—*pl.* **laciniae.**

lacin'iate (*Bot.*). See **lacerate.**

La Cour convertor (*Elec. Eng.*). See **motor convertor.**

lac'quer (*Chem.*). A solution of film-forming substances in volatile solvents; e.g. a spirit lacquer or varnish consists of shellac or other gums dissolved in methylated spirit. The most important lacquers are the *cellulose lacquers* (q.v.). Lacquers are applied as varnish to finished surfaces, either to give temporary or permanent protection from tarnishing by the atmosphere, or for effect.

lacquering (*Cinema.*). The process of covering the entire emulsion side of a release print with a thin coat of nitro-cellulose lacquer, for edge lubrication and protection of the image during use.

lac'rimal (*Zool.*). Pertaining to, or situated near, the tear gland: in some Vertebrates, a paired lateral membrane bone of the orbital region of the skull, in close proximity to the tear gland.

lacrimal duct (*Zool.*). In most of the higher Vertebrates, a duct leading from the inner angle of the eye into the cavity of the nose; it serves to drain off the secretion of the lacrimal gland from the surface of the eye.

lacrimal gland (*Zool.*). In most of the higher Vertebrates, a gland situated at the outer angle of the eye; it secretes a watery secretion which washes the surface of the eye and keeps it free from dust.

lactalbu'mins (*Chem.*). Albumins occurring in milk; like other albumins, they are crystalline substances, soluble in water, are not precipitated by NaCl, but coagulate at 70°-75° C.

lactam formation (*Chem.*). The formation of cyclic acid amides from γ- and δ-amino acids by the elimination of water through the combination of a hydrogen atom of the amino group with the hydroxyl group of the carboxyl. Amino acids with longer chains also form lactams, which can be considered as intramolecular anhydrides. Lactams are tautomers of lactims (see **lactim formation**), and a number of compounds can react according to both formulae; e.g. isatin.

lactase (*Chem.*). An enzyme, present in the digestive juices of some animals, which facilitates the conversion of lactose into glucose.

lactates (*Chem.*). The salts and esters of lactic acid.

lactation (*Zool.*). Milk-production; the formation of milk by the mammary glands.

lacte'als (*Zool.*). In Vertebrates, lymphatics, in the region of the alimentary canal, in which the lymph has a milky appearance, due to minute fat globules in suspension.

lacte'ous (*Bot.*). Milky.

lactic (*Zool., etc.*). Pertaining to milk.

lactic acids (*Chem.*). $CH_3 \cdot CH(OH) \cdot COOH$ and $CH_2(OH) \cdot CH_2 \cdot COOH$, hydroxy-propionic acids. There are two isomers, viz. α-hydroxy-propionic acid, and β-hydroxy-propionic acid; only the former, known as *lactic acid* or *fermentation lactic acid*, is of importance.—LACTIC ACID, a synonym for racemic α-hydroxy-propionic acid, $CH_3 \cdot CH(OH) \cdot COOH$, hygroscopic crystals, m.p. 18° C., b.p. 83° C. at 1 mm., sp. gr. 1·248. It is produced commercially by the lactic fermentation of sugars with *Bacillus acidi lactici* or by heating cane-sugar with caustic potash solution of a certain concentration.

lactif'erous (*Bot.*). Containing latex.—(*Zool.*) Milk-producing: milk-carrying.

lactiferous cell (or **element**) (*Bot.*). A cell or vessel which contains or conducts latex.

lactif'ic (*Bot., Zool.*). Producing latex or milk.

lactim formation (*Chem.*). The formation of cyclic acid amides from γ- and δ-amino acids by the elimination of water through the combination of both amino hydrogen atoms with the oxygen atom of the carbonyl group. Lactims are tautomers of lactams (see **lactam formation**).

lac'tobi'ose (*Chem.*). Milk-sugar or *lactose* (q.v.).

Lactoid (*Plastics*). A thermoplastic of the casein type. See **Erinoid.**

lactones (*Chem.*). Intramolecular anhydrides of hydroxy-carboxylic acids, particularly of γ-hydroxy acids. These acids are so unstable in the free state that, when a mineral acid is added, the lactone is formed.

lactose (*Chem.*). $C_{12}H_{22}O_{11}+H_2O$, rhombic prisms which become anhydrous at 140° C., m p. 205° C. with decomposition; when hydrolysed it forms *d*-galactose and *d*-glucose. It reduces Fehling's solution and shows *mutarotation* (q.v.). It occurs in milk and is not so sweet as cane-sugar.

lactosu'ria (*Med.*). The presence of lactose in the urine.

lacu'na (*Bot.*). (1) Any depression in a surface of a plant.—(2) Any cavity in a plant.—(3) A cavity formed in rapidly elongating stems by breakdown of the protoxylem.—(4) A large intercellular space.—(*Zool*) A small cavity or space; as one of the cell-containing cavities in bone.—*adjs.* **lacunar, lacunose.**

lacu'nar (*Build.*). A coffer or panel formed in a ceiling.

lacu'nose (*Bot.*). Having a pitted surface.

lacus'trine (*Ecol.*). Pertaining to a lake or lakes: living in, or on the shore of, a lake.

lacustrine deposits (*Geol.*). Sediments accumulated in a lake, consisting of marginal deposits of shingle, passing rapidly into clay and limestone in deeper water. May exhibit a well-marked seasonal banding, as in varve clays, while a light colour seems characteristic. The occurrence of fresh-water snails and algae is a certain indication of lacustrine origin of such rocks as the Oligocene Bembridge Limestones, etc.

ladder (*Build.*). A framework consisting of two parallel, or roughly parallel, posts connected by bars at regular intervals along their length, thus providing a series of steps which enable the ladder to be used as an aid to climbing to different levels.

ladder (*Civ. Eng.*). The continuous line of mud-buckets, carried on an oblique endless chain, in a bucket-ladder excavator or dredger.

ladder (*Hosiery*). A defect caused by the breaking of a knitted stitch, which causes the thread to *ladder* in a vertical direction; more liable to occur in smooth yarns.

ladder back (*Furn.*). A back (of a chair or settee) with horizontal bars.

ladder dredger (or **excavator**) (*Civ. Eng.*). See **bucket-ladder dredger.**

ladder network (*Elec. Comm.*). A transmission network constructed from a number of equal symmetrical filter elements.

ladder rack (*Civ. Eng.*). A form of rack railway in which the rack, being formed of two long parallel bars connected by a series of short bars, is similar to a ladder laid along the ground between the rails.

ladder scaffold (*Build.*). A light scaffold sometimes used for painting and other exterior work; it consists of ladders suitably braced together and fixed in vertical positions around the building.

ladies (*Build.*). Slates 16×8 in.

ladle (*Met.*). A vessel lined with refractory material; used for conveying molten metal from the furnace to the mould or from one furnace to another.

Laënnec's cirrhosis, la-en-ek' (*Med.*). Multilobular cirrhosis of the liver, in which degeneration of liver cells is associated with areas of fibrosis enclosing many lobules of the liver.

lae′otro′pic (*Zool.*). Tending to the left; as a *laeotropic* spiral, *laeotropic* division.

laevigate, properly **levigate,** lev′— (*Bot.*). Having a smooth, polished surface.

laevo-rotatory (*Light*). Rotating the plane of polarisation of a polarised ray of light to the left.

laevulose, lev′— (*Chem.*). Fruit-sugar or *l-fructose* (q.v.).

laevulosu′ria (*Med.*). The presence of laevulose in the urine.

lag (*Eng.*). See **ignition—** **injection—**

lag (*Mining*). To protect a shaft or level from falling rock by lining it with timber (*lagging*).

lag (*Weaving*). A perforated wooden strip forming part of the pattern chain for a dobby. This pattern chain is formed by lags which are connected together, and in which wooden or metal pegs have been inserted to make the pattern.

lags (*Build., Civ. Eng.*). *Lagging* (q.v.).

lage′na (*Zool.*). In higher Vertebrates, a pocket lined by sensory epithelium and developed from the posterior side of the sacculus, which becomes transformed in Mammals into the scala media or canal of the cochlea.

lagen′iform (*Bot.*). Having the form of a Florence flask.

lager beer (*Brew.*). A light beer, low in alcohol, and with a rather high percentage of extract.

lagging (*Bot.*). Slow movement towards the poles of the spindle by one or more chromosomes in a dividing nucleus, with the result that these chromosomes do not become incorporated into a daughter nucleus.

lagging (*Build., Civ. Eng.*). The wooden boards nailed across the framework of a centre, to form the immediate supporting surface for the arch.

lagging (*Eng.*). (1) The process of covering a vessel or pipe with a non-conducting material, to prevent either the loss or ingress of heat.—(2) The non-conducting material itself, such as a plaster mixture of asbestos and magnesia, moulded sections of magnesia plaster, powdered cork, *Alfol* (q.v.), etc.

lagging (*Mining*). See **lag.**

lagging-back (*Weaving*). The operation of turning back the pattern chain of a dobby in order to rectify the fault which would otherwise occur when the loom stopped on account of a weft breakage.

lagging current (*Elec. Eng.*). An alternating current which reaches its maximum value at a later instant in the cycle than the voltage which is producing it. See **phase-angle** and **angle of lag.**

lagging load (*Elec. Eng.*). A reactive load on an a.c. circuit in which the current lags behind the voltage. Also called INDUCTIVE LOAD.

lagging of tides (*Astron.*). The interval between the theoretical moment of maximum tide, which is that of the moon's crossing of the meridian at that place, and the actual moment, which is later by an amount depending on several factors, amongst them the irregular contour of ocean boundaries.

lagging phase (*Elec. Eng.*). A term used in connexion with measuring equipment on 3-phase circuits to denote a phase whose voltage is lagging behind that of one of the other phases by approximately 120°. Also used, particularly in connexion with the 2-wattmeter method of 3-phase power measurement, to denote the phase in which the current at unity power factor lags behind the voltage applied to the meter in which that current is flowing.

lagoonal deposition (*Geol.*). The accumulation of sediment in a shallow arm of the sea, which is cut off from the outer ocean by a barrier which prevents free communication. The strata formed under such conditions constitute a *lagoon phase.* Examples in the stratigraphical column occur in the Lower Carboniferous and in the Rhaetic Series.

lagophthal′mus, lagophthal′mos (*Med.*). Imperfect closure of the eyelids when the eyes are shut.

lagop′odous (*Zool.*). Having feet covered by hairs or feathers.

lagre (*Glass*). A store. Probably a corruption of German *lager.*

laid-dry (*Build.*). Said of bricks which have been laid without mortar.

laid-in moulding (*Join.*). A moulding cut out of a separate strip of wood of the required section, and sunk in a special groove in the surface which it is intended to decorate.

laid-on moulding (*Join.*). A *planted moulding* (q.v.).

laid paper (*Paper*). Writing and printing paper with a ribbed watermark derived from the mould or dandy in which the wires are laid side by side.

Lainer's reducer (*Photog.*). An iodide solution for reducing contrast or density in photographic images.

laitance (*Build.*). (1) The milky scum from grout or mortar, squeezed out when tesserae or tiles are pressed into place.—(2) The milky scum formed on over-trowelled cement concrete or rendering.

lake (*Geol.*). A body of water lying on the surface of a continent, and unconnected (except indirectly by rivers) with the ocean. Lakes may be *fresh-water lakes,* provided with an outlet to the sea; or *salt lakes,* occurring in the lowest parts of basins of inland drainage, with no connexion with the sea. Lakes act as natural settling tanks, in which silt carried down by rivers is deposited as clay, containing the shells of molluscs, etc. The lakes of former geological periods may thus be recognised by the nature of the sediments deposited in them and the fossils they contain. Lakes occur plentifully in glaciated areas, occupying hollows scooped out by the ice, and depressions lying behind barriers of morainic material.

Lake copper (*Met.*). Copper produced from the Lake Superior ores in which the metal occurs native and is of high purity. Before modern methods of refining were developed, this was the purest copper produced.

lakes (*Chem.*). Pigments formed by the interaction of dyestuffs and 'bases' or 'carriers.' The formation of insoluble lakes in fibres which are being dyed is known as 'mordanting,' the hydroxides of aluminium, chromium, and iron generally being employed as 'mordants.'

Lalande cell, la-lahn^{g}d′ (*Elec. Eng.*). A primary cell having electrodes of zinc and iron, an electrolyte of caustic soda, and a copper oxide depolariser.

lalling, lallation (*Med.*). Babbling speech of infants: lack of precision in the articulatory mechanism of the mouth.

lam (*Weaving*). The wooden bar below a heald which is pulled down by the tappet lever, and which in turn lowers the heald connected to it.

Lamarckism (*Zool.*). A theory of the mechanism of evolution propounded by Lamarck; it postulates that new characters acquired by an organism during its lifetime, as an outcome of use or disuse, are inherited.

lamb dysentery (*Vet.*). See **dysentery (lamb).**

lambskin (*Textiles*). A fustian type of cotton fabric, having a raised surface and deep nap.

lamb's wool (*Textiles*). See under **fleece wool.**

lambert (*Illum.*). A unit of brightness; it is the brightness of a perfectly diffusing surface emitting or reflecting one lumen per sq. cm., and is equal to $\frac{1}{\pi}$ candles per sq. cm.

Lambert's law (*Light*). The illumination of a surface on which the light falls normally from a point source is inversely proportional to the square of the distance of the surface from the source. If the normal to the surface makes an angle with the direction of the rays, the illumination is proportional to the cosine of that angle.

lamell-, lamelli- (Latin *lamella*, thin plate). A prefix used in the construction of compound terms; e.g. *lamellibranchiate,* having plate-like gills.

lamel'la (*Bot.*). (1) A plate of cells.—(2) The gill of an agaric.—(*Zool.*) A structure resembling a thin plate.—*adjs.* **lamellar, lamellate.**

lamellar magnetisation (*Elec. Eng.*). Magnetisation of a sheet or plate distributed in such a way that the whole of the front of the sheet forms one pole and the whole of the back forms the other.

lam'ellate (*Bot.*). Made up of thin plates.

lamel'libranch (*Zool.*). Having plate-like gills, as members of the group *Pelecypoda.*

Lamellibran'chia (*Zool.*). See **Pelecypoda.**

lamel'licorn (*Zool.*). Having lamellate antennae.

lamelliros'tral (*Zool.*). (Of Birds) having lamelliform ridges on the inner edge of the beak.

lam'ellose (*Bot.*). Stratified.

lam'ina (*Bot.*). (1) The flattened blade of a leaf.—(2) Any flattened part of a thallus.—*pl.* **laminae.**

lamina (*Elec. Eng*). Thin sheet-steel.

lamina (*Geol.*). See **lamination.**

lamina (*Zool.*). A thin layer: a flat plate-like structure.—*adjs.* **laminar, laminiform.**

lamina cribro'sa (*Zool*). (1) See **cribriform plate.**—(2) The area of the sclerotic coat of the eye which is pierced by the bundles of the optic nerve.

lamina fusca (*Zool.*). In the Vertebrate eye, the layer of pigmented connective tissue lining the sclerotic coat.

lamina reticula'ris (*Zool.*). A net-like cuticular structure extending over the outer epithelium cells of Corti's organ in the Mammalian ear.

lamina supra-choroi'dea (*Zool.*). In the Vertebrate eye, the outermost layer of the choroid coat, consisting of delicate connective tissue containing elastic fibres and pigment cells.

laminar flow (*Hyd.*). See **viscous flow.**

lamina'ria tent (*Med.*). A conical plug made of a certain kind of seaweed, for use in dilating the opening of the cervix uteri.

laminated arch (*Carp.*). An arch formed of successive thicknesses of planking, which are bent into shape and secured together.

laminated brush (*Elec. Eng.*). A brush for an electric machine, made up of a number of layers insulated from one another, so that the resistance is greater across the brush than along its length (i.e. in the direction of normal current-flow).

laminated-brush switch (*Elec. Eng.*). A switch in which one or both of the contacts are laminated. See **laminated contact.**

laminated bulb (*Bot.*). See **tunicate bulb.**

laminated clay (*Geol.*). A type of clay exhibiting lamination (i.e. very fine stratification); characteristic of accumulation under lacustrine conditions. See also **varve clays.**

laminated conductor (*Elec. Eng.*). A conductor commonly used for armature windings of large machines or for heavy-current bus-bars; it is made up of a number of thin strips, in order to reduce eddy currents in the conductor or to make it more flexible.

laminated contact (*Elec. Eng.*). A switch contact made up of a number of laminations arranged so that each lamination can be pressed into contact with the opposite surface, thereby giving a large area of contact and also a wiping action. Also called BRUSH CONTACT.

laminated core (*Elec. Eng.*). A core built up of laminations; this is the usual type of core for an electric machine or transformer.

laminated glass. See **safety glass.**

laminated magnet (*Elec. Eng.*). (1) A permanent magnet built up of magnetised strips, in order to obtain a high intensity of magnetisation.—(2) An electromagnet for a.c. circuits, having a laminated core to reduce eddy currents.

laminated plastics (*Plastics*). Sheets of paper, linen, canvas, or silk impregnated with a phenolic, urea, or vinyl resin, and dried in a continuous operation. The sheets are pressed on heated platens in hydraulic presses during cure. Tubes are made by rolling on hot steel mandrels. Laminated plastics are light and strong, machinable, impervious to water and oil, and resistant to wear, acids, and alkalis; they have a high dielectric constant. They are used for silent gears, electrical insulation, decoration, and in the plating industry.

laminated pole (*Elec. Eng.*). A pole for the field windings of an electric machine, having the core built up of laminations in order to reduce eddy currents caused by flux pulsations in the air-gap.

laminated pole-shoe (*Elec. Eng.*). A field magnet pole for an electric machine having the pole-shoe built up of laminations in order to reduce eddy currents in it caused by flux pulsations in the air-gap.

laminated record (*Acous.*). A gramophone record in which the surface material differs from that in the inside, or core, in being finer grained and therefore freer from surface noise. The superior material is carried on a fine sheet of paper, being pressed on to the hot core in the press.

laminated spring (*Eng.*). A flat or curved spring consisting of thin plates or leaves superimposed, acting independently, and forming a beam or cantilever of uniform strength. See **carriage spring.**

laminated yoke (*Elec. Eng.*). A yoke for an electric machine, built up of laminations; used in some forms of a.c. motors.

lamination (*Elec. Eng.*). A sheet-steel stamping shaped so that a number of them can be built up to form the magnetic circuit of an electric machine, transformer, or other piece of apparatus. Also called CORE PLATE, PUNCHING, STAMPING.

lamination (*Geol.*). Stratification on a fine scale, each thin stratum, or *lamina*, being a small fraction of an inch in thickness. Typically exhibited by shales and fine-grained sandstones.

laminec'tomy (*Surg.*). Surgical removal of the posterior arch or arches of one or more spinal vertebrae.

laminiplan'tar (*Zool.*). (Of Birds) having the integument of the metatarsus scaly in front and smooth behind; as in Thrushes.

lamini'tis (*Vet.*). Inflammation of the keratogenous membrane of the feet of horses and cattle.

La Mont boiler (*Eng.*). A once-through or semi-flash boiler in which the feed is supplied to the upper ends of long closely spaced tubes of small diameter, from which the water and steam pass to a separating drum.

Lamont's law (*Elec. Eng.*). A law stating that the permeability of steel, at any flux density, is proportional to the difference between that flux density and the saturation value.

lamp (*Illum.*). A device for producing light.

See **arc—**
daylight—
electric—
filament—
gas—
miner's—
projector-type—
standard—
synchronising—
traction—
tubular—

lamp base (*Illum.*). See **lamp cap.**

lampblack (*Chem.*). The soot (and resulting pigment) obtained when substances rich in carbon (e.g. mineral oil, turpentine, tar, etc.) are burnt in a limited supply of air so as to burn with a smoky flame. See also **carbon black.**

lamp cap (*Illum.*). The cap of brass, bakelite, or other material, at the base of a filament or electric-discharge lamp, which contains the terminals, and also serves to support the lamp in the holder; also called LAMP BASE. See **bayonet cap, Edison screw-cap.**

lampholder (*Illum.*). A device for supporting an electric lamp; fitted with contacts connected to the source of supply; also called a HOLDER or LAMP SOCKET. See **backplate lampholder, bayonet holder, Edison screw-holder.**

lampholder plug (*Elec. Eng.*). A device for connecting a flexible electric cord, instead of a lamp, to an ordinary lampholder. Also called PLUG ADAPTOR.

lamphole (*San. Eng.*). A vertical shaft which is sunk in the ground and communicates with the crown of a sewer, thus enabling a lamp to be lowered into it to assist inspection from a nearby manhole.

lamp oil (*Fuels*). See **kerosene.**

lamp resistance (*Elec. Eng.*). A resistance consisting of one or more electric filament lamps.

lamp socket (*Illum.*). See **lampholder.**

lampas (*Vet.*). A swelling of the palatal mucous membrane behind the upper incisor teeth of horses.

lamp'rophyres (*Geol.*). Igneous rocks usually occurring as dykes intimately related to larger intrusive bodies; characterised by abnormally high contents of coloured silicates, such as biotite, hornblende, and augite, and a correspondingly small amount of feldspar, some being feldspar-free. See also **minette, monchiquite.**

lan'arkite (*Min.*). A very rare monoclinic sulphate of lead, occurring with anglesite and leadhillite (into which it easily alters) at Leadhills, Lanarkshire, Scotland.

lan'ate (*Bot., Zool.*). Covered with long and loosely tangled hairs: pertaining to or having wool: having the appearance of wool or of a woolly coat.

Lancashire boiler (*Eng.*). A cylindrical steam-boiler having two longitudinal furnace tubes containing internal grates at the front. After leaving the tubes the gases pass to the front along a bottom flue, and return to the chimney along side or wing flues.

Lancashire booster (*Elec. Eng.*). A special form of battery booster having four field windings connected respectively across the booster armature, across the main bus-bars, in series with the booster armature, and in series with the main circuit.

lance (*Carp.*). A sharp scribing part of a cutting tool, serving to cut through the grain in advance and on each side of the cutting tool proper.

lan'ceolate (*Bot.*). Flattened, two or three times as long as broad, widest in the middle, and tapering to a pointed apex.

lancet arch (*Build.*). A sharply pointed arch, of greater rise than an equilateral arch of the same span.

lancet-shaped (*Bot.*). Flattened, and shortly lanceolate, with a bluntish apex.

lancet window (*Build.*). A tall narrow window surmounted by a lancet arch.

lan'cinating (*Med.*). (Of pain) acute, shooting, piercing, cutting.

land and sea breezes (*Meteor.*). Light winds occurring at the coast during fine summer weather. During the day, when the land is hotter than the sea, convection causes a breeze from the sea; at night conditions are reversed, and the sea is warmer than the land, causing a breeze from the land.

landside (*Agric. Mach.*). A flat plate which is attached to the body of a plough and takes up the horizontal reactions of the ground when the plough is working.

landslip (*Geol.*). The sudden sliding of masses of rock, soil, or other superficial deposits from higher to lower levels, on steep slopes. Landslips on a very large scale occur in mountainous districts as a consequence of earthquake shocks, stripping the valley sides bare of all loose material. In other regions landslips occur particularly where permeable rocks, lying on impermeable shales or clays, dip seawards or towards deep valleys. The clays hold up water, becoming lubricated thereby, and the superincumbent strata, fractured by joints, tend to slip downhill, a movement that is facilitated on the coast by the undercutting consequent on marine erosion.

land tie (*Civ. Eng*). A tie-rod providing horizontal restraint against the lateral pressure exerted by earth retained by a wall.

land treatment (*Sewage*). The final or oxidising stage in sewage treatment, in which the liquid sewage is distributed over an area of land, through which it filters to underdrains. If the land will not permit of easy filtering, the sewage is applied to one plot of land by irrigation, and is then passed on to a second, third, and fourth plot, before final discharge into a stream.

landing (*Build.*). A flat platform at the head of a series of steps.

See **half-space—** **quarter-space—**

landing (*Civ. Eng.*). A space on a pier or quayside, intended to provide access for passengers alighting.

landing area floodlight (*Aero.*). A battery of lights specially designed to illuminate a sufficiently large surface for an aircraft landing.

landing bar (*Lace*). Part of the mechanism of a Levers lace machine, on which the tail of the carriage lands at the end of each swing.

landing-call push (*Elec. Eng.*). A push-button fitted at each landing of an electric lift, and arranged either to call the lift-car itself or to attract the attention of the attendant.

landing direction light (*Aero.*). A light, in the form of a beam, for indicating the direction in which landings are to be made. The aircraft alights upon, and travels along, the beam to its source.

landing ground (*Aero.*). In air transport, any piece of ground that has been prepared for landing of aircraft as required; not necessarily a fully equipped aerodrome. An *emergency landing ground* is any area of land that has been surveyed and indicated to pilots as being suitable for forced or emergency landings.

landing-switch (*Elec. Eng.*). (1) A two-way lighting switch.—(2) A switch operated by a lift car, to effect stoppage at a landing.

Landolt's fibres (*Zool.*). In some Vertebrates, the free outwardly directed processes of the cone-bipolars of the eye.

Landry's paralysis (*Med.*). An acute form of paralysis which starts at the feet and rapidly spreads upwards.

Landsberger apparatus (*Chem.*). An apparatus for the determination of the boiling-point of a solution by using the vapour of the solvent to heat the solution.

landscape marble (*Geol.*). A type of limestone containing markings resembling miniature trees, etc.; when polished, the surface has the appearance of a sepia drawing. See **dendritic markings, Cotham Marble.**

Lang lay (*Eng.*). A method of making wire ropes in which the wires composing the strands, and the strands themselves, are laid in the same direction of twist.

Lang′erhans′ cells (*Zool.*). Spindle-shaped cells in the centre of each acinus of the pancreas.

Langerhans′ islets (*Zool.*). Irregular masses of hyaline epithelium cells, unfurnished with ducts, occurring in the Vertebrate pancreas; they are responsible for the elaboration of the hormone insulin.

Langerhans′ layer (*Zool*). See **cytotrophoblast.**

lang′ite (*Min.*). A very rare ore of copper occurring in Cornwall, blue to green in colour; essentially hydrated copper sulphate, crystallising in the orthorhombic system.

Langmuir's theory (*Chem.*). (1) The assumption that the extra-nuclear electrons in an atom are arranged in shells corresponding to the periods of the periodic system. The chemical properties of the elements are explained by supposing that a complete shell is the most stable structure.—(2) The theory that adsorbed atoms and molecules are held to a surface by residual forces of a chemical nature.

Langport Beds (*Geol.*). A series of light-coloured limestones, with thin marl partings, occurring in the Rhaetic System between the Cotham Beds below and the Watchet Beds above. They reach 25 ft. in maximum thickness, and constitute the 'White Lias' proper.

languet, languette, lan′get (*Zool.*). In some *Urochorda*, a small process depending from the hyper-pharyngeal band.

lan′iary (*Zool.*). Adapted for tearing, as a canine tooth.

lan′olin (*Chem.*). Trade name for wool-fat (*adeps lanae*), a yellowish viscous mass of wax-like consistency, very resistant to acids and alkalis; it emulsifies easily with water and is used for making ointments. It consists of the palmitate, oleate, and stearate of cholesterol.

lantern (*Build.*). An erection on the top of a roof, projecting above the general roof level, and usually having glazed sides to admit light, as well as openings for ventilation.

lantern coelom (*Zool.*). In *Echinoidea*, the coelomic space lying within the lantern of Aristotle, and representing an enlarged perihaemal ring.

lantern, projection (*Light*). See **projection lantern.**

lantern wheel (or **pinion**) (*Horol.*). A form of pinion consisting of two circular brass discs connected by cylindrical pins, the pins acting as the leaves in an ordinary pinion. Lantern pinions are very satisfactory as followers but should not be used as drivers. Used extensively in cheap clocks, alarm clocks with pin-pallet escapement, and in some turret clocks. The lantern wheel is obsolete in general engineering.

lan′thanum (*Chem.*). Symbol, **La.** A metallic element in the third group of the periodic system, belonging to the rare earths group. At. no. 57, at. wt. 139·0, m.p. 810° C.

lan′tharin (*Zool.*). See **linin.**

lanu′ginose, lanuginous (*Bot.*, *Zool.*). Bearing a woolly coating, lanate.

lanu′go (*Zool.*). In Mammals, pre-natal hair.

lap (*Build.*). The length of overlap (varying between 2½ in. and 4 in.) of a slate over the slate next but one below it, in centre-nailed work; or that of a slate over the nail securing the slate next but one below it, in head-nailed work.

lap (*Eng.*). (1) The extent to which one plate overlaps another. See **lap joint.**—(2) In steam-engines, the amount by which the valve has to move from mid position to open the steam or exhaust port. See **exhaust lap, outside lap.**—(3) A piece of soft metal, wood, etc., often in the form of a rotating cylinder or disc, charged with abrasive or polishing powder; used in polishing or finishing metals, gem-cutting, etc. See **lapping, lapping machine.**

lap (*Met.*). A surface defect on rolled or forged steel. It is caused by folding a fin on to the surface and squeezing it in; as welding does not occur, a seam appears on the surface.

lap (*Textiles*). A rolled sheet of fibres produced at the delivery end of opening machinery during preparation of the material for spinning.

lap dissolve (*Cinema.*). The same as *dissolve*.

lap dovetail (*Join.*). An angle joint between two members, in which only one shows end grain, a sufficient thickness of wood having been left on this member, in cutting the joint, to cover the end grain of the other member. Also called DRAWER-FRONT DOVETAIL, from one of its common uses.

lap joint (*Carp.*). A joint between two pieces of timber, formed by laying one over the other for a certain length and fastening the two together with metal straps passing around the timbers, or with bolts passing through them.—(*Eng.*) A plate joint in which one member overlaps the other, the two being riveted or welded along the seam single, double, or treble.

lap winding (*Elec. Eng.*). A form of two-layer winding for electric machines in which each coil is connected in series with the one adjacent to it. Cf. *wave winding*.

laparot′omy (*Surg.*). Cutting into the abdominal cavity.—EXPLORATORY LAPAROTOMY, the operation of cutting into the abdominal cavity so that direct examination of abdominal organs may be made.

lapel′ microphone (*Acous.*). A small microphone, worn on the lapel; suitable for use when the speaker is addressing an audience, or when he cannot remain in a stable position.

lapidic′olous (*Zool.*). Living under stones.

lapil′li (*Geol.*). Small rounded pieces of lava whirled from a volcanic vent during explosive eruptions; lapilli are thus similar to volcanic bombs but smaller in size, usually about the size of walnuts.—*sing.* **lapillus.**

la′pis laz′uli (*Min.*). The original sapphire of the ancients, a beautiful blue stone used extensively for ornamental purposes; it consists of calcite stained deep-blue by three cubic minerals, sodalite, lazurite, and hauyne.

La Plata Sandstone (*Geol.*). A Jurassic sandstone, representing a dune-sand of desert origin, occurring in S.W. Colorado; equivalent to the White Cliff Sandstone of the Grand Canyon section.

lappet (*Zool.*). Any hanging, lobe-like structure; as the ciliated *lappets* of the actinotroch larva of Phoronis.

lappets (*Cotton Weaving*). Fabrics with figures of extra warp which resemble embroidered effects, the figures being produced during weaving.

lapping (*Eng.*). The finishing of spindles, bored holes, etc., to fine limits, by the use of laps of lead, brass, etc.

lapping (*Linen*). The operation of arranging cloth in yard folds after weaving, and again, usually, after bleaching.

lapping (*Paint.*). (1) A line or mark showing edges where each stretch of paint begins and ends.—(2) The art of concealing the line separating new work from old.

lapping (*Photog.*). Rubbing one surface against another, generally with an abrasive such as rouge, so that the softer takes up the contour of the harder; e.g. in a lens, or in making optical flats.

lapping machine (*Eng.*). A machine tool for finishing the bores of cylinders, etc., to fine limits by the use of revolving circular laps supplied with an abrasive powder suspended in the coolant.

lapse (*Meteor.*). The temperature gradient of the atmosphere taken vertically. The average lapse-rate is about 0·6° C. per 100 metres, being taken as positive when the temperature decreases with height.

lapsed intelligence (*Zool.*). See **instinct.**

Lara'mian or **Lar'amie Sands** (*Geol.*). A thick formation of sand laid down under continental conditions during the shallowing and retreat of the Cretaceous sea from the central U.S.A. The formation contains the remains of the last great dinosaurs (the *Ceratops* fauna) in Wyoming and Montana.

Lar'amide revolution (*Geol.*). A period of earth movement in early Tertiary times during which the interior regions of N. America were folded, producing the Rockies and the Andean and Antillean chains. The Appalachians were uplifted at this time, and the cycle of erosion was initiated which has produced the existing land forms. Volcanic activity occurred from Mexico into Canada.

larda'ceous disease (*Med.*). Amyloid or waxy kidney. Amyloid degeneration of the blood-vessels of the kidney (and usually elsewhere), associated with the copious excretion of urine of low specific gravity and containing albumin. See also **amyloid degeneration.**

lardalite (*Geol.*). See **laurdalite.**

large (*Paper*). A standard size of cut card, 3 × 4½ in.

large calorie (*Heat*). See **calorie.**

large imperial (*Paper*). A standard board size, 22 × 32 in.

large post (*Paper*). A standard size of printing paper, 16½ × 21 in.

lar'mier (*Build.*). A corona placed over a door or window opening to serve as a dripstone.

larnite (*Min.*). Orthosilicate of calcium, Ca_2SiO_4, discovered in the contact zone of a Tertiary dolerite intrusive into chalk containing flint nodules; formed by reaction between the calcium carbonate of the former and the silica of the latter. Cf. *wollastonite.*

larry (*Build.*). A tool having a curved steel blade fixed to the end of a long handle, to which it is bent normally; used for mixing mortar, or for mixing hair with coarse stuff to form a plaster.

larrying (*Build., Civ. Eng.*). The process of pouring a mass of mortar upon the wall and working it into the joints; sometimes used in building large masses of brickwork.

larva (*Zool.*). In *Acarina*, an immature stage intervening between the egg and the nymph, characterised by the possession of three pairs of legs only: in *Insecta*, an immature stage intervening between the egg and the adult, differing fundamentally from the latter, notably in the absence of compound eyes, and acquiring the adult structure by means of a complex metamorphosis, accompanied by a pupal instar: a self-supporting immature form of any animal, which differs fundamentally from the parents in structure.—*adj.* **larval.**

Larva'cea (*Zool.*). A class of *Urochorda* in which the adult is a free-living active form possessing a notochord, and closely resembles the larva in its anatomy; there are only two gill-slits, which open directly to the exterior; the animal secretes a curious non-adherent 'house' around itself, which is periodically replaced; pelagic forms.

larvikite (*Geol.*). See **laurvikite.**

larvip'arous (*Zool.*). Giving birth to offspring which have already reached the larva stage.—*n.* **larviparity.**

larviv'orous (*Zool.*). Larva-eating.

laryng-, laryngo- (Greek *larynx*, the larynx). A prefix used in the construction of compound terms; e.g. *laryngofissure* (q.v.).

larynge'al. *Adj.* from *larynx.*

laryngec'tomy (*Surg.*). Surgical removal of the larynx.

laryngis'mus (*Med.*). Spasm of the larynx.

laryngismus strid'ulus (*Med.*). In ill-nourished children, a condition in which sudden attacks of asphyxia are caused by collapse of the cartilaginous framework of the larynx.

laryngi'tis (*Med.*). Inflammation of the larynx.

laryngofis'sure (*Surg.*). Thyrotomy. Surgical exposure of the larynx by dividing the thyroid cartilage (Adam's apple) in the mid-line.

laryngol'ogy (*Med.*). That branch of medical science which treats of abnormal conditions of the larynx and adjacent parts of the upper respiratory tract.—*n.* **laryngol'ogist.**

laryngopharyngi'tis (*Med.*). Inflammation of the larynx and the pharynx.

laryn'goscope (*Surg.*). An instrument used for viewing the larynx.

laryngosteno'sis (*Med.*). Pathological narrowing of the larynx.

laryngos'tomy (*Surg.*). The surgical formation of an opening in the larynx.

laryngot'omy (*Surg.*). The operation of cutting into the larynx.

laryngotracheitis, —trak-e-i'tis (*Vet.*). A contagious filterable-virus infection of fowls, characterised by acute inflammation of the respiratory system.

lar'ynx (*Anat.*). The vocal organ in all land Vertebrates except Birds, situated at the anterior end of the trachea.—(*Acous.*) The fundamental of a speech sound is determined by the tension of the muscles in the larynx, and the spectral distribution of the frequency components in the emitted sound is determined by the acoustic resonance in the mouth and nasal cavities. See **voiced sound, unvoiced sound.**

lash-up (*Elec. Comm.*). The temporary connexion of apparatus, for experimental or emergency use.

lasher (*Mining*). A native employed to do *lashing* (q.v.).

lasher-on (*Mining*). A man employed to lash the chains from the tubs to the endless rope, in underground mechanical haulage.

lashing (*Mining*). A South African term for removing broken rock after blasting. Canadian term, MUCKING.

lasso-cell (*Zool.*). In *Ctenophora*, an adhesive cell, with a long anchoring filament, occurring on the tentacles.

last (*Boots and Shoes*). A wooden form, shaped like a foot, on which the various parts of a boot or shoe are shaped and attached to each other.

last-subscriber release (*Auto. Teleph.*). The release of automatic switching plant when the last of both subscribers has replaced his receiver and opened his loop.

lasting (*Textiles*). Strong twill cloth of hard twisted cotton or worsted yarns, or cotton warp and worsted weft; used for boot and bag linings, etc.

latch (*Join.*). A door-fastening device which exists in various forms but consists essentially of a pivoted bar, secured to the door, which falls into a hook on the frame.

latch needle (*Hosiery*). A hooked needle, with a latch over the hook which opens and closes while a stitch is in process of formation, the completed stitch opening the latch to receive a new thread.

latchet (*Plumb.*). A *tingle* (q.v.).

latching (*Surv.*). *Dialling* (q.v.).

latebric'olous (*Zool.*). Living in holes.

la'tent (*Zool.*). In a resting condition or state of arrested development, but capable of becoming active or undergoing further development when conditions become suitable: said also of hidden characteristics which may become evident under the right circumstances.

latent heat (*Phys.*). The heat which is required to change the state of a substance from solid to liquid, or from liquid to gas, without change of temperature. The numerical value of the latent heat is the amount of heat required to change the state of unit mass. Thus the latent heat of fusion of ice is 80 calories per gm., and the latent heat of vaporisation of water is 540 calories per gm.

latent image (*Photog.*). The non-detectable image registered in a sensitive emulsion by ionisation of molecules and realised by development.

latent magnetisation (*Elec. Eng.*). The property possessed by certain feebly magnetic metals (e.g. manganese and chromium) of forming strongly magnetic alloys or compounds.

latent time (*Bot.*). The period of time between the beginning of stimulation and the first signs of a response.

later (*Build.*). A brick or tile.

later-, latero-, lateri- (Latin *latus*, gen. *lateris*, side). A prefix used in the construction of compound terms; e.g. *laterocranium* (q.v.).

lateral. Situated on or at, or pertaining to, a side.—(*Bot.*) (1) Arising from the side of the parent axis.—(2) Attached to the side of another member.—(3) On or near the edge of a thallus or fruit.

lateral axis (*Aero.*). The cross-wise axis of an aircraft, particularly that passing through its centre of gravity, parallel to the line joining the wing tips.

lateral canal (*Hyd. Eng.*). A separate navigational canal constructed to follow the lie of a river which does not lend itself to canalisation.

lateral inversion (*Television*). A defect in a reproduced television image, the picture being reversed, the right-hand side appearing on the left, and vice versa. It is due to a reversal in the connexions to the line-scanning generator.

lateral line (*Zool.*). In Fish, a line of neuromast organs running along the side of the body.

lateral meristem (*Bot.*). A meristem located to the side of a plant member.

lateral mesenteries (*Zool.*). In *Zoantharia*, all mesenteries apart from the *directive mesenteries* (q.v.).

lateral plane (*Bot.*). The plane passing through a flower, parallel to the surface of the earth.

lateral recording (*Acous.*). The normal form of recording on a gramophone record; the cutting stylus removes a thread from the surface of a wax blank, the modulation being represented by a lateral, i.e. radial, deviation as the perfect spiral is traversed. Cf. *contour recording*.

lateral shift (*Geol.*). The displacement of outcrops in a horizontal sense, as a consequence of faulting. Cf. *throw*.

lateral traverse (*Eng.*). The longitudinal play given to locomotive trailing axles to permit of taking sharp curves.

latera'lis (*Zool.*). In Fish, a branch of the tenth cranial nerve, which innervates the lateral line.

later'igrade (*Zool.*). Moving sideways, as some Crabs.

lat'erite (*Geol.*). An aeolian clay formed under tropical climatic conditions by the weathering of igneous rocks, usually of basic composition. Consists chiefly of hydroxides of iron and aluminium, grading through increase of the latter into bauxite.

laterit'ious (*Bot.*). Brick-red.

lateritisation (*Geol.*). The process whereby rocks are converted into laterite, the details being imperfectly understood. Essentially, the process involves the abstraction of silica from the silicates. See **laterite.**

laterocra'nium (*Zool.*). In Insects, the side of the head, comprising the genae and postgenae.

laterosphe'noid (*Zool.*). The so-called 'alisphenoid' of Fish, Reptiles, and Birds (representing an ossification of the wall of the chondrocranium), as distinct from the alisphenoid of Mammals (developed from the splanchnocranium).

la'tex (*Bot.*). A milky fluid, present in many plants, usually white, sometimes yellow or reddish; it consists of a mixture of substances, proteins, gums, carbohydrates, etc.—(*Rubber*) A milky viscous fluid extruded when rubber trees (e.g. *Hevea Brasiliensis*) are tapped. It is a colloidal system of caoutchouc dispersed in an aqueous medium, sp. gr. 0.99, which forms rubber by coagulation. The coagulation of latex can be prevented by the addition of ammonia or formaldehyde. Latex may be vulcanised directly, the product being known as *vultex*.

latex (*Paper*). A solution of rubber sometimes used to increase the strength and durability of paper.

latex cell (*Bot.*). A simple or branched cell, derived by the enlargement of a single cell, and containing latex.

latex duct (*Bot.*). An elongated, branched, aseptate system of anastomosing hyphae present in some of the larger agarics, and containing latex.

latex tube (*Bot.*). A general term for *latex cells* and *latex vessels*.

latex vessel (*Bot.*). A simple or branched tube, usually anastomosing with other similar tubes, derived by the enlargement and union of a chain of cells, and containing latex.

lath (*Build.*). See **lathing.**

lath (*Min.*). A term commonly applied to a lath-like crystal.

lath and half laths (*Build.*). Wood laths $1 \times \frac{1}{2}$ in. in section.

lathe (*Eng.*). A machine tool for producing cylindrical work, facing, boring, and screw-cutting. It consists generally of a bed carrying a head-stock and tail-stock, by which the work is driven and supported, and a saddle carrying the slide rest, by which the tool is held and traversed.

lathe bed (*Eng.*). That part of a lathe forming the support for the head-stock, tail-stock, and carriage. It consists of a rigid cast box-section girder, supported on legs, its upper face being planed and scraped to provide true working surfaces, or 'ways.'

lathe carrier (*Eng.*). A clamp consisting of a shank which is formed into an eye at one end and provided with a set screw. It is attached to work supported between centres and driven by the engagement of the driver-plate pin with the shank or 'tail' of the carrier, which may be straight or bent.

lathe tools (*Eng.*). Turning tools with edges of various shape (round-nosed, side, etc.), and cutting angles, varying with the material worked on, formed by giving clearance to the front of the cutting edge and rake to the top of the tool. See **finishing tool, knife tool, roughing tool, side tool.**

lathe work (*Eng.*). Any work ordinarily performed in the lathe, such as all classes of turning, boring, and screw-cutting.

lathing, laths (*Build.*). Oak or fir strips, usually 3 or 4 ft. long, or steel meshing, used to cover surfaces to provide a basis for plaster.

lath'yrism (*Med.*). A disease characterised by stiffness and paralysis of the legs, due to poisoning with certain kinds of chick-pea.

laticif′erous duct (*Bot.*). A cavity in which latex is secreted.

latiplan′tar (*Zool.*). Having the posterior tarsal surface rounded.

latiros′tral (*Zool.*). Having a broad beak.

latisep′tate (*Bot.*). Having wide septa or dissepiments.

latitude and **longitude** (*Astron.*). (1) CELESTIAL. Spherical co-ordinates referred to the ecliptic and its poles. **Celestial latitude** is the angular distance of a body from the ecliptic. **Celestial longitude** is the arc of the ecliptic intercepted between the latitude circle and the First Point of Aries, and is measured positively eastwards from 0° to 360°.—(*Geog.*) (2) TERRESTRIAL. Spherical co-ordinates referred to the earth's equator and its poles; used to specify a point on the earth's surface. **Terrestrial latitude.** The angular elevation of the celestial pole above a plane tangential to the earth at a given place is known as the *geographical latitude*. The *geocentric latitude* is the angle made with the equatorial plane by the radius of the earth through the given point. The latter is slightly less than the former owing to the oblate form of the earth. **Terrestrial longitude** is the arc of the equator between the meridian through the point and the meridian at Greenwich; generally measured from 0° to 180° east or west of Greenwich.

latitude (*Photog.*). The range of exposure permissible, or range of density usefully obtainable, in a photographic emulsion. The range of exposure obtainable with the linear portion of the gamma curve of an emulsion.

latitude (*Surv.*). (1) The projected length of a survey line upon the reference meridian.—(2) See **latitude (terrestrial)** above.

latitude, libration in (*Astron.*). A phenomenon by which, owing to the moon's axis of rotation not being perpendicular to her orbital plane, an observer on the earth sees alternately more of the north and south regions of the lunar surface, and so, in a complete period, more than a hemisphere.

latitude, variation of (*Astron.*). A phenomenon, first detected in 1888 by Küstner, who showed that, owing to the spheroidal form and non-rigid consistency of the earth, its axis of rotation does not remain constant in direction but varies in a regular manner about a mean position, so that the latitude of a place also undergoes periodic variations.

latitudinal furrow (*Zool.*). In a segmenting ovum, a constriction encircling the ovum above or below, and parallel to, the equatorial furrow.

Latour alternator (*Radio*). See **Bethenod-Latour alternator.**

Latour-Winter-Eichberg motor (*Elec. Eng.*). A form of compensated repulsion motor sometimes used for traction work.

latterkin (*Plumb.*). A piece of hardwood suitably shaped at one end so that it may be used for clearing the grooves in cames.

lattice (*Bot.*). A weakly developed sieve plate on a lateral wall of a sieve tube, having vaguely defined edges and very minute pores.

lattice (*Chem.*). See **space-lattice.**

lattice (*Civ. Eng.*). Any structure formed of diagonal crossing bars.

lattice bars (*Struct.*). The diagonal bracing of struts and ties in an *open frame girder* or *lattice girder* (qq.v.).

lattice bridge (*Struct.*). A bridge formed of lattice girders.

lattice coil (*Elec. Eng.*). A form of coil used for the armature winding of electric machines, which is arranged so that the end connexions cross over one another in a regular pattern, giving a lattice appearance.—(*Radio*) An inductance coil in which the turns are wound so as to cross each other obliquely, to reduce the self-capacity. See **honeycomb coil.**

lattice diagram (*Elec. Eng.*). A diagram for simplifying the calculation of travelling waves on a transmission line when there are a large number of successive reflections.

lattice filter (*Elec. Comm.*). An electric wave filter constructed from lattice networks.

lattice girder (*Struct.*). A girder formed of upper and lower horizontal members connected by an open web of diagonal crossing bars; used in structures such as bridges and large cranes.

lattice network (*Elec. Comm.*). A filter network formed by two pairs of identical arms on opposite sides of a square, the input terminals being across one diagonal and the output terminals across the other.

lattice winding (*Elec. Eng.*). A winding, made up of lattice coils, for electric machines; always used for d.c. machines and frequently for a.c. machines.

lattice window (*Build.*). A window in which diamond-shaped panes are supported in a leaden frame consisting of diagonally intersecting cames, the longer axes of the diamonds being vertical.

laudanum (*Med.*). Tincture of opium.

laughing gas (*Chem.*). See **nitrous oxide.**

laumontite, lō′— (*Min.*). A zeolite consisting essentially of hydrated silicate of calcium and aluminium, crystallising in the monoclinic system; occurs in cavities in igneous rocks and in veins in schists and slates.

launder (*Mining*). A wooden trough for conveying water or crushed ore and water (pulp), in a mill or concentration works.

laur′dalite or **lardalite** (*Geol.*). A coarse-grained soda-syenite from South Norway; it resembles laurvikite but contains nepheline (elaeolite) as an essential constituent.

Laurent acid, lō-rahng′ (*Chem.*). See **L-acid.**

Laurentian Granites (*Geol.*). The oldest granitic intrusives in the Canadian Shield, of post-Keewatin, pre-Timiskaming age; they occur as batholiths elongated N.E. to S.W., and consist of granite, granite-gneiss, and pegmatites worked as a source of potash. See also **Algoman Granites.**

Laurer-Stieda (or **Laurer's**) **canal,** low′rer shtē′da (*Zool.*). In *Trematoda*, a canal leading away from the junction of the oviduct and the vitelline duct; it opens either to the exterior of the body dorsally or into the alimentary canal, or ends blindly.

laur′ionite (*Min.*). Oxychloride of lead, exceedingly rare, found in ancient lead slags at Laurium in Greece.

laurite (*Min.*). An iron-black sulphide of ruthenium and osmium occurring as small cubic crystals (octahedra), associated with platinum, in Borneo and Oregon.

laur′vikite or **larvikite** (*Geol.*). A soda-syenite from S. Norway, very popular as an ornamental stone when cut and polished; widely used for facing buildings, the distinctive feature being a fine blue colour, produced by schiller structure in the anorthoclase feldspars.

laut′arite (*Min.*). Monoclinic iodate of calcium, occurring rarely in caliche in Peru.

lava (*Geol.*). The molten rock material that issues from a volcanic vent or fissure and consolidates on the surface of the ground (*subaerial lava*), or on the floor of the sea (*submarine lava*). Chemically, lava varies widely in composition; it may be in the condition of glass, or a holocrystalline rock. See **basalt, obsidian, pillow structure, pumice;** also **volcano.**

lava flows (*Geol.*). See **extrusive rocks.**

lavage, lav-azh′ (*Med.*). Irrigation or washing-out of a cavity, such as the stomach or the bowel; e.g. gastric *lavage*.

lavender print (*Cinema.*). The specially dyed print, of low contrast, which is the first print made after editing the negative. It is suitable for making a duplicate negative, should the original negative become defective or be destroyed.

law. A scientific law is a rule or generalisation which describes specified natural phenomena within the limits of experimental observation. An apparent exception to a law tests the validity of the law under the specified conditions. A true scientific law admits of no exception. A law is of no scientific value unless it can be related to other laws comprehending relevant phenomena.

law calf (*Bind.*). Calf leather with a rough surface and light in colour; used for account-book bindings, etc.

law of conservation of matter (*Chem.*). Matter is neither created nor destroyed during any physical or chemical change.

law of constant (or **definite**) **proportions** (*Chem.*) Every pure substance always contains the same elements combined in the same proportions by weight.

law of Dulong and Petit, dü-lon^{g}′, pt-ĕ′ (*Chem.*). The atomic heats of solid elements are constant and approximately equal to 6·3. Certain elements of low atomic weight and high melting-point have, however, much lower atomic heats at ordinary temperatures.

law of equivalent (or **reciprocal**) **proportions** (*Chem.*). The proportions in which two elements separately combine with the same weight of a third element are also the proportions in which the first two elements combine together.

law of Guldberg and Waage, goold′berg, vah′ge (*Chem.*). See **law of mass action.**

law of isomorphism (*Chem.*). See **Mitscherlich's law of isomorphism.**

law of mass action (*Chem.*). The velocity of a homogeneous chemical reaction is proportional to the concentrations of the reacting substances.

law of multiple proportions (*Chem.*). When two elements combine to form more than one compound, the amounts of one of them which combine with a fixed amount of the other exhibit a simple multiple relation.

law of partial pressures (*Chem.*). See **Dalton's law of partial pressures.**

law of photochemical equivalence (*Chem.*). See **Einstein's law of photochemical equivalence.**

law of rational indices (*Crystal.*). A fundamental law of crystallography which states, in the simplest terms, that in any natural crystal the indices may be expressed as small whole numbers.

law of reciprocal proportions (*Chem.*). See **law of equivalent proportions.**

law of volumes (*Chem.*). See **Gay-Lussac's law of volumes.**

laws of electrolysis (*Chem.*). See **Faraday's laws of electrolysis.**

lawn (*Textiles*). A fine plain cloth, originally made from linen. Some light-weight cotton fabrics of good quality are now thus named.

Lawrence Smith method (*Chem.*). A method used in chemical analysis for the estimation of alkali metals, particularly in the analysis of glass and silicates.

lax (*Bot.*). Arranged loosely.

lax′ator (*Zool.*). A muscle which relaxes or loosens a part of the body without changing the relative position or direction of the axis of the part. Cf. *tensor.*

lay (*Cables*). The axial length of one turn of the helix formed by the core (in a telephone cable) or strand of a conductor (in a power cable). See also **lay ratio.**

lay (*Typog.*). The position of print on a sheet of paper. See **lay-out.**

lay-away pits (*Tanning*). See **layers.**

lay cords (*Bind.*). Cords with which a book is tied, to prevent the covers from warping whilst drying.

lay edge (*Print.*). The edge of a sheet of paper which is laid against the fixed guides in a printing or folding machine.

lay light (*Build.*). A window or sash, fixed horizontally in a ceiling, to admit light to a room.

lay marks (*Print.*). The marks to which sheets are laid in printing to ensure uniformity of position.

lay-out (*Typog.*). (1) The general appearance of a printed page.—(2) The art and practice of disposing display (e.g. advertising) matter to the best advantage.

lay panel (*Join.*). A long panel of small height formed in a panelled wall above a doorway, or all round the room immediately below the cornice.

lay ratio (*Cables*). The ratio of the *lay* (q.v.) to the mean diameter of the helix.

lay shaft (*Eng.*). An auxiliary geared shaft; as the secondary shaft running alongside the mainshaft of an automobile gear-box, to and from which the drive is transferred by gear-wheels of varying ratio.

layer (*Bot.*). A stratum of vegetation, as the shrubs in a wood.

layer (*Build.*). (1) A course in a wall.—(2) A bed of mortar between courses.

layers (*Tanning*). Pits containing tan liquor, in which heavy hides are laid out with a layer of ground tanning material separating them, after passing through the handlers. Also called LAY-AWAY PITS. See **handlers.**

layer board (*Build.*). See **lear board.**

layer, dielectric (*Cables*). Maxwell showed that absorption phenomena are exhibited by a model composed of the series combination of two leaky dielectrics of unequal time-constants.

layered map (*Surv.*). A map on which relief is represented by the use of contours, the areas between adjacent contours being coloured according to a definite system.

layering (*Bot.*). (1) See **stratification.**—(2) A method of artificial propagation in which stems are pegged down and covered with soil until they root, when they can be detached from the parent plant.

laying (*Plast.*). The first coat in two-coat work.

laying-in (*Join.*). The operation of forming a *laid-in moulding* (q.v.).

laying-off (*Ship Constr.*). The process of transferring the design form to full scale, for the purpose of 'fairing' and ultimately of fabrication of details.

laying-out (*Eng.*). The marking-out of material, especially plate work, full size, for cutting and drilling.

laying-over seams (*Furs*). The operation of lapping over the edges of two skins in order to obtain greater length or breadth.

laying press (*Bind.*). See **lying press.**

laying trowel (*Plast.*). A tool similar to the *hand-float* (q.v.) but made of steel.

laz′ulite (*Min.*). A deep sky-blue, strongly pleochroic mineral, crystallising in the monoclinic system. In composition essentially a hydrated phosphate of aluminium, magnesium, and iron, with a little calcium.

laz′urite (*Min.*). An ultramarine-blue mineral occurring in cubic crystals or shapeless masses; it consists of silicate of sodium and aluminium with some sulphur. A constituent of lapis-lazuli.

L.B. (*Teleph.*). Abbrev. for *local battery* (q.v.).

lb. Abbrev. for *pound.*—For **lb.-calorie,** see **pound-calorie.**

l.c. (*Typog.*). Abbrev. for *lower case* (q.v.).

lea (*Textiles*). A length of yarn; 80 yds. in worsted, 120 yds. in cotton. In linen, the term indicates the size of yarns; or a length of 300 yds.

leaching (*Bot.*). The removal, by percolating water, of mineral salts from the soil.

leaching (*Met.*). The extraction of a soluble metallic compound from an ore by dissolving in a solvent (frequently sulphuric acid). The metal is subsequently precipitated from the solution. Also called LIXIVIATION.

leaching or **leeching** (*Tanning*). The extraction of tannic acid from bark or other tanning material, by passing water through a series of pits (*leaches*) containing the pulverised material.

leaching cesspool (*Sewage*). A cesspool which is not watertight.

lead, led (*Met.*). Symbol, Pb. A metallic element in the fourth group of the periodic system. At. wt. 207·2, at. no. 82, valency 2 or 4, m p. 327·5° C, sp. gr. at 20° C. 11·35. Specific electrical resistivity 20·65 microhms per cm. cub. Used as the basis for the manufacture of massicot, litharge, white lead, red lead, orange lead, and lead chromes. The metal is bluish-grey, the heaviest and softest of the common metals. On account of its resistance to corrosion, extensively used for roofing, cable sheathing, and for lining apparatus in the chemical industry. Other principal uses:—in storage batteries, ammunition, foil, and as a constituent of bearing metals, solder, and type-metal. Lead can be hardened by the addition of arsenic or antimony. Lead occurs very rarely in the native form, and then appears to have been formed by fusion of some simple lead ore accidentally incorporated in lava.

lead (*Build.*). See **sheet lead.**

lead (*Plumb.*). The leaden came of a lattice window.

lead (*Surv.*). The leaden sinker secured at one end of a *lead-line* (q.v.).

leads (*Eng.*). Lengths of thin lead wire inserted between a very large journal and the bearing cap during assembly to test the clearance.

leads (*Typog.*). Thin strips of lead, of varying thickness, used to separate lines of type. Thicknesses are 1-point, 1½-point (*thin*), 2-point, and 3-point (*thick*).

lead-acid (or **lead**) **accumulator** (*Elec. Eng.*). A secondary cell consisting of lead electrodes, the positive one covered with lead dioxide, dipping into sulphuric acid solution. It yields 2 volts electromotive force, but is comparatively heavy.

lead azide (*Chem.*). PbN_6. Explosive like most azides. Sometimes used, instead of mercury fulminate, as a detonator for T.N.T.

lead burning (*Plumb.*). The process of welding together two pieces of lead, thus forming a joint without the use of solder.

lead carbonate (*Chem.*). $PbCO_3$. Occurs in nature as cerussite. At about 200° C. it decomposes into the monoxide and carbon dioxide. Readily reduced to metal by carbon monoxide.

lead carbonate, basic (*Chem.*). See **basic lead carbonate.**

lead chloride (*Chem.*). $PbCl_2$. Made by dissolving lead oxide or carbonate in hot hydrochloric acid. Crystals of lead chloride deposited on cooling.

lead chromate (*Chem.*). $PbCrO_4$. Precipitated when potassium chromate is added to the solution of a lead salt. Used as a pigment, called *chrome yellow.* The colour may be varied by varying the conditions under which the precipitation is made.

lead chromate, basic (*Chem.*). See **basic lead chromate.**

lead disilicate (*Chem.*). Obtained by fusing lead oxide and silica together. As lead frit, it is used as a ready means of incorporating lead oxide in the making of lead glazes.

lead dot (*Build.*). A lead peg or dowel used to fasten sheet-lead to the upper surface of a coping or cornice, for which purpose it is run into a mortise in the stone.

lead flare (*Cables*). See **flare (lead).**

lead-flat (*Build.*). A *flat roof* (q.v.) formed of sheet-lead laid on boarding and joists.

lead frit (*Chem.*). Also known as *lead disilicate* (q.v.).

lead glance (*Min.*). See **galena.**

lead glass (*Glass*). Glass containing lead oxide. The amount may vary from 3-4% to 50% or more in special cases. 'English Lead Crystal' used for tableware contains 33-34%.

lead grip (*Elec. Eng.*). A bonding device for providing continuity of a lead-sheathed electric cable.

lead hydroxide (*Chem.*). $Pb(OH)_2$. Dissolves in excess of alkali hydroxides to form plumbites.

lead joint (*Plumb.*). A joint formed between the spigot and the socket of successive lengths of large water-pipes by pouring molten lead into the annular space between them, or by ramming in lead wool.

lead-lights (*Build.*). *Leaded lights* (q.v.).

lead-line (*Surv.*). A line with which soundings are taken. The depth of water is indicated on the line by 'marks,' or by knots in the line, indicating fathoms; fathoms not indicated on the line (e.g. between 7 and 10) are known as *deeps* (q.v.).

lead monoxide (*Chem.*). PbO. An oxide of lead, varying in colour from pale yellow to brown depending on the method of manufacture. An intermediate product in the manufacture of red lead. Known also as LITHARGE, and under certain conditions as MASSICOT.

lead nail (*Build.*). A small copper alloy nail used for fixing sheet-lead on roofs.

lead oxychloride (*Chem.*). $PbCl_2{\cdot}PbO$. See **Cassel's yellow.**

lead paint (*Paint.*). The ordinary paint, in which the base is white lead.

lead peroxide (*Chem.*). PbO_2. A strong oxidising agent. Industrial application very limited. Present, in certain conditions, in accumulators or electrical storage batteries as a chocolate brown powder.

lead plug (*Masonry*). A cast-lead connecting-piece binding together adjacent stones in a course; formed by running molten lead into suitably cut channels in the jointing faces.

lead sulphate (*Chem.*). $PbSO_4$. Formed as a white precipitate when sulphuric acid is added to a solution of a lead salt.

lead sulphate, basic (*Chem.*). See **basic lead sulphate.**

lead sulphide (*Chem.*). Found in nature as *galena.* Formed when lead sulphate is reduced by carbon and when hydrogen sulphide is passed through a solution of a lead salt.

lead tetraethyl (*Chem.*). $Pb(C_2H_5)_4$. A colourless stable liquid, obtained by the action of a zinc or magnesium ethyl halide on lead chloride. It is used in motor spirit to increase the anti-knock rate.

lead wire (*Cables*). Used in cable joints. The lead (Pb) wire is wound round the lead flare and oil-resisting poultice, on to the lead sheath.

lead wool (*Plumb.*). A specially prepared form of lead made in fine threads; used, instead of molten lead, in making pipe joints.

lead, lēd (*Civ. Eng.*). The distance over which earthwork has at any time to be conveyed from a cutting to a place of deposit.

lead (*Elec. Eng.*). (1) A term often used to denote an electric wire or cable.—(2) See **backward shift, brush shift, forward shift.**

lead (*Rail.*). The distance from the nose of a crossing to the nose of the switch.

lead-in (*Radio*). That portion of an antenna wire which connects the indoor apparatus with the outdoor antenna system.

lead-in insulator (*Elec. Eng.*). See **bushing.**

lead screw (*Eng.*). A square or acme-thread screw running alongside the bed of a lathe, and driven through *change wheels* (q.v.) from the mandrel, for traversing the slide rest in screw cutting.

lead, slide-valve (*Eng.*). The amount by which the steam port of a steam-engine is already uncovered by the valve when the piston is at the beginning of its working stroke. See also **inside lead.**

leaded bronze (*Met.*). Copper base alloy containing 5-10% of tin and 8-20 and sometimes 30% of lead. Used for heavy-duty bearings.

leaded lights (*Build.*). A window formed of (usually) diamond-shaped panes of glass connected together by leaden cames.

leader (*Bot.*). One of the main shoots of a tree.

leader (*Cinema.*). A blank strip of film, generally white to facilitate threading and for identification purposes, attached or printed at the start of each reel of film, so that the speed of projection may be normal when the projected picture commences. Cf. *trailer.*

leader (*Mining*). A thin mineralised vein parallel to, or in continuation of, the main vein formation.

leader (*Plumb.*). See **conductor.**

leader (*Surv.*). The chainman who has charge of the forward end of a chain. He is directed into line by the follower.

leader (*Typog.*). A series of dots (...) placed at intervals to guide the eye across a table of contents, index, etc.

leader-hook (*Build.*). A device, such as a *holderbat* (q.v.), for securing a rain-water pipe to a wall.

leadhillite (*Min.*). Carbonate and sulphate of lead, so called from its occurrence with other ores of lead at Leadhills (Lanarkshire, Scotland).

leading, leading-out (*Typog.*). The process of inserting leads between lines of type matter, in order to open them out, thus presenting more white space between the printed lines.

leading axle (*Eng.*). The front axle of a locomotive.

leading current (*Elec. Eng.*). An alternating current which reaches its maximum value at an earlier instant in the cycle than the voltage which is producing it. See **angle of lead, phase-angle.**

leading edge (*Aero.*). The edge of a streamline body or aerofoil which is forward in normal motion: structurally, the member that constitutes that part of the body or aerofoil.

leading edge (*Elec. Eng.*). A term used in connexion with the brushes of electric machines. See **entering edge.**

leading-in insulator (or tube) (*Radio*). A tubular form of insulator through which the lead-in enters a building.

leading-in wire (*Radio*). The same as *lead-in.*

leading-in wires (*Illum.*). The wires conducting the current from the cap contacts of an electric filament or discharge lamp to the filament itself or to the electrodes.

leading load (*Elec. Eng.*). A reactive load on an a.c. circuit in which the current leads upon the voltage. Also called a CAPACITIVE LOAD.

leading note (*Acous.*). The note one semitone below the tonic or key note of the normal musical scale; essential in combining harmonic frequencies.

leading-out wire (*Elec. Comm.*). The flexible insulated wire which is attached to the more delicate insulated wire used for the windings of transformers, etc., and which is insufficiently robust for connecting to terminals.

leading phase (*Elec. Eng.*). (1) A term used in connexion with measuring equipment on 3-phase circuits to denote a phase whose voltage is leading upon that of one of the other phases by approximately 120°.—(2) Particularly in connexion with the two-wattmeter method of 3-phase power measurement, the phase in which the current at unity power factor leads upon the voltage applied to the meter in which that current is flowing.

leading pole horn (*Elec. Eng.*). The portion of the pole-shoe of an electric machine which is first met by a point on the armature or stator surface as the machine revolves. Hence also *leading pole tip.*

leading ramp (*Elec. Eng.*). The end of a conductor-rail at which the collector-shoe of an electric train first makes contact.

leaf (*Bot.*). An outgrowth from the stem of a plant, usually green, and largely concerned with photosynthesis and with transpiration. It consists ordinarily of a leaf base, a petiole or stalk, and a flattened lamina, which in a simple leaf is in one piece; in a compound leaf it is in two or more separate pieces. The lamina is usually conspicuously veined.

leaf (*Civ. Eng., etc.*). A term applied to an object which has a large area in relation to its thickness; e.g. one of a pair of lock-gates.

leaf (*Textiles*). (1) A heald shaft.—(2) One plate of a shedding tappet.

leaf base (*Bot.*). The base of the leaf stalk, where it joins the stem.

leaf bud (*Bot.*). A bud containing vegetative leaves only.

leaf cushion (*Bot.*). A swollen leaf base.

leaf divergence (*Bot.*). The angle at the intersection of the planes passing longitudinally through the middles of two successive leaves.

leaf fall (*Bot.*). See **fall of the leaf.**

leaf gap (*Bot.*). An interruption of the vascular tissues of a stem, beneath the insertion of a leaf.

leaf incept (*Bot.*). The earliest recognisable rudiment of a leaf.

leaf mosaic (*Bot.*). The arrangement of the leaves on a shoot or a plant in such a way that as much leaf surface as possible is exposed to light, and as little as possible is shaded by other leaves.

leaf scar (*Bot.*). The scar left on a stem at the point where a leaf has fallen off; it is commonly covered by a thin sheet of cork.

leaf sheath (*Bot.*). The base of the leaf when it is in the form of a sheath more or less surrounding the stem.

leaf trace (*Bot.*). The vascular tissue between the stele and the base of the leaf.

leaflet (*Bot.*). One separate portion of the lamina of a compound leaf.

leafy raceme (*Bot.*). A raceme in which the bracts differ little, or not at all, from the ordinary foliage leaves of the plant.

leak (*Radio*). A high resistance, of the order of megohms. Frequently used as a discharging path for a condenser. See **grid leak.**

leakage coefficient (*Elec. Eng.*). The ratio of the total flux in the magnetic circuit of an electric machine or transformer to the useful flux which actually links with the armature or secondary winding. Also called LEAKAGE FACTOR.

leakage conductance (*Elec. Eng.*). See **leakance.**

leakage current (*Elec. Eng.*). Current flowing from one pole of an electric system to earth, or to another pole, through the insulation. Usually confined to currents of a small value.

leakage factor (*Elec. Eng.*). See **leakage coefficient.**

leakage flux (*Elec. Eng.*). That part of the total flux of the magnetic circuit of an electric machine or transformer which does not link with the armature or secondary winding. Also called MAGNETIC LEAKAGE.

leakage indicator (*Elec. Eng.*). An instrument for measuring or detecting a leakage of current from an electric system to earth. Also called an EARTH DETECTOR.

leakage protective system (*Elec. Eng.*). A protective system which operates as a result of leakage of current from electrical apparatus to earth.

leakage reactance (*Elec. Eng.*). The reactance of a circuit arising from the interlinkages between it and the leakage flux associated with it.

leakance (*Elec. Eng.*). The reciprocal of insulation resistance. Also called LEAKAGE CONDUCTANCE.

leaky grid rectification (or **detection**) (*Radio*). A system of grid rectification in which the signal is applied to the grid of a thermionic tube via a series condenser shunted by a grid leak.

lean lime (*Build.*). *Hydraulic lime* (q.v.).

lean mixture (*I.C. Engs.*). A fuel-air mixture which is weaker than desired, or weaker than the chemically correct mixture.

Lean's dial (*Surv.*). A form of compass adapted for taking inclined sights; it consists of a pair of sighting vanes, or a telescope capable of rotation about a horizontal axis and moving over a fixed vertical graduated arc.

lean-to roof (*Build.*). A roof, having only one slope, spanning the distance between two walls one of which is higher than the other.

leaning thread (*Eng.*). See **buttress screw-thread.**

leap years (*Astron.*). Those years in which an extra day, February 29, is added to the civil calendar to allow for the fractional part of a tropical year of 365·2422 days. Since the Gregorian reform of the Julian calendar, the leap years are those whose number is divisible by 4, except centennial years unless these are divisible by 400.

leaping weir (*Civ. Eng.*). A special arrangement whereby flood flows may be diverted from a channel into which normal flows would ordinarily pass, the water having to go over a weir set at such a height that flood flows leap beyond the channel to an overflow. Also called a SEPARATING WEIR.

lear (*Glass*). See **lehr.**

lear board (*Build.*). A board carrying a lead gutter. Also called a LAYER BOARD.

lease rods (*Weaving*). Two rods across a warp, used to separate the threads and to keep them in their correct position.

leasing (*Weaving*). The process of dividing the threads of a warp by a band or rods. The threads are placed end-and-end (1-and-1) or 2-and-2, as required.

least action, principle of (*Phys.*). The path described between two points A and B by a particle under the influence of forces is such that the line integral of the velocity v is a minimum. That is:

$$\int_{A}^{B} v\, ds = \text{minimum},$$

where ds is an element of path.

least count (*Surv.*). The lowest fractional part to which it is possible to read with a vernier.

least distance of distinct vision (*Optics*). For a normal eye it is assumed that nothing is gained by bringing an object to be inspected nearer than 25 cm., owing to the strain imposed on the ciliary muscles if the eye attempts to focus for a shorter distance.

least squares, law of (*Maths.*). The law which postulates that the best value to take from a set of observations is that which makes the sum of the squares of the deviations from this value a minimum.

least time, principle of (*Phys.*). See **Fermat's principle of least time.**

leat (*Mining*). A small stream of water.

leather. An animal skin or hide which, by tanning or tawing and subsequent dressing, has been rendered imputrescible and suitable for special purposes. The skins of numerous reptiles, as well as shark and fish skins, are converted into leather on a large scale.

leather hollows (*Eng.*). Strips of leather used by pattern-makers to form the fillets in wood patterning.

leather yellow (*Chem.*). *Phosphine* (2, q.v.).

Leatheroid (*Diel.*). A proprietary *vulcanised fibre* (q.v.).

leaving edge (*Elec. Eng.*). The edge of the brush of an electric machine which is last met during revolution by a point on the commutator or slip ring. Also called HEEL, BACK, TRAILING EDGE.

Leber's disease, lā'ber (*Med.*). Hereditary optic atrophy; hereditary optic neuritis. A hereditary condition, transmitted through an unaffected female to males, in which there is gradual loss of sight due to an affection of the optic nerve behind the eyeball.

Le-Blanc phase advancer, le blahn^{g} (*Elec. Eng.*). A phase advancer consisting of a d.c. armature with three sets of brushes per pole pair on the commutator; the brushes are connected to the three slip rings of the induction motor, and the advancer is driven from the motor shaft at an appropriate speed, thereby causing it to take a leading current and improve the motor power-factor; the armature is usually arranged in a stator frame, although the latter has no windings.

Leblanc process, le-blahn^{g} (*Chem.*). A process formerly used on a large scale for the manufacture of sodium carbonate and intermediate products from common salt.

Le Chatelier-Braun principle, shat-lyā brown (*Chem.*). If any change of conditions is imposed on a system at equilibrium, then the system will alter in such a way as to counteract the imposed change. This principle is of extremely wide application.

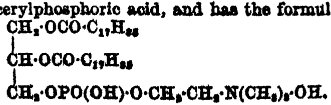
lechatel'ierite (*Min.*). A name sometimes applied to naturally fused amorphous silica, such as that which occurs as fulgurites.

lechosos opal, lek-ō'— (*Min.*). A variety of precious opal exhibiting a deep-green play of colour.

lech'riodont (*Zool.*). Having the teeth borne by the pterygoid and those borne by the vomer forming a transverse row.

lecith-, lecitho- (Greek *lekithos*, yolk of egg). A prefix used in the construction of compound terms; e.g. *lecithoblast* (q.v.).

lecithin, les'i-thin (*Chem.*). A phosphatide found in the yolk of the egg and in the brain. It may be described as the choline ester of distearyl-glycerylphosphoric acid, and has the formula:



$$\begin{array}{l} CH_2{\cdot}OCO{\cdot}C_{17}H_{35} \\ | \\ CH{\cdot}OCO{\cdot}C_{17}H_{35} \\ | \\ CH_2{\cdot}OPO(OH){\cdot}O{\cdot}CH_2{\cdot}CH_2{\cdot}N(CH_3)_3{\cdot}OH. \end{array}$$

Other lecithins contain, besides stearic acid, palmitic or oleic acid. Lecithin is an important constituent of protoplasm.

lec'ithoblast (*Zool.*). The blastomeres of a segmenting ovum which contain yolk.

lec'ithocoel, —sēl (*Zool.*). The segmentation cavity of a holoblastic egg.

lecithoproteins (*Chem.*). Compounds formed from proteins and lecithin.

Leclanché cell, le-klahn^{g}-shā (*Elec. Eng.*). A primary cell consisting of a carbon cathode covered with manganese dioxide and a zinc anode dipping into ammonium chloride solution, the manganese dioxide being retained in a porous pot. See also **agglomerate Leclanché cell.**

Ledbury Shales (*Geol.*). A local name for the 300 ft. of olive-green and purple shales occurring in Herefordshire, at the level of the Temeside Shales of Downtonian age.

ledge (*Join.*). One of the battens across the back of a batten door.

ledged-and-braced door (*Join.*). A door similar to a batten door, but framed diagonally with braces across the back, between the battens.

ledged door (*Join.*). A *batten door* (q.v.).

ledgement (*Build.*). A horizontal line of mouldings, or a string-course.

ledger (*Build.*). A horizontal pole or member, lashed or otherwise fastened across the standards in a scaffold.

ledger board (*Carp*) See **ribbon strip.**

leeches (*Vet.*). See **bursattee.**

leer (*Glass*). See **lehr.**

left-hand rule (*Elec. Eng.*). See **Fleming's rule.**

left-hand thread (*Eng.*). A screw-thread cut in the opposite direction to the normal right-hand. Viewed in elevation, the external thread is inclined upwards from right to left. Used when a normal thread would tend to unscrew.

left-hand tools (*Eng.*). Lathe side-tools with the cutting edge on the right, thus cutting from left to right.

left twist (*Woollen*). Yarn twist which runs to the left; obtained by driving the spindle by means of a crossed band, so that it turns in an anti-clockwise direction. See **cross band.**

leg (*Elec. Comm.*). A side of a loop circuit, i.e. either the *go* or *return* of an electrical circuit.

leg (*Instruments*). One of the limbs of a pair of compasses.

legal ohm (*Elec. Eng.*). A unit of resistance adopted by the International Congress of Electricians at Paris in 1884 but never given legal sanction. It is equal to the resistance of a column of mercury 106 cm. long and 1 sq. mm. in cross-section at 0° C., i.e. equal to 0·99718 of the international ohm.

legend line (*Typog.*). The line of descriptive matter set below an illustration; a caption.

leg'ume (*Bot.*). A fruit formed from a single carpel, splitting along the dorsal and the ventral sutures, and usually containing a row of seeds borne on the inner side of the ventral suture. A pea pod is a familiar example.

lehr, leer, or **lear** (*Glass, etc.*). An enclosed oven or furnace used for annealing, or other form of heat-treatment, particularly used in glass manufacture. It is a kind of tunnel down which the glass, hot from the forming process, is sent to cool slowly, so that strain is removed, and cooling takes place without additional strain being introduced. Lehrs may be of the open type (in which the flame comes in contact with the ware), or of the muffle type.

Leicester wool (*Textiles*). The best quality of the English lustre wools, staple 10 ins.; used for lining fabrics.

Leidig's cell, lī'dig (*Zool.*). A type of connective tissue cell, occurring in *Crustacea*, consisting of a central cytoplasmic mass, with an eccentric nucleus, and a number of radiating branched processes arising from the periphery.

Leighton Buzzard Silver Sand (*Geol.*). Clean white sand used for refractory moulding purposes; it occurs at the top of the Woburn Sands of Lower Cretaceous age, and is named from the locality where it is exploited in Bedfordshire, England.

leimtype, līm'— (*Photog.*). A half-tone block process involving the use of an exposed bichromated film, which is attached directly to the block before development.

Leintwardine Flags, lĕnt'— (*Geol.*). Strata of Lower Ludlow age, flags being developed in the higher part of the group. At Leintwardine they contain a rich star-fish bed.

leiomyo'ma (*Med.*). A tumour composed of unstriped muscle fibres.

leiospo'rous (*Bot.*). Having smooth spores.

leishmani'asis, leishmanio'sis (*Med.*). A term applied to a group of diseases caused by infection with protozoal parasites of the genus *Leishmania*. See also **kala-azar.**

leizure (*Textiles*). A term used in the silk trade for *selvedge*.

lemma (*Bot.*). A glume subtending a flower of a grass.

lemnis'cus (*Zool.*). In *Acanthocephala*, one of a pair of sac-like organs situated at the base of the proboscis and containing fat globules.

lemon chrome (*Paint.*). A mixture of lead chrome and lead sulphate, forming a pale-yellow pigment.

lemon yellow (*Paint.*). A mixture of chromic acid and barium ground in water or oil to form a yellow pigment.

Lemstrom machine (*Elec. Eng.*). An electrostatic generator consisting of concentric cylinders of insulating material revolving in opposite directions and carrying strips of tin foil for collecting the charge.

Lenard rays, lā'nart (*Phys.*). Cathode rays which pass into the atmosphere through a thin foil window sealed into the envelope. See **Lenard tube.**

Lenard tube (*Phys.*). A cathode ray tube provided with a very thin aluminium window, through which the cathode rays can penetrate into the air. By means of such tubes it has been possible to investigate the absorption and scattering of electrons by matter.

length of lay (*Cables*). See **lay.**

lengthening bar (*Instruments*). An extension piece which may be fitted to the leg of a pair of compasses in order to increase its length and so enable an arc of larger radius to be drawn.

lengthening rod (*Civ. Eng.*). A rod with a male thread at one end and a female thread at the other, capable of being used to extend the length of shank carrying a boring piece at its lower end.

Lenham Beds (*Geol.*). Deposits of sand and gravel named from Lenham in Kent, where they rest at an elevation of about 650 ft. O.D. on the Chalk. They were deposited in a gulf of the Diestian Sea that occupied the London Basin in early Pliocene times.

lenit'ic fauna (*Ecol.*). Animals living in still waters such as lakes and ponds.

leno (*Textiles*). A fabric with an openwork or an embroidered effect, produced by cross-weaving; fabrics of this character that are of regular texture are usually termed *gauze* (q.v.).

leno brocade (*Textiles*). A brocade cotton, or cotton and rayon cloth, produced by a combination of ordinary and cross-weaving; used for dress and furnishing purposes.

lens (*Light*). (Latin *lens*, a lentil.) A portion of a homogeneous transparent medium bounded by spherical surfaces. Each of these surfaces may be convex, concave, or plane. If in passing through the lens a beam of light becomes more convergent or less divergent the lens is said to be *convergent* or *convex*. If the opposite happens, the lens is said to be *divergent* or *concave*. See **lens formula, image, thick lens, focal length, chromatic aberration, spherical aberration.**

lens (*Zool.*). In a compound eye, a modified portion of the cornea lying in front of each visual element: in a simple eye, a lens-shaped mass of transparent connective tissue which is situated between the cornea and the retina, and serves to focus the rays of light on to the latter. See also **crystalline lens.**

lens barrel (*Photog.*). The metal tube in which one or more lenses are mounted.

lens cap (*Photog.*). A temporary light-tight protective covering for the external end of a camera lens; removed during exposure and focusing; it protects the lens when the camera is not in use.

lens disc (*Television*). A rotating disc having a series of lenses arranged around the periphery, used in some forms of mechanical scanning. The light is projected through the lenses in a direction parallel to the axis of the disc.

lens drum (*Television*) A device similar to a lens disc, except that the lenses are arranged on the surface of a rotating drum, the light being projected radially.

lens formula (*Light*). The equation giving the relation between the image and object distances, *v* and *u*, and the focal length *f* of a lens:

$$\frac{1}{f}=\frac{1}{v}-\frac{1}{u}.$$

See **convention of signs** for the rule for applying the correct signs to *f*, *v*, and *u*.

lens grinding (*Glass*). The process of grinding pieces of flat sheet-glass (or pressed blanks) to the correct form of the lens. Cast-iron 'tools' of the correct curvature, supplied with a slurry of abrasive and water, are used.

lens hood (*Photog.*). A funnel for fixing in front of the lens, in order to exclude stray light from strong sources not in the camera angle.

lens mount (or **mounting**) (*Photog.*). The metal unit in which the lens of a camera is fixed, incorporating the focusing and stop adjustments, the whole being detachable from the rest of the camera.

len′ticel (*Bot.*). A tiny pore in the periderm, which is packed with loose corky cells and allows gaseous diffusion to occur between the interior of the plant and the atmosphere.

lenticle (*Geol.*). A mass of lens-like form. The term may have reference to masses of clay in sand, or vice versa, and, in metamorphic rocks, to enclosures of one rock type in another.

lentico′nus (*Med.*). Abnormal curvature of the lens of the eye, in which the surface becomes conical instead of spherical.

lentic′ular (*Bot., Zool.*). Shaped like a double convex lens.—(*Min.*) Said of a mineral or rock of this particular shape, embedded in a matrix of a different kind.

lenticular bob (*Horol.*). A pendulum bob whose cross-section corresponds to that of a double convex lens; the usual form of bob for household clocks.

lenticular girder bridge (*Struct.*). A type of girder composed of an arch whose thrust is taken by a suspension system hanging below it, the anchorages of the latter system being provided by the arch thrust.

lenticulation (*Photog.*). The embossing of a series of minute lenses on the base carrying sensitive emulsion, for additive colour photography.

lenti′go (*Med.*). Freckles.

Lentz valve gear (*Eng.*). A locomotive valve gear in which the steam is admitted and exhausted through two pairs of *poppet valves* (q.v.), spring-controlled and operated from a camshaft rotating at engine speed.

Lenz's law (*Elec. Eng.*). A fundamental law stating that the direction of currents induced in a circuit as a result of a change in the interlinkages between the circuit and a magnetic field is such as to oppose the change of interlinkages.

Leo (*Astron.*). Lion. The fifth sign of the *Zodiac* (q.v.).

Le′onids (*Astron.*). A swarm of meteors whose orbit round the sun is crossed by the earth's orbit at a point corresponding to about November 14, when a display of more than average numbers is to be expected every three years; the radiant point is in the constellation Leo.

leonti′asis os′sea (*Med.*). A rare condition characterised by diffuse hypertrophy of the bones of the skull.

leopard (*Furs*). The dressed skin of the panther or leopard; the ground is a pale or reddish buff marked with dark-brown or black rosettes.

Lepel discharger (*Radio*). A quenched-spark discharger used in radio systems.

lepido- (Greek *lepis*, gen. *lepidos*, a scale). A prefix used in the construction of compound terms; e.g. *lepidotrichia* (q.v.).

lepidocro′cite (*Min.*). An orthorhombic hydrous oxide of iron ($Fe_2O_3\,H_2O$), occurring as scaly blood-red crystals, associated with limonite, in iron ores.

lep′idolite (*Min.*). See **lithia-mica.**

lepidomelane′ (*Min.*). A variety of biotite, rich in iron, occurring commonly in igneous rocks.

Lepidop′tera (*Zool.*). An order of *Endopterygota*, having two pairs of large and nearly equal wings densely clothed in scales; the mouth-parts are suctorial, the mandibles being absent and the maxillae forming a tubular proboscis; the larva or caterpillar is active and herbivorous, with biting mouth-parts. Butterflies and Moths.

lep′idote (*Bot.*). Said of a surface which bears scale-like hairs.

lepidote (*Zool.*). Having a coating of minute scales, as the wings of a Butterfly.

lepidotrichia, —trik′i-a (*Zool.*). Jointed, branched, bony dermotrichia, occurring in Fish with a bony skeleton; believed to have been derived from scales. Cf. *ceratotrichia.*

lepospon′dylous (*Zool.*). Said of vertebral centra in which there is a skeletal ring constricting the notochord in the intervertebral region, with an expansion between each pair of adjacent centra.

leprar′ioid, lep′rose (*Bot.*). Having a whitish, mealy, or scurfy surface.

lepro′ma (*Med.*). A leprous swelling or tumour.

leprosy (*Med.*). A chronic infection with the *Bacillus leprae*, characterised by the appearance of nodules on the skin and mucous membranes, and by neuritis.

lepto- (Greek *leptos*, slender). A prefix used in the construction of compound terms; e.g. *leptodactylous* (q.v.).

leptocen′tric vascular bundle (*Bot.*). A concentric vascular bundle, in which a central strand of phloem is surrounded by xylem.

leptoceph′alus (*Zool.*). The larval form of the family *Anguillidae* (Eels), a ribbon-shaped transparent animal, with a slender head.

leptocer'cal, leptocer'cous (*Zool.*). Having a long slender tail.

leptodac'tylous (*Zool.*). Having slender digits.

leptoder'matous (*Zool.*). Thin-skinned.

leptoder'mous (*Bot.*). Having a thin wall; said especially of capsules of *Bryophyta* which are soft.

leptome (*Bot.*). The conducting elements of the phloem.

leptomedu'sae (*Zool.*). The medusoid persons of the members of the order *Calyptoblastea* (q.v.), which may possess otocysts and ocelli, and in which the gonads are situated on the radial canals.

leptomenin'ges (*Anat.*). The two innermost membranes—the arachnoid and the pia mater—investing the brain and the spinal cord.

leptomeningi'tis (*Med.*). Inflammation of the leptomeninges.

leptone'ma (*Cyt.*). See **leptotene.**

leptosporan'giate (*Bot.*). Said of ferns in which the sporangium originates from a single cell.

Leptos'traca (*Zool.*). See **Phyllocarida.**

lep'totene (*Cyt.*). The first stage of meiotic prophase, in which the chromatin thread acquires definite polarity.

leptus (*Zool.*). A larval form of *Acarina*, having three pairs of legs.

Leroux formation, le-roo' (*Geol.*). Continental beds, of varied type (largely marls and sandstones), and of Triassic age, occurring in Arizona; includes one of the famous fossil forests consisting of silicified tree trunks, associated with reptilian remains. Equivalent to the Lower Dolores beds of Colorado.

Ler'wick Series (*Geol.*). Grey micaceous and pebbly sandstones, occurring in the Middle Old Red Sandstone of the Shetland Isles, and equivalent to some part of the Caithness Flagstone Group of the mainland.

lesion (*Med.*). Any wound or morbid change anywhere in the body.

leste, les'tā (*Meteor.*). A dry south wind blowing in Madeira and N. Africa in front of a depression.

let-in (*Carp., etc.*). Said of a connexion between two pieces in which one is sunk into the other.

le'thal (*Biol.*). Causing death; as any factor of the environment, normal or abnormal, the presence of which is fatal to an organism; or any hereditary factor fatal to an embryo, or tending to retard development, especially of the gametes and zygotes.

lethargic encephalitis (*Med.*). See **epidemic encephalitis and Von Economo's disease.**

letterpress (*Print.*). (1) A term applied to printing from type or block surfaces, as distinct from lithography, intaglio, etc. See **printing.**—(2) The reading matter in a book, apart from illustrations, etc.

letterpress paper (*Paper*). Paper manufactured for the various processes of letterpress printing.

letting-down (*Eng.*). The process of tempering hardened steel by heating until the desired colour is reached and then quenching.

letting-in (*Furs*). The operation of cutting the edges of furs, to permit of joining them. See **laying-over seams.**

***l*-leucine** (*Chem.*). $(CH_3)_2CH \cdot CH_2 \cdot CH(NH_2)COOH$, *α*-amino-*iso*caproic acid, colourless flakes, m.p. 270° C., formed by the decomposition of albuminous substances.

leucite (*Min.*). A silicate of potassium and aluminium, closely related in chemical composition to orthoclase, but containing less silica. Two varieties occur in rocks: a low-temperature form crystallising in the orthorhombic system, the shape being almost identical with the icositetrahedron; and a high-temperature form, which is cubic. Occurs in igneous rocks, particularly lavas, of intermediate and basic composition, as for example at Vesuvius.

leucitohe'dron (*Min.*). See **icositetrahedron.**

leucit'ophyre (*Geol.*). A fine-grained igneous rock, commonly occurring as a lava, carrying phenocrysts of leucite and other minerals in a matrix essentially trachytic; a well-known example comes from Rieden in the Eifel.

leuco- (Greek *leukos*, white). A prefix used in the construction of compound terms; e.g. *leucocyte* (q.v.).—(*Geol.*) See under **leucocrate.**

leuco-bases or **leuco-compounds** (*Chem.*). Colourless compounds formed by the reduction of dyes, which when oxidised are converted back into dyes.

leu'coblast (*Zool.*). A cell which will give rise to a leucocyte.

leu'cocrate (*Geol.*). A general name for light-coloured igneous rock rich in felsic minerals and correspondingly poor in mafic constituents. The adjective *leucocratic* is more commonly met with; while the prefix *leuco-* is used with such names as syenite, diorite, etc., to indicate a marked deficiency of coloured silicates. Thus albitite is a soda-leucosyenite consisting almost exclusively of albite.

leucocrat'ic (*Geol.*). A term used to denote a light colour in igneous rocks, due to a high content of felsic minerals, and a correspondingly small amount of dark, heavy silicates. Cf. *melanocratic*.

leu'cocyte (*Zool.*). A white blood-corpuscle; one of the colourless amoeboid cells occurring in suspension in the blood-plasma of many animals.

leucocytol'ysis (*Physiol.*). The breaking down of white cells of the blood.

leucocytope'nia (*Med.*). Abnormal diminution in the numbers of white cells in the blood.

leucocyto'sis (*Med.*). An increase in the number of leucocytes in the blood.

leucoder'mia, leucoder'ma (*Med.*). Vitiligo; melanodermia. A condition in which white patches, surrounded by a pigmented area, appear in the skin.

leu'con grade (*Zool.*). In *Porifera*, the third grade of structure, in which the choanocytes are confined to flagellated chambers and exhalant canals occur.

leucope'nia (*Med.*). See **leucocytopenia.**

leu'cophore (*Zool.*). See **iridocyte.**

leu'cophyre (*Geol.*). An old name, not now used, for dolerites particularly rich in feldspar and therefore very light in colour.

leucopla'kia (*Med.*). The stage of a chronically inflamed area at which the surface becomes hard, white, and smooth. On the tongue, it is usually due to syphilitic infection.

leu'coplast (*Bot.*). A colourless plastid.

leucopoie'sis (*Physiol.*). The production of white cells of the blood.

leucorrhoe'a, leucorrhe'a (*Med.*). A whitish discharge from the vagina.

leucosapphire (*Min.*). See **white sapphire.**

leucospo'rous (*Bot.*). Having white spores.

leucox'ene (*Min.*). An opaque whitish mineral formed as a decomposition product of ilmenite; believed to be a variety of sphene.

leukae'mia, leukemia (*Med.*). A fatal condition in which there is hyperplasia of the tissues producing white cells, with consequent increase in the numbers of white cells in the blood and great enlargement of the spleen. See also **lymphocythaemia.**

leukaemia, avian (*Vet.*). A filterable-virus infection of fowls.

leuko-. A variant spelling of *leuco-* (q.v.).

levant'er (*Meteor.*). An east wind blowing at Gibraltar, the resulting cloud on the Rock being termed the *levant*.

leva'tor (*Zool.*). See **elevator.**

leveche, lā-vā'chā (*Meteor.*). A dry S.W. wind blowing in Spain in front of a depression.

lev'ee (*Hyd. Eng.*). A well-consolidated bank of earth or spoil, having a central core forming an impervious connexion with the natural ground; used as a form of training works to control river flow and prevent flooding of adjacent country. In America the name also signifies a quay, landing-place, or pier.

level (*Acous., Elec. Comm.*).
See **black—**
blur—
noise—
power—
sensation—
transmission—
zero power—

level (*Auto. Teleph.*) The row of contacts in a selector which is found by the vertical motion of the selector under the action of an impulse train. The wipers then traverse the row of contacts either by impulse, finding, or hunting action.

level (*Build.*). A *level tube* (q.v.).

level (*Civ. Eng.*). To reduce a cut or fill surface to an approximately horizontal plane. *

level (*Mining*). An approximately horizontal tunnel in a mine, generally marking a working horizon or level of exploitation.

level (*Surv.*). An instrument used by the surveyor for determining the difference in height between two points.

level book (*Surv.*) The specially ruled book in which the surveyor records his observations when levelling, and performs any subsequent reduction required.

level canal (*Hyd. Eng.*). A canal which is level throughout. Also called a DITCH CANAL.

level-compounded (*Elec. Eng.*). See **flat-compounded.**

level line (*Surv.*). A line lying wholly on a level surface, and therefore perpendicular at all points to the direction of gravity.

level-luffing crane (*Eng.*). A jib crane in which, during derricking or luffing, the load is caused to move radially in a horizontal path, with consequent power saving.

level man (*Surv.*). The operator of a surveyor's level.

level multiple (*Auto. Teleph.*). That section of a multiple which is concerned with the outlets from a given level in the selector switches.

level small caps (*Typog.*). See **even small caps.**

level surface (*Surv.*). A surface which is everywhere perpendicular to the direction of gravity.

level trier (*Surv.*). An apparatus for measuring the angular value of a division on a level tube; it consists of a beam, hinged about a horizontal axis at one end and capable of being moved up or down at the other end by means of a micrometer screw, which records the inclination corresponding to a given number of divisions of movement of the bubble.

level tube (*Surv.*). A specially shaped glass tube nearly filled with spirit, so as to leave a 'bubble' of air and spirit vapour, which always rises to the highest part of the tube. The level tube is used to test whether a surface to which it is applied is horizontal. It is an essential feature of many forms of surveying instrument.

levelling (*Surv.*). The operation of finding the difference of elevation between two points.

levelling block (*Eng.*). A large flat cast-iron plate, stiffened by ribs on the under side, on which iron and steel plates are laid for flattening.

levelling staff (*Surv.*). The graduated wooden rod used to give the vertical distance between the line of sight of the level and the point on which the staff is held. See **self-reading staff** and **target rod.**

lever (*Mech.*). One of the simplest machines. It may be considered as a rigid beam pivoted at a point called the *fulcrum*, a load being applied at one point in the beam and an effort, sufficient to balance the load, at another. Three classes of lever may be distinguished: (1) fulcrum between effort and load; (2) effort between fulcrum and load; (3) load between fulcrum and effort. See **machine, mechanical advantage, velocity ratio.**

lever (*Horol.*). The pivoted arm which carries the pallets in the lever escapement.

lever brace (*Carp.*). A *brace* (q.v.).

lever escapement (*Horol.*). The most important type of watch escapement. The impulse from the escape wheel is transmitted to the balance by the equivalent of two levers—a pivoted lever carrying the pallets, and the roller carrying the impulse pin. In the 'English' lever, the escape wheel is planted at right-angles to the line joining the pallet staff and balance staff centres. In the 'Swiss' lever or 'straight-line' escapement the escape wheel, pallet staff, and balance staff centres are in a straight line. Strictly speaking, the pin-pallet escapement is a lever escapement, but it is not generally referred to as such.

lever (or **locker**) **jack** (*Textiles*). An accessory part on the under side of the combs of a lace machine, which controls the locker carriage.

lever key (*Teleph.*). A hand-operated key for telephone switchboards; operated by a small lever, which opens and closes one or more spring contacts. May be locking or non-locking.

lever safety-valve (*Eng.*). A safety-valve in which the valve is held on its seating by a long lever, loaded by a weight at the other end; a form of *dead-weight safety-valve* (q.v.).

lever-type brush-holder (*Elec. Eng.*). A type of brush-holder in which the brush is held at the end of an arm pivoted about the brush spindle.

lever-type starter (*Elec. Eng.*). See **faceplate starter.**

lever watch (*Horol.*). A watch fitted with the lever escapement.

Levers machine (*Textiles*). A lace machine originally made by John Levers; the modern machine is used for straight-down fabrics.

lev'igate (*Bot.*). Correct form of *laevigate* (q.v.)

levigation (*Chem.*). The reduction of a substance to a fine powder by grinding in water, followed by fractional sedimentation.

levulosu'ria (*Med.*). See **laevulosuria.**

lew (*Build.*). A light covering or roof of straw used to protect bricks on *hacks* (q.v.) during the drying period.

lew'is (*Masonry*). A truncated steel wedge or dovetail made in three pieces, with the larger end downwards and fitting into a similarly shaped hole in the top of a block of masonry; it then provides, by its attached hoist ring, a means of lifting the stone.

lewis bolt (*Civ. Eng.*). A foundation bolt with a tapered and jagged head, which is securely fixed into a hole in the anchoring masonry by having molten lead run round it.

Lewis gun (*Small Arms*). A light machine-gun fed by a circular magazine, which holds 47 rounds, placed horizontally over the mechanism.

Lewis's theory (*Chem.*). The assumption that atoms can combine by sharing electrons, thus completing their shells without ionisation.

Lewis'ian Gneiss (*Geol.*). See **Hebridean Gneiss.**

lew'isson (*Masonry*). A *lewis* (q.v.).

Leyden jar, li'den (*Elec. Eng.*). A capacitor consisting of a glass jar having its inner and outer surfaces coated with a conducting material. Its use gave rise to the unit jar for capacitance.

Leydig's duct, li'dig (*Zool.*). See **Wolffian duct.**

Leydig's organs (*Zool.*). Minute structures occurring on the antennae of some *Arthropoda*; believed to be olfactory in function.

lher'zolite (*Geol.*). An ultramafic plutonic rock, a peridotite, consisting essentially of olivine, with both ortho- and clino-pyroxene; named from Lake Lherz in the Pyrenees.

Li (*Chem.*). The symbol for *lithium*.

Li'as or Lias'sic System (*Geol.*). A thick series of marine strata occurring in a broad belt of country extending from the coast of Dorset to that of Yorkshire, and including the well-known Liassic clays, at some levels interbedded with thin, pale limestones, sands, shales, and, in the Middle Lias, ironstone. See **Blue Lias** and **marlstone**; also **Hardgrave Sandstone** and **Trail formation.**

Lias Clay (*Geol.*). A thick bed of clay found in the Lower Jurassic rocks of Britain. See **Blue Lias.**

li'ber (*Bot.*). See **phloem.**

libeth'enite (*Min.*). An orthorhombic hydrous phosphate of copper, occurring rarely as olive-green crystals in the oxide zone of metalliferous lodes.

libido, lib-ē'dō (*Psycho-an.*). A term introduced by Freud to denote the energy attached to the sexual impulse, manifesting itself in various forms; subsequently used by some authors (e.g. Jung) to cover vital energy in general, without special reference to the sexual impulse. See **Freud's theory of the libido.**

Libra (*Astron.*). Balance. Seventh sign of the *Zodiac* (q.v.).

librations (*Astron.*). A phenomenon by which, owing to a variety of causes, slightly more than half the moon's surface is visible to an observer on the earth, if observations are taken over a sufficiently long time. The three principal librations are: (1) in longitude, (2) in latitude, (3) diurnal.

libration, diurnal (*Astron.*). The name given to the phenomenon by which, owing to the finite dimensions of both the earth and the moon, an observer can see rather more than half the moon's surface when his observations at different times or from different places on the earth are combined. The effect is one of *parallax* (q.v.), the term *libration* being a misnomer in this case.

lib'riform fibre (*Bot.*). An elongated thick-walled element of the xylem, formed from a single cell.

lich gate (*Build.*). See **lych gate.**

lichen, lī'ken (*Bot.*). A member of the *Lichenes*.

lichen planus (*Med.*). An itchy eruption of pinkish papules on the skin, usually localised to certain parts.

Liche'nes (*Bot.*). A large group of composite plants, consisting of an alga and a fungus in intimate association, and divided into genera and species as if they were independent plants.

lichen'icole (*Bot.*). Living on lichens; said particularly of parasitic fungi.

lichen'ifica'tion (*Med.*). The condition in which the skin becomes thick and rigid, owing to excessive rubbing or scratching.

Licht'enberg figure (*Elec. Eng.*). A figure appearing on a photographic plate or on a plate coated with fine dust when the plate is placed between electrodes and a high voltage is applied between them.

licker-in (*Cotton Spinning*). In a carding engine, a revolving cylinder covered with saw-like teeth; sheets of cotton entering the machine are torn up by the teeth.

Lickey Quartzite (*Geol.*). A stratum of quartzite occurring at the local base of the Cambrian System of rocks in the Birmingham district; occupying the same position, and of the same age, as the Wrekin Quartzite in Shropshire, the Erribol Quartzite in Scotland, etc.

licking disease (*Vet.*). Pica (of cattle).

Lie'berkühn's crypts (*Zool.*). Simple tubular glands occurring in the mucous membrane of the small intestine in Vertebrates.

Lie'bermann-Burchard test, boor'hhart (*Chem.*). A colour test for cholesterol, based on a change of colour from red to bluish-green in chloroform solution on addition of acetic anhydride and concentrated sulphuric acid.

lien, lĕn (*Zool.*). See **spleen.**

lie'nal (*Zool.*). Pertaining to the spleen.

lie'nculus (*Zool.*). An accessory spleen.

lienogas'tric (*Zool.*). Pertaining to, or leading to, the spleen and the stomach.

lierne, li-ėrn' (*Arch.*). A connecting rib between the main ribs in a groined vault.

lierne vaulting (*Arch.*). Vaulting which is divided into panels by the use of lierne ribs.

Liesegang phenomenon, lĕ'ze-gang (*Chem.*). The stratification, under certain conditions, of precipitates formed in gels by allowing one reactant to diffuse into the other.

life-cycle (*Biol.*). The various stages through which an organism passes, from fertilised ovum to the fertilised ovum of the next generation.

life form (*Bot.*). The form of a plant determined by the position of its resting buds (if any), in respect to the surface of the soil.

life tests (*Elec. Eng.*). Tests carried out on cables, electric lamps, etc., to ascertain the time elapsing before failure occurs.

lift or **elevator.** An enclosed platform made to ascend or descend in a vertical shaft or framework; used for transferring persons, goods, or vehicles from one floor or level to another. The majority of lifts are operated electrically, but hydraulic lifts are generally used for short rises (e.g. to pavement level), and air-operated lifts in automobile service stations.

lift (*Aero.*). The component of the aerodynamical forces supporting an aeroplane along the lift axis, which is normal to the lateral axis and to the direction of the wind relative to the aircraft.

lift (*Hyd. Eng.*). (1) The vertical distance through which a vessel is raised in the process of passing through a lock.—(2) A mechanical contrivance for lifting a vessel from one reach of a canal to the next, either by transfer vertically or on an inclined plane.

lift (*Quarrying*). The plane, parallel to the floor of the quarry, along which the rock is split.

lift (*Textiles*). The movement of a tappet lever, heald, or griffe; it is effected by a cam.

lift-bridge (*Civ. Eng.*). A type of movable bridge which is capable of being lifted bodily through a sufficient vertical distance to allow of the passage of a vessel beneath.

lift-gate (*Build.*, *Civ. Eng.*). A gate which opens by bodily vertical movement, as distinct from one swinging about an axis at one end.

lift-lock (*Hyd. Eng.*). A canal lock serving to lift a vessel from one reach of water to another.

lift-motor (*Elec. Eng.*). A motor, sometimes having special characteristics, used for operating an electric lift.

lift-valve (*Eng.*). Any valve consisting of a disc, ball, plate, etc. which lifts or is lifted vertically to allow of the passages of a fluid.

lifter (*Foundry*). An L- or Z-shaped bar of cast- or wrought-iron, used for supporting the sand in a cope, the upper end being hooked on to a box bar.

lifting blocks (*Eng.*). A lifting machine consisting of a continuous rope passing round pulleys mounted in blocks, whereby an effort applied at the free end of the rope lifts a larger weight attached to the lower block. See **mechanical advantage.**

lifting magnet (*Elec. Eng.*). A large electromagnet used, instead of a hook, on cranes or hoists, when lifting iron and steel.

lifting of patterns (*Foundry*). See **drawing of patterns.**

lifting piece (*Horol.*). In the rack-striking work of a striking clock, a cranked lever which carries the warning piece at one end and lifts the rack hook just before the hour.

lifting plan (*Weaving*). See **peg plan.**

lifting plates (*Foundry*). Small iron plates, let into a pattern, into which a lifting screw is inserted for withdrawing the pattern from the mould.

lifting screw (*Foundry*). An iron rod screwed into a pattern to withdraw it from the mould.

lifting the offsets (*Ship Constr.*). The process of measuring the ship's form as 'laid off' on buttocks, waterlines, and sections. These offsets are the permanent record and are used to reproduce the ship's form, initially, for design work and ordering material, and, subsequently, in cases of repair or alterations.

lifting truck (*Transport*). A truck with three, or four, wheels, drawn by a handle which can be raised and lowered to lift a loaded platform standing on feet. The lift is effected either by leverage or by hydraulic mechanism.

lig'ament (*Zool.*). A bundle of fibrous tissue joining two or more bones or cartilages.

ligate' (*Surg.*). To tie with a ligature.—*n.* **ligation.**

lig'ature (*Med.*) A piece of thread, silk, horsehair, catgut, or any other material, for tying round blood-vessels · to tie with thread, etc.

light. Electromagnetic radiation capable of inducing visual sensation through the eye. Light is precisely defined as the product of the visibility and the radiant power, the latter being the rate of propagation of radiant energy. See also **illumination, velocity of light.**

light (*Build.*). (1) A term applied to any glazed opening admitting light to a building.—(2) A single division of a window.

light-adapted (*Optics*). See **adaptation.**

light-centre length (*Illum.*). The distance from the geometrical centre of the filament of an electric filament lamp to the contact plate or plates at the end of the lamp cap remote from the bulb. With automobile headlight lamps the measurement is taken from the bulb side instead of from the remote side of the pin.

light current (*Photo-electronics, Television*). The same as *photo-current.*

light-curve (*Astron.*). The line obtained by plotting, on a graph, the apparent change of brightness of a variable star, against the observed times; analysis then divides these stars into *long-* or *short-period variables, Cepheids,* and so on.

light flux (*Light*). The measure of the quantity of light passing through an area, e.g. through a lens system. Light flux is measured in lumens, one candle-power radiating 4π lumens. Illumination is light flux per unit area.

light-fog (*Photog.*). Fog in an emulsion, caused by intrusion of extraneous light into a camera or other apparatus which is intended to be light-tight.

lighthouse (*Civ. Eng.*). A permanent structure which is founded on rock at a point along a coastline or out at sea, and is equipped with a powerful light serving as a warning or guide to shipping.

light modulation (*Television*). Control of the intensity of light by electrical means, such as a combination of Kerr cell and crossed Nicol prisms.

light quantum (*Light*). A single train of waves emitted by an atom or molecule, with no abrupt changes of phase. Such trains are some metres in length and persist for about 10^{-8} second. See **photon.**

light ratio (*Astron.*). See **magnitudes.**

light relay (*Television*). See **light valve.**

light resistance (*Photo-electric Cells*). The resistance, when exposed to light, of a photo cell of the photo-conductivity type.

light restraint (*Photog.*). The impregnation of a dye in an emulsion, to prevent the deep penetration of light.

light seed (*Bot.*). A seed which requires exposure to light in order that it may germinate.

light-sensitive cell (*Photo-electric Cells*). Any device which, when exposed to light, generates a current or changes its resistance.

lightship (*Civ. Eng.*). A kind of floating *lighthouse* (q v), consisting of an anchored vessel carrying a powerful light as a warning or guide to shipping.

light splitter (*Photog.*) The same as *beam splitter.*

light-trap (*Photog.*). An arrangement for modifying doors or windows of dark-rooms, so that air can pass but light is excluded.

light valve. Any device whereby the passage of light is controlled electrically.—(*Cinema.*) A device, such as the double-ribbon light valve in the Western Electric sound-film recorder, which varies the width of a beam of light in accordance with the variation of electric currents, and so varies the exposure on the sound-track of a steadily moving film.

light-year (*Astron.*). A spatial unit sometimes used to express distances in the stellar universe. It is the distance travelled by light in one year, amounting to 63,290 astronomical units, or $5\,880 \times 10^{12}$ miles.

light alloys (*Met.*). See **aluminium alloys.**

light automatic (*Small Arms*). An automatic-fire weapon, which is normally fired from the shoulder with the aid of a rest.

light machine-gun (*Small Arms*). The modern term for a *light automatic gun.*

light oils (*Chem.*). A term for oils with a boiling range of about 100°-210° C., obtained from the distillation of coal-tar.

light railway (*Civ. Eng.*). (1) A *narrow-gauge* (q v.) railway.—(2) A tramway constructed under the Light Railways Act of 1896, i.e. a tramway which does not run along a public highway.

light-spring diagram (*Eng.*). An indicator diagram taken by a piston or diaphragm-type engine indicator, using a specially weak control spring or diaphragm in order to reproduce the low-pressure part of the diagram to a large scale.

light-weight concrete (*Build.*). Concrete of low unit weight (e.g. 20 lb. per cu. ft. instead of the usual 140 lb. per cu. ft), made by using aggregates such as pumice, sawdust, and cork, with cellular concrete; useful when lightness is required, not strength.

lighter-than-air craft (*Aero.*). See **aerostat.**

lighting. See **illumination.**

lighting (*Photog.*). The technique of illuminating objects to be photographed, so that they are well-defined and possess artistic contrast.

See **flat—** **hard—** **soft—**

lightning (*Meteor.*). The very large spark which marks the discharge of an electrified thunder cloud, either to earth or to another cloud. See **thunder.**

lightning arrester or **lightning protector** (*Elec. Eng.*). An over-voltage protection device in parallel with apparatus to be protected from surges such as those arising from lightning. It provides a low impedance so that the voltage reaching the apparatus is limited. In electrical communication circuits, the lightning protector takes the form of two blocks of smooth carbon, separated by a punched slip of mica. This insulation is adequate for normal operating voltages, but short-circuits the line to earth when a high voltage initiates an arc. See also **autovalve arrester.**

lightning conductor (*Elec. Eng.*, etc.). A system of metal conductors connected between the highest points of a building and earth, in order to provide an easy passage to earth for a lightning discharge striking the conductor in preference to the building, thereby obviating damage to the building. The primary function is, however, to reduce the ambient electric field and electric charges, by providing the conductor with sharp points, so that the probability of a lightning stroke in the neighbourhood is greatly reduced. Also called a LIGHTNING ROD.

lightning protector (*Elec. Eng.*). See **lightning arrester.**

lightning rod (*Elec. Eng.*). See **lightning conductor.**

lightning tubes (*Min.*). See **fulgurites.**

ligne, lēn'y^{e} (*Horol.*). A unit used in the measurement of watch movements. It is equal to 2·256 mm. The *twelfth*, or *douzième* (0·188 mm.), is the unit used for the height or thickness of a movement. There are 12 twelfths in a ligne. Lady's wrist watches vary from 3½ lignes to about 8 lignes; gents.' wrist watches from 10 to 13, pocket watches from 17 to 19, and deck watches from 20 to 32. The word ligne is sometimes spelt LINE. Symbol, ‴.

lig'neous (*Bot.*). Woody.

lig'nicole, lignicolous (*Bot.*). Growing on or in wood, or on trees.—(*Zool.*) Living on or in wood, as certain species of Termites.

lignification (*Bot.*). The deposition of lignin on and in a cell wall.

lignin (*Bot.*). A complicated mixture of substances formed by certain cells of plants and deposited in thickened cell walls, particularly in woody tissue.

lig'nite (*Geol.*). Dull-brown compact fossil wood, representing one stage in the conversion of plant remains into coal. In this country it occurs in the Bovey Tracey Beds in Devonshire; while it is liable to be found in smaller quantities in lacustrine and estuarine deposits of Mesozoic and Tertiary age. See also **brown coal.**

ligniv'orous (*Zool.*). Wood-eating.

ligno-celluloses (*Chem.*). Compounds of lignin and cellulose found in wood and other fibrous materials.

lig'roin, —rō-in (*Chem.*). A term for a petroleum fraction with a boiling range of from about 90° to 120° C.

lig'ula (*Zool.*). In Insects, a median structure lying between the labial palps; composed of the paraglossae and the glossae, which may be separate or fused.

lig'ulate (*Bot.*). (1) Strap-shaped, long, flattened, and narrow.—(2) Said of a corolla which has a very short tube and is prolonged above into a flattened group of united petals.—(3) Said of a capitulum in which all the flowers have ligulate corollas.

lig'ule (*Bot.*). A small outgrowth, commonly membranous, from the upper surface of a leaf or leaf-like member, and arising close to the base of the leaf, or at the junction of the lamina and petiole.

limacel' (*Zool.*). In Slugs, the shell, which is reduced and usually embedded in the integument.

limaciform, lim-as'— (*Zool.*). Slug-like.

limb (*Astron.*). The term applied to the edge or rim of a heavenly body having a visible disc; used specially of the sun and moon.

limb (*Bot.*). (1) The lamina of a leaf.—(2) The widened upper part of a petal.—(3) The upper, often spreading, part of a sympetalous corolla.

limb (*Zool.*). A jointed appendage, as a leg.

limber (*Artillery*). The connecting link between the gun and its tractive power. The limber also carries rounds of ammunition and part of the detachment.

limberneck (*Vet.*). *Botulism* (q.v.) of birds.

limbous (*Zool.*). Overlapping.

limbric (*Textiles*). A plain grey cotton cloth of medium quality; used for curtains, etc. after being piece-dyed or printed.

lim'burgite (*Geol.*). An ultramafic, fine-grained igneous rock occurring in lava flows, similar to the dyke-rock, monchiquite, but having interstitial glass between the dominant olivine and augite crystals. Typically, limburgite is feldspar-free; but re-examination of material from the type locality has proved that feldspar does occur in most samples.

limbus (*Zool.*). In Mammals, the thickened, overhanging extremity of the spiral lamina of the cochlea.

lime (*Build.*). A substance produced by heating limestone to 825° C. or more, as a result of which the carbonic acid and moisture are driven off. Sometimes called QUICKLIME or CAUSTIC LIME.

lime bag (*Foundry*). A bag of powdered lime used for testing the fit of joints. Lime is sprinkled on the parting face, and the cope is lowered and lifted; if the lime adheres to the top face, the joint is good.

lime blast (*Leather*). Dark patches that appear on limed skins while being tanned; caused by carbonate of lime on the skins.

lime blue (*Paint.*). A blue pigment used in distemper colours; it is made by precipitating copper sulphate by means of milk of lime under the influence of heat.

lime, chloride of (*Chem.*). See **bleaching powder.**

lime chlorosis (*Bot.*). Yellowing in a plant growing in a soil containing an excess of calcium carbonate; due to chlorophyll deficiency.

lime knot (*Bot.*). A widening in the threads of the capillitium of *Myxomycetes*, containing calcium carbonate.

lime mortar (*Build., Civ. Eng.*). A mortar composed of lime and sand, with the addition sometimes of other material, such as crushed bricks, ground slag, or coke. It is not generally suitable for use under water.

lime paste (*Build.*). Slaked lime.

lime powder (*Build.*). The material produced as a result of subjecting quicklime to the process of air-slaking.

lime-silicate rocks (*Geol.*). These result from the contact (high-temperature) metamorphism of limestones containing silica in detrital grains, nodules of flint or chert, or siliceous skeletons, the silica combining with the lime to form such silicates as lime-garnet, anorthite, wollastonite, and idocrase.

limestone (*Geol.*). Sedimentary rock containing carbonate of lime or magnesia to the extent of 50% of the whole. If the carbonate is calcite, the rock is termed *calcite-limestone*; if dolomite is present as well, it is *dolomitic limestone*—or *dolomite rock* if calcite be absent. Limestones are formed by the consolidation of calcareous ooze, which may be chemically precipitated, derived from some pre-existing limestone by the normal processes of rock wastage, or formed by organic agencies.

Limestone Coal Group (*Geol.*). See **Edge Coal Group.**

lime uranite (*Min.*). See **uranite (lime).**

limewash (*Paint.*). A mixture which is prepared by slaking lump lime with about one-third of its weight of water, and then adding sufficient water to make a 'milk'; used as a wall covering in cases where a frequent application is necessary.

lime water (*Chem.*). A suspension of calcium hydroxide in distilled water.

limic'olous (*Zool.*). Living in mud.

lim'inal (*Physiol.*). Pertaining to the threshold value, especially of perception.

liminal value (*Optics*). The threshold of intensity of a specified colour, below which there is no visual appreciation.

liming (*Leather*). The process of soaking hides and skins in milk of lime, which causes them to swell and facilitates removal of the hair. To loosen the wool, sheepskins are painted on the flesh side with a paste consisting of milk of lime and a small amount of alkaline sulphides.

limit gauge (*Eng.*). A gauge used for verifying that a part has been made to within specified dimensional limits. Limit gauges consist, for example, of a pair of plug gauges on the same bar, one of which should just enter a hole ('go') and the other just not enter ('not go').

limit gauging (*Eng.*). A method of measurement which ensures that pieces intended to fit together shall do so within certain specified limits of clearance, and that similar pieces shall be interchangeable.

limit of proportionality (*Met.*). The point on a stress-strain curve at which the strain ceases to be proportional to the stress. Its position varies with the sensitivity of the extensometer used in measuring the strain.

limit-switch (*Elec. Eng.*). A switch fitted to electric lifts, travelling cranes, etc. in order to cut off the power supply if the lift-car or moving carriage travels beyond a certain specified limit.

limits of audition (*Acous.*). The extreme frequencies of sound-waves perceivable by the normal ear, and the extent of perception between the maximum tolerable loudness and the minimum perceptible. See **audibility.**

limited availability (*Auto. Teleph.*). See under **full availability.**

limiter valve (*Thermionics*). A thermionic valve operated as an amplifier and so biased that the output resulting from a large input voltage is substantially the same as that from a small one.

limiting conductivity (*Chem.*). The equivalent conductivity of a substance at infinite dilution, i.e. when completely ionised.

limiting density (*Chem.*). The relative density of a gas at vanishingly low pressures.

limiting factor (*Bot.*). The slowest-acting factor of a group of factors simultaneously affecting a physiological process in a plant.

limiting frequency (*Elec. Comm.*). The frequency at which there is a recognisable change in response, as contrasted with a cut-off frequency, which (as in a filter) may be nominal and not apparent.

limiting friction (*Mech.*). See **friction.**

limiting gradient (*Civ. Eng.*). *Ruling gradient* (q.v.).

limiting range of stress (*Met.*). The greatest range of stress (mean stress zero) that a metal can withstand for an indefinite number of cycles without failure. If exceeded, the metal fractures after a certain number of cycles, which decreases as the range of stress increases. Also called ENDURANCE RANGE; half this range is the fatigue limit or endurance limit.

limiv'orous (*Zool.*). Mud-eating; as certain aquatic Invertebrates which swallow mud in order to extract from it the nutritious organic matter that it contains.

lim'nobiot'ic (*Zool.*). Living in fresh water.

limnoph'ilous (*Zool.*). Living in marshes, especially fresh-water marshes.

limnoplank'ton (*Ecol.*). The plankton of fresh waters, such as ponds, lakes, rivers, and marshes. Cf. *haliplankton.*

***d*-lim'onene** (*Chem.*). Hesperidene, citrene, carvene. The oil of the orange peel consists almost entirely of this essential oil, b.p. 175° C. *l*-Limonene is present in the oil of fir cones. The systematic name of these compounds, which are monocyclic terpenes, is Δ-1,8-menthadiene.

limon'iform (*Bot.*). Lemon-shaped.

li'monite (*Min.*). An amorphous hydrated oxide of iron (and an important ore of that metal) occurring as pseudomorphs after magnetite and haematite. Also the chief constituent of bog iron-ore.

limp (*Bind.*). Said of a book having non-rigid sides; described as *limp cloth, limp leather*, according to the covering material.

limpet washer (*Build.*). A form of washer used in fixing corrugated sheeting, for which purpose it is shaped on one side to conform to the curve of a corrugation.

li'narite (*Min.*). Hydrous sulphate of lead and copper, found in the oxide zone of metalliferous lodes; a deep-blue mineral resembling azurite, and, like it, crystallising in the monoclinic system.

linch pin. A pin placed in a transverse hole on the outside of the axle of a vehicle, to retain a wheel; at the top it has a projection on one side, to prevent it from passing through the hole.

Lincoln wool (*Worsted*). The longest of the lustre wools, with a staple of 12 ins.; used for Sicilians, linings, etc.

Lincolnshire Limestone (*Geol.*). Oölitic limestones, famous as building-stones, which form a prominent escarpment running through Lincolnshire and Northamptonshire. They are of the same age as the Inferior Oölite of the Cotteswold Hills in Gloucestershire.

Lincrusta (*Plastics*). A trade-name for a plastic material, made of linoxyn, resins, and fillers, pressed on canvas or paper; used as a building material for covering walls, etc.

Linde process (*Chem.*). A process for the liquefaction of air and for the manufacture of oxygen and nitrogen from liquid air.

line. The twelfth part of an inch. See **ligne.**

line (*Build.*). A cord stretched between steel line-pins driven into each end of a wall, as a guide to the bricklayer for level and direction of succeeding courses.

line (*Carp.*). To mark a straight line on timber as a guide for working or erection.

line (*Elec. Comm.*). That part of a communication circuit which has, substantially, uniformly distributed constants. It may consist of two equal wires on a pole route; two wires twisted, frequently with others, in a lead-covered cable; or a single conductor, supported by insulators at the centre of a conducting tube.

See **air—(2)** **long-distance—**
artificial— **open-wire—**
coin-box— **party—**
direct— **programme—**
distortionless— **shielded—***
exchange— **subscriber's—**
individual— **tie—** **toll—**
infinite— **trunk—**

For *coaxial line* see **concentric tube feeder.**

line (*Elec. Eng.*). A power transmission circuit or one of the conductors of that circuit.

See **artificial—** **Kapp—**
bus— **pump—**
control— **train—**
also **line of electric flux**
line of electric force
line of magnetic flux
line of magnetic force.

line (*Horol.*). (1) The cord or gut supporting the weight or weights of a weight-driven clock.—(2) See **ligne.**

line (*Rail.*). A common term for a railway track.

line (*Surv.*). The cord to which the lead of a lead-line is secured. See also **centre line*.**

line (*Textiles*). Yarn spun from flax fibre of good quality.

line amplifier (*Elec. Comm.*). In broadcasting equipment, the amplifier which is the output amplifier for supplying power to the line, either to the control room or to the radio transmitting station.

line amplitude (*Television*). The amplitude of the voltage generated by the line-scanning generator, or the length of the line on the screen produced thereby.

line balance (*Elec. Comm.*). The matching impedance, equalling the impedance of the line at all frequencies, which is used to terminate a two-wire line when it divides through a hybrid-coil or bridge-set into a four-wire line. Also called BALANCING IMPEDANCE, BALANCING NETWORK.

line block (*Print.*). A printing block of a subject consisting of black and white parts only, without gradations of tone. It is produced by photography and etched into relief on metal, usually zinc. Cf. *half-tone process*.

line-breaker (*Elec. Eng.*). A contactor on an electric vehicle, arranged for closing or interrupting the main current circuit.

line choking coil (*Elec. Eng.*). An inductor included in an electric power supply circuit in order to protect plant connected to the line from the effect of high-frequency or steep-fronted surges. Also called SCREENING PROTECTOR.

line-colour (*Print.*). A colour-picture produced by superimposed impressions of two or more line blocks printed in different colours. Varied tones are obtainable by the use of stipples.

line distortion (*Elec. Comm.*). Distortion in the wave-form of a transmitted signal, arising from the propagation constant of the line not being the same for all frequencies.

line finder (*Auto. Teleph.*). A uniselector which automatically hunts to find the line of a subscriber, when he lifts his telephone receiver, in order to connect selectors to his circuit.

line, frame (*Cinema.*). See **frame line.**

line frequency (*Television*). The frequency of repetition of the individual lines in a scanned image, i.e. the reciprocal of the interval between the commencements of two successive lines.

line frequency generator (*Television*). The generator of the voltage or current which causes the scanning spot to traverse the individual lines of the image.

line integral (*Elec. Eng.*). The continuous integration of the product of the element of a line by the tangential component of the vector along it. See **potential difference.**

line jack (*Elec. Comm.*). A jack connected to a line for testing purposes.

line jump scanning (*Television*). The same as *interlaced scanning*.

line noise (*Teleph.*). Noise in telephone circuits which may arise from cross-talk, babble, or induction from power lines, and which interferes with the normal use of such circuits. See **interference.**

line of action (*Mech.*). The line along which a force acts.

line of centres (*Horol.*). A line passing through two or more centres: the line joining the centres of two or more wheels: in a lever escapement, the line joining the balance staff and the pallet staff.

line of collimation (*Surv.*). See **collimation (line of).**

line of electric flux (*Elec. Eng.*). A line drawn in a graphical representation of an electric field so that its direction at any point is the direction of the electric flux at that point.

line of electric force (*Elec. Eng.*). A line drawn in a graphical representation of an electric field so that its direction at any point is the direction of the electric force at that point.

line of magnetic flux (*Elec. Eng.*). A line drawn in a graphical representation of a magnetic field so that its direction at any point is the same as the direction of the field at that point. The line is also commonly used as a unit of magnetic flux, one line being equal to one maxwell. Also called a LINE OF MAGNETIC INDUCTION.

line of magnetic force (*Elec. Eng.*). A line drawn in a graphical representation of a magnetic field so that its direction at any point is the direction of the magnetic field at that point.

line of nosings (*Build.*). The line tangential to the nosings of a stair.

line of sight (*Surv.*). Alternative term for line of collimation (see **collimation, line of).**

line of sight velocity (*Astron.*). The rate, always expressed in kilometres per second, at which a heavenly body is approaching or receding from the observer. It is measured spectroscopically by observing the shift of the spectral lines of the body relative to those of a terrestrial source, a phenomenon known as the *Doppler effect*. A shift towards the red indicates a velocity of recession and is by convention considered positive, and vice versa.

line-pin (*Build.*). See **line.**

line ranger (*Surv.*). An instrument for locating an intermediate point in line with two distant signals. It consists of two reflecting surfaces so arranged as to bring images of the two signals into coincidence when the instrument is in line with the signals.

line scanning (*Television*). A method of scanning in which the scanning spot repeatedly traverses the field of the image in a series of straight lines.

line screen process (*Photog.*). A colour photographic process in which the screen takes the form of lines ruled on the emulsion.

line shafting (*Eng.*). Overhead shafting used in factories to transmit power from an engine or motor to individual machines.

line spectrum (*Light*). A spectrum consisting of relatively sharp lines, as distinct from a *band spectrum* (q.v.) or a *continuous spectrum* (q.v.). Line spectra originate in the atoms of incandescent gases or vapours. See **spectrum, Bohr theory.**

line-squall (*Meteor.*). A system of squalls occurring simultaneously along a line, sometimes hundreds of miles long, which advances across the country. It is characterised by an arch or line of low dark cloud and a sudden drop in temperature and rise in pressure. Thunderstorms and heavy rain or hail often accompany these phenomena.

line standard. A standard of length consisting of a metal bar near whose extremities are engraved fine lines, the standard length being the distance between these lines measured under specified conditions.

line survey (*Bot.*). A record of the plants occurring along a line taken across a piece of country.

line switch (*Auto. Teleph.*). A small uniselector which immediately hunts to seize a free A-digit selector when the subscriber lifts his receiver.

line synchronisation (*Television*). Synchronisation of the line-scanning generator at the receiver with that at the transmitter so that the scanning spots at the two ends keep in step throughout each line.

line transect (*Bot.*). A chart showing the position and names of all the plants occurring on a line drawn across a piece of country.

line-up (*Elec. Comm.*). The adjustment of a number of circuits in series so that they function in the desired manner when required.

line voltage (*Elec. Eng.*). See **voltage between lines.**

lin'ea alba (*Anat.*). The tendinous line which extends down the front of the belly, from the lower end of the chest to the pubic bone, and gives attachment to abdominal muscles.

linea ni'gra (*Med.*). Pigmented linea alba, occurring in pregnant women.

lineage (*Gen.*) In evolution, a time-character concept representing a racial complex of lines of descent.

linear (*Bot.*). Having parallel edges, and at least four to five times as long as broad.

linear amplification (*Radio*). Amplification in which the output current or voltage is strictly proportional to the input voltage.

linear detection (*Radio*). The same as *linear rectification.*

linear distortion (*Elec. Comm.*). That form of amplitude distortion in which the envelope of the output signal is not proportional to the corresponding input envelope, but in which alien frequencies are not introduced. See **compandor, automatic volume control.**

linear modulation (*Radio*). Modulation in which the amount by which the instantaneous peak amplitude of the alternating output current or voltage differs from its unmodulated value is directly proportional to the instantaneous modulating voltage.

linear network (*Elec. Comm.*). A network of electrical elements which are constant in magnitude with varying current.

linear rectification (*Radio*). Rectification in which the unidirectional output current is directly proportional to the instantaneous peak amplitude of the applied alternating voltage.

linear resistance (*Elec. Comm.*). A resistance in which the current and voltage are always proportional, e.g. in a copper wire, provided the temperature and other physical factors remain constant. Ohm's law is a description of this property.

linear tetrad (*Bot.*). A row of four megaspores, as is usual in flowering plants.

linear time base (*Television*). An oscillator giving a 'saw-toothed' waveform, which, when applied to a cathode ray tube, causes the spot to move at a uniform rate across the tube in one direction and then rapidly return to its starting point, after which the process is repeated indefinitely.

linel'lae (*Zool.*). In some *Sarcodina*, a system of smooth filaments uniting the xenophya.

linen. A cloth woven from yarn prepared from the fibres of the flax plant, *Linum usitatissimum*, family *Linaceae*; underpick looms are generally used, and, for damasks, jacquard machines.

linen-fold (or **linen-scroll**) **panel** (*Join.*). See **drapery panel.**

liner (*Dec.*). A type of brush used for drawing lines.

liner (*Eng.*). A separate sleeve placed within an engine cylinder to form a renewable and more durable rubbing surface; in I.C. engines, termed *dry* if in continuous contact with the cylinder wall, and *wet* if supported only at the ends and surrounded by cooling water.

liner-off (*Ship Constr.*). A tradesman engaged in shipbuilding, whose function it is to 'mark off' by fair lines, using battens to enable plate workers and others to prepare material to fit *in situ.*

lingel, ling'gl (*Boots and Shoes*). A shoemaker's thread rubbed with beeswax.

lin'gua (*Zool.*). Any tongue-like structure: in Insects, the hypopharynx: in *Acarina*, the floor of the mouth.

lingual (*Zool.*). In Arthropods, pertaining to the lingua: in Molluscs, pertaining to the radula: in Vertebrates, pertaining to the tongue.

lin'gula (*Zool.*). In *Aleurodidae*, a tongue-shaped organ on the dorsal surface of the last abdominal somite, on which honey-dew accumulates.

Lingula Flags (*Geol.*). Well-stratified rocks, consisting of alternating slaty and sandy layers (the latter known as *ringers*), occurring in the Upper Cambrian of N. Wales and containing large numbers of the Lingula-like brachiopod, *Lingulella davisii*. In the Upper Lingula Flags, the Dolgelley Beds, trilobites also are comparatively common.

lingu'late (*Bot.*). Tongue-shaped; proportionally shorter and wider than *ligulate*, and somewhat fleshy, with a bluntish apex.

lin'in (*Cyt.*). The more solid, form-conserving part of the nucleus, which holds the chromioles in definite relation to one another.

lining (*Bind.*). (1) The operation of pasting a strip of brown paper down the back of a book after backing.—(2) A strip of linen fixed down the middle of a section for strengthening purposes.

lining (*Hyd. Eng.*). A layer of clay puddle covering the sides of a canal, making them watertight.

lining (*Join.*). Thin boarding covering an interior surface in a building.

lining (*Pot.*). A cup or other hollow vessel partially formed on the wheel, to be finished in a mould.

linings (*Furs*). A number of furs sewn together and used for lining garments.

lining paper (*Dec.*). An undercoat paper applied to a wall or ceiling as a basis for a figured paper or for distemper.

lining-papers (*Bind.*). Another name for *end-papers.*

lining-up (*Eng.*). The operation of arranging the bearings of an engine crankshaft, etc. in perfect alignment.

link (*Auto. Teleph.*). (1) A circuit or outlet between one rank of selectors and the next in order of operation, or between such selectors and a manual position. Also termed a TRUNK, which is a circuit in the trunking.—(2) See **U-link.**

link (*Elec. Eng.*). See **fuse-link, isolating link.**

link (*Eng.*). (1) Any connecting piece in a machine, pivoted at the ends.—(2) The curved slotted member of a *link motion* (q.v.).

link (*Surv.*). The one-hundredth part of a chain. In the Gunter's chain, 1 link=7·92 ins.; in the Engineer's chain, 1 link=1 ft.

link block (*Eng.*). A sliding block pivoted to the end of the valve rod, and working in the slotted link of a *link motion* (q.v.).

link motion (*Eng.*). A valve motion, invented by Stephenson, for reversing and controlling the cut-off of a steam-engine. It consists of a pair of eccentrics, set for ahead and reverse rotation, connected to the ends of a slotted link carrying a block attached to the valve rod. Variation of the link position (known as *linking-up*) makes either eccentric effective, and also varies the cut-off.

link rods (*I.C. Engs.*). The auxiliary or articulated connecting-rods of a radial aero engine, which work on the wrist pins carried by the master rod.

linkage (*Gen.*). The tendency shown by certain genetical characteristics to be inherited together.

linkage (*Chem.*). A chemical bond, particularly a covalent bond in an organic molecule.

linkage (*Elec. Eng.*). A measure of the product of the magnetic flux passing through a closed electric circuit and the number of turns in the circuit, the unit being one line passing through a circuit having one turn.

linkage group (*Gen.*). A group of hereditary characteristics which remain associated with one another through a number of generations.

linkage map (*Gen.*). A diagram showing the position of the genes in a chromosome or group of chromosomes.

linked switches (*Elec. Eng.*). Switches mechanically linked, so that they operate together or in a definite sequence. Also called COUPLED SWITCHES.

linking-up (*Eng.*). See **link motion.**

Linnae'an (or **Linnean**) **system** (*Bot., Zool.*). The system of classification and of *binomial nomenclature* (q.v.) established by the Swedish naturalist Linnaeus.

Linnaean species (*Bot.*). A wide conception of a species, in which many varieties are included.

lino'leum. A very widely used floor-covering material made by impregnating a foundation of hessian fabric with a *linoleum cement.* This linoleum cement is made of oxidised linseed oil (linoxyn) mixed with resins (e.g. **kauri gum**) and fillers (e.g. cork), and has to undergo a prolonged curing process before it can be applied to the fabric.

Li'notype composing machine (*Typog.*). See **composing machines.**

linox'yn (*Chem.*). An elastic substance obtained by the oxidation of linseed oil; used as the basis for making *linoleum* (q.v.).

linseed oil (*Chem.*). An oil obtained from the seeds of flax (*Linum usitatissimum*). It contains solid and liquid glycerides of oleic and other unsaturated acids. Its iodine value is 160-200, which is the highest of all fats. It is easily oxidised and polymerised, forming elastic films. Used for the mixing of paints and varnishes and for the manufacture of linoleum.

linsey (*Textiles*). A fabric which is a combination of linen and wool; used for dresses.

lint (*Med.*). A material made from cotton or linen, with a soft, teased surface; usually rendered antiseptic and used for bandages and dressings.

lintel (*Build.*). A beam across the top of an aperture. Also called the HEAD.

linters or **cotton linters.** Short stiff fibres remaining on cotton seeds after removal of the longer fibres; usually removed before the seeds are crushed (if subsequently, known as HULL FIBRE). Linters are used extensively in the manufacture of rayon, guncotton, celluloid, absorbent cotton, etc.

lintol (*Build.*). A *lintel* (q.v.).

Linville truss (*Struct.*). See **Pratt truss.**

lip (*Bot.*). (1) A large projecting lobe of a corolla.—(2) See **label.**

lip (*Horol.*). The edge of the cylinder of the cylinder escapement which receives impulse from the escape wheel.

lip-and-leg ulceration (*Vet.*). See **necrobacillosis.**

lip block (*Civ. Eng.*). A block of wood spiked to the end of a strut used in timbering a trench; it overhangs the end of the strut and rests upon the waling, so that the strut is supported and prevented from dropping if the sides of the trench give way.

lip union (*Plumb.*). A union which has an inner annular projection to prevent the gasket from being forced partially into the pipe and thereby obstructing the flow.

lipae'mia, lipe'mia (*Med.*). Excess of fat (Greek *lipos*) in the blood.

lip'arite (*Geol.*). A name suggested in 1860 by Roth to include all the fine-grained granitic rocks occurring as lava flows, such as those found in the Lipari Isles. The synonymous term *rhyolite* is more widely used.

li'pase (*Bot., Zool.*). A fat-digesting enzyme.

lipec'tomy (*Surg.*). Surgical removal of fatty tissue.

lip'ochromes (*Chem.*). Pigments of butter fat.

lipodystro'phia progressi'va (*Med.*). A rare condition in which there is progressive loss of fat from the subcutaneous tissues of the upper half of the body.

lipogas'try (*Zool.*). Temporary disappearance of the gastric cavity or of the paragaster.

lipogenous, li-poj'— (*Zool.*). Fat-producing.

lipo'ma (*Med.*). A tumour composed of cells containing fat.

lipo'mato'sis (*Med.*). A term applied to a number of conditions (e.g. Dercum's disease) in which there is an excessive accumulation of fat in the body or part of the body.

lipomatosis, bovine (*Vet.*). A diffuse growth of lipoma throughout the mesentery of cattle.

lipom'erism (*Zool.*). In metameric animals, disappearance of metamerism by overgrowth or rearrangement of somites.

lip'oplast (*Bot.*). A fatty globule.

lip'osome (*Bot.*). A fatty or oily globule in cytoplasm.

lipos'tomy (*Zool.*). Temporary disappearance of the mouth, or of the osculum.

lipox'enous *or* —zē'nus (*Bot., Zool.*). (Of parasitic forms) leaving the host before development is completed.

lipu'ria (*Med.*). The presence of fat in the urine.

liquation (*Chem.*). A process used in metallurgical chemistry depending on slowly cooling a molten alloy, or metallic mixture, and combining this with the different freezing-points of the various constituents as a means of their separation.

liquefaction. The change of a gas or a solid into the liquid state. See **gases (liquefaction of).**

liquid. A state of matter in which the shape of a given mass depends on the containing vessel, but the volume is independent thereof. A liquid is a practically incompressible fluid.

liquid controller (*Elec. Eng.*). A liquid rheostat arranged for speed or other control of an electric motor.

liquid crystals (*Chem.*). Certain pure liquids which are turbid and, like crystals, anisotropic over a definite range of temperature above their freezing-points.

liquid dimmer (*Elec. Eng.*). A dimmer making use of liquid resistances and therefore giving a smooth variation in the illumination.

liquid drier (*Paint.*). See **drier.**

liquid-quenched fuse (*Elec. Eng.*). A fuse in which a liquid is used for quenching the arc.
See **semi-immersed— immersed—**

liquid resistance (*Elec. Eng.*). A resistance consisting of a liquid of low conductivity, the current being led to and from the liquid by means of suitable electrodes.

liquid rheostat (*Elec. Eng.*). A liquid resistance whose value can be varied continuously, usually by movement of one of the electrodes relative to the other, or relative to the surface of the liquid.

liquid starter (*Elec. Eng.*). A liquid rheostat arranged to operate as a motor starter.

liq'uidus (*Met., etc.*). A line in a constitutional diagram indicating the temperatures at which solidification begins or melting is completed, in alloys of different composition or in silicate melts. See **solidus** and **solidification range.**

liquor amnii, li'kor am'ni-i (*Physiol.*). The clear fluid in the amniotic cavity, in which the embryo is suspended.

lirel'la (*Bot.*). A long narrow apothecium with a ridge in the middle, found in some lichens.

lirel'liform (*Bot.*). Like a furrow.

liroc'onite (*Min.*). A rare ore of copper, sky-blue to green in colour; essentially, hydrated oxide of arsenic combined with hydroxide of copper and aluminium.

lisle, lil (*Textiles*). Long-staple, hard-twisted cotton yarn, gassed to produce a lustrous effect; used extensively for stockings.

Lissajous figures, lēs'a-zhoo' (*Phys.*). The curves obtained by compounding two linear harmonic vibrations at right-angles to each other, there being a simple ratio between their frequencies.—(*Cathode Ray Tubes*) The stationary patterns which are obtained on the screen of a cathode ray tube when two alternating voltages, whose frequencies are related to each other by a simple integral ratio, are applied to the two pairs of deflector plates or coils.

lissenceph'alous (*Zool.*). Having smooth cerebral hemispheres.

lissoflagellate, —flaj'el-āt (*Zool.*). Having the flagellum unprovided with a collar at the base.

listed (*Woollen*). A term denoting defects near the lists or selvedge in a length of cloth; due to uneven dyeing, uneven tension of the lists, or other causes.

listel (*Arch.*). See **facette.**

listening key (*Teleph.*). The lever key which the operator throws, to put her head-set on to a cord circuit and speak to a subscriber.

listing (*Carp.*). (1) A narrow edge of a board.—(2) The operation of removing the sappy edge of a board.

lists or **listing** (*Textiles*). See **selvedge.**

literals (*Typog.*). Casual errors of composition, such as one character substituted for another, worn letters, turned letters, etc.

lith'arge (*Chem., Dec.*). Lead monoxide, used in paint-mixing as a drier; used also in the rubber and electrical accumulator industries.

litharge cement (*Chem.*). See **glycerine litharge cement.**

lithia (*Chem.*). Lithium monoxide.

lithia emerald (*Min.*). A trade name for the mineral species *hiddenite.*

lithia mica (*Min.*). An important member of the mica group of minerals, occurring as pinkish-mauve crystals, or more typically as scaly aggregates, hence the name (from the Greek *lepis, lepidos,* a scale). The composition is complicated, but it is essentially silicate of potassium, lithium, and aluminium. Also called LEPIDOLITE.

lithi'asis (*Med.*). The formation of calculi in the body. The condition in which an excess of uric acid and urates is excreted in the urine—the gouty diathesis.

lithioph'ilite (*Min.*). Orthorhombic phosphate of lithium and manganese, forming with triphilite a continuously variable series.

lithite (*Zool.*). See **statolith.**

lithium (*Met.*). The lightest metallic element. Chem. symbol, Li; at. wt. 6·94, at. no. 3, sp. gr. at 20° C. 0·534, m.p. 186° C., specific electrical resistivity 8·5 microhms per cm. cub. Used, in alloy with calcium, as a deoxidiser for copper; also added, in small amounts, to some lead-base bearing metals.

lithium hydride (*Chem.*). LiH. Formed when lithium unites with hydrogen at a red heat.

lithium monoxide (*Chem.*). Li_2O. Also called LITHIA. Formed when the metal is heated in air.

lithium nitride (*Chem.*). Li_3N. Lithium combines with nitrogen to form *lithium nitride.*

li'tho (*Print.*). A common abbreviation for *lithography* (q.v.).

litho-offset (*Print.*). Offset printing.

lith'ocyst (*Zool.*). See **statocyst.**

lithod'omous (*Zool.*). Living in rocks.

lithogenous, —oj'en-us (*Zool.*). Rock-building, as certain Corals.

lithographic paper (*Paper*). High machine-finished or supercalendered paper, made so that any stretch occurs the narrow way of the sheet. Such paper is often double-supercalendered or plate-glazed.

lithographic stone (*Geol.*). A compact, porous, fine-grained limestone, often dolomitic, employed in lithography. Pale creamy-yellow in colour, but occasionally grey. Fair samples may be obtained from the Jurassic rocks of this country, but the finest material comes from Solenhofen and Pappenheim in Bavaria. See also **Solenhofen stone.**

lithog'raphy (*Print.*). Originally the art of printing from stone (see **lithographic stone**), but now applied to printing processes depending on the mutual repulsion of water and greasy ink. Damp rollers pass over the surface, followed by inking rollers. The design, which is greasy, repels the water but retains the ink (also greasy), which is transferred to the paper. In modern practice, a sheet of zinc or aluminium, grained to retain moisture, is commonly used in place of stone. See also **chromolithography, photo-lithography.**

lithol'ogy (*Geol.*). The character of a rock expressed in terms of its mineral composition, its structure, the grain-size and arrangement of its component parts; that is, all those visible characters that in the aggregate impart individuality to the rock.

lith'olopaxy (*Surg.*). The operation of crushing a stone in the bladder, followed by the washing out of the crushed fragments.

lith'omarge (*Geol.*). An old name applied to various clays differing in origin and physical characters; of no systematic importance.

lithopae'dion, lithope'dion (*Med.*). A dead foetus which has become calcified within the maternal body.

lithoph'agous (*Zool*). Stone-eating; said of graminivorous Birds which take small stones into the gizzard, to aid mastication; also of certain Molluscs which tunnel in rock.

lithoph'ilous (*Ecol.*). Using stones as a shelter; said especially of aquatic animals.

lithophy'sae (*Geol.*). Literally 'stone bubbles'; they are spherical bodies up to the size of a fist occurring in glassy igneous rocks, particularly in some varieties of rhyolites. They usually exhibit, when broken across, a strongly developed series of concentric shells.—*sing.* **lithophysa.**

lith'ophyte (*Bot.*). A plant growing on rocks or stones.

lith'opone (*Paint.*). A white pigment, having good covering qualities, used for inside painting; compounded of 66% barium sulphate and 34% zinc sulphide approximately.

lith'osphere (*Geol.*). The outer rocky earth shells that surround the centrosphere or 'core' and which include the continuous *sima* and the discontinuous *sial* (qq.v.): a more scientific name for the *crust of the earth.* See **Earth, barysphere*.**

lithot'omous (*Zool.*). Stone-boring, as certain Molluscs.

lithot'omy (*Surg.*). Cutting into the bladder for the removal of a stone or calculus.

lith'otripsy (*Surg.*). The crushing of a stone in the bladder.

lith'otrite (*Surg.*). An instrument, with special blades, adapted for crushing stones in the bladder.

lithot'rity (*Surg.*). The operation of crushing stones in the bladder.

lithu'ria (*Med.*). An excess of uric acid and of urates in the urine.

litmus (*Chem.*). A material of organic origin used as an indicator in acidimetry and alkalimetry. See also **indicator** (1).

litter (*Bot.*). More or less undecomposed plant residues on the surface of the soil in a wood.

Little's disease (*Med.*). Spastic paralysis of the lower half of the body, due to congenital failure of development of nerve cells in the brain.

litt'oral (*Bot., Zool.*). Living on, or pertaining to the shore, especially the seashore (Latin, *litus*, *-oris*).

littoral conditions (*Geol*.). Conditions which obtain in the littoral zone (i.e. the shore zone); they involve strong current and wave action, causing intense marine abrasion, and the development of much sand and well-rounded pebbles. See also **littoral deposits.**

littoral deposits (*Geol*.). Deposits of the shore zone lying between high- and low-water mark. According to local conditions, these consist of shingle grading into sand, or one of these only. In special areas, the chief or only deposit may be coral sand. Littoral deposits are recognised by their coarse grain, by ripple marking, and by the fauna they contain, which includes in British seas such well-known forms as whelks (*Littorina littorea*), mussels (*Mytilus edulis*), etc.

littoral zone (*Bot*.). The part of the seashore inhabited by plants, below average low-water level.—(*Zool.*) The part of the seashore lying between low and high tide marks.

Littré's glands, lĕt'rā (*Zool*.). In male Mammals, small mucous glands occurring in the mucous membrane of the urethra.

Littrow spectrograph, lit'rō (*Light*). A convenient prism spectrograph in which the same lens serves both to collimate the light and to focus the spectrum on the photographic plate, the light being reflected back through the prism and lens by a plane mirror behind the prism. The instrument has several obvious advantages over the type with separate collimator and camera lens.

litz'endraht (*Radio*). Abbrev. **litz.** The German name, commonly used in English, for a high-frequency conductor made up of a number of strands, each separately insulated and interwoven, and connected together in parallel at the ends. Its a.c. resistance is less than that of the equivalent cross-section of solid conductor, owing to the reduction in skin effect.

live (*Acous*.). Said of an enclosure, or motion-picture set, which is not rendered dead by the presence of sound-absorbing areas, and in which the reverberation is normal or above normal.

live (*Elec. Eng*.). Said of an electric circuit or conductor in which there is a potential difference between it and earth.

live axle (*Eng*.). A revolving axle to which the road-wheels are rigidly attached, as distinct from a fixed or *dead axle* (q.v.).

live load (*Struct*.). A moving load or a variable force on a structure; e.g. that imposed by traffic movement over a bridge, as distinct from a dead weight or load, such as that due to the weight of the bridge.

live rail (*Elec. Eng*.). The conductor-rail of an electric traction system, the rail being at a potential above or below earth.

live ring (*Eng*.). A large roller-bearing, used for supporting turn-tables and revolving cranes.

live steam (*Eng*.). Steam supplied direct from a boiler, as distinct from exhaust steam or steam which has been partly expanded.

liver (*Zool*.). In *Invertebrata*, the digestive gland or *hepatopancreas* (q.v.): in *Vertebrata*, a large mass of glandular tissue arising as a diverticulum of the gut, which secretes the bile and plays an important part in excretion and other aspects of the general metabolism of the body.

liver of sulphur (*Chem*.). The literally translated name of *hepar sulphuris* (q.v.).

liver opal (*Min*.). A form of opaline silica, in colour resembling liver.

liver rot (*Vet*.). See **distomiasis.**

livering (*Paint*.). The condition when a paint in bulk becomes jelly-like or tough.

livid (*Bot*., *etc*.). Of the colour of an old bruise.

lixiviation (*Met*.). See **leaching.**

Llanber'is Slates (*Geol*.). Argillaceous rocks of Cambrian age occurring in the Cambrian Slate Belt of N. Wales, from Penrhyn to Nantlle in Carnarvonshire. They are famous for their perfect cleavage, which makes them perhaps the finest roofing slates known.

Llandeilian Series, lan-dī'li-an (*Geol*.). A division of the Ordovician System, lying between the Llanvirn Series below and the Caradocian Series above. As described by Murchison from the type locality (Llandeilo, Wales), the series comprises flags and limestones; but, traced westwards into Mid-Wales, these pass into shales containing graptolites. Their equivalents occur also in Shropshire, S. Scotland, and the Lake District.

Llandeilo Flags and Limestone (*Geol*.). These constitute the Llandeilian Series in the type locality, and reach about 2500 ft. in thickness, the flags and limestones alternating. They contain an abundant shelly fauna.

Llando'very (or **Llandoverian**) **Series** (*Geol*.). The lowest series in the Silurian System, divisible at the type locality (Llandovery, Wales) into three groups of beds—Lower, Middle, and Upper, defined by the graptolite faunas they contain.

Llanvirn Series (*Geol*.). A division of the Ordovician System, the name being taken from a S. Welsh locality. The series consists of blue-black shales containing a graptolite fauna, the characteristic forms being the 'tuning-fork' graptolites, *Didyomograptus bifidus* and *D. murchisoni*. In Wales and the Lake District the Llanvirn Series is largely volcanic.

Lloyd's mirror (*Light*). A device for producing interference fringes. A slit, illuminated by monochromatic light, is placed parallel to and just in front of the plane of a plane mirror or piece of unsilvered glass. Interference occurs between direct light from the slit and that reflected from the mirror. See **interference fringes.**

load. (1) The weight supported by a structure. —(2) The power output of an engine or motor under given circumstances.

load (*Aero*.). See **pay—** **useful—**

load (*Build*.). 50 cu. ft. of squared or hewn timber.

load (*Elec. Eng*.). A term used to denote the output of an electric machine or transformer, or a group of such apparatus, e.g. a generating station or substation. It may also denote the power carried by a particular circuit.

load curve (*Elec. Eng*.). A curve whose ordinates represent the load on a system or piece of apparatus, and whose abscissae represent time of day, month, or year, so that the curve indicates the value of the load at any time.

load curve (*Eng*., *etc*.). See **influence line.**

load despatcher (*Elec. Eng*.). An engineer who is responsible for the distribution of load over a large interconnected power system, and also, usually, for the general control of the system.

load displacement (*Ship Constr*.). A ship's displacement at load draught, i.e. the draught to the centre of the freeboard disc marking, which is set off to the summer freeboard.

load draught (*Ship Constr*.). See **draught.**

load-extension curve (*Met*.). A curve, plotted from the results obtained in a tensile test, showing the relations between the applied load and the extension produced.

load-factor (*Elec. Eng*.). The ratio of the average load, during a given period, on an electric circuit or piece of equipment to the maximum load during that period. See **plant load-factor.**

load-levelling relay (*Elec. Eng*.). A relay used in connexion with certain forms of apparatus such as storage-water heaters. It automatically switches them off when the demand on the system exceeds a certain value.

load line (*Ships*). A line marked on the outside of a ship to indicate the depth to which it may be immersed when loaded. Sometimes called PLIMSOLL MARK (after Samuel Plimsoll, the originator). See **freeboard.**

load line (*Thermionics*). A line drawn on a set of anode-current/anode-voltage characteristics of a thermionic valve in the graphical representation of the operating conditions. Its slope and position are determined by the anode load-impedance and steady electrode potentials respectively.

load-rate prepayment meter (*Elec. Eng*). A form of prepayment meter in which the charge per unit is changed whenever the load exceeds a certain predetermined value.

loaded (*Photog.*). A camera or film magazine is said to be *loaded* when it contains film.

loaded antenna (*Radio*). An antenna in which series inductance has been added to increase its natural wavelength.

loaded cable (*Elec. Comm.*). See **loading.**

loaded circuit (*Elec. Comm.*). A circuit which includes loaded cable and therefore has a reduced and uniform attenuation up to a cut-off frequency but a lower velocity of transmission.

loaded push-pull amplifier (*Elec. Comm.*). A push-pull stage of valve amplification in which the amplitude distortion arising from grid-current is minimised by shunting the grids with resistances low in comparison with the effective non-linear grid-resistance.

loader (*Mining*). A mechanical shovel or other device for loading trucks underground.

loading or **loaded cable** (*Elec. Comm.*). An inductance added to a communication circuit, such as an open-line or conductor-pair in a cable, to decrease the attenuation over a specified frequency-band, as predicted by Heaviside.

See **coil—**
continuous—
intermittent—
Krarup—
phantom—
Pupin—

loading (*Eng., etc.*). See **on-costs.**

loading (*Paper*). A material, such as clay, added to the pulp in order to produce a smooth surface and solidity.

loading (*Radio*). The addition of inductance to an antenna to increase its natural wavelength.

loading (*Textiles*) The weighting of fabrics by means of size or metallic compounds.

loading coil (*Elec. Comm.*). The inductance coil placed at uniform spacing in transmission lines, to reduce and unify the attenuation with frequency. Such coils are invariably made in the toroid form, with four equal windings, to facilitate the maintenance of balance.

loading gauge (*Rail.*). (1) The limiting dimensions governing height, width, etc. of rolling stock to ensure that adequate clearance is obtained for passage under bridges and through tunnels.—(2) A shaped bar suspended over a railway track, at the correct height and position, to check compliance of trucks passing underneath with the above limiting dimensions.

loadstone (*Min.*). See **lodestone.**

loam (*Build.*). A brick earth composed of clay and sand, which requires a fluxing material to fuse its constituents at furnace temperature. Also called MILD CLAY, SANDY CLAY.

loam (*Foundry*). A clayey sand milled with water to a thin plastic paste, from which moulds are built up on a backing of soft brick; generally swept or strickled to shape without the use of a pattern.

loam board (*Foundry*). See **strickle board.**

loam bricks (*Foundry*). Cakes of loam, or soft building-bricks built up with loam, which form a solid but porous support for the loam forming the wall of the mould. See **loam.**

loam mill (*Foundry*). A mortar mill used for mixing floor sand, clay, and water to form loam.

loam plates (*Foundry*). Cast-iron plates on which loam moulds are built up, or between a pair of which a mould is bolted. They are provided with lugs and projections to hold the loam.

loamy clay (*Geol.*). An earthy mixture of clay, silt, and sand, with more or less organic matter.

loan (*Paper*). Animal-sized rag paper made for bank-notes, bonds, etc.

lobar pneumonia (*Med.*). Inflammation of one or more lobes of the lung, the affected lobes becoming solid; due usually to infection with the pneumococcus. See also **pneumonia.**

Loba'ta (*Zool.*). An order of *Tentaculata*, the members of which are laterally compressed, and possess two lateral lobes in the oral region; the tentacles are non-retractile and without sheaths.

lobe (*Bot.*). One of the parts into which a flattened plant member is cut when the parts are too large and distinct to be called teeth but not wholly separated from one another.—(*Zool*) A rounded or flap-like projection.—*adjs.* **lo'bate, lobed, lobose, lob'ulate.**

lobe (*I.C. Engs.*). A rounded projection or cam. The term is usually applied to the projections on an ignition contact-breaker, and to the several cams formed on one ring, used in radial aero engines.

lobec'tomy (*Surg.*). Removal by operation of a (diseased) lobe of the lung.

lo'beline (*Chem.*). $C_{23}H_{29}O_2N$, an alkaloid of unknown constitution, obtained from *Lobelia inflata* It forms broad needles, m.p. 130°-131° C. It is monoacidic, and has the remarkable property of yielding acetophenone when heated with water.

lobing (*Bot.*). Division of the blade of a leaf, or of a flat thallus, when the separation does not extend much more than half way in, but is deeper than is necessary to cut out teeth.

lobopo'dia (*Zool.*). Thick, blunt pseudopodia of some *Sarcodina.*

Lobo'sa (*Zool.*). See **Amoebina.**

lobose (*Zool.*). Said of pseudopodia which are short and blunt and contain both ectoplasm and endoplasm. Cf. *filose.*

lob'ule or **lob'ulus** (*Zool.*). A small lobe: one of the polyhedral cell masses forming the liver in Vertebrates.—*adjs.* **lob'ular, lobulate.**

local action (*Chem.*). The corrosion of a piece of metal by the formation of galvanic cells between different parts of its surface.

local attraction (*Surv.*). An effect (due to mineral deposits in the ground or to other local causes, such as a nearby iron fence or lamp-post) which may give trouble in compass surveying, the compass needle being deviated from its magnetic north-south direction.

local battery (*Teleph.*). A telephone system in which each subscriber's telephone station is provided with its own battery, wet or dry. Abbrev. **L.B.** Cf. *central battery.*

local call (*Teleph.*). A call within a prescribed area surrounding a telephone exchange.

local exchange (*Teleph.*). The exchange to which a given subscriber has a direct line. Called in America CENTRAL OFFICE.

local extension (*Met.*). The extension which is produced in a tensile test after the ultimate tensile stress has been passed, and which is concentrated on part of the gauge length where a neck is formed. See **uniform extension.**

local junction circuit (*Teleph.*). A junction between exchanges in the unit-fee area, i.e. where the calling subscriber pays unit fee for a successful connexion.

local oscillations (*Radio*). Oscillations generated by the local oscillator.

local oscillator (*Radio*). The oscillator used in a heterodyne or supersonic heterodyne receiver to generate the currents which beat with the incoming signal. Also called BEATING OSCILLATOR.

local race (*Zool.*). A collection of individuals occurring in a particular locality and differing in minor characters from typical members of the species.

local time (*Astron.*). Applied to any of the three systems of time reckoning, sidereal, mean solar, or apparent solar time, it signifies the hour angle of the point of reference in question measured from the local meridian of the observer as against *standard time* (q.v.). The local times of a given instant at two places differ by the amount of their difference in longitude expressed in time, the local time at a place east of another being the greater.

local vent (*Plumb.*). A connexion enabling foul air in a room or plumbing fixture to escape to the outer air.

localisation (*Acous.*). See **auditory perspective.**

localisation of function (*Zool.*). The specialisation of certain areas of the brain to deal with certain types of stimuli.

localisation of respiration (*Zool.*). The specialisation of certain parts or areas of the body (as lungs, trachea, etc.) to perform the function of respiration, as opposed to the utilisation of the whole surface of the body for this purpose.

location (*Cinema.*). Used in the phrase *on location* to indicate the making of a motion-picture outside the studio, e.g. in a natural setting.

location (*Civ. Eng.*). (1) The exact position of an engineering project, as decided upon in the light of technical and other considerations.—(2) The process of determining the above position in the field.

locator (*Acous.*). See **sound locator.**

lochia, lō′ki-a (*Physiol.*). The normal discharge from the vagina during the first week or two after childbirth.

lock (*Elec. Comm.*). A relay *locks* when, on operation, it trips a ratchet device which holds it in operation after the operating current ceases; or if, on operation, it makes a circuit which maintains in a winding of the relay a current sufficient to keep it operated, after the original operating current has ceased.

lock, locking (*Horol.*). The stopping of the escape wheel.

lock-and-key theory (*Chem.*). A theory devised by Emil Fischer to explain the specific action of enzymes; based on the assumption that enzyme and substrate must possess a similar geometrical structure in order that a chemical reaction can occur.

lock-and-key theory (*Zool.*). A theory which postulates that the sharply marked differences between the genitalia of different species of Insects act, by preventing interbreeding, as a mechanical means of isolating the species.

lockjaw (*Med.*). See **tetanus.**

lock-nut (*Eng., etc.*). (1) An auxiliary nut used in conjunction with another, to prevent it from loosening under vibration.—(2) Any special type of nut designed to obviate accidental loosening.

lock rail (*Join.*). The door-rail which is level with the lock.

lock-saw (*Carp.*). See **compass saw.**

lock stile (*Join.*). That stile of a door in or on which the lock is fastened.

lock-woven mesh (*Civ. Eng.*). A mechanically woven fabric, made of steel wires crossing at right-angles and secured at the intersections, used as a reinforcement in ferro-concrete construction.

lock (*Furs*). The belly or under part of skins.

lock (*Hyd. Eng.*). A communicating channel, having gates at both ends, between the higher and lower reaches of a canal. It is used to transfer a vessel from one reach to the other.

lock-bay (*Hyd. Eng.*). The water space enclosed in a *lock-chamber* (q.v.).

lock-chamber (*Hyd. Eng.*). The space between the head-gates and tail-gates of a lock.

lock-gate (*Hyd. Eng.*). A pair of doors at one end of a lock, serving, in conjunction with a similar pair at the other end, to enclose water within the lock-chamber.

lock-paddle (*Hyd. Eng.*). A sluice through which water is passed to fill an empty lock-chamber.

lock-sill (*Hyd. Eng.*). See **mitre-sill.**

lockage (*Hyd. Eng.*). Water lost, i.e. transferred from a higher to a lower level, in the operation of passing a vessel through a lock.

locked-coil conductor (*Elec. Eng.*). A form of stranded conductor in which the outer wires are so shaped that they are prevented from having any radial movement.

locked-cover switch (*Elec. Eng.*). A switch which can be operated only after unlocking the cover. Also called ASYLUM SWITCH, LOCKING SWITCH, SECRET SWITCH.

locker jack (*Textiles*). See **lever jack.**

locker rack (*Civ. Eng.*). A form of rack railway in which the rack is centrally located and has, on each side, teeth in which horizontal cog-wheels work.

locking (*Radio*). A phenomenon which occurs when two thermionic valve oscillators, between which the initial difference in frequencies is small, are coupled together. As the coupling is increased, or the frequency difference is reduced, the oscillations suddenly ‘ jump ’ into synchronism.

locking angle or **angle of lock** (*Horol.*). The angle, measured from the pallet centre, through which the pallets have to move before unlocking can take place.

locking face (*Horol.*). The portion of the pallet upon which the teeth of the escape wheel drop for locking.

locking key (*Teleph.*). A hand-operated telephone key, which, when operated, remains in its operated position until released by the hand.

locking lampholder (*Elec. Eng.*). A lampholder with a switch for locking the lamp in position.

locking plate (*Horol.*). A circular plate around the periphery of which notches are cut, the distance between the notches regulating the number of hours struck.

locking relay (*Teleph.*). A telephone relay which, when operated, remains in its operated condition when the operating current ceases, either by closing a winding which carries a sustaining current or, more rarely, by mechanical means.

locking stile (*Join.*). A *lock stile* (q.v.).

locking switch (*Elec. Eng.*). See **locked-cover switch.**

Lockport Limestone and Dolomite (*Geol.*). Marine, highly fossiliferous strata which form the top of the scarp and the lip of the Niagara Falls, having a thickness of 130 ft. above the falls and faunally closely resembling the Wenlock Limestone in England. Sometimes called the NIAGARA LIMESTONE.

lockrand (*Masonry*). A course of stones laid as bondstones.

locomotive (*Eng.*). A vehicle driven by steam, oil, or electricity, for hauling trucks or carriages on a railway.

See **Diesel—** **electric—**
Diesel-electric— **steam—**

locomotive boiler (*Eng.*). The type of boiler used on steam locomotives; it consists of an internal fire-box at one end of the horizontal cylindrical shell, from which the hot gases are led through fire-tubes passing through the water space into the smoke-box at the front of the boiler. See **fire-tube boiler, fire-box.**

locomotor atax'ia (or **ataxy**) (*Med.*). See **tabes dorsalis.**

loc'ular, locula'tous (*Bot.*). Divided into compartments by septa.

loculici'dal (*Bot.*). Said of a fruit which splits open along the midribs of the carpels.

loc'ulus (*Bot.*). (1) One portion of a septate spore.—(2) One compartment in a synangium.—(3) One compartment in an anther, or in an ovary.—(*Zool.*) A small space or cavity; as in *Foraminifera*, a shell, chamber.

locus (*Bot.*). The same as the ***hilum*** (q.v.) of a starch grain.—(*Cyt.*) The position of a gene in a chromosome.

lode (*Civ. Eng.*). An artificial dyke.

lode (*Mining*). An inclined tabular mineral deposit of value, occurring between the definite walls of a fissure, crack, or vein in the earth's surface. When it contains gold the term *reef* is often used.

lodestuff (*Mining*). The minerals and gangue constituents of a lode.

lodestone, loadstone (*Min.*). A form of magnetite or manganite which exhibits polarity, behaving, when freely suspended, as a magnet. Occurs extensively at Magnet Heights in Sekukuniland (Transvaal) and elsewhere. See **armed lodestone.**

Lodge valve (*Thermionics*). See **ionic valve.**

Lodge-Muirhead coherer (*Radio*). A coherer consisting of a slowly rotating steel wheel whose periphery dips into a pool of mercury. The arrival of a signal causes a sudden drop in the resistance of the contact.

lod'icule (*Bot.*). One of two (or rarely three) small scales present below the stamens in the flower of a grass. They become distended with water and assist in the separation of the glumes.

loess, lō'es (*Geol.*). An aeolian clay, consisting of fine rock-flour, originating in arid regions and transported by wind. Vast accumulations of loess cover large areas in Asia.

Löffler boiler, lĕf'ler (*Eng.*). A high-pressure boiler employing forced circulation, by pumping steam through small-diameter tubes. Part of the high-temperature steam is returned to the water drum, to produce the saturated steam supply to the pump.

loft (*Build.*). (1) A garret formed within a roof-space.—(2) A raised gallery within a building, such as that for a choir in a church.

lofty (*Textiles*). Said of wool and woollen fabrics which possess bulky and springy qualities.

log (*Maths.*). The usual abbrev. of *logarithm* (q.v.).

log-dec. (*Radio*). Abbrev. for *logarithmic decrement.*

log, nautical (*Ships*). A device for estimating the speed of a vessel. In the old-fashioned log, a line divided into equal spaces (knots) runs freely off a reel and is attached to a *chip*, which is stationary in the water as the vessel travels. Time is measured by a log-glass. The modern *patent* (or *taffrail*) *log* mechanically indicates the rate of travel by means of a submerged fly or rotator, whose revolutions are conveyed to a register on the rail of the vessel by a braided hemp line secured to the rotator.

log (*Timber*). The stem of a felled tree when deprived of its limbs and ready for conversion.

logagraph'ia (*Med.*). Loss of the ability to express ideas in writing.

Loga'nian System (*Geol.*). A name suggested for the combined Coutchiching and Keewatin groups of Pre-Cambrian rocks in the Canadian Shield.

logarithm (*Maths.*). The *logarithm* of a number to a given base (usually 10 or *e*) is the index of the power to which the base must be raised to produce the number. The whole number preceding the decimal point of the logarithm is known as the *characteristic*, the decimal fraction being called the *mantissa*. Logarithms greatly facilitate long arithmetical operations. See ***e*** (*Maths.*).

logarithmic decrement (*Phys.*). For a body executing damped vibrations in which the damping force is proportional to the velocity, the *logarithmic decrement* is the natural logarithm of the ratio of the amplitudes of two successive swings, the ratio being constant during the decay of the oscillation. The undamped amplitude for a body set in motion by an impulse is $a\left(1+\frac{\lambda}{2}\right)$, where a is the first damped amplitude and λ the logarithmic decrement.—(*Radio*) The natural logarithm of the ratio of two successive maxima of current in a freely oscillating circuit containing inductance, capacity, and resistance in series. It is equal to the *decay factor* multiplied by the *periodic time*. Abbrev. **log-dec.** See also **damping factor, decay factor.**

log'atom (*Acous.*). An artificial word used in articulation testing. A logatom comprises a vowel with either an initial or a final consonant, or both, and is devoid of meaning in ordinary language. Long lists of such logatoms are read, the listeners recording their impression of the reception. See **articulation.**

logger (*Elec. Comm.*). An arrangement of thermionic valves for obtaining an output indication which is proportional to the logarithm of the input amplitude or intensity. Required in modulation and noise meters.

loggia, loj'i-a (*Build.*). A covered gallery or portico built into, or projecting from, the face of a building, and bounded by a colonnade on its open side.

log'otype (*Typog.*). A word, or several letters, cast as one piece of type.

lol'lingite (*Min.*). Arsenide of iron, $FeAs_2$, occurring as steel-grey crystals, prismatic in habit, belonging to the orthorhombic system.

lomen'tum (*Bot.*). A fruit, usually elongated, which develops constrictions as it matures, finally breaking across these into one-seeded portions.—*adj.* **lomen'tose.**

London Basin (*Geol.*). A geographical region of S.E. England, lying between the Chiltern Hills and the North Downs. Structurally the region is a great syncline, pitching towards the east and truncated by the sea.

London Clay (*Geol.*). A blue clay (brown when weathered), up to 600 ft. in thickness, occurring in the London and Hampshire Basins, of deltaic origin and Eocene in age. Contains septaria, sometimes fossiliferous, and yields the remains of plants (Sheppey), crustaceans, reptiles, fishes, and more prosaic shells on several horizons.

London tie (*Weaving*). The mounting of the harness in a jacquard loom in which the jacquard engine and the card cylinder lie at right-angles to the comber board, in such a way that the pattern cards are on one side of the loom. Also called CROSS-TIE.

London-shrunk (*Textiles*). A term used in the woollen and worsted trades to indicate that a fabric has been specially treated in order to prevent shrinkage during make-up and when worn.

lone pair (*Chem.*). A pair of valency electrons unshared by another atom. Such lone pairs are responsible for the formation of co-ordination compounds.

long-and-short work (*Masonry*). A mode of laying quoins and of forming door and window jambs in rubble walling, the stones being alternately laid horizontally and set up on end; the latter stones are usually longer than the former.

long column (*Civ. Eng.*). A column which fails by bending rather than by crushing; commonly taken as one whose length is more than 20 diameters.

long-day plant (*Bot.*). A plant which needs alternating periods of comparatively prolonged illumination and correspondingly reduced darkness for the proper development of flowers and fruit.

long-distance call (*Teleph.*). In America, any long-distance telephone call. In Europe, an international trunk call.

long-distance line (*Teleph.*). A line between toll centres, for establishing long-distance calls between subscribers through their local central offices.

long float (*Plast.*). A plasterer's trowel so long as to need two men to handle it.

long letters (*Typog.*). Letters with the long accent added (ā, ē, ī, etc.).

long line (*Ocean.*). A long line having many short subsidiary lines attached to it, each with one or more hooks, the whole being trailed behind a boat, to take certain kinds of midwater fish.

long-period variables (*Astron.*). See **variable star.**

long plane (*Join.*). A bench plane 27 in. long, used for planing very straight stuff.

long-primer (*Typog.*). The old name for a type-size, approximately 10-point.

long saw (*Tools.*). A *pit-saw* (q.v.).

long shot (*Cinema.*). In motion-picture production, a shot which comprises scenery or persons at a distance.

long-shunt compound winding (*Elec. Eng.*). A field winding arrangement for a compound-wound d.c. machine in which the shunt winding is connected across the external terminals, i.e. across the armature and the series winding.

long-sightedness (*Med.*). See **hypermetropia.**

long stick (*Textiles, etc.*). A length of 36½ in.; namely a yard with an extra ½ in. allowed for the folding of the cloth.

long superstructure (*Ship Constr.*). A superstructure which is sufficiently long to be included in calculations of the ship's main strength, and not simply as an excrescence.

long ton. A unit of weight equal to 2240 lb.

longwall coal-cutting machine (*Mining*). A machine with a rotating toothed-bar or disc for undercutting a long face of coal.

long waves (*Radio*). Electromagnetic waves whose wavelength is more than 1000 metres.

longeron, lon^{g}-zhe-ron^{g}' (*Aero.*). The main longitudinal member of a fuselage or nacelle, when of girder construction.

longi-, *usually* lon'ji- (Latin *longus*, long). A prefix used in the construction of compound terms; e.g. *longirostral*, having a long beak.

lon'gicorn (*Zool.*). Having elongate antennae, as some Beetles.

longipen'nate (*Zool.*). Having elongate wings or feathers.

longiros'tral (*Zool.*). Having a long beak or rostrum.

longitude, celestial and **terrestrial.** See under **latitude.**

longitude (*Surv.*). (1) Terrestrial longitude (see under **latitude**).—(2) The perpendicular distance of the mid-point of a survey line from the reference meridian.

longitude, libration in (*Astron.*). A phenomenon by which, owing to the uniform rotation of the moon on her axis combined with her non-uniform orbital motion, an observer on the earth sees more, now on the east and now on the west, of the lunar surface than an exact hemisphere. See **librations.**

longitudinal (*Aero.*). A girder that runs fore and aft on the outside of a rigid airship frame. Longitudinals connect together the outer rings of the transverse frames.

longitudinal clinometer (*Aero.*). An instrument that indicates the angle between the longitudinal axis of an aircraft and the horizontal. Sometimes called a FORE-AND-AFT LEVEL. (Not to be confused with *incidence indicator*.)

longitudinal currents (*Elec. Comm.*). Currents which travel along both legs of a circuit in parallel; e.g. interfering radio-frequency currents, and unbalance currents in line and measuring circuits. Generally undesired, but usefully employed in phantom circuits. Cf. *loop current.*

longitudinal frame (*Ship Constr.*). A stiffening member of a ship's hull disposed longitudinally, as opposed to a tranverse frame. It is supported at ends by either bulkheads or web frames, disposed transversely.

longitudinal joint (*Carp.*). A joint used to secure two pieces of timber together in the direction of their length.

Longmyn'dian Series (*Geol.*). A thick series of sedimentary rocks occurring in the Longmynd of Shropshire; believed to be Pre-Cambrian in age. The Eastern Longmyndian consists essentially of slaty rocks; the Western, of red feldspathic sandstones (arkoses).

lonk (*Textiles*). Wool that comes from the large type of mountain sheep of the same name, reared on the Lancashire and Yorkshire moorlands.

loo, low (*Vet.*). See **foot rot.**

loom (*Textiles*). A machine for weaving cloth, in which two sets of threads, *warp* and *weft*, are interlaced.

loom and spindle oils (*Lubricants*). The name given to oils of low viscosity, which are suitable for use in textile industries.

looming (*Meteor.*). The vague enlarged appearance of objects seen through a mist or fog, particularly at sea.

looming or **healding** (*Weaving*). The operation of drawing the threads of the warp through the eyes of the heald shaft, in the order arranged, prior to weaving; it may also include knotting and twisting.

loop (*Aero.*). An aeroplane manœuvre consisting of a complete revolution about a lateral axis, with the normally upper surface of the machine on the inside of the path of the loop. See also **inverted loop.**

loop (*Cinema.*). The slack which must be left between claws and sprocket wheels in a camera or projector, so that the intermittent motion arising from the one can be taken up before the film takes up the uniform motion of the other.

loop (*Elec. Comm.*). The *go* and *return* of an electrical circuit. The *loop current* is the normal current in an electrical two-wire circuit.

loop (*Radio*). See **antinode.**

loop antenna (*Radio*). See **frame antenna.**

loop cable (*Elec. Comm.*). The same as *twin cable.*

loop current (*Elec. Comm.*). The normal current which flows round a loop, *go* along one leg of the circuit, *return* along the other; *longitudinal currents* (q.v.) flow along both legs in parallel, and return *via* earth.

loop-dialling (*Auto. Teleph.*). The normal subscriber dialling, whereby trains of impulses are set up by interrupting the loop current from the exchange.

loop direction-finder (*Radio*). See **frame direction-finder.**

loop film (*Cinema.*). The same as *band film* or *cycle film.*

loop galvanometer (*Elec. Eng.*). A sensitive galvanometer in which the moving element is a

U-shaped current-carrying loop of aluminium foil, the two sides of the loop being in magnetic fields of opposite direction.

loop pile (*Textiles*). A surface covering, on a foundation texture, consisting of loops of thread formed usually by an extra warp. See **pile.**

loop resistance (or **impedance**) (*Elec. Comm.*). The total resistance or impedance of a circuit, from the sending end along the *go* wire and along the *return* wire or earth return.

loop test (*Elec. Eng.*). A method of test used for locating faults in electric cables. The faulty conductor is made to form part of a closed circuit or loop, an adjacent sound conductor usually forming another part.

See **Allen's— Murray— Varley—**

loop tuning error (*Radio*). The error in the bearings given by a direction finder, if the loop is improperly tuned.

loop yarn (*Textiles*). A fancy yarn, with small loops; composed of three threads folded together, one of which is an effect thread and forms the loops, which are bound by another thread.

looped filament (*Illum.*) A filament arranged in the form of a large helix of one or more turns; usually employed for carbon filament lamps.

looping-in (*Elec. Eng.*). A term used in wiring work to denote a method of avoiding the use of a tee-joint by carrying the conductor to and from the point to be supplied.

loose butt hinge (*Join.*). A butt hinge in which one leaf may be lifted from the other, enabling, e.g., a door to be easily removed.

loose centres (*Eng.*). Heads similar to the tailstock of a lathe; used for supporting work on the table of a planing machine, etc., so that it may be rotated.

loose coupler (*Radio*). An obsolete tuning system, which comprised two solenoids, sliding one within the other and forming part of two resonant circuits magnetically coupled.

loose coupling (*Elec. Eng.*). See **weak coupling.**

loose coupling (*Eng.*). A shaft coupling capable of instant disconnexion, as distinct from a *fast coupling*. See **claw coupling.**

loose eccentric (*Eng.*). An eccentric used on small reversing steam-engines. It rides freely on the shaft but is located by either of two stops on the shaft, which position and drive it for ahead- and reverse-running respectively.

loose gland (*Eng.*). A ring used in making an *expansion joint* (q.v.) between hot-water pipes. It slides on the spigot and compresses a rubber ring against the socket, to which it is bolted.

loose-key switch (*Elec. Eng.*). See **detachable-key switch.**

loose-leaf (*Bind.*). A binding system in which separate leaves are held together within a cover by means of a spring, ring, spiral, or other device, by unlocking which a leaf may be removed or inserted at any point.

loose pulley (*Eng.*). A pulley mounted freely on a shaft; generally used in conjunction with a *fast pulley* (q.v.) to provide means of starting and stopping the shaft by shifting the driving belt from one to the other.

loph (*Zool.*). A crest connecting the cusps of a molar tooth.

lopho- (Greek *lophos*, crest). A prefix used in the construction of compound terms; e.g. *lophocalthrops*, a sponge spicule with crested rays.

lophobran'chiate (*Zool.*). Having tuft-like, crest-like, or lobe-like gills.

lophocer'cal (*Zool.*). Having the caudal fin ridge-like and without rays.

loph'odont (*Zool.*). (Of Mammals) having cheek teeth with transverse ridges on the grinding surface.

lo'phophore (*Zool.*). An extrovert, bearing usually a ring of ciliated tentacles, found surrounding the mouth in certain aquatic animals of sedentary habit.

lophos'teon (*Zool.*). A sternal keel, as in *Carinatae.*

lophotrich'ous (*Biol.*). Said of organisms which have the flagella in one group arising from a single point on the surface of the cell.

lop'oliths (*Geol.*). Igneous intrusions having the form of a concavo-convex lens, thickest in the centre and tapering away in all directions; formed probably by the sagging downwards of an intrusion of laccolithic form. The great Bushveld intrusion in S. Africa is a good example.

lo'rate (*Bot., Zool.*). Shaped like a strap.

lor'doscolio'sis (*Med.*). A deformity of the spine in which *lordosis* (q.v.) is associated with lateral curvature of the spine.

lordo'sis (*Med.*). Deformity of the spine in which there is an increase of the forward convexity of the lower half of the spinal column.

lore (*Zool.*). In Birds, the space between the beak and the eye.—*adj.* **loral.**

Lorentz-Lorenz equation (*Chem.*). The equation by which molecular refractivity is defined:

$$[R]=\frac{n^2-1}{n^2+2}\cdot\frac{M}{\rho},$$

where $[R]$ is the molecular refractivity, n is the refractive index, M is the molecular weight, ρ is the density.

Lorenz apparatus (*Elec. Eng.*). A delicate apparatus for the absolute determination of the value of a resistance. A metal disc is rotated in an accurately known uniform field, and the e.m.f. produced between its centre and its periphery is balanced against the drop of potential caused by the field-producing current in the resistance to be measured.

Lorenzini's ampulla, —tsē'ne (*Zool.*). In *Selachii*, a large ampulla opening to the exterior by a pore, filled with mucus and innervated by the lateralis nerve; believed to subserve a pressure sense.

lo'rica (*Bot.*). An obsolete alternative for *testa.*—(*Zool.*) In *Rotifera* and *Protozoa*, a rigid inflexible case surrounding and protecting the body.—*adj.* **loricate.**

Lorica'ta (*Zool.*). An order of Reptiles having upper and lower temporal arcades, a hard palate, an immovable quadrate, loose abdominal ribs, socketed teeth; large powerful amphibious forms. Crocodiles, Alligators, Caimans, Gavials.

lorry or **lurry** (*Mining*). A movable bridge at the top of a sinking shaft.

lo'rum (*Zool.*). Any strap-shaped structure: in *Insecta*, a flexible transverse band supporting the base of the submentum.—*adj.* **lorate.**

Loschmidt number, losh'mit (*Chem.*). The number of molecules per c.c. in a gas at a standard pressure of one atmosphere at 0° C.; it is the same for all gases, with the approximate value of $2{\cdot}7\times10^{19}\ \mathrm{cm}^{-3}$.

loss (*Elec. Comm.*). The negative of gain in a transmission system; measured by the ratio, in decibels, of the output power level to the input power level of the whole or of a part of the system. Realised in an attenuator pad, consisting of a resistance-network, introducing a known loss when inserted in a line of specified impedance level. Cf. *gain.*

See **insertion— reflection—**
interaction— transmission—

loss of charge method (*Elec. Eng.*). A method of measuring very high resistances. The resistance is placed across the terminals of a charged condenser and the rate at which the charge leaks away is observed.

Lossiemouth Beds (*Geol.*). Well-bedded yellow sandstones, somewhat calcareous, occurring in the Elgin district on the south side of the Moray Firth in Scotland. Their Triassic age is proved by the occurrence of reptilian remains, the rock being sometimes known as REPTILIAN SANDSTONE.

lost-wax process (*Founding*). A process used in statuary founding. The figure is modelled in wax over a core, and then covered in plaster. The wax is melted out after the plaster has set and is replaced by the metal casting.

lot (*Cinema.*). The whole area of studios, workshops, and neighbouring locations in a motion-picture producing organisation.

lo′tic fauna (*Ecol.*). Animals living in running waters, such as rivers and streams.

loudness (*Acous.*). The subjective measure of the intensity of a sound, music, or noise. This subjective measure cannot be translated into objective measurement, but equalities of loudness can be adjusted subjectively.

loudness contour (*Acous.*). Lines drawn on the audition diagram of the average ear which indicate the intensities of sounds that appear to the ear to be equally loud. In an objective sound-level meter, any component in the applied sound is referred to the reftone by the use of these loudness contours.

loudness level (*Acous.*). The *loudness level* of a specified sound is the intensity of the reference tone, 1000 cycles per second, on the phon scale, which is adjusted to equal, in apparent loudness, the specified sound. The adjustment of equality is made either subjectively, or objectively, as in a *noise-meter* (q.v.).

loudspeaker (*Acous.*). An electro-acoustic transducer which accepts transmission currents and is particularly designed for radiating sound-waves for audition by a number of persons, as contrasted with the telephone receiver which is useful to one person only.

loudspeaker response (*Acous.*). The response of a loudspeaker is the response measured over its operating frequency range and in a particular direction. See **response.**

loudspeaking receiver (*Acous.*). The driving unit which is attached to a horn to form a complete loudspeaker. The unit may contain any moving-coil or moving-iron mechanism.

Loup River Series, loo (*Geol.*). Terrestrial deposits of Miocene age occurring in western N. America; famous for their rich vertebrate fauna, including several ancestors of the horse.

louping ill (*Vet.*). A filterable-virus infection of sheep, which is transmitted by ticks.

louvre or **louver,** loo′ver (*Build.*). A window space across which are sloping slats fixed horizontally, with spaces between for ventilation.

love arrows (*Min.*). See **flèches d'amour.**

low (*Meteor.*). A region of low pressure, or a *depression* (q.v.).

low (*Print.*). Type or blocks which are below the level of the forme surface are said to be *low*, and must be adjusted by underlaying or overlaying.

low-frequency amplifier (*Teleph.*). An amplifier for audio frequencies.

low-loading amplifier (*Elec. Comm.*). A more recent name for a *loaded push-pull amplifier* (q.v.).

low machine (or **mill**) **finish** (*Paper*). See **calendered paper.**

low melting-point alloys (*Met.*). See **fusible alloys.**

low-pass filter (*Elec. Comm.*). A filter which passes currents having frequencies lower than a nominal cut-off frequency, and highly attenuates those with frequencies above.

low-power modulation (*Radio*). A system of modulation used in radio-telephone transmitters, in which the high frequency oscillations are generated and modulated at a low power level, being subsequently amplified to the required level for transmission from the antenna. Cf. *high-power modulation.*

low-pressure cylinder (*Eng.*). The largest cylinder of a multiple-expansion steam-engine (e g. the third of a triple-expansion engine), in which the steam is finally expanded.

low red heat (*Met.*). A temperature between 550° and 700° C.

low-stop filter (*Elec. Comm.*). Same as *high-pass filter* (q.v.).

low tension (*Radio*). A term loosely applied to the currents and voltages associated with the filament or heater circuits of a thermionic tube.

low-tension battery (*Radio*). The battery which supplies the filament or heater current to a thermionic tube. See **A-battery.**

low-tension detonator (*Elec. Eng.*). The usual form of detonator, in which a charge is fired by heating a wire by an electric current.

low-tension ignition (*Elec. Eng.*). Electric ignition of the charge in the cylinder of an I.C. engine by the interruption of a current-carrying circuit inside the cylinder, no special means being employed to produce a high-voltage spark as in high-tension ignition.

low-tension magneto (*Elec. Eng.*). A magneto for producing the current impulses necessary in a low-tension ignition system.

low-volt release (*Elec. Eng.*). See **under-voltage release.**

low voltage (*Elec. Eng.*). A term used to denote any voltage not exceeding 250 volts.

low warp (*Textiles*). A term used to indicate a small number of threads per inch in the warp of a woven fabric.

low-water alarm (*Eng.*). An arrangement for indicating that the water-level in a boiler is dangerously low. See **low-water valve.**

low-water valve (*Eng.*). A boiler safety valve which is opened by a float in the water if the level of the latter falls dangerously low; generally fitted to stationary boilers such as the Lancashire.

lower case (*Typog.*). The type *case* (q.v.) in which small letters are kept (cf. *upper case*). Abbreviated (l.c.), the term is used as a proof-correction mark to indicate that a letter is to be changed from a capital to a small letter.

lower critical velocity (*Hyd.*). The critical velocity of change from eddy to viscous flow.

lower culmination (*Astron.*). See under **transit.**

lower deck (*Ship Constr.*). A deck below the weather deck. The term has no legal definition status, and is usually applied to a partial deck which acts simply as a platform and contributes nothing to main longitudinal strength.

Lower Greensand (*Geol.*). Marine strata of Lower Cretaceous age, forming the inner ring of hills in the Weald. They are also present in the Isle of Wight, and have a narrow outcrop extending from Leighton Buzzard to Hunstanton.

They consist mainly of sands, which contain bands of sandy limestone (Kentish Rag), chert, and fuller's earth. When unweathered, the beds are greenish in colour, owing to the presence of the mineral glauconite, but in surface exposures they are usually shades of red, buff, and brown, owing to the alteration of the glauconite.

lower layer (*Zool.*). In developing meroblastic ova, the secondary endoderm, which becomes separated from the under side of the blastoderm.

Lower Limestone Group (*Geol.*). A division of the Lower Carboniferous rocks of northern England; it consists of shales with limestones, delimited by the Dun Limestone at the base and the Oxford Limestone at the top, and is thus equivalent to the lower part of the Upper Bernician.

Lower Limestone Shales (*Geol.*). An obsolete term for the thinly bedded strata occurring at the base of the Carboniferous Limestone in England; not everywhere of the same age.

lower mean hemispherical candle-power (*Illum.*). See **mean hemispherical candle-power.**

lower transit (*Astron.*) Another name for *lower culmination* (see **culmination**).

lowering wedges (*Civ. Eng.*). See **striking wedges.**

lowry (*Rail.*). An open form of box-car.

lozenge. A rhombus shape.—(*Med.*) A medicated sweetmeat given usually for affections of the mouth or throat.

L.T. (*Radio*). Abbrev. for *low tension.*

Lu (*Chem.*). The symbol for *lutecium.*

lubricant. A substance capable of reducing friction between bearing surfaces in relative motion, either by virtue of separating them by a viscous fluid film (oil) or by an unctuous solid (graphite), or by providing an adsorbed layer of polarised oil molecules at the metallic surfaces.

lubrication. The use of a lubricant or lubricants (see above).

See **boundary—** **fluid—**

lu'bricous (*Bot.*). Having a slippery surface.

Lucas sounder (*Ocean.*). See **sounder.**

Lu'ciae (*Zool.*). See **Pyrosomatida.**

lucif'erase (*Zool.*). An oxidising enzyme which occurs in the luminous organs of certain animals and acts on luciferin to produce luminosity.

lucif'erin (*Zool.*). A protein-like substance which occurs in the luminous organs of certain animals and is oxidised by the action of luciferase.

luciph'ilous (*Ecol.*). Seeking light.

luciphu'gous (*Ecol.*). Shunning light.

Lüders lines (*Met.*). See **flow lines.**

Ludlow Beds (*Geol.*). A rock series in the Silurian System, often referred to as the LUDLOVIAN SERIES, lying above the Wenlockian, and divisible into the Lower Ludlow Group, the Aymestry Group, and the Upper Ludlow Group. The typical Ludlovian rocks are richly fossiliferous greenish mudstones and shales.

Ludlow Bone Bed (*Geol.*). A thin band, usually less than 6 in. in thickness, occurring at the base of the Downtonian stage of the Devonian System, and consisting largely of spines and fragmental hard parts of fossil fishes such as *Onchus.* Occurs in the Ludlow district of S. Shropshire.

Ludwig's angina, lood'vihh (*Med.*). Purulent infection in the region of the submaxillary gland below the lower jaw, the infection spreading into the floor of the mouth and towards the chin.

lues, loo'ēz (*Med.*). A plague or pestilence. The term is now synonymous with *syphilis* (q.v.).—*adj.* **luetic.**

luffer-boarding (*Build.*). Sloping slats arranged as in a *louvre* (q.v.).

luffing-jib crane (*Eng.*). A common form of jib crane, in which the jib is hinged at its lower end to the crane structure, so as to permit of alteration in its radius of action. Also called a DERRICKING JIB CRANE. See **level luffing-jib crane.**

lug (*Elec. Eng.*). On an accumulator plate, a projection to which the electrical connexion is made.

See **commutator—** **terminal—**

lug (*Eng.*). See **ear.**

lug sill (*Build.*). A *sill* (q.v.) which is of greater length than the distance between the jambs of the opening, so that its ends have to be built into the wall.

lu'garite (*Geol.*). A form of analcite-gabbro, occurring rarely among the basic intrusive rocks of Scotland; named from the Lugar sill in Ayrshire.

lum (*Mining*). A chimney sometimes erected at the top of an upcast shaft as a means of increasing the ventilating current.

lumachel'la (*Geol.*). The trade name for an ornamental marble containing opalised fossil shells.

lumbago (*Med.*). A rheumatic affection of the muscles and ligaments in the lumbar region or lower part of the back.

lum'bar (*Zool.*). Pertaining to, or situated near, the lower or posterior part of the back; as the *lumbar* vertebrae.

lumber (*Timber*). The term employed in the United States and Canada for sawn wood of all descriptions.

lu'men (*Bot.*). The space enclosed by the cell walls; used especially when the contents of the cell have disappeared.

lumen (*Zool.*). The central cavity of a duct or tubular organ.

lumen (*Light*). A unit of luminous flux defined as the amount of light energy emitted per unit space angle per second by a source of intensity one international candle. One lumen therefore falls on unit area at unit distance from one international candle, and the candle emits altogether 4π (or 12·57) lumens. See **luminous flux.**

lumen-hour (*Illum.*). A unit for quantity of light; it is the amount of light emitted by a lamp having an output of 1 *lumen* (q.v.) and operating for one hour.

lu'meter (*Illum.*). A term often used to denote a portable photometer for measuring illumination.

luminaire' (*Illum.*). A term sometimes used in America to denote an electric-light fitting.

lumines'cence (*Chem., Min.*). The emission of light as a result of causes other than high temperature; e.g. the effect of ultra-violet radiation on certain chemical compounds. Cf. *incandescence.*

lu'minophore (*Chem.*). (1) A substance which emits light at room temperature.—(2) A group of atoms which can make a compound luminescent.

luminosity (*Astron.*). The measure of the amount of light actually emitted by a star, irrespective of its distance; synonym for *absolute magnitude.*—(*Light*) See **intrinsic brilliancy.**

luminosity curve (*Light*). The curve which shows the spectral distribution of the light energy emission from a light-source.

See **photopic—*** **scotopic—***

luminosity factor (*Illum.*). The ratio of the total luminous flux emitted by a light source at a given wavelength to the total energy emitted.

luminosity function (*Astron.*). One of the formulae sought in statistical investigations of the heavens, and found by Kapteyn, which expresses what proportion of the stars per unit volume, say one million cubic parsecs, have absolute magnitudes lying in successive equal intervals.

luminous dial (*Horol.*). A dial the figures or chapters of which have been painted with a luminous paint containing radium salts.

luminous efficiency (*Illum.*). The ratio of the light emitted by a source of light to the energy input; usually expressed in lumens per watt for electric lamps.

luminous flux (*Illum.*). The rate of passage of radiant energy, i e. the quantity of light emitted from a light source.

luminous flux density (*Illum.*). The quantity of luminous flux passing through a normal unit area.

luminous hands (*Horol.*). Hands which have been painted or filled with luminous paint.

luminous intensity (*Illum.*). The amount of luminous flux emitted by a point source of light per unit solid angle. Also called CANDLE-POWER.

luminous paint (*Chem.*). The sulphides of calcium, barium, strontium, with traces of heavy metal impurities, added to a suitable medium, such as a varnish. They glow after exposure to light. Radioactive paints contain mesothorium or radiothorium, and do not require previous exposure to light.

luminous sulphides (*Chem.*). See **luminous paint.**

Lummaton Shell Bed (*Geol.*). A richly fossiliferous band occurring in the Upper Devonian Limestones at Lummaton Quarry in the Torquay district of E. Devonshire.

Lummer-Brodhun photometer, loom'er brod'hoon (*Illum*). A form of contrast photometer in which, by an arrangement of prisms, the surfaces illuminated respectively by the standard source and the source under test are next to one another, thus enabling an easy comparison to be made.

Lummer-Gehrcke interferometer, —gār'ke (*Light*). A very accurately worked, plane, parallel-sided glass plate, so arranged that light is internally reflected in a zig-zag path through the plate. The rays which emerge into the air at each reflection are in a condition to produce interference fringes of a very high order. The instrument is used for studying the fine structure of spectral lines. See **interference fringes.**

lump (*Worsted*). Light-weight fabric which has been made greater than the usual length.

lumps (*Vet.*). See **hypopteronosis cystica.**

lump lime (*Build*). The *quicklime* (q.v) produced by burning limestone in a kiln.

lumped constant (*Elec. Comm.*). An electrical magnitude may be taken as *lumped* or *concentrated* when its dimensions are small in comparison with the wavelength propagation of currents in it. Cf. *distributed constant.* See **primary constant.**

lumped voltage (*Thermionics*). A fictitious voltage formed by adding to the anode voltage of a multi-electrode thermionic tube the sum of the products of the various intermediate electrode voltages and the respective amplification factors associated with these electrodes. The total space current is a function of this quantity.

lunar bows (*Meteor.*). Bows of a similar nature to *rainbows* (q.v.) but produced by moonlight.

lunar distances (*Astron.*). The name applied to a method, much used in the past at sea, for determining a ship's longitude. It consisted of a comparison between the observed angular distance of the moon from a star, at a known local time, with the tabulated angular distance at a certain Greenwich time; rendered obsolete by radio.

lunar grid valve (*Thermionics*). See **inverted thermionic valve.**

lunar month (*Astron.*). See **synodic month.**

lu'nate, lu'nulate. Crescent-shaped; shaped like the new moon.

lunation (*Astron.*). See **synodic month.**

lunette (*Build.*). (1) A semicircular window or pediment over a doorway.—(2) A small arched opening in the curved side of a vault.

lung (*Zool.*). The respiratory organ in air-breathing Vertebrates. The lungs arise as a diverticulum from the ventral side of the pharynx; they consist of two vascular sacs filled with constantly renewed air.

lung book (*Zool.*). An organ of respiration in some *Arachnida* (Scorpions, Spiders), consisting of an air-filled cavity opening on the ventral surface of the body; it contains a large number of thin vascular lamellae, arranged like the leaves of a book.

lungsickness (*Vet.*). See **pleuropneumonia.**

lungworm disease (*Vet.*). See **husk.**

Lunge nitrometer, loong'e (*Chem.*). Apparatus devised for the estimation of oxides of nitrogen. May be used for other analytical processes which involve the measurement of a gas.

luni-solar precession (*Astron*). See **precession of the equinoxes.**

luniti'dal interval. The time interval between the moon's transit and the next high-water at a place.

lu'nule, lu'nula (*Zool*). A crescentic mark.—*adj.* **lu'nular.**

lu'pinine (*Chem.*). $C_{10}H_{19}ON$, an alkaloid of unknown constitution, obtained from the seeds of various species of *Lupinus*; rhombic crystals, m p. 69° C., b.p. 255°-257° C.

lupino'sis (*Vet.*). Poisoning of sheep, goats, cattle, and horses, by plants of the genus *Lupinus*.

lu'pus vulga'ris (*Med.*). Tuberculous infection of skin and mucous membranes, with the formation of nodules which later may ulcerate.

lurid (*Bot.*). Dingy yellowish-brown.

lurry (*Mining*). See **lorry.**

lustre (*Min.*). This depends upon the quality and amount of light that is reflected from the surface of a mineral. The highest degree of lustre in opaque minerals is *splendent*, the comparable term for transparent minerals being *adamantine* (i.e. the lustre of diamond). *Metallic* and *vitreous* indicate less brilliant lustre, while *pearly*, *resinous*, and *dull* are self-explanatory terms covering other degrees of lustre.

lustre (*Pot.*). A glaze applied to faience and porcelain in a thin layer in order to give a smooth, glistening surface, usually with metallic reflections.

lustre cloths (*Textiles*). Fabrics made from cotton warp and from weft consisting of mohair or lustre worsted; the cloth is either plain or figured, with lustrous surface.

lustring (*Textiles*). A process of friction-polishing applied to degummed, or nearly degummed, silk yarns, while under tension.

lute. A straightedge for levelling off clay in a brick mould by removing the excess.

lute'al (*Zool.*). Pertaining to, or resembling, the *corpus luteum* (q.v.).

lute'cium (*Chem.*). Symbol, Lu. A metallic element, a member of the rare earth group. At. no. 71, at. wt. 175·0. It occurs in bloomstrandite, gadolinite, polycrase, and xenotime.

lutein, lū'te-in (*Chem.*). Leaf xanthophyll. A yellow unsaturated compound occurring in the leaves and petals of various plants; formula, $C_{40}H_{56}O_2$. Also one of the colouring matters of egg yolk. It belongs to the group of carotenoid pigments.

lutein cells (*Zool.*). Peculiar cells occurring in the corpus luteum of the ovary.

luteino'ma (*Med.*). A tumour occurring in the ovary, composed of cells resembling those of the corpus luteum.

lu'teous (*Bot.*). Of a good yellow colour.

lutes'cent (*Bot.*). Pale-yellow.

lu'thern (*Build.*). A vertical window set in a roof.

lu'tidines (*Chem.*). Dimethyl-pyridines, which all occur in bone-oil and in coal-tar; general formula, $C_5(CH_3)_2H_3N$.

luting (*Pot.*). The process of affixing pre-cast or modelled ornament to ceramic bodies by means of liquid clay, before glazing and firing.

lux (*Light*). A unit of illumination, sometimes called a *metre-candle*. It is defined as the illumination produced by light from a source of unit intensity (one international candle) falling normally on a surface at a distance of one metre. See **illumination.**

luxmeter (*Illum.*). A name given to certain portable photometers which operate on the contrast principle and employ a variable aperture.

luxation (*Med.*). Dislocation.

luxul'yanite, luxul'liante (*Geol.*). A rare type of granite in which tourmaline, in stellate groups, replaces the normal coloured minerals, the other essential constituents being red orthoclase, partly replaced by tourmaline, and quartz. The rock is named from the original locality in Cornwall.

lycan'thropy (*Med.*). An insane delusion of a patient that he or she is a wolf.

lych (or **lich**) **gate** (*Build.*). A roofed gateway entrance to a churchyard.

lychnid'iate (*Zool.*). Phosphorescent; light-producing.

ly'coper'sicin, ly'copin (*Bot.*). A red pigment, allied to carotin, occurring in tomatoes and red pepper.

Lycop'sida (*Bot.*). A group of *Pteridophyta*; the plants have small leaves, and there are no leaf gaps in the stele of the stem.

Lydian stone, lydite, or **touchstone** (*Min.*). A highly siliceous rock, normally black in colour, although surface alteration may change this to grey. In England lydite occurs as small pebbles in many of the newer sedimentary rocks; for example, in the London Basin. They are uniformly fine-textured and even-grained, and frequently have a high polish. These lydites are rolled fragments of chert, derived from the Lower Carboniferous and Jurassic rocks. In other countries these terms have been applied to silicified argillaceous sedimentary rocks, such as flinty slates. The name *touchstone* has reference to the use of lydite as a streak plate for gold; the colour left on the stone after rubbing the metal across it indicates to the experienced eye the amount of alloy. It does not splinter.

lye (*Mining*). See **double parting.**

lying money (*Mining*). An allowance to piece-workers rendered idle by special circumstances.

lying panel (*Join.*). A door panel whose width is greater than its height.

lying (or **laying**) **press** (*Bind.*). A small portable screw-press in which books are held firmly during various operations.

Lyman series (*Phys.*). One of the hydrogen series occurring in the extreme ultra-violet region of the spectrum. The series may be represented by the formula $\nu = N\left(\frac{1}{1^2} - \frac{1}{n^2}\right)$, $n = 2,\ 3,\ 4\ldots$ (see **Balmer series**), the series limit being at wave number $N = 109678$, which corresponds to wavelength 912·6 A.U.

lymph-, lympho- (Latin *lympha*, water). A prefix used in the construction of compound terms; e.g. *lymphogenic*, produced in a lymph gland.

lymph (*Zool.*). A colourless circulating fluid occurring in the lymphatic vessels of Vertebrates and closely resembling blood plasma in composition.—*adj.* **lymphatic.**

lymph gland (*Zool.*). An aggregation of reticular connective tissue, crowded with lymphocytes, surrounded with a fibrous capsule, and provided with afferent and efferent lymph vessels.

lymph heart (*Zool.*). A contractile portion of a lymph vessel, which assists the circulation of the lymph and forces the lymph back into the veins.

lymphadeni'tis (*Med.*). Inflammation of lymph glands.

lymphad'enoid (*Med.*). Resembling the structure of a lymphatic gland.

lymphadeno'ma (*Med.*). Hodgkin's disease. A disease characterised by the progressive enlargement of the lymph glands and lymphoid tissue, anaemia, and enlargement of the spleen.

lymphadeno'sis (*Med.*). See **lymphocythaemia.**

lymphangiec'tasis (*Med.*). Dilatation and distension of lymphatic vessels, due usually to obstruction.

lymphangio'ma (*Med*). A nodular tumour consisting of lymphatic channels.

lymphangi'tis (*Med.*). Inflammation of a lymphatic vessel or vessels.

lymphangitis, epizootic (*Vet.*). A chronic contagious lymphangitis of horses, due to infection by *Cryptococcus farciminosus.*

lymphangitis, ulcerative (*Vet.*). A chronic contagious lymphangitis of horses, due to infection by *Corynebacterium pyogenes* (Bacillus of Preisz-Nocard).

lymphat'ic system (*Zool.*). In Vertebrates, a system of vessels pervading the body, in which the lymph circulates and which communicates with the venous system; lymph glands and lymph hearts are found on its course.

lymph'oblast (*Zool*). A large cell which occurs in a lymph gland and which, by subdivision, gives rise to lymphocytes.

lymph'ocyte (*Zool.*). A type of leucocyte formed largely in the lymph-glands and the spleen, characterised by hyaline basiphil cytoplasm and slight phagocytic powers.

lymphocythae'mia, lymphocythe'mia (*Med.*). Abnormal increase in the number of lymphocytes in the blood, associated with hyperplasia of lymphatic tissue. Also termed LYMPHATIC LEUKAEMIA, LYMPHADENOSIS.

lymphocytope'nia (*Med.*). Diminution, below normal, of the number of lymphocytes in the blood.

lymphocyto'sis (*Med.*). Increase in the number of lymphocytes in the blood, as in certain infections.

lymphogenous, —oj'en-us (*Zool.*). Lymph-producing.

lymphogranulo'ma. See **lymphadenoma.**

lymphogranuloma inguina'le (*Med.*). Poradenitis venerea. A venereal infection thought to be due to a filter-passing virus; characterised by enlargement of the glands in the groin; common in the tropics.

lymphoid tissue (*Zool.*). The type of reticular connective tissue, containing lymphocytes and lymphoblasts in the interstices, which occurs in lymph glands.

lympho'ma (*Med.*). A tumour consisting of lymphoid tissue.

lymphosarco'ma (*Med.*). A sarcoma arising in lymphatic glands or lymphoid tissue.

lymphu'ria (*Med.*). The presence of lymph in the urine.

lynx (*Furs*). The dressed skin of a lynx, one of the cat family. The fur of some of the lynxes is of very fine quality and is occasionally dyed black. The natural fur of the Canada lynx is shaggy and grey in colour; that of the Southern Bay lynx is reddish or yellowish, sometimes spotted; the spotted Spanish lynx has a fine fur.

ly'ocyto'sis (*Zool.*). Histolysis by the action of enzymes secreted outside the tissue, as in Insect metamorphosis.

lyol'ysis (*Chem.*). The formation of an acid and a base from a salt by interaction with the solvent; i.e. the reaction which opposes neutralisation.

Lyom'eri (*Zool.*). An order of *Neopterygii* comprising black, scaleless, abyssal marine forms, having an enormous mouth and a distensible stomach; capable of swallowing prey larger than themselves. Gulper Eels.

lyophil'ic colloid (*Chem*.). A colloid which is readily dispersed in a suitable medium, and may be re-dispersed after coagulation.

lyopho'bic colloid (*Chem*.). A colloid which is dispersed only with difficulty, yielding an unstable solution which cannot be re-formed after coagulation.

lyosorp'tion (*Chem*.). The adsorption of a liquid on a solid surface, especially of solvent on suspended particles.

lyotro'pic series (*Chem*.). Ions, radicals, or salts arranged in order of magnitude of their influence on various colloidal, physiological, and catalytic phenomena, an influence exerted by them as a result of the interaction of ions with the solvent. Cf. *Hofmeister series*.

lypes (*Mining*). Bad or dangerous roof in a mine.

ly'ra (*Zool*.). Any lyre-shaped structure; as a lyra pattern on a bone.

ly'rate (*Bot*., *Zool*.). Shaped like a lyre.—(*Bot*.) Said of a leaf which is pinnately lobed, and has a terminal lobe which is much larger than the lateral lobes.

lyr'iform organs (*Zool*.). Patches, consisting of well-innervated ridges of chitin, occurring on the legs, palpi, chelicerae, and body of various *Arachnida*; believed to be olfactory in function.

Lysholm-Smith torque converter (*Eng*.). A variable-ratio hydraulic gear of the Föttinger type, but in which multi-stage turbine blading gives high efficiency of transmission over a wide range; used in road and rail vehicles.

lysigenic, lysigenetic, lysigenous (*Bot*., *Zool*.). Said of a space formed by the breakdown and dissolution of cells. Also LYSOGENOUS.

ly'sin (*Zool*.). A substance which will cause dissolution of cells.

ly'sine (*Chem*.). $H_2N{\cdot}CH_2{\cdot}(CH_2)_3{\cdot}CH(NH_2)COOH$, a diamino-caproic acid, obtained from albuminous substances by decomposition with acids; casein yields 8%. Lysine is essential for animal growth.

Lysol (*Chem*.). A trade-name for a solution of cresols in soft soap. It is a well-known disinfectant.

ly'sozyme (*Bot*.). A substance of obscure nature, present in some plants; it has the power of killing bacteria, resembles an enzyme in some respects, but appears to be able to multiply itself

lys'sa (*Zool*.). In some Vertebrates, a cylindrical mass of muscle, cartilage, and connective-tissue, lying in the ventral part of the tongue.

lyssopho'bia (*Med*.) Morbid fear of contracting rabies, leading to the appearance of symptoms of this disease.

lyt'ta (*Zool*.) In *Carnivora*, a rod of cartilage or fibrous tissue embedded in the mass of the tongue.

M, μ

m- (*Chem.*). An abbrev. for (1) *meta-*, i.e. containing a benzene nucleus substituted in the 1.3 positions; (2) *meso-*, i.e. optically inactive by intramolecular compensation.

m-derived network or **filter** (*Elec. Comm.*). An electric wave filter element which is derived from a normal element by transformation, the aim being to obtain more desirable impedance characteristics than is possible in the prototype.

μ (*Chem.*). A symbol for (1) chemical potential; (2) dipole moment.

μ- (*Chem.*). A symbol signifying (1) *meso-*, i.e. substituted on a carbon atom situated between two hetero-atoms in a ring; (2) *meso-*, i.e. substituted on a carbon atom forming part of an intramolecular bridge.

μ (*Phys.*). The symbol for (1) index of refraction; (2) magnetic permeability; (3) the *micron* (q.v.).

μ (*Thermionics*). A symbol for *amplification factor* (q.v.).

M (*Chem.*). A general symbol for a metal or an electropositive radical.

M. or **M-** (*Chem.*). An abbrev. for *molar* (*concentration*).

M (*Chem.*). A symbol for *molecular weight.*

Ma (*Chem.*). The symbol for *masurium.*

macad'amised road (*Civ. Eng.*). A road whose surface is formed with broken stones of fairly uniform size rolled into a 6-10 in. layer, with gravel to fill the interstices.

maceration (*Zool.*). The process of soaking a specimen in a reagent in order to destroy some parts of it and to isolate other parts (as soaking the mouth-parts of an Insect in caustic potash solution in order to dissolve the fleshy parts and isolate the chitinous structures), or in order to soften it for dissection or section-cutting.

machicola'tions, match-i— (*Build.*). Apertures between the corbels of a projecting parapet, used in ancient castles to allow defenders to throw down missiles on attackers, and retained for reasons of ornament in some Gothic timbered houses.

machine (*Mech.*). A device for overcoming a resistance at one point by the application of a force at some other point. Typical simple machines are the inclined plane, the lever, the pulley, and the screw. See also **mechanical advantage, velocity ratio.**

machine, electric (*Elec. Eng.*). See **electric motor, electromagnetic generator, electrostatic generator.**

machine-finish(ed) (*Paper*). See **M.F., printing papers.**

machine-gun (*Small Arms*). An automatic weapon capable of sustained fire. It is fired from a mounting.

machine mining (*Mining*). Mechanised mining.

machine moulding (*Eng.*). The process of making moulds and cores by mechanical means, as, for example, by replacing hand-ramming by power-squeezing of the sand, or by the jolting of the box on a vibrating table. See **jolt-** (or **jar-**)**ramming machine, jolt-squeeze machine, sand slinger, squeezer.**

machine paper (*Paper*). A continuous web of paper made on the fourdrinier machine, the mould of which consists of a wire-cloth belt.

machine points (*Print.*). Iron pins used for obtaining correct register when printing sheets with uneven edges.

machine ringing (*Teleph.*). The normal ringing current which is placed on a subscriber's line to attract his attention. The currents are generated by a machine and interrupted by a suitable commutator.

machine riveting (*Eng.*). Clenching rivets by the use of compressed-air hammers or hydraulic riveters. See also **hydraulic riveter, pneumatic riveter.**

machine-room (*Print.*). That department of a printing establishment where the actual process of printing (by machine) is carried out.

machine switching (*Auto. Teleph.*). The same as *automatic telephone* (q.v.) system.

machine tools (*Eng.*).

See **drilling machine**
key-way tool
lathe
milling machine
planing machine
shaping machine
slotting machine.

machinery oils (*Lubricants*). Pale or red oils suitable for lubricating bearings, shafting, and cylinders (not steam). See also **cylinder oils, lubricant.**

machining (*Print.*). The operation of printing by machine.

machopol'yp (*Zool.*). See **nematophore.**

mackerel sky (*Meteor.*). Cirro-cumulus or alto-cumulus cloud arranged in regular patterns suggesting the markings on mackerel.

mackle (*Typog.*). A defective printed sheet, having a blurred appearance due to incorrect impression.—*adj.* **mackled.**

macle, makl (*Min.*). The French term for a *twin crystal*; in the diamond industry, more commonly used than *twin*, especially for twinned octahedra.

macr-, macro- (Greek *makros*, large). A prefix used in the construction of compound terms; e g. *macroglossate*, having a large tongue.

macramoe'ba (*Zool.*). In certain *Sarcodina*, a large amoebula stage probably representing a female gamete. Cf. *micramoeba*.

macran'er (*Zool.*). An abnormally large male ant.

macrer'gate (*Zool.*). An abnormally large worker ant.

macro-axis (*Crystal.*). The long axis in orthorhombic and triclinic crystals.

macroceph'aly, macrocepha'lia (*Med.*). Abnormal largeness of the head.

macrochae'tae (*Zool.*). In *Diptera*, the differentiated bristles.

macrocheil'ia (*Med.*). Abnormal increase in the size of the lips.

macrocheir'ia (*Med.*). Abnormally large hands.

macrochem'istry (*Chem.*). The study of the composition and chemical properties of matter in bulk.

macrocon'jugant (*Zool.*). In certain *Mastigophora*, the larger of a pair of conjugants.

mac'rocyte (*Zool.*). A large uninuclear leucocyte with great powers of mobility and phagocytosis.

macrodac'tyly, macrodactyl'ia (*Med.*). Congenital hypertrophy of a finger or fingers.

macrogam'ete (*Zool.*). The larger of a pair of conjugating gametes, generally considered to be the female gamete.

macrogame'tocyte (*Zool.*). In *Protozoa*, a stage developing from a trophozoite and giving rise to female gametes.

macrog'amy (*Zool.*). In *Protozoa*, syngamy between two full-grown individuals of the species.

macrogen'itoso'mia prae'cox (*Med.*). Excessive growth of the body, associated with precocious sexual development.

macrogloss'ia (*Med.*). Abnormal enlargement of the tongue.

macrogonid'ia (*Zool.*). In some *Mastigophora* (as *Volvox*), a gametocyte which will give rise to macrogametes.

mac'rogyne (*Zool.*). An abnormally large queen ant.

macrolecithal (*Zool.*). See **megalecithal.**

macrolym'phocyte (*Zool.*). A large type of lymphocyte occurring in bone-marrow.

mac'romere (*Zool.*). In a segmenting ovum, one of the large cells which are formed in the lower or vegetable hemisphere.

macrome'rozo'ite (*Zool.*). A stage in the life-cycle of certain *Haemosporidia*, arising by schizogony from a macroschizont.

macrono'tal (*Zool.*). Having a large thorax.

mac'ront (*Zool.*). In *Neosporidia*, a stage formed after schizogony which gives rise by fission to macrogametes.

macronu'cleus (*Zool*). In *Ciliophora*, the larger of the two nuclei which is composed of vegetative chromatin. Cf. *micronucleus.*

mac'rophage (*Zool.*). A *macrocyte* (q.v.): a large amoeboid phagocytic cell of the spleen pulp.

macro-photography (*Photog.*). The normal process of making enlarged prints from negatives.

macrophyll'ine (*Bot.*). Divided into, or having, large lobes.

macrophyr'ic, macroporphyrit'ic (*Geol.*). A textural term descriptive of medium to fine-grained igneous rocks containing phenocrysts more than 2 mm. in length. Cf. *microphyric.*

macrop'sia (*Med.*). The condition in which objects appear to the observer larger than they are, a symptom of hysteria or due to retinal disease.

macroschi'zont (*Zool.*). A stage in the life-cycle of certain *Haemosporidia.*

macroscop'ic. Visible to the naked eye.

macrosmat'ic (*Zool.*). Having a highly developed sense of smell.

mac'rosome (*Zool.*). A large protoplasmic granule or globule.

macrospher'ic (*Zool.*). See **megalospheric.**

macrosplanch'nic (*Zool.*). Having a large body and short legs; as a Tick.

mac'rospore (*Bot.*, *Zool.*). See **megaspore.**

macrospor'ophyll (*Bot.*). See **megasporophyll.**

macrosto'ma (*Med.*). Abnormal width of the mouth due to a defect in development.

mac'rostructure (*Met.*). The general arrangement of crystals in a solid metal (e.g. an ingot) as seen by the naked eye or at low magnification. The term is also applied to the general distribution of impurities in a mass of metal as seen by the naked eye after certain methods of etching.

macro'tous (*Zool.*). Having large ears.

macrotrich'ia (*Zool.*). Large setae occurring on the wings of certain Insects. Cf. *microtrichia.*

mac'ula, macule (*Bot.*, *Zool.*). A blotch or spot of colour: a small tubercle: a small shallow pit. —(*Med.*) A small discoloured spot on the skin, not raised above the surface.—*adjs.* **macular, mac'ulate, maculif'erous, macu'liform, mac'ulose.**

macula acu'stica (*Zool.*). The point in the sacculus and utriculus of the ear at which the nerve-fibres enter.

macula lu'tea (*Zool.*). See **yellow spot.**

Madagascar aquamarine (*Min.*). A strongly dichroic variety of blue beryl obtained, as gemstone material, from Madagascar.

Madagascar topaz (*Min.*). See **citrine.**

made ground (*Build.*). Ground formed by filling in natural or artificial pits with hardcore or rubbish.

Madeira topaz (*Min.*). A form of *Spanish topaz* (q.v.).

Madras muslin (*Textiles*). A woven fabric with opaque figuring on a plain gauze ground; used mainly for window curtains.

madrepor'ic canal (*Zool.*). See **stone canal.**

madreporic vesicle (*Zool.*). In *Echinodermata*, a small cavity which represents the right anterior coelomic sac of the larva.

madrepo'rite (*Zool.*). In *Echinodermata*, a calcareous plate with a grooved surface, perforated by numerous fine canaliculi and situated in an interambulacral position, through which water passes to the axial sinus.—*adj.* **madrepo'ric.**

Madura foot (*Med.*). Mycetoma. A disease, endemic in India and occurring also in other parts of the world, in which nodular, ulcerated swellings appear on the foot, due to infection with a fungus.

Maentwrog Beds, min-too'rog (*Geol.*). Flaggy slates forming the lowest division of the Lingula Flags in the Upper Cambrian rocks of N. Wales.

maestro, mī'strō (*Meteor.*). A fine-weather, non-autumn north-west wind in the Adriatic.

mafic (*Min.*). A mnemonic term for the ferromagnesian and other nonfelsic minerals actually present in an igneous rock.

Maftex (*Build.*). Trade-name for a building-board having good thermal insulation properties.

magazine (*Photog.*). The light-tight enclosure for retaining exposed or unexposed film; it is generally detachable from the camera proper, so that the latter need not be taken into the dark-room for loading and unloading.

magazine arc lamp (*Illum.*). A form of electric arc lamp having a number of carbons which are automatically brought into operation as the others burn away, so that the lamp can burn for long periods without attention.

magazine valve (*Cinema.*). The same as *fire-trap* (q.v.).

Magbestic (*Build.*). A jointless flooring composition made from magnesite.

Magellanic Clouds (*Astron.*). Two striking clusters of stars in the southern hemisphere, called respectively the *Larger* and the *Lesser Magellanic Cloud*; they have the appearance of being detached portions of the Milky Way, and are known to be very distant.

Magen'die's foramen (*Zool.*). In Vertebrates, an aperture in the roof of the fourth ventricle of the brain, through which the cerebro-spinal fluid communicates with the fluid in the spaces enclosed by the meningeal membranes.

magenta (*Chem.*). *Fuchsine* (q.v.).

magenta wax test (*Cables*). The paper tapes are unrolled and the oil extracted with petrol. A magenta water-dye then colours the papers except where wax has been formed. Traces of wax, ordinarily invisible, are shown up very clearly.

maggot (*Zool.*). An acephalous, apodous, eruciform larva such as that of certain *Diptera.*

magic lantern (*Photog.*). Obsolete name for a projection-lantern using lantern-slides.

magilp', magilph' (*Dec.*). A preparation of mastic varnish which has been diluted with linseed oil; used as a medium in the mixing of paints for fine work.

magma (*Geol.*). A comprehensive term given to the molten fluids and gaseous fractions which have been generated within the earth, and from which igneous rocks are considered to have been derived.

magmatic cycle (*Geol.*). See **igneous cycle.**

magna'lium (*Met.*). An aluminium-base alloy. Contains 1·75% copper and 1·75% magnesium. Tensile strength, 16-20 tons per sq. in., cold-worked 24-28 tons, resistant to corrosion, malleable, sp. gr. less than that of aluminium.

Magnascope (*Cinema.*). A projection arrangement whereby the projected picture can be altered in size while remaining in focus, the mechanism providing for the synchronous operation of the lenses with the movement of the mask surrounding the screen.

magnesia. See **magnesium oxide, periclase.**

magnesia alba (*Chem.*). Commercial basic magnesium carbonate.

magnesia-alum (*Min*) See **pickeringite.**

magnesia cement (*Chem.*). See **Sorel's cement.**

magnesia glass (*Glass*). Glass containing usually 3-4% of magnesium oxide. Electric-lamp bulbs have been mainly made from this type of glass since fully automatic methods of production were adopted.

magnesia mixture (*Chem*). A mixture of magnesium chloride, ammonium chloride, and ammonia solution used in chemical analysis for the estimation of phosphorus.

magnesia usta (*Chem.*). Commercial name for magnesium carbonate calcined at a low temperature for a long period.

Magnesian Limestone (*Geol.*). The major division of the English Permian System of N.E. England; consists of several hundred feet of dolomitic limestones and dolomites where best developed in Durham, whence they outcrop continuously southwards to near Nottingham. Feebly represented also locally west of the Pennines.

magnesian spinel (*Min.*). See **spinel.**

mag'nesite (*Met.*). Carbonate of magnesium, crystallising in the trigonal system. Magnesite is a basic refractory used in open-hearth and other high-temperature furnaces; it is resistant to attack by basic slag. It is obtained from natural deposits (mostly magnesium carbonate, $MgCO_3$), which is calcined at high temperature to drive off moisture and carbon dioxide, before being used as a refractory.—(*Photog.*) Magnesium carbonate is the substance adopted for a standard white surface.

magnesite flooring (*Build.*). A composition of calcined magnesite and magnesium chloride solution with a filler of sawdust, wood flour, ground silica, or quartz; used as a covering for concrete floors on which it is floated in a layer about 1½ in. thick. Also called JOINTLESS FLOORING.

magne'sium (*Chem.*). Symbol, Mg. A metallic element in the second group of the periodic system. At. no. 12, at wt. 24·32, m.p. 649° C., specific electrical resistivity 4·46 microhms per c.c., b.p. 1120° C. at 760 mm., density 1·75 grams per c.c., latent heat of fusion 46·5 cal. per gram at 644°. Only found in nature as compounds. The metal is a brilliant white in colour, and magnesium ribbon burns in air, giving an intense white light, rich in ultra-violet rays.—(*Met.*) Magnesium is used as a deoxidiser for copper, brass, and nickel alloys, and added to several aluminium-base alloys. A basis metal in strong light alloys (e.g. *Elektron*, q.v.) which are used in aircraft and automobile construction and for reciprocating parts.

magnesium carbonate (*Chem.*). $MgCO_3$. See **magnesite.**

magnesium nitride (*Chem.*). Mg_3N_2. Formed by the direct combination of the elements or by heating magnesium in gaseous ammonia.

magnesium orthodisilicate (*Chem.*). Occurs in nature as *serpentine* (q.v., *Min.*).

magnesium oxide (*Chem.*). MgO. Obtained by igniting the metal in air. In the form of calcined magnesite and dolomite it is used as a refractory material. See also **periclase.**

magnesium oxychloride cement (*Chem.*). See **Sorel's cement.**

magnesium silicide (*Chem.*). Mg_2Si. Sometimes used for the preparation of impure silicomethane or silicane.

magnet. A mass of iron or other material which possesses the property of attracting or repelling other masses of iron, and which also exerts a force on a current-carrying conductor placed in its vicinity. See **electromagnet, permanent magnet.**

magnet coil (*Elec. Eng.*). See **magnetising coil.**

magnet core. The iron core within the coil of an electromagnet.

magnet frame (*Elec. Eng*). The portion of a rotating-armature electric machine which supports the magnet poles and also forms part of the magnetic circuit. Also called MAGNET YOKE.

magnet pole (*Elec Eng.*). See **pole piece.**

magnet steel (*Met.*). A steel from which permanent magnets are made. It must have a high remanence and coercive force. Steels for this purpose contain high percentages of tungsten (up to 10%) or cobalt (up to 35%).

magnet yoke (*Elec. Eng.*). See **magnet frame.**

magnetic alloys (*Met.*). See **Permalloy, Mu-metal, silicon-iron.**

magnetic axis. A line through the effective centres of the poles of a magnet.

magnetic bearing (*Surv.*). The horizontal angle between any survey line and the direction of magnetic north.

magnetic blow-out (*Elec. Eng.*). A special magnet coil fitted to circuit-breakers or other similar apparatus in order to produce a magnetic field at the point of opening the circuit, so that any arc which is formed is deflected in such a direction as to be lengthened or brought into contact with a cool surface and is rapidly extinguished. Also called BLOW-OUT COIL.

magnetic braking (*Elec. Eng.*). A method of braking a moving system in which a brake is applied and released by means of an electromagnet.

magnetic chuck (*Eng.*). A chuck having a surface in which alternate steel elements, separated by insulating material, are polarised by electromagnets, so as to hold light flat work securely on the table of a grinding machine or other machine tool.

magnetic circuit (*Elec. Eng.*). The closed path taken by the magnetic flux in an electric machine or other piece of apparatus.

magnetic clutch (*Elec. Eng.*). A clutch in which the necessary force to hold the two parts together is provided by means of an electromagnet.

magnetic compass. A compass consisting of a magnetic needle which sets itself along the lines of the earth's magnetic field.

magnetic component (*Radio*). That component of an electromagnetic wave which is at right-angles to the direction of propagation and to the force which the wave exerts on an electric charge in its path.

magnetic creeping (*Elec. Eng.*). A gradual increase in the intensity of magnetisation of a piece of magnetic material, after a continued application of the magnetising force.

magnetic damping (*Elec. Eng.*). The process of checking the oscillations of a moving system by means of eddy currents set up by the movement of the system in a magnetic field.

magnetic declination (*Surv.*). See **declination.**

magnetic deflection (*Cathode Ray Tubes*). Deflection of the path of a cathode ray beam by a magnetic field produced by current-carrying coils close to the tube.

magnetic delay (*Elec. Comm.*). Delay in the transmission of a signal introduced by recording the signal magnetically on a moving tape and reproducing it at a point further along the tape, the delay being determined by the time of travel of the tape between the recording and reproducing points.

magnetic detector (*Radio*). A generic name for those early forms of detectors of high-frequency currents which depended on the demagnetising effect of an alternating magnetic field upon a magnetised iron core.

magnetic difference of potential (*Elec. Eng.*). A difference in the magnetic conditions at two points which gives rise to a magnetic flux between the points.

magnetic dip. See **dip.**

magnetic discontinuity (*Elec. Eng.*). An air gap, or a layer of non-magnetic material, in a magnetic circuit.

magnetic elongation (*Elec. Eng.*). The slight increase in length of a wire of magnetic material when it is magnetised. See **magneto-striction.**

magnetic field. The region in the neighbourhood of a permanent magnet or a current-carrying conductor in which magnetic forces can be detected.

magnetic-field strength. See **magnetising force.**

magnetic flux (*Elec. Eng.*). The surface integral of the magnetic field intensity normal to the surface. The magnetic flux is conceived, for theoretical purposes, as starting from a positive fictitious north-pole and ending on a fictitious south-pole, without loss. In practice, a complete circuit, the *magnetic circuit*, is envisaged, the quantity of magnetic flux being sustained by a magnetomotive force, *m.m.f.* (co-existent with ampere-turns linked with the said circuit, or derived from the molecular m.m.f. of a so-called permanent magnet), in a continuity made up of materials or space contributing reluctance, in analogy with the electric conducting circuit. Measured in *lines* (or *megalines*) or *maxwells.*

magnetic flux density (*Elec. Eng.*). The normal magnetic flux per unit area. Symbol B, measured in lines per sq. cm. or gauss, it being postulated that each fictitious unit north-pole emanates 4π lines, so that the mechanical force on the said pole, when placed in a field of unit flux density, is one dyne. See **intensity of field.**

magnetic focusing (*Cathode Ray Tubes*). Concentration of the stream of electrons emitted from the cathode into a narrow pencil, by means of a steady magnetic field directed axially along the direction of flow of the electrons. Cf. *electrostatic focusing.*

magnetic force. See **magnetising force.**

magnetic hysteresis (*Elec. Eng.*). A lagging of the magnetic flux in a magnetic material behind the magnetising force which is producing it.

magnetic hysteresis loop (*Elec. Eng.*). A closed figure formed by plotting magnetising force against flux density for a magnetic material when the magnetising force is taken through a complete cycle of increasing and decreasing values. The area of the figure is proportional to the magnetic hysteresis loss. Also called B/H LOOP.

magnetic hysteresis loss (*Elec. Eng.*). The energy expended in taking a piece of magnetic material through a complete cycle of magnetisation. The magnitude of the loss per cycle is proportional to the area of the magnetic hysteresis loop.

magnetic induction. See **magnetic flux density.**

magnetic iron-ore (*Min.*). See **magnetite.**

magnetic leakage (*Elec. Eng.*). See **leakage flux.**

magnetic link (*Elec. Eng.*). A small piece of magnet steel placed in the immediate vicinity of a conductor carrying a heavy surge current, e.g. a transmission line tower carrying a lightning stroke current. The magnetisation of the link affords a means of estimating the value of the current.

magnetic lock. A locking device, used chiefly on miners' lamps, which can be released only by a magnet.

magnetic map. A map showing the distribution of the earth's magnetic field.

magnetic mine (*Armaments*). A submarine mine for resting on the bottom in shallow water (e.g. an estuary). Detonation is achieved by an electrical delay circuit which is actuated by a delicately pivoted strong permanent magnet. The magnet is rendered ineffective until the mine is resting on the sea-bed; thereafter it is affected by the distortion of the earth's field by the presence of any large mass of magnetic material, such as a ship. Magnetic mines are countered by **degaussing** (q.v.).

magnetic modulation (*Radio*). A form of modulation sometimes used for keying continuous-wave transmitters, and formerly for radiotelephony; in it the inductance of an iron-cored coil is varied by control of a unidirectional polarising flux.

magnetic moment. The ratio of the torque exerted in a vacuum on a magnet to the magnetising force of the uniform field in which it is situated, the magnet being in the position giving the maximum torque. Also called MOMENT OF A MAGNET.

Magnetic North. The direction in which the north pole of a pivoted magnet will point. It differs from the Geographical North by an angle called the *declination* (q.v.).

magnetic oxide of iron. See **magnetite.**

magnetic polarisation (*Chem.*). The production of optical activity by placing an inactive substance in a magnetic field.

magnetic pole (*Elec. Eng.*). A convenient conception, which cannot exist, deduced from the experimental indication of the direction of the magnetic field arising from a permanent magnet. If the latter is long in comparison with its cross-section and the ends are provided with soft-iron balls, the direction of the magnetic field, as indicated by iron-filings, appears to radiate from the centres of such spheres, called *poles*. Experimentally, such poles appear as magnetic charges, from which are deduced the magnitude of magnetic poles, magnetic field-strength, magnetic flux, magnetic potential, and electrical units.

magnetic pyrite (*Min.*). See **pyrrhotite.**

magnetic reaction (*Radio*). See **electromagnetic reaction.**

magnetic recorder (*Acous.*). A machine which records and reproduces speech and music on a magnetic tape, pulling it with a steady velocity through recording, reproducing, and saturating (wash-out) pole-tips. See **Blattnerphone** and **Stille machine.**

magnetic recording (*Acous.*). Recording of speech or music by modulation of the residual magnetisation along a steel tape. Magnetisation of the tape is effected by coil-excited pole-tips. Reproduction is obtained by passing the tape through similar pole-tips, the residual magnetisation producing a varying flux in the coils and hence a modulation electromotive force.

magnetic screen (*Elec. Eng.*). A screen of soft iron used to surround certain electrical instruments, in order to protect them from the effect of stray magnetic fields.

magnetic separator. A device for separating, by means of an electromagnet, any magnetic particles in a mixture from the remainder of the mixture; e.g., for separating iron-filings from brass-filings, or magnetic particles of ore from non-magnetic particles.

magnetic shell. A thin sheet of magnetic material magnetised so that one face is a north pole and the other face is a south pole. Such a concept is often used in theoretical work on magnetism.

magnetic shunt (*Elec. Eng.*). A piece of magnetic material in parallel with a portion of a magnetic circuit, so arranged as to vary the amount of magnetic flux in that portion of the circuit.

magnetic slot-wedge (*Elec. Eng*). A slot-wedge of magnetic material which gives the same effect as a closed slot.

Magnetic South. The direction in which the South pole of a pivoted magnet will point. It differs from the Geographical South by an angle called the *declination* (q.v).

magnetic squeezer (*Moulding*). See **squeezer.**

magnetic stability. A term used to denote the power of permanent magnets to retain their magnetism in spite of the influence of external magnetic fields, vibration, etc.

magnetic storms (*Meteor.*). Widespread disturbances in the magnetic field of the earth which may last for periods varying from a few hours to a few days. Such storms are often accompanied by brilliant aurorae and by earth-currents of such magnitude as to interfere with electrical communications. There is evidence to show that terrestrial magnetic storms accompany the appearance of large sunspots.

magnetic tube of force. The space enclosed by all the lines of magnetic force drawn through the boundary of an area in a magnetic field. A unit *tube of force* corresponds to a line of force, and the term is often preferred to the latter.

magnetic variation (*Surv.*). See **declination.**

magnetic variations (*Meteor.*). Both diurnal and annual variations of the magnetic elements (dip, declination, etc.) occur, the former having by far the greater range. In the northern hemisphere the declination moves to the west during the morning and then gradually back, the extreme range being nowhere more than 1°. The dip varies by a few minutes during the day. It is thought that these effects are caused by varying electric currents in the ionised upper atmosphere.

magnetisation. The process of rendering iron, steel, or similar substances magnetic.

See **lamellar—** **solenoidal—**

magnetisation curve. A curve showing the relation between the flux density and the magnetising force for a sample of magnetic material. It also denotes the relation between the total m.m.f. and the total flux in a magnetic circuit, such as that of an electric machine. Since m.m.f. is proportional to exciting current and flux is proportional to the e.m.f. generated in a machine, a curve between exciting current and e.m.f. is also called a *magnetisation curve.*

magnetising coil (*Elec. Eng.*). A current-carrying coil used to magnetise an electromagnet, such as the field coil of an electric generator or motor. Also called FIELD COIL, MAGNET COIL.

magnetising current (*Elec. Eng.*). The current required to produce the magnetic flux in an electric machine; used particularly in connexion with transformers and alternating-current motors.

magnetising force. The force which produces magnetic flux density at a point; measured by considering the force which would be exerted on a unit magnetic pole placed at that point. Also called MAGNETIC FIELD STRENGTH, MAGNETIC FORCE.

magnetism. A general term used to denote either a magnetic field or the whole science associated with the behaviour of such fields. See **residual magnetism.**

magnetite or **magnetic iron-ore** (*Min.*). An oxide of iron, ferrosoferric oxide, Fe_3O_4, probably consisting of iron sesquioxide and ferrous oxide, which crystallises in the cubic system. It has the power of being attracted by a magnet, but it has no power to attract particles of iron to itself, except in the form of lodestone.

magne'to (*Elec. Eng.*). A small permanent-magnet electric generator capable of producing periodic high-voltage impulses; used for providing the ignition of internal-combustion engines, firing of explosives, etc.

See **high-tension—** **low-tension—**

magneto bell (*Teleph.*). An audible bell actuated by alternating current, which causes an armature to vibrate and hit two gongs alternately.

magneto generator (*Elec. Eng.*). An electric generator in which the exciting flux is obtained from permanent magnets.

magneto ignition (*Elec. Eng.*). An ignition system for I.C. engines, in which the voltage necessary to produce the spark is generated by a magneto.

magneto system (*Teleph.*). A telephone system in which the exchange operators are called by turning the handle of a magneto generator, line-current from which operates a relay at the exchange.

magnetochemistry (*Chem.*). The study of the magnetic changes accompanying chemical reactions.

magnetom'eter. A pivoted magnetic needle used for measuring the strength of magnetic fields; the deflection, when the needle is placed in such a field, indicates the strength. See **Kew-pattern magnetometer.**

magnetomotive force. The force, produced usually by a current-carrying coil, which produces a magnetic flux in a magnetic circuit. It is equal to the line integral of the magnetising force around the circuit.

magneto-optic rotation (*Chem.*). See **magnetic polarisation.**

magneto-optical rotation (*Television, etc.*). The rotation of the plane of polarisation of a ray of polarised light on reflection from the surface of a magnet, or on passing through a thin film of magnetised iron. The effect has been utilised for light modulation, in place of a Kerr cell.

magneto-striction. The change in dimensions produced in a magnetic material (e.g. iron or steel) when it is magnetised; most marked in nickel.

magneto-striction oscillator (*Elec. Comm.*). A thermionic oscillator based on the principle that when a bar of magnetic material conducts a magnetic flux it lengthens or contracts longitudinally. The mechanical oscillating system can therefore be coupled magnetically to a valve, the latter supplying power for sustaining oscillation.

mag'netron (*Thermionics*). A thermionic tube in which the inter-electrode space is traversed by a magnetic field acting transversely to the cathode to anode path, causing deflection of the electrons in their flight. Used for the generation of very high frequency oscillations.

magnetron effect (*Thermionics*). The deflection of the electrons emitted from a thermionic filament by the magnetic field produced by the filament-heating current.

magnetron rectifier (*Thermionics*). A thermionic rectifier in which use is made of the magnetron effect.

magnification. See **magnifying power.**

magnification factor (*Radio*). See **Q.**

magnifier (*Photog.*). See **focusing glass.**

magnifier (*Radio*). Any thermionic amplifier; especially one used for the amplification of audio-frequencies.

magnifier, Heurtley hot-wire (*Teleg.*). See **Heurtley hot-wire magnifier.**

magnifying power (*Light*). The ratio of the apparent size of the image of an object formed by an optical instrument to that of the object seen by the naked eye. For a microscope it is necessary to assume that the object would be examined by the naked eye at the least distance of distinct vision, 25 cm Unless otherwise stated, the *linear* magnification is assumed to be indicated. See also **longitudinal magnification*.**

magnitudes (*Astron*) The scale by which the brightness of stars is measured: (1) *apparent magnitude* is the measure of the brightness on Pogson's logarithmic scale, in which each step of one whole magnitude represents a light ratio of 2·512, and this increases numerically with decreasing brightness; (2) *absolute magnitude* is the apparent magnitude a given star would have at the standard distance of 10 parsecs.

magnolia metal (*Met.*). A lead-base alloy, containing 78-84% lead; remainder is mainly antimony, but small amounts of iron and tin are present. Used for bearings.

Magnus' green salt (*Chem.*). A platinum-ammonia compound obtained by adding ammonia to a solution of platinum tetrachloride in hydrochloric acid, when a green precipitate is formed.

mahlstick (*Paint*) See **maulstick.**

maidismus, maidism (*Med.*). See **pellagra.**

main (*Civ. Eng.*). A principal water or gas pipe, having branch pipes leading supplies to consumers.

main and tail (*Mining*). Rope haulage by means of a main rope to draw out the full wagons and a tail rope to draw back the empties.

main beam (*Struct.*). In floor construction, one of the principal beams transmitting loads direct to the columns.

main circuit (*Elec. Eng*). See **current circuit.**

main contacts (*Elec. Eng.*). The contacts of a switch which normally carry the current; cf. *arcing contacts*, which carry the current at the instant when the circuit is being interrupted.

main couple (*Carp.*). The principal truss in a timber roof.

main deck (*Ship Constr.*). A term used to signify a full-length deck below the weather deck. It has no legal-definition status, and is in use only on capital ships and large liners. It is derived from the sailing ship's deck on which the main-mast was stepped.

main distribution frame (*Teleph*). A frame for rearranging the incoming lines to a telephone exchange into the numerical order required in the exchange. Abbrev. **M.D.F.**

main exchange (*Teleph.*). An exchange which has other exchanges, such as satellites, dependent on it for extension from them to other exchanges.

main field (*Elec. Eng.*). The chief exciting field in an electric machine, as opposed to an auxiliary field, such as that produced by the compoles.

main planes (*Aero.*). See **plane.**

main rope (*Mining*). See **main and tail.**

main sequence (*Astron.*). See **Harvard classification.**

mainspring (*Horol.*). The spring in a watch or spring-driven clock which provides the motive power.

mainspring hook (*Horol.*). The means by which a mainspring is attached to its barrel.

mainspring winder (*Horol.*). A tool for coiling a mainspring prior to its insertion or withdrawal from the barrel.

main switchboard (*Elec. Eng.*). A large switchboard which controls the whole power of a particular installation (e.g. a generating station or the supply to a factory), and splits it up amongst a number of feeders supplying distribution switchboards.

main tanks (*Aero.*). See under **fuel tanks.**

main tie (*Struct.*). The lower tensional members of a roof-truss, connecting the feet of the principal rafters.

main transformer (*Elec. Eng.*). A term sometimes used in connexion with the Scott transformer connexion to indicate the transformer which is connected across two of the phases on the 3-phase side.

main wheel (*Horol*). The first wheel in the train; the great wheel. In a going-barrel it is integral with the barrel.

mains (*Elec. Eng.*). A general term used in connexion with electric power distribution to denote current-carrying conductors, such as feeders or distributors.

See **rising—** **theatre—**

mains antenna (*Radio*). Electric-supply mains used as a receiving antenna by connexion to the antenna terminal of the receiver through a condenser, which passes the radio-frequency currents but not those of the supply frequency.

mains receiver (*Radio*). A receiver which derives its operating power (i.e. for the cathode heating, etc.) from the public supply mains.

maintained tuning-fork (*Acous.*). A tuning-fork associated with a thermionic valve so that the latter supplies energy continuously to maintain the fork in steady oscillation. The frequency of the oscillation is substantially that of the free fork, the method being standard for establishing frequencies with great accuracy.

maintaining power (*Horol.*). A device which permits of power being transmitted to the train while winding is in progress.

maize oil (*Chem.*). See **corn oil.**

majol'ica (*Pot.*). Earthenware decorated with opaque white and coloured glazes.

majus'cule (*Palaeography*). A capital letter, originally written separately on manuscripts or cut on monuments. Cf. *minuscule.*

make (*Teleph.*). The operation, partial or complete, of a telephone relay, when current is passed through its windings.

make-before-break contact (*Teleph.*). The group of contacts in a relay assembly so arranged that the one which moves makes contact with a front contact before it separates from a back contact, and so is never free, whether the relay is operated or not.

make-contact (*Teleph.*). A pair of contacts in a relay assembly which are brought together on operation of the relay and so close a circuit.

make even (*Typog.*). To arrange type so that the last word of a portion or 'take' of copy ends a full line.

make impulse (*Elec. Comm.*). An electrical impulse arising when a circuit is made, i.e. closed.

make-ready (*Typog.*). See **making-ready.**

make-up (*Typog.*). The arrangement of type-matter and blocks into pages.

make-up (*Cinema., Photog.*). The application of substances (usually powders held on by greases) over the flesh, in order to give good photographic texture and simplified features.

making-capacity (*Elec. Eng.*). A term used in connexion with the rating of switchgear to denote the capability of a switch to make a circuit under certain specified conditions.

making-current (*Elec. Eng.*). A term used in connexion with switchgear to denote the maximum peak of current which occurs at the instant of closing the switch.

making department (*Boots and Shoes*). The department that makes boots and shoes from the shaped parts passed to it from the bottom-stock department.

making-ready or **make-ready** (*Typog.*). The process of preparing a forme for printing by adding or cutting away paper on the impression cylinder, and by underlaying or interlaying blocks.

making-up (*Textiles*). The examination, packing, and ticketing of fabrics before dispatch from the mills.

mal de caderas (*Vet.*). See **caderas (mal de).**

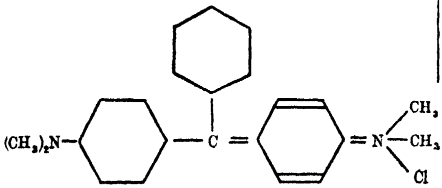
mal de los pintos (*Med.*). See **pinta.**

mal du coit (*Vet.*). See **dourine.**

mal'a (*Zool.*). In some Insects (as many coleopterous larvae), a single lobe borne by the maxilla and possibly representing the galea.

mal'achite (*Min.*). Basic cupric carbonate $[CuCO_3 \cdot Cu(OH)_2]$, crystallising in the monoclinic system. It is a common ore of copper, and occurs typically in the oxidation zone of copper deposits.

malachite green (*Chem.*). A triphenylmethane dyestuff of the rosaniline group. It has the formula:



It is obtained by the condensation of benzaldehyde with dimethylaniline in the presence of $ZnCl_2$, HCl, or H_2SO_4, and by the oxidation of the resulting leuco-base with PbO_2.

mala'cia (*Med.*). Pathological softening of any organ or tissue.

Mal'acocot'yle'a (*Zool.*). An order of *Trematoda* in which the ventral sucker may be absent, or, if present, is generally anterior in position; the position of the genital pore is variable; the life-history is complex and includes more than one host; the sexual form occurs in connexion with the gut of Vertebrates, the asexual generations in Invertebrates mainly.

mal'acophi'ly (*Bot.*). Pollination by snails.

malacophyl'lous (*Bot.*). Xerophytic, and having fleshy leaves containing much water-storing tissue.

malacopla'kia (*Med.*). The occurrence of soft, rounded, pale plaques in the wall of the bladder, in chronic inflammation of the bladder.

malacop'terous (*Zool.*). Having soft fin-rays.

Malacos'traca (*Zool.*). A group of *Crustacea* having fourteen or fifteen trunk somites, all bearing appendages; the trunk is clearly divided into a thorax, with walking legs and maxillipedes, and an abdomen with swimming legs; the antennules are usually biramous; caudal furca rarely occur. Crabs, Lobsters, Prawns, Crayfish, Shrimps.

malacos'tracous (*Zool.*). Having a soft shell.

mal'ar (*Zool.*). Pertaining to the *mala* (q.v.): pertaining to, or situated in, the cheek region of Vertebrates: the *jugal* (q.v.).

malaria (*Med.*). Ague; paludism; intermittent fever. A febrile disease caused by infection with various species of the protozoal parasite *Plasmodium*, transmitted to man by the bite of the female anopheline mosquito; characterised by intermittent paroxysms of fever. See also **quartan** and **tertian.**

malaria, animal (*Vet.*). See **piroplasmosis.**

malarial catarrhal fever of sheep (*Vet.*). A catarrhal fever of sheep in South Africa, due to infection by a filterable virus; probably transmitted by insects. Also known as BLUE-TONGUE.

malarial fever of horses (*Vet.*). See **anaemia (infectious).**

malaxa'tion (*Zool.*). A process adopted by certain Wasps after stinging their prey, which consists in the repeated compression of the neck by the mandibles.

mal'chite (*Geol.*). A term applied to rocks which have been described as microdiorite or dioritic lamprophyre.

male (*Zool.*). An individual of which the gonads produce spermatozoa or some corresponding form of gamete.

male and female (*Eng.*). Trade terms applied to inner and outer members respectively of pipe-fittings, threaded pieces, etc. See also **external screw-thread, internal screw-thread.**

male flower (*Bot.*). A flower containing stamens but no carpels.

male'ic acid (*Chem.*). $HOOC \cdot CH:CH \cdot COOH$, large prisms or plates, m.p. 130° C., b.p. 160° C. with decomposition into its anhydride and water, readily soluble in water. The *cis*-configuration is ascribed to this acid, whereas its isomer, *fumaric acid* (q.v.), has the *trans*-configuration.

ma'lic acid (*Chem.*). $HOOC \cdot CH_2 \cdot CH(OH) \cdot COOH$, hygroscopic needles, m.p. 100° C., found in unripe fruit; it also occurs in wines. When attacked by certain ferments, butyric, lactic, and propionic acids are produced. Heat causes the loss of a molecule of water, producing maleic and fumaric acids. It has been synthesised by various methods.

malignant (*Med.*). Tending to go from bad to worse: especially, cancerous (see **tumour**).

malignant disease (*Med.*). A common synonym for cancer and for sarcoma.

malignant endocarditis (*Med.*). Septic endocarditis, infective endocarditis. A progressive bacterial infection of one or more of the valves of the heart.

malignant oedema of animals (*Vet.*). An acute toxaemia of animals due to infection by bacteria of the genus *Clostridium*; characterised usually by crepitant swelling and gangrene of the infected part.

mall (*Tools*). A *beetle* (q.v.).

malleabil'ity, mal'e-a— (*Met.*). (Applied to metals) the property of being able to be mechanically deformed by rolling, forging, extrusion, etc., without rupture and without pronounced increase in resistance to deformation (as in case of ductility). Exhibited by lead, tin, and zinc at room temperature, and by other common metals at elevated temperature.

malleable cast-iron, mal'e-abl (*Met.*). A variety of cast-iron which is cast white, and then annealed at about 850° C. to remove carbon (*white-heart process*) or to convert the cementite to rosettes of graphite (*black-heart process*). Distinguished from grey and white cast-iron by exhibiting some elongation and reduction in area in tensile test.

malleable iron (*Met.*). Now usually means malleable cast-iron, but the term is sometimes applied to wrought-iron.

malleable nickel (*Met.*). Nickel obtained by re-melting and deoxidising electrolytic nickel and casting into ingot moulds. Can be rolled into sheet and used in equipment for handling food, for coinage, condensers, and other purposes where resistance to corrosion, particularly by organic acids, is required.

malleableising (*Met.*). A process used in the production of malleable cast-iron.

mal'leate (*Zool.*). Hammer-shaped.

mallein, mal'e-in (*Vet.*). The concentrated filtrate of broth cultures of *Pfeifferella mallei* which have been killed by heat; used as an inoculum for the diagnosis of glanders in horses.

malleo'lar (*Zool.*). Pertaining to, or situated near, the malleolus: in *Ungulata*, the reduced fibula.

malleo'lus (*Zool.*). A process of the lower end of the tibia or fibula.

mallet (*Tools*). A wooden hammer, or one made of raw-hide or rubber.

mallet-finger (*Med.*). Permanent flexion of the end-joint of a finger or thumb.

mal'leus (*Zool.*). In *Mammals*, one of the ear ossicles: in *Rotifera*, one of the masticatory ossicles of the mastax: more generally, any hammer-shaped structure.

malm, mahm (*Build.*). An artificial imitation of natural marl made by mixing clay and chalk in a wash mill; the product is used as a clay for the manufacture of bricks. Also called WASHED CLAY.

malm bricks (*Build.*). Bricks made from marl or *malm* (q.v.).

malm rubber (*Build.*). A soft form of malm brick, capable of being cut or rubbed to special shapes.

Malmstone (*Geol.*). A grey-green glauconitic sandstone containing much colloidal silica and many sponge spicules, forming part of the Upper Greensand of Hampshire.

malo'nic acid (*Chem.*). HOOC CH_2 COOH, large plates, soluble in water, alcohol, ether; m.p. 132° C.; it decomposes when heated to a slightly higher temperature, giving acetic acid; it occurs in beetroot as its calcium salt and can be obtained from malic acid by oxidation with chromic acid.

malonic ester (*Chem.*). Diethyl malonate, a liquid of aromatic odour, b p. 198° C., $CH_2(CO{\cdot}OC_2H_5)_2$. The hydrogen of the methylene group is replaceable by sodium which in turn can be exchanged for an alkyl group. In this way malonic ester is important for the synthesis of higher dibasic acids.

Malpighian body (or **corpuscle**), mal-pig'i-an (*Zool.*). In the Vertebrate kidney, the expanded end of a uriniferous tubule surrounding a glomerulus of convoluted capillaries: in the Vertebrate spleen, one of the globular or cylindrical masses of lymphoid tissue enveloping the smaller arteries.

Malpighian cell (*Bot.*). One cell of a layer of closely packed, radially directed thick-walled cells occurring in the testas of some seeds.

Malpighian layer (*Zool.*). In Vertebrates, the deep protoplasmic layer of the epidermis which is in contact with the dermis; rete mucosum.

Malpighian pyramids (*Zool.*). In many Mammals, the conical portions into which the kidney is divided.

Malpighian tubes (*Zool.*). In *Insecta*, *Arachnida*, and *Myriapoda*, tubular glands of excretory function opening into the alimentary canal, near the junction of the mid-gut and hind-gut.

malpresentation (*Med.*). Abnormal posture of the foetus during birth.

malt (*Brew.*). Grain, such as barley, oats, wheat, that has been germinated artificially by means of moisture, and then dried slowly in a kiln. The rate and the temperature of drying produce *malt* classed as amber, brown, black, and pale.

malt-sugar (*Chem.*). *Maltose* (q.v.).

Malta fever (*Med.*). See **undulant fever.**

malt'ase (*Chem.*). An enzyme effecting the hydrolysis of maltose and other *a*-glucosides. It is present in many yeasts, in the liver, kidney, pancreas and other organs, and the digestive juices of many animals.

maltese cross (*Cinema.*). A basic mechanism for feeding the film forward intermittently in a cinematograph projector, obviating the use of claws.

malting (*Brew.*). The processes by which barley, a hard vitreous grain, is converted into malt. See **couching, flooring, steeping, withering.**

maltobiose (*Chem.*). *Maltose* (q.v.).

maltose (*Chem.*). Malt-sugar, maltobiose. $C_{12}H_{22}O_{11}+H_2O$, a disaccharose, a white crystalline mass, dextro-rotatory, formed by the action of diastase upon starch during the germination of cereals. It reduces Fehling's solution, and when hydrolysed is converted into *d*-glucose.*

Malvern Quartzite (*Geol.*). A quartzite which occurs at the base of the Cambrian rocks in the Malvern Hills.

Malvernian direction (*Geol.*). The name assigned to structures, resulting from earth-movements, having a direction predominantly north-south, after the trend of the Armorican structures in the Malvern Hills.

mamil'la (*Zool.*). A nipple.

mam'illar (*Bot*). Having the form of a hemisphere bearing a projecting papilla.

mamil'lary body (*Zool.*). *Corpus mamillare* (q.v.).

mam'illate (*Bot.*, *Zool.*). Having a rounded outgrowth ending in an abrupt point.

mamil'liform (*Bot.*). Shaped like a papilla.

mamma (*Anat*, *Zool.*). In female Mammals, the milk gland; the *breast* (q.v.).—*adj.* **mam'mary.**

Mamma'lia (*Zool*). A class of *Craniata* having a hairy integument, warm blood, a left aortic arch only, a double heart and circulation, and mammary glands with which they suckle the young; respiration is pulmonary; there is a double occipital condyle, the lower jaw articulates with the squamosal; the limbs are pentadactyl.

mamma'to-cumulus (*Meteor.*). Clouds with rounded protuberances on their lower surfaces, something like inverted cumulus. They often occur in thunder-clouds.

Man (*Zool*) The human race, all varieties of which are included in the single species *Homo sapiens*, belonging to the order *Primates* (q.v.). Man's principal distinction from his nearest allies, the anthropoid apes, is the very high degree of cerebral development correlated with the power of sustained thought. Among structural peculiarities may be mentioned the erect posture, reduction of body hair, relatively short arms and long legs, non-opposable hallux, large forehead and small cheek-bones, uniform series of teeth without conspicuous canines, twelve ribs and seventeen dorsolumbar vertebrae. Man probably arose from an ancestral stock common also to the anthropoid apes during the Miocene ages, although no fossil remains are known until the Pleistocene.

manhole (*Eng.*). (1) An elliptical inspection-opening in a tank or boiler, large enough to admit a man, and closed by a cover fastened by bolts or clamps.—(2) Any similar opening into the inspection pits of underground electric cable ducts or sewers, closed by water-tight covers.

man lock (*Civ. Eng.*). An air-lock enabling workmen to pass into, and out of, spaces filled with compressed air.

mandel'ic acid (*Chem.*). $C_6H_5{\cdot}CH(OH){\cdot}COOH$, phenyl-glycollic acid; glistening crystals; m.p. 133° C.; soluble in water. It occurs naturally in the form of its glucoside, *amygdalin* (q.v.), and can be synthesised by the hydrolysis of benzaldehyde cyanhydrin. Mandelic acid possesses an asymmetric carbon atom, and exists in a *d*- and an *l*- form and as the racemic compound.

mandible (*Zool.*). In *Vertebrata*, the lower jaw: in *Arthropoda*, a masticatory appendage of the oral somite: in *Polychaeta* and *Cephalopoda*, one of a pair of chitinous jaws lying within the buccal cavity.—*adjs.* **mandib'ular, mandib'ulate.**

mandib'ulo- (Latin *mandibulum*, jaw). A prefix used in the construction of compound terms; e.g. *mandibulomaxillary*, pertaining to the mandibles and the maxillae.

mandrel or **mandril** (*Eng.*). (1) An accurately turned shaft on which work already bored is mounted for turning, milling, etc.; if partially split and capable of expansion by a tapered plug it is called an *expanding mandrel*.—(2) The headstock spindle of a lathe.

mandrel (*Horol.*). A special face-plate lathe, usually hand driven, for turning or recessing watch plates or similar operations.

mandrel (*Met.*). A rod used to retain the cavity in hollow metal products during working. Thus hollow forgings are made on a mandrel, pierced billets are rolled on one to form tubes, and the internal dimensions of tubes are maintained during cold drawing by drawing over one.

manduca'tion (*Zool.*). See **mastication.**

maneton or **maneton bolt** (*I.C. Engs.*). A heavy pinch-bolt used to grip the split end of the separate rear crank web of a radial aero engine on to the crank-pin.

mangan-blende (*Min.*). See **alabandite.**

mangan-epidote (*Min.*). See **piedmontite.**

manganese (*Met.*). A hard, brittle metallic element, in the seventh group of the periodic system, which exists in three polymorphic forms, α, β, and γ, and has a complicated crystal structure. It is brilliant white in colour, with reddish tinge. Chemical symbol, Mn; at. wt. 54·93, at. no. 25, valency 2, 3, 4, or 7, sp. gr. at 20° C. 7·2, m.p. 1245° C., b.p. 1900° C., specific electrical resistivity 5·0 microhms per cu. cm., hardness in Mohs' scale 6. Mainly used in steel manufacture, as a deoxidising and desulphurising agent.

manganese alloys (*Met.*). Manganese is not used as the basis of alloys, but is a common constituent in those based on other metals. It is present in all steel and cast-iron, and in larger amount in special varieties of these, e.g. manganese steel, silico-manganese steel, etc. It is also present in many varieties of brass, in aluminium-bronze, and in aluminium and nickel base alloys.

manganese bronze (*Met.*). Originally an alpha-beta brass containing about 1% of manganese; the term is now applied generally to *high-strength brass* (q.v.).

manganese carbide (*Chem.*). Mn_3C. Formed by direct combination of the two elements.

manganese dioxide (*Chem.*). MnO_2. Basic and acidic. Forms manganites.

manganese epidote (*Min.*). See **piedmontite.**

manganese-garnet (*Min.*). See **spessartite.**

manganese heptoxide (*Chem.*). Mn_2O_7. Acidic. Forms permanganates.

manganese nitride (*Chem.*). Mn_5N_2. Formed when manganese is heated in nitrogen.

manganese sesquioxide (*Chem.*). Mn_2O_3. Basic. Forms manganic salts.

Manganese Shale Group (*Geol.*). A group of shales and grits containing silicate, carbonate, and oxide of manganese. It occurs in the Harlech Series of N. Wales.

manganese spar (*Min.*). See **rhodochrosite.**

manganese steel (*Met.*). A term sometimes applied to any steel containing more manganese than is usually present in carbon steel (i.e. 0·3-0·8%), but generally to *austenitic* (*Hadfield's*) *manganese steel*, which contains 11-14%. This steel is very resistant to shock and wear, and is used for railway crossings and switches, rock crusher parts, dredger buckets, etc.

manganese trioxide (*Chem.*). MnO_3. Acidic. Forms manganates.

man'ganin (*Met.*). A copper-base alloy, containing 17-18% of manganese and 1·5-2% of nickel. The electrical resistance is high (about 38 microhms per cu. cm.), and the temperature coefficient low; the alloy is therefore suitable for resistances.

man'ganite (*Min.*). A hydrated oxide of manganese, crystallising in the orthorhombic system. It is a minor ore of manganese.

man'gano-mangan'ic oxide (*Chem.*). Mn_3O_4. Neutral or mixed oxide.

manganophyll'ite (*Min.*). A biotite containing manganese; it occurs in aggregations of thin scales and has a colour ranging from bronze to copper-red.

mangan'osite (*Min.*). The protoxide of manganese which crystallises in the cubic system.

manganous oxide (*Chem.*). MnO. Basic. Forms manganous salts.

mange (*Vet.*). Inflammation of the skin of animals due to infection by certain species of acari or mites. Also called SCABIES, SCAB.—CHORIOPTIC MANGE, mange of horses and cattle due to acari of the genus *Chorioptes*.—DEMODECTIC or FOLLICULAR MANGE, see **folliculitis (demodectic).**—FOOT MANGE, see **scaly leg.**—NOTOEDRIC MANGE, mange of cats due to *Notoedres cati*.—OTODECTIC MANGE, mange of the ears of animals, due to acari of the genus *Otodectes*.—PSOROPTIC MANGE, mange of animals due to acari of the genus *Psoroptes*.—SARCOPTIC MANGE, mange of animals due to acari of the genus *Sarcoptes*.

Manger's soap (*Paint.*). A proprietary cleansing preparation for paints.

mania (*Psychiatry*). The elated phase of manic depressive psychosis; characterised by euphoric excitement, exaggerated will-power, and flight of ideas of a grandiose nature. See **manic-depressive psychosis.**

manic-depressive psychosis (*Psychiatry*). A type of insanity shown by Kraepelin to be characterised by disorders of affect, either of elation or of depression, with intermediate mixed states. The depressed phase (melancholia) may exist by itself, and be repeated after an interval of normal health, or it may alternate with a phase of elation (mania). General characteristics include irritability, suspicion, and, in some cases, a clouding of consciousness, delusions, hallucinations, and disorientations. Also CYCLOTHYMIA.

manifold (*Eng.*). See **induction manifold.**

manifold (*Paper*). A term which describes thin paper used in duplicating; may be waxed. Also, carbon paper (obsolete).

manilla paper (*Paper*). A strong paper made from sulphite wood-pulp, but containing some hemp fibre and manilla (about 40% at most). Used for wrappings, and impregnated with wax, oil, or varnish, as a dielectric for cables. Also called CARTRIDGE PAPER.

manna (*Zool.*). See **honey-dew.**

mannans (*Chem.*). The anhydrides of mannose.

Mann'esmann process (*Met.*). A process for making seamless metal tubing from a solid bar of metal by the action of two eccentrically mounted rolls which simultaneously rotate the bar and force it over a mandrel.

Manning's formula (*Hyd.*). An expression giving the value of the coefficient *C* in *Chezy's formula* (q.v.). It states that

$$C=\frac{1{\cdot}49}{N}\cdot m^{\frac{1}{6}},$$

where m = the hydraulic mean depth, and N = a factor depending on the nature of the surface of the channel.

man'nitol (*Chem.*). $HO{\cdot}CH_2{\cdot}(CH{\cdot}OH)_4{\cdot}CH_2{\cdot}OH$; a hexahydric alcohol, fine needles or rhombic prisms, soluble in water and in hot alcohol, m.p. 166° C. It is found in many plants, and several stereo-isomers are known.

man'nosans (*Chem.*). See **mannans.**

mannose (*Chem.*). A hexose. *d*-Mannose can be obtained by the oxidation of *mannitol* (q.v.), and is a stereo-isomer of *d*-glucose.

man'ocyst (*Bot.*). The receptive papilla in some *Oömycetes*.

manom'eter (*Phys.*). An instrument used to measure the pressure of a gas. The usual form of manometer consists of a U-tube containing a liquid (water, oil, or mercury), one limb being connected to the enclosure whose pressure is to be measured, while the other limb is either open to the atmosphere or is closed. The open pattern reads the difference between the required pressure and atmospheric pressure as the difference in level of the liquid in the two limbs.

manomet'ric flame (*Phys.*). A small gas flame so arranged as to oscillate by the variations of pressure due to sound-waves impinging on a diaphragm forming one wall of a small gas chamber. The oscillations of the flame are detected by viewing it in a rotating mirror.

manoxylic wood, —zī'lik (*Bot.*). Wood of somewhat loose texture, containing a good deal of parenchyma.

mansard roof (*Build.*). A double-sloped pitched roof rising steeply from the eaves, and having a summit of flatter slope on both sides of the ridge. Also called CURB ROOF, FRENCH ROOF, GAMBREL ROOF.

Mansbridge condenser (*Elec. Comm.*). A paper condenser in which a pinhole discharge oxidises the foil electrodes and restores the insulation after a breakdown.

Mansfeld method (*Chem.*). A method for the valuation of copper ores.

Mansfield Sandstone (*Geol.*). The transgressive basal member of the Pennsylvanian succession in parts of N. America, e.g. Indiana and Illinois.

mantel (*Build.*). An ornamental front and shelf to a fireplace.

mantel-piece, mantel-shelf (*Build.*). The shelf of a mantel.

mantel tree (*Build.*). The lintel of a fireplace.

mantle (*Build.*). The outer covering of a wall when this is of different material from the inner part.

mantle (*Illum.*). See **gas mantle.**

mantle (*Zool.*). In *Urochorda*, the true body-wall lying below the test and enclosing the atrial cavity: in *Mollusca, Brachiopoda*, and *Cirripedia*, a soft fold of integument enclosing the trunk and responsible for the secretion of the shell or carapace.

mantle cavity (*Zool.*). In *Urochorda*, the atrial cavity: in *Mollusca, Brachiopoda*, and *Cirripedia*, the space enclosed between the mantle and the trunk.

mantle lobes (*Zool.*). The mantle flaps in *Pelecypoda.*

Manu-marble (*Build.*). Trade-name for an artificial marble.

manual. (1) The finger-operated key in an organ console.—(2) The row of keys normally played by the hand, the thumb pistons being below.

manuals (*Zool.*). See **primaries.**

manual exchange (*Teleph.*). An exchange in which all the operations for connecting subscribers to other subscribers, or to other exchanges, are effected manually by operators.

manual hold (*Auto. Teleph.*). The holding of the connexion from a subscriber on an automatic exchange by an operator in a manual exchange who is about to complete the call.*

manual ringing (*Teleph.*). The application of ringing current to a line by the manual throwing of a key, as performed, for example, by A-operators in an exchange and by P.B.X. operators.

manual switchboard (*Teleph.*). A manually operated switchboard in a manual exchange.

manual telephone system (*Teleph.*). A system of telephone connexion in which the temporary connexions are made by operators located in front of multiple switchboards.

manu'brium (*Zool.*). Any handle-like structure: the basal part of the furcula in *Collembola*: the presternum in Mammals: part of the malleus of the ear in Mammals: the pendant oral portion of a medusa: part of the malleus in *Rotifera.*

manure distributor (*Agric. Mach.*). A machine for distributing artificial manures. It operates in a manner similar to the *broadcast sower* (q.v.).

manus (*Zool.*). The podium of the fore limb in land Vertebrates.

Manx Slates (*Geol.*). A thick mass of slate rocks, possibly Cambro-Ordovician in age, found in the Isle of Man.

man'yplies (*Zool.*). See **psalterium.**

map. A representation on paper of part of the earth's surface.

map measurer (*Surv.*). An instrument used to find the length of a route on a map. It consists of a small wheel which is made to roll over the route, in so doing actuating a needle which records the distance traversed. Also called OPISOMETER.

map varnish. Colourless gums dissolved in spirit; used for protecting maps, engravings, etc.

maple syrup and **maple sugar** (*Chem.*). Syrup and sugar made from the maple tree. The delicate flavour is probably due to the small protein content.

Maplewell Beds (*Geol.*). A series of rocks, largely pyroclastic and of intermediate composition, found in the middle division of the Pre-Cambrian rocks of Charnwood Forest in Leicestershire.

M.A.R. (*Chem.*). An abbrev. for *microanalytical reagent*, a standard of purity which indicates that a reagent is suitable for use in *microanalysis* (q.v.).

maras'mus (*Med.*). Progressive wasting, especially in infants.—*adj.* **maras'mic.**

Marb-l-cote (*Paint.*). A paint, in powder form, which on being mixed with water and applied to a surface sets in 24 hours and presents the appearance of marble.

marble (*Geol.*). The term strictly applies to a granular crystalline limestone, but in a loose sense it includes any calcareous or other rock of similar hardness that can be polished for decorative purposes.—(*Diel.*) Used for switchboard panels. Electric strength 50-100 kV per inch for an inch thickness.

marble bones (*Med.*). See **osteopetrosis.**

marbled (*Bot.*). Marked by irregular streaks of colour.

marbled ware (*Pot.*). Articles decorated in the unbaked state with opaque slips and coloured transparent glazes to represent marble, and then fired in the kiln.

marbling (*Bind.*). The operation of decorating book-edges, etc., with a variegated 'marble' effect. Carried out in a trough containing gum (made from carragheen moss), on the surface of which pigments (containing ox-gall) are worked in fantastic patterns.

marbling (*Paint.*). The process of painting a surface to make it resemble marble.

mar'casite (*Min.*). (1) White iron pyrite. A disulphide of iron which crystallises in the orthorhombic system. It resembles iron pyrite, but has a lower specific gravity, is less stable, and is paler in colour when in a fresh condition.—(2) In the gemstone trade *marcasite* is either pyrite, polished steel (widely used at present in ornamental jewellery in the form of small 'brilliants'), or even white metal.

Marcellus Shale (*Geol.*). A highly bituminous black shale, of Middle Devonian age, occurring at the top of the Ulsterian Division in eastern N. America; it is the source rock of the oil stored in the overlying Onondaga Limestone.

marces'cent (*Bot.*). Withered but remaining attached to the plant.

marchioness (*Build.*). A slate, 22 × 12 in.

Marconi beam antenna (*Radio*). A directional antenna array comprising a system of tuned vertical radiators and reflectors.

Marconi coherer (*Radio*). An evacuated glass tube containing two electrodes in contact with a mixture of iron and nickel filings. The resistance between the electrodes drops suddenly on the application of a high-frequency voltage between them.

Marconi detector (*Radio*). A form of magnetic detector comprising an endless iron or steel wire which is drawn continuously through a coil, connected to the antenna, and situated in the field of a permanent magnet. The arrival of a signal causes a current to be induced in a second coil, wound over the first, which is made audible in telephones connected thereto.

Marconi-Stille recorder (*Acous.*). See **Blattnerphone.**

marcus (*Tools*). A large hammer with an iron head.

mare, mar′ā (*Astron.*). See **maria.**

Marechal's test (*Chem.*). A test for the presence of bile acids based on the appearance of a green zone between the bile solution and a dilute solution of iodine.

marekan′ite (*Min.*). A rhyolitic perlite broken down into more or less rounded pebbles; named from the type locality, Marekana river, Eastern Siberia.

Marezzo marble, mar-et′so (*Build.*). An artificial marble made with Keene's cement.

margarine, marj′a-rēn *or* marg′— (*Foods*). A butter substitute made from (usually) vegetable fats, suitably treated by heating and cooling, churning with milk, colouring, and adding concentrates of vitamins A and D.

mar′garite (*Geol.*). An aggregate of minute sphere-like crystallites, arranged like beads, found as a texture in glassy igneous rocks.—(*Min.*) Hydrated silicate of calcium and aluminium, crystallising in the monoclinic system.

Margary's process (*Build.*). A process for preserving timber by soaking it in a solution of acetate or sulphate of copper.

margin (*Bot.*). (1) The edge of a growing fungal mycelium.—(2) The edge of a leaf or other flattened plant member.

margin (*Build.*). The exposed width of each slate in coursed work.

margin (*Civ. Eng.*). An open strip of land alongside a road, allowing for future widening.

margin (*Join.*). The flat surface of stiles or rails in panelled framing.

margin-draft (*Masonry*). A smooth face round a joint in ashlar work.

margin lights (*Build.*). Narrow panes of glass near the edges of a sash.

margin trowel (*Plast.*). A box-shaped float for finishing internal angles.

marginal (*Bot., etc.*). Situated on, or arising from, the edge of a member.

marginals (*Zool.*). In *Chelonia*, the plates forming the edge of the carapace.

marginal anchors (*Zool.*). In certain *Scyphozoa*, adhesive organs attached to the edge of the umbrella.

marginal bars (*Join.*). Glazing bars so arranged as to divide the glazed opening into a large central part bordered by narrow panes at the edges.

marginal community (*Bot.*). A plant community bordering on another community of slightly different character.

marginal current (*Auto. Teleph.*). The adjusted heavy or light, positive or negative, current which is used for coding impulses in a coder, to expedite the transmission of numericals by key-senders.

marginal ray cell (*Bot.*). A more or less specialised cell occurring with others of the same kind on the edge of a vascular ray.

marginal species (*Bot.*). A plant which grows along the edge of woodland.

marginate (*Bot.*). Having a well-marked border, which is often composed of cells or elements differing in form or colour from those making up the rest of the member.

mar′ia (*Astron.*). The Latin designation of the so-called 'seas' on the lunar surface, named before the modern telescope showed their dark areas to be dry planes. The *sing.* is *mare* (e g. *Mare Serenitatis, Mare Imbrium, Mare Fecunditates*, etc.).

mari′alite (*Min.*). Silicate of aluminium and sodium with sodium chloride, crystallising in the tetragonal system. It is one of the species in the isomorphous series of the Scaptolite Group.

mar′igold window (*Build.*). See **rose window.**

mar′igram (*Surv.*). The continuous record of height of tide given by a self-registering tide gauge.

mar′igraph (*Surv.*). A gauge registering the height of the tide at a given place.

marine boiler (*Eng.*). A cylindrical boiler, of large diameter and short length, provided with two or more furnaces in flue tubes leading to combustion chambers, surrounded by water, at the back. The gases pass through banks of fire tubes to the smoke-box or uptakes at the boiler front. Also called SCOTCH BOILER. See also **dry-back boiler, Yarrow boiler.**

marine chronometer (*Horol.*). A specially mounted chronometer for use on board ship in the determination of longitude.

marine compass. See **floating-card compass, gyro compass.**

marine denudation (*Geol.*). The erosive and sweeping action of the sea. See also **denudation.**

marine deposits (*Geol.*). Rock waste which is laid down under marine conditions.

marine engineering. That branch of mechanical engineering concerned with the design and production of propelling machinery and auxiliary equipment for use in ships.

marine engines (*Eng.*). Steam- or oil-engines used for ship propulsion, particularly triple or quadruple expansion vertical steam-engines, direct-coupled to the propeller.

marine glue (*Build.*). A form of glue resisting the action of water, and containing rubber, shellac, and oil.

marine screw propeller (*Eng.*). A boss, carrying two, three, or four blades of helical form, which produces the thrust to drive a ship by giving momentum to the column of water which it displaces in an astern direction.

marine surveying. Hydrographical surveying undertaken in tidal waters.

Marino′ni machine (*Print.*). A newspaper machine invented in France and introduced into England in 1872.

Mariotte's law. Boyle's law.

Mar′iotype (*Photog.*). A carbon printing process in which an exposed bichromated emulsion is brought into contact with a bichromated pigmented tissue, which can be developed with water.

Maripo′sa formation (*Geol.*). A series of much metamorphosed slates cut by gold-bearing lodes, occurring in the Sierra Nevada Mts.; of Upper Jurassic age.

maritime (*Bot., Zool.*). Living by the sea.

mark (*Surv.*). Any of the distinguishing tags attached at intervals to a lead-line to denote fathoms or feet.

mark contact (*Teleg.*). The contact which is made when a telegraph key is depressed and alters the current in a transmitting circuit. Cf. *space contact.*

mark of reference (*Typog.*). A sign which directs the reader to a footnote. The commonest marks of reference are * asterisk, † dagger, ‡ double dagger, § section, ‖ parallel, ¶ paragraph, in order of use. *Superior figures* (q.v.) are now more commonly used in general typography.

marker (*Cinema.*). See **camera marker.**

marking current (*Teleg.*). The current, which may be positive or negative, corresponding to the coding of the signals sent and the depressed position of the telegraphist's key; such signals may be machine-transmitted by a slip. See **spacing current.**

marking gauge (*Carp.*). A tool for marking lines on the work parallel to one edge of it. It consists of a wooden bar having a projecting steel marking pin near one end and a sliding block adjustable for position along the bar.

marking knife (*Join.*). A small steel tool having a chisel edge at one end and pointed at the other. It is used for setting out fine work.

marking-out (*Build., Surv., etc.*). Setting out boundaries and levels for a proposed piece of work.—(*Eng.*) Setting out centre lines and other dimensional marks on material, as a guide for subsequent machining operations. See also **laying-out.**

marking wave (*Radio*). The electromagnetic wave radiated from a radio-telegraph transmitting antenna when the key is depressed. Cf. *spacing wave.*

marl (*Geol.*). A general term for a very fine-grained rock, either clay or loam, with a variable admixture of calcium carbonate.—(*Build.*) A brick earth which contains a high percentage of carbonate of lime; it is the best clay for making bricks without addition of other substances. Also called CALCAREOUS CLAY. See also Supplement.

Marl Slate (*Geol.*). A thin but important datum plane in the Lower Magnesian Limestone of Notts, Yorks, and Durham, England. It is a fissile calcareous rock, yielding fish remains, but is not a true slate.

marlstone rock or **marlstone** (*Geol.*). Sandy clays, calcareous beds, and ironstone, found in the Middle Lias Series of the Jurassic System. The ironstone has been worked from Gloucestershire to Lincolnshire.

marl yarn (*Worsted Spinning*). Worsted yarn of two or more colours which have been combined in the drawing box or while the yarn is being spun.

Mar'marosch diamonds (*Min.*). A local name for *rock crystal.*

mar'matite (*Min.*). A ferruginous variety of *blende* (q.v.); it contains up to 20% of iron.

mar'morate (*Bot.*). Marked or coloured like marble.

marmoration (*Build.*). A marble casing for a building.

marmora'tum or **marmore'tum** (*Build.*). A cement containing pulverised marble and lime.

marmot (*Furs*). The dressed skin of the marmot, a burrowing rodent living in high altitudes. The fur is short and thick and is generally dyed.

mar'ocain (*Textiles*). A dress fabric with a fine cord, in appearance like a wavy rib, across the width; made from hard twisted yarns of silk, rayon, wool, or cotton.

mar'quetry, —ket-ri (*Furn.*). Decorative natural or stained wood inlay, with or without the addition of metal, mother-of-pearl, ivory, or tortoiseshell.

marquise, mar-kēz' (*Build.*). A projecting canopy over the entrance to a building.

marrow (*Zool.*). The vascular connective tissue which occupies the central cavities of the long bones in most Vertebrates, and also the spaces in certain types of cancellated bone.

marrying (*Build.*). The process of lashing poles together in scaffold erection, in order, for example, to increase the height of the standards.

marrying (*Cinema.*). The printing of the mute negative and the negative sound-track on the release print. For 'rushes,' the mute and sound-track are printed separately.

Mars (*Astron.*). The fourth planet from the sun in order of distance. Its mass is 0·108 that of the earth; it has two satellites; its sidereal period is 686·98 days.

Marsh's test (*Chem.*). A method used in chemical analysis for the estimation of arsenic. Largely superseded by the Gutzeit test.

Marshall valve gear (*Eng.*). A radial gear of the *Hackworth* (q.v.) type, in which the straight guide is replaced by a curved slot to correct inequalities in steam distribution.

Marsipobran'chii (*Zool.*). A class of aquatic *Craniata,* breathing by gills, having a suctorial funnel-shaped mouth without jaws, a naked scaleless skin, a continuous median fin but no paired fins, a primitive cartilaginous skeleton, and a persistent notochord. Lampreys and Hags.

Marsupia'lia (*Zool.*). The single order included in the Mammalian group *Metatheria* (q.v.), and having the characteristics of the subclass.

marsu'pium (*Zool.*). A pouch-like structure occupied by the immature young of an animal during the later stages of development; as the abdominal pouch of metatherian Mammals.—*adj.* **marsu'pial.**

marten (*Furs*). The dressed skin of one of various martens, a weasel-like animal of northern regions. The fur of the pine marten is brown and soft; that of the stone or beech marten bluish brown; the fisher marten has a black fur, with brown under-fur.

mar'tensite (*Met.*). A constituent formed in steel when it is cooled at a rate sufficiently rapid to suppress the change from austenite to pearlite. Results from the decomposition of austenite at low temperatures. Consists of a solid solution of carbon in α-iron, and is responsible for the hardness of quenched steel.

Martin's cement (*Plast.*). A quick-setting hard plaster, made by soaking plaster of Paris in a solution of potassium carbonate.

Martinez formation, mar-tē'nez (*Geol.*). A formation which, together with the Tejon, represents the Eocene along the Pacific coast of N. America. They consist of marine shales (13,000 ft.) and sandstones containing foraminifera, and are important in the Californian oil-fields.

martite (*Min.*). Sesquioxide of iron (Fe_2O_3), crystallising in the cubic system like magnetite (Fe_3O_4), and believed to be pseudomorphous after magnetite, and in part perhaps after iron pyrite.

marver (*Glass*). A flat cast-iron or stone (marble) block upon which glass is rolled during the hand method of working.

Marwood Beds (*Geol.*). Marine sands and shales which occur in rocks of Upper Devonian age in North Devon and West Somerset. See also **Baggy Beds.**

Marx rectifier (*Elec. Eng.*). See **atmospheric arc rectifier.**

mash (*Brew.*). A porridge-like mixture consisting of coarsely ground malt and hot water which have been mixed in the masher.

mash tun (*Brew.*). An insulated metal vessel in which the mash is mechanically mixed and kept at a temperature of about 150° F. for a period (about 2 hours), when the sweet wort is run off.

masher (*Brew.*). The receptacle in which ground malt is mixed with hot water before reaching the mash tun.

mashing (*Brew.*). The process of extracting the grist (ground malt) with water, at a temperature of 145-155° F., in a mash tun.

mask (*Photog.*). Any opaque paper or film which is used to limit the printing of a negative on a positive print, or, in a projector or printer, to confine or limit the size of the effective image. See **mat.**

mask (*Psycho-an.*). See **persona.**

mask (*Zool.*). A prehensile structure of the nymphs of certain Dragon-flies (*Libellulidae*).

masked valve (*I.C. Engs.*). A poppet valve the head of which is recessed into its seat, so that its outer diameter acts as a piston valve; it allows a lower valve acceleration to be used, and gives a more efficient *valve-opening diagram* (q.v.).

mas'kelynite (*Min.*). A mineral which occurs in colourless isotropic grains in meteorites and has a composition near labradorite. It probably represents re-fused feldspar.

masking (*Acous.*). The loss of sensitivity of the ear for specified sounds in the presence of other sounds, one sound *masking* sounds of higher frequency to a marked extent.

ma'sochism (*Psycho-path.*). Gratification obtained from the suffering of physical or mental pain, usually inflicted from without. Cf. *sadism.*

mason. A builder in stone.

mason's joint (*Build.*). Pointing finished with a projecting vee.

mason's level (*Masonry, etc.*). A *plummet level* (q.v.).

mason's mitre (*Build.*). The name given to an effect similar to the *mitre* (q.v.) but produced (particularly in stonework) by shaping the intersection out of the solid.

mason's putty (*Masonry*). A mixture of Portland cement, lime putty, and stone dust, usually in the proportions 2 : 5 : 7, with water. Used for making fine joints, especially in ashlar work.

mason's scaffold (*Build.*). A form of scaffold used in the erection of stone walls, when it is not convenient to leave holes for the support of one end of the putlogs; an inner set of standards and ledgers is used to provide this support.

mason's stop (*Build.*). A *mason's mitre.*

mason's trap (*Build.*). A form of trap in which a stone slab on edge dips below the water surface.

Ma'sonite (*Build.*). A form of building-board used as a lining because of its heat-insulation properties.

masonry. The craft of building in stone.

mass (*Phys.*). The quantity of matter in a body. Mass may also be considered as the equivalent of inertia, or the resistance offered by a body to change of motion (i.e. acceleration). Masses are compared by weighing them, which amounts to comparing the forces of gravitation acting on them. See also **force, gram, pound, weight.**

mass action (*Chem.*). See **law of mass action.**

mass concrete (*Civ. Eng.*). Concrete which is placed without reinforcement. Also called BULK CONCRETE.

mass-control (*Acous.*). Said of mechanical systems, particularly, those generating sound-waves, when the mass of the system is so large that the compliance and resistance of the system are ineffective in controlling motion.

mass effect (*Met.*). The tendency for hardened steel to decrease in hardness from the surface to the centre, as a result of the variation in the rate of cooling throughout the section. Becomes less marked as the rate of cooling required for hardening decreases, that is, as the content of alloying elements increases.

mass-haul curve (*Civ. Eng.*). A curve used in the design of earthworks involving cuttings and embankments, the abscissae representing chainage along the centre line, and the ordinates the excess of cutting over filling, i.e. the material requiring to be hauled to another position.

mass number (*Chem.*). The atomic weight of an isotope.

mass of the electron (*Phys.*). A result of the theory that mass can be ascribed to kinetic energy is that the effective mass of the electron should vary with its velocity according to the expression

$$m = \frac{m_0}{\sqrt{1-\left(\frac{v}{c}\right)^2}}$$

where m_0 is the mass for small velocities, c is the velocity of light, and v that of the electron. This has been confirmed experimentally.

mass provisioning (*Zool.*). In certain species of Insect, the provision by the mother (or in the case of social Insects by nurse individuals) of sufficient food to last the offspring through the whole of its larval life.

mass resistivity (*Elec. Eng.*). The product of the volume resistivity and the density of a given material at a given temperature.

mass spectra (*Phys.*). Positive ray spectra obtained by means of the mass spectrograph. In such spectra the images due to positive ray particles of different masses are spaced according to the masses of the particles, that is, according to their atomic weights. *Isotopes* (q.v.) were investigated by Aston by means of mass spectra.

mass spectrograph (*Phys.*). An instrument developed by Aston for the analysis of positive rays. By means of magnetic and electrostatic fields applied at right-angles to the positive ray beam, particles having the same value of e/m are brought to a focus on a photographic plate. From the resulting mass spectrum the atomic weights of the particles may be deduced. See also **positive rays, mass spectra.**

mass'eter (*Zool.*). An elevator muscle of the lower jaw in higher Vertebrates.—*adj.* **masseter'ic.**

massicot (*Min.*). Lead monoxide which crystallises in the orthorhombic system. It is a rare mineral of secondary origin, associated with galena.—(*Paint.*) A yellow pigment, the same chemically as litharge.

mast (*Bot.*). The fruit of the beech and related trees.

mast (*Struct.*). A slender vertical structure which is not self-supporting and requires to be held in position by guy-ropes. Cf. *pylon.*

mast antenna (*Radio*). An antenna in which the currents are carried by the metallic structure of the mast itself, instead of in conductors supported thereby.

mast cell (*Zool.*). See **basicyte.**

mastax (*Zool.*). In *Rotifera*, the gizzard or masticatory part of the alimentary canal, between the pharynx and the oesophagus.

mastec'tomy (*Surg.*). Surgical removal of the breast.

master (*Acous.*). In gramophone-record manufacture, the copper electroplate obtained by plating the original wax on which a record has been made.

master (*Eng.*). (1) The term applied to special tools, gauges, etc. used for checking the accuracy of others used in routine work.—(2) The chief or key member of a system, as the *master cylinder* of a hydraulic brake mechanism.

master clock (*Elec. Eng.*). A clock for use with certain forms of electrical timekeeping equipment. It sends out impulses at predetermined time-intervals for the operation of other clocks or similar equipment.

master connecting-rod (*I.C. Engs.*). A specially strengthened connecting-rod used on one cylinder of a radial aero engine. It carries wrist pins to which the other rods are articulated, and so transmits the total thrust of all cylinders to the crank-pin.

master controller (*Elec. Eng.*). A controller for electrical equipment the operation of which energises or de-energises the contactors which perform the actual switching operations.

master factor (*Bot.*). Any powerfully acting ecological factor which plays the main part in determining the occurrence in a given area of a plant community of major rank.

master frequency meter (*Elec. Eng.*). See **integrating frequency meter.**

master gauge (*Eng.*). A standard gauge made to specially fine limits; used for checking the accuracy of limit gauges in routine use.

master haulier (*Mining*). See **pusher-on.**

master key (*Build.*). A special key operating a number of locks the keys for which are not interchangeable.

master oscillator (*Radio*). A thermionic valve oscillator, usually of low power, which controls the frequency of the currents radiated from a transmitter using independent drive.

master switch (*Elec. Eng.*). A switch for controlling the effect of a number of other switches or contactors; for instance, if the master switch is open, none of the other switches is operative.

master tap (*Eng.*). A sub-standard screw-tap, sometimes used after the plug-tap when great accuracy is required.

master telephone transmission reference system (*Teleph.*). The C.C.I.F. reference system for telephonic transmission measurements, located in the C.C.I. laboratory in Paris, and identical with the corresponding system maintained in the Bell Telephone Laboratories in New York.

mastic. A pale-yellow resin for the preparation of fine varnishes.

mastic (*Build.*). A term applied to bituminous preparations used for bedding and pointing window frames, bedding wood-block flooring, and repairing flat roofs.

mastic asphalt (*Build.*). A mixture of bitumen with stone chippings or sand, used for roofing, paving, and damp-proof courses.

mastication (*Zool.*). The act of reducing solid food to a fine state of subdivision or to a pulp.

masticator (*Chem.*). An apparatus consisting of two revolving and heated cylinders studded with teeth or knives; used for converting rubber into a homogeneous mass.

mas'ticatory (*Zool.*). Pertaining to the trituration of food by the mandibles, teeth, or gnathobases, prior to swallowing.

masticatory stomach (*Zool.*). See **gastric mill.**

mastid'ion (*Zool.*). In certain Spiders, a small nipple-like tubercle on the inner side of the paturon.

Mastigoph'ora (*Zool.*). A class of *Protozoa* comprising forms generally of small size, having in the principal phase one or more flagella, and lacking a meganucleus.

masti'tis (*Med., Vet.*). Inflammation of the mammary gland.

mas'todyn'ia (*Med.*). Pain in the breast.

mas'toid (*Bot., Zool.*). Resembling a nipple; as a posterior process of the otic capsule in the Mammalian skull.

mastoidec'tomy (*Surg.*). Excision of the (infected) air-cells of the mastoid bone.

mastoidi'tis (*Med.*). Inflammation of the air-cells of the mastoid bone.

masu'rium (*Chem.*). Symbol, Ma. An element in the seventh group of the periodic system, whose discovery was reported some years ago. At. no. 43. It is very rare, and exists only in small quantities in columbite, gadolinite, zircon, and certain other minerals.

mat (*Cinema.*). In cinematograph-film printing, a colloquial term for *mask.*

match-boarding or **match-lining** (*Carp.*). *Matched boards* (q.v.).

match, colour (*Photog.*). See **colour match.**

match planes (*Carp.*). A pair of planes used to cut the tongue and the groove, respectively, on matched boards. Also MATCHING PLANES.

matched boards (*Carp.*). Boards specially cut at the edges to enable close joints to be made, either by tongue and groove or by rebated edge.

matched lenses (*Photog.*). (1) A pair of substantially equal lenses in a normal camera or a television camera; used in parallel, one for focusing and framing, the other to focus the image on the emulsion or mosaic, which cannot be seen.—(2) The pair of lenses in a stereoscopic camera or viewer.

matching (*Carp.*). *Matched boards* (q.v.).

matchings (*Textiles*). Wool from different fleeces that has been sorted to one quality.

matching impedances (*Elec. Comm.*). The adjustment of a load to a source so that the maximum power is accepted, i.e. so that there is no reflection loss due to mis-match.

matching transformer (*Elec. Comm.*). A transformer expressly inserted into a communication circuit to avoid reflection losses because the load impedance differs from the source impedance. In designing for optimum matching, the ratio of the impedances equals the square of the ratio of the turns on the windings.

matelassé (*Textiles*). A compound cloth with a brocade face and, usually, a plain weave back; made from different materials and used for fancy vestings, etc.

material lock (*Civ. Eng.*). An air-lock enabling materials, tools, etc. to be passed into or taken out from spaces filled with compressed air.

material system (*Chem.*). See **system.**

materialism, dialectic. The philosophical principle which states that new phenomena arise through internal contradiction between phases of a process, e.g. mind from matter, ideologies from material social conditions.

mate'ries mor'bi (*Med.*). The stuff, substance, or organism which causes disease.

mating (*Build., etc.*). Said of surfaces or pieces which come into contact or interlock with others.

matlockite (*Min.*). Oxychloride of lead ($PbO \cdot PbCl_2$) which occurs in tabular tetragonal crystals.

ma'trix (*Biol.*). An outer layer of stainable material in a chromosome.—(*Bot.*) Any substratum, living or dead, in which a fungus grows.—(*Zool.*) The intercellular ground-substance of connective tissues.

matrix (*Build.*). The lime or cement constituting the cementing material that binds together the aggregate in a mortar or concrete.

matrix (*Print.*). The mould from which type is cast, produced by an impression from a punch: also, the mould made from a page of type in stereotyping or electrotyping.

mat'rocli'nous (*Biol.*). Exhibiting the characteristics of the female parent more prominently than those of the male parent. Cf. *patroclinous.*

matromor'phic (*Biol.*). Resembling the mother.

matt or **matte.** Smooth but dull; tending to diffuse light; said, e.g., of a surface painted or varnished so as to be dull or flat.

matte (*Met.*). A solution of mixed sulphides produced in the smelting of sulphide ores. In the smelting of copper, for example, a slag containing the gangue oxides and a matte consisting of copper and iron sulphides are produced. The copper is subsequently obtained by blowing air through the matte, to oxidise the iron and sulphur.

matter (*Med.*). See **pus.**

matter (*Phys.*). The substances of which the physical universe is composed. Matter is characterised by gravitational properties (on the earth by weight) and by its indestructibility under normal conditions.

Matthiesens standard (*Elec. Eng.*). A standard used for expressing the conductivity of copper. A length of wire of 1 metre, weighing 1 gram, should have a resistance of 0·1539 ohm if hard drawn, and 0·1508 if annealed; the value for any other wire can then be expressed as a percentage of this.

matting (*Cinema.*). Closing the width of the effective variable-density sound-track during recording so that the corresponding area prints black. The reduced area available for the modulation then requires extra modulation in compensation, but the result is an improved speech/noise ratio in sequences where the modulation is low.

mattress (*Civ. Eng.*). Sheet expanded metal for reinforcement of concrete roads.

Mat'ura diamonds (*Min.*). Colourless zircons from Ceylon, which on account of their brilliancy are useful as gemstones.

maturation (*Bot., Zool.*). The final stages in the development of the germ cells.

maturation divisions (*Zool.*). The divisions by which the germ cells are produced from the primary spermatocyte or oöcyte, during which the number of chromosomes is reduced from the diploid to the haploid number.

Mauch Chunk Beds, mawk— (*Geol.*). A group of red beds of continental origin, partly of Middle, partly of Upper Mississippian age, occurring in Pennsylvania.

Mauchline Lavas, mawhh'lin (*Geol.*). A series of lava flows and tuffs in Ayrshire, Scotland, which are followed above by red sandstones. The whole is possibly of Permian age.

maude (*Textiles*). A striped woollen plaid of greyish colour.

maul (*Tools*). See **beetle.**

maulstick (*Paint.*). A slender stick padded at one end with cloth or leather; used as a support for the hand guiding the brush. Also spelt MAHLSTICK.

maw-bound (*Vet.*). A term implying impaction of the rumen of cattle.

maxill-, maxil'lo- (Latin *maxilla*, jaw). A prefix used in the construction of compound terms; e.g. *maxillodental*, pertaining to the jaws and the teeth.

maxil'la (*Zool.*). In *Vertebrata*, the upper jaw: a bone of the upper jaw: in *Arthropoda*, an appendage lying close behind the mouth and modified in connexion with feeding.—*pl.* **maxil'lae** —*adjs.* **maxil'lary, maxillif'erous, maxil'liform.**

maxil'lary (*Zool.*). Pertaining to a maxilla: pertaining to the upper jaw: a paired membrane bone of the Vertebrate skull which forms the posterior part of the upper jaw.

maxillary glands (*Zool.*). In some *Crustacea*, excretory glandular organs in the region of the maxillae.

maxil'liped (*Zool.*). In *Arthropoda*, especially *Crustacea*, an appendage behind the mouth, adapted to assist in the transference of food to the mouth.

maxil'lotur'binal (*Zool.*). In Vertebrates, a paired bone or cartilage of the nose which supports the folds of the olfactory mucous membrane.

maxillu'la (*Zool.*). In *Arthropoda*, one of the first pair of maxillae, if there is more than one pair.

maximum and minimum thermometer (*Meteor.*). An instrument for recording the maximum and minimum temperatures of the air between two inspections, usually a period of 24 hours. A type widely used is *Six's thermometer* (q.v.).

maximum demand (*Elec. Eng.*). The maximum load taken by an electrical installation during a given period. It may be expressed in kW, kVA, or amperes.

maximum-demand indicator (*Elec. Eng.*). An instrument for indicating the maximum demand which has occurred on a circuit within a given period.

maximum-demand tariff (*Elec. Eng.*). A form of charging for electrical energy in which a fixed charge is made, depending on the consumer's maximum demand, together with a charge for each unit (kWh) consumed.

maximum equivalent conductance (*Elec. Eng.*). The value of the equivalent conductance of an electrolytic solution at infinite dilution with its own solvent.

maximum tensile stress (*Met.*). See **ultimate tensile stress.**

maximum traction truck (*Elec. Eng.*). A special form of bogie or truck often used on trams and arranged so that the greater part of the weight comes on the driving wheels, thereby enabling the maximum tractive effort to be obtained.

maximum value (*Elec. Eng.*). See **peak value.**

Maxweld (*Build.*). A metallic fabric providing a key for concrete.

maxwell (*Elec. Eng.*). The unit of magnetic flux; equivalent to one *line of force*.

Maxwell bridge (*Elec. Eng.*). An a.c. bridge devised by Maxwell for the measurement of self-inductance.

Maxwell experiment (*Photog.*). The demonstration of three-colour additive synthesis, using three black-and-white negatives.

Maxwell primaries (*Photog.*). The colours red, green, and blue-violet, used in Maxwell's experiment.

Maxwell's rule (*Elec. Eng.*). A law stating that every part of an electric circuit is acted upon by a force tending to move it in such a direction as to enclose the maximum amount of magnetic flux.

Maxwell's theorem (*Struct.*). See **reciprocal theorem.**

May Hill Sandstone (*Geol.*). A group of sandstones, conglomeratic at the base, belonging to the Llandovery Series in the Welsh Borderlands.

Maycous'tic (*Build.*). Trade-name for a pre-cast stone having good acoustic properties.

Mayo twill (*Textiles*). See **Campbell twill.**

M.C., m.c. Abbrev. for *metric carat* (see **carat**).

McBurney's point (*Med.*). A point situated on a line joining the umbilicus to the bony prominence of the hip-bone at the upper end of the groin, and 1½ in. from the latter; a point of maximum tenderness in appendicitis.

McColl protective system (*Elec. Eng.*). A form of protective system used on electric power networks; it operates on the balanced principle embodying biased beam relays.

McLeod gauge (*Chem.*). A device for the measurement of low pressures, based on an application of Boyle's law.

MC.P.S., mcps, or **mc/s** (*Elec. Comm.*). Abbrevs. for *megacycles per second.*

M.D.F. (*Elec. Comm.*). Abbrev. for *main distribution frame* (q.v.).

Me (*Chem.*). (1) A symbol for the methyl radical $-CH_3$. (2) A general symbol for a metal.

Meadfoot Beds (*Geol.*). A series of sandstones and grits which comprise the middle division of the Lower Devonian Rocks of Cornwall and South Devon.

Meadowtown Beds (*Geol.*). A group of limestones and flags belonging to the Llandeilian Series of the Ordovician System in Shropshire.

mealy (*Bot.*). Covered by a scurfy powder; farinose.

mean (*Maths.*). The *mean* of a set of quantities is their sum divided by the number of quantities. Distinction is made between the algebraic mean, which takes into account the signs (positive or negative) of the quantities, and the arithmetic mean, which takes all the signs as positive.

mean calorie (*Heat*). See **calorie.**

mean daily motion (*Astron.*). The term applied to the change in position of a heavenly body in some spherical co-ordinate, which is obtained by dividing the 360° of the complete cycle by the number of days taken to accomplish it; the amount a body would move in one day were its motion uniform.

mean effective pressure (*Eng.*).
See **brake—** **indicated—**

mean establishment (*Surv.*). The average value of the lunitidal interval at a place.

mean free path (*Acous.*). The average distance travelled by a sound-wave between successive reflections within an interior.

mean free path (*Phys.*). The mean distance traversed by a molecule of a gas between successive collisions. The following expressions for the mean free path L are derived from the kinetic theory:

$$L=\frac{\eta}{0{\cdot}31\rho U}; \quad L=\frac{2{\cdot}02\eta}{\sqrt{p\rho}},$$

where η is the viscosity, ρ the density, p the pressure, and U the mean molecular velocity. See also **gases (kinetic theory of).**

mean-hemispherical candle-power (*Illum.*) The average value of the candle-power in all directions above or below a horizontal plane passing through the source; called the *upper* or *lower* mean-hemispherical candle-power according as the candle-power is measured above or below the horizontal plane through the source.

mean-horizontal candle-power (*Illum.*). The average value of the candle-power of a light source in all directions in a horizontal plane through the source.

mean noon (*Astron.*). The instant at which the mean sun crosses the meridian at upper culmination at any place; unless otherwise specified, the meridian of Greenwich is generally meant.

mean pitch, experimental (*Aero.*). See **experimental mean pitch.**

mean solar day (*Astron.*). See **day (mean solar).**

mean solar time (*Astron.*). The hour angle of the *mean sun* (q.v.) at any moment. Referred to the meridian of Greenwich, this angle is Greenwich Mean Time. Before 1925 this was the time used in civil life in England. It is agreed by international convention that civil time should be counted from Greenwich Mean Midnight, so that it now differs from G.M.T. by twelve hours.

mean-spherical candle-power (*Illum.*). The average value of the candle-power of a light source taken in all directions.

mean-spherical response (*Acous.*). The response of a microphone or loudspeaker taken over a complete sphere the radius of which is large in comparison with the size of the apparatus. For a loudspeaker, this response (total response) determines the total output of sound-power, and therefore, in conjunction with the acoustic properties of an enclosure, the average reverberation intensity in the enclosure. For a microphone, this response is substantially equal to the response for reverberant sound. See also **reverberation response, total response.**

mean-square error (*Maths.*). The square-root of the mean of the squares of the deviations from the mean value when a number of observations are made of a quantity, all known errors having been eliminated, the residual errors being accidental. If n observations provide readings x_1, $x_2 \ldots x_n$, the mean of which is y, the mean-square error is taken as

$$\sqrt{\frac{\Sigma(x-y)^2}{n-1}}.$$

Cf. *probable error*, and *error (normal law of)*.

mean stress (*Met.*). The mid-point of a range of stress. When it is zero, the upper and lower limits of the range have the same value but are in tension and compression respectively.

mean sun (*Astron.*). A fictitious point imagined to describe the celestial equator at the same average rate as the true sun's completion of the ecliptic, but uniformly, so that the length of a mean solar day throughout the year is constant.

mean-zonal candle-power (*Illum.*). The average value of the candle-power of a light source taken in a given zone, the angular limits of the zone being stated.

measles (*Med.*). Morbilli. An acute infectious fever due, it is thought, to infection with a filter-passing organism; characterised by catarrh of the respiratory passages, *Koplik's spots* (q.v.), and a distinctive rash.

measles of beef (*Vet.*). Infection of beef by the bladderworm *Cysticercus bovis.*

measles of pork (*Vet.*). Infection of pork by the bladderworm *Cysticercus cellulosae.* Hence **measly pork.**

measure and a half (*Join.*). Joinery work which is square on one side and moulded on the other.

measuring chain (*Build., Surv.*). See **chain.**

measuring frame (*Build.*). A wooden box without top or bottom used as a measure for aggregates in mixing concrete.

measuring instrument (*Elec. Eng.*). A device serving to indicate or record one or more of the electrical conditions in an electrical circuit. Literally the term also includes integrating meters, but it is not generally used in this connexion.

measuring machine (*Eng.*). A machine for the precise measurement of standard gauges to an accuracy of the order 0·00001 in. It consists of a bed supporting slidable head and tail stocks, the former carrying a micrometer spindle.

measuring tape (*Build., Surv.*). See **tape.**

measuring wheel (*Surv.*). See **perambulator.**

me'atot'omy (*Surg.*). Incision of the urinary meatus in order to widen it.

mea'tus (*Zool.*). A duct or channel, as the external auditory *meatus* leading from the external ear to the tympanum.

mechanical advantage (*Mech.*). The ratio of the resistance (or load) to the applied force (or effort) in a *machine* (q.v.).

mechanical bias (*Teleg.*). In a polarised relay, the displacement of the tongue so that unequal marking and spacing currents are required for operation.

mechanical bond (*Civ. Eng.*). A bond used in reinforced concrete construction because the natural bond between the concrete and its reinforcing steel is generally inadequate from a strength point of view. Mechanical bond, independent of adhesion, is introduced by the use of plain bars bent into hooks at their ends, or of specially rolled bars with projecting ribs of various forms.

mechanical characteristic (*Elec. Eng.*). See **speed-torque characteristic.**

mechanical depolarisation (*Elec. Eng.*). Dissipation, by mechanical means, of the hydrogen bubbles causing polarisation of an electrolytic cell.

mechanical deposits (*Geol.*). Those deposits of sediment which owe their accumulation to mechanical or physical processes.

mechanical efficiency (*Eng.*). (Of an engine) the ratio of the brake or useful horse-power to the indicated horse-power developed in the cylinders, i.e. the efficiency of the engine regarded as a machine.

mechanical engineering. That branch of engineering concerned primarily with the design and production of all purely mechanical contrivances, including all types of prime-movers, vehicles, and general engineering products.

mechanical equivalent of heat (*Phys.*). The ratio of the mechanical energy transformed into heat to the resulting quantity of heat generated. Its value is $4 \cdot 18 \times 10^7$ ergs per calorie. Also called JOULE'S EQUIVALENT (symbol J).

mechanical equivalent of light (*Light*). The ratio of the radiant flux, in watts, to the luminous flux, in lumens, at the wavelength for which the *relative visibility factor* (q.v.) is a maximum. Its value is about ·0016 watt per lumen.

mechanical filter (*Cinema., etc.*). An arrangement of springs and masses interposed in a drive, particularly in sound-cameras, to smooth out variations in the required constant speed.

mechanical impedance (*Acous.*). The ratio of the total force required to move a body to the velocity resulting, for a specified frequency of motion. It consists of the real part, mechanical resistance, which represents the transmission of mechanical power, and the imaginary part, which is purely reactive.

mechanical line (*Acous.*). The adjustment of the elements in an acoustic system, such as a sound-box or electrical recorder, so that they form the elements of a wave-filter, in analogy with electrical filters.

mechanical rectifier (*Elec. Eng.*). A rectifier in which a rotating or oscillating commutator, operating synchronously with the a.c. supply, is used to rectify alternate half-waves of this supply.

mechanical refrigerator (*Eng.*). A plant comprising a compressor for raising the pressure of the refrigerant, a condenser for removing its latent heat, a regulating valve for lowering its pressure and temperature by throttling, and an evaporator in which it absorbs heat at a low temperature.

mechanical resonance (*Acous.*). Enhanced response to a constant-magnitude disturbing force as the frequency of this force is increased through a resonant frequency, at which the reactance of the inertia (or moment of inertia) balances the reactance of the supporting stiffness (or torque constant) of the system.

mechanical scanning (*Television*). Any system of scanning in which use is made of moving apertures, mirrors, lenses, or other like devices, as opposed to one in which there are no moving parts other than electron beams, as in cathode ray systems.

mechanical shovel (*Civ. Eng.*). An excavating machine.

mechanical stipple (tint) (*Print.*). A *stipple* (q.v.) executed on the block as opposed to one drawn by the artist on the original (*hand stipple*).

mechanical (or automatic) stoker (*Eng.*). A device for stoking or firing a steam boiler by automatic means. It receives fuel continuously by gravity, carries it progressively through the furnace, and deposits or discharges the ash. See **chain grate stoker, overfeed stoker, underfeed stoker.**

mechanical tissue (*Bot.*). Tissues, usually made up of thick-walled cells, which give support to the plant body.

mechanical wood-pulp (*Paper*). A low grade of wood-pulp prepared by grinding.

mechanics. The study of the action of forces on bodies and of the motions they produce. One branch of the subject, *statics*, deals with forces in equilibrium; another branch, *dynamics*, is concerned with motion in its relation to force; a third branch, *kinematics*, deals with the theory of motion without reference to forces.

Meckel's diverticulum (*Med.*). A diverticular outgrowth from the lower end of the small intestine, as a result of the persistence in the adult of the vitelline or yolk-sac duct of the embryo.

Mecke'lian cartilage (*Zool.*). In some Fish, the cartilaginous bar which forms each ramus of the lower jaw.

meco'nium (*Zool.*). In certain Insects, liquid expelled from the anus immediately after the emergence of the imago; it represents the pupal excreta.

medi-, medio- (Latin *medius*, middle). A prefix used in the construction of compound terms; e.g. *mediopectoral*, in the middle of the sternum.

me'dia (*Zool.*). In Insects, one of the primary veins of the wing: in Vertebrates, the middle tissue layer of the wall of a blood-vessel.

me'diad (*Zool.*). Situated near, or tending towards, the median axis.

median plane (*Bot.*). The plane passing through the middle of a leaf or a flower.

me'diastini'tis (*Med.*). Inflammation of the tissues of the mediastinum.

mediasti'num (*Zool.*). In higher Vertebrates, the mesentery-like membrane which separates the pleural cavities of the two sides ventrally: in Mammals, a mass of fibrous tissue representing an internal prolongation of the capsule of the testis.

mediator, potential (*Chem.*). See **potential mediator.**

medical electrolysis. See **galvanism.**

Medi'na cement (*Build., Civ. Eng.*). A quick-setting natural hydraulic cement made by calcining certain nodules found in the Isle of Wight, the bed of the Solent, and Hampshire.

Medina Sandstones and **Shales** (*Geol.*). A subdivision of the Silurian of N. America, typically exposed in the Niagara Gorge section, and comprising a basal quartzite followed by green and red shales and sandstones capped by another quartzite. These beds constitute the Medina Group of the Niagaran Series in some classifications; but in others they are given the status of a Series.

Mediterranean fever (*Med.*). See **undulant fever.**

medium (*Bot., Zool.*). A nutritive substance, usually of a paste-like or liquid consistency, on or in which tissues or cultures of micro-organisms may be reared; the all-pervading substance in which an animal has its being, as an *aqueous medium*.

medium (*Paint.*). A liquid or a semi-liquid vehicle, such as water, oil, spirit, wax, which makes pigment and other components of paint workable.

medium (*Paper*). A standard size of printing paper, 18½×23½ in.; U.S., 18×23 in.

medium Edison screw-cap (*Elec. Eng.*). An Edison screw-cap having a diameter of approximately 1 in. and approximately 7 threads per inch.

medium-grained (*Geol.*). See **grain-size classification.**

medium shot (*Cinema.*). A shot in motion-picture production which is normally used for a room or a group of people. See also **close shot, long shot.**

medium waves (*Radio*). Electromagnetic waves whose wavelength lies between 200 and 1000 metres.

medul'la (*Bot.*). (1) See **pith.**—(2) A tangle of loose or moderately loose hyphae in a sclerotium, rhizomorph, or other massive fungal structure.—(3) A loose hyphal layer in a thallus of a lichen.

medulla (*Zool.*). The central portion of an organ or tissue, as the *medulla* of the Mammalian kidney: bone-marrow.—*adj.* **medul'lary.**

medulla oblonga'ta (*Zool.*). The hind brain in Vertebrates, excluding the cerebellum.

medul'lary (*Bot*). Relating to, or belonging to, the pith

medullary bundle (*Bot.*). A vascular bundle running in the pith.

medullary canal (*Zool.*). The cavity of the central nervous system in Vertebrates; the central marrow cavity of a shaft-bone.

medullary folds (*Zool.*). In a developing Vertebrate, the lateral folds of the medullary plate, by the upgrowth and union of which the tubular central nervous system is formed.

medullary groove (*Zool.*). In a developing Vertebrate, a groove on the surface of the medullary plate which will later become converted into the medullary canal.

medullary plate (*Zool.*). In a developing Vertebrate, the dorsal plate-like area of ectoderm which will later give rise to the central nervous system.

medullary ray (*Bot.*). See **vascular ray.**

medullary rays (*Zool.*). Bundles of straight uriniferous tubules passing through the medulla of the Mammalian kidney.

medullary sheath (*Bot.*). The peripheral layers of cells of the pith. The cells are usually small, sometimes thick-walled, and sometimes more or less lignified.—(*Zool*) A layer of peculiar white fatty substance (myelin) which, in Vertebrates, surrounds the axons of the central nervous system and acts as an insulating coat.

medullary stele (*Bot.*). A meristele lying in the central tissues of a fern stem.

medullary velum (*Zool.*). See **Vieussens' valve.**

medul'late (*Bot.*). (1) Having pith.—(2) See **stuffed.**

med'ullated nerve fibres (*Zool.*). Axons of the central nervous system which are provided with a *medullary sheath* (q v.).

medul'loblasto'ma (*Med*). A malignant and rapidly growing tumour occurring in the cerebellum.

Medu'sa (*Build.*). Trade-name for a preparation used to waterproof cement surfaces.

medusa (*Zool.*). In metagenetic *Coelenterata*, a free-swimming sexual individual.

medu'soid (*Zool.*). In metagenetic *Coelenterata*, an imperfectly developed sexual individual which remains attached to the parent hydroid colony.

medusoid person (*Zool.*). An individual of the sexual stage in *Coelenterata* which show alternation of generations.

meerschaum, mär'showm (*Min.*). A hydrated silicate of magnesium. It is clay-like, and is shown microscopically to be a mixture of a fibrous mineral called parasepiolite and an amorphous mineral β-sepiolite. It is used for making pipes, and formerly was used in Morocco as a soap. Also called SEPIOLITE.

meeting post (*Hyd. Eng.*). The vertical post at the outer side of a lock-gate, which is chamfered so as to fit against the corresponding edge of the other gate of a pair when the gates are shut. Also called MITRE POST.

meeting rail (*Join.*). The top rail of the lower sash, or the bottom rail of the upper sash, of a double-hung window.

meeting stile (*Join.*). See **shutting stile.**

mega-, meg-. Prefix denoting a million, e.g. 1 megawatt = 1 million watts.

meg'a-, megal-, megalo- (Greek *megas*, gen. *megalou*, large). A prefix used in the construction of compound terms; e.g. *megacephalic*, with an abnormally large head.

megachro'mosomes (*Zool.*). In some *Ciliophora*, the outer set of chromosomes at mitosis, representing the meganucleus.

megaco'lon (*Med.*). Abnormally large colon.

meg'acycle (*Elec. Comm.*). One million cycles.

megacycles per second (*Elec. Comm.*). The unit of frequency in which there are one million complete cycles of alternation per second. Used in preference to wavelength when the latter attribute of a wave or oscillation is very short. Abbrevs. **MC.P.S., mc/s, mcps.**

Megadril'i (*Zool.*). An order of *Oligochaeta*, comprising mainly terrestrial forms in which the clitellum never commences before the twelfth somite (except in one family).

megagam'ete (*Zool.*). See **macrogamete.**

megakar'yocyte (*Zool.*). A uninucleate myeloplax possessing a central group of centrioles.

megal-, megalo-. Prefix. See **mega-.**

megalaes'thete (*Zool.*). In *Amphineura*, the larger type of sense-organ occurring in canals traversing the shell, resembling an eye in structure but not proved to be sensitive to light. Cf. *micraesthete.*

megalecithal, —les'i-thal (*Zool.*). Said of eggs which contain a large quantity of yolk.

meg'aline (*Elec. Eng.*). A unit often used in connexion with electrical machinery to denote a magnetic flux of 1 million lines or maxwells.

meg'aloblast (*Zool.*). An embryonic cell which has a large spherical nucleus and of which the cytoplasm contains haemoglobin, which will later give rise to *erythroblasts* (q.v.) by mitotic division within the blood-vessels.

meg'alocyte (*Med.*). An abnormally large red cell in the blood.

megalocyto'sis (*Med.*). The presence of many abnormally large red cells in the blood.

megaloma'nia (*Psychiatry*). Delusion of grandeur Delusional ideas of the possession of great wealth or of great power or of high position, as, for example, in general paralysis of the insane.

megalo'pa (*Zool*). See **megalops.**

meg'alopore (*Zool.*). One of the large apertures in the shell of an amphineuran Mollusc containing a megalaesthete.

meg'alops (*Zool.*). In brachyurous *Decapoda* (Crabs), the last larval stage intervening between the zoëa stages and the adult; characterised by the possession of a broad crab-like cephalothorax and a macrurous tail.—*adj.* **megalop'ic.**

Megalop'tera (*Zool.*). An order of *Endopterygota* in which there are usually two pairs of similar, transparent, net-veined wings; the mouth-parts are adapted for biting; the larva is active and predaceous and possesses biting mouth-parts. Alder Flies, Snake Flies.

megalospher'ic (*Zool.*). (In certain dimorphic species of *Foraminifera*) said of a form in which the initial chamber of the shell is large; cf. *microspheric.*—*n.* **meg'alosphere.**

meg'amere (*Zool.*). See **macromere.**

meganephrid'ia (*Zool.*). In *Chaetopoda*, the typical nephridia, of which one pair occurs in each somite. Cf. *micronephridia.*

meganu'cleus (*Zool.*). See **macronucleus.**

megaphan'erophyte (*Bot.*). A large tree over 30 metres in height.

megaphyl'lous (*Bot.*). Having very large leaves.

megasporan'gium (*Bot.*). A sporangium which contains megaspores.

meg'aspore (*Bot.*). A spore which gives rise to a female gametophyte, or its equivalent.—(*Zool.*) A large swarm-spore or anisogamete of *Sarcodina.*

megaspor'ophyll (*Bot.*). A leaf-like member which bears or subtends one or more megasporangia.

megger (*Elec. Eng.*). An instrument, operating on the ohmmeter principle, for measuring insulation resistance; it embodies a hand-driven electric generator to supply the e.m.f.

meg′ohm (*Elec. Eng.*). A unit of resistance used for very high resistance values; it is equal to 1 million ohms.

me′grims (*Vet.*). See **vertigo.**

Meibo′mian glands (*Zool*) In *Mammalia*, sebaceous glands of the eyelids.

mei′ocyte (*Cyt.*). Any cell in which meiosis is begun.

meiomer′ous (*Bot., Zool.*). Having a small number of parts.—*n.* **meiom′ery.**

mei′onite (*Min.*). Silicate of aluminium and calcium, together with calcium carbonate, which crystallises in the tetragonal system. It is a species of the isomorphous series forming the scapolite group. Cf. *feldspar group.*

meio′sis (*Cyt.*). The type of nuclear division by which the chromosomes are reduced from the diploid to the haploid number —*adj.* **meiot′ic.**

meiotax′y (*Bot.*). The failure of a whorl, or whorls, to develop.

meiot′ic euapogamy (*Bot.*) See **reduced apogamy.**

Meissner circuit, mis′ner (*Radio*). An oscillating thermionic valve circuit in which the resonant circuit is inductively coupled to two coils included in the anode and grid circuits respectively.

Meissner's corpuscles (*Zool.*). In Vertebrates, a type of sensory nerve-ending found in the skin, in which the nerve breaks up into numerous branches which surround a core of large cells in a connective-tissue capsule.

Meissner's plexus (*Zool.*). In Vertebrates, a gangliated plexus of non-medullated nerve-fibres in the submucous coat of the intestine.

melac′onite (*Min.*). Cupric oxide crystallising in the triclinic system. It is a black earthy material found as an oxidation product in copper veins. See also **tenorite.**

melae′na (*Med.*). The passage of black, pitch-like faeces due to the admixture of altered blood, the result of haemorrhage in the alimentary tract.

melan-, mel′ano- (Greek *melas*, gen. *melanos*, black). A prefix used in the construction of compound terms; e.g. *melanocratic* (q.v.).

melanae′mia (*Med*). The presence in the blood of the pigment melanin.

melancho′lia (*Psychiatry*). A condition seen in the depressive state of manic depressive psychosis, characterised by a state of extreme dejection and misery and a painful accent on all experiences; retardation of thought and depressive delusions may also be present. See **manic-depressive psychosis.**

melange, mă-lahn^{g}zh′ (*Textiles*). Worsted yarns made from printed tops.

mel′anin (*Chem.*). A dark-brown or black pigment occurring in hair and skin. Its empirical formula is $C_{17}H_{98}O_{33}N_{14}S$. It is soluble only in alkali, and is formed by the oxidation of tyrosine.

mel′anism (*Zool.*). An abnormal condition caused by overproduction of melanin.

mel′anite (*Min.*). Silicate of calcium and iron, crystallising in the cubic system. It is a black variety of garnet.

mel′anoblast (*Zool.*). A special connective tissue cell containing melanin.

melanocrat′ic (*Geol.*). A term applied to rocks which are abnormally rich in dark and heavy ferro-magnesium minerals (to the extent of 60% or more). See also **leucocratic, mesocratic.**

mel′anocyte (*Zool.*). A lymphocyte containing black pigment.

melanoder′mia or **melanoder′ma** (*Med.*). See **leucodermia.**

melanoglos′sia (*Med.*). Black hairy tongue. An overgrowth of the papillae of the tongue, which are stained black as the result either of bacterial action or of chemical action of certain food substances.

melano′ma (*Med.*). Strictly, any pigmented tumour; now commonly used as a synonym for *melanotic sarcoma.*

mel′anophore (*Zool.*). A chromatophore containing black pigment.

melano′sis (*Med.*). The abnormal deposit of the pigment melanin in the tissues of the body.

melanospor′ous (*Bot.*). Having black spores.

melanot′ic sarcoma (*Med.*). Melanoma. Malignant melanoma. A pigmented, malignant tumour arising in the skin or in the choroid of the eye.

mel′anotype (*Photog.*). Another name for *ferrotype.*

melan′terite (*Min.*). Hydrous ferrous sulphate which crystallises in the monoclinic system. It usually results from the decomposition of iron pyrite or marcasite. Also called COPPERAS.

melanu′ria (*Med.*). The presence in the urine of the pigment melanin.

mel′aphyre (*Geol.*). An obsolete general term for altered amygdaloidal rocks of basaltic or andesitic types.

Melbourn Rock (*Geol.*). A hard, white, often nodular bed of chalk, found at the base of the Turonian stage of the Chalk in the southern counties of England.

melena (*Med.*). See **melaena.**

melez′itose, melicitose (*Chem.*). A trisaccharose found in the juice of certain pines and in Persian manna.

mel′ilite (*Min.*). A complex mineral crystallising in the tetragonal system and consisting of a mixture of two minerals in isomorphous series—gehlenite (calcium aluminium silicate) and akermanite (calcium magnesium silicate). Melilite occurs as a component of certain recent basic eruptive rocks.

melliph′agous, melliv′orous (*Zool.*). Honey-eating.

mel′lisu′gent (*Zool.*). Honey-sucking.

mellowing (*Tanning*) A lessening of the astringency of a tan liquor by ageing.

melting-point (*Chem., etc.*). The temperature at which a solid begins to liquefy. Pure metals, eutectics, and some intermediate constituents melt at constant temperature. Alloys generally melt over a range. Also called FUSING-POINT.

melting-point test (*Build., Civ. Eng.*). A test for the determination of the melting-point of a bitumen for use in building or roadmaking. Also called SOFTENING-POINT TEST.

melting pot (*Glass*). A vessel of fireclay holding from a few pounds to 30-40 cwt., according to the type of manufacture; used to contain the glass whilst melting in the pot furnace. Such pots may be open or closed (i.e. provided with a hood to prevent furnace gases from acting on the glass).

melting pot (*Plumb*). The iron pot in which lead and solder are melted ready for use.

melton (*Textiles*). A strong heavily milled woollen fabric used for overcoatings.

member (*Bot.*). Any part of a plant considered from the standpoint of morphology.

member (*Build., Civ. Eng.*). (1) A constituent part of a structural framework.—(2) A division of a moulding.

member (*Zool.*). An organ of the body, especially an appendage.

membra′na (*Zool.*). A thin layer or film of tissue; a membrane.

membrana granulo′sa (*Zool.*). In a Graafian follicle, the inner layer which lines the cavity of the follicle.

membrana pro′pria (*Histol.*). See **basement membrane.**

membrana tecto′ria (*Zool.*). A soft fibrillated membrane overlying the organ of Corti.

membrana tym′pani (*Zool.*). A thin fibrous membrane forming the tympanum or ear-drum.

membrana'ceous, membranif'erous, mem'branous. *Adjs.* from *membrana, membrane.*

membrane (*Bot., Zool.*). A thin sheet-like structure, usually fibrous, connecting other structures or covering or lining a part or organ.—(*Entomol.*) The terminal portion of the hemi-elytrum of some hemipterous insects.

membrane bone (*Histol.*). Bone formed by the direct ossification of areolar connective tissue, without passing through a cartilaginous stage.

membranel'la (*Zool.*). In *Ciliophora,* an undulating membrane formed by the fusion of rows of cilia.

mem'branous labyrinth (*Zool.*). The soft tubular organ which forms the internal ear of Vertebrates, lining the tubular cavities of the bony labyrinth.

membranu'la (*Zool.*). An organelle of certain *Ciliophora,* formed by the concrescence of a number of cilia.

Menac'can Grit (*Geol.*). See **Grampound Grit.**

menac'canite (*Min.*). Sand composed of *ilmenite* (q.v.); found at Menaccan, Cornwall.

Mendel's law (*Gen.*). The offspring of parents that show contrasting characters, one dominant and one recessive, resemble the dominant parent in respect of such a character; in the second filial generation resulting from the crossing of these hybrid offspring 25% of the individuals will resemble the dominant grandparent, 25% will resemble the recessive grandparent, and 50% will resemble the hybrid individuals of the first filial generation.

Mendeleev's table, men-del-ā'yef (*Chem.*). See **periodic system.**

Mende'lian character (*Gen.*). A character which is inherited according to the generalisation known as *Mendel's law* (q.v.); an allelomorph.

Mendelian inheritance, Mendelism (*Gen.*). See **Mendel's law.**

Mendez Shales (*Geol.*). The impermeable cover to the oil-bearing Cretaceous limestones in Mexico; of Eocene age in the main.

mending (*Textiles*). Making good any imperfections caused during weaving by yarn breakages, etc.

mending (*Typog.*). A corrected piece inserted in a printing plate.

men'dipite (*Min.*). Oxychloride of lead, $2PbO \cdot PbCl_2$, which crystallises in the orthorhombic system; found in the Mendip Hills of Somerset.

Mene'vian Beds (*Geol.*). A series of dark flags and black slates which are of Middle Cambrian age; found typically in the St. Davids area in Pembrokeshire.

Ménière's disease, mā-nyār' (*Med.*). Labyrinthine vertigo. A disorder characterised by attacks of dizziness, buzzing noises in the ears, and progressive deafness; due to chronic disease of the labyrinth of the ear.

men'ilite (*Min.*). An alternative and more attractive name for *liver-opal*; it is a grey or brown variety of that mineral.

mening-, menin'go- (Greek *mēninx*, gen. *mēningos*, membrane). A prefix used in the construction of compound terms; e.g. *meningoencephalitis* (q.v.).

men'inges (*Zool.*). In Vertebrates, envelopes of connective tissue surrounding the brain and spinal cord.—*sing.* **meninx.**—*adj.* **menin'geal.**

meningio'ma (*Med.*). A tumour arising from the meninges of the brain, and, more rarely, of the spinal cord.

menin'gism, meningis'mus (*Med.*). The presence of the symptoms of meningitis in conditions in which the meninges are neither diseased nor inflamed.

meningi'tis (*Med.*). Inflammation of the meninges.

menin'gocele (*Med.*). The hernial protrusion of the meninges through some defective part of the skull or the spinal column.

meningo-encephali'tis (*Med.*). Inflammation of the meninges and of the brain substance.

meningo-enceph'alocele (*Med.*). A hernia of meninges and brain through some defect in the skull.

meningo-myeli'tis (*Med.*). Inflammation of the meninges and of the spinal cord.

meningo-myel'ocele (*Med.*). Hernial protrusion of meninges and spinal cord through a defect in the spinal column.

meningovas'cular (*Med.*). Pertaining to, or affecting, the meninges and the blood-vessels (especially of the nervous system).

menis'cus (*Chem.*). The surface of a liquid in a tube. It is usually curved, owing to surface tension effects.

meniscus (*Zool.*). A small interarticular plate of fibrocartilage which prevents violent concussion between two bones; as the intervertebral discs of *Mammalia.*

men'opause (*Med.*). The natural cessation of menstruation in women, usually between the ages of 45 and 50.

menorrha'gia (*Med.*). Excessive loss of blood owing to increased discharge during menstruation, the duration of the menstrual period being normal.

menostax'is (*Med.*). Excessive loss of menstrual blood due to an increase in the duration of the menstrual period (normally 4-5 days).

menotax'is (*Zool.*). The movements of an animal when it maintains a fixed direction in relation to a stimulus.

mensa (*Zool.*). The biting surface of a tooth.

men'strual (*Zool.*). Pertaining to menstruation.

menstrua'tion (*Zool.*). The periodical discharge from the uterus of a female Mammal. See also **xenomenia.**

mentalism. See **idealism.**

menthol (*Chem.*). $C_{10}H_{20}O$, a camphor compound of the formula

The *l*-modification is the chief constituent of peppermint oil. M.p. 43° C., b.p. 213° C. It is used as an antiseptic, and, externally, as a local analgesic.

mentomecke'lian (*Zool.*). In some Vertebrates, a cartilage bone of the lower jaw formed by the ossification of the tip of the Meckelian cartilage.

men'tum (*Zool.*). In higher Vertebrates, the chin: in some *Gastropoda,* a projection between the head and foot: in Insects, the distal sclerite forming the basal portion of the labium, situated between the submentum and the prementum.—*adj.* **mental.**

meral'gia paraesthet'ica (*Med.*). An affection of the nerve supplying the skin of the front and outer part of the thigh; characterised by pain, tingling, and/or numbness.

Mer'amec Group (*Geol.*). The general name for the Middle Mississippi Series, which includes the Warsaw Beds, Spergen Limestone, and St. Louis Limestone.

mercap'tals (*Chem.*). The condensation products of mercaptans with aldehydes.

mercap'tans (*Chem.*). Thio-alcohols. General formula, R·SH. They form salts with sodium, potassium, and mercury, and are formed by warming alkyl halides or sulphates with potassium hydrosulphide in concentrated alcoholic or aqueous solution, or by heating alcohol with P_2S_5.

mercaptan (*Chem.*). Ethyl mercaptan, C_2H_5SH; liquid of nauseous odour; b.p. 36° C.; readily oxidised to ethyl disulphide, $(C_2H_5)_2S_2$, by exposure to the air. It is an intermediate for *sulphonal* (q.v.) and for rubber accelerators.

mercap'tides (*Chem.*). The salts of mercaptans.

mercap'tols (*Chem.*). The condensation products of mercaptans with ketones.

mercerisa'tion (*Textiles*). A process which greatly increases the lustre of cotton yarns and fabrics. It consists of treating the material with concentrated caustic soda lye, which causes swelling and results in the fibres becoming transparent if the material is kept under tension.

merchant iron (*Met.*). Bar-iron made by re-piling and re-rolling puddled bar. All wrought-iron is treated in this way before being used for manufacture of chains, hooks, etc.

mercurial pendulum (*Horol.*) A compensation pendulum in which mercury is used as the compensating medium.

mercu'ric chloride (*Chem.*) See under **calomel.**

mercuric iodide (*Chem*). HgI_2. See also **Nessler's solution.**

mer'curous chloride (*Chem*). See **calomel.**

Mercury (*Astron.*). The first planet from the sun in order of distance; its mass is about $\frac{1}{25}$ that of the earth; its sidereal period is 88 days; it is not easily seen in non-tropical latitudes as, owing to its proximity to the sun, it can never attain a high altitude above the horizon, whether as an evening or morning star.

mercury (*Met.*) A white metallic element which is liquid at atmospheric temperature. Chemical symbol Hg, at. wt. 200·61, at. no. 80, sp. gr. at 20° C. 13·546, m.p. −38·5° C., b.p. 356 7° C., specific electrical resistivity 95·8 microhms per cu. cm. A solvent for most metals, the products being called *amalgams*. Its chief uses are in the manufacture of drugs and chemicals, fulminate, and vermilion. Used as metal in mercury-vapour lamps, arc rectifiers, power-control switches, and in many scientific and electrical instruments. Also called QUICKSILVER

mercury-arc convertor (*Elec. Eng.*). A convertor making use of the rectifying properties of the mercury arc.

mercury-arc rectifier (*Elec. Eng*). A type of rectifier in which use is made of the rectifying properties of an arc in mercury vapour between a hot cathode and a relatively cool anode at very low pressures. Also called MERCURY-VAPOUR RECTIFIER. See also **glass-bulb rectifier, steel-tank rectifier.**

mercury barometer (*Meteor.*, *Phys.*). An instrument used for measuring the pressure of the atmosphere in terms of the height of a column of mercury which exerts an equal pressure. In its simplest form it consists of a vertical glass tube about 80 cm. long, closed at the top and having its lower open end immersed in mercury in a dish. The tube contains no air, the space above the mercury column being known as a *Torricellian vacuum*.

mercury discharge lamp (*Illum.*). An electric discharge lamp in which the discharge takes place through mercury vapour. Also called MERCURY-VAPOUR LAMP.

mercury gauge (*Phys.*). A *manometer* (q.v.) containing mercury.

mercury motor meter (*Elec. Eng.*). A type of motor meter in which the moving part consists of a metal disc rotating in a bath of mercury. Current is led to the disc via the mercury, and interacts with permanent magnets or electromagnets to produce a torque on the disc, thus causing it to rotate.

mercury seal (*Chem.*). A device which ensures that the place of entry of a stirrer into a piece of apparatus is gas-tight, while allowing the free rotation of the stirrer.

mercury switch (*Elec. Eng.*). A switch in which the fixed contacts consist of mercury cups into which the moving contacts dip, or in which the mercury is contained in a tube which is made to tilt, thereby causing the mercury to bridge the contacts.

mercury-vapour lamp (*Illum.*). See **mercury discharge lamp.**

mercury-vapour pump (*Chem.*). A pump in which mercury is continuously vaporised and recondensed; its evacuating action results from the diffusion of gas into the mercury vapour.

mercury-vapour rectifier (*Elec. Eng.*). See **mercury-arc rectifier.**

mercury-vapour tube (*Thermionics*). Generally, any device in which an electric discharge takes place through mercury vapour. Specifically, a triode valve operating in an atmosphere of mercury vapour, which is ionised by the passage of electrons and reduces the space charge, and consequently the anode potential necessary to maintain a given current. The grid is only effective in controlling the start of the discharge. See also **thyratron.**

Merevale Shales (*Geol.*). The upper division of the Stockingford Shales found near Nuneaton; of Cambrian age.

mer'icarp (*Bot.*). A one-seeded portion of a fruit which splits up at maturity.

mericli'nal chimaera (*Bot.*). A chimaera in which one component does not completely surround the other; an incomplete *periclinal chimaera* (q.v.).

merid'ian (*Astron.*). That great circle passing through the poles of the celestial sphere which cuts the observer's horizon in the north and south points, and also passes through his zenith.

meridian (*Surv.*, *etc.*). The imaginary plane passing through the earth's axis and the point on the earth's surface to which the meridian refers. Called a *meridian of longitude*.

meridian altitude (*Astron.*). The altitude of a heavenly body at the position of upper transit.

meridian circle (*Astron.*). A telescope mounted on a horizontal axis pointing due east and west, so that the instrument itself moves in the meridian plane. It is used to determine the times at which stars cross the meridian, and is equipped with a graduated circle for deducing declinations. Also called TRANSIT CIRCLE.

meridian passage (*Astron.*). **See transit.**

meridian plane (*Surv.*). The vertical plane lying in the direction of true north-south.

merid'ional (*Zool.*). Extending from pole to pole; as a *meridional furrow* in a segmenting egg.

Merid'ogas'tra (*Zool.*). See **Ricinulei.**

Merino, me-rē'no (*Hosiery*). The term applied to yarn or knitted goods made from a mixture of Merino wool and cotton.

Merino wool (*Textiles*). Wool of fine quality from Merino sheep; used in Saxony quality woollens and Botany quality worsted cloths. The name is also used in the low woollen trade for waste obtained from fine worsted clothing.

mer'ism (*Bot.*). The development of more than one member of the same kind, usually in such a way that a symmetrical arrangement or pattern is formed.

mer'ispore (*Bot.*). One segment of a multiple spore.

mer'istele (*Bot.*). A strand of vascular tissue, enclosed in a sheath of endodermis, forming part of a dictyostele.

mer'istem (*Bot.*). A group of undifferentiated cells each of which is capable of division, giving rise to at least one daughter cell able to divide again, and so on.—*adj.* **meristemat'ic.**

meris'tic (*Zool.*). Segmented: divided up into parts: pertaining to the number of parts, as *meristic variation* (q.v.). See also **merome.**

meristic variation (*Bot.*, *Zool.*). Variation in the number of organs or parts; as variation in the number of body somites of a metameric animal.

mer′istogenet′ic (*Bot.*). Formed from, or by, a meristem.

Merkel's corpuscles (*Zool.*). See **Grandry's corpuscles.**

merlons (*Arch*). The projecting parts of a battlement.

mermaid's purse (*Zool*). A popular name applied to the horny purse-like capsule in which the eggs of certain Selachian fish (Sharks, Dogfish, Skates, Rays) are enclosed.

Mermis (*Zool.*). A genus of Nematode worms living parasitically in the bodies of ants.

mermithan′er (*Zool.*). A male ant having abnormal characters, as a result of being parasitised by Mermis.

mermither′gate (*Zool.*). A worker ant having abnormal characters as a result of its being parasitised by Mermis.

mer′mithogyne (*Zool.*). A queen ant having abnormal characters as a result of its being parasitised by Mermis.

mero- (Greek *meros*, part). A prefix used in the construction of compound terms; e.g. *merogastrula*, a gastrula formed by the segmentation of part of the ovum only.

meroblas′tic (*Zool*). Said of a type of ovum in which cleavage is restricted to a part of the ovum, i.e. is incomplete, usually due to the large amount of yolk.

merocerite, mer-os′— (*Zool.*). In *Crustacea*, the fourth segment of the antennae.

mer′ochrome (*Chem.*). A mixed crystal consisting of two differently coloured isomers.

merog′amy, *or* mer′ō-gam′i— (*Bot.*). The union of two individualised gametes.—(*Zool.*) The condition of having gametes which are smaller than the ordinary cells of the species and are produced by special fission; union of such gametes; cf. *hologamy*.—*n.* **merogam′etes.**

merogen′esis (*Zool.*). Segmentation: formation of parts.

merogen′ic (*Zool*) Said of induction in which a part only of the soma is affected primarily. Cf. *hologenic.*

merogna′thite (*Zool.*). The fourth joint of an oral appendage in *Crustacea.*

merog′ony (*Zool.*). The development of fertilised enucleate fragments of an ovum.

meroistic, mer-ō-is′tik (*Zool.*). Said of ovaries which produce yolk-forming cells as well as ova.

me′rome (*Zool.*). A body somite or segment of a metameric animal.

mer′on (*Zool.*). In Insects in which the coxa is divided, the posterior portion.

me′ront (*Zool.*). In some *Neosporidia*, a uninucleate phase succeeding the *planont* (q.v.) and multiplying by fission.

me′roplank′ton (*Zool.*). Plankton which is found at different depths at different times.

merop′odite (*Zool.*). In some *Crustacea*, the second joint of the endopodite of the walking-legs or maxillipeds.

me′ros (*Arch.*). The surfaces between the channels in a triglyph. Also called FEMUR.

meroso′matous (*Zool.*). Said of ascidiozooids which show division into thorax and abdomen.

me′rosome (*Zool*). See **merome.**

merosthen′ic (*Zool.*). Having the hind limbs exceptionally well developed, as Frogs, Kangaroos.

merox′ene (*Min.*). One of the classes into which *biotite* (q.v.) was divided by Tschermak. This class includes nearly all ordinary biotite.

Merozo′a (*Zool.*). An order of *Cestoda* in which the body is differentiated into a scolex and proglottides, and the genitalia are repeated in each proglottis; there is a complex life-history, the larval form usually occurring in herbivorous animals, the mature form in the gut of various carnivorous, omnivorous, and insectivorous Vertebrates.

merozo′ite (*Zool*). In *Protozoa*, a young trophozoite resulting from the division of the schizont.

merozo′on (*Zool.*). A fragment of a protozoon produced artificially, and containing a portion of the macronucleus.

Merrill-Crowe process (*Met.*). A process for precipitating gold from deoxygenated cyanide solution by means of zinc dust.

merrythought bone (*Zool.*). The furcula of Birds.

Meru′lius lac′rymans (*Build.*). The name of a fungus which commonly occasions *dry rot* (q.v.).

mer′ycism (*Med.*). Rumination. The return, after a meal, of gastric contents to the mouth; they are then chewed and swallowed once more.

Merz-Hunter protective system (*Elec. Eng.*). See **split-conductor protection.**

Merz-Price protective system (*Elec. Eng.*). A form of balanced protective system for electric power networks, in which the current entering a section of the network is balanced against that leaving it. If a fault occurs on the section this balance is upset, and a relay is caused to operate and trip circuit-breakers to clear the faulty section from the network.

mes-, meso- (Greek *mesos*, middle). A prefix used in the construction of compound terms; e.g. *mesothorax*, the middle segment of the thorax in Insects. This prefix is also used to indicate association with the mesothorax of Insects (e.g. *mesoscutum*, the scutum of the mesothorax), and in naming Vertebrate mesenteries (e.g. *mesohepar*, the mesentery supporting the liver).

mesade′nia (*Zool.*). In Insects, accessory glands of the genital system, of mesodermal origin. Cf. *ectadenia.*

mesaorti′tis (*Med.*). Inflammation of the middle coat of the aorta.

me′sarch (*Bot.*). Having the protoxylem surrounded by metaxylem.

mesec′toderm (*Zool.*). Parenchymatous tissue formed from ectoderm cells which have migrated inwards.

mesenceph′alon (*Zool.*). The mid-brain of Vertebrates.

mesen′chyma (*Zool.*). Parenchyma; embryonic mesodermal tissue of spongy appearance.—*adj.* **mesenchym′atous.**

mes′enchyme (*Zool.*). Mesodermal tissue, comprising cells which migrate from ectoderm, or endoderm, or mesothelium into the blastocoele. Cf. *mesothelium.*

mesen′doderm (*Zool.*). In ontogeny, endodermal cells which will later give rise to mesoderm.

mesenter′ic (*Zool.*). Pertaining to the mesenteron: pertaining to a mesentery.

mesenteric caeca (*Zool.*). Digestive diverticula of the mesenteron in many *Invertebrata* (e.g. in *Arachnida, Crustacea, Echinodermata, Insecta*).

mesenteric filament (*Zool.*). In *Anthozoa*, the enlarged free edge of a mesentery.

mesen′teron (*Zool.*). See **mid-gut.**

mes′entery (*Zool.*). In *Coelenterata*, a vertical fold of the body wall projecting into the enteron. More generally, a fold of tissue supporting part of the viscera.—*adjs.* **mesente′rial, mesenter′ic.**

meseth′moid (*Zool.*). A median cartilage bone of the Vertebrate skull, formed by ossification of the ethmoid plate.

mesh (*Build., Civ. Eng.*). Expanded metal used as a reinforcement for concrete.

mesh (*Elec. Comm.*). A combination of electrical elements forming a complete circuit.

mesh (*Lace*). A completed opening in a fabric, formed by the combination of two bobbin threads and two warp threads.

mesh connexion (*Elec. Eng.*). A method of connecting the windings of an a.c. electric machine; the windings are connected in series so that they may be represented diagrammatically by a polygon. The *delta connexion* (q.v.) is a particular example of this method.

mesh network (*Elec. Comm.*). A network formed from a number of impedances in series.

mesh structure (*Geol.*). A term applied to the mode of alteration of olivine to serpentine; this process begins round the margins of the crystal and along the irregular network of cracks which traverse it.

mesh voltage (*Elec. Eng.*). The voltage between any two lines of a symmetrical polyphase system which are consecutive as regards phase sequence. Called *delta voltage* in a three-phase system, and *hexagon voltage* in a six-phase system.

me'siad (*Zool.*). Situated near, or tending towards, the median plane.

me'sial, me'sian (*Zool.*). In the median vertical or longitudinal plane.

mes'itite (*Min.*). A variety of *magnesite* (q.v.) containing from 30-50% of iron carbonate.

mes'ityl oxide (*Chem.*). $(CH_3)_2C.CH{\cdot}CO{\cdot}CH_3$; a colourless liquid of peppermint-like odour; b.p. 122° C.

mesit'ylene (*Chem.*). $C_6H_3(CH_3)_3$, 1, 3, 5-trimethylbenzene; a colourless liquid, occurring in coal-tar; b.p. 164° C.

meso- (*Chem.*). (1) Optically inactive by intramolecular compensation.—(2) Substituted on a carbon atom situated between two hetero-atoms in a ring.—(3) Substituted on a carbon atom forming part of an intramolecular bridge.

meso-. Prefix. See **mes-**.

mesoben'thos (*Zool.*). Fauna and flora of the sea-floor, at depths ranging from 100 to 500 fathoms.

me'soblast (*Zool.*). The mesodermal or third germinal layer of an embryo, lying between the endoderm and ectoderm.—*adj.* **mesoblas'tic.**

mesoblastic somites (*Zool.*). In developing metameric animals, segmentally arranged blocks of mesoderm, the forerunners of the somites.

mesobron'chium (*Zool.*). In Birds, the continuation of the main bronchus through the lung to the abdominal air-sac.

me'socarp (*Bot.*). The middle layer of a pericarp.

mesocer'ebron (*Zool.*). See **deutocerebron.**

me'socoele, —sēl (*Zool.*). In *Craniata*, the cavity of the mid-brain; mid-ventricle; Sylvian aqueduct.

mesocol'loid (*Chem.*). A particle whose dimensions are 250-2500 A ($2{\cdot}5\times10^{-6}$-$2{\cdot}5\times10^{-5}$ cm.), containing 100-1000 molecules.

mesocrat'ic (*Geol.*). A term applied to igneous rocks which, in respect of their content of dark silicates, are intermediate between those of leucocratic and melanocratic type, and contain 30-60% of heavy, dark minerals.

me'soderm (*Zool.*). See **mesoblast.**

mesogas'ter (*Zool.*). In Vertebrates, the portion of the dorsal mesentery which supports the stomach.

mesogloe'a (*Zool.*). In *Coelenterata*, a structureless layer of gelatinous material intervening between the ectoderm and the endoderm.

mesohe'par (*Zool.*). In Vertebrates, the surviving portion of the ventral mesentery in the region of the liver.

me'solecithal, —les'i-thal (*Zool.*). Said of ova in which the yolk is aggregated in the centre.

me'solite (*Min.*). A mineral intermediate in composition between *natrolite* and *scolecite.* Crystallises in the monoclinic system, and occurs in amygdaloidal basalts and similar rocks.

me'somere (*Zool.*). The middle muscle-plate zone of the mesothelial wall of a developing Vertebrate, situated between the epimere and the hypomere.

mesom'erism (*Chem.*). (1) *Desmotropism* (q.v.).—(2) *Resonance* (q.v.).

mesomet'rium (*Zool.*). The mesentery which supports the uterus and related structures.

mesomito'sis (*Cyt.*). Mitosis which takes place within the nuclear membrane, without any co-operation from cytoplasmic elements. Cf. *metamitosis.*

mesomor'phous (*Chem.*). Existing in a state of aggregation midway between the true crystalline state and the completely irregular amorphous state. See also **liquid crystals.**

mesomyo'dian (*Zool.*). (Of Birds) having the syringeal muscles attached to the middle of the bronchial hemi-rings.

Me'sonemertin'i (*Zool.*). An order of *Dimyaria* in which the mouth is behind the brain, the proboscis lacks stylets, and the cerebral ganglia and lateral nerves are embedded in the muscles of the body-wall. Marine forms.

mesoneph'ros (*Zool.*). The Wolffian body or median portion of the Vertebrate kidney, arising after the pronephros, which it gradually replaces; in some forms it develops into the adult kidney, while in others it combines with, or is replaced by, the *metanephros* (q.v.) as an excretory organ; it frequently becomes associated with the genital system in male animals.

mesono'tum (*Zool.*). The notum of the mesothorax in Insects.—*adj.* **mesono'tal.**

mesophan'erophyte (*Bot.*). A tree having a height of 8-30 metres.

mesophi'lic bacteria (*Bot.*). Bacteria which grow best at temperatures of 10-40° C.

mesophrag'ma (*Zool.*). In *Insecta*, an apodeme arising from the postscutellum.

me'sophyll (*Bot.*). The parenchymatous tissue between the upper and lower epidermises of a leaf, chiefly concerned with photosynthesis.

me'sophyte (*Bot.*). A plant occurring in places where the water-supply is neither scanty nor excessive.—*adj.* **mesophyt'ic.**

mesophyt'ic environment (*Bot.*). An environment in which the water-supply is neither very scanty nor very abundant.

mesoplank'ton (*Zool.*). Plankton found below a depth of 100 fathoms.

mesoplas'tron (*Zool.*) In some *Chelonia*, a bone of the plastron intercalated between the hypoplastron and the hyoplastron.

mesopleu'ron (*Zool.*). In *Diptera*, a thoracic sclerite lying between the notopleural and sternopleural sutures and in front of the root of the wing.

me'sopod (*Bot.*). Said of the fruit body of a fungus which has a central stipe.

mesopo'dium (*Zool.*). (1) The metacarpus or metatarsus.—(2) In *Gastropoda*, that part of the foot between the propodium and the metapodium. —*adj.* **mesopo'dial.**

mesopterygium, mē-zō-pter-ij'— (*Zool.*). One of the three basal cartilages of the pectoral fin in *Selachii*, lying between the propterygium and the metapterygium.

mesopter'ygoid (*Zool.*). See **ectopterygoid.**

mesor'chium (*Zool.*). In Vertebrates, the mesentery supporting the testis.

mesosap'robe (*Bot.*). A plant living in somewhat foul water.

mesoso'ma (*Zool.*). In *Arachnida*, the anterior division of the 'abdomen,' being the middle tagma of the body, which always bears the genital opening on its first somite.—*adj.* **mesosomat'ic.**

me'sospore (*Bot.*). (1) A layer in the spore wall, developed inside the first-formed outer layer, and sometimes bearing ridges, pointed outgrowths, or other ornamentation.—(2) A teleutospore consisting of one cell.

me'sostate (*Zool.*). An intermediate stage in metabolism.

mesoster'num (*Zool.*). In Insects, the sternum of the mesothorax: in Vertebrates, the middle part of the sternum, connected with the ribs; the gladiolus.

mesosteth'ium (*Zool.*). See **mesosternum.**

mesotar'sal (*Zool.*). In Insects, the tarsus of the second walking leg: in land Vertebrates, the ankle joint or joint between the proximal and distal rows of tarsals.

mesothe'lium (*Zool.*). Mesodermal tissue comprising cells which form the wall of the cavity known as the coelom. Cf. *mesenchyme.*

mesotho'rax (*Zool.*). The second of the three somites composing the thorax in Insects.—*adj.* **mesothorac'ic.**

mesotho'rium (*Chem.*). A radioactive isotope of radium, with a half-life of 6·7 years.

mesot'ic (*Zool.*). In Birds, a paired cartilage of the chondrocranium, situated between the parachordal and the acrochordal.

mesotro'chal (*Zool.*). Having an equatorial band of cilia.

mesotympan'ic (*Zool.*). See **symplectic.**

me'sotype (*Min.*). A name given by Hauy to *natrolite*, because its form is intermediate between the forms of stilbite and analcite. S. J. Shand uses the same term as synonymous with *mesocratic.*

mesova'rium (*Zool.*). In Vertebrates, the mesentery supporting the ovary.

mesoxal'ic acid (*Chem.*). $CO(COOH)_2+H_2O$ or $C(OH)_2(COOH)_2$; a dibasic ketonic acid, forming deliquescent prisms; it is prepared from dibromomalonic acid by heating with caustic soda solution.

Mesozo'ic (*Geol.*). The name applied to the era of geological time which includes the periods during which rocks of Triassic, Jurassic, and Cretaceous age were deposited.

messenger wire (*Elec. Eng., etc.*). The strong suspension wire for holding aerial cables, the latter being suspended by leather thongs: a *bearer cable* (q.v.).

mes'suage (*Build.*). A dwelling-house and its adjacent land and buildings.

mes'tome (*Bot.*). Conducting tissue, with associated parenchyma, but without mechanical tissue.

meta- (Greek *meta*, after). A prefix used in the construction of compound terms; e.g. *metanauplius*, the stage in the life-cycle of some *Crustacea* which comes after the nauplius; *metathorax*, the posterior part of an Insect's thorax. This prefix is also used to indicate association with the metathorax of Insects (e.g. *metascutum*, the scutum of the metathorax).

meta- (*Chem.*). (1) Derived from an acid anhydride by combination with one molecule of water.—(2) A polymer of . . . —(3) A derivative of . . .

meta- (*Chem.*). See ***m-***.

meta-aldehyde (*Chem.*). See **metaldehyde.**

metabasip'odite (*Zool.*). See **preischiopodite.**

metabol'ic nucleus (*Cyt.*). A nucleus when it is not dividing, and when the chromatin is in the form of a network; the so-called *resting nucleus.*

metab'olism (*Biol.*). The sum-total of the chemical and physical changes constantly taking place in living matter.—*adj.* **metabol'ic.**

metab'olite (*Zool.*). A product of metabolism.

metab'oly (*Bot.*). The power possessed by some cells of altering their external form.

metaboly (*Zool.*). Euglenoid movement (see **euglenoid**).

metabo'ric acid (*Chem.*). See **boric acid.**

metacar'pal or **metacar'pale** (*Zool.*). One of the bones composing the *metacarpus* (q.v.) in Vertebrates.

metacar'pus (*Zool.*). In land Vertebrates, the region of the fore limb between the digits and the carpus.

met'acentre (*Hydrostatics*). If a vertical line is drawn through the centre of gravity of a body floating in equilibrium in a liquid, and a second vertical line is drawn through the centre of buoyancy (centre of gravity of the displaced liquid) when the body is slightly displaced from its equilibrium position, the two lines meet in a point called the *metacentre.* According to whether this is above or below the centre of gravity of the body, the equilibrium is stable or unstable.

metacen'tric height (*Hydrostatics*). The distance between the centre of gravity of a floating body and its *metacentre* (q.v.). Of ships, the measure of stability of a vessel at small angles of heel, indicative of its behaviour when rolling.

metacerca'ria (*Zool.*). An encysted cercaria.

metacer'ebron (*Zool.*). See **tritocerebron.**

metaces'tode (*Zool.*). The encysted larval stage of a Tapeworm (*Cestoda*).

metachemistry. The study of atomic and subatomic phenomena.

metachromat'ic (*Micros.*). Showing other than the basic colour constituent after staining.—*n.* **metachro'masy.**

metachromatic corpuscle or **metachromatic granule** (*Cyt.*). An inclusion in cytoplasm consisting of *metachromatin.*

metachro'matin (*Biol.*). A complicated substance, stated to be a compound of nucleic acid, occurring in granules in cytoplasm.

metachro'nal rhythm (*Zool.*). The rhythm shown by beating cilia, or the movements of the ctenes of *Ctenophora*, in which each cilium or ctene bends in immediate succession to its predecessor, giving the appearance of wave motion.

metachro'sis (*Zool.*). The ability, shown by some animals (as the Chameleon) to change colour by expansion or contraction of chromatophores.

metacin'nabarite (*Min.*). Mercuric sulphide. In composition similar to *cinnabar* (q.v.), but occurs in black tetrahedral (cubic) crystals (also massive).

metacneme, met'a-nēm (*Zool.*). In some *Anthozoa*, a secondary mesentery.

met'acoele (*Zool.*). In *Craniata*, the cavity of the hind brain; the fourth ventricle.

met'acone (*Zool.*) In Mammals, the postero-external cusp of an upper molar tooth.

metaco'nid (*Zool.*). In Mammals, the postero-external cusp of a lower molar tooth.

metacro'mion (*Zool.*). A process terminating the acromion in some *Rodentia.*

metadiscoi'dal placentation (*Zool.*). Having the villi at first scattered and then restricted to a disc, as in Primates.

Met'aform (*Build., Civ. Eng.*). Steel shuttering for the support of concrete while it is setting; side-by-side units are employed for large surfaces.

metagen'esis (*Zool.*). See **alternation of generations.**

metakine'sis (*Cyt.*). See **metaphase.**

metal. An element which readily forms positive ions. Metals are characterised by their opacity and high thermal and electrical conductivity.

metal (*Civ. Eng.*). See **road metal.**

metals (*Rail.*). A term applied to the rails of a railway.

metal-arc welding (*Elec. Eng.*). A type of electric welding in which the electrodes are of metal, and melt during the welding process to form filler metal for the weld.

metal-clad switchgear (*Elec. Eng.*). A type of switchgear in which each part is completely surrounded by an earthed metal casing. Cf. *metal-enclosed switchgear.*

metal-cored carbon (*Illum.*). An arc-lamp carbon having a core of metal, in order to improve its conductivity.

metal electrode (*Elec. Eng.*). A form of electrode used in *metal-arc welding* (q.v.).

metal-enclosed switchgear (*Elec. Eng.*). A type of switchgear in which the whole equipment is enclosed in an earthed metal casing. Cf. *metal-clad switchgear.*

metal filament (*Elec. Eng.*). A fine metal conductor heated to incandescence to provide illumination or to act as a source of electrons in a vacuum tube.

metal-filament lamp (*Illum.*). A filament lamp in which the light is produced by raising a fine wire or filament of metal to white heat.

metal lathing (*Build.*). *Expanded metal* (q.v.) used to cover surfaces to provide a basis for plaster.

metal pattern (*Foundry*). A *pattern* (q.v.) made in cast-iron, brass, or light alloy, in order to ensure durability and permanence of form when a large number of castings are required, as in repetition work on moulding machines.

metal rectifier (*Elec. Eng.*). A form of rectifier making use of the rectifying property of a layer of oxide on a metal disc, e.g. copper oxide on a copper disc. A number of such discs can be connected in series or in parallel to give high-voltage or high-current rectifiers. Also called DRY PLATE RECTIFIER.

metal rule (*Typog.*). See **em rule.**

metal spinning (*Eng.*). The shaping of thin sheet-metal discs into cup-shaped forms by the lateral pressure of a steel roller or a stick on the revolving disc, which is gradually pressed into contact with a former on the lathe face-plate.

metal trim (*Build.*). Architraves and other finishings made out of pressed metal sheeting clipped or screwed in position around door or window openings.

metal valley (*Plumb.*). A V-shaped gutter, lined with lead, zinc, or copper, between two roof-slopes.

metal V-ring or **metal V-collar** (*Elec. Eng.*). A metal ring used in commutator construction; it has a V-shaped cross-section, so that it will fit into a corresponding recess in the commutator segments.

metal'dehyde (*Chem.*). Meta-aldehyde. $(C_2H_4O)_3$; long glistening needles which sublime at 115° C. with partial decomposition into acetaldehyde. Acetaldehyde is polymerised to metaldehyde by the action of acids at temperatures below 0° C.

metallic circuit (*Teleg.*). Telegraph circuit in which there is a complete copper circuit, with no earth return.

metallic crystals (*Met.*). The crystals of which metals and alloys are composed. Three main types are recognised, viz. *pure metal* crystals, *primary solid solution* crystals, *intermediate constituent* crystals.

metallic lustre (*Min.*). A degree of lustre exhibited by certain opaque minerals, comparable with that of polished steel.

metallic mirror (*Photog.*). A mirror made from the surface of a highly polished metal.

metallic packing (*Eng.*). A *packing* (q.v.) consisting of a number of rings of soft metal, or a helix of metallic yarn, encircling the piston-rod and pressed into contact therewith by a gland nut.

metallic soap (*Acous.*). The soap-like wax material which is used for making the original record in gramophone-disc manufacture. The metallic character arises from the presence of lead or aluminium stearate.

metallif'erous veins (*Geol.*). Cracks and fissures in rocks which are found to contain, among other minerals, the ores of metals. See also **lodes.**

metalling (*Civ. Eng.*). See **road metal.**

metallisation (*Chem.*). The conversion of a substance, e.g. selenium, into a metallic form.

metallised filament (*Elec. Eng.*). A carbon lamp filament which has been given special heat treatment in order partially to convert it to graphite, thereby making it almost metallic in its properties. Also called GRAPHITISED FILAMENT.

metallised valve (*Thermionics*). A valve in which the exterior of the envelope is coated with a conducting metallic film which can be connected to cathode or earth, to provide electrostatic shielding of the interior of the valve from external disturbance. Also called SPRAY-SHIELDED VALVE.

metal'lochrome (*Chem.*). The tinting produced on a metal surface by means of metallic salts.

metallog'raphy. The branch of metallurgy which deals with the study of the structure and constitution of solid metals and alloys, and the relation of this to properties on the one hand and manufacture and treatment on the other.

met'alloid (*Chem.*). (1) An element having both metallic and non-metallic properties; e.g. arsenic. —(2) A non-metal.

metallurgy, met'— *or* met-al'—. Art and science applied to metals. The term covers extraction from ores, refining, alloying, shaping, treating, and the study of structure, constitution, and properties.

met'amere (*Zool.*). See **merome.**

metamer'ic segmentation (*Zool.*). See **metamerism.**

metam'erism (*Chem.*). A form of isomerism occasioned by the attachment of different radicals to the same central polyvalent atom or group, the general chemical behaviour of the compounds being the same.

metamerism (*Zool.*). Repetition of parts along the long axis of an animal.—*adj.* **metamer'ic.**

metamito'sis (*Cyt.*). Mitosis in which the nuclear membrane disappears and the karyokinetic figure lies free in the cytoplasm. Cf. **mesomitosis.**

metamor'phic aureole (*Geol.*). The zone which usually surrounds a large igneous intrusion; it consists of altered sedimentary or other rocks. See also **metamorphism.**

metamorphic rocks (*Geol.*). Rocks derived from pre-existing rocks by mineralogical, chemical, and structural alterations due to processes operating in the earth's crust. The change is sufficient to produce a new rock type.

metamor'phism (*Geol.*). The sum of the processes which can operate within the earth's crust and transform a rock into a well characterised new type.

metamorpho'sis (*Zool.*). Pronounced change of form and structure taking place within a comparatively short time, as the changes undergone by an animal in passing from the larval to the adult stage.—*adj.* **metamor'phic.**

metanau'plius (*Zool.*). A larval stage in some *Crustacea*, differing from the *nauplius* (q.v.) in having a fourth pair of appendages (representing the maxillae) developed behind the original three pairs.

Met'anemertin'i (*Zool.*). An order of *Dimyaria* in which the mouth is in front of the brain, the proboscis is generally armed with stylets, and the cerebral ganglia and lateral nerves lie within the muscles of the body-wall, embedded in the parenchyma. Marine, fresh-water, and terrestrial forms.

metaneph'ros (*Zool.*). In Vertebrates, that portion of the kidney which arises posterior to the mesonephros and in higher forms replaces it as the functional excretory organ, never having any connexion with the genital system in the male.—*adj.* **metaneph'ric.**

metanil'ic acid (*Chem.*). $C_6H_4(NH_2)(SO_3H)$, *meta*-aminobenzene-sulphonic acid; an intermediate for dyestuffs.

metano'tum (*Zool.*). The notum of the metathorax in Insects.—*adj.* **metano'tal.**

met'aphase (*Cyt.*). The stage in mitosis in which the chromosomes aggregated on the equator of the mitotic spindle divide longitudinally and the daughter chromosomes pass outwards towards the poles of the spindle.

metaphlo'em (*Bot.*). Completely developed primary phloem, consisting of sieve tubes (with or without companion cells), fibres, and parenchyma.

metaphosphor'ic acid (*Chem.*). HPO_3. Formed as a viscous solid when phosphorus pentoxide is left exposed to the air.

metaphrag'ma (*Zool.*). In *Insecta*, an apodeme situated in the metathorax.

metaph'ysis (*Med.*). The end of the shaft (diaphysis) of a long bone where it joins the epiphysis.

metapla'sia (*Zool.*). Tissue transformation, as in the ossification of cartilage.

metapla'sis (*Zool.*). The period of maturity in the life-cycle of an individual.

met'aplasm (*Biol.*). Any substance within the body of a cell which is not protoplasm; especially food material, as yolk or fat, within an ovum.—*adjs.* **metaplas'mic, metaplas'tic.**

met'apleure (*Zool.*). In some *Prochordata*, a ventrolateral fold of integument.—*adj.* **metapleu'ral.**

metapleu'ron (*Zool.*). In *Diptera*, a thoracic sclerite behind the pteropleuron and above the hypopleuron.

metapneus'tic (*Zool.*). (Of *Insecta*) having only the last pair of abdominal spiracles open, as in larval *Culicidae*.

metapo'dium (*Zool.*). (1) In *Vertebrata*, the second podial region; metacarpus or metatarsus; palm or instep.—(2) In *Insecta*, that portion of the abdomen posterior to the podeon.—(3) In *Gastropoda*, the posterior part of the foot.—*adj.* **metapo'dial.**

metapodoso'ma (*Zool.*). In *Acarina*, the segments of the third and fourth pairs of legs.

metapoph'ysis (*Zool.*). In some *Mammalia*, a process of the vertebrae above the prezygapophysis which strengthens the articulation.

metapro'teins (*Chem.*). *Infraproteins* (q.v.).

metapterygium, met'-a-ter-ij'—(*Zool.*). In *Selachii*, the innermost or most posterior of the three basal cartilages of the pectoral fin.

metapter'ygoid (*Zool.*). In some Fish, a paired ventral bone of the skull, lying above the quadrate.

metasitism (*Zool.*). Cannibalism.

metaso'ma (*Zool.*). In *Arachnida*, the posterior part of the abdomen, or hindermost tagma of the body, which is always devoid of appendages.—*adj.* **metasomat'ic.**

metaso'matism (*Geol.*). The processes by which one mineral is replaced by another of different chemical composition by the introduction of material from external sources. See also **metamorphism.**

Metasperm'ae (*Bot.*). See **Angiospermae.**

met'astable (*Chem.*). In a state which is apparently stable, often because of the slowness with which equilibrium is attained; said, for example, of a supersaturated solution.

metastable state (*Phys.*). An excited state of an atom from which it cannot pass directly to the normal state by emitting radiation. Atoms are found to remain in the metastable state for as long as a few seconds, and may therefore accumulate to a considerable concentration. Metastable states are of importance in many photochemical reactions. See also **Bohr theory.**

metasta'sic electron (*Chem.*). An electron which is transferred from one atom to another, or from one shell to another in the same atom.

metas'tasis (*Med.*). The transfer, by lymphatic channels or blood-vessels, of diseased tissue (especially cells of malignant tumours) from one part of the body to another: the diseased area arising from such transfer.

metastasis (*Zool.*). Transference of a function from one part or organ to another; metabolism.

metas'tasise (*Med.*). To form metastases.

metastat'ic (*Zool.*). A term used to describe the life-cycle of a parasite in which metamorphosis into the adult form takes place in the secondary host, which is then eaten by the primary host.

metaster'num (*Zool.*). In *Insecta*, the sternum of the metathorax. In *Vertebrata*, the posterior portion of the sternum; xiphisternum.

metastig'mate (*Zool.*). Having the tracheal openings situated posteriorly, as certain Mites.

metasto'ma (*Zool.*). In *Crustacea*, the lower lip.

metasyn'desis (*Cyt.*). See **telosynapsis.**

metatar'sal or **metatar'sale** (*Zool.*). One of the bones composing the *metatarsus* (q.v.) in Vertebrates.

metatarsal'gia (*Med.*). A painful neuralgic condition of the foot, felt in the ball of the foot and often spreading thence up the leg.

metatar'sus (*Zool.*). In *Insecta*, the first joint of the tarsus when it is markedly enlarged: in land *Vertebrata*, the region of the hind limb between the digits and the tarsus.

Metathe'ria (*Zool.*). A subclass of viviparous *Mammalia* in which the newly born young are carried in an abdominal pouch which encloses the teats of the mammary glands; an allantoic placenta is usually lacking; the scrotal sac is in front of the penis, the angle of the lower jaw is inflexed, and the palate shows vacuities.

metatho'rax (*Zool.*). The third or most posterior of the three somites composing the thorax in Insects.—*adj.* **metathorac'ic.**

metatra'cheal parenchy'ma (*Bot.*). Parenchyma occurring in wood scattered throughout the annual ring.

met'atroch (*Zool.*). A ciliated band encircling the body of a trochophore posterior to the mouth.

metatympan'ic (*Zool.*). See **entotympanic.**

metaxenia, —zē'ni-a (*Bot.*). Any effect that may be exerted by pollen on the tissues of the female organs.

metaxylem, —zī'lem (*Bot.*). Primary xylem in which the vessels have either reticulate thickening or pitted walls.

Metazo'a (*Zool.*). A subkingdom of the animal kingdom, comprising multicellular animals having two or more tissue layers, never possessing choanocytes, usually having a nervous system and enteric cavity, and always showing a high degree of co-ordination between the different cells composing the body. Cf. *Protozoa*, *Parazoa.*

metazoaea, —zō-ē'a (*Zool.*). A larval stage of decapod *Crustacea* which differs from the zoaea in showing the rudiments of the abdominal appendages.

metenceph'alon (*Zool.*). The cerebellum of Vertebrates.

meten'teron (*Zool.*). An inter-mesenteric space in a Coelenterate.

me'teor (*Astron.*). A 'shooting star.' A small body which enters the earth's atmosphere from interplanetary space and becomes incandescent by friction, flashing across the sky and generally ceasing to be visible before it falls to the earth. See also **bolide.**

meteoric shower (*Astron.*). A display of meteors in which the number seen per hour greatly exceeds the average. It occurs when the earth crosses the orbit of a meteor swarm and the swarm itself is in the neighbourhood of the point of section of the two orbits.

me'teorism (*Med., Vet.*). Excessive accumulation of gas in the intestines. See also **tympanites.**

meteorites (*Astron., Min.*). Mineral aggregates of cosmic origin which reach the earth from interplanetary space; cf. *meteor* and *bolide.* See achondrite, aerolites, chondrite, iron meteorites, pallasite, siderite.**

meteorit'ic hypothesis (*Astron.*). A theory that the so-called craters on the moon are due not to volcanic action but to the impact, in a relatively late stage of development, of planetesimal bodies or meteorites on the lunar surface.

me'teorograph (*Meteor.*). A collection of meteorological recording instruments, such as the barograph, thermograph, etc., which are attached to kites or small balloons and sent up to record conditions in the upper atmosphere.

meteorology. The study of the earth's atmosphere in its relation to weather and climate.

metepip'odite (*Zool.*). In *Crustacea,* an epipodite borne upon the coxopodite.

meter. A variant spelling of *metre.*

meter (*Elec. Eng.*). A general term for any electrical measuring instrument, but usually confined to integrating meters.

See **ampere-hour—**
Aron—
Bastian—
electrolytic—
frequency—
induction—
integrating—
motor—
power-factor—
prepayment—
reactive—
volt-ampere-hour—

meter (*Photog.*). A device which assists in calculating the exposure to be given to an emulsion under the conditions of its use.

See **exposure—**
extinction—
Harvey—
Heyde—
photo-electric exposure—
Photronic exposure—

meter (*Teleph.*). A counting mechanism which indicates the number of times it has been operated by passing a sufficient current through its windings.

See **analysis—**
call-counting—
congestion call—
congestion traffic-unit—
decibel—
director—
noise—
overflow—
subscriber's—
traffic—

meter, echo (*Acous.*). See **echo meter.**

meter loss (*Elec. Eng.*). The energy loss produced by the various iron and copper losses which occur in a meter.

methaemoglo'bin, met-hēm— (*Chem.*). A compound of haemoglobin and oxygen, more stable than oxyhaemoglobin, obtained by the action of oxidising agents on blood, as in cases of poisoning by nitrites or chlorates.

methaemoglobinae'mia (*Med.*). The presence of methaemoglobin in the blood, the result usually of the action of drugs derived from aniline.

methaemoglobinu'ria (*Med.*). The presence of methaemoglobin in the urine. See also **methaemoglobinaemia.**

me'thane (*Chem.*). CH_4; a gas, m.p. −186° C., b.p. −164° C.; occurs naturally in oil-wells, e.g. near Baku, at Pittsburgh, in the Crimea near Bulganak, and in many other places. *Fire-damp* (q.v.) is a mixture of methane and air; coal-gas contains a large proportion of methane. It can be synthesised from its elements, and prepared by various methods, as by catalytic reduction of CO or CO_2, or by passing CO and H_2O over heated metal oxides, or by the action of water on aluminium carbide.

meth'anides (*Chem.*). Carbides, such as aluminium and beryllium carbides, which give methane when decomposed by water.

meth'anol (*Chem.*). *Methyl alcohol* (q.v.). The term is nowadays preferred to *methyl alcohol,* particularly in its industrial application; e.g. methanol synthesis.

methemoglobin (*Chem.*). See **methaemoglobin.**

methemoglobinemia (*Med.*). See **methaemoglobinaemia.**

methemoglobinuria (*Med.*). See **methaemoglobinuria.**

methene (*Chem.*). *Methylene* (q.v.).

methine (*Chem.*). The trivalent radical $CH\equiv$.

methox'yl group (*Chem.*). The monovalent radical $-OCH_3$. In certain compounds the methoxy group can be estimated analytically by *Zeisel's method* (q.v.).

methyl group (*Chem.*). The monovalent radical CH_3-.

methyl alcohol (*Chem.*). *Methanol* (q.v.); CH_3OH; a colourless liquid, b.p. 66° C., sp. gr. 0·8. It used to be produced by the destructive distillation of wood; is nowadays synthesised from CO and H_2 in the presence of catalysts. It is an important intermediate for numerous chemicals, and is used as a solvent and for denaturing ethyl alcohol. Also called WOOD ALCOHOL.

methyl ethyl ketone (*Chem.*). $CH_3{\cdot}CO{\cdot}C_2H_5$; a colourless liquid of ethereal odour, b.p. 81° C.; prepared by the oxidation of secondary butyl alcohol; an important solvent.

methyl methacrylate resins (*Plastics*). See **acrylic resins.**

methyl orange (*Chem.*). The sodium salt of helianthine, $(CH_3)_2N\,C_6H_4{\cdot}N.N\,C_6H_4{\cdot}SO_3Na$. It is a chrysoidine dye, and is used as an indicator in volumetric analysis.

methyl-pyridines (*Chem.*). See **picolines.**

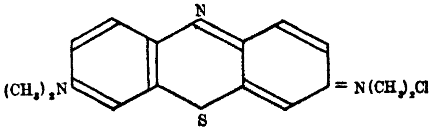
methyl-rubber (*Chem.*). The polymerisation product of βγ-dimethyl-butadiene, $CH_2{:}C(CH_3){\cdot}C(CH_3)\,CH_2$. It has different properties from natural rubber; it oxidises easily, and can be vulcanised only by the addition of organic catalysts (accelerators).

methyl sulphate (*Chem.*). $(CH_3)_2SO_4$; a colourless syrupy oil, very poisonous, b.p. 188° C.; used for introducing the methyl group into phenols, alcohols, and amines.

methyl violet (*Chem.*). A triphenylmethane dyestuff consisting of a mixture of the hydrochlorides of tetra-, penta-, and hexamethylpararosaniline.

meth'ylene (*Chem.*). The hypothetical compound CH_2. Numerous attempts have been made to obtain it by eliminating, for example, hydrogen and chlorine from methyl chloride, but the resulting CH_2 groups combine together in pairs, yielding ethylene, $H_2C{\cdot}CH_2$.

methylene blue (*Chem.*). A thiazine dyestuff of the formula



It is prepared by oxidising dimethyl-*p*-phenylenediamine and dimethylaniline in the presence of sodium thiosulphate and zinc chloride. It is a very important dye for cotton, upon which it is fixed with the aid of tannin.

Metlex plug (*Build.*). A split hollow plug of soft metal placed in a drilled hole to receive a screw, which opens out the plug against the walls of the hole, thus ensuring a firm fixing.

metochy, met-ŏ'ki (*Zool.*). The type of partnership exhibited by a neutral inquiline and the social insects in the nest of which it makes its home.

metoe'cious (*Bot., Zool.*). Heteroecious.

metoe'strus (*Zool.*). In Mammals, the recuperation period following oestrus.

me'tol (*Photog.*). A salt of methyl-amido-cresol, the basis of a rapid developer for negatives.

Meton'ic cycle (*Astron.*). A period of nineteen years, which is very nearly equal to 235 synodic months, this relationship having been introduced in Greece in 433 B.C. by the astronomer Meton; its effect is that after a full cycle the phases of the moon recur on the same days of the year.

metope, met'ō-pe (*Arch.*). A slab or tablet (generally of marble and ornamented) filling the space between the triglyphs in a Doric frieze.

meto'tic (*Zool.*). Posterior to the auditory vesicle.

meto'vum (*Zool.*). An ovum which is surrounded by nutritive material.

metox'enous, *or* **—zē'nus** (*Bot., Zool.*). Heteroecious.

metre. The unit of length in the metric system. Originally intended to represent 1/1000000 of the distance on the earth's surface between the North Pole and the Equator, it is governed by the standard metre, a bar of platino-iridium alloy deposited in Paris (copies being held in most other countries). For legal purposes the metre is 39·370113 in., though a redetermination in 1922 found the value to be 39 370147 in.

metre bridge (*Elec. Eng.*). A form of Wheatstone bridge in which two of the arms are in the form of a wire, one metre long, to which a sliding contact is made.

metre-candle (*Light*). See **lux.**

metre-kilogram-second (M-K-S.) system of units. The system of units, proposed by Giorgi, to replace the *centimetre-gram-second* (*c.g.s.*) units.

metric carat. See **carat.**

metric screw-thread (*Eng.*). A standard screw-thread in which the diameter and pitch are specified in millimetres. See **British Association (B.A.) screw-thread, international screw-thread, Swiss (Thury) screw-thread.**

metric system. A system of weights and measures depending upon the metre, the original factors being derived from the *metre*, the unit of length. The *are* is the unit of the measures of surface; the *litre* the unit of the measures of capacity; the *gram* the unit of weight. Ascending values are multiplied by ten and bear a Greek prefix; e.g. *decametre*, signifies 10 metres; *hectometre* 100 metres; *kilometre* 1000 metres. Descending values bear a Latin prefix; e.g. *decimetre*, 1/10 of a metre; *centimetre*, 1/100 of a metre; *millimetre*, 1/1000 of a metre. The prefix *mega-* denotes a multiple by one million, the prefix *micro-*, a millionth part. Abbreviations used in measures of length are *cm.* (centimetre), *dm.* (decimetre), *km.* (kilometre), *m.* (metre), *mm.* (millimetre); in measures of weights, *cg.* (centigram), *dg.* (decigram), *g.* (gram), *kg.* (kilogram), *mg.* (milligram), *q.* (quintal), *t.* (tonneau or millier).

metri'tis (*Med.*). Inflammation of the substance of the uterus.

metromor'phic (*Bot.*). Resembling the mother.

metropa'thia haemorrhag'ica (*Med.*). Essential uterine haemorrhage. A condition in which bleeding from the uterus is associated with thickening of the lining of the uterus and with the presence of cysts in the ovaries.

metrorrha'gia (*Med.*). Bleeding from the uterus between menstrual periods.

metrostax'is (*Med.*). See **metrorrhagia.**

-metry (*Chem., etc.*). A suffix denoting a method of analysis or measurement; e.g. acidimetry, iodimetry, nephelometry.

metu'liform (*Bot.*). Resembling a pyramid.

Mexican (*Textiles*). A coarse cotton cloth, grey or coloured, heavily sized. Usually of plain weave. Made for export.

Mexican onyx (*Min.*). A translucent, veined, and parti-coloured aragonite, found in Mexico and in the south-western U.S.A.

mez'zanine (*Build.*). An intermediate floor constructed between two other floors in a building.

mezzo-relievo, med'zo rē-lyā'vo (*Dec.*). Decoration in medium relief.

mezzotint, med'zō— (*Print.*). An intaglio process in which printing is done from a copper plate, grained by rocking a semicircular toothed knife over the surface, the lighter tones being produced by scraping or burnishing away the grain to reduce the ink-holding capacity.

mF., μF. (*Elec. Eng.*). Abbrev. for *micro-farad.*

M.F. (*Paper*). Machine-finished. Paper which has been surfaced while on the paper-making machine.

M.G. (*Build.*). Abbrev. for *make good.*

M.G. (*Paper*). Machine-glazed. A class of paper which is rough on one side and glazed on the other; used for wrapping, poster work, etc.

M.G. machine (*Paper*). See **single cylinder machine.**

Mg (*Chem.*). The symbol for *magnesium.*

mg. (*Phys.*). An abbrev. for *milligram.*

mho, mō (*Elec. Eng.*). The practical unit of conductance, being the conductance of a body having a resistance of 1 ohm.

miarolit'ic structure (*Geol.*). A structure found in an igneous rock, consisting of irregularly shaped cavities into which the constituent minerals may project as perfectly terminated crystals.

mica (*Min.*). A group of minerals which crystallise in the monoclinic system; they have similar chemical compositions and highly perfect basal cleavage. See also **biotite, lepidomelane, lithia mica, muscovite, phlogopite.**—(*Diel.*) Mica is one of the best electrical insulators (see **Glyptanite, Micafolium, Micanite, Micarta, Mycalex.**

mica cone (*Elec. Eng.*). See **mica V-ring.**

mica flap valve (*San. Eng.*). A sheet of mica hinged about one edge, so as to permit only uni-directional flow of air through ventilators.

mica-lamprophyre (*Geol.*). One of the commonest types of *lamprophyre* (q.v.), characterised by an abundant content of mica, originally biotite, but often bleached and altered. See also **kersantite, minette, mica-trap.**

mica-schist (*Geol.*). A schist composed essentially of micas and quartz, the foliation being mainly due to the parallel disposition of the mica flakes. See also **schist.**

mica-trap (*Geol.*). An obsolete name for *mica-lamprophyre.*

mica V-ring (*Elec. Eng.*). A ring of V-shaped cross-section made of a mica compound and used to insulate a metal V-ring from the bars of the commutator which it supports. Also called MICA CONE.

mica'ceous iron-ore (*Min.*). A variety of specular iron-ore (Fe_2O_3) which is foliated or which simulates mica in habit.

micaceous sandstone (*Geol.*). A sandstone containing a varying amount of mica flakes. See also **sandstones.**

Micafo'lium (*Diel.*). A composite insulating material consisting of a paper backing covered with mica flakes and varnish. Much used for insulating wire, machine coils, etc.

Mi'canite (*Diel.*). Mica splittings bonded by varnish or shellac into a large sheet; mechanically weak at high temperatures.

Micar'ta (*Diel.*). A synthetic insulating material made up very largely of mica.

micel'la (*Bot.*). A hypothetical crystalline structure too small to be seen, which may, with many other similar structures, form the foundation of cell walls, starch grains, etc.

micelle, mi-sel' (*Chem.*). A particle of colloidal size, especially a colloidal ion.

Michell bearing (*Eng.*). A thrust or journal bearing in which pivoted pads support the thrust collar or journal in such a way that they tilt slightly under the wedging action of the lubricant induced between the surfaces by their relative motion. The fluid lubrication conditions thus produced result in a very low friction coefficient and power loss in the bearing.

Michelson interferometer (*Light*). One of the earliest interferometers, by means of which much work was done on the fine structure of spectral lines and the evaluation of the standard metre in wavelengths of light. The principle of the instrument is similar to that of the *Fabry and Pérot interferometer* (q.v.).

Michelson-Morley experiment (*Phys.*). An attempt to detect and measure the relative velocity of the earth and the ether by observations of interference fringes with a form of apparatus which can be rotated bodily into different orientations. The very small velocity indicated by the results of the experiment is much less than was expected, and was probably due to accidental causes.

Michie sludge test (*Lubricants*). A test made to ascertain the tendency of an oil to form sludge during service; the oil is heated to 150° C. and a measured quantity of purified air is bubbled through for a number of hours, copper foil being used as a catalyst.

micraes'thete (*Zool.*). In *Amphineura*, the smaller type of sense-organ occurring in canals traversing the shell. Cf. *megalaesthete*.

micramoe'ba (*Zool.*). In certain *Sarcodina*, a small amoebula stage, probably representing a male gamete which fuses with a *macramoeba* (q.v.).

micran'er (*Zool.*). An abnormally small male ant.

micrer'gate (*Zool.*). An abnormally small worker ant.

micro- (Greek *mikros*, small). A prefix used in the construction of compound terms; e.g. *microparasite*, a very small parasite. Applied to names of units, the prefix indicates a related unit one-millionth part in magnitude of the basic unit, e.g. *microhm*.—(*Geol.*) Applied to names of rocks, it indicates the medium-grained form, e.g. *microdiorite*, *microsyenite*, *microtonalite*.

microaer'ophile (*Bot.*). An organism which does not grow well with ordinary concentrations of oxygen, but only when the oxygen concentration is low.—*adj.* **microaerophil'ic.**

microanal'ysis (*Chem.*). A special technique of both qualitative and quantitative analysis, by means of which very small amounts of substances may be analysed.

microanalytical reagent (*Chem.*). See **M.A.R.**

mi'crobe (*Bacteriol.*). A bacterium which can be seen with the aid of a microscope.

microceph'aly, microcepha'lia (*Med.*). Abnormally small size of the head.

microchro'mosome (*Zool.*). In some *Ciliophora*, the inner set of chromosomes at mitosis, representing the micronucleus.

mi'crocline (*Min.*). A silicate of potassium and aluminium which crystallises in the triclinic system. It resembles orthoclase, but is distinguished by its optical and other physical characters. See also **potash feldspar.**

microconid'ium (*Bot.*). A small conidium produced by some species of fungi, differing in form as well as in size from the larger conidia characteristic of the species.

microcon'jugant (*Zool.*). In certain *Mastigophora*, the smaller of a pair of conjugants.

microcos'mic salt (*Chem.*). Sodium ammonium hydrogen phosphate, $NaNH_4HPO_4$.

microcrystalline texture (*Geol.*). A term applied to a rock or groundmass in which the individual crystals can be seen as such only under the microscope.

Microcypri'ni (*Zool.*). An order of small *Neopterygii*, characterised by the flattened scaly head, protractile mouth, and absence of a distinct lateral line; fresh-water and estuarine forms of the tropics and subtropics, feeding on insects and other small organisms or organic matter in mud; mainly viviparous. Cyprinodonts or Toothed Carps, Killifishes, Four-eyed Fish, Millions Fish.

microdi'orite (*Geol.*). An intermediate igneous rock of medium grain-size. Often referred to as *porphyrite*.

Micro'drili (*Zool.*). An order of *Oligochaeta* comprising for the most part small forms living in fresh water, but a few forms are marine, or terrestrial, or parasitic; the clitellum usually commences not later than the tenth or eleventh somite.

micro-far'ad (*Elec. Eng.*). A unit of capacitance equal to one-millionth of a farad; more convenient for use than the farad. Abbrev. **mF., μF.**

micro-micro-farad (*Elec. Eng.*). The unit equal to one million-millionth of a farad, most convenient for the small capacitances used in radio circuits. Abbrevs. **mmF., μμF.; pf., pF.** (for pico-farad). One mmF. equals 0·9 cm. of capacitance. See **jar.**

microfelsit'ic texture (*Geol.*). A term applied to the cryptocrystalline texture seen, under the microscope, in the groundmass of quartz-felsites and similar rocks; due to the devitrification of an originally glassy matrix.

microfila'ria (*Zool.*). The early larval stage of certain parasitic *Nematoda*.

mi'crofilm (*Photog.*). A standard non-flam film on which documents, books, pamphlets, etc., are recorded; for viewing, the records are projected on a ground-glass screen by an enlarging machine.

microfun'gi (*Bot.*). The smaller fungi, which need the microscope for their adequate study.

microgametan'gium (*Bot.*, *Zool.*). A gametangium which produced microgametes.

microgam'ete (*Zool.*). The smaller of a pair of conjugating gametes, generally considered to be the male gamete.

microgame'tocyte (*Zool.*). In *Protozoa*, a stage developing from a trophozoite and giving rise to male gametes.

microg'amy (*Zool.*). In *Protozoa*, syngamy between two of the smallest individuals produced by fission or gemmation.

mi'croglia (*Zool.*). A small type of neuroglia cell (occurring more frequently in grey matter than in white matter) having an irregular body and freely branching processes which end in terminal spines.

microgonid'ium (*Zool.*). In some *Mastigophora* (as *Volvox*), a gametocyte which will give rise to microgametes.

microgran'ite (*Geol.*). A medium-grained, microcrystalline, acid igneous rock having the same mineral composition and texture as a granite.

micrograph'ic texture (*Geol.*). A distinctive rock texture in which the simultaneous crystallisation of quartz and feldspar has led to the former occurring as apparently isolated fragments, resembling runic hieroglyphs, set in a continuous matrix of the latter mineral.

mi'crogyne (*Zool.*). An abnormally small queen ant.

microgyr'ia (*Med.*). Abnormal smallness of the convolutions of the brain.

microlecithal, —les'i-thal (*Zool.*). Said of eggs containing very little yolk.

mi'crolite (*Geol.*). A general term for minute crystals of tabular or prismatic habit found in microcrystalline rocks. These give a reaction with polarised light.

microlite (*Min.*). A mineral which is essentially a pyrotantalate of calcium, but which frequently contains niobium, fluorine, and a variety of bases. It crystallises in the cubic system.

mi'crolux (*Photog.*). A unit for very weak illuminations, equal to one-millionth of a lux.

microma'zia (*Med.*). Failure of the female breast to develop after puberty.

mi'cromere (*Zool.*). In a segmenting ovum, one of the small cells which are formed in the upper or animal hemisphere.

micromerozo'ite (*Zool.*). A stage in the life-history of certain *Haemosporidia*, arising by schizogony from a microschizont.

microm'eter (*Instruments*). An instrument used mainly for measuring small angular separations visually. It consists of three frameworks carrying spider-webs for superposition; one of these is fixed, and the two others are movable by means of a pair of screws. The micrometer is mounted at the eye end of an equatorial telescope and furnished with an eye-piece; the separation is read from the two micrometer heads, and a graduated circle gives the position angle when the object is a double star.

micrometer gauge (*Eng.*). A U-shaped length gauge in which the gap between the measuring faces is adjustable by an accurate screw whose end forms one face. The gap is read off a scale uncovered by a thimble carried by the screw, and by a circular scale engraved on the thimble.

micrometer theodolite (*Surv.*). A theodolite equipped with micrometers instead of the usual verniers for reading the horizontal and vertical circles.

mi'cron. A unit of length equal to 10^{-3} mm; used for expressing small distances and wave-lengths of light. Denoted by μ. A *millimicron* ($m\mu$) is equal to 10^{-6} mm.

micronephrid'ia (*Zool.*). In some *Chaetopoda*, small nephridial tubes, with or without a nephrostome, present in large numbers in a single somite and believed to be derived from *meganephridia* (q.v.).

mi'cront (*Zool.*). In *Neosporidia*, a stage formed after schizogony which gives rise by fission to microgametes.

micronu'cleus (*Zool.*). In *Ciliophora*, the smaller of the two nuclei which is composed of reserve generative chromatin. Cf. *macronucleus*.

micropeg'matite (*Geol.*). A term applied to micrographic intergrowths of quartz and feldspar occurring in the groundmass in various igneous rocks. Synonymous with *micrographic texture*.

microperth'ite (*Geol.*). A feldspar which consists of interlaminations of orthoclase and albite on a microscopic scale.

mi'crophage (*Zool.*). A small phagocytic cell in blood or lymph.—*adj.* **microphagocyt'ic.**

microph'agous (*Zool.*). Feeding on micro-organisms.

microphan'erophyte (*Bot.*). A woody plant from 2-8 metres in height.

mi'crophone (*Acous.*). An acousti-electrical convertor of sound wave-forms, essential in all sound-reproducing systems. The excess pressure in the sound-wave is applied to a mechanical system, such as a ribbon or diaphragm, the motion of which generates an electromotive force, or modulates a current or voltage. See **transmitter.**

microphone amplifier (*Elec. Comm.*). **See condenser-transmitter amplifier, pre-amplifier.**

microphone boom (*Elec. Comm.*). The mechanical arrangement for swinging the microphone clear of artists and cameras in sound-film and television studios.

microphone response (*Acous.*). The response of a microphone is the response measured over its operating frequency range, and in a particular direction. See also **response.**

microphon'ic noise (*Thermionics*). Noise in the output current of a thermionic valve caused by mechanical vibration of the electrode system.

microphotog'raphy (*Photog.*). The production of minute prints or transparencies from normal negatives.

microphyl'line (*Bot.*). Composed of small scales or lobes.

microphyl'lous (*Bot.*). Having very small leaves—a condition characterising many plants living in arid habitats.

microphyr'ic (*Geol.*). A textural term descriptive of medium- to fine-grained igneous rocks containing phenocrysts less than 2 mm. in length. Cf. *macrophyric*.

micropo'dous (*Zool.*). Having the foot, or feet, small or vestigial.

micropoecil'ic (or **mikropoikilit'ic) texture** (*Geol.*). A term applied to igneous rocks containing small granular crystals irregularly scattered without common orientation in larger crystals of another mineral as seen under the microscope.

mi'cropore (*Zool*). One of the small apertures in the shell of an amphineuran Mollusc containing a micraesthete.

microp'sia (*Med*). The condition in which objects appear to the observer smaller than they actually are; a symptom of hysteria, or it may be due to retinal disease.

microp'terous (*Zool.*). Having small or reduced fins: in Insects, having small hind wings, hidden by the fore wings when at rest.

mi'cropyle (*Bot.*). (1) A tiny opening in the integument at the apex of an ovule, through which the pollen tube usually enters.—(2) The corresponding opening in the testa of the seed.—(*Zool.*) An aperture in the chorion of an Insect egg through which a spermatozoon may gain admittance.

microschi'zont (*Zool.*). A stage in the life-cycle of certain *Haemosporidia*.

mi'croscope (*Optics*). An instrument used for obtaining magnified images of small objects. The simple microscope is a convex lens of short focal length, used to form a virtual image of an object placed just inside its principal focus. The *compound microscope* consists of two short-focus convex lenses, the objective and the eye-piece mounted at opposite ends of a tube. For most microscopes, the magnifying power is roughly equal to $\frac{450}{f_0 f_e}$, where f_0 and f_e are the focal lengths of objective and eye-piece in centimetres.*

mi'croseisms, —sizmz. The minute irregular motions of the surface of the earth, of periods of the order 6 seconds and amplitude 1μ, which are continuously recorded on sensitive seismographs; possibly due to fluctuations of pressure on the sea, or of waves on the shore.

microsmat'ic (*Zool.*). Having a poorly developed sense of smell.

mi'crosome (*Cyt.*). A granular or bladder-like inclusion in the cytoplasm, of very small size.

microspe'cies (*Bot.*). A variety of a species.

microspher'ic (*Zool.*). (In certain dimorphic species of *Foraminifera*) said of a form in which the initial chamber of the shell is small; cf. *megalospheric*.—*n.* **mi'crosphere.**

microspherulit'ic texture (*Geol.*). A texture in which spherulites on a microscopic scale are distributed through the groundmass of an igneous rock.

microsplanch′nic (*Zool.*). Having a small body and long legs, as a Harvestman.

microsporan′gium (*Bot.*). A sporangium which produces microspores.

mi′crospore (*Bot.*). A spore which gives rise to a male gametophyte, or its equivalent.—(*Zool.*) A small swarm-spore or anisogamete of *Sarcodina.*

microspor′ocyte (*Bot.*). A cell which divides to give microspores, i.e. a microspore mother cell.

microspor′ophyll (*Bot.*). A leaf-like organ, more or less modified, bearing or subtending one or more microsporangia.

microsto′ma, microsto′mia (*Med.*). An abnormally small mouth, due either to developmental defect or to contraction of scar tissue.

microstructural changes (*Met.*). Changes in solid alloys which involve alteration in the microstructure. Usually associated with constitutional changes, but may occur independently of these, as, for example, when crystals are deformed by working of the metal, or when deformed crystals recrystallise.

microstructure (*Met.*). A term referring to the size, shape, and arrangement with respect to each other (as seen under the microscope) of the crystals of the constituents present in a metal or alloy.

microsy′enite (*Geol.*). An intrusive rock of medium grain-size and syenitic composition.

microthor′ax (*Zool.*). The cervicum of Insects, according to certain authorities who regard it as belonging to the prothorax.

mi′crotome (*Bot., Zool.*). An instrument for cutting thin sections of specimens.

microtrich′ia (*Zool.*). Small bristles occurring on the wings of certain Insects. Cf. *macrotrichia.*

microwaves (*Radio*). Electromagnetic waves having wavelengths of less than 20 centimetres.

micturition (*Zool.*). In Mammals, the passing, to the exterior, of the contents of the urinary bladder.

mid-brain (*Zool.*). In Vertebrates, that part of the brain which is derived from the second or middle brain-vesicle of the embryo, comprising the optic lobes and the crura cerebri: the second or middle brain-vesicle itself.

mid-feather (*Build.*). A *withe* (q.v.).

mid-feather (*Join.*). (1) A *cross-tongue* (q.v.).—(2) A *parting slip* (q.v.).

mid-feather (*Paper*). The partition in the beater which induces circulation of the wet pulp.

mid (or middle) gear (*Eng.*). The position of a steam-engine link motion or valve gear when the valve motion is a minimum.

mid-gut (*Zool.*). That part of the alimentary canal of an animal which is derived from the archenteron of the embryo.

midland tariff (*Elec. Eng.*). A name sometimes given to that form of tariff for electrical energy in which a fixed charge per year per kVA of maximum demand is made, together with a charge per kWh.

midnight sun (*Astron.*). The term used in popular language for the phenomenon (seen only in the Arctic and Antarctic circles) of the sun's remaining above the horizon all night and being seen at midnight at lower culmination.

mid-point protective system (*Elec. Eng.*). A method of balanced protection used for protecting generators against faults between turns by balancing the voltage of one half of the winding against that of the other.

midrib (*Bot.*). The largest vein of a leaf, running longitudinally through the middle of the lamella.

mid-riff (*Zool.*). See **diaphragm.**

midsummer growth (*Bot.*). The second period of active growth shown by some trees.

midwater zone (*Ocean.*). The depths of the ocean between the surface waters and the abyss.

middle conductor (*Elec. Eng.*). See **neutral conductor.**

middle gear (*Eng.*). See **mid gear.**

middle gouge (*Carp., etc.*). A gouge intermediate between the *flat gouge* (q.v.) and the *quick gouge* (q.v.).

middle lamella (*Bot.*). A thin layer of primary wall forming the middle layer of the wall between two sister cells; it often consists largely of pectin, and stains differently from the cellulose wall layers on each side of it.

middle oils (*Chem.*). Carbolic oils, obtained from coal-tar distillation. Their boiling range is from about 210° C. to 240° C.

middle-post (*Carp.*). A *king-post* (q.v.).

middle rail (*Join.*). The rail next above the bottom rail in doors, framing, and panelling.

middle shore (*Carp.*). An inclined shore placed between the bottom and top shores in a set of raking shores.

middle-temperature error (*Horol.*). The error in the time of vibration of a compensation balance due to the fact that compensation for dimensional changes of the balance and the elastic properties of the spring is not complete over a range of temperature. A watch or chronometer regulated to be correct at the extremes of the temperature range over which it is to be used will show an error at temperatures between the extremes.

middle third (*Civ. Eng.*). The middle part of a brickwork or masonry structure, such as an arch or dam. It is equal in width, at any section, to one-third the width of the section, and is centrally disposed. The importance of the middle third is that, providing the line of resultant pressure lies wholly within it, no tensile forces come into play.

middle wire (*Elec. Eng.*). See **neutral conductor.**

Middleton Series (*Geol.*). An obsolete term formerly applied to part of the Ordovician System in Shropshire.

middling space (*Typog.*). A type space cast four to the em.

middlings (*Mining*). In ore dressing, a partially concentrated product left after the removal of clean concentrates and rejected tailings.

Miescher's tubes, mēsh′er (*Zool.*). Elongate cylindrical opaque whitish bodies occurring in muscles of domestic animals and representing encysted *Sarcosporidia.* See also **Rainey's corpuscles.**

migraine, mē-gren (*Med.*). Paroxysmal headache. A condition in which recurring headaches are often associated with vomiting and disturbances of vision. See also **teichopsia.**

migration (*Chem.*). The steady motion of particles, ions, etc., in a given direction under the influence of a force.

migration (*Zool.*). Removal from one habitat or region to another, generally of a large number of animals together: the passage from one part of the body to another of an endoparasite or a phagocytic cell.

migratory cell (*Zool.*). See **amoebocyte.**

migratory community (*Bot.*). A plant community which occupies a locality for a time and then seems to die out.

Mikulicz's disease, mik′oo-litsh (*Med.*). A chronic inflammation of the salivary and the lacrimal glands, the cause of which is unknown.

mild ale (*Brew.*). Ale of a dark-brown colour, often sweetened, and with less hop flavouring than pale ales; usually sold from the cask.

mild clay (*Build.*). See **loam.**

mile. A unit of length commonly used for distance measurement in the British Empire and the

U.S.A. A *statute mile* = 1760 yds. = 1609·3 m. See **geographical—, nautical—.**

mile of standard cable (M.S.C.) (*Elec. Comm.*). The unit of attenuation provided by one mile of an arbitrary type of telephone circuit at 800 cycles per second. Formerly used for estimating possibilities of transmission over circuits. Now displaced by the decibel and néper, which alone are accepted internationally.

milia'ria (*Med.*). Prickly heat. Inflammation of the sweat glands, accompanied by intense irritation of the skin.

mil'iary (*Med.*). Like a millet seed; said of lesions which are small, like millet seeds.

miliary tuberculosis (*Med.*). A form of tuberculosis in which small tuberculous lesions are found in various organs of the body, especially in the meninges and in the lungs.

milk fever (*Vet.*). An afebrile disease of parturient cows characterised by a generalised paresis and loss of consciousness.

milk glands (*Zool.*). The mammary glands of a female Mammal: in viviparous Tsetse flies, special uterine glands by which the larva is nourished until it is ready to pupate.

milk-leg (*Med.*). See **phlegmasia alba dolens.**

milk-sugar (*Chem.*). Lactobiose or *lactose* (q v.).

milk teeth (*Zool.*). In Mammals, the first or deciduous dentition, which is early replaced by the second or permanent dentition.

milking generator (*Elec. Eng.*). A low-voltage d.c. generator used for giving one or more cells of a battery a charge independently of the remainder of the cells. Sometimes called MILKER, MILKING BOOSTER.

milking machine (*Agric. Mach.*). A machine by which a cow is milked. It consists essentially of a vacuum pump, a *pulsator* (q.v.), metal teat cups lined with rubber, and milk pail with an air-tight lid.

Milky Way (*Astron.*). See **Galaxy.**

mill (*Eng.*). Generally, (1) a machine for grinding or crushing, as a *flour mill, paint mill*, etc.; (2) a factory fitted with machinery for manufacturing, as a cotton mill, saw-mill, etc.—(*Mining*) In Britain, a crushing and grinding plant. In America, the whole equipment for comminuting and concentrating an ore.

millboards (*Paper*). Boards manufactured from wood pulp, fibre refuse, etc.

mill-dam (*Hyd. Eng.*). A dam built across the current of a stream to raise its level and divert it into a mill-race.

mill engine (*Eng.*). A large low-speed horizontal steam-engine fitted with drop valves or Corliss valves, or an engine of the Unaflow type; often used in factories to drive machinery through ropes.

mill-fitting (*Illum.*). See **factory-fitting.**

mill-race (*Eng.*). The channel or *flume* (q.v.) by which water is led to a mill-wheel or water-wheel.

mill rugs (*Textiles*). The term used to describe creases that have been produced in woollen cloths during milling.

mill-tail (*Eng.*). The channel conveying water away from a mill-wheel.

mill-wheel (*Eng.*). A water-wheel driving the machinery in a mill.

Millburn Beds (*Geol.*). A group of slate rocks found in the Lake District of England; they belong to the Llanvirn Series of the Ordovician System.

mille (*Paper*). One thousand. The new standard unit for paper.

milled (*Eng.*). Having the edge grooved or fluted, as a coin or adjusting screw. See **knurling tools.**

milled cloth (*Textiles*). A woollen fabric in which, as the result of milling, the felting properties of wool fibres have caused them to interlock. The cloth has a fibrous surface, the individual threads and the weave being indistinguishable.

milled (or **knurled) head** (*Eng.*). The head of an adjusting screw, knurled or roughened to provide a good grip. See **knurling tools.**

milled lead (*Build.*). Sheet-lead formed from cast slabs by a rolling process.

millefio'ri glass. Glassware made by arranging a large number of sections of glass rods of various colours to form a pattern and fusing the whole together. Further manipulation of the shape is often carried out.

Mil'lepore Oölite Beds (*Geol.*). A thin bed of limestone belonging to the Middle Estuarine Series of the Jurassic System in Yorkshire. These beds are inaccurately named from the abundance of a polyzoan.

Miller effect (*Thermionics*). The change in the input admittance of a triode valve caused by variation of the impedance in the anode circuit, which is due to the capacitance between the anode and grid passing a portion of the alternating component of the anode current.

Millerian indices (*Crystal.*). See **indices of crystal faces.**

millerite (*Min.*). 'Capillary pyrite.' Sulphide of nickel, crystallising in the hexagonal system. It usually occurs in very slender crystals and often in delicately radiating groups.

millet-seed sand (*Geol.*). See **blown sand.**

millet-seed sandstone (*Geol*) A sandstone consisting essentially of small spheroidal grains of silica; typical of deposits accumulated under desert conditions.

milli- (Latin *mille*, thousand). A prefix used in the construction of compound terms; used of units in the metric system it means a thousandth part, as in the articles below.

milliam'meter (*Elec. Eng.*). An ammeter calibrated and scaled in milliamperes; used for measuring currents up to about 1 ampere.

milliammeter, differential (*Teleg.*). See **differential milliammeter.**

mil'libar (*Meteor.*). See **bar.**

mil'lilambert (*Illum.*). A unit of brightness equal to 0·001 lambert; more convenient magnitude than the lambert.

mil'lilitre (*Chem.*). A unit of volume, equal to 1·000028 c.c., used in volumetric analysis (particularly in America).

mil'lilux (*Photog.*). A unit of illumination intensity, equal to one-thousandth of a lux.

mil'limetre. The thousandth part of a metre.

millimetre pitch (*Eng.*). See **metric screw-thread.**

mil'limicron (*Phys.*). A unit of length, equal to 10^{-6} millimetre; frequently used for visual radiation and colorimetry. Denoted by **mμ.**

milling (*Eng.*). A machine process in which metal is removed by a revolving multiple-tooth cutter, to produce flat or profiled surfaces, grooves, and slots. See also **milling-cutter, milling-machine.**

milling (*Mining*). Dressing; removing valueless material and harmful constituents from an ore in order to render marketing most profitable.

milling (*Textiles*). A preliminary process in the finishing of woollen fabrics, carried out in a milling-machine by the agency of soap, alkali, or acid (depending on the nature of the fabric and the dye), pressure, and friction. The process decreases the surface area of a fabric and imparts a fibrous cover. Also called FULLING.

milling-cutter (*Eng.*). A hardened steel disc or cylinder on which cutting-teeth are formed by slots or grooves on the periphery and faces, or into which separate teeth are inserted; used in the milling-machine for grooving, slotting, surfacing, etc. See also **end mill, milling-machine.**

milling-machine (*Eng.*). A machine tool in which a horizontal arbor or a vertical spindle carries a rotating multi-tooth cutter, the work being supported and fed by an adjustable and power-driven horizontal table. See also **milling-cutter.**

milling-machine (*Textiles*). A machine used in preparing woollen fabrics for the subsequent finishing process. Rotary milling-machines, which have largely displaced the fulling stocks type, consist of squeezing-rollers, a box channel called the spout, etc., over a large trough, the whole being enclosed.

Millington reverberation formula (*Acous.*). A modified formula for calculating the period of reverberation, taking into account the random disposition of the reflecting and acoustically absorbing surfaces in an enclosure.

Millon's reaction, mē-yon^g (*Chem.*). A test for proteins, based on the formation of a pink or dark-red precipitate of coagulated proteins on heating with a solution of mercuric nitrate containing some nitrous acid.

Millstone Grit (*Geol.*). A deltaic facies of the rocks of Upper Carboniferous age, typically developed between the Carboniferous Limestone and the Coal Measures of the North Midlands of England; it consists of alternating grits and marine shales, to a maximum thickness of more than 5000 ft.

Milroy's disease (*Med.*). Hereditary oedema. A disorder in which persistent oedema (swelling) of the legs occurs in members of the same family in successive generations.

milt (*Zool.*). The spleen: in Fish, the testis or spermatozoa: to fertilise the eggs of the female.

mim'etite or **mimet'esite** (*Min.*). Arsenate of lead with chloride of lead, which crystallises in the hexagonal system. It is usually found in lead deposits which have undergone a secondary alteration.

mim'icry (*Zool.*). The adoption by one species of the colour, habits, or structure of another species. —*adjs.* **mim'ic, mimet'ic.**

min'aret (*Arch.*). A lofty slender tower rising from a mosque or similar building and surrounded by galleries.

mind (*Psycho-an.*). According to Freud, *mind* consists of a relatively small conscious part and a larger unconscious part, each of which consists of the processes of thinking, feeling, and wishing.

miner's dip needle (*Mining*). A portable form of dip needle used for indicating the presence of magnetic ores.

miner's inch (*Hyd., Mining*). An aperture 1 in. square the upper edge of which lies 6 in. below the surface of a stream; used to measure the rate of flow. The yield is about 90 cu. ft. (673·2 gallons) per hour.

miner's lamp (*Mining*). A portable lamp specially designed to be of robust construction and adequate safety for use in mines.

mineral (*Min.*). A body produced by processes of inorganic nature. It has usually a definite chemical composition, a certain characteristic atomic structure, which is expressed in its crystalline form, and other physical properties.

mineral alkali (*Chem.*). An old name for *sodium carbonate.*

mineral caoutchouc (*Min.*). See **elaterite.**

mineral flax (*Build.*). A fiberised form of asbestos much used in the manufacture of asbestos-cement sheeting.

mineral oils (*Chem.*). Petroleum and other hydrocarbon oils obtained from mineral sources. Cf. *vegetable oils.*

mineral vein (*Geol.*). A fissure or crack in a rock which has been subsequently lined or filled with minerals. See also **lode.**

mineral wool (*Met.*). See **slag wool.**

mineralisation (*Bot.*). The deposition of calcium salts, silica, and other inorganic substances on or in a cell wall.

mineralised carbon (*Illum.*). An arc-lamp carbon impregnated with metallic salts for use in a flame arc-lamp.

mineral'ogy. The scientific study of minerals.

minerva machine (*Print.*). A small platen machine used for jobbing work.

minette (*Geol.*). A lamprophyre composed essentially of biotite and orthoclase, occurring in dykes associated with major granitic intrusions. Originally the term was applied to the Jurassic ironstones of Briey and Lorraine, and it is still so used. See also **lamprophyre.**

miniature Edison screw-cap (*Illum.*). An Edison screw-cap for electric filament lamps, in which the screw-thread has a diameter of about ⅜ in. and about 14 threads per inch.

miniature valve (*Thermionics*). A valve in which all the dimensions are reduced to very small values, in order to keep down the inter-electrode capacities and the electronic transit time. Used in very short-wave circuits.

minimum blowing current (*Elec. Eng.*). The minimum current which will cause melting of a fuse link under certain specified conditions.

minimum clearing (*Radio*). Same as *zero clearing.*

minimum deviation (*Light*). See **angle of minimum deviation.**

minimum flying speed (*Aero.*). The minimum speed at which an aeroplane has sufficient lift to support itself in level flight in standard atmosphere.

minimum pause (*Auto. Teleph.*). The interval of lost time which is necessarily introduced into the operation of a dial to ensure that the selectors have time to complete their hunting.

minimum two-part prepayment meter (*Elec. Eng.*). A two-part prepayment meter in which the time element is arranged to collect a charge based upon a minimum yearly consumption as well as the usual fixed charge.

mining dial (*Mining, Surv.*). See **dial.**

mining engineering. That branch of engineering chiefly concerned with the sinking and equipment of mine shafts and workings, and all operations incidental to the winning and preparation of minerals.

minion (*Typog.*). The old name for a type-size now standardised as 7-point.

minium (*Chem.*). An alternative name, now seldom used, for *red-lead.*

mink (*Furs*). The dressed skin of the mink, an amphibious animal; the best skins, dark brown, short, and thick, come from Nova Scotia. The skins of several other animals are known commercially as mink.

min'nikin (*Typog.*). The old name for a small size of type, about 3-point.

minor intrusions (*Geol.*). The collective name for igneous intrusions of relatively small size, compared with *plutonic* (*major*) *intrusions.* They comprise dykes, sills, veins, and small laccoliths. The injection of the minor intrusions constitutes the dyke phase of a volcanic cycle.

minor planet (*Astron.*). See **asteroid.**

mint camphor (*Chem.*). *Menthol* (q.v.).

minus colour (*Photog.*). The complementary colour to a given colour, i.e. the colour which, when added to the given colour, produces white light.

minus strain (*Bot.*). One of the two distinct strains of a heterothallic mould; sometimes written (−) strain.

minus'cule (*Typog.*). A lower-case, or small, letter.

minute. (1) A sixtieth part of an hour of time.—(2) A sixtieth part of a degree.—(3) A sixtieth part of the lower diameter of a column.

minute hand (*Horol.*). The hand of a watch or clock which makes one turn per hour.

minute pinion (or **nut**) (*Horol.*). The pinion in the motion work that drives the hour wheel.

minute wheel (*Horol.*). The wheel in the motion work driven by the cannon.pinion.

minute-wheel pin (or **stud**) (*Horol*) A vertical pin in the plate on which the minute wheel revolves.

min'verite (*Geol.*). A basic intrusive rock, in essentials a dolerite, containing a brown, soda-rich hornblende; named from the type-locality, St. Minver, Cornwall.

Mi'ocene Period (*Geol.*). The period of geological time which ensued between the Oligocene and Pliocene Periods. In Britain this period was one of erosion and is not represented by any known deposits.

mio'sis (*Med.*). Contraction of the pupil of the eye.

Mipolam (*Plastics*). A proprietary plastic of the polyvinyl chloride type. Non-inflammable; of high value for its electrical and acid-resisting qualities.

mirab'ilite (*Min.*). *Glauber salt* (q.v).

miracid'ium (*Zool.*). The ciliated first-stage larva of a Trematode.

mirage, mir-azh' (*Meteor.*). An effect caused by total reflection of light at the upper surface of shallow layers of hot air in contact with the ground, the appearance being that of pools of water in which are seen inverted images of more distant objects. Other types of mirage are seen in polar regions, where there is a dense, cold layer of air near the ground. See **fata morgana.**

mirbane, oil of (*Chem.*). See **oil of mirbane.**

Mirrophon'ic (*Cinema.*). Trade-name of a sound-film system, manufactured by Western Electric, which provides for uniform high-quality reproduction over the entire area of an auditorium.

mirror (*Phys.*). A highly polished reflecting surface capable of reflecting light-rays without appreciable diffusion. The commonest forms are plane spherical (convex and concave), and paraboloidal (usually concave). The materials used are glass silvered on the back or front, speculum metal, or stainless steel. See **concave—, convex—, parabolic—**; also **anti-parallax—*.**

mirror arc (*Cinema.*). A projection arc in which the positive carbon is advanced towards the negative carbon, which is fed along the axis and through the centre of the parabolic metallic mirror; light from a greater radiation angle from the positive crater is thereby collected and focused on to the gate.

mirror drum (or **wheel**) (*Television*). A rotating drum having a number of mirrors arranged around its circumference; used in some forms of mechanical scanning.

mirror galvanometer (*Elec. Eng.*). A galvanometer having a mirror attached to the moving part, so that the deflection can be observed by directing a beam of light on to the mirror and observing the movement of the reflection of this over a suitable scale. Also called REFLECTING GALVANOMETER.

mirror plate (*Furn.*). (1) Plate glass for silvering.—(2) A fixing device in the form of a small metal plate, one end being screwed or nailed to the object to be held in position and the other fixed to the base.

mirror screw (*Television*). An arrangement of mirrors on a rotating shaft, used for mechanical scanning. The mirrors are set in line along the shaft, each inclined at a small angle to the next.

mirror wheel (*Television*). See **mirror drum.**

miscarriage (*Med.*) Expulsion of the foetus before the twenty-eighth week of pregnancy. Loosely, abortion.

miscibility (*Chem.*). The property enabling two or more liquids to mix when brought together and thus form one phase.

miscibility gap (*Chem.*). The region of composition and temperature in which two liquids form two layers or phases when brought together.

miser (*Civ. Eng.*). A large *auger* (q.v.) used for boring holes in the ground in wet situations.

misering (*Civ. Eng.*). The process of sinking borings with a miser.

misfiring (*I.C. Engs.*). The failure of the compressed charge to fire normally, generally due either to ignition failure or an over-rich or weak mixture.

mis'pickel (*Min.*). Sulpharsenide of iron, crystallising in the orthorhombic system. It is used as an ore of arsenic. Also called ARSENICAL PYRITE, ARSENOPYRITE.

Mississippian System (*Geol.*). Approximately equivalent to the Lower Carboniferous of N.W. Europe; comprises those members of the Carboniferous System which underlie the Coal Measures and are typically exposed in the Mississippi valley.

mist (*Chem.*). A suspension, often colloidal, of a liquid in a gas.—(*Meteor.*) A term applied to cloud in contact with the ground, as on a mountain, or thin fog where the visibility is not greatly reduced. See also **fog.**

mistake. Any difference from correct value, due to carelessness of observation and/or calculation. Cf. *error.*

mis'tral (*Meteor.*). A cold, dry, northerly wind of a katabatic nature, occurring along the Mediterranean coast of France during fine clear weather.

mitcheline (*Textiles*). See **patent satin.**

mites (*Zool*). See **Acarina.**

mitochon'dria (*Cyt.*). Protoplasmic inclusions of all living cells which take the form of filamentous or rod-like bodies and are believed to take an active part in the production of some types of secretion, as enzymes.

mitogenet'ic ray (*Bot.*). A form of radiant energy, possibly consisting of ultra-violet radiations of very low intensity, emitted by some actively growing parts of plants; said to influence development.

mito'sis (*Cyt.*). The series of changes through which the nucleus passes during ordinary cell division, and by which each of the daughter cells is provided with a set of chromosomes similar to that possessed by the parent cell.—*adj.* **mitotic.**

mito'tic index (*Cyt.*). The proportion in any tissue of dividing cells.

mi'tral (*Med.*). Pertaining to, or affecting, the mitral valve, or valves, of the heart.

mitral or **mitriform** (*Zool.*). Mitre-shaped; as the *mitral valve,* guarding the left auriculo-ventricular aperture of the heart in higher Vertebrates, or the *mitral layer* of the olfactory bulb, composed of mitre-shaped cells.

mitral stenosis (*Med.*). Narrowing of the communication between the left auricle and the left ventricle of the heart, as a result of disease of the mitral valves.

mi'trate (*Bot.*). Descriptive of a rounded, folded fungal fruit body which is somewhat bonnet-shaped.

mitre (*Join., etc.*). A joint between two pieces at an angle to one another, each jointing surface being cut at an angle to the piece on which it is formed.

mitre block (*Carp., etc.*). A block of wood rebated along one edge and having saw-cuts in the part above the rebate, with the kerfs inclined at 45° to the face of the rebate so as to guide the saw when cutting mouldings for a mitred joint.

mitre board (*Join., etc.*). See **mitre shoot.**

mitre box (*Carp., etc.*). An open-ended box having saw-cuts in the sides at 45° to the length of the box; used for the same purpose as the mitre block but capable of taking deeper mouldings.

mitre clamp (*Join., etc*). A *clamp* (q.v.) adapted for holding together temporarily the two parts of a mitre joint.

mitre-cut piston-ring (*Eng.*). A piston-ring in which the ends are mitred at the joint, as distinct from stepped or square ends.

mitre dovetail (*Join.*). See **secret dovetail.**

mitre joint (*Join.*). See **mitre.**

mitre plane (*Join.*). A plane specially adapted for use with a mitre shoot.

mitre post (*Hyd. Eng.*). See **meeting post.**

mitre saw (*Join.*). See **tenon saw.**

mitre-saw cut (*Carp., etc*) A device, such as a mitre block or box, for keeping the saw at the required angle to the work when cutting mouldings for a mitre joint. Also called MITRE-SAWING BOARD.

mitre-sawing board (*Carp., etc.*). See **mitre-saw cut.**

mitre shoot (*Join., etc.*). A block of wood rebated along one edge as a guide for a jointing plane, and having a pair of wood strips fixed to the top face of the part above the rebate, at 45° to the face of the rebate, so as to hold the mitre face of a moulding at the right angle to the plane while it is being shot. Also called MITRE BOARD.

mitre-sill (*Hyd. Eng.*). The raised part of the bed of a canal lock against which the lower parts of the gates abut in closing. Also called CLAP-SILL, LOCK-SILL.

mitre square (*Carp., etc.*). A tool similar to the bevel, but having the blade fixed at 45° to the stock.

mitre wheels (*Eng.*). See **bevel gear.**

mitred clamp (*Join.*). A wooden border mitred at its ends and fixed to a board at right-angles to the direction of its grain.

mitred valley (*Build.*). See **cut and mitred valley.**

mit'riform (*Bot.*). Split on two or more sides at the base, in symmetrical manner.

Mitsch'erlich's law of isomorphism (*Chem*). Salts having similar crystalline forms have similar chemical constitutions.

mix (*Build., Civ. Eng.*). A mixing of concrete.

mixed (*Zool.*). Said of nerve trunks containing motor and sensory fibres.

mixed bud (*Bot.*). A bud containing young foliage leaves and also the rudiments of flowers or of inflorescences.

mixed conductor (*Chem*). A conductor in which conduction is both electrolytic and electronic.

mixed coupling (*Radio*). Simultaneous inductive and capacitative coupling between two resonant circuits.

mixed crystal (*Crystal.*). A crystal in which certain atoms of one element are replaced by those of another.

mixed-flow (or **American**) **water turbine** (*Eng.*). An inward-flow reaction turbine in which the runner vanes are so curved as to be acted on by the water as it enters radially and as it leaves axially.

mixed inflorescence (*Bot.*). An inflorescence in which some of the branching is racemose and some is cymose.

mixed pith (*Bot.*). A pith consisting chiefly of parenchyma, but with isolated tracheides scattered in it.

mixed-pressure turbine (*Eng.*). A steam turbine operated from two or more sources of steam at different pressures, the low-pressure supply, from, for example, the exhaust of other engines, being admitted at the appropriate pressure stage.

mixed service (*Teleph.*). Service provided by a P.B.X. to the main exchange for a number of extension lines only.

mixer (*Build., Civ. Eng.*). See **concrete mixer.**

mixer (*Cinema.*). The man who regulates the outputs of several microphones when they are mixed during the recording of a shot.

mixer (*Elec. Comm.*). An arrangement of resistance potentiometers, controlled by sliders or knobs, to regulate the contribution of several channels (from microphones, land-lines, etc.) when they are added together (or mixed) to form the transmission into another channel. Each knob provides for regulation by indistinguishable steps, from the maximum output level to total loss.

mixer (*Met.*). (1) A large furnace used as a reservoir for molten pig-iron coming from the blast-furnace. The product of several furnaces is thus mixed, and the composition can be kept constant by making suitable additions. Used in connexion with hot-metal steel-making and direct casting of pig-iron —(2) See **agitator.**

mixer valve (*Thermionics*). A valve in which two currents having different frequencies are combined, generally for the purpose of modulation.

mixing (*Textiles*). The operation of blending cotton of different types, but of similar staple and colour, to obtain the most suitable material for spinning yarns economically.

See **direct—** **stack—**

mixipterygium, miks-i-pter-ij'i-um (*Zool.*). The clasper of *Selachii* (q.v.). Also MIXOPTERYGIUM.

mixo- (Greek *mixis*, a mingling). A prefix used in the construction of compound terms; e.g. *mixochimaera* (q.v.).

mixochimae'ra (*Bot.*). A chimaera in fungi, produced experimentally by mixing the contents of two hyphae of different strains of a species.

mixochro'mosome (*Cyt.*). In syndesis, the new chromosome formed by fusion of a pair of normal chromosomes.

mixotro'phic (*Zool.*). Combining two or more fundamental methods of nutrition, as certain *Mastigophora* which combine holophytic with saprophytic nutrition, or as a partial parasite.

mixture (*Acous.*). The fixed combination of a number of ranks of pipes, containing octaves and mutations, on one stop, which is therefore specially loud and brilliant.

mixture (*I.C. Engs.*). The combined inflammable gas and air constituting the explosive charge.

mixture (*Textiles*). (1) A mixture of different qualities of material, the combined material being termed the *blend*.—(2) A mixture of colours. —(3) A mixture of yarn.

mixture (*Typog.*). An extra charge for composition if three or more type faces are used.

mixture control (*Aero.*). An auxiliary control fitted to a carburettor to allow of a variation of mixture strength with altitude of flight. May be manually operated or automatic.

miz'zonite (*Min.*). One of the series of minerals forming the scapolite group, consisting of a mixture of the meionite and marialite molecules. It includes those minerals with 54-57% silica, and occurs in clear crystals in the ejected masses on Mte. Somma, Vesuvius. Also called DIPYRE, DIPYRITE.

M-K-S. units. See **metre-kilogram-second units.**

ml. An abbrev. for *millilitre.*

mm. An abbrev. for *millimetre.*

m.m.f. (*Elec. Eng.*). Abbrev. for *magnetomotive force.*

μμF. (*Elec. Eng.*). Abbrev. for *micro-micro-farad.*

Mn (*Chem.*). The symbol for *manganese.*

mnemic principle, nē'mik (*Zool.*). The principle which explains heredity, development, and evolution on the basis of the inherited memory of past generations.

mnemotax'is (*Zool.*). The movements of an animal dictated in whole or in part by memory.

mo. (*Build.*). An abbrev. for *moulded.*

Mo (*Chem.*). The symbol for *molybdenum.*

Mo (*Chem.*). A symbol for *morphine*, $C_{17}H_{19}O_3N$.

Mocha stone (*Min.*). See **moss agate.**

mock grandrelle (*Textiles*). A two-colour thread produced by spinning a single yarn in which two rovings of different colours are incorporated.

mock leno (*Textiles*). A fabric in which openwork effect is produced by a grouping of threads, which, however, do not cross, as they do in leno and gauze fabrics. Also called IMITATION GAUZE.

mock moons (*Meteor.*). Lunar images similar to *mock suns* (q.v.). Also called PARASELENAE.

mock suns (*Meteor.*). Images of the sun, not usually very well defined, seen towards sunset at the same altitude as the sun and 22° from it on each side. They are portions of the 22° ice *halo* (q.v.) formed by ice crystals which, for some reason, are arranged with their axes vertical. Also called PARHELIA.

mode (*Geol.*). The actual mineral composition of a rock expressed quantitatively in percentages by weight. Cf. *norm.*

modelling (*Plast.*). The operation of smoothing a plaster surface to a required shape.

moderately hydraulic lime (*Build.*). *Lime* (q.v.) made by burning a limestone containing 12-22% clay.

modern face (*Typog.*). A style of type with contrasting thick and thin strokes, serifs at right-angles, curves thickened in the centre, etc. See also **type.**

modification (*Bot.*). A change in a plant brought about by environmental conditions and lasting only as long as the operative conditions last.

modification (*Met.*). Originally the altering of structure and properties of aluminium-silicon alloys, e.g. Alpax, by adding about 0·1% of sodium. Now also the production of fine graphite in grey cast-iron by various treatments.

modifier or **modifying factor** (*Bot.*). A hereditary factor which influences the operation of another.

modil'lion (*Build.*). An ornamental bracket supporting a cornice.

modio'lus (*Zool.*). The central pillar of the cochlea.

modular ratio (*Civ. Eng.*). The ratio between Young's modulus for steel and that for the concrete in any given case of reinforced concrete.

modulated amplifier valve (*Radio*). The valve in an anode modulation system to the grid of which the high-frequency carrier voltage is applied, and whose mean anode potential (over a high-frequency cycle) is varied, in accordance with the impressed modulation, through the coupling to the modulator valve.

modulation (*Acous.*). The changing from one key to another in music. The continual change from one fundamental frequency to another in speech, as automatically regulated by the tension in the muscles of the larynx.

modulation (*Cathode Ray Tubes, Television*). Control of the intensity of illumination produced by a cathode ray beam in accordance with the picture signal, as by varying the beam current, voltage, or scanning velocity.

See also **intensity—** **velocity—**

modulation (*Elec. Comm.*). The process whereby a high frequency is rectified with a lower frequency, thereby producing sum-and-difference frequencies. These are called the side-frequencies of the upper frequency, which is termed the carrier.

modulation (*Radio*). Variation of the frequency, phase, or magnitude of a high-frequency current in accordance with an impressed telephonic, telegraphic, or picture signal current.

See **amplitude—** **frequency—** **phase—**

modulation condition (*Elec. Comm.*). The condition of voltages and currents in an amplifier for a modulated signal when the carrier is steadily modulated to a stated degree, e.g. 100%.

modulation depth (*Radio*). See **depth of modulation.**

modulation distortion (*Elec. Comm.*). When a carrier frequency is modulated, any departure from invariability of carrier amplitude and the addition of side-frequencies proportional in amplitude to the corresponding frequencies in the signal, with phases balanced with respect to the initial phase of the carrier, causes *modulation distortion.*

modulation frequency (*Radio*). The frequency with which change is effected in any of the quantities associated with a high-frequency current.

modulation meter (*Elec. Comm.*). A meter, placed in shunt with a communication channel, which gives an indication that interprets, in a stated way, the instant-to-instant power-level in the varying modulation currents.

modulation system (*Radio*). See **control system.**

modulator (*Radio*). Any device for effecting modulation.

modulator valve (*Radio*). The valve in an anode modulation system to the grid of which the modulating signal is applied, and which impresses the variations in its anode potential upon the anode circuit of the modulated amplifier valve.

module (*Arch.*). The radius of the lower end of the shaft of a column.

module (*Eng*). (In a gear-wheel) the pitch circle diameter per tooth, i.e. the reciprocal of the *diametral pitch.*

modulus (*Elec. Eng.*). See **amplitude.**

modulus of elasticity (*Eng., etc.*). See **elasticity, Young's modulus.**

modulus of rigidity (*Eng.*). Of a material suffering shear, the ratio of the intensity of the shear stress across the section to the shear strain, i.e. to the angle of distortion in radians; expressed in pounds or tons per square inch.

Moebius process (*Met.*). An electrolytic process for parting gold-silver bullion. The electrolyte is silver nitrate. Bullion forms the anode. Silver passes into solution and is deposited on the cathode. Gold remains on the anode.

mo'ellen (*Leather*). *Degras* (q.v.).

moellon (*Build.*). A rubble filling between the facing walls of a structure, sometimes laid in mortar.

Moel-y-Gest Beds (*Geol.*). Banded grey slates and mudstones belonging to the Tremadoc rocks of the Upper Cambrian of Carnarvonshire.

Moerner's test, mér'ner (*Chem.*). A test for the presence of tyrosine, based on the appearance of a green colour when the solution is heated with a mixture of formalin and sulphuric acid.

mofette, mo-fet' (*Geol.*). A volcanic opening through which emanations of carbon dioxide, nitrogen, and oxygen pass. It marks the last phase of volcanic activity.

mohair (*Textiles*). Formerly, the long fine fleece-like hair from the Angora goat, *Capra Mircus*, family *Ovinae*; now, hair obtained for commercial purposes from crossbred animals.

mohair lustre (*Textiles*). A plain or figured cloth made from fine cotton warp and mohair weft; used for dresses.

Mohawk'ian Series (*Geol.*). The middle of the main divisions of the Ordovician System in N. America, comprising the Utica, Lorraine, Richmond, and Gamache formations.

Mohr's litre (*Chem.*). The volume occupied by one kilogram of distilled water when weighed in air against brass weights; it is approximately equal to 1·002 true litres.

Mohr's salt (*Chem.*). Ferrous ammonium sulphate, $(NH_4)_2SO_4{\cdot}FeSO_4{\cdot}6H_2O$.

Mohs' scale of hardness (*Min.*). A scale introduced by Mohs to measure the hardness of minerals. See **hardness** (*Min.*).

moil (*Glass*). Glass left waste in the manufacture of glassware by hand methods. See also **cullet.**

Moine Schists (or **Series**) (*Geol.*). Flaggy granulites and pelitic schists of sedimentary origin, occurring typically in the Moine (northern Scotland); presumably of Pre-Cambrian age.

moiré effect, moi'rē (*Photog.*). A 'watered-silk' *pattern* (q.v.) arising from interference between two line-screens; a defect for which occasional uses are found.

moisture expansion (*Build.*, *Civ. Eng.*). Increase in the volume of a material from absorption of moisture. Also called BULKING.

moits or **motes** (*Textiles*). A term for vegetable matter, burrs, seeds, twigs, straw, etc., found in wool.

mol (*Chem.*). A unit of weight of an element or compound, equal to its molecular weight in grams, or also, if a gas, to a volume of approximately 22·4 litres at N.T.P.

molal specific heat (*Chem.*). The *specific heat* (q.v.) of one mol of an element or compound. Also called VOLUMETRIC HEAT (for gases).

molality (*Chem.*). The concentration of a solution expressed as the number of gram-molecules of dissolved substance per 1000 grams of solvent.

molar volume (*Chem.*). See **gram-molecular volume.**

molarity (*Chem.*). The concentration of a solution expressed as the number of gram-molecules of dissolved substance per litre of solution.

molars (*Zool.*). The posterior grinding or cheek teeth of Mammals which are not represented in the milk dentition.

Molasse, mō-las' (*Geol.*). A series of deposits in Switzerland consisting of soft sandstones and grey and red sandy marls; formerly considered to be of Miocene age, now, in part, found to be in the Oligocene System.

molas'ses (*Chem.*). Residual sugar syrups from which no crystalline sugar can be obtained by simple means. It forms an important raw material for the manufacture of ethyl and other alcohols.

mold, molding, etc. A variant spelling of *mould*, *moulding*, etc.

mol'davite (*Min.*). See **bottle-stone**; also **tektites.**

mole (*Civ. Eng.*). A *breakwater* (q.v.) or a masonry *pier* (q.v.).

mole (*Furs*). The dressed skin of the mole; the fur is bluish-grey, short, and velvety.

moleskin (*Textiles*). A heavy fustian type of fabric, with smooth face and twill back; used for clothing by blacksmiths, moulders, and labourers.

mole (*Med.*). (1) *Naevus* (q.v.).—(2) A haemorrhagic mass formed in the Fallopian tube as a result of bleeding into the sac enclosing the embryo.

molec'ular (*Chem.*). (1) Pertaining to a molecule or molecules.—(2) Pertaining to one gram-molecule

molecular (*Zool.*). Granular.

molecular association (*Chem.*). The relatively loose binding together of the molecules of a liquid or vapour in groups of two or more.

molecular compound (*Chem.*). A compound formed by the combination of two or more molecules capable of independent existence.

molecular conductivity (*Chem.*). The conductivity of a volume of electrolyte containing one gram-molecule of dissolved substance.

molecular depression of freezing-point (*Chem.*). The drop in the freezing-point of a liquid which would be produced by the dissolution of one gram-molecule of a substance in 100 gms. of the solvent, if the same laws held as in dilute solutions.

molecular elevation of boiling-point (*Chem.*). The rise in the boiling-point of a liquid which would be produced by the dissolution of one gram-molecule of a substance in 100 gms. of the solvent, if the same laws held as in dilute solutions.

molecular heat (*Chem.*). The product of the specific heat of a substance and its molecular weight.

molecular layer (*Zool.*). The outer layer of the cerebral cortex in higher Vertebrates: the outer layer of the cerebellar cortex.

molecular refraction (*Chem.*). See **Lorentz-Lorenz equation.**

molecular rotation (*Chem.*). One-hundredth of the product of the specific rotation and the molecular weight of an optically active compound.

molecular solution (*Chem.*). A true solution, in which molecules of the dissolved substance are separated from one another by molecules of solvent.

molecular structure (*Chem.*). The way in which atoms are linked together in a molecule.

molecular volume (*Chem.*). The volume occupied by one gram-molecule of a substance, particularly by a gram-molecule of a liquid at its boiling-point under normal pressure (760 mm.).

molecular weight (*Chem.*). The weight of a molecule of a substance referred to that of an atom of oxygen as 16·000.

molecule (*Chem.*). The smallest particle of a substance that is capable of independent existence while still retaining its chemical properties. This concept is largely meaningless in the case of crystalline salts.

moler (*Build.*). A diatomaceous earth used in the manufacture of Fosalsil.

Mo'lisch test (*Chem.*). A test for proteins, based on the appearance of a violet ring between two layers of a protein solution containing some α-naphthol and concentrated sulphuric acid. The reaction is due to the presence of a carbohydrate group in the protein molecule, and the same reaction is also given by carbohydrates in general.

mol'leton or **mol'litan** (*Textiles*). A heavy type of cotton fabric, plain or figured, raised on both sides; used for dressing-gowns.

mollit'ies os'sium (*Med.*). See **osteomalacia.**

Mollus'ca (*Zool.*). A phylum of non-metameric *Invertebrata*, having a calcareous shell secreted by a sheath of skin (the mantle) which hangs down around the body and covers the respiratory organs or ctenidia; there are no limbs, but the under surface of the body (the foot) is highly muscular and used for locomotion; the mouth contains a ribbon of chitinous teeth, the radula. Coat-of-Mail Shells, Tusk Shells, Limpets, Whelks, Snails, Slugs, Mussels, Scallops, Oysters, Squids, Cuttlefish, and Octopods.

Mollusco'idea (*Zool.*). An obsolete group; formerly used to include the *Polyzoa* and the *Brachiopoda*, which are now classed as separate phyla.

mollus'cum contagio'sum (*Med.*). A contagious condition in which small, white, waxy nodules appear on the skin; believed to be due to infection with a filter-passing virus.

molluscum fibro'sum (*Med.*). Von Recklinghausen's disease; multiple neurofibromata. A disease characterised by the appearance on the skin (and elsewhere in the body) of soft nodules composed of fibrous tissue and believed to develop from nerve fibres.

Molpadi'da (*Zool.*). An order of *Holothuroidea* having small simple buccal tube-feet with ampullae, and with or without retractor muscles; there are no tube-feet on the trunk; respiratory trees occur; the madreporite is internal. Burrowing forms.

molyb'dates (*Chem.*). Salts of molybdic acid.

molyb'denite (*Min.*). Disulphide of molybdenum, crystallising in the hexagonal system. It is the most common ore of molybdenum, but never occurs in large quantities.

molyb'denum (*Met.*). A metallic element in the sixth group of the periodic system. Chemical symbol, Mo; at. wt. 96, at. no. 42, sp. gr. at 20° C. 10·2, hardness 147 (Brinell), m.p. 2450° C., b.p. 3200° C., specific electrical resistivity 4·77 microhms per cm. cub. Its physical properties are similar to those of iron, its chemical properties to those of a non-metal. Used in the form of wire for filament supports, hooks, etc. in electric lamps and radio valves, for electrodes of mercury-vapour lamps, and for winding electric resistance furnaces. Is added to a number of types of alloy steels, certain types of Permalloy, and Stellite.

molybdenum trioxide (*Chem.*). MoO_3. Behaves as an acid anhydride, forming molybdic acid. The essential starting-point in the manufacture of molybdenum metal.

molyb'dic acid (*Chem.*). H_2MoO_4. See also **molybdenum trioxide.**

molyb'dite (*Min.*). A hydrous ferric molybdate which crystallises in the orthorhombic system. It is commonly impure and occurs in small amounts as an oxidation product of molybdenite. Also called MOLYBDIC OCHRE, FERRIMOLYBDITE.

moment of a force (*Phys., etc.*). The *moment* of a force about a given point is its turning effect, measured by the product of the force and the perpendicular distance of the point from the line of action of the force. Clockwise moments are usually considered as positive, and counterclockwise as negative.

moment of a magnet (*Elec. Eng.*). See **magnetic moment.**

moment of inertia (*Mech.*). A measure of the resistance offered by a body to angular acceleration. For a given body, the moment of inertia is not unique but depends on the particular axis of rotation chosen. It is defined as Σmr^2, where m is the mass of a particle in the body and r is its perpendicular distance from the axis.

moment of momentum (*Mech.*). Angular momentum. See **momentum.**

momentum (*Mech.*). The product of the mass of a body and its velocity. *Angular momentum* is the product of the moment of inertia and the angular velocity of a body. See also **conservation of momentum.**

mon-, mono- (Greek *monos*, alone). A prefix used in the construction of compound terms; e.g. *monogamous*, having only one mate.—(*Chem.*) Containing one atom, group, etc., e.g. *monobasic* (q.v.).

Mona Complex (*Geol.*). The name given to the rock groups of Pre-Cambrian age exposed in Anglesey and parts of peninsular Carnarvonshire.

monacid (*Chem.*). Containing one hydroxyl group, replaceable by an acid radical, with the formation of a salt.

mo'nad (*Zool.*). A *flagellispore* (q.v.); a primitive organism.—*adj.* **monad'iform.**

monadel'phous (*Bot.*). Having all the stamens in the flower joined together by their filaments.

monan'drous (*Bot.*). (1) Having one antheridium. —(2) Having one stamen.

monan'gial (*Bot.*). Said of a sorus consisting of a single sporangium.

monarch (*Bot.*). Having a single strand of protoxylem in the stele.

monau'ral (*Acous.*). Pertaining to the use of one ear instead of two (cf. *binaural*). Hence *monaural system of reproduction*, e.g. telephone, broadcasting, etc., which uses one channel only and eliminates any subjective effects arising from the possession of two ears.

monax'on (*Zool.*). Having only one axis; said of Sponge spicules.

Monaxo'nida (*Zool.*). An order of *Demospongiae* in which the skeleton is composed of monaxial spicules only, in some cases cemented together by spongin.

mon'azite (*Min.*). An accessory mineral, crystallising in the monoclinic system. One of the chief sources of thorium used in the manufacture of gas mantles. The mineral frequently contains the rare earth metals, principally cerium and lanthanum.

monchiquite, mon'chi-kit (*Geol.*). A dark-coloured lamprophyric igneous rock, microcrystalline or porphyritic, and containing abundant mafic minerals, with little or no feldspar, in an isotropic base consisting of analcite. Some varieties contain olivine, nepheline, or leucite.

Mönckeberg's sclerosis (or **degeneration**) (*Med.*). Degeneration of the middle coat of medium-sized arteries in old people, characterised by the deposit of lime salts in it.

Mond gas (*Chem.*). The gas produced by passing air and a large excess of steam over coal-slack at about 650° C. See also **semi-water gas.**

Mond process (*Met.*). A process used by Mond Nickel Co. in extracting nickel from a matte consisting of copper-nickel sulphides. The matte is roasted to obtain oxides, the copper is leached out with H_2SO_4, the nickel oxide is reduced to nickel with hydrogen, then the nickel is caused to combine with CO to form a carbonyl, which is decomposed by heating.

Monel' metal (*Met.*). A nickel-base alloy containing nickel 68%, copper 29%, and iron, manganese, silicon, and carbon 3%. Has high strength (about 33 tons per sq. in.), good elongation (about 45%), and high resistance to corrosion. Used for condenser tubes, propellers, pump fittings, turbine blades, and for chemical and food-handling plant.

mon'golism (*Med.*). Mongolian idiocy. A condition in which mental deficiency is associated with snub nose, Mongolian-like eyes, prominent cheek-bones, small mouth, large tongue, and short, broad, and thick hands and feet.

mongrel (*Bot., Zool.*). The offspring of a cross between varieties or races of a species.

mo'nial (*Join.*). A *mullion* (q.v.).

monili'asis (*Med.*). Infection with any of the various species of the fungus *Monilia.*

monil'icorn (*Zool.*). Having moniliform antennae.

monil'iform (*Zool.*). Resembling a necklace or chain of beads, as *moniliform antennae.*

mon'imosty'ly (*Zool.*). In Vertebrates, the condition of having the quadrate immovably united to the squamosal; cf. *streptostyly.*—*adj.* **monimosty'lic.**

monis'tic (*Chem.*). Un-ionised in solution.

monitor (*Elec. Comm.*). An arrangement for reproducing any kind of transmission so that such reproduction does not interfere with the regular transmission. Used for checking the quality of the transmission, and for quickly locating faults in the channel.

monitor-man (*Cinema.*). An alternative name for the *recordist* (q.v.), since he is at all times hearing the reproduction of the sound-transmission which he is controlling for recording.

monitor position (*Teleph.*). The special position at any exchange at which operators deal with queries and complaints.

monitor tube (*Television*). A cathode ray tube at a television transmitting station to check the quality of the transmitted picture.

monitoring (*Elec. Comm.*). A general term for the act of tapping on to a communication circuit with the view to ascertain that the transmission is that desired, without interfering with the transmission. Monitoring may be with head receivers or with an amplifier and loudspeaker. See also **blind monitoring.**

monitoring amplifier (*Elec. Comm.*). See **bridging amplifier.**

monitoring booth (*Cinema.*). A portable enclosure on wheels for the use of the recordist on the floor of a sound-film studio. It is arranged so that he sees the action and hears on a monitoring receiver what is being recorded.

monitoring receiver (*Radio*). A high-fidelity receiver employed at a transmitting station to check the quality of the outgoing transmissions. Also called CHECK RECEIVER.

monk (*Typog.*). An area of printing with too much ink.

monk bond (*Build.*). A modification of the *Flemish bond* (q.v.), each course consisting of two stretchers and one header alternately. Also called FLYING BOND.

monkey (*Civ. Eng.*). The falling weight of a pile-driver. Also called BEETLE-HEAD.

monkey chatter (*Elec. Comm.*). The interference between a wanted carrier and the nearer side-band (modulation) of an unwanted transmission in radio reception.

monkey pot (*Glass*). See **jockey pot.**

monkey tail (*Join.*). A vertical scroll at one end of a hand-rail.

monkey-tail bolt (*Join.*). A long-handled bolt for the top of a door, capable of operation from the floor.

mono-. Prefix. See **mon-.**

monoba'sic (*Chem.*). Containing one hydrogen atom replaceable by a metal with the formation of a salt.

mon'obloc (*I.C. Engs.*). The integral casting of all the cylinders of an engine, i.e. in the same cylinder block.

mon'ocable (*Civ. Eng.*). The type of *aerial ropeway* (q.v.) in which a single endless rope is used both to support and to move the loads.

monocar'dian (*Zool.*). Having a completely undivided heart.

monocarpel'lary (*Bot.*). Having, or consisting of, a single carpel.

monocarp'ic (*Bot.*). (1) Forming a single fruit and then dying.—(2) Dying after one flowering season.

monocer'cous (*Zool.*). Uniflagellate.

monoc'erous (*Zool.*). Having a single horn.

monocha'sium (*Bot.*). A cymose inflorescence in which each successive branch bears one branch in its turn.

Monochlamyd'eae (*Bot.*). See **Incompletae.**

monochlamyd'eous (*Bot.*). Having a perianth of one whorl of members.

monochlamydeous chimaera (*Bot.*). See **haplochlamydeous chimaera.**

monochromat'ic filter (*Photog.*). A filter which transmits light of a single wavelength, or, in practice, a very narrow band of wavelengths.

monochromatic light (*Phys.*). Light containing radiation of a single wavelength only. For many purposes the light from a sodium flame (i.e. a Bunsen flame coloured yellow by the introduction of common salt) is sufficiently nearly monochromatic. The wavelengths it gives are 5890 and 5896 A.U. See also **cadmium red line.**

mon'ochrome (*Photog.*). A photographic print in one colour of varying brightness.

monocle (*Photog.*). An uncorrected simple lens, similar to a spectacle lens, for soft focus work.

mon'ocline (*Geol.*). A fold with a single limb which produces a sudden steepening of the dip; the rocks, however, soon approximate to horizontality on either side of this flexure.

monoclin'ic system (*Crystal.*). The style of crystal architecture in which the three crystal axes are of unequal lengths, having one of their intersections oblique and the other two at right-angles. Also called OBLIQUE SYSTEM.

monocli'nous (*Bot.*). Having stamens and carpels in the same flower.

mon'ocoque,—kok' (*Aero.*). A type of construction of a fuselage or nacelle in which the loads in the structure are taken principally by the skin, reinforced sometimes by bulkheads and stringers. Colloquially STRESSED SKIN CONSTRUCTION. See **Geodetic.**

Monocotyle'dones (*Bot.*). One of the two main groups included in the Angiospermae, with many thousands of species. The plants are mostly herbs with parallel venation in the leaves, flowers with parts in threes, and stems without a clearly defined pith, and containing scattered vascular bundles without a cambium (with few exceptions). The embryo has one cotyledon.

monocotyle'donous (*Bot.*). (1) Belonging to the *Monocotyledones.*—(2) Said of an embryo having a single cotyledon.—(3) Said of a seedling having a single cotyledon.

monoc'ular vision (*Photog.*). The viewing, by one eye only, of a scene to be photographed, the axis of vision being parallel to the axis of the camera.

mo'nocule (*Zool.*). An animal possessing a single eye, as the Water Flea *Daphnia.*—*adj.* **monoc'ular.**

monocy'clic (*Bot.*). (1) Said of an annual plant.—(2) Having each kind of member forming one whorl.—(*Zool.*) Said of the calyx of *Crinoidea* when the row of infrabasals is lacking. Cf. *dicylic.*

mo'nocyte (*Zool.*). A type of large uninuclear macrocyte.

monodac'tylous (*Zool.*). Having only a single digit.

Monodel'phia (*Zool.*). See **Eutheria.**

monode'smic (*Bot.*). Said of a petiole which contains one vascular strand.

mo'nodont (*Zool.*). Having a single persistent tooth, as the male Narwhal.

monoe'cious (*Bot.*). Having separate staminate and pistillate flowers on the same individual plant.—(*Zool.*) See **hermaphrodite.**

monoe'strous (*Zool.*). Exhibiting only one oestrous cycle during the breeding season. Cf. *polyoestrous.*

monogas'tric (*Zool.*). (Of *Siphonophora*) having a single gastric cavity.

monogenet'ic (*Chem.*). Producing only one colour on fabrics.

monogenetic (*Zool.*). Multiplying by asexual reproduction; showing a direct life-history; of parasites, having a single host.

monogenetic gravel (*Geol.*). A loose detrital sediment in which the predominant size of the particles is 2-10 mm.; it consists of one type of constituent.

monogo'nopor'ous (*Zool.*). (In hermaphrodite forms) having a single genital opening through which both male and female genital products are discharged.

monog'ony (*Zool.*). Asexual reproduction.

monohy'brid (*Bot.*). The result of a cross between two plants in which the inheritance of a single pair of characters is being investigated.

monohy'dric alcohols (*Chem.*). Alcohols containing one hydroxyl group only.

monoi'cous (*Bot.*). Said of mosses which have the antheridia and archegonia borne on the same plant, but in separate groups.

monokar'yon (*Cyt.*). A nucleus with only one centriole.

monolayer (*Chem.*). See **monomolecular layer.**

mon'olith (*Build.*). A single detached column or block of stone.

monolith (*Civ. Eng.*). A hollow foundation piece of concrete, brickwork, or masonry with a number of open wells passing through it. It is sunk in a manner similar to the *cylinder caisson* (q.v), the wells being finally filled with concrete to form a solid foundation.

monolith'ic (*Build., Civ. Eng*). The term applied to a structure made of a continuous mass of material.

monomas'tigote (*Zool.*). See **monocercous.**

monomeroso'matous (*Zool.*). Having all the somites of the body fused to form a single tagma, as in Mites.

monomineral'ic rocks (*Geol.*). Rocks consisting essentially of one mineral, as, for example, dunite and anorthosite.

monomolec'ular layer, monolayer (*Chem.*). A film of a substance one molecule thick.

monomolecular reaction (Chem.). A reaction whose speed is proportional to the concentration of one reactant only.

monomor'phic (*Zool*). Showing little change of form during the life-history; showing only a single type of bodily structure. Cf. *polymorphic.*

monomor'phous (*Crystal.*) Existing in only one crystalline form.

Monongahe'la Series (*Geol.*). The Upper Productive coal measures of the Pennsylvanian, of which they constitute the highest member.

mononucleo'sis, infectious (*Med.*). Glandular fever. An acute infectious disease characterised by slight fever, enlargement of glands in the neck, and an increase in the white (mononuclear) cells of the blood.

monony'chous (*Zool.*). Possessing a single claw.

Monopet'alae (*Bot.*). See **Sympetalae.**

monopet'aly (*Bot.*). See **gamopetaly.**

monoph'agous *or* —fă'-gus (*Bot.*). Said of a fungal parasite having a thallus which attacks one host cell only.—(*Zool.*) Feeding on one kind of food only; as *Sporozoa*, living always in the same cell, or phytophagous Insects, with only one food-plant.

monopha'sic (*Zool.*). Having an abbreviated life-cycle, without a free active stage; said of certain Trypanosomes. Cf. *diphasic.*

monophylet'ic (*Gen.*). Descended from a single parent form.

monophy'odont (*Zool.*). Having only a single set of teeth, the permanent dentition.

mon'oplane (*Aero.*). A heavier-than-air craft, either aeroplane or glider, having one main supporting surface. The term is also used as an adjective associated with some part, as *monoplane tail*, etc.

monoplanet'ic (*Bot.*). Having one period of locomotion.

monople'gia (*Med.*). Paralysis of an arm or of a leg.

mon'oploid (*Cyt.*). Haploid.

monopo'dium (*Bot.*). A branch system in which each or any branch continues to increase in length by apical extension and bears similar lateral branches in acropetal succession.

monoprosthom'erous (*Zool.*). Having one somite in front of the mouth.

mon'orail (*Civ. Eng.*). A railway system in which carriages are suspended from, and run along, a single continuous elevated rail.

monorhi'nal (*Zool.*). Having only a single nostril.

monosac'charoses (*Chem.*). The simplest group of carbohydrates, which are represented by aldehyde-alcohols or by ketone-alcohols, containing from three to six carbon atoms.

monosep'alous (*Bot.*). See **gamosepalous.**

mono'ses (*Chem.*). *Monosaccharoses* (q.v.).

mon'osome (*Cyt.*). See **sex chromosome.**

mon'ospermy (*Zool.*). Fertilisation of an ovum by a single spermatozoon.

mon'ospor'ous (*Bot.*). (1) Containing one spore.—(2) Derived from one spore.

mon'osti'chous (*Bot.*). Forming, or arranged in, one row.

mono'sy (*Zool.*). Separation of parts normally fused.

monosymmet'ric system (*Crystal.*). See **monoclinic system.**

monosymmet'rical (*Bot.*). See **zygomorphic.**

monothal'amous (*Zool.*). (In *Protozoa*) said of a shell or test which always has a single chamber.

Mono'tocar'dia (*Zool.*). See **Pectinibranchia.**

monoto'cous (*Zool.*). Producing a single offspring at a birth.

monotower crane (*Civ. Eng.*). A crane whose jib is counterpoised about a single tower.

Monotre'mata (*Zool.*). The single order included in the Mammalian group *Prototheria* (q.v.) and having the characteristics of the subclass.

mon'otri'chous (*Bot.*). Bearing a single flagellum.

mon'otro'chous (*Zool.*). Having the trochanter undivided.

mon'otro'phic (*Zool.*). See **monophagous.**

mon'otro'pic (*Chem.*). Existing in only one stable crystalline form, the other forms being unstable under all conditions.

Mon'otype (*Typog.*). See **composing machines.**

monotyp'ic (*Bot., Zool.*). Said of a species or genus which is exemplified by only a single type.

monova'lent (*Chem.*). Capable of combining with one atom of hydrogen or its equivalent.

monoxenous, —zĕ'nus (*Bot.*). Said of a parasitic fungus which is restricted to one species of host plant.

Monozo'a (*Zool.*). An order of *Cestoda* in which the body is not differentiated into a scolex and proglottides, and the genitalia are not repeated; most of the adults are parasitic in the gut of various Fish, but one form occurs in an Annelid.

Monro's foramen (*Zool.*). A narrow canal connecting the first or second ventricle with the third ventricle in the brain of *Vertebrata.*

Monroan (or **Monroe**) **Stage** (*Geol.*). Marine and estuarine strata which succeed the Salinian in Michigan, Ohio, New York, and Ontario; they consist of limestones, dolomites, and a pure quartz sand, the Sylvania Sandstone.

monsoon (*Meteor.*). A wind which blows in opposite directions at different seasons of the year. Similar in origin to land and sea breezes, but on a much larger scale, both in space and time. Particularly well developed over southern and eastern Asia, where the wet summer monsoon from the S.W. is the outstanding feature of the climate.

montage (*Cinema.*). The composition of shots or strips of images so that the whole idea conveyed to the viewer is something more than the sum of the material in the shots.

montage photograph (*Photog.*). A composite photograph, for decoration or publicity, made from the juxtaposition of cut-up photographs arranged in a pattern.

montage record (*Acous.*). A gramophone record which consists of a composite sound-picture formed from re-recordings from other records.

montan wax (*Chem.*). A bituminous wax extracted under high temperature and pressure from lignite. It is dark brown in colour, and can be bleached. M.p. 80°-90° C.; soluble in benzene, chloroform, carbon tetrachloride. It forms the basis for the metallic soaps which are used for making the original recordings in gramophone-disc manufacture.

Montan'an (*Geol.*). The Middle Cretaceous (American usage), comprising the Pierre Group below and the Fox Hill Group above; succeeded by the Laramian and underlain by the Coloradoan. Represented in Canada by coal-bearing strata in Alberta.

montant (*Join.*). A vertical member in panelling or framing.

montebra'site (*Min.*). The name given to *amblygonite* (q.v.) when there is an increase of hydroxyl.

Monterey Shale, mon-te-rā' (*Geol.*). A hard flinty shale passing upwards into a chalky rock containing only foraminifera and diatoms; of Middle Miocene age; the possible source-rock of the Californian oil-fields. It is 7000 ft. thick.

month (*Astron.*).
See **anomalistic—** **synodic—**
calendar— **lunation.**
sidereal—

monticel'lite (*Min.*). A silicate of calcium and magnesium which crystallises in the orthorhombic system. It occurs very often in crystals embedded in limestones.

montic'olous (*Zool.*). Living in mountainous regions.

montmoril'lonite (*Min.*). A hydrated silicate of calcium and magnesium, one of the important clay-minerals and the chief constituent of bentonites and fuller's earth.

monture (*Silk*). An old name for the jacquard harness and its accessories.

mon'zonite (*Geol.*). A coarse-grained igneous rock of intermediate composition, characterised by approximately equal amounts of orthoclase and plagioclase (near andesine in composition) together with coloured silicates in variety. Named from Monzoni in the Tyrol. Often referred to as SYENODIORITE.

moon (*Astron.*). The satellite which moves round the earth in an elliptic orbit and appears differently illuminated by the sun according to the relative positions of the sun, moon, and earth; the mean distance from the earth is 238,900 miles, and the moon's diameter 2158 miles. By extension, any similar satellite. See **Jupiter, Saturn,** etc.

moon blindness. See **nyctalopia.**

moonstone (*Min.*). A variety of adularia or microperthite which often possesses a bluish pearly opalescence. It is used as a gemstone.

Moore lamp (*Elec. Eng.*). A type of electric discharge lamp, usually in the form of a long tube, employing a gas other than mercury or sodium vapour.

mooring anchor (*Ships*). See **bower anchor.**

mooring guy (*Aero.*). A rope used for securing an airship, either when housed in a shed in a buoyant condition or when picketed in the open.

mooring mast (*Aero.*). A relatively small mast for the mooring of airships. Sometimes made portable and carried by the ship itself. Sometimes mounted on a movable platform to facilitate handling the airship on the ground. Also called TRANSPORTER MAST.

mooring, three-wire (*Aero.*). A three-wire system of cables attached to points in the ground in such positions that the dynamic lift due to the prevailing wind is counterbalanced, and the airship rides at a constant safe height above the ground.

mooring tower (*Aero.*). A permanent tower for the mooring of airships. Provided with facilities for the transference of passengers and freight and arrangements for replenishing ballast, gas, and fuel.

mop-board (*Build.*). A *skirting board* (q.v.).

mop-stick hand-rail (*Join.*). A timber hand-rail having a circular section flattened on the under side.

moraine' (*Geol.*). A trail of rock waste left either at the margins or at the base of a mass of ice.

morbid (*Med.*). Diseased: pertaining to, or of the nature of, disease.

morbidity (*Med.*). The state of being diseased: the sick-rate in a community.

morbil'li (*Med.*). See **measles.**

mor'bus maculo'sus (*Med.*). See **purpura haemorrhagica.**

mor'danting (*Photog.*). Adding to a silver image, or replacing a silver image by, a substance having the requisite affinity for a specified dye, which silver in itself has not.

mordants (*Chem.*). Substances, chiefly the weakly basic hydroxides of aluminium, chromium, and iron, which combine with and fix a dyestuff on the fibre in cases where the fibre cannot be dyed direct. The product formed by the action of a dye on a mordant is called a *lake* (q.v.).—(*Paint*) Preparations applied to surfaces to assist paint or gold-leaf to adhere thereto.

moreen' (*Textiles*). A plain cotton cloth with fine cord running lengthwise and watered finish; used for linings.

Morgagni's ventricle, mor-gan'yē (*Zool.*). In the higher Mammals, a paired pocket of the larynx, anterior to the vocal cords, and acting in the *Anthropoidea* as a resonator.

mor'ganite (*Min.*). A rose-coloured variety of beryl (named after J. Pierpont Morgan), obtained chiefly from California and Madagascar; used as a gemstone. Also called VEROBYERITE.

mor'iform (*Bot.*). Mulberry-like.

Mormon Sandstone (*Geol.*). A member of the Jurassic succession in California, comparable with the British Inferior Oölite.

morning glory column (*Struct.*). A slim tapering hollow concrete shaft topped by a shallow flaring circular cap supporting the floor above.

morning star (*Astron.*). The name given in popular language to a planet, generally Venus or Mercury, seen in the eastern sky at or about sunrise.

morocco (*Leather*). Tanned goatskins, finished by glazing or polishing; used in upholstery and high-class bookbinding, etc.

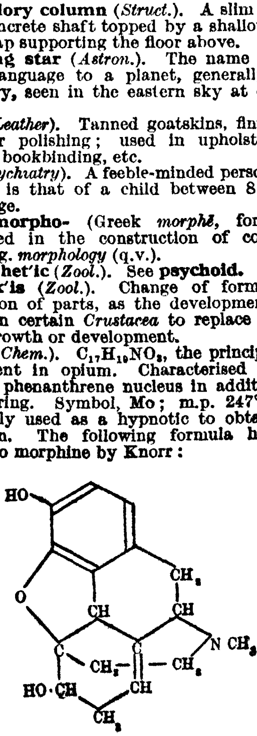
mo'ron (*Psychiatry*). A feeble-minded person whose mentality is that of a child between 8 and 12 years of age.

morph-, morpho- (Greek *morphē*, form). A prefix used in the construction of compound terms; e.g. *morphology* (q.v.).

mor'phaesthet'ic (*Zool.*). See **psychoid.**

morphallax'is (*Zool.*). Change of form during regeneration of parts, as the development of an antenna in certain *Crustacea* to replace an eye; gradual growth or development.

morphine (*Chem.*). $C_{17}H_{19}NO_3$, the principal alkaloid present in opium. Characterised by containing a phenanthrene nucleus in addition to a nitrogen ring. Symbol, Mo; m.p. 247°-254° C. Extensively used as a hypnotic to obtain relief from pain. The following formula has been ascribed to morphine by Knorr:



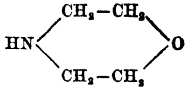
morpho-. See **morph-.**

morphoe'a, morphea (*Med.*). Localised sclerodermia. A disease in which thickened pinkish patches appear on the skin of the trunk.

morphogen'esis (*Zool.*). The origin and development of a part, organ, or organism.

morphog'raphy (*Zool.*). The description of the structure of the parts of animals; morphology.

mor'pholine (*Chem.*). A six-membered heterocyclic compound of the formula:



It is a liquid, b.p. 128° C., with strong basic properties.

morphol'ogy (*Bot.*, *Zool.*). The study of the structure and form of organisms, as opposed to the study of their functions.—(2) By extension, the nature of a member.—*adj.* **morphological.**

morphology (*Geol.*). The study of the shapes and contours of objects, especially of the surface of the earth.

morpho'sis (*Zool.*). The development of structural characteristics; tissue formation.—*adj.* **morphot'ic.**

morphot'ropy (*Chem.*). The change in crystalline form produced by replacing certain atoms or radicals in a crystal by others.

Morrison Series (*Geol.*). Part of the Comanchean, consisting of flood-plain, fluviatile deposits occurring in the Colorado region. Cf. the *Kootenai Series* of Canada.

Morse code (*Teleg.*). The dot-dash heterogeneous code devised by Morse for telegraphy.

mortar (*Artillery*). A low-velocity weapon for projecting bombs or heavy shell a short distance.

mortar (*Build.*, *Civ. Eng.*). A pasty substance which gradually hardens on exposure and is used as a jointing medium in masonry or brickwork construction.

mortar (*Chem.*). A bowl, made of porcelain, glass, or agate, in which solids are ground up with a pestle.

mortar board (*Build.*). A *hawk* (q.v.).

mortar box (*Build.*, *Plast.*). The box in which mortar or plaster is mixed.

mortar fruit (*Bot.*). A structure consisting of a persistent calyx from which the true fruits are thrown out by the wind or by shaking caused by animals.

mortar mill (*Build.*). An appliance in which the ingredients of a mortar mix are crushed mechanically by two rollers running on the ends of a horizontal bar rotating about a central vertical axis, the rollers running around a shallow pan containing the ingredients.

mortar structure (*Geol.*). A mechanical structure in which small grains produced by granulation occupy the interstices between larger grains.

Morte Slates (*Geol.*). Slate rocks found in Upper Devonian strata of North Devon and West Somerset; extensively quarried for roofing-slates.

mortise or **mortice** (*Carp.*). A rectangular hole cut in one member of a framework to receive a corresponding projection on the mating member.

mortise-and-tenon joint (*Carp.*). A framing joint between a *mortise* (q.v.) and a *tenon* (q.v.).

mortise bolt (*Join.*). A bolt which is housed in a mortise in a door so as to be flush with its edge.

mortise chisel (*Carp.*, *Join.*). A more robust type of chisel than the firmer, for use in cutting mortises and therefore designed to withstand blows from a mallet. Also called FRAMING CHISEL, HEADING CHISEL.

mortise gauge (*Carp.*). A tool similar to the *marking gauge* (q.v.) but having an additional marking pin, which is adjustable for position along the bar and allows parallel lines to be set out in marking tenons and mortises. Also called COUNTER GAUGE.

mortise joint (*Carp.*). A *mortise-and-tenon joint* (q.v.).

mortise lock (*Join.*). A lock sunk into a mortise in the edge of a door.

mortising-machine (*Join.*). A machine for cutting square or rectangular holes in wood.

mo'rula (*Zool.*). A solid spherical mass of cells resulting from the cleavage of an ovum.

Morvan's disease (*Med.*). A form of *syringomyelia* (q.v.) in which there are complete loss of sensibility in, and wasting of muscles of, hands and feet, accompanied by cyanosis of these parts and, in the early stages, severe pain.

mosa'ic (*Bot.*). (1) The arrangement of leaves in a pattern in such a way that each leaf is very little covered by its neighbours.—(2) A disease caused by a virus, and indicated chiefly by chlorosis or mottling of the leaves.

mosaic (*Dec.*). Inlaid work on plaster or stone, formed with small cubes (tesserae) or irregular-shaped fragments of marble, glazed pottery, or glass.

mosaic (*Television*). A photo-electric surface made up of a large number of infinitesimal granules of photo-emissive material deposited on an insulating support. Used as the emitting electrode in some forms of electron camera, such as the Iconoscope.

mosaic gold (*Chem.*). A complex product obtained by heating dry tin amalgam, ammonium chloride, and sulphur in a retort. A complex stannic sulphide. Sometimes used as a pigment.

mosaic gold (*Furn.*). An alloy of copper and zinc. Also called ORMOLU.

mosaic image (*Zool.*). The type of image formed in a compound eye by apposition of the separate images formed by the various facets. Also called APPOSITION IMAGE.

mosaic screen (*Photog.*). The parti-coloured screen of fine pattern used for separating the component colours in colour photography.

mosaic structure (*Met.*). An assumed division of metallic crystals into blocks so that the structure is not continuous throughout each individual crystal.

mosaic vision (*Zool.*). The mode of vision of a compound eye when the pigment is extended. A mosaic or apposition image is formed which is composed of as many points of light as there are visual elements.

Moscicki condenser, mos-tsits'ki (*Elec. Eng.*). A condenser on the principle of the Leyden jar; sometimes used on transmission lines to act as a protective device against effects of high-frequency surges.

Moseley's law (*Phys.*). The frequencies of the characteristic X-rays of the elements show a strict linear relationship with the square of the atomic number. This result of Moseley's researches stressed the importance of atomic number, and not atomic weight, in considering regularities in atomic structure. See **K-series.**

moss agate (*Min.*). A variegated cryptocrystalline silica containing visible impurities, as manganese dioxide, in moss-like or dendritic form. Also called MOCHA STONE.

moss pile (*Textiles*). A short nap or pile.

mossite (*Min.*). See **tapiolite.**

mossy cells (*Zool.*). See **neuroglia.**

motes (*Textiles*). See **moits.**

mo'tes peculia'res (*Astron.*). See **peculiar motion.**

mother (*Acous.*). The copper electroplate positive which is made from the master in gramophone-record manufacture. See **matrix.**

mother cell (*Bot.*, *Zool.*). A cell which divides to give daughter cells; the term is applied particularly to cells which divide to give spores, pollen grains, gametes, and blood corpuscles.

mother liquor (*Chem.*). The solution remaining after a salt has been crystallised out.

mother of emerald (*Min.*). A variety of *prase*, a leek-green quartz owing its colour to included fibres of actinolite; thought at one time to be the mother-rock of emerald.

mother rod (*Eng.*). See **master connecting-rod.**

mother set (*Typog.*). A set of printing plates (e.g. of a standard reference work) kept solely for the purpose of electro- or stereotyping, as required, further sets therefrom. Not used for printing.

mo'tile (*Bot.*). Able to move about as a whole by means of flagella or other organs of locomotion.

motion bars (*Eng.*). The bars which guide the motion of an engine crosshead; often called SLIDE BARS (q.v.) or GUIDE BARS.

motion block (*Eng.*). In some steam-engine valve-gears, a block attached to the valve rod, held by or constrained to move in a circular path by a curved slotted link. See **Joy's valve-gear, Walschaert's valve-gear.**

motion in line of sight (*Astron.*). See **line of sight velocity.**

motion study. A technical study of the essential movements of a workman in performing a given piece of work.

motion work (*Horol.*). The auxiliary train of wheels, normally under the dial, which gives the correct relative motion to the hour and minute hands.

motional impedance (*Elec. Comm.*). In an electro-mechanical transducer, such as a telephone receiver or relay, that part of the input electrical impedance which is due to the motion of the mechanism; it is, therefore, the difference between the input electrical impedance when the mechanical system is allowed to oscillate and the same impedance when the mechanical system is stopped from moving, or blocked.

motor (*Bot.*, *Zool.*). Pertaining to movement; as nerves which convey movement-initiating impulses to the muscles from the central nervous system.

motor areas (*Zool.*). Nerve-centres of the brain concerned with the initiation and correlation of movement.

motor cell (*Bot.*). One of a number of cells which together can expand or contract and so cause movement in a plant member.

motor end plates (*Zool.*). The special end-organ in which a motor nerve terminates in a striated muscle.

motor oculi (*Zool.*). See **oculomotor.**

motor system (*Bot.*). A general name for the tissues and structures concerned in the movements of plant members.

motor (*Eng.*). The petrol engine of an automobile or aeroplane. See also **electric motor.**

motor-boating (*Elec. Comm.*). Very low frequency oscillation, of a few cycles per second, arising from common impedances in the source of the power supplies to the anodes and grids in amplifiers.

motor-boating (*Radio*). Intermittent oscillation of a multi-stage amplifier due to coupling between the output and input circuits, causing it to become periodically inoperative.

motor-bogie (*Elec. Eng.*). A bogie or truck on an electric locomotive or motor-coach which carries one or more electric motors.

motor-car. A self-propelled vehicle or private carriage, now almost universally powered by a multi-cylinder petrol-engine which drives the rear (sometimes the front) wheels through a variable-speed gear-box. Also called AUTOMOBILE (q.v.).

motor-coach (*Elec. Eng.*). A passenger coach, equipped with its own motors, for use on electrified railways; it is commonly used in conjunction with trailer coaches to make up a multiple-unit train.

motor convertor (*Elec. Eng.*). A form of convertor in which an induction motor, to which the a.c. supply is connected, is combined with a synchronous convertor which is connected to the d.c. circuit, the armature winding of the induction motor being connected directly to that of the synchronous convertor.

motor generator (*Elec. Eng.*). A convertor consisting of a motor connected to a supply of one voltage, frequency, or number of phases, and a generator providing output power to a system of different voltage, frequency, or number of phases, the motor and generator being mechanically connected.

motor-generator locomotive (*Elec. Eng.*). A type of electric locomotive on which is mounted a motor generator for converting current of one type supplied by the trolley wire, e.g. 1-phase a.c., to current of another type, e.g. d.c., for supply to the traction motors.

motor meter (*Elec. Eng.*). An integrating meter embodying a motor whose speed is proportional to the power flowing in the circuit to which it is connected, so that the number of revolutions made by the spindle is proportional to the energy consumed by the circuit. See also **mercury motor meter, induction meter.**

motor-oils (*Eng.*). Mineral oils, or blends of mineral and vegetable oils, specially prepared for lubricating automobile engines, the viscosity being adjusted to the season in *summer* and *winter* grades.

motor-operated switch (or **circuit-breaker**) (*Elec. Eng.*). A large switch or circuit-breaker which is closed by means of an electric motor. Cf. *solenoid-operated switch.*

motor starter (*Elec. Eng.*). A device for operating the necessary circuits for starting and accelerating to full speed an electric motor, but not for controlling its speed when running. See **controller.**

motor'ium (*Zool.*). See **motor areas.**

mottle (*Textiles*). Two yarns of different colours folded together.

mottled. A term applied to a surface marked with spots of different colours or shades of colour.

mottled clay (*Geol.*). Variegated clay rock, found, for example, in the Keuper Marls. The mottling results from oxidation of iron compounds in localised patches.

mottled iron (*Met.*). Pig-iron in which the majority of the carbon is combined with iron in the form of cementite (Fe_3C) but in which there is also a small amount of graphite. The fractured pig has a white crystalline fracture with clusters of dark spots, indicating the presence of graphite.

mottled sandstone (*Geol.*). Variegated sandstones found in the Bunter Series of the Triassic System in the Midlands and North of England.

mot'tramite (*Min.*). A variety of descloizite in which the zinc element is almost entirely replaced by copper.

mould (*Civ. Eng.*). A temporary timber or metal construction used for the support of concrete in position while it is setting. Also called FORM.

mould (*Paper*). A wooden frame covered with woven or laid wire, on which hand-made paper is made.

mould (*Plast.*). A zinc sheet or thin board cut to a given profile and used in running cornices, etc.

mould (*Typog.*). A papier-mâché impression of type from which, when heat-dried, stereotypes for printing may be made. See **flong.**

mouldboard (*Agric. Mach.*). In the general purposes plough, a long, gently curving implement which turns over the furrow slice cut by the coulter and the share. In the digger plough the mouldboard is short, with an abrupt curve. Also called BREAST.

mouldboard plough (*Agric. Mach.*). An implement (drawn by horses or by mechanical power) which by means of a coulter and a share detaches a slice of soil vertically from the undersoil. This is turned over by the *mouldboard* (q.v.), leaving an unbroken furrow slice, or, in the case of the digger plough, a flat broken surface. See also **disc plough, tractor plough.**

mould oil (*Build., Civ. Eng.*). A substance applied to shuttering to prevent adherence of the concrete.

moulded breadth, moulded depth (*Ship Constr.*). See **breadth (moulded), depth (moulded).**

moulded-intake belt course (*Masonry*). An *intake belt course* (q.v.) shaped along the projecting corner to a more or less ornamental profile.

moulded-in-place concrete piles (*Civ. Eng.*). See **cast-in-situ concrete piles.**

moulding. See **foundry, machine moulding, moulding sands, pipe moulding, plate moulding.**

moulding (*Build*) A more or less ornamental band projecting from the surface of a wall or other surface.

moulding (*Plastics*). The moulding powder is weighed carefully into small containers or preformed in pill machines to pellets. The material is then placed in a steel die, heated to about 160° C., and subjected to a pressure of 3000-5000 lb. per sq. in. The volume of the powder is reduced to about ⅖.

mouldings (*Join*). Strips of wood cut to a given cross-sectional profile and applied to surfaces required to be decorated.

moulding box (*Foundry*). See **flask.**

moulding cutter (*Join.*). A specially shaped cutting tool which, when revolving about its own axis, is capable of cutting a desired moulding profile.

moulding machines (*Moulding*). See **machine moulding.**

moulding powder (*Plastics*). The finely ground mixture of binder, accelerator, colouring matter, filler, and lubricant which is converted under pressure into the final moulding.

moulding sands (*Moulding*). Siliceous sands (containing clay or aluminium silicate as a binding agent) possessing naturally or by blending the qualities of fineness, plasticity, adhesiveness, strength, permeability, and refractiveness. See **dry sand, green sand, loam.**

Mouldrite (*Plastics*). A thermosetting plastic, of the phenol-cresol-formaldehyde type. See **Bakelite.**

Moullin voltmeter (*Radio*). A thermionic voltmeter employing the anode bend principle, in which the anode is connected to one end of the filament, the potential drop across which provides the anode voltage supply.

moult (*Zool.*). See **ecdysis.**

mound (*Civ. Eng.*). An undisturbed hillock left on an excavated site as an indication of the depth of the excavation.

mound breakwater (*Civ. Eng.*). A breakwater formed by depositing rubble to form a mound which eventually rises above water.

mounding (*Med.*). See **myoidema.**

mount (or mounting), lens (*Photog.*). See **lens mount (or mounting).**

mountain cork (*Min.*). A variety of asbestos which consists of thick interlaced fibres. It is light and will float, and is of a white or grey colour.

mountain leather (*Min.*). A variety of asbestos which consists of thin flexible sheets made of interlaced fibres.

mountain railway (*Civ. Eng.*). A type of railway in which, on account of the steep ascents required, other means of traction than mere adhesion between train and rails become necessary.

mountain wood (*Min.*). A compact fibrous variety of asbestos looking like dry wood.

mountains, origin of (*Geol*). Most mountains, other than those of volcanic origin, have originated by the dissection of uplifted areas of the earth's crust.

mountants (*Photog.*). Special adhesives for fixing prints on mounts, free from chemicals which might attack the silver or other image during the course of time.

mounting (*Artillery*). A fixed support for an artillery weapon, for firing only. See **gun carriage.**

mounting, dry (*Photog.*). See **dry mounting.**

mouse roller (*Print*). A small extra roller used to obtain better distribution of the ink on a machine.

mousseline-de-laine, moos-lēn′ de len (*Textiles*). An all-wool muslin fabric made from yarn which has been spun on the worsted system.

mouth (*Acous*). See **flare.**

mouth (*Carp., etc.*). The slot in the body of a plane into which the cutting iron fits.

mouth grinding (*Glass*). After the cap of a hollow blown article has been cracked off, the mouth is ground flat and then sometimes bevelled slightly on the inside and outside edges before being fire-finished.

mouth-parts (*Zool.*). In *Arthropoda,* the appendages associated with the mouth.

mouth rot (*Vet.*). Pyorrhoea (of dogs).

mouth, sharp (*Vet.*). Overgrowth of a part of one or more teeth of a horse through loss of wear.

mouth, shear (*Vet.*). An increase in the obliquity of the wearing surfaces of the molar teeth of horses.

mouth, smooth (*Vet.*). Smooth and polished grinding surface of the molar teeth of horses.

mouth, wave-formed (*Vet.*). A variation in height of the molar teeth of horses.

movable bridge (*Civ. Eng.*). A bridge which is capable of being displaced bodily in order to permit the passage of vessels.

See **bascule—** **swing—**
floating— **traversing—**
lift—

movable types (*Typog.*). Single types, as distinguished from Linotype slugs or blocks.

movable weir (*Civ. Eng.*). A temporary weir capable of being removed from the river channel in times of flood.

movement (*Cinema.*). The essential part of the mechanism of a camera or projector.

movement (*Horol.*). The mechanism of a clock or watch, not including the case or dial.

movie (*Cinema.*). A cinematograph film.

Movieflood lamp (*Cinema.*). A tungsten-wire incandescent lamp run at excess voltage, with correspondingly reduced life, in order to raise its colour temperature.

movieo′la or **moviola** (*Cinema.*). Miniature sound-reproducing equipment for the use of editors in film studios. The picture is viewed through a lens and the reproduced sound heard through a small loudspeaker or head telephones, the film being reversed at will.

Movietone (*Cinema.*). The original method of recording sound on film, in which the variable light from an Aeolight lamp illuminates a constant slit sliding on the surface of the film, with a resulting variable-density track.

moving-coil galvanometer (*Elec. Eng.*). A galvanometer depending for its action on the movement of a current-carrying coil in a magnetic field. Cf. *moving-magnet galvanometer*.

moving-coil instrument (*Elec. Eng.*). An electrical measuring instrument depending for its action upon the force on a current-carrying coil in the field of a permanent magnet.

moving-coil loudspeaker (*Acous.*). A loudspeaker in which the driving force arises from the interaction of a current in an annular coil fixed near the apex of the radiating cone diaphragm and located in the circular gap of a pot-magnet.

moving-coil microphone (*Acous.*). A type of microphone in which the generated electromotive force arises in a coil attached to a diaphragm, the coil being in the radial field of a small pot-magnet. See also **Sykes microphone.**

moving-coil receiver (*Teleph*). The high-grade telephone receiver used as the reference receiver in the C.C.I.F. transmission reference system; used also for sound-film monitoring.

moving-coil regulator (*Elec. Eng*). A type of voltage regulator, for use on a.c. circuits, in which a short-circuited coil is made to move up and down the iron core of a specially arranged auto-transformer.

moving-coil transformer (*Elec. Eng.*). A type of transformer, occasionally used in constant-current systems, in which one coil is made to move relatively to the other for regulating purposes.

moving-conductor microphone (*Acous.*) A microphone in which a conductor (generally in the form of a foil) in a magnetic field is moved by the application of acoustic pressures. An electromotive force is thereby generated.

moving contact (*Teleph.*). An electrical contact carried on a moving spring which leaves a back contact and advances to make contact with a front contact on the operation of the relay.

moving form (*Civ. Eng.*). See **climbing form.**

moving-iron instrument (*Elec. Eng.*). An electrical measuring instrument depending for its action upon the magnetic force exerted by a current-carrying coil upon a piece of soft iron.

moving-iron (or, **-armature**) **loudspeaker** (*Acous.*). A loudspeaker in which the mechanism driving the diaphragm contains a moving element, which is acted on by magnetic forces across a gap.

moving-iron microphone (*Acous.*). A microphone in which the acoustic forces operate magnetic material in a magnetic field, and thereby induce an electromotive force in a coil on a magnetic circuit.

moving load (*Struct.*). A variable loading on a structure, consisting of the pedestrians or vehicles passing over it.

moving-magnet galvanometer (*Elec. Eng.*). A galvanometer depending for its action on the movement of a small permanent magnet in the magnetic field produced by the current to be measured. Cf. *moving-coil galvanometer*.

moving period (*Cinema.*). In describing an intermittent mechanism, the period (expressed in degrees or as a fraction of the whole cycle of operation) during which the film is actually in motion.

moving-staircase. See **escalator.**

mower (*Agric. Mach.*). See **horse mower, tractor mower.**

m.p. (*Chem.*). An abbrev. for melting-point.

M.Q. (*Photog.*). An abbrev. for metol-quinol or metol-hydroquinone developers. See **metol.**

M.S.C. (*Elec. Comm.*). An abbrev. for *mile of standard cable.*

MsTh (*Chem.*). The symbol for *mesothorium.*

Mu-metal (*Met.*). An alloy of Permalloy type (i.e. with high magnetic permeability and low hysteresis loss) but containing copper and manganese in addition to iron and nickel.

mu'cedin'eous, mu'cedin'ous (*Bot.*). Mould-like; white and cottony.

muci-, muco- (Latin *mucus*). A prefix used in the construction of compound terms, e.g. *muco-serous*, secreting both mucus and a watery fluid; *mucodermal*, pertaining to the skin and the mucous membrane.

mu'cic acid (*Chem.*). $HOOC{\cdot}(CHOH)_4{\cdot}COOH$, an acid obtained by the oxidation of galactose.

mu'cid. Musty or mouldy.

mu'cigen (*Zool*). A substance occurring as granules or globules in chalice cells and later extruded as mucin.

mu'cilages (*Chem.*). Complex organic compounds related to the polysaccharoses, of vegetable origin, and having glue-like properties.

mucila'ginous (*Bot., Zool.*). Pertaining to, containing, resembling, or composed of mucilage or mucin.

mu'cins (*Chem.*). A group of glucoproteins occurring in mucus and saliva and widely distributed in Nature. They are acid in character and dissolve readily in alkali carbonates and ammonia; they are not coagulable by heat.

mucking (*Mining*). See **lashing.**

mu'cocele (*Med.*). A localised accumulation of mucous secretion, in, for example, a hollow organ the outlet of which is blocked.

mu'coids (*Chem.*). A group of glucoproteins. They are not precipitated by acetic acid.

mucomem'branous colic (*Med.*). A condition in which constipation is associated with abdominal pain and the passing in the stools of membranes or casts of mucus.

mucon'ic acid (*Chem.*). $HOOC{\cdot}CH{:}CH{\cdot}CH{:}CH{\cdot}COOH$. Often obtained by cleavage of naturally occurring aromatic amino acids. A white crystalline solid; m.p. about 260° C., soluble in alcohol and in acetic acid, slightly in hot water.

mucopro'teins (*Chem.*). Conjugated proteins containing a carbohydrate group.

mucopu'rulent (*Med.*). Consisting of mucus and pus.

muco'sa (*Zool.*). See **mucous membrane.**

mucosanguin'eous (*Med.*). Consisting of mucus and blood.

mu'cose (*Bot.*). Slimy.

mu'cous glands (*Zool.*). Glands secreting or producing mucus.

mucous membrane (*Zool.*). A tissue layer found lining various tubular cavities of the body (as the gut, uterus, trachea, etc.). It is composed of a layer of epithelium containing numerous unicellular mucous glands and an underlying layer of areolar and lymphoid tissue, separated by a basement membrane. Also MUCOSA.

mu'cro (*Bot.*). A short sharp point formed by a continuation of the midrib.—(*Zool.*) Any sharp spiny structure, as the claw-like process of each dens of the furcula in *Collembola*.

mu'cronate (*Bot.*). Said of a leaf tipped by a short sharp point of much the same texture as the leaf.

mu'cus (*Zool.*). The viscous slimy fluid secreted by the mucous glands.—*adjs.* **mu'cous, mu'coid, mu'ciform, mucip'arous.**

mud (*Geol.*). A fine-grained unconsolidated rock, of the clay grade, often with a high percentage of water present. It may consist of several minerals.

mud drum (*Eng.*). A vessel placed at the lowest part of a steam-boiler: a similar plant to intercept and retain insoluble matter or sludge, as the lowest drum of a *water-tube boiler* (q.v.).

mud fever (*Vet.*). See **grease.**

mud hole (*Eng.*). A *hand hole* (q.v.) in a mud drum, or in the bottom of a boiler, for the removal of scale and sludge.

mudstone (*Geol.*). An argillaceous sedimentary rock characterised by the absence of obvious stratification. Cf. *shale.*

mud volcano (*Geol.*). A conical hill formed by the accumulation of fine mud which is emitted, together with various gases, from an orifice in the ground.

muff (or box) coupling (*Eng.*). A shaft coupling consisting of a sleeve, split longitudinally, which embraces and is keyed to the shafts, the halves being bolted together.

muffs (*Acous*). See **ear muffs.**

muffle furnace (*Met*). A furnace in which heat is applied to the outside of a refractory chamber containing the charge.

muffle kiln (*Pot.*). An arched fireclay-lined furnace in which seggars are placed.

mugearite, moo-gĕr′īt (*Geol.*). A dark, finely crystalline, basic igneous rock which contains oligoclase, orthoclase, and usually olivine in greater amount than augite. Occurs typically at Mugeary in Skye.

muir ill (*Vet.*). See **haemoglobinaemia (paralytic).**

mule (*Textiles*). A cotton-spinning machine invented by Samuel Crompton (*c.* 1779); it is intermittent in action, first spinning the yarn (outward run) and then winding it on a spindle (inward run); it spins yarn of any counts, but more particularly fine counts.

mull (*Textiles*). A light-weight plain grey cotton fabric, generally pure sized and bleached; for Eastern markets.—(*Bind.*) *Scrim* (q.v.).

Mull Leaf Beds (*Geol.*). Bands of sand and shale interstratified with the lava flows of Tertiary age in Scotland. They contain many plant remains.

Müller's fibres, mü′ler (*Zool.*). Long neuroglia cells occurring in the retina of the Vertebrate eye.

Müller's glass (*Min.*). See **hyalite.**

Müller's law (*Zool.*). Each nerve of special sense gives rise to its own peculiar sensation, however excited.

Müller's muscle (*Zool.*). The circular ciliary muscle of the Vertebrate eye.

Müller's organ (*Zool.*). In some Insects, a swelling formed by numerous scolophores applied to the inner surface of the tympanum.

Mülle′rian duct (*Zool.*). A duct which arises close beside the oviduct, or which, by the actual longitudinal division of the archinephric duct, in many female Vertebrates becomes the oviduct.

Müllerian mimicry (*Zool.*). Resemblance in colour between two animals, both of which benefit by the resemblance. Cf. *Batesian mimicry.*

mullion (*Join.*). A vertical member of a window frame separating adjacent panes. Also called MUNNION.

mullite (*Min.*). A silicate of aluminium, closely similar to sillimanite but with formula $3Al_2O_3$, $2SiO_2$. It occurs in contact-altered argillaceous rocks.

multi- (Latin *multus*, many). A prefix used in the construction of compound terms; e.g. *multiganglionate*, with many ganglia.

multiartic′ulate (*Zool.*). Many-jointed.

multi-break switch (or **circuit-breaker**) (*Elec. Eng.*). A switch or circuit-breaker in which the circuit is broken at two or more points in series on each pole or phase.

multicel′lular (*Bot., Zool.*). Consisting of a number of cells.

multicellular voltmeter (*Elec. Eng.*). A form of electrostatic voltmeter in which a number of moving vanes mounted upon the spindle are drawn into the spaces between a corresponding number of fixed vanes.

multi-channel system (*Television*). A system of transmission in which the picture signal is divided into a number of relatively narrow bands in the frequency spectrum by means of filters. Each band is transmitted over a separate channel, and all are recombined at the receiving end.

multi-channel telegraphy (*Teleg.*). The use of a large number of voice-frequency channels, e.g. 12 or 18, for the fullest utilisation of the transmission properties of normal audio-frequency telephone circuits.

multicip′ital (*Zool.*). Many-headed.

Multi-color (*Photog.*). A two-colour subtractive cinematograph film process in which two emulsions, blue-green on the front, panchromatic with an orange-red filter at the back, are exposed in a camera, separated, and normally printed on both sides of a positive film, the respective sides of which are dyed the same colours as registered.

multicus′pidate (*Zool.*). Said of teeth with many cusps.

multi-exchange system (*Teleph.*). A group of local exchanges in an exchange area.

mul′tifid (*Bot.*). Divided into a number of lobes.

multi-filament lamp (*Illum.*). An electric filament lamp having more than one filament in the same bulb, so that failure of one filament will not cause the lamp to be extinguished.

multifol′iolate (*Bot.*). Having many leaflets.

mul′tiform (*Bot.*). Diverse in shape.

multi-frequency generator (*Teleg.*). The multi-frequency inductor generator which is used for the multi-channel voice-frequency telegraph system operated by teleprinter and transmitting over normal telephone lines.

multigap arrester (*Elec. Eng.*). A form of lightning arrester in which a number of spark gaps are connected in series between the line and earth.

multigap discharger (*Elec. Eng.*). A discharger for use in a spark-type of radio transmitter, making use of a number of gaps in series.

multigrav′ida (*Med.*). A woman who has been pregnant more than once.

multilayer winding (*Elec. Eng.*). A type of cylindrical winding, used chiefly for transformers, in which several layers of wire are wound one over the other with layers of insulation between.

multilayered (*Bot.*). Consisting of several layers of cells.

multiloc′ular, multiloc′ulate (*Bot.*). Having a number of compartments.

mul′timu valve (*Thermionics*). See **variable mu valve.**

multinu′cleate (*Bot., Zool.*). With many nuclei.

multi-office exchange (*Teleph.*). A group of central offices in a telephone area.

multip′arous (*Zool.*). Bearing many offspring at a birth.

multiple (*Teleph.*). The face of the telephone switchboard in a telephone exchange, containing the outgoing jacks to subscribers' lines, each of which appears within the reach of every B-operator. The jacks are multipled round the positions by connecting the relevant jacks, which appear in order, in parallel.

See **check—** **ribbon—**

multiple-circuit winding (*Elec. Eng.*). See **lap winding.**

multiple-disc clutch (*Eng.*). A friction clutch similar in principle to the *single-plate clutch* (q.v.), but in which a smaller diameter is obtained by using a large number of discs, alternately splined to the driving and driven members, loaded by springs, and usually run in oil. See **friction clutch.**

multiple duct (*Elec. Eng.*). A cable duct having a number of tunnels for the reception of several cables.

multiple echo (*Acous.*). The perception of a number of distinct repetitions of a sound because of the multiple reflections and the differential delays in travel of the waves between the source and the observer.

multiple-expansion engine (*Eng.*). An engine in which the expansion of the steam or other working fluid is divided into two or more stages, which are performed successively in cylinders of increasing size. See **compound engine, triple-expansion engine, quadruple-expansion engine.**

multiple feeder (*Elec. Eng.*). A feeder consisting of a number of cables connected in parallel; used where a single cable to carry the load would be prohibitively large.

multiple fission (*Zool.*). A method of multiplication found in *Protozoa*, in which the nucleus divides repeatedly without corresponding division of the cytoplasm, which subsequently divides into an equal number of parts leaving usually a residuum of cytoplasm. Cf. *binary fission.*

multiple fruit (*Bot.*). A fruit formed from the flowers of an inflorescence, and not from one flower

multiple-hearth furnace (*Met.*). A type of roasting furnace consisting of a number of hearths (from 7 to 12). The charge enters on the top hearth and passes downwards from hearth to hearth, being rabbled by rotating arms from centre to circumference and circumference to centre of alternate hearths

multiple intrusions (*Geol.*). Minor intrusions formed by several successive injections of approximately the same magma.

multiple-operator welding-unit (*Elec. Eng.*). An electric-arc welding generator or transformer designed to supply current to two or more welding arcs operating in parallel.

multiple personality (*Psycho-an.*). A condition in which the normal organisation of mental life is disintegrated, or split up into distinct parts or sub-personalities, each with a fairly complicated organisation of its own, comparable with a normal individual personality. Each sub-personality may, from time-to-time, partially or completely usurp the main personality, but even in extreme cases the split is not absolutely complete, because there seems always to be some underlying personal unity, despite much disintegration. See also **dual personality.**

multiple proportions (*Chem.*). See **law of multiple proportions.**

multiple-retort underfeed stoker (*Eng.*). A number of underfed inclined retorts arranged side-by-side with tuyères between, resulting in a fuel bed the full width of the furnace walls. See **single-retort underfeed stoker.**

multiple scanning (*Television*). Repeated scanning of a television image by two or more scanning beams.

multiple-spark system (*Radio*). A form of quenched spark system in which the spark discharge takes place across a series of gaps formed between a number of closely spaced metallic plates.

multiple-spindle drilling machine (*Eng.*). A drilling machine having two or more vertical spindles for simultaneous operation on a number of holes in large work; e.g. an engine crankcase.

multiple star (*Astron.*). A system in which three or more stars are so united by gravitational forces as to revolve about a common centre of gravity.

multiple-switch starter (or **controller**) (*Elec. Eng.*). A starter (or controller) for an electric machine in which the steps of resistance are cut out, or other operations performed, by hand-operated switches.

multiple system (*Met.*). A method of connecting the anodes and cathodes in electrolytic refining. Each cell contains a number of electrodes, anodes and cathodes being connected in parallel. From the cathodes of one cell the current flows to the anodes of the next. The cells are therefore in series.

multiple-threaded screw (*Eng.*). A screw of coarse pitch in which two or more threads are used to reduce the size of thread and maintain adequate core strength. Also called MULTI-START THREAD, TWO-START THREAD, THREE-START THREAD. See also **divided pitch, multi-start worm.**

multiple-tool lathe (*Eng.*). A heavy lathe having two large tool posts, one on either side of the work, each carrying several tools operating simultaneously on different parts of the work.

multiple-tuned antenna (*Radio*). A transmitting antenna system comprising an extensive horizontal 'roof' with a number of spaced vertical leads, each connected to earth through appropriate tuning circuits, and all tuned to the same frequency, the connexion to the transmitter being made through one of them.

multiple-twin cable (*Elec. Comm.*). A lead-covered cable in which there are numbers of cores, each comprising two pairs twisted together.

multiple-unit control (*Elec. Eng.*). The method of control by which a number of motors operating in parallel can be controlled from any one of a number of points; used on multiple-unit trains.

multiple-unit train (*Elec. Eng.*). An electric train consisting of a number of motor-coaches, all controlled from one driving position at the front or rear of the train.

multiple valve (*Thermionics*). A valve comprising two or more separate electrode systems (sometimes with a common cathode) enclosed in one envelope.

mul'tiplet (*Bot.*). One of several individuals derived by the segmentation of an ovum.

mul'tiplex (*Teleg.*). A telegraph system which provides a number of channels by allocating the line to these in turn by means of distributors.

multiplex printing (*Teleg.*). A system which provides for printing the messages received over a multiplex system.

multiplex winding (*Elec. Eng.*). A two-layer armature winding sometimes used on d.c. machines. It has more than two parallel paths per pole-pair between the positive and negative terminals.

multiplication (*Bot.*). Increase by vegetative means.

multiplier (*Photo-electronics*). See **electron multiplier.**

multi-ply (*Timber*). Plywood formed of more than three layers of wood.

multiplying camera (*Photog.*). A camera for taking a number of small exposures on one negative, using a deflecting mirror or a number of lenses which can be traversed.

multiplying constant (*Surv.*). A factor in the computation of distance by tacheometric methods (see **tacheometer**). It is that constant value for the particular instrument by which the staff intercept must be multiplied in order to give the distance of the staff from the focus of the object glass. If the distance from the centre of the instrument is required, it is necessary to add (see **additive constant**) the distance between the focus of the object glass and the centre of the instrument.

multipo'lar (*Zool.*). Said of nerve cells having many axons.

multirota'tion (*Chem.*). See **mutarotation.**

multiser'iate (*Bot.*). (1) Said of ascospores arranged in several rows in the ascus.—(2) Said of a vascular ray which is several to many cells wide.

multi-start thread (*Eng.*). See **multiple-threaded screw.**

multi-start worm (*Eng.*). A worm in which two or more helical threads are used in order to obtain a larger pitch and hence a higher velocity ratio of the drive.

multitone (*Acous.*). A generator, either thermionic or mechanical, which produces a mass-spectrum of currents, i.e. a complex current with a large number of equal components, equally spaced in the frequency scale.

multituber'culate (*Zool.*). Said of tuberculate teeth with many cusps: having many small projections.

multi-turn current transformer (*Elec. Eng.*). A current transformer in which there are several turns on the primary winding. Cf. *bar-type current transformer*.

multiva'lent (*Chem.*). Polyvalent.

multivibra'tor (*Elec. Comm.*). An arrangement of thermionic valves, usually a back-coupled resistance-capacity coupled amplifier, which sustains relaxation oscillations which are readily pulled into step by a stable drive. Characterised by an irregular wave-form of oscillation, containing high-order harmonics.

multivin'cular (*Zool.*). (In Bivalves) said of the hinge of the shell when it is provided with several ligaments.

multivol'tine (*Zool.*). Having more than one brood in a year.

multiwire antenna (*Radio*). An antenna consisting of a number of horizontal wires in parallel.

multun'gulate (*Zool.*). Having the hoof divided into three or more parts.

Mummery's plexus (*Zool.*). A network of fine nerve-fibrils lying between the odontoblasts and the dentine in a tooth.

mumps (*Med.*). Epidemic or infectious parotitis. An acute infectious disease characterised by a painful swelling of the parotid gland; thought to be due to infection with a filter-passing virus.

mundic (*Min.*). See **iron pyrite.**

mungo (*Textiles*). A low grade of recovered waste from which certain types of woollen yarns are spun.

munnion (*Join.*). A mullion: a munting.

munting or **muntin** (*Join.*). The vertical framing piece separating the panels of a door. Also called MUNNION.

Muntz metal (*Met.*). Alpha-beta brass, 60% copper and 40% zinc. Stronger than alpha-brass and used for castings and hot-worked (rolled, stamped, or extruded) products. High-strength brasses are developed from this by adding other elements.

murex'ide test (*Chem.*). A test for uric acid in which the substance is heated with nitric acid. The residue of alloxantin thus produced turns purple-red on adding ammonia, owing to the formation of murexide, the ammonium salt of purpuric acid, $C_8H_5N_5O_6$.

muriat'ic acid (*Chem.*). Hydrochloric acid.

mu'ricate (*Bot.*). Having a surface roughened by short, sharp points.

mu'riform (*Bot.*). Said of a spore made up of a mass of cells formed by divisions in three intersecting planes.

murmur (*Med.*). An irregular rustling sound which follows, accompanies, or replaces the normal heart sounds and often indicates disease of the valves of the heart; similar sound heard over blood-vessels. The sound heard over the lungs during respiration.

mur'rain (*Vet.*). A malignant epizootic fever of contagious nature, affecting domestic animals: a lethal infection of animals.

Murray loop test (*Elec. Eng.*). A method of localising a fault in an electric cable. The cable up to and beyond the fault is made to form two arms of a Wheatstone bridge network.

mus'cae volitan'tes (*Med.*). The appearance of imaginary black specks in front of the eyes.

Muschelkalk, moosh'— (*Geol.*). A marine shelly limestone occurring between the rocks of Bunter and Keuper age in the Trias of France and Germany.

Mus'ci (*Bot.*). One of the two main groups of the *Bryophyta*, with some thousands of species. The plants are small, attached to the substratum by rhizoids and not by roots. The stem bears a number of small leaves, both members being of very simple internal structure, containing no woody material. The sexual organs are antheridia and archegonia, borne on the leafy moss plant, and the zygote gives rise to a small spore-bearing plant, a stalked capsule known as the sporogonium, which lives parasitically on the leafy moss plant.

muscle (*Zool.*). Tissue possessing the power of rapidly and forcibly changing shape; therefore the motile tissue of the animal body: a definitive mass of such tissue.—*adj.* **mus'cular.**

mus'covite (*Geol., Min.*). The common or white mica; for the most part an orthosilicate of aluminium and potassium, crystallising in the monoclinic system. It can be used as an insulator (not above 600° C., when its water of composition is driven off; see **phlogopite),** as a lubricant, or for non-inflammable windows.

muscovite-granite (*Geol.*). A granite which contains a fairly large proportion of the mineral muscovite.

Muscovy glass (*Min.*). Formerly a popular name for *muscovite*.

mus'culature (*Zool.*). The disposition and arrangement of the muscles in the body of an animal.

mus'culocuta'neous (*Zool.*) Pertaining to the muscles and the skin.

mush (*Radio*). The radiation emitted over a band of frequencies extending on either side of the carrier frequency of an arc transmitter; due to irregularities in the arc discharge.

mush winding (*Elec. Eng.*). A type of winding used for a.c. machines; the conductors are placed one-by-one into partially closed ready-lined slots, the end connexions being subsequently insulated separately.

mushroom bodies (*Zool.*). Paired nerve centres of the protocerebrum in Insects, regarded by some authorities as the principal motor and psychic centres of the brain.

mushroom construction (*Civ. Eng.*). Ferro-concrete construction composed only of columns and floor slabs.

mushroom follower (*Eng.*). A cam follower in the form of a mushroom, i.e., with a flat surface, as distinct from a roller-type follower.

mushroom gland (*Zool.*). In male *Orthoptera*, the large compact mushroom-shaped mass of the accessory genital glands.

mushroom loudspeaker (*Acous.*). A loudspeaker in which a vertical horn is fitted with directing baffles, so that the radiated sound-power is directed uniformly over an area in its neighbourhood.

mushroom valve (*Eng.*). See **poppet valve.**

mushy (*Textiles*). Said of wool that is lacking in grease and uneven in staple, the result of dry climate and light soil where the sheep are kept.

musical clock (*Horol.*). A clock which plays a tune instead of chiming.

musical echo (*Acous.*). A multiple echo in which the interval between the reception of successive echoes is so small that the impulses received appear to have the quality of music.

musical spark system (*Radio*). A form of spark transmitting system in which the sparks follow one another at regular intervals, so that the received signal, after rectification, produces a musical note in the telephones. Also called SINGING SPARK SYSTEM.

musical watch (*Horol.*). A repeater watch which plays a tune on a comb instead of striking on a gong.

musk glands (*Zool.*). In some Vertebrates, glands, associated with the genitalia, the secretion of which has an odour of musk.

muslin (*Textiles*). A light-weight, plain cotton cloth of open texture and soft finish, bleached, dyed, or printed; chiefly for Eastern markets.

musquash' (*Furs*). The dressed skin of the American musk-rat, an aquatic rodent. The fur is dark-brown, with lighter underfur. There is also a black variety.

mustard gas (*Chem.*). $(CH_2Cl{\cdot}CH_2)_2S$, dichlorodiethyl sulphide; a poison gas manufactured from ethylene and S_2Cl_2.*

mustard oils (*Chem.*). *Iso*-thiocyanates.

mutam'erism (*Chem.*). The formation of an equilibrium mixture of two isomers from a freshly prepared solution of one of them.

mu'tant (*Gen.*). See **mutation.**

mutarota'tion (*Chem.*). The change with time of the optical activity of a freshly prepared solution of an active substance. The sugars are the best-known class to exhibit the phenomenon.

mutation (*Gen.*). The inception of a heritable variation.

mutations (*Acous.*). Stops on an organ manual or pedal which sound notes with intervals other than multiples of an octave with respect to the nominal pitches of the keys.

mutation rate (*Gen.*). The frequency of gene mutations in a given species.

mute. See **deaf-mute.**

mute (*Cinema.*). A rush print of the exposed film in a motion-picture camera, i.e. one printed without the sound-track; it is independently printed on another positive and reproduced synchronously in another projection machine when the rushes are viewed.

mute shot (*Cinema.*). A shot taken in a motion-picture studio without sound being recorded.

Muthmann's sulphur, moot'man (*Chem.*). The various crystalline forms of sulphur.

mu'ticate (*Bot.*). Without a point.

mu'ticous (*Bot.*). **Muticate.**—(*Zool.*) Lacking defensive structures.

mu'toscope (*Cinema.*). A form of *flickers* (q.v.). The illusion of photographed motion is obtained by exposing rapidly a sequence of photographs.

mutton (*Typog.*). See **em quad.**

mutton rule (*Typog.*). See **em rule.**

mutual conductance (*Radio*). Transconductance specifically applied to a thermionic valve. The differential change in a space or anode current divided by the differential change of grid potential which causes it. Colloquially termed *slope, slope conductance,* or *goodness* of a valve, measuring the effectiveness of the valve as an amplifier in normal circuits. Expressed in milli-amperes per volt, and denoted by G_m.

mutual coupling (*Elec. Comm.*). See **transformer coupling.**

mutual impedance (*Elec. Comm.*). See **transfer impedance.**

mutual inductance (*Elec. Eng.*). The property of two circuits by virtue of which mutual induction occurs between them. It is measured by the rate of change of linkages in one coil when there is a unit rate of change of current in the other coil. Also called COEFFICIENT OF MUTUAL INDUCTION.

mutual induction (*Elec. Eng.*). A phenomenon whereby a change of current in one of two coils causes a change of the flux linked with another coil, thereby setting up an e.m.f. in the latter.

mutualism (*Bot., Zool.*). Any association between two animals which is beneficial to both and injurious to neither; symbiosis.

mu'tule (*Build.*). A rectangular section modillion.

my-. See **myo-.**

myal'gia (*Med.*). The sensation of pain in muscle.

mya'rian (*Zool.*). Based on musculature, as a system of classification: pertaining to the musculature.

myasthe'nia (*Med.*). Muscular weakness.

myasthenia gravis (*Med.*). A malady of adult life in which there are a variable paralysis of muscles on exertion, with slow recovery during rest, and a permanent paralysis of muscles, which succeeds the variable paralysis.

myc-. See **myco-.**

My'calex (*Diel.*). Mica bonded with glass. It is hard, and can be drilled, sawn, and polished; has a low power factor at high frequencies, and is a very good insulating material at all frequencies.

myce'lium (*Bot.*). The thallus of a fungus when it consists of hyphae.

myceto-. See **myco-.**

myce'tocytes (*Zool.*). Cells containing symbiotic micro-organisms occurring in the *pseudovitellus* (q.v.).

myceto'ma (*Med.*). See **Madura foot.**

my'cetome (*Bot.*). A cellular organ inside an aphid, containing symbiotic yeasts.—(*Zool.*) See **pseudovitellus.**

mycetoph'agous (*Zool.*). Fungus-eating.

Mycet'ozo'a (*Bot.*). See **Myxomycetes.**

Mycetozoa (*Zool.*). An order of semi-terrestrial *Sarcodina* the members of which possess numerous blunt pseudopodia but have no shell, skeleton, or central capsule; they form cellulose-coated cysts and spores.

my'co-, myc-, myce'to- (Greek *mykēs*, gen. *mykētos*, fungus). A prefix used in the construction of compound terms; e.g. *mycology, mycelium* (qq.v.).

mycocecid'ium (*Bot.*). A gall caused by a fungus.

my'cocri'ny (*Bot.*). The decomposition of plant material by fungi.

mycoder'ma (*Bot.*). A name sometimes applied to the saccharomyces or *yeasts* (q.v.).

mycol'ogy (*Bot.*). The study of fungi.

mycophthorous, mĭ'kof-thŏr'us (*Bot.*). Said of a fungus which is parasitic on another fungus.

my'corrhi'za (*Bot.*). A symbiotic association between a fungus and a higher plant, most often consisting of an intimate relation between the roots of the higher plant and the mycelium of the fungus.

myco'sis. A disease of animals caused by a fungus.

mycosis fungoi'des (*Med.*). A chronic, and usually fatal, disease in which fungus-like tumours appear in the skin.

mycotroph'ic plant (*Bot.*). A plant which lives in symbiosis with a fungus.

mydri'asis (*Med.*). Extreme dilatation of the pupil of the eye.

mydriat'ic (*Med.*). Producing dilatation of the pupil of the eye: any drug which does this.

mydriatic alkaloids (*Med.*). Alkaloids which cause dilatation of the pupil of the eye; e.g. atropine.

Mydrim Limestone (*Geol.*). A calcareous band which occurs at the base of the Caradoc Series in South Wales.

Mydrim Shales (*Geol.*). A series of shales which belong to the Caradocian Series of the Ordovician System in South Wales.

my'el-, my'elo- (Greek *myelos*, marrow). A prefix used in the construction of compound terms; e.g. *myelitis* (q.v.).

myelenceph'alon (*Zool.*). The hind brain in Vertebrates, excluding the cerebellum.

my'elin (*Zool.*). A white fatty substance which forms the medullary sheath of nerve fibres.

myelin sheath (*Zool.*). See **medullary sheath.**

myelina'tion (*Zool.*). Formation of a myelin sheath.

myeli'tis (*Med*). (1) Inflammation of the spinal cord.—(2) Inflammation of the bone-marrow, but the term *osteomyelitis* is generally used for this.

myelo-. See **myel-.**

my'elocele (*Med.*). A condition in which the spinal cord protrudes on to the surface of the body; due to a defect of the spinal vertebrae.

my'elocoel, —sēl (*Zool.*). The central canal of the spinal cord.

my'elocyte (*Zool.*). A marrow-cell; a large amoeboid cell found in the marrow of the long bones of some higher Vertebrates, and believed to give rise, by division, to blood-leucocytes.

myelo'ma (*Med.*). A tumour composed of bone-marrow cells, appearing usually in the marrow of several bones. See also **Kahler's disease.**

myelomala'cia (*Med.*). Pathological softening of the spinal cord.

myelomato'sis (*Med.*). The occurrence of myelomata in several bones. See **myeloma.**

myelomenin'gocele (*Med.*). Protrusion of the spinal cord and spinal membranes; due to a defect in the spinal column.

myel'oplast (*Zool.*). A leucocyte of bone-marrow.

my'eloplax (*Zool.*). A giant cell of bone-marrow and other blood-forming organs, sometimes multinucleate, and usually having a central group of centrioles; believed to give rise to the blood-platelets.

myenter'ic (*Zool.*). Pertaining to the muscles of the gut; as a sympathetic nerve plexus controlling their movements.

myiasis, mī-ī'— (*Vet.*). Infection of animals and birds by adult or larval forms of flies of the sub-order *Cyclorrhapha.*

myiophi'lous plants (*Bot.*). Plants with inconspicuous and often ill-smelling flowers, which are pollinated by flies.

Mylius' test (*Chem.*). A colour test for bile acids, based on the appearance of a red colour between the layers of bile acids mixed with a trace of furfural and concentrated sulphuric acid.

mylohy'oid (*Zool.*). Pertaining to, or situated near, the mandible and the hyoid: a muscle of this region.

my'lonite (*Geol.*). A hard compact rock with a streaky or banded structure which is produced beneath thrust-planes in mountain-building movements.

mylonitisation (*Geol*). The process by which rocks are granulated and pulverised and formed into mylonite.

Mylor Series (*Geol.*). A group of slaty rocks of Middle to (?) Upper Devonian age found in Cornwall, England.

myo-, my- (Greek *mys*, gen. *myos*, muscle). A prefix used in the construction of compound terms; e.g. *myodynamic,* pertaining to the force of muscular contraction.

my'oblast (*Zool.*). An embryonic muscle cell which will develop into a muscle fibre.

myocar'dial (*Med.*). Pertaining to, or affecting, the myocardium.

myocardi'tis (*Med.*). Inflammation of the muscle of the heart.

myocar'dium (*Zool.*). In Vertebrates, the muscular wall of the heart.

myochon'dria (*Zool.*). Granules occurring in irregular masses in sarcoplasm.

myoclo'nus (*Med.*). (1) Paramyoclonus multiplex. A condition in which there occur sudden shock-like contractions of muscles, often associated with epilepsy and progressive mental deterioration.—(2) A sudden shock-like contraction of a muscle (see **clonus**).

my'ocoel, —sēl (*Zool.*). The coelomic space within a myotome.

myocom'ma (*Zool.*). A partition of connective tissue between two adjacent myomeres.

my'ocyte (*Zool.*). A muscle cell: a deep contractile layer of the ectoplasm of certain *Protozoa.*

Myo'doco'pa (*Zool.*). An order of *Ostracoda* in which the shell generally has an antennal notch, there are five pairs of postoral limbs, and the caudal furca have lamellar rami armed with spines.

my'odome (*Zool.*). In some *Neopterygii*, a chamber in which the muscles of the eye are situated.

myoepithe'lial, mī-ō-ep— (*Zool.*). A term used to describe the epithelial cells of *Coelenterata* which are provided with tail-like contractile outgrowths at the base.

myofibril'lae (*Zool.*). The contractile fibrils of a muscle.

myogen'ic (*Zool.*). Contraction arising spontaneously in a muscle, independent of nervous stimuli.

myohyper'trophy (*Med.*). Increase in the size of muscle fibres.

myoide'ma or **myo-ede'ma** (*Med.*). Mounding. A localised swelling of wasting muscle obtained when the muscle is lightly struck.

myolem'ma (*Zool.*). See **sarcolemma.**

myol'ogy (*Zool.*). The study of muscles.

myo'ma (*Med.*). A tumour composed of unstriped (leiomyoma) or striped (rhabdomyoma) muscle fibres.

myomala'cia cordis (*Med.*). Pathological softening of the muscle of the heart.

myomec'tomy (*Surg.*). Surgical removal of a myoma, especially of a fibromyoma of the uterus.

my'omere (*Zool.*). In metameric animals, the voluntary muscles of a single somite.

my'oneme (*Zool.*). In *Protozoa,* a contractile fibril of the ectoplasm.

myoneu'ral (*Zool.*). Pertaining to muscle and nerve, as the junction of a muscle and a nerve.

myop'athy (*Med*). Any one of a number of conditions in which there is progressive wasting of skeletal muscles from no known cause.

my'ophore (*Zool.*). A structure to which muscle attachments are led; as an apodeme.

my'ophrisk (*Zool.*). See **myoneme.**

myo'pia (*Med.*). Short-sightedness. A condition of the eye in which, with the eye at rest, parallel rays of light come to a focus in front of the retina. —*adj.* **myop'ic.**

myosarco'ma (*Med*). A malignant tumour composed of muscle cells and sarcoma cells.

myosep'tum (*Zool.*). See **myocomma.**

my'osin (*Chem.*). An insoluble protein obtained from paramyosinogen and myosinogen; its formation is the cause of rigor mortis.

myosin'ogen (*Chem.*). One of the chief proteins contained in the living muscle.

myo'sis (*Med.*). See **miosis.**

myosi'tis (*Med.*). Inflammation of striped muscle.

myositis ossif'icans progres'siva (*Med.*). A condition in which there is progressive ossification of the muscles of the body.

myota'sis (*Physiol.*). Muscular tension.

my'otome (*Zool.*). A muscle merome; one of the metameric series of muscle masses in a developing segmented animal.

myoto'nia atroph'ica (*Med.*). Dystrophia myotonica. A disease characterised by wasting of certain groups of muscles, difficulty in relaxing muscles after muscular effort, and general debility.

myotonia congen'ita (*Med.*). Thomsen's disease. A rare and congenital malady characterised by extreme slowness in relaxation of muscles after voluntary effort.

Myriapo'da (*Zool.*). A class of terrestrial *Arthropoda* which breathe by tracheae; they possess uniramous appendages; the head is distinct from the thorax and bears one pair of antennae; the legs are numerous, all alike, and extend the whole length of the body. Centipedes and Millipedes.

myr'icyl alcohol (*Chem.*). $C_{30}H_{61}OH$, a saturated monohydric alcohol, present as the palmitic ester in beeswax and in carnauba wax.

myringi'tis (*Med.*). Inflammation of the drum of the ear.

myrin'goscope (*Med.*). An instrument for viewing the drum of the ear.

myringot'omy (*Surg.*). Incision of the drum of the ear.

myr'iospored or **myriospor'ous** (*Bot.*). Having many spores.

myr'mecoch'ory (*Bot.*). The distribution of seeds by ants (Greek *myrmex*, ant).—*adj.* **myrmecochorous.**

myrmecoph'agous (*Zool.*). Feeding on ants.

myrmecoph'ilous (*Bot.*) Pollinated by ants.

myrmecoph'ily (*Bot.*). A symbiotic association between plants and ants.

myr'mekite (*Geol*). An intimate intergrowth on a microscopic scale of the minerals quartz and feldspar, formed apparently by interaction between magmatic residua and earlier-formed crystals.

Mysida'cea (*Zool.*). An order of *Peracarida* retaining more or less completely the primitive *caridoid facies* (q v); the carapace extends over most of the thorax but coalesces with not more than three somites; the eyes are borne on stalks; the uropods are lamellar; most are actively swimming marine forms. Opossum Shrimps.

mysopho'bia (*Med.*). Morbid fear of being contaminated.

mytil'iform (*Bot.*). Resembling a sea-shell in form.

Myt'ton Flags (*Geol.*). A local but thick group of flagstones found in Shropshire and the borderland of Wales, and belonging to the Arenig Series of the Ordovician System.

myx'a (*Zool.*). In Birds, the fused extremities of the rami of the lower beak.

myxamoe'ba (*Bot*). The product of germination of a spore of a Myxomycete. It is a uninucleate, naked protoplast, which creeps like an amoeba, and may develop a flagellum and swim as a zoospore.

myxoede'ma (*Med.*). A condition due to deficiency of thyroid secretion; characterised by loss of hair, increased thickness and dryness of the skin, increase in weight, slowing of mental processes, and diminution of metabolism.

myxo'ma (*Med.*). A term applied to a tumour composed of a clear jelly-like substance and star-shaped cells.

myxomato'sis (*Vet.*). A contagious filterable-virus infection of rabbits; characterised by proliferative changes in the connective tissues.

Myxomyce'tes (*Bot.*). A group of very simple organisms mostly living on or in rotten wood or in soil and having some plant and some animal characters. The thallus is a naked creeping mass of protoplasm, containing many nuclei and known as a *plasmodium*. Sporangia are developed and liberate spores which germinate to yield myxamoebae.

Myxophyc'eae (*Bot.*). Blue-green algae. A group of algae, unicellular or filamentous, without a well-defined nucleus or chromatophore, and usually bluish green in colour. They appear to have no sexuality, have no zoospores, and propagate chiefly by vegetative means. There are many fresh-water and marine species. Also called CYANOPHYCEAE.

Myxospon'gida (*Zool.*). An order of *Demospongiae* in which there is typically no skeleton.

Myzosto'mida, mī'zō— (*Zool.*). A class of *Annelida* the members of which are parasitic in or on *Crinoidea*; they have an oval depressed body provided with five pairs of ventral parapodia, each with a hooked seta, and ten pairs of marginal cirri; the epidermis is ciliated, and there are ventral suckers for attachment.

n (*Chem.*). A symbol for number of mols.

n- (*Chem.*). An abbrev. for *normal*, i.e. containing an unbranched carbon chain in the molecule.

n (*Light*). Symbol for *index of refraction.*

N (*Chem.*). The symbol for *nitrogen.*

N. or **N-** (*Chem.*). An abbrev. for *normal* (*concentration*).

N (*Chem.*). A symbol for the Avogadro number.

N (*Chem.*). A symbol for mol fraction.

N- (*Chem.*). A symbol indicating substitution on the nitrogen atom.

N (*Eng.*). A symbol often used for *modulus of rigidity.*

N-part commutator (*Elec. Eng.*). A commutator having N-bars.

N-truss (*Eng.*). See **Whipple-Murphy truss.**

Na (*Chem.*). The symbol for *sodium.*

N.A. (*Civ. Eng*). An abbrev. for *neutral axis.*

nab (*Join.*). The keeper part of a door-lock.

nacelle (*Aero.*). A small body, carrying the engines, and sometimes fuel, oil, and engineers, situated on the planes of a multi-engined aircraft.

na'cre or **na'creous layer** (*Zool.*). The iridescent calcareous substance composing the innermost layer of a molluscan shell. Mother-of-pearl (French *nacre*).

nacreous (*Min.*). A term applied to the lustre of certain minerals, usually on crystal faces parallel to a good cleavage, the lustre resembling that of pearls.

na'crite (*Min.*). A species of clay mineral, identical in composition with kaolin, from which it differs in certain optical characters and in atomic structure.

na'dir (*Astron.*). That pole of the observer's horizon which is vertically below his feet: hence, the point on the celestial sphere diametrically opposite the zenith.

nae'vus (*Med.*). Birth-mark. Mole. (1) A pigmented tumour in the skin.—(2) A patch or swelling in the skin composed of small dilated blood-vessels.

nagan'a (*Vet.*). A disease of animals in Africa due to infection by *Trypanosoma brucei*; transmitted by tsetse flies.

Nag'elfluh, —floo (*Geol.*). A group of massive conglomerates of Miocene age which form the Rigi and Rossberg in Switzerland.

nai'ad (*Zool.*). A nymph of a hemimetabolic insect.

nail (*Zool.*). In higher Mammals, a horny plate taking the place of a claw at the end of a digit.

nail punch (*Join.*). A small steel rod tapering at one end almost to a point; used to transmit the blow from a hammer when it is desired to drive a nail in so that its head is sunk beneath the surface. Also called NAIL SET.

nailing (*Build.*). See **centre— head—**

nailing (*Furs*). The operation involved in stretching and nailing damped skins according to pattern.

Nairn Sandstone (*Geol.*). A bed of sandstone, of Upper Old Red Sandstone age, found in Caithness.

Nairobi disease of sheep (*Vet.*). A filterable-virus infection of African sheep; transmitted by the 'brown tick' *Rhipecephalus appendiculatus*; characterised by an acute haemorrhage gastro-enteritis.

naked (*Bot.*). (1) Lacking a perianth.—(2) Without any appendages.—(3) Not enclosed in a pericarp.—(4) Bractless.

naked flooring (*Carp.*). A term for the timbers of a floor without the boards.

naked light (*Mining, etc.*). An open unscreened flame.

na'nism (*Med., etc.*). The condition of being a dwarf (Latin *nanus*); dwarfism.

nankeen' (*Textiles*). A twill cotton cloth, drab in colour; used for pocket linings, corsets, etc.

nankeen twill (*Textiles*). The name applied to the 2-and-1 twill weave.

nanophan'erophyte (*Bot.*). A plant from 25 centimetres to 2 metres in height, with its resting buds above the surface of the soil.

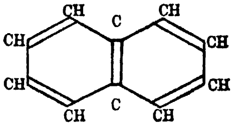
na'noplank'ton (*Zool.*). Plankton of microscopic size.

nanoso'ma (or **nanosomia**) **pituita'ria** (*Med.*). Dwarfism due to hypofunction of the pituitary gland.

Nansen-Pettersson water-bottle (*Ocean.*). See **insulating water-bottle.**

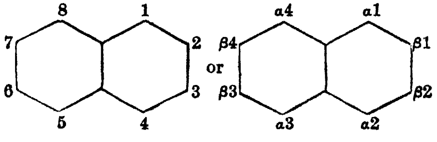
nap (*Textiles*). A woolly surface on fabrics, produced by the finishing process of raising.

naph'thalene (*Chem.*). $C_{10}H_8$; consists of two condensed benzene rings:

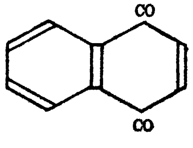


glistening plates, insoluble in water, slightly soluble in cold alcohol and ligroin, readily soluble in hot alcohol and ether; m p. 80° C., b.p. 218° C.; sublimes easily and is volatile in steam. It occurs in the coal-tar fraction boiling between 180° and 200° C. It forms an additive compound with picric acid. Naphthalene is more reactive than benzene, and substitution takes place in the first instance in the *alpha* position. It is an important raw material for numerous derivatives, many of which play a rôle in the manufacture of dyestuffs.

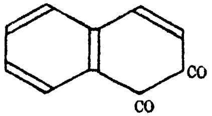
naphthalene derivatives (*Chem.*). Substitution products of naphthalene. The monosubstituted products form two series of isomers according to the position of the substituents in the benzene rings. The disubstituted derivatives can form ten isomers with identical substituents or even more with different substituents. The positions taken by substituents in the naphthalene molecule are marked as follows:



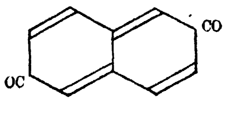
naphthaquinones, —kwi-nōnz' (*Chem.*). $C_{10}H_6O_2$. Three isomers are known, viz.: *α-naphthaquinone,*



yellow rhombic plates, m.p. 125° C., the analogue of ordinary quinone; *β-naphthaquinone*,



red needles, odourless, non-volatile, decomposes at 120° C.; *amphi-*, or 2, 6-*naphthaquinone*,



crystallises in small red prisms, and is not stable in the presence of water, acids, alkalis, and alcohols.

naph'thenes (*Chem.*). Polymethylene hydrocarbons. A great number of these occur in petroleum.

naphthion'ic acid (*Chem.*). 1,4-Naphthylamine-monosulphonic acid, $H_2N{\cdot}C_{10}H_6{\cdot}SO_3H$, obtained by the sulphonation of α-naphthylamine. Intermediate for azo-dyes.

naphtho'ic acids (*Chem.*). $C_{10}H_7{\cdot}COOH$, naphthalene carboxylic acids. There are two isomers, of which the α-naphthoic acid crystallises in fine needles, m p. 160° C. On distillation with lime they are decomposed into naphthalene and CO_2.

naph'thols (*Chem.*). $C_{10}H_7OH$. There is an α-naphthol, m.p. 95° C., b.p. 282° C., and a β-naphthol, m p. 122° C., b.p. 288° C. Both are present in coal-tar and can be prepared from the respective naphthalene-sulphonic acids or by diazotising the naphthylamines. They have a phenolic character, but also resemble alcohols; the hydroxyl groups, for example, can be readily replaced by the amino group. β-Naphthol is an antiseptic.

naph'thylamines' (*Chem.*). $C_{10}H_7{\cdot}NH_2$. α-Naphthylamine forms colourless prisms or needles, m.p. 50° C., b.p. 300° C., soluble in alcohol. It is of unpleasant odour, sublimes readily, and turns brown on exposure to the air. β-Naphthylamine, odourless, m.p. 112° C., b.p. 294° C., forms colourless plates.

Napier's compasses. A form of compasses having a needle-point and a pencil-holder pivoted at the end of one limb, and a needle-point and a pen pivoted at the end of the other limb, both limbs being jointed so that the ends may be folded in between the limbs for safety when being carried in the pocket.

Napierian logarithms. See **natural logarithms.**

nap'iform (*Bot.*). Shaped like a turnip.

Naples yellow (*Dec.*). A yellow pigment made from oxide of lead and antimony.

napo'leonite (*Min.*). A gabbro containing spheroidal structures, about one inch in diameter, which consist of alternating shells essentially of hornblende and feldspars. See **corsite.**

nappe (*Geol.*). A major structure of mountain chains such as the Alps, consisting essentially of a great recumbent fold with both limbs lying approximately horizontally and produced by compressional earth movements which have involved translation of the folded strata over distances of many miles in a horizontal sense.

napping (*Textiles*). Raising a downy surface on a fabric by means of a revolving cylinder covered with stiff wire, or by other process.

napping and friezing machine (*Textiles*). A machine used in the woollen trade to produce small beads (frieze effect) or ripples (wave effect) on the surface of a fabric.

nar'cissism (*Psycho-path.*). A state of self-love; so called after Narcissus, who fell in love with himself. Present in all people at an early stage of development, when sensual gratification is found in the person's own body and not in an outside love-object. According to Freud, some of the libido becomes attached to the ego in this state.

nar'colepsy (*Med.*). A condition characterised by sudden attacks of an uncontrollable desire to sleep and/or by cataplectic attacks (see **cataplexy**).

narco'sis (*Med.*). A state of unconsciousness produced by a drug; the production of a narcotic state.

narcot'ic (*Med.*). Tending to induce sleep or unconsciousness: a drug which does this.

nar'cotine (*Chem.*). $C_{22}H_{23}O_7N$, an alkaloid of the *iso*quinoline series; occurs in opium; forms colourless needles; m.p. 176° C.

narcotise (*Med.*). To subject to the influence of a narcotic.

nar'es (*Zool.*). Nostrils; nasal openings; as the internal or posterior *nares* to the pharynx, the external or anterior *nares* to the exterior.—*adjs.* **nar'ial, nar'iform.**

nar'icorn (*Zool.*). A scale of the nasal region: the terminal part of the nostril when that is horny.

narration (*Cinema*). A connected story rather than a simple commentary, as reproduced from a sound-film.—*n.* **narrator.**

narrow (*Typog.*). The old name for furniture 3 ems, or 36 points, wide.

narrow-base tower (*Elec. Eng.*). A tower for overhead transmission lines having a base sufficiently small to be supported on a single foundation. Cf. *broad-base tower.*

narrow gauge (*Rail*). A railway gauge less than the standard 4 ft. 8½ in.

narrowed (*Bot.*). Tapering, especially downwards.

na'sal (*Zool.*). Pertaining to the nose: a paired dorsal membrane bone covering the olfactory region of the Vertebrate skull.

nasal sinusitis (*Med.*). See **sinusitis.**

nas'cent (*Chem.*). Just formed by a chemical reaction, and therefore very reactive. Nascent gases are probably in an atomic state.

Na'smyth pile-driver (*Civ. Eng.*). A form of pile-driver in which the monkey is raised by steam pressure acting on an attached piston, facilitating rapid operation.

Nasmyth's membrane (*Zool.*). A thin horny membrane covering the enamel of unworn teeth.

na'so- (Latin *nasus*, nose). A prefix used in the construction of compound terms; e.g. *nasolabial*, pertaining to the nose and the lip.

nasopharyngi'tis (*Med.*). Inflammation of the nasopharynx.

nasophar'ynx (*Zool.*). In Vertebrates, that part of the pharynx continuous with the internal nares.

nasosinusi'tis (*Med.*). Inflammation of the air-containing bony cavities in communication with the nose.

nasotur'binal (*Zool.*). In Vertebrates, a paired bone or cartilage of the nose which supports the folds of the olfactory mucous membrane.

nastic movement (*Bot.*). A curvature of a plant member, brought about by growth in response to a diffuse stimulus.

na'sus (*Zool.*). See **clypeus.**

na'sute (*Zool.*). Having a rostrum; especially of soldier termites.

na'tal (*Med., Zool.*). (1) Pertaining to birth.—(2) Pertaining to the buttocks.

nata'tory or **natato'rial** (*Zool.*). Adapted for swimming.

na'tes (*Med.*). The buttocks.

National Electric Code (*Elec. Eng.*). A set of regulations governing electrical installation systems in America; it is established by the American National Board of Fire Underwriters.

native (*Min.*, *Mining*). Said of naturally occurring metal; e.g. *native* gold, ***native*** copper.

natrojar'osite (*Min.*). Hydrous sulphate of potassium and iron, crystallising in the trigonal system.

nat'rolite (*Min.*). Hydrated silicate of sodium and aluminium crystallising in the orthorhombic system. A soda-zeolite. It usually occurs in prismatic crystals which are slender or acicular and closely resemble tetragonal crystals. See also **mesotype, Permutite.**

natural cement (*Build.*, *Civ. Eng.*). A cement similar to a hydraulic lime, made from a natural earth, with but little preparation.

natural classification (*Bot.*). A classification based on the presumed relationships of plants in descent.

natural draught (*Eng.*). The draught or air-flow through a furnace induced by a chimney and dependent on its height and the temperature difference between the ascending gases and the atmosphere.

natural foundation (*Build.*, *Civ. Eng*). A foundation in which the earth requires no preparation, such as the sinking of piles, to make it effective as a support for the structure which it is to carry.

natural frequency (*Phys.*). The frequency of free vibrations of a body.

natural frequency of antenna (*Radio*) The lowest frequency at which an antenna system is resonant when directly earthed, without the addition of loading inductance.

natural gas (*Geol.*). The term includes gases generated during volcanic activity (see **pneumatolysis, solfatara**) and gaseous hydrocarbons distilled under natural conditions from the mineral oils stored in porous strata. The latter types of gas naturally occur in oil-producing localities the world over, notably in parts of the U.S.A., such as W. Virginia, Oklahoma, and Pennsylvania, where the gas derived from the Mississippi formation is the basis of a great industry. In England natural gas issues in small quantities from rocks of different ages, including the Hastings Beds at Heathfield in the Weald of Sussex, the Carboniferous Limestone of the Peak District, the Coal Measures of Hardstoft in Derbyshire, etc. At Heathfield the gas is chiefly methane.

natural glass (*Geol.*). Magma of any composition is liable to occur in the glassy condition if cooled sufficiently rapidly. Acid (i.e. granitic) glass is commoner than basic (i.e. basaltic) glass; the former is represented among igneous rocks by pumice, obsidian, and pitchstone; the latter by tachylyte. Natural quartz glass occurs in masses lying on the surface of certain sandy deserts (e.g. the Libyan Desert); while both clay rocks and sandstones are locally fused by basic intrusions. See also **australite, buchite.**

natural harbour (*Civ. Eng.*). A harbour provided by the natural configuration of the coast-line at a given place.

natural (or **Napierian**) **logarithms.** Logarithms to the base e (or ϵ), which is defined as the limiting value of $\left(1+\frac{1}{m}\right)^m$ when m approaches infinity. Its numerical value is 2·71828. . . . The following conversions are useful:

$$\log_e x = \log_{10} x \times 2{\cdot}30259$$
$$\log_{10} x = \log_e x \times 0{\cdot}43429.$$

See also **logarithm.**

natural magnet. See **lodestone.**

natural mode (*Radio*). The mode of oscillation of an antenna when it is oscillating at its natural frequency. It is characterised by a distribution of voltage rising from zero at the base to a maximum at the top, with no intermediate maxima or minima.

natural period (*Phys.*). The period of free vibrations of a body.

natural roadstead. A natural area of water providing good anchorage for ships, but not offering much shelter as a harbour.

natural scale (*Acous.*). The musical scale in which the frequencies of the notes within the octave are proportional to 24, 27, 30, 32, 36, 40, 45, and 48, and which can be realised in continuously variable pitch instruments, such as the human voice and string instruments, but not in keyboard instruments, which use the tempered scale. Also termed JUST SCALE, JUST TEMPERAMENT.

natural scale (*Surv.*). A term applied to a section drawn with equal vertical and horizontal scales.

natural seasoning (*Timber*) The process of seasoning by exposing cut timbers laid in a stack so as to permit free circulation of air around every timber.

natural selection (*Biol.*). A theory of the mechanism of evolution which postulates the survival of the best-adapted forms, with the inheritance of those distinctive characteristics wherein their fitness lies, and which arise as small uncontrolled variations; it was first propounded by Charles Darwin, and is, consequently, often referred to as *Darwinism* or the *Darwinian Theory.*

natural slope (*Civ. Eng.*). The maximum angle at which soil in cutting or bank will stand without slipping.

natural stone (*Build.*). Building-stone obtained from a quarry, as distinct from pre-cast stone.

natural wavelength of antenna (*Radio*). The free-space wavelength corresponding to the natural frequency of an antenna.

naturalised (*Bot.*). Introduced from another region, reproducing freely by seed and maintaining its position in competition with wild plants.—(*Zool.*) Said of introduced species which compete successfully with the native fauna.

nau'pliiform larva (*Zool.*). See **cyclopoid larva.**

nau'plius (*Zool*). A larval form of many *Crustacea*, characterised by the possession of three pairs of appendages and an unpaired median eye.

nauplius eye (*Zool.*). A median unpaired eye similar to that found in a nauplius larva.

nautical almanac (*Astron.*, *etc.*). An astronomical ephemeris published annually, some years in advance, by the Lords Commissioners of the Admiralty for navigators and astronomers.

nautical log (*Ships*). See **log (nautical).**

nautical mile. One sixtieth of a degree of latitude, a distance varying with latitude. Actually (U.K.) it is taken as =6000 ft. The *Admiralty measured mile* is 6080 feet; that of the *United States Coast Survey* 6080·27 feet.

Nautiloi'dea (*Zool.*). The only living order of *Tetrabranchia* (q.v.), having a wide siphuncle, a shell with simple sutures, and interlocular septa which are concave on the side nearest the aperture. Nautiloid cephalopods were abundant in the Palaeozoic seas, but since Triassic times have been represented by only one genus, *Nautilus* (Pearly Nautilus), which still lives in southern seas.

naval brass (*Met.*). Brass containing a small percentage of tin. Typical composition: Cu 60%, Zn 39%, Sn 1%. Resistant to corrosion by sea water.

nave (*Eng.*) The hub of a wheel. (Obsolete.)

na'vel (*Zool.*). In *Mammalia*, the point of attachment of the umbilical cord to the body of the foetus.

navel-ill (*Vet.*). See **pyosepticaemia of sucklings.**

navic'ular (*Bot.*). Shaped like a boat.

navigation. The science of ascertaining the position of ships and directing their course by astronomical observation and other calculations: the general processes involved in operating ships and aircraft.

navigation (*Hyd. Eng.*). A name frequently given to a canalised river the flow of which is more or less under artificial control.

navigation flame float (*Aero.*). A pyrotechnic device, dropped from an aircraft, which burns with a flame while floating on the water. Used for determining the drift of the aircraft at night.

navigation smoke float (*Aero.*). A pyrotechnic device, dropped from an aircraft, which emits smoke while floating on the water. Used for ascertaining the direction of the wind or the drift of the aircraft.

na'yagite (*Min.*). A sulpho-telluride of lead and gold (sometimes containing antimony) crystallising in the orthorhombic system.

Nay'lorite (*Build.*). Trade-name for a liquid preparation used for hardening and water-proofing cement surfaces.

Nb (*Chem.*). The symbol for *niobium.*

Nd (*Chem.*). The symbol for *neodymium.*

Ne (*Chem.*). The symbol for *neon.*

nean'ic (*Zool.*). Said of the adolescent period in the life-history of an individual.

neap tides (*Astron.*). High tides occurring at the moon's first or third quarter, when the sun's tidal influence is working against the moon's, so that the height of the tide is below the maximum in the approximate ratio 3 : 8.

near-end cross-talk (*Teleph.*). Cross-talk between two parallel circuits when both the listener and the speaker originating the inducing currents are at the same end of the parallelism. See **far-end cross-talk.**

Nearc'tic region (*Zool.*). One of the subrealms into which the Holarctic region is divided; it includes North America and Greenland.

neat (*Textiles*). The name applied by wool-sorters to wool taken from the sides of a lustre fleece of average quality.

neat cement (*Build., Civ. Eng.*). A cement mortar mixture made up without addition of sand.

neat size (*Build.*). The net or exact size after preparation.

neat work (*Build.*). The brickwork above the footings.

neat's-foot oil (*Chem.*). A pale-yellow oily liquid, obtained from the feet of cattle; m.p. about 30° C, sp. gr. 0·916, saponification no. 195-200, iodine no. 65-75. A good lubricating oil.

Nebalia'cea (*Zool.*). The only order comprised in the division *Phyllocarida*, possessing the characteristics of the division. Pelagic marine forms.

nebenkern, nā'ben-kern (*Zool.*). See **paranucleus.**

Nebraska Beds (*Geol.*). Strata of Upper Miocene age occurring in western N. America; famous as containing *Hipparion*, the immediate forerunner of the horse.

neb'ula (*Med.*). (1) A slight opacity in the cornea of the eye.—(2) An oily preparation for use in an atomiser or nebuliser (e.g. for spraying the nasal cavity).

neb'ulae (*Astron.*). A generic name given to a large class of heavenly bodies showing evidence of gaseous material surrounding starry nuclei; the main subclasses are *spiral*, *irregular*, *planetary*.

nebular hypothesis (*Astron.*). One of the earliest scientific theories of the origin of the solar system, stated by Laplace. It supposed a flattened mass of gas extending beyond Neptune's orbit to have cooled and shrunk, throwing off in the process successive rings which in time coalesced to form the several planets.

nebule (*Arch.*). An ornamental moulding characterised by a wavy lower edge.

nebuliser (*Med.*). An apparatus for converting a liquid into a fine spray. See **nebula.**

nebu'lium (*Astron.*). A hypothetical element to which are attributed certain spectral emission lines not found in known terrestrial elements; these appear in the spectra of the irregular nebulae, e.g. in the Great Nebula in Orion.

neb'ulous (*Bot.*). Clouded, dark.

neck (*Bot.*). (1) The upper tubular part of an archegonium, and of a perithecium.—(2) The lower part of the capsule of a moss, just above the junction with the seta.

neck (*Build.*). The narrow moulding separating the capital of a column from the shaft.

neck canal cell or **neck cell** (*Bot.*). One of the cells in the central canal in the neck of an archegonium.

neck-mould (*Build.*). The neck round the top of the shaft of a column.

neck, volcanic (*Geol.*). A vertical plug-like body of igneous rock or volcanic ejectamenta, representing the feeding channel of a volcano.

necking (*Build.*). The neck between the capital and the shaft of a column.

necro- (Greek *nekros*, a dead body). A prefix used in the construction of compound terms; e.g. *necrophagous* (q.v.).

necrobacillo'sis (*Vet.*). Lip-and-leg ulceration. Infection of animals by *Fusiformis necrophorus.*

necrobio'sis (*Med.*). The gradual death, through stages of degeneration and disintegration, of a cell in the living body.

necrogen'ic abortion (*Bot.*). The speedy death of the tissues of a plant close under the point of attack of a parasite, checking the spread of the latter.

necrog'enous (*Biol.*). Living or developing in the bodies of dead animals.

ne'cron (*Bot.*). Dead plant material not rotted into humus.

necroph'agous (*Zool.*). Feeding on the bodies of dead animals.

necroph'orous (*Zool.*). Carrying away the bodies of dead animals; as certain Beetles, which usually afterwards bury the bodies.

nec'ropsy (*Med.*). Autopsy. A post-mortem examination of the body.

necro'sis (*Biol.*). Death of a cell (or of groups of cells) while still part of the living body.—*adj.* **necrot'ic.**—*v.* **necrose.**

nectar (*Bot.*). A sugary fluid exuded by plants, usually from some part of the flower, occasionally from somewhere else on the plant; it attracts insects, which assist in pollination.

nectariv'orous (*Zool.*). Nectar-eating.

nectary (*Bot.*). A glandular organ or surface from which nectar is secreted.

necto- (Greek *nēktos*, swimming). A prefix used in the construction of compound terms; e.g. *nectocalyx* (q.v.).

nectoca'lyx (*Zool.*). In *Siphonophora*, a medusoid modified as a swimming organ and lacking a manubrium.

nec'tocyst (*Zool.*). The cavity of a nectocalyx.

necton (*Bot., Zool.*). See **nekton.**

necton'ic benthos (*Bot.*). Small organisms floating at the bottom of the water.

nec'tophore (*Zool.*). A *nectocalyx* (q.v.): that portion of the common stem of a siphonophoran colony bearing the nectocalyces.

nec'topod (*Zool.*). An appendage adapted for swimming.

nec'tosome (*Zool.*). The upper part of a siphonophoran colony to which the nectocalyces and pneumatophores are attached.

nectozo'oid (*Zool.*). See **nectophore.**

Needham's sac (*Zool.*). In certain Cephalopods, a spacious sac, being an expansion of the lower part of the vas deferens, in which spermatophores are stored.

needle (*Bot.*). A long, narrow, stiffly constructed leaf from which water does not readily escape; characteristic of pine trees and related plants.

needle (*Build.*). A timber or steel beam used in the process of underpinning. It is laid horizontally at right-angles to the wall (through which it passes) and is supported on both sides by dead shores, so as to take the load of the upper part of the walls.

needle (*Civ. Eng.*). The timbers used in a *needle weir* (q.v.).

needle (*Elec. Eng.*). The moving magnet of a compass or galvanometer of the moving-magnet type. Sometimes also the moving element of an electrostatic voltmeter.

needle beam (*Civ. Eng.*). A transverse floor-beam supported across the chords of a bridge.

needle instrument (*Surv.*). A surveying instrument in which the essential part is a magnetic needle.

needle lubricator (*Eng.*). A crude form of lubricator consisting of an inverted stoppered flask attached to a bearing and containing a wire loosely fitting a hole in the stopper and touching the shaft.

needle machines (*Textiles*). The name generally given to embroidery machines of single-needle type.

needle pick-up (*Acous.*). A pick-up in which the sole moving part is the magnetic needle, which by its motion diverts magnetic flux and induces electromotive forces in coils on the magnetic circuit.

needle-point gap (*Elec. Eng.*). A spark gap in which the electrodes are needle points.

needle roller-bearing (*Eng.*) A *roller-bearing* (q.v.) in which long rollers of very small diameter are used, located endwise by a lip on the inner or outer race.

needle scaffold (*Build.*). A scaffold which is supported on cantilever or needle beams jutting out from an intermediate height in the building, thereby avoiding the necessity for erection from ground-level.

needle stone (*Min.*). A popular term for clear quartz containing acicular inclusions, usually of rutile, but in some specimens, of actinolite. Also called RUTILATED QUARTZ.

needle system (*Teleg.*). A telegraph system in which signals are received by observing the deflections of one or more needles. Now generally replaced by audible signal indication.

needle traverse (*Surv.*). A traverse in which the angles between successive lines, or the directions of the lines, are found by means of a magnetic compass.

needle valve (*Eng.*). A slender pointed rod working in a hole or circular seating; operated by automatic means, as in a carburettor float chamber, or by a screw, for the control of fluid.

needle wear (*Acous.*). Wear of the rounded point of a gramophone reproducing needle caused by sliding along the track on the record. In principle, the needle has to fit itself into the track during the first few (blank) revolutions of the disc and not wear shoulders during the remainder of the playing.

needle weir (*Civ. Eng.*). A form of frame weir in which the wooden barrier consists of upright square-section timbers placed side-by-side against the iron frames.

needling (*Build.*). The process of underpinning in which needles are used in the support of the upper part of the building.

needling (*Surg.*). *Discission* (q.v.). Cutting with a needle the lens of the eye in the treatment of cataract.

negative (*Elec.*). A particular point or electrode is said to be *negative* with respect to another point when it is at a lower electric potential.

negative (*Photog.*). The black-and-white reversed image obtained by developing a sensitised and exposed photographic emulsion; so called because the greater the brilliance of the light arriving from the object, the blacker is the image, i.e. the greater is the reduction and retention of silver after fixing.

See **cloud—** **rainbow—**

negative (*Weaving*). See under **positive.**

negative after-image (*Optics*). The image of complementary colour arising after visual fatigue from viewing a coloured object and then a white surface.

negative booster (*Elec. Eng.*). A series-wound booster used in connexion with an earthed-return power supply system, e.g. for a tramway. It is connected between two points on the earth return path, in order to reduce the potential between them and minimise the possibility of electrolysis due to leakage currents.

negative carbon (*Illum.*). The carbon of a d.c. arc lamp which is connected to the negative terminal of the supply. It is usually of smaller diameter than the positive carbon as it burns away more slowly.

negative catalysis (*Chem.*). The retardation of a chemical reaction by a substance which itself undergoes no permanent chemical change.

negative conductance (*Radio, etc.*). A property which is similar to negative resistance, but in which an increase in voltage produces a decrease in current. A device possessing such a property can maintain oscillations in a resonant circuit with which it is connected in parallel. A typical example is the dynatron.

negative cyanotype (*Photog.*). A process which produces blue negative prints, i.e. white lines on a blue background Much used in engineering work.

negative electricity (*Elec.*). A body is said to possess *negative electricity* when it gives rise to certain well-recognised phenomena, this state arising from an excess of electrons above normal. Cf. *positive electricity*.

negative feedback (*Radio*). Interconnexion of the input and output terminals of an amplifier in such a manner that the output opposes the input, resulting in a reduction in amplification, but also in a corresponding increase in output power obtainable with a given degree of harmonic distortion. Also called COUNTER-COUPLING, DEGENERATION, REVERSE FEEDBACK.

negative feeder (*Elec. Eng.*). In the power supply to an electric traction system, the feeder connecting the track rails or negative conductor-rail to the negative bus-bars at the substation. Also called RETURN FEEDER.

negative film stock (*Cinema.*). The unexposed film used in cinematograph cameras in motion-picture production.

negative group (*Chem.*). (1) An acid radical.—(2) A group of atoms whose introduction into an organic molecule tends to give it an acidic character.

negative image (*Television*). A reproduced television image in which the light parts of the original scene appear dark, and vice-versa.

negative mineral (*Light*). A doubly refracting mineral in which the ordinary refractive index is greater than the extraordinary. Calcite is a negative mineral, for which the values of μ_o and μ_e are 1·66 and 1·48 respectively. See **optical sign.**

negative phase-sequence (*Elec. Eng.*). A three-phase system in which the voltages or currents in the three phases reach their maximum values in the non-standard order, i.e. in the order red, blue, yellow. See **phase-sequence.**

negative-phase-sequence component (*Elec. Eng.*). The symmetrical component of an unbalanced three-phase system of voltages or currents in which the phase sequence is in the opposite order to standard, i.e. it is in the order red, blue, yellow.

negative-phase-sequence relay (*Elec. Eng.*). A relay which operates when any negative-phase-sequence components of current or voltage appear in the circuit to which it is connected.

negative plate (*Elec. Eng.*). The plate of an accumulator or primary cell which is normally at the lower potential and to which the current from the circuit during discharge is said to return.

negative reaction (*Biol.*). A tactism or tropism in which the organism moves, or the member grows, from a region where the stimulus is stronger to one where it is weaker.

negative resistance (*Radio, Thermionics*). The property possessed by certain forms of gas-discharge and thermionic tubes, and combinations thereof, in which an increase in current flow is accompanied by a decrease in the voltage necessary to maintain it. Such a device is capable of maintaining continuous oscillations in a resonant circuit with which it is connected in series. A typical example is a carbon arc.

negative stagger (*Aero.*). See **stagger.**

negative transconductance (*Thermionics*). The property of certain forms of thermionic tube by virtue of which an increase in positive potential of a control electrode causes a decrease in the current flowing to another electrode.

negative video signal (*Television*). A video signal in which increasing amplitude corresponds to decreasing light-value in the transmitted picture. Black is taken as 100%, white about 30%, of the maximum amplitude in the signal.

negative well (*Civ. Eng*). A shaft sunk through an impermeable stratum to allow water to drain through to a permeable one.

negative wire (*Auto. Teleph*). Any wire in a circuit which is connected to the negative, or live, end of the main exchange battery.

negatron (*Thermionics*). A four-electrode thermionic tube for obtaining negative resistance, comprising an anode and grid on one side of a cathode, and an anode on the other. Increase of the grid potential causes a reduction in the current to the opposite anode.

nekton (*Zool.*). Actively swimming aquatic organisms, as opposed to the passively drifting organisms or *plankton* (q.v.).

nemathe'cium (*Bot*). A cushion-like projection formed on the thallus of a seaweed and bearing reproductive organs.

Nemathelmin'thes (*Zool.*). A phylum which formerly comprised the groups *Nematoda*, *Acanthocephala*, and *Nematomorpha*; now obsolete.

nemat'o- (Greek *nēma*, gen. *nēmatos*, a thread). A prefix used in the construction of compound terms; e.g. *nematocyst* (q.v.).

nemat'oblast (*Zool.*). A cell which will develop a *nematocyst* (q.v.).

nematoca'lyx (*Zool.*). See **nematophore.**

nemat'ocyst (*Zool.*). A chitinous sac filled with poisonous fluid and produced at one end into a long narrow pointed hollow thread, which normally lies inverted and coiled up within the sac but can be everted by pressure.

Nemato'da (*Zool.*). A phylum of non-metameric worms with an elongate rounded body pointed at both ends and marked by lateral lines; possessing a mouth and alimentary canal, a heavy cuticle, and longitudinal muscles only; cilia are absent; the sexes are separate; many members of the group are of economic importance. Round Worms, Thread Worms.

Nematomor'pha (*Zool.*). A small phylum of non-metameric worms with an elongate rounded body pointed at both ends, without lateral lines; in the adult the mouth and alimentary canal are occluded and functionless; there is a triple ventral nerve-cord; the young forms are parasitic in various Insects, Molluscs, and Oligochaetes, the adults are free-living in fresh water. Horse-hair Worms.

nematoparenchy'matous thallus (*Bot.*). An algal thallus composed of united threads, which are, however, still recognisable as individuals.

nemat'ophore (*Zool.*). A small, secondary type of polyp of certain *Hydrozoa* which lacks a mouth but is capable of engulfing organisms by means of pseudopodia.

nematozo'oid (*Zool.*). See **dactylozooid.**

Nemertin'ea (*Zool.*). A phylum of apparently non-metameric worms with an elongate depressed body, a ciliated ectoderm, and a dorsal eversible proboscis; there is a vascular system; the sexes are separate; the majority are of marine habit, but some forms occur in fresh water and on land. Ribbon Worms.

neo- (Greek *neos*, young). A prefix used in the construction of compound terms; e.g. *neoplasm*, young or newly formed tissue (usually pathological).

ne'oblasts (*Zool.*). In many of the lower animals (*Annelida*, *Ascidians*, etc.), large amoeboid cells widely distributed through the body which play an important part in the phenomena of regeneration.

Neoco'mian (*Geol.*). The name given to the lowest stage of the Cretaceous System which precedes the Aptian stage See also **Wealden Series.**

Neo-Darwinian (*Zool.*). Pertaining to the modern version of the natural selection theory of Darwin.

neodym'ium (*Chem.*). Symbol, Nd. A metallic element, a member of the rare earth group. At. no. 60, at wt. 144 3, sp. gr. 6 956, m.p. 840° C. The metal, which has a faint yellow colour, is found in cerite, monazite, and orthite.

neo-enceph'alon (*Zool.*). See **telencephalon.**

neog'amous (*Zool.*). (In *Protozoa*) showing precocious association of gametocytes.

Neog'nathae (*Zool.*). A division of *Neornithes* characterised by the possession of a palate in which the vomer is reduced in size, i e. a schizognathous, desmognathous, or aegithognathous palate.

Neo-Lamarck'ism (*Zool.*). A revival of the evolution theories of Lamarck, which postulated that differences between species arose by the inheritance of the effects of use and disuse.

Neolithic Period (*Geol*) The later portion of the Stone Age, characterised by well-finished, polished stone implements, made by men of the same species as ourselves. Cf. *Palaeolithic Period.*

neoman'oscope (*Photog*). An apparatus for viewing transparencies at the correct distance.

neomorpho'sis (*Zool.*). A type of regeneration in which the part reformed does not resemble any existing part of the body.—*adj.* **ne'omorph.**

ne'on (*Chem.*). Symbol, Ne. A zero-valent element, one of the rare gases. At. no. 10, at. wt. 20·183. It is a colourless and odourless monatomic gas; m p. −248·67° C., b.p. −245·9° C., density 0 90035 gms. per litre at N.T.P. It constitutes about 18 parts per million by volume of the atmosphere, from which it is obtained by the fractionation of liquid air. Neon is used in glow-discharge lamps.

neon induction lamp (*Illum.*). A lamp consisting of a small tube containing neon at low pressure; luminescence is produced by the action of high-frequency currents in a few turns surrounding the tube.

neon lamp (*Illum.*). An electric discharge lamp containing neon and giving a red glow. Widely used for advertising signs; also, on a small scale, for indicating lamps.

neonych'ium (*Zool.*). A pad of soft tissue enclosing a claw of the foetus during the development of many Mammals, to eliminate the risk of ripping the foetal membranes.

neopal'lium (*Zool.*). In Mammals, that part of the cerebrum occupied with impressions from senses other than the sense of smell.

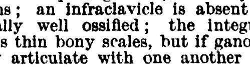
ne'oplasm (*Med.*). A new formation of tissue in the body: a *tumour* (q.v.).—*adj.* **neoplas'tic.**

Neopteryg'ii, nē-op-ter-ij'i-ī (*Zool.*). A subclass of *Pisces* comprising the great majority of living forms; an infraclavicle is absent; the skull is usually well ossified; the integument usually bears thin bony scales, but if ganoid scales occur they articulate with one another by a peg-and-socket arrangement, and are pierced by unbranched vascular canals; the caudal fin is usually homocercal.

Neor'nithes (*Zool.*). A subclass of *Aves* which includes all living Birds and is characterised by the absence of teeth in the jaw and of claws at the tips of the fingers. Cf. *Archaeornithes.*

neor'ophags (*Zool.*). Phagocytic cells which engulf and destroy senile nerve cells.

Neosal'varsan (*Chem.*). No. 914. The Na salt of 3,3'-diamino-4,4'-dihydroxyarsenobenzene-*N*-methylene-sulphinic acid, having the formula:



It has a therapeutical action against syphilis.

Neosporid'ia (*Zool.*). A subclass of *Sporozoa* in which the trophozoite is multinucleate and forms spores continuously; the spore cases are complex and usually contain only a single sporozoite.

neossoptiles —op'tī-lēz (*Zool.*). The down-feathers found on a newly hatched Bird.

neoteinic, —tē'nik (*Zool.*). In a state of arrested development, as certain castes of *Isoptera.*

neot'eny (*Zool.*). The retention of larval characters beyond the usual period, as in some *Amphibia* which may still have the appearance of Tadpoles when they have reached sexual maturity.

Neotre'mata (*Zool.*). An order of *Ecardines* having a horny or calcareous shell, of which the ventral valve is usually smaller and flat; there may or may not be a peduncle; of wide distribution.

Neotrop'ical region (*Zool.*). One of the primary faunal regions into which the surface of the globe is divided. It comprises South America, the West Indian islands, and Central America south of the Mexican plateau.

neovi'talism (*Zool.*). The theory which postulates that a complete causal explanation of vital phenomena cannot be reached without invoking some extra-material concept.

Neozo'ic (*Geol.*). The name (='new life') sometimes given to the Tertiary and Post-Tertiary rocks.

néper, nā-per (*Elec. Comm.*). The unit of attenuation adopted by the C.C.I.F. to be used with the same status as the decibel. If I_1 is attentuated to I_2 so that $I_2 = I_1 \epsilon^{-N}$, then the current attenuation is N népers. (Named after John Napier, the Scottish scientist, inventor of natural logarithms.)

neph'eline, neph'elite (*Min.*). Silicate of sodium and aluminium, $NaAlSiO_4$, which crystallises in the hexagonal system. It is frequently present in igneous rocks with a high soda content and a low percentage of silica.

nepheline-basalt (*Geol.*). A general name for any basic lava carrying nepheline as an essential constituent.—See **nephelinite,** also **basanite, tephrite.** By some petrologists the term is restricted to those nepheline-basalts which carry olivine but no feldspar. A more accurate name for the latter is *olivine-nephelinite.*

nepheline-syenite (*Geol.*). Also called ELAEOLITE-SYENITE. A coarse-grained igneous rock of intermediate composition, undersaturated with regard to silica, and consisting essentially of elaeolite, a varying content of alkali-feldspar, with soda amphiboles and/or soda-pyroxenes. Common hornblende, augite, or mica are present in some varieties. See, for example, **foyaite, laurdalite.**

neph'elinite (*Geol.*). A fine-grained igneous rock normally occurring as lava flows, and resembling basalt in general appearance; it consists essentially of nepheline and pyroxene, but not of olivine or feldspar. The addition of the former gives *olivine-nephelinite,* and of the latter, *nepheline-tephrite.*

nephelomet'ric analysis (*Chem.*). A method of quantitative analysis in which the concentration of suspended matter in a liquid is determined by optical means. Also called TURBIDIMETRIC ANALYSIS.

neph'ograph (*Photog.*) An instrument comprising electrically controlled cameras for photographing clouds, etc., in order that their position in the sky may subsequently be determined.

neph'oscope (*Meteor.*). An apparatus which determines the direction of motion and the rate of rotation of a cloud which is vertically above it.

nephr-, nephro- (Greek *nephros,* kidney). A prefix used in the construction of compound terms; e.g. *nephrectomy* (q.v.).

nephrec'tomy (*Surg.*). Removal of a kidney by operation.

neph'ric (*Anat., Zool.*). Pertaining to the kidney.

nephrid'iopore (*Zool.*). The external opening of a nephridium or nephromixium.

nephrid'ium (*Zool.*). In *Invertebrata* and lower *Chordata,* a segmental excretory organ consisting of an intercellular duct of ectodermal origin, typically terminating at the inner end in a solenocyte or flame-cell. more generally, an excretory tubule; cf. *coelomoduct, nephromixium.*—*adj.* **nephrid'ial.**

nephrite (*Min.*). One of the minerals grouped under the name of *jade*; consists of compact and fine-grained tremolite or actinolite. It has been widely used for ornaments in the Americas and the East.

nephri'tis (*Med.*). Inflammation of the substance of the kidney.—*adj.* **nephrit'ic.**

neph'rocoel, —sēl (*Zool.*). The coelomic cavity of a nephrotome.

neph'rocysti'tis (*Med.*). Inflammation both of the kidney and of the bladder.

neph'rocyte (*Zool.*). A cell which has the property of storing up substances of an excretory nature, as in *Porifera* and *Insecta.*

nephrodin'ic (*Zool.*). Employing the same duct for the discharge of excretory and genital products.

neph'rogon'oduct (*Zool.*). (Especially in *Invertebrata*) a common duct for genital and excretory products.

neph'roid (*Bot.*). See **reniform.**

neph'rolithi'asis (*Med.*). The presence of stones in the kidney.

neph'rolithot'omy (*Surg.*). Removal of stones from the kidney through an incision in the kidney: the operation for doing this.

nephromix'ium (*Zool.*). A compound excretory tubule consisting of both ectoderm and mesoderm.

nephrop'athy (*Med.*). Any disease of the kidneys.

neph'ropexy (*Surg.*). The fixation, by operative measures, of a kidney which is abnormally movable. Cf. *nephrorrhaphy.*

neph'ropore (*Zool.*). See **nephridiopore.**

neph'ropto'sis (*Med.*). Movable kidney; **floating** kidney. An abnormally mobile kidney, associated with general displacement downwards of other abdominal organs.

nephropyeli'tis (*Med.*). Inflammation both of the substance of the kidney and of its pelvis.

nephror'rhaphy (*Surg.*). The fixation, by suture, of a displaced kidney. Cf. *nephropexy.*

neph'ros (*Zool.*). A kidney.—*adj.* **neph'ric.**

neph'roscleroʹsis (*Med*). Hardening and contraction of the kidney as a result of arteriosclerosis and of general increase of fibrous tissue in the substance of the kidney.

nephro'sis (*Med.*). A degeneration of the tubules of the kidney, associated with oedema of the tissues and albuminuria.

neph'rostome (*Zool.*). The ciliated funnel by which some types of nephridia and nephromixia open into the coelom.

nephros'tomy (*Surg.*). The surgical formation of an opening into the pelvis of the kidney for the drainage of urine.

neph'rotome (*Zool*). That region of the coelomic epithelium in each somite of a metameric animal that gives rise to the excretory tubes.

nephrot'omy (*Surg*). The making of an incision into the kidney.

nephrotox'in (*Med*). A poison or toxin which specifically affects the cells of the kidney.

nepionic, nē-pi-on'ik (*Zool.*). Said of the embryonic period in the life-history of an individual.

neps (*Textiles*). (1) The term applied in the cotton industry to small entanglements of fibres that cannot be unravelled; generally formed during the ginning process.—(2) Small lumps formed in cotton or wool fibres during carding.

Neptune (*Astron.*). The eighth planet of the solar system, in order of distance from the sun; discovered independently by Leverrier and Adams by deduction from the perturbations of Uranus; it has one satellite; its mass is about 17 times that of the earth, and its sidereal period 164·8 years.

Nereidifor'mia (*Zool.*). An order of *Phanerocephala*, comprising for the most part active predaceous forms with well-developed parapodia bearing dorsal and ventral cirri; there is an eversible buccal region, and the pharynx is armed with chitinous jaws; the tentacles and palps are well developed, and the peristomium usually bears cirri; includes the Sea-Mice and the Rag-Worms.

nerit'ic. Pertaining to, or found in, the *neritic zone* (q v.).

neritic environment, neritic facies (*Geol.*). Sediments that are deposited in the neritic zone of the sea floors and in epicontinental seas are of *neritic facies*, showing rapid alternations of the clay and sand grades; ripple marks and other characters indicate accumulation in shallow water, within reach of wave- and current-action. The former term is synonymous with *neritic zone*.

neritic zone (*Geol., Ocean*). That portion of the sea floor lying between low-water mark and the edge of the continental shelf, at a depth of about 100 fathoms.

Nernst lamp (*Illum.*). An electric lamp in which a rod of material, composed of a mixture of the oxides of certain rare metals, is caused to glow by the passage of a current through it.

Nernst theory (*Chem.*). An explanation of the development of electrode potentials, based on the supposition that an equilibrium is established between the tendency of the electrode material to pass into solution and that of the ions to be deposited on the electrode.

nervation, nervature (*Bot.*). See **venation.**—(*Zool.*) See **nervuration.**

nerve (*Anat., Zool.*). One of the branches of the central nervous system passing to an organ or part of the body: a nervure.—*adjs.* **nervous, neural.**

nerve (*Bot.*). A general name for the midrib and the larger veins of a leaf.

nerves (*Arch.*). The projecting ribs on a vault surface. Also called NERVURES.

nerve block (*Med.*). Production of insensibility of a part by injecting an anaesthetic into the nerve or nerves supplying it.

nerve canal (*Zool.*). An aperture in the root of a tooth through which the nerve may pass to the pulp.

nerve cell (*Zool.*). See **neurocyte.**

nerve centre (*Zool.*). An aggregation of nerve cells associated with a particular sense or function.

nerve ending (*Zool.*). The free distal end of a nerve or nerve fibre, generally with accessory parts forming a complex end-organ.

nerve fibre (*Zool.*). An axon.

nerve impulse (*Zool.*). The disturbance which passes along a nerve when it is stimulated.

nerve net (*Zool.*). The primitive type of nervous system found in *Coelenterata*, consisting of numerous multipolar neurocytes which form a net underlying and connecting the various cells of the body wall.

nerve plexus (*Zool.*). A network of interlacing nerve fibres.

nerve root (*Zool.*). The origin of a nerve in the central nervous system.

nerve trunk (*Zool.*). A bundle of nerve fibres united within a connective-tissue coat.

nervi nervo'rum (*Zool.*). Sensory nerve fibres received by a nerve trunk and usually terminating within the epineurium as end-bulbs.

nervico'lous (*Bot.*). Said of a parasitic fungus which grows on the veins of a leaf.

nervous system (*Zool*). The whole system of nerves, ganglia, and nerve endings of the body of an animal, considered collectively.

See **central—** **parasympathetic—**
sympathetic—

ner'vule (*Zool.*). A small branch of a nervure.

nervura'tion, nerva'tion, ner'vature (*Zool.*). The arrangement of the nervures in an Insect wing.

ner'vure (*Zool.*). One of the chitinous struts which support and strengthen the wings of an Insect.

nervures (*Arch.*). See **nerves.**

nervus lateralis (*Zool.*). See **lateralis.**

Nessler's solution (*Chem.*). Used in the analysis of water for the estimation of free and combined ammonia. It is a solution of mercuric iodide in potassium iodide, made alkaline with sodium or potassium hydroxide.

nest (*Glass*). A cushion upon which glass is placed to be cut with a diamond.

nest epiphyte (*Bot.*). An epiphyte which develops a tangle of stems, roots, and leaves among which humus collects, and is utilised by the plant.

nestoca'lyx (*Zool.*). The bell-shaped swimming-organ of a hydrozoan, as a medusa or jellyfish.

Nestorite (*Plastics*). A thermo-setting plastic of the phenol-cresol-formaldehyde type.

net knot (*Cyt.*). A small accumulation of chromatin, particularly at the intersections of the nuclear reticulum.

net-veined (*Bot.*). Having the veins running in irregular courses, anastomosing at times, and all together forming a network.

network (*Elec. Comm.*). Short for ***electrical-transmission network,*** i.e. a group of electrical elements connected together for the purpose of satisfying specified transmission requirements.—(*Elec. Eng.*) A set of interconnected electrical conductors; e.g. the feeders and distributors of an electric power system.

unbalanced—
Y—

network structure (*Met.*). The type of structure formed in alloys when one constituent exists in the form of a continuous network round the boundaries of the grains of the other. Even if the grains included in the cells are themselves duplex, they are regarded as individual grains.

net′rum (*Cyt.*). A minute spindle which arises within the centrosome during the division of the centriole.

netted (*Bot.*). (1) Covered with lines forming a network.—(2) Forming a network.

nettle-cell (*Zool.*). See **cnidoblast.**

Nettlestone Beds (*Geol.*). A group of marls and sandy and shelly limestones of Oligocene age found near Whitecliff Bay, Isle of Wight.

Neumann lamellae, noi′man (*Met.*). Straight, narrow bands parallel to the crystallographic planes in the crystals of metals that have been subjected to deformation by sudden impact. They are actually narrow twin bands, and are most frequently observed in iron.

neur-, neuro- (Greek *neuron*, nerve). A prefix used in the construction of compound terms; e.g. *neurotendinous*, pertaining to nerves and tendons.

neu′rad (*Zool.*). Situated on the same side of the vertebral column as the spinal cord: hence, dorsal.

neu′ral (*Zool.*). See **nerve.**

neural arch (*Zool.*). The skeletal structure arising dorsally from a vertebral centrum, formed by the neurapophyses and enclosing the spinal cord.

neural canal (*Zool.*). The space enclosed by the centrum and the neural arch of a vertebra, through which passes the spinal cord.

neural crest (*Zool.*). In a Vertebrate embryo, a band of cells lying parallel and close to the nerve cord which will later give rise to the ganglia of the dorsal roots of the spinal nerves.

neural folds (*Zool.*). See **medullary folds.**

neural groove (*Zool.*). See **medullary groove.**

neural plate (*Zool.*). In *Chelonia*, a median row of bony plates forming part of the carapace: medullary plate: neurapophysis.

neural spine (*Zool.*). The median dorsal vertebral spine, formed by the fusion of the neurapophyses above the neural canal.

neural′gia (*Med.*). Paroxysmal intermittent pain along the course of a nerve, arising from various causes.—*adj.* **neuralgic.** See also **tic douloureux.**

neurapoph′yses (*Zool.*). A pair of plates arising dorsally from the vertebral centrum, and meeting above the spinal cord to form the neural arch and spine.—*sing.* **neurapophysis.**

neurasthe′nia (*Psycho-an.*). A psychoneurosis in which the sexual drive is completely repressed at the expense of a large output of mental energy, resulting in extreme tiredness and lassitude, so that sleep and relaxation are not effective. Originally classified by Freud as one of the true neuroses.

neurax′is (*Zool.*). See **axon.**

neurec′tomy (*Surg.*). Surgical excision of part of a nerve.

neurenter′ic canal (*Zool.*). A temporary passage connecting the cavity of the nerve cord and the archenteron in the early embryonic stages of some *Chordata.*

neurilem′ma (*Anat.*, *Zool.*). See **neurolemma.**

neurine (*Chem.*). $CH_2{:}CH{\cdot}N(CH_3)_3OH$, trimethylvinylammonium hydroxide, obtainable from brain substance and from putrid meat; related to *choline* (q.v.), into which it can be transformed. It is a ptomaine base.

neuri′tis (*Med.*). Inflammation of a nerve. For *multiple neuritis*, see **polyneuritis**; for *optic neuritis*, see **papillitis.**

neu′robiotax′is (*Zool.*). The tendency shown by nerve cells to migrate towards the source of the impulses which they most frequently receive.

neuroblasto′ma (*Med.*). A malignant tumour composed of primitive nerve cells, arising in the adrenal gland or in connexion with sympathetic nerve cells.

neu′roblasts (*Zool.*). Cells of ectodermal origin which give rise to neurocytes.

neurocir′rus (*Zool.*). In *Polychaeta*, a cirrus borne by the neuropodium.

neu′rocoel, —sēl (*Zool.*). The spinal canal.

neurocra′nium (*Zool.*). The brain-case and sense capsules of a Vertebrate skull. Cf. *viscerocranium.*

neu′rocyte (*Zool.*). A nerve cell, consisting of a cell-body and cell-processes.

neuro-epithe′lium (*Zool.*). A layer of superficial cells specialised for the reception of stimuli.

neurofi′brils (*Zool.*). Fine fibrils which run in parallel bundles in the cell-processes and form an intricate plexus in the cell-body.

neurofibro′ma (*Med.*). A tumour composed of fibrous tissue derived from the connective-tissue sheath of a nerve. See **molluscum fibrosum.**

neurofibromato′sis (*Med.*). Von Recklinghausen's disease; multiple fibromata. See **molluscum fibrosum.**

neurofi′brosi′tis (*Med.*). Interstitial neuritis. Inflammation of the connective tissue which surrounds and binds together large nerve trunks (e.g. the sciatic nerve).

neurogen′esis (*Zool.*). The development and formation of nerves.

neurogen′ic (*Zool.*). Activity of a muscle or gland which is dependent on continued nervous stimuli.

neu′roglia (*Zool.*). The supporting tissue of the brain and spinal cord of Vertebrates, composed of much-branched fibrous cells which occur among the nerve cells and fibres.

neu′rohypoph′ysis (*Zool.*). See **pars nervosa.**

neuroker′atin (*Chem.*). A protein forming part of the nerve and brain substance.

neurolem′ma or **neurilemma** (*Zool.*). A thin homogenous sheath investing the medullary sheath of a medullated nerve fibre; sheath of Schwann.

neurol′ogy. The study of the nervous system.

neu′rolymphomato′sis (*Vet.*). An inherited disease of certain strains of fowls.

neu′romasts (*Zool.*). In lower *Icthyopsida*, collections of sense-cells in which the element of the lateralis nerve terminate; sense-hillocks.

neu′romere (*Zool.*). In metameric animals, the portion of the central nervous system contained within one somite.

neuromus′cular (*Zool.*). Pertaining to nerve and muscle, as a myoneural junction.

neuron, neurone (*Zool.*). A nerve cell and its processes, regarded as an anatomically independent element.

neu′ronemes (*Zool.*). In some *Ciliophora*, filaments, believed to be of a nervous nature, running parallel with and external to the myonemes.

neuroneph′roblast (*Zool.*). In a segmenting ovum, a cell which will later contribute to the nerve cord and nephridia.

neuroni′tis (*Med.*). Inflammation (or degeneration) of neurons.

neuronopha′gia (*Med.*). The destruction of diseased nerve cells by white-blood cells and by microglial cells.

neuropo′dium (*Zool.*). In *Polychaeta*, the ventral lobe of a parapodium.

neu′ropore (*Zool.*). The anterior opening by which the cavity of the central nervous system communicates with the exterior.

Neurop′tera (*Zool.*). An order of *Endopterygota* in which there are usually two pairs of similar transparent net-veined wings; the mouth-parts are adapted for biting; the larva is predaceous and usually active, and possesses suctorial mouth-parts. Lace Wings, Ant Lions, Butterfly

Hawks, Mealy Wings, Stink Flies, Scorpion Flies. By some entomologists now split into several orders.

neuro'sis (*Med.*). Any one of a group of diseases thought to be due to disordered function of the involuntary nervous system, shown by instability of the circulatory system.—(*Psycho-path.*) A psychological disorder resulting from a conflict of repressed infantile instinctive demands with those of adult society. Freud particularly distinguishes three pure forms of actual neurosis, as distinct from psychoneurosis, viz. melancholia, anxiety neurosis, and hypochondria, in which the causation is physical rather than psychical.

neurosurgery (*Surg.*). That part of surgical science which deals with the nervous system.

neurosy'napse (*Zool.*). See **synapse.**

neurosyph'ilis (*Med.*). Syphilitic infection of the nervous system.

neurotro'pic (*Med.*). Having a special affinity for nerve cells; e.g. *neurotropic* virus.

neurotro'pism (*Zool.*). The tendency to mutual attraction shown by masses of nervous tissue under suitable conditions.

neus'ton (*Ecol.*). Aquatic animals associated with the surface film.

neuter (*Bot.*). (1) Apparently sexless; said of certain strains of fungi which normally show sexuality.—(2) Said of a flower in which the androecium and gynaeceum are non-functional or absent.

neuter, neutral (*Zool.*). Without sex: lacking functional sexual organs: neither male nor female: a sexless animal.

neutral (*Elec. Eng.*). See **neutral point, neutral conductor.**

neutral (*Photog.*). Possessing no colour or hue; grey.

neutral auto-transformer (*Elec. Eng.*). See **earthing reactor.**

neutral axis (*Elec. Eng.*). A term used to denote the diametral plane in which the brushes of a commutator machine should be situated in order to give perfect commutation.

neutral axis (*Eng.*). In a beam subjected to bending, the line of zero stress—a transverse section of the longitudinal plane, or neutral surface, which passes through the centre of area of the section.

neutral compensator (*Elec. Eng.*). See **earthing reactor.**

neutral (or **middle**) **conductor** (*Elec. Eng.*). The middle wire of a d.c. *three-wire system* (q.v.) or a distribution system, or the wire of a polyphase distribution system which is connected to the neutral point of the supply transformer or alternator. Sometimes called the NEUTRAL (or MIDDLE) WIRE or the NEUTRAL. Cf. *outer.*

neutral equilibrium (*Mech.*). See **equilibrium (neutral).**

neutral grey filter (*Photog.*). A filter which absorbs all visible rays to the same extent, and therefore does not change the collective hue of any complex colour passed through.

neutral point or neutral (*Elec. Eng.*). The point at which the windings of a polyphase star-connected system of windings are connected together. Also, the mid-point of the neutral zone of a d.c. machine.

neutral solution (*Chem.*). An aqueous solution which is neither acidic nor alkaline. It therefore contains equal quantities of hydrogen and hydroxyl ions and has a pH-value of 7.

neutral surface (*Eng.*). See **neutral axis.**

neutral-tongue relay (*Elec. Comm.*). A relay for cable telegraphy in which the tongue is maintained in a central position by springs, being moved to either of the contacts by a current in the appropriate direction.

neutral wedge filter (*Photog.*). A neutral grey filter, originally a wedge of grey glass, which introduces a continuously variable attenuation of light, depending on the density or thickness introduced into the beam, without altering the relation between hues in the transmitted light.

neutral zone (*Elec. Eng.*). That part of the commutator of a d.c. machine in which, when the machine is running normally, the voltage between adjacent commutator bars is approximately zero.

neu'tralator (*Elec. Eng.*). See **earthing reactor.**

neutralisation (*Chem*). The interaction of an acid and a base with the formation of a salt. In the case of strong acids and bases, the essential reaction is the combination of hydrogen ions with hydroxyl ions to form water molecules.

neutralisation (*Radio*). The counteracting of detrimental effects of anode-grid capacitance in triode amplifying circuits by the provision of a second path, through a neutralising or *balancing condenser* (q.v.), between the anode and grid circuits. By this method coupling between the two circuits is effected in reverse phase to that produced by the inter-electrode capacitance. Also called BALANCING.

neutralised series motor (*Elec. Eng.*). See **compensated series motor.**

neutralising (*Paint.*). The process of preparing cement surfaces which are to be painted, a chemical preparation being applied to neutralise the lime.

neutralising capacitance, neutralising condenser (*Radio*). See **balancing capacitance.**

Neutrodyne (*Radio*). A registered trade-name for one form of neutralised high-frequency amplifier.

neutrodyne capacitance (*Radio*). See **balancing capacitance.**

neutron (*Phys.*). An uncharged particle of mass equal to a proton, which probably goes to build up atomic nuclei.

neutrope'nia (*Med.*). Abnormal diminution in the number of neutrophil leucocytes in the blood.

neu'trophil (*Physiol.*). (1) Stainable by neutral dyes.—(2) A white-blood cell whose granular protoplasm is stainable with neutral dyes; also called POLYMORPHONUCLEAR LEUCOCYTE.

neutrophil'ia (*Physiol.*). An increase in the number of neutrophils in the blood.

neutroson'ic receiver (*Radio*). A supersonic heterodyne receiver employing neutralised triode amplifiers for the intermediate frequency.

nevad'ite (*Geol.*). An acid lava (rhyolite) containing an abnormally large quantity of phenocrysts, with correspondingly little groundmass.

névé (*Geol.*). See **firn.**

Nevile and Winther's acid (*Chem.*). 1-Naphthol-4-sulphonic acid, an intermediate for dyestuffs.

nevus (*Med.*). See **naevus.**

new moon (*Astron.*). The instant when the moon is directly in line with the earth and sun, between the two, in elongation 0°, when her illuminated hemisphere is wholly invisible.

New Red Sandstone (*Geol.*). A name frequently applied to the combined Permian and Triassic Systems, and particularly applicable in N.W. England, where the palaeontological evidence is insufficient to allow of their separation. The term reflects the general resemblance between the rocks comprising these two systems and the Old Red Sandstone of Devonian age.

new star (*Astron.*). See **nova.**

New Style (*Astron., etc.*). A name given to the system of date-reckoning established by the *Gregorian Calendar* (q.v.).

New Zealand greenstone (*Min.*). Nephritic 'jade' of gemstone quality, from New Zealand.

Newark Series (*Geol.*). Continental strata of Upper Triassic age in the U.S.A., consisting essentially of red sandstones, shales, arkoses, and conglomerates, some 14,000 to 18,000 ft. thick;

they include black shales with fish remains, thin coal-seams in the Rhaetic of Virginia and N. Carolina, and basaltic flows and sills.

Newbourn Crag (*Geol*.). A local group of soft sandy rocks which occur in the middle of the Pliocene System in East Anglia.

Newcastle Beds or **Newcastle-under-Lyme Group** (*Geol.*). A local series of grey shales and sandy beds which belong to the Staffordian Coal Measures of North Staffordshire.

Newcastle disease (*Vet.*). A contagious infection of fowls, resembling fowl pest.

newel (*Join.*). An upright post fixed at the foot of a stair or at a point of change of direction and used as a support for a balustrade.

newel cap (*Join.*). An ornamental finish planted on the upper end of a newel post.

newel drop (*Join.*). An ornamental finish on the lower end of a newel, above ground-level.

newel joints (*Join.*). The joints connecting the newel and the hand-rail or string.

Newman Limestone (*Geol.*). A thick group of limestones, about 3300 ft. in thickness, referred to the Upper Mississippian of Virginia.

Newnam hearth (*Met*.). A modified Scotch hearth in which poking or rabbling is done mechanically.

newsprint (*Paper*). Cheap-quality printing paper, usually supplied in reels, for newspaper purposes; composed largely of mechanical or ground wood-pulp with a relatively small admixture of strong sulphite wood pulp.

newsreel (*Cinema*). A motion-picture film depicting items of news and of current interest: a theatre where such films occupy most of the programme.

Newton's disc (*Optics*). A motor-driven disc with sectors of primary colours, which appears white on fast rotation and with white illumination, thus demonstrating the synthesis of colour vision.

Newton's law of cooling (*Heat*). The rate of cooling of a hot body which is losing heat both by radiation and by natural convection is proportional to the difference in temperature between it and its surroundings. The law does not hold for large temperature excesses.

Newton's rings (*Light*). Circular concentric interference fringes seen surrounding the point of contact of a convex lens and a plane surface. Interference occurs in the air film enclosed between the two surfaces. If r_n is the radius of the nth ring, R the radius of curvature of the lens surface, and λ the wavelength, $r_n = \sqrt{nR\lambda}$.

Newtonian telescope (*Astron.*). A form of reflecting telescope due to Newton, in which the object is viewed through an eye-piece in the side of the tube, the light reflected from the main mirror being deflected into it by a small plane-mirror inclined at 45° to the axis of the telescope and situated on the axis just inside the principal focus.

Ni (*Chem.*). The symbol for *nickel*.

Niagara Limestone (*Geol.*). See **Lockport Limestone.**

Niagara Series or **Niagaran** (*Geol.*). Strata of Silurian age typically exposed in the Niagara Gorge section; includes the Medina Group below, and the Clinton, Rochester, and Lockport beds.

nib (*Build.*). A small projection, sometimes continuous, formed on the under-side at the top of each tile, enabling the tile to be hung on battens. Also called a COG.

nib (*Tools*). The point of a crowbar.

nibs (*Paint.*). Specks of solid matter in varnish.

nib rule (*Plast.*). A straightedge used to guide the projecting nib on a horsed mould when running a cornice.

nic'colite (*Min.*). Arsenide of nickel, crystallising in the hexagonal system. It usually contains a little iron, cobalt, and sulphur and is one of the chief ores of metallic nickel. Also called COPPER NICKEL, KUPFERNICKEL.

niche (*Build.*). A recess in a wall surface, often to accommodate a statue, etc.

niche (*Ecol.*). A term used to describe the status of an animal in its community, i.e. its biotic and trophic relationships.

niched column (*Build.*). A column set back in a wall with a clear space between it and the wall.

Nicholson hydrometer (*Phys.*). A hydrometer of the constant-displacement type, which can be used for determining the specific gravity of a solid.

Ni'chrome (*Met.*). Trade-name for heat-resisting nickel-chromium alloys made by Driver-Harris Co.; contain 10-20% chromium and 80-90% nickel. Sometimes used generally to denote nickel-chromium alloys.

nick (*Carp., Join., etc*.). A small cut made at a particular point to facilitate starting a kerf.

nick (*Typog.*). The groove in the shank of a type letter. It aids the compositor in placing the type correctly in the stick, and in identifying the fount; in Monotype it distinguishes the foot of a letter from the top, as in u, n, d, p, etc.

nickel (*Met.*). A silver-white metallic element. Chemical symbol, Ni. At. wt. 58·69, at. no. 28, sp. gr. at 20° C. 8·85, m.p. 1450° C., specific electrical resistivity at 20° C. 10·9 microhms per c.c. Used pure for electroplating, coinage, and in chemical and food-handling plant. See also **nickel alloys.**

nickel alloys (*Met.*). Nickel is the main constituent in Monel metal, Permalloy, and nickel-chromium alloys. It is also used in cupro-nickel, nickel-silver, various types of steel and cast-iron, brass, bronze, and light alloys.

nickel antimony glance (*Min.*). Sulphantimonide of nickel, crystallising in the cubic system. Also called ULLMANITE.

nickel arsenic glance (*Min.*). See **gersdorffite.**

nickel bloom (*Min*.). See **annabergite.**

nickel carbonyl (*Chem.*). $Ni(CO)_4$. A volatile compound of nickel, formed by passing carbon monoxide over the heated metal. The compound is decomposed into nickel and carbon monoxide by further heating. Used on a large scale in industry for the production of nickel from its ores by the Mond process.

nickel-chromium steel (*Met.*). Steel containing nickel and chromium as alloying elements. 1·5% to 4% nickel and 0·5% to 2% chromium are added to produce an alloy of high tensile strength, hardness, and toughness. Used for highly stressed automobile and aero-engine parts, for armour plate, etc.

nickel-iron-alkaline accumulator (*Elec. Eng*.). An accumulator in which the positive plate consists of nickel hydroxide enclosed in perforated steel tubes, and the negative plate consists of iron or cadmium also enclosed in perforated steel tubes. The electrolyte is potassium hydrate, and the voltage 1·2 per cell. It is lighter than a lead accumulator. Also called EDISON ACCUMULATOR, NI-FE ACCUMULATOR.

nickel silver (*Met.*). See **German silver.**

nickel steel (*Met.*). Steel containing nickel as an alloying element. Varying amounts, between 0·5% and 6·0%, are added to increase the strength in the normalised condition, to enable hardening to be performed in oil or air instead of water, or to increase the core strength of carburised parts.

nick'eline (*Min.*). An old term for *niccolite.*

nicker (*Carp.*). The side wing of a *centre-bit* (q.v.) which scribes the boundary of the hole to be cut.

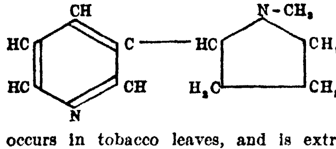
Niclad (*Met.*). Composite sheets made by rolling together sheets of nickel and mild steel, to obtain the corrosion resistance of nickel with the strength of steel.

Niclausse boiler, nē-klōs (*Eng.*). A French marine boiler which consists of a horizontal water and steam drum from which vertical double headers are suspended, carrying banks of *field tubes* (q.v.) slightly inclined downwards.

Nicol prism (*Light*). A device for obtaining plane-polarised light. It consists of a crystal of Iceland spar which has been cut and cemented together in such a way that the ordinary ray is totally reflected out at the side of the crystal, while the extraordinary plane-polarised ray is freely transmitted.

nicopyrite (*Min.*). See **pentlandite.**

nic'otine (*Chem.*) An alkaloid of the pyridine series, $C_{10}H_{14}N_2$, having the constitutional formula:



It occurs in tobacco leaves, and is extremely poisonous. It is a colourless oil, of nauseous odour; b.p. 246° C. (730 mm.).

nic'titating (*Zool.*). Winking; said of the third eyelid of the Vertebrates, which by its movements keeps clean the surface of the eye.

nidamen'tal (*Zool.*). Nest-forming; said of glands which secrete material for the formation of a nest or an egg-covering.

nida'tion (*Zool.*). In the oestrous cycle of Mammals, the process of renewal of the lining of the uterus between the menstrual periods.

nidged ashlar (*Masonry*). *Nigged ashlar* (q.v.).

nidic'olous (*Zool.*). Said of Birds which remain in the parental nest for some time after hatching.

nidification or **nidulation** (*Zool.*). The process of building or making a nest.

nidifu'gous (*Zool.*). Said of Birds which leave the parental nest soon after hatching.

ni'dus (*Zool.*). A nest: a small hollow resembling a nest: a nucleus.

niello, ni-el'lo (*Dec.*). A method of decorating metal. Sunk designs are filled with an alloy of silver, lead, and copper, with sulphur and borax as fluxes, and fired.

Ni-Fe accumulator (*Elec. Eng.*). Trade-name of a *nickel-iron-alkaline accumulator.*

nigged ashlar (*Masonry*). A block of stone dressed with a pointed hammer.

nigger (*Cinema.*). Any adjustable panel which is used to cut off stray light which might enter the camera lens and cause fog.

night bell (*Teleph.*). A bell used in telephone exchanges to warn operators that a subscriber is requiring attention at a position which is vacated.

night-blindness (*Med.*). See **nyctalopia.**

night bolt (*Join.*). See **night latch.**

night chair (*San. Eng.*). A form of earth closet designed for use in the sick-room.

night error, night effect (*Radio*). The error in the bearings given by a radio direction finder at night time; produced by waves reflected by the Heaviside layer; especially prominent at short wavelengths. Preferably termed *polarisation error* (q.v.).

night latch (*Join.*). A lock whose bolt is key-operated from the outside and knob-operated from the inside, but which is fitted with a device for preventing operation from either side.

nigres'cent (*Bot.*). Becoming blackish.

nig'ro-punc'tate (*Bot.*). Marked with black dots.

ni'grosines (*Chem.*). Diphenylamine dyestuffs, used as black pigments, prepared by heating nitrobenzene or nitrophenol, aniline, and aniline hydrochloride with iron filings.

nimbus (*Meteor.*). A dense layer of dark shapeless cloud with ragged edges, from which steady rain or snow usually falls.

ni'obite (*Min.*). See **columbite.**

nio'bium (*Met.*). See **columbium.**

Ni'obrar'a Limestone (*Geol.*). A member of the Upper Coloradoan (Senonian) strata, which follows the Benton Shales and Limestone in the Gulf States of N. America.

Nipkow disc (*Television*). A rotating disc having a series of apertures arranged in the form of a spiral around the circumference; used for mechanical scanning.

nippers (*Masonry*). See **stone tongs.**

nippier (*Mining*). See **clipper.**

nipping (*Bind.*). See **smashing.**

nipple (*Eng., Plumb., etc.*). (1) A short length of externally threaded pipe for connecting two lengths of internally threaded pipe.—(2) A small drilled bush, sometimes containing a non-return valve, screwed into a bearing for the supply of lubricant by a *grease-gun* (q.v.).

nipple (*Zool.*). The mamma or protuberant part of the mammary gland in female Mammals, bearing the openings of the milk-forming glands.

Ni-resist (*Met.*). A cast-iron consisting of graphite in a matrix of austenite. Contains carbon 3%, nickel 14%, copper 6%, chromium 2%, and silicon 1·5%. Has a high resistance to growth, oxidation, and corrosion.

Nissl bodies (*Zool.*) Angular bodies of granular appearance occurring in the cell-body of a neurocyte; they stain deeply with basic dyes.

Nissl degeneration (*Zool.*). Degenerative changes associated with chromatolysis, occurring in the cell-body of a neurocyte the axis-cylinder of which has been severed.

niter. See **nitre.**

nit'idous (*Bot.*). Lustrous.

ni'ton (*Chem.*). The original name for radium emanation, *radon.*

Nitral'loy (*Met.*). Steel specially developed for nitriding (which is not effective with ordinary steels). Contains carbon 0·2-0·3%, aluminium 0·9-1·5%, chromium 0·9-1·5%, and molybdenum 0·15-0·25%.

ni'tramines (*Chem.*). Amines in which an amino-hydrogen has been replaced by the nitro group. They have the general formula $R{\cdot}NH{\cdot}NO_2$.

ni'trates (*Chem.*). Salts formed by the action of nitric acid on metallic oxides, hydroxides, and carbonates. Readily soluble in water; decompose when heated. The nitrates of polyhydric alcohols and the alkyl radicals explode with violence.

nitrate bacteria (*Bot.*). Soil-inhabiting bacteria which convert nitrites into nitrates.

nitrate film (*Cinema.*). Cinematograph standard film using cellulose nitrate as a base; commercially more advantageous than acetate or non-flam, though explosive at a low temperature.

nitration (*Bacteriol., Bot.*). The conversion of nitrites into nitrates by the action of bacteria, being the final stage of nitrification in the soil.

nitre (*Min.*). *Potassium nitrate* (q.v.), crystallising in the orthorhombic system. Also called SALTPETRE. See also **Chile nitre, soda nitre.**

ni'tric acid (*Chem.*). HNO_3. Occurs in rain water during thunder-storms. Its salts, nitrates, are widely distributed. Obtained directly from the air by various processes; also by catalytic oxidation of ammonia gas. Used for dissolving metals (gold, platinum, and palladium are unattacked) and for etching, in the manufacture of nitrates, sulphuric acid, and explosives. Strong oxidising agent. Forms a constant-boiling mixture with water; b.p. 78° C. Also called (in concentrated form) AQUA FORTIS.

nitric anhydride (*Chem.*). N_2O_5. Dissolves in water to give nitric acid.

nitric oxide (*Chem.*). NO. Colourless gas. In contact with air it forms reddish-brown fumes of nitrogen peroxide.

nitrides (*Chem.*). Compounds of metals with nitrogen. Usually prepared by passing nitrogen or gaseous ammonia over the heated metal.

ni'triding, nitrogen case-hardening (*Met.*). A process for producing hard surface on special types of steel by heating in gaseous ammonia. Components are finish-machined, hardened and tempered, and heated for about 60 hours at 520° C. Case is about 0·02 in. deep and surface hardness is 1100 V.P.N. See **Nitralloy.**

nitrification (*Chem.*). The treatment of a material with nitric acid.—(*Bacteriol., Bot.*) The conversion of nitrogenous matter into nitrates by bacteria, especially in the soil. See **ammonisation, nitration, nitrosation.**

nitrifying bacteria (*Bot.*). Soil bacteria which are able to bring atmospheric nitrogen into combination and use it in their nutrition.

ni'triles (*Chem.*). Alkyl cyanides of the general formula R·C:N. When hydrolysed they yield carboxylic acids or the corresponding ammonium salts. When reduced they yield amines. Numerous additive reactions are possible to the triple bond.

nitrites (*Chem.*). Salts or esters of nitrous acid, O.NOH.

nitrite bacteria (*Bot.*). Soil-inhabiting bacteria which form nitrites from compounds of ammonia.

ni'tritoid crisis (*Med.*). A reaction following the injection of arsphenamine, in which flushing of the face is associated with difficulty of breathing.

nitroben'zene (*Chem.*). $C_6H_5{\cdot}NO_2$, a yellow liquid with an odour of bitter almonds, m.p. 5° C., b.p. 208° C., sp. gr. 1·2. It is obtained by the action of a mixture of concentrated sulphuric acid and nitric acid on benzene. When reduced it yields aniline.

nitrocel'luloses (*Chem.*) Cellulose nitrates. They are the nitric acid esters of cellulose, and are formed by the action of a mixture of nitric and sulphuric acids on cellulose. The cellulose can be nitrated to a varying extent ranging from two to six nitrate groups in the molecule. Nitrocelluloses with a low nitrogen content, up to the tetranitrate, are not explosive, and are used in the lacquer and artificial silk industries, etc. They dissolve in ether-alcohol mixtures, and in so-called lacquer solvents, e.g. butyl acetate, etc. A nitrocellulose with a high nitrogen content is guncotton, an explosive. The principal nitrocellulose plastic is *celluloid* (q.v.).

nitro derivatives (*Chem.*). Aliphatic or aromatic compounds containing the group $-NO_2$. The aliphatic nitro derivatives are colourless liquids which are not readily hydrolysed, but have acidic properties, e.g. the primary and secondary aliphatic nitro derivatives can form metallic compounds. Aromatic nitro derivatives are easily formed by the action of nitric acid on aromatic compounds. The nitro groups substitute in the nucleus and only exceptionally in the side chain.

ni'trogen (*Chem.*). A non-metallic element in the fifth group of the periodic system. At. no. 7, at. wt. 14·008, valencies 3, 5; symbol N. It is a colourless, odourless, chemically relatively inert, diatomic gas; m.p. −209·86° C., b.p. −195·8° C., density 1·25055 gms. per litre at N.T.P. It constitutes about 78% by volume and 75·5% by weight of the atmosphere; it occurs combined as nitrates (e.g. in Chile), as ammonium salts, in the soil and in all living matter. The gas is obtained from liquid air and is used in gas-filled electric lamps; large quantities are fixed by various methods.

nitrogen bases (*Chem.*). *Amines* (q.v.).

nitrogen case-hardening (*Met.*). See **nitriding.**

nitrogen chlorides (*Chem.*). Three nitrogen chlorides, NH_2Cl, $NHCl_2$, and NCl_3 produced by the chlorination of ammonium ions. Unstable and explosive.

nitrogen cycle (*Bacteriol.*). The sum total of the transformations undergone by nitrogen and nitrogenous compounds in nature in relation to living organisms.

nitrogen dioxide (*Chem.*). *Nitrogen peroxide* (q.v.).

nitrogen fixation (*Bot., Chem.*). See **fixation of nitrogen.**

nitrogen pentoxide (*Chem.*). See **nitric anhydride.**

nitrogen peroxide (*Chem.*). NO_2. Oxidising agent. Formed when one volume of oxygen is mixed with two volumes of nitric oxide. Below 17° C. the formula is N_2O_4 and the molecule is colourless. Decomposed by water, forming a mixture of nitric and nitrous acids.

nitrogen tetroxide (*Chem.*). N_2O_4. See **nitrogen peroxide.**

nitrogen trifluoride (*Chem.*). NF_3. Formed by the action of fluorine on ammonia. Colourless gas; stable; insoluble in water.

nitrogen trihydride (*Chem.*). Ammonia, NH_3.

nitroglyc'erine (*Chem.*). $C_3H_5(ONO_2)_3$, a colourless oil; m.p. 11°-12° C.; insoluble in water; prepared by treating glycerine with a cold mixture of concentrated nitric and sulphuric acids. It solidifies on cooling, and exists in two physical crystalline modifications. In thin layers it burns without explosion, but explodes with tremendous force when heated quickly or struck.

Ni'trolime (*Chem.*). Trade-name for an artificial fertiliser consisting of calcium cyanamide.

nitro-metals (*Chem.*). Metals which unite with nitrogen peroxide to give metallic nitroxyls.

nitrometer, Lunge (*Chem.*). See **Lunge nitrometer.**

nitrometh'ane (*Chem.*). CH_3NO_2, a liquid; b.p. 99°-101° C.; prepared from chloro-acetic acid and sodium nitrite.

ni'tron (*Chem.*). 1,4-Diphenyl-3,5-*end*anilodihydrotriazole. It forms an insoluble salt with nitric acid, and serves as a reagent for the quantitative estimation of nitric acid.

nitrophi'lous (*Bot.*). Said of plants which occur characteristically in places where there are good supplies of nitrogenous compounds.

nitroprus'sides (*Chem.*). Formed by the action of nitric acid on either ferro- or ferricyanides. Also called NITROSOFERRICYANIDES.

nitrosation (*Bacteriol., Bot.*). The conversion of ammonium salts into nitrites by the action of bacteria, being the second stage in nitrification in the soil.

nitro'so compounds (*Chem.*). Compounds containing the monovalent radical $-NO$.

nitrosoferricy'anides (*Chem.*). See **nitroprussides.**

nitrososulphuric acid (*Chem.*). See **chamber crystals.**

nitrotol'uenes (*Chem.*). $CH_3{\cdot}C_6H_4{\cdot}NO_2$. On nitration of toluene a mixture of *o*- and *p*-nitrotoluene is obtained with very little *m*-nitrotoluene. *o*-Nitrotoluene, a liquid, has a b.p. 218° C.; *p*-nitrotoluene crystallises in large crystals; m.p. 54° C., b.p. 230° C.

nitrous acid (*Chem.*). The pale-blue unstable solution obtained by precipitating barium nitrite with dilute sulphuric acid is supposed to contain nitrous acid, HNO_2.

nitrous oxide (*Chem.*). Laughing gas, N_2O. A colourless gas with a sweetish odour and taste, soluble in water, alcohol, ether, and benzene. Nitrous oxide is endothermic, and supports combustion better than air. The gas is manufactured by the decomposition of ammonium nitrate by heat, and purified by passage through solutions of ferrous sulphate, caustic potash, and milk of lime. It is used for producing anaesthesia of short duration.

nitrox'yl (*Chem.*). The radical $-NO_2$ when attached to a halogen atom or a metal. Compounds containing the group are called *nitroxyls*.

niv'eous (*Bot.*). Snowy-white.

No. 606 (*Chem.*). Salvarsan.

No. 914 (*Chem.*). Neosalvarsan.

no bottom, no top (*Acous.*). Sounds which, when reproduced, are attenuated in the low or/and high audio-frequency range are said to have *no bottom* or/and *no top*.

no-load characteristic (*Elec. Eng.*). See **open-circuit characteristic.**

no-load current (*Elec. Eng.*). The current taken by a transformer when it is energised but is giving no output, or by a motor when it is running but giving no mechanical load.

no-load loss (*Elec. Eng.*). The losses taking place in a motor or transformer when it is operating but giving no output.

no-throw (*Textiles*). The name for silk thread to which the twist imparted has been just sufficient to bind together the filaments composing it.

no top (*Acous.*). See under **no bottom.**

no-voltage release (*Elec. Eng.*). A relay or similar device which causes the circuit to a motor or other equipment to be opened automatically if the supply voltage fails.

noble gases (*Chem.*). See **rare gases.**

noble metals (*Met.*). Metals, such as gold, silver, platinum, etc., which have a relatively positive electrode potential, and which do not enter readily into chemical combination with non-metals. They have high resistance to corrosive attack by acids and corrosive agents, and resist atmospheric oxidation. Cf. *base metal.*

nocardi'asis (*Med.*). Infection (usually of the lungs) with any one of a number of spore-forming fungi of the genus *Nocardia.*

nocicep'tive (*Zool.*). Sensitive to pain.

noctilu'cent (*Zool.*). Phosphorescent: light-producing.

Noc'tovision (*Television*). Trade-name for a system of television in which the light-sensitive elements respond to infra-red light, and can therefore be operated in apparent darkness.

nocturnal (*Zool., etc.*). Active at night.

nodal gearing (*Eng.*). The location of gear-wheels, e.g. between a turbine and propeller shaft, at a nodal point of the shaft system with respect to torsional vibration.

nodal point (*Radio*). A point in a high-frequency circuit where the current is a maximum and the voltage a minimum, or vice-versa. Also called NODE.

nodal points of a lens (*Light*). Two points on the principal axis of a lens or lens system such that an incident ray of light directed towards one of them emerges from the lens as if from the other, in a direction parallel to that of the incident ray. For a lens having the same medium on its two sides the nodal points coincide with the principal points.

nodaliser (*Elec. Comm.*). An arrangement for adjusting a minimum effect in an electrical circuit, such as hum in an amplifier, or interfering current in a bridge.

node (*Acous.*). The location where the interference between two or more progressive sound-waves results in a stationary wave, with either the sound pressure or particle velocity zero or a minimum.

node (*Bot.*). The place where a leaf is attached to a stem; it is sometimes swollen.

node (*Phys.*). A point of minimum displacement in a system of stationary waves. The nodes are spaced half a wavelength apart. See **antinode.**

node (*Radio*). See **nodal point.**

nodes (*Astron.*). The two points, diametrically opposite each other, in which the orbit of a heavenly body cuts some great circle, the ecliptic in the case of the moon and planets. The *ascending* and *descending* nodes are distinguished by the body's passage to north or south of the reference plane in question.

Noden-Bretteuneau (*Build.*). The name of an electrical process for preserving timber.

nod'ose (*Bot.*). Bearing knot-like swellings.

nod'ular or **nod'ulose** (*Bot.*). Bearing local thickenings; said especially of an elongated plant member.

nodular structures (*Geol.*). Spheroidal, ovoid, or irregular bodies often encountered in both igneous and sedimentary rocks, and formed by segregation about centres. See, for example, **clay ironstone, doggers, flint, septaria.**

nod'ule (*Bot.*). (1) Any small rounded structure on a plant.—(2) A swelling on a root inhabited by symbiotic bacteria.

no'dus (*Zool.*). In Insects, a joint or swelling formed by the union of two nervures.

nog (*Build.*). A block of wood the size of a brick, built into a wall to provide a substance to which joinery, such as skirtings, may be nailed.

nogging (*Build.*). The filling in with bricks of the spaces between timbers in walls and partitions.

nogging-piece (*Build.*). A timber in a brick-nogging wall or partition.

noil (*Worsted*). Short fibre extracted from wool in the process of combing; used for blending in the woollen trade.

noise (*Acous.*). Sounds which are objectionable to some persons and which may or may not have significance. Technically defined as that class of sounds which do not exhibit clearly defined frequency components, but comprise a frequency spectrum of energy. See also **loudness level, phon.**

See **aircraft—**
babble—
frame—
frying—
ground—
Johnson—
line—
room—
Schottky—
sprocket—
surface—
thermal agitation—

noise audiogram (*Acous.*). An audiogram taken in the presence of a specified noise.

noise audiometer (*Acous.*). An audiometer which measures the threshold of hearing of a deaf person's ear, the other ear, or both ears, being subjected to a standardised noise in addition to the test sound.

noise level (*Acous.*). The same as *loudness level* (q.v.); applied to noise.

noise-meter (*Acous.*). Any form of meter which allows the operator to measure, either objectively or subjectively, the loudness of a specified sound on the phon scale.

See **objective—** **subjective—**

noiseless recording (*Acous.*). The practice of making the sound-track on a positive sound-film as dense as possible, consistent with the accommodation of the modulation, in order to keep the photographic noise level as far below the recorded level as possible.

noma (*Med.*). See **cancrum oris.**

nomeris'tic (*Zool.*). (Of metameric animals) having a definite number of somites.

nominal (*Textiles*). A term used in the cotton industry for a cloth that differs slightly from the quality particulars indicated.

nominal horse-power (*Eng.*). An obsolete method of rating steam-engines, devised by Watt;

based on a fixed mean effective pressure and piston speed.

nominal section (*Elec. Comm.*). A network which is equivalent to a section of transmission line, based on the assumption of lumped constants.

nomotagmo'sis (*Zool*). In metameric animals, the formation of definite regions (tagmata) of the body by the differentiation of a definite number of somites.

non-, nona- (*Chem.*). Containing nine atoms, groups, etc.

no'nane (*Chem.*). C_9H_{20}, a paraffin hydrocarbon; m.p. −51° C., b p. 150° C., sp. gr. 0·72.

non-association cable (*Elec. Eng.*). Cable which is not manufactured or designed in accordance with the standards of the Cable Makers' Association.

non-bearing wall (*Build.*). A wall carrying no load apart from its own weight.

non-cadu'cous (*Zool.*). See **indeciduate.**

non-coded call-indicator working (*Auto. Teleph.*). The direct operation of the display panel in a call indicator system by the original trains of impulses.

non-conjunction (*Cyt.*). The complete failure of synapsis.

non-directional microphone (*Acous*) A microphone which has a uniform polar response for all useful audio frequencies.

non-disjunction (*Cyt.*). Failure of two chromosomes to disjoin in meiosis.

non-dissipative network (*Elec. Comm.*). A network designed as if the inductances and condensers are free from dissipation, and constructed with components of minimum loss.

non-essential organs (*Bot.*). Sepals and petals.

non-ferrous alloy (*Met.*). See **alloy (non-ferrous).**

non-flam film (*Cinema*). See **safety film.**

non-inductive load (*Elec. Eng.*). See **non-reactive load.**

non-inductive resistor (*Elec. Eng.*). A resistor having a negligible inductance.

non-intermittent camera (*Photog.*). A cinematograph camera in which the film is in continuous motion, the separate images being formed by a train of lenses.

non-linear distortion (*Elec. Comm.*). That form of amplitude distortion in which alien tones are introduced by the non-linear response of part of a communicating system.

non-linear distortion factor (*Elec. Comm.*). The root of the ratio of the powers associated with the alien tones to the powers associated with the wanted tones in the output of a non-linear distorting device.

non-linear network (*Elec. Comm.*). A network in which the electrical elements are not all linear with varying current, as rectifying thermionic valves.

non-linear resistance (*Elec. Comm.*). Any device in which there is not a linear relation between the applied voltage and the consequent current—a special requirement in modulators and demodulators, such as thermionic valves and crystal and metal-oxide rectifiers.

non-locking key (or **relay**) (*Elec. Comm.*). A key (or relay) which returns to its unoperated condition when the hand is removed, or the current ceases, usually by the action of a spring, which is extended on operation. The key is said to *restore*, and the relay to *fall off.*

non-magnetic steel (*Elec. Eng.*). A steel, containing about 12% of manganese, which does not exhibit magnetic properties.

non-magnetic watch (*Horol.*). A watch so constructed that its performance is not affected by magnetic fields. Usually, the balance, balance spring, roller, and fork are made of a non-magnetic alloy.

non-medullated (*Zool.*). See **amyelinate.**

non-metal (*Chem.*). An element which readily forms negative ions, often in combination with other non-metals. Non-metals are generally poor conductors of electricity.

non-metallic inclusions (*Met.*). See **inclusions.**

non'oses (*Chem.*). A group of monosaccharoses, containing nine oxygen atoms in the molecule, e.g. $HO\ CH_2{\cdot}(CHOH)_7{\cdot}CHO$.

nonpareil, non-par-el' (*Typog.*). The old name for a type-size now standardised as 6-point.

non-polarised relay (*Elec. Comm.*). A relay in which there is no magnetic polarisation. The operation depends on the square of the current in the windings, and is therefore independent of direction.

non-reactive load (*Elec. Eng.*). A load in which the current is in phase with the voltage across its terminals.

non-sensibility (*Bot*). The ability of a plant to support the development of a parasite without showing marked signs of disease.

non-sequence (*Geol.*). A break in the continuity of the stratigraphical column, less important and less obvious than an unconformity, and deduced generally on palaeontological evidence.

non-slip or **non-skid** (*Build., Civ. Eng.*). A term applied to road, floor, or other surfaces specially prepared to minimise slipping tendencies.

non-speaking stop (*Acous.*). See **speaking stop.**

non-synchronous motor (*Elec. Eng.*). An a c motor which does not run at synchronous speed, e.g. an induction motor or an a.c. commutator motor. Also called ASYNCHRONOUS MOTOR.

non-tension joint (*Elec. Eng.*). A joint in an overhead transmission line conductor which is designed to carry full-load current but not to withstand the full mechanical tension of the conductor.

non-uniform flow (*Hyd.*). Flow in a channel when the water surface is not parallel to the invert.

non-valent (*Chem.*). See **zero-valent.**

non-vi'able (*Bot., Zool*). Incapable of surviving.

noon (*Astron.*). The instant of the sun's upper culmination at any place. See also **mean noon, sidereal noon.**

Nord'hausen sulphuric acid (*Chem.*). See **fuming sulphuric acid.**

nord'markite (*Geol.*). A type of quartz-bearing soda-syenite, described originally from Nordmarken in Norway; consists essentially of microperthites, aegirine, soda amphibole, and accessory quartz.

Norfolk (or **Canadian**) **latch** (*Join.*). A latch in which the fall bar is actuated within the limits of the keeper by a lifting lever passing through a slot in the door and operated by the pressure of the thumb at one end.

nor'ite (*Geol.*). A coarse-grained igneous rock of basic composition consisting essentially of plagioclase (near labradorite in composition) and orthopyroxene. Other coloured minerals are usually present in varying amount, notably clinopyroxene, which, however, must not exceed half of the total pyroxene content.

norm. The value of a quantity or of a state which is statistically most frequent.—(*Geol.*) The composition of an igneous rock expressed in terms of standard mineral molecules, calculated from the chemical analysis as stated in terms of percentages of oxides. Cf. *mode.*

normal (*Bot., etc.*). Quite ordinary in structure and all other respects.

normal (*Chem.*). Containing an unbranched chain of carbon atoms; e.g. *normal* propyl alcohol is $CH_3{\cdot}CH_2{\cdot}CH_2{\cdot}OH$, whereas the isomeric *iso*propyl alcohol, $(CH_3)_2{:}CH{\cdot}OH$, has a branched chain.

normal (*Maths., etc.*). The *normal* to a line or surface is a line drawn perpendicular to it.

normal (*Psychol.*). Said of one who is well adjusted to himself and to the outside world.

normal bend (*Elec. Eng.*). A section of conduit bent to a moderately large radius; used in an electrical installation for connecting two other pieces of conduit which are at right-angles to each other.

normal calomel electrode (*Chem.*). A calomel electrode containing normal potassium chloride solution.

normal electrode potential (*Chem.*). See **standard electrode potential.**

normal element (*Chem.*). A *standard cell* (q.v.).

normal fault (*Geol.*). A fracture in rocks along which relative displacement has taken place under tensional conditions, the *fault* (q.v.) hading to the downthrow side. Cf. *reversed fault.*

normal order of crystallisation (*Geol.*). A term which perpetuates a misconception. There is no generally applicable order of crystallisation, but for any particular rock the study of thin sections enables the observer to deduce the order in which the minerals *finished* crystallising. The order in many rocks is: accessories, mafic minerals in the order olivine, orthopyroxenes, clinopyroxenes, amphiboles, micas, overlapping with plagioclase, orthoclase, quartz; but there are many exceptions.

normal polarisation (*Radio*). The state of polarisation of an electromagnetic wave radiated from a vertical antenna, when measured on the ground at not too great a distance from the transmitter. The electric component is vertical, and the magnetic component horizontal.

normal salts (*Chem.*). Salts formed by the replacement by metals of all the replaceable hydrogen of the acid.

normal segregation (*Met.*). A type of segregation in which the content of impurities and inclusions tends to increase from the surface to the centre of cast metals. Of special importance in steel, in which phosphorus, sulphur, and oxide inclusions segregate in this way. See also **inverse segregation.**

normal sensitivity (*Elec. Eng.*). See **factor of merit.**

normal solution (*Chem.*). A solution made by dissolving the gram-equivalent weight of a substance in sufficient distilled water to make a litre of solution.

normal temperature and pressure (*Chem.*). See **N.T.P.**

normalising (*Met.*). A heat-treatment applied to steel. Involves heating above the critical range, followed by cooling in air. Is performed to refine the crystal structure and eliminate internal stress.

normality (*Chem.*). The concentration of a solution expressed in gram-equivalents of active material per litre of solution.

normally aspirated engine (*I.C. Engs.*). An unsupercharged or unboosted petrol or oil engine.

nor′moblast (*Zool.*). A stage in the development of an erythrocyte from an erythroblast when the nucleus has become reduced in size and the cytoplasm contains much haemoglobin.

nor′te (*Meteor.*). See **norther.**

north light roof (*Struct.*). A pitched roof with unequal slopes, of which the steeper is glazed and arranged to receive light from the north.

north pole (*Elec.*). See **pole.**

Northampton Sands (*Geol.*). A local group of sandstones containing ironstone beds; found in the Middle Jurassic strata of Northamptonshire.

norther or norte, nor′tā (*Meteor.*). A dry cold wind blowing from the north over the Gulf of Mexico, Valparaiso, or Table Bay.

Northern Lights (*Astron.*). See **Aurora Borealis.**

northing (*Surv.*). A north latitude.

Northrup furnace (*Elec. Eng.*). See **coreless induction furnace.**

Norton's theorem (*Elec. Comm.*). A source can be considered as a constant current generator, the current being equal to the short-circuit current, in parallel with an impedance which equals the source impedance. See **Thévénin's theorem.**

Norusto (*Paint.*). Trade-name for a preservative paint for iron surfaces.

Norwich Crag (*Geol.*). A group of sands, clays, and gravels found near Norwich and belonging to the Middle Pliocene Series.

Norwich (or **straight**) **tie** (*Weaving*). The tying up of the harness in a jacquard loom so that the jacquard machine and its card cylinder are parallel to the comberboard. See **London tie.**

nose dive (*Aero.*). See **dive.**

nose heaviness (*Aero.*). The state in which the combination of the forces acting upon an aircraft in flight is such that it tends to pitch downwards by the nose.

nose-key (*Join.*). One of the small wedges used in the operation of foxtail wedging.

nose ribs (*Aero.*) Small intermediate ribs, usually from the front spar to the leading edge only, of planes and control surfaces. They maintain the correct wing contour under the exceptionally heavy air load at that part of the aerofoil.

nose-ring (*Vet.*). A hinged ring for transfixing the nasal septum of bulls as a means of restraint.

nose-suspension (*Elec. Eng.*). A method of mounting a traction motor, by supporting one side of it on the axle and the other side on the framework of the truck.

no′sean or **no′selite** (*Min.*). Silicate of sodium and aluminium with sodium sulphate, crystallising in the cubic system. Occurs in extrusive igneous rocks which are rich in alkalies and deficient in silica, e.g. phonolite.

nosing (*Build.*). The exposed edge of the tread of a step, often rounded and projecting beyond the riser. See **line of nosings.**—(*Join.*) A bead on the edge of a board, making it half-round.

nosing motion (*Cotton Spinning*). A motion on the mule spinning frame which, as the diameter lessens, increases the speed of the tapering spindle on which a cop is being wound.

nosol′ogy (*Med.*). Systematic classification of diseases: the branch of medical science which deals with this.

nosopho′bia (*Med.*). Morbid fear of contracting disease.

Noss Series (*Geol.*). A group of flaggy sandstones and grey shales, of Upper Devonian age, found in Shetland and the island of Noss.

nostrils (*Anat., Zool.*). The external nares.

not (*Paper*). The unglazed, rough surface of drawing-papers which have not been highly pressed. Intermediate between *hot-pressed* and *rough.*

notch (*Carp.*). A groove cut in the side of one timber to receive the side of another timber.

notch (*Elec. Eng.*). A term often used to denote any of the various positions of a controller.

notch board (*Carp.*). A notched board carrying the treads and risers of a staircase.

notch brittleness (*Met.*). Susceptibility to fracture in the Izod or Charpy tests without absorbing much energy.

notch plate (*Civ. Eng.*). A vertical barrier, with a notch cut in its upper edge, placed across the current of a stream. Used as a means of gauging the flow over the notch by measurement of the head of water above it.

notch sensitivity (*Met.*). The extent to which the endurance of metals, as determined on smooth and polished specimens, is reduced by surface discontinuities, such as tool marks, notches, and changes in section, which are common features of actual components. It tends to increase with the hardness and endurance limit.

notch toughness (*Met.*). The energy in ft. lbs. required to break standard specimens under the standard conditions realised in the Izod or the Charpy test. It may also mean the opposite of *notch brittleness* (q.v.).

notched-bar test (*Met.*). A test in which a notched metal specimen is given a sudden blow by a striker carried by a pendulum or a falling weight and the energy absorbed in breaking the specimen is measured. Also called IMPACT TEST. See also **Izod test, Charpy test, Fremont test.**

notching (*Carp.*). The process of jointing timbers together by fitting one or both into a notch cut in the other.

notching (*Civ. Eng.*). The method of excavating cuttings for roads or railways in a series of steps worked at the same time.

notching adze (*Carp.*). An adze with a nearly straight cutting edge; used for cutting notches in timbers.

notching (or **linking**) **up** (*Eng.*). Movement of the gear-lever of a locomotive or steam-engine towards the centre of a notched quadrant, to decrease the valve travel and shorten the cut-off.

note (*Acous.*). An identifiable musical tone, whether pure or complex.

See **hum**— **strike**— **wolf**—*

note magnifier (*Radio*). An obsolete term for the audio-frequency amplifier following the detector in a radio receiver.

note tuning (*Radio*). A method of obtaining additional freedom from interference in a radio-telegraph receiver designed for the reception of spark or I.C.W. transmission; the post-detector circuits are tuned to the audio-frequency note of the transmitter.

Notgrove Freestone (*Geol.*). A limestone of Middle Jurassic age occurring in the Cotteswold Hills in Gloucestershire; has been much used for building purposes.

Nothe Beds (*Geol.*). A thin bed of sandstone of Upper Jurassic age found on the Dorset coast.

no'tochord (*Zool.*). In *Chordata*, skeletal rod formed of turgid vacuolated cells and originating from the endoderm of the mid-dorsal line of the archenteron.—*adj.* **notochor'dal.**

notocir'rus (*Zool.*). In *Polychaeta*, a cirrus borne by the notopodium.

notonec'tal (*Zool.*). Swimming in an inverted position with the ventral surface uppermost.

notopo'dium (*Zool.*). In *Polychaeta*, the dorsal lobe of a parapodium.

Notos'traca (*Zool.*). An order of mainly fresh-water *Branchiopoda* in which there is a broad shield-like carapace and a pair of sessile crescentic eyes; the second antennae are vestigial; there are very numerous pairs of trunk limbs; the caudal furca are long and jointed. Tadpole Shrimps.

no'tum (*Zool.*). The tergum of *Insecta.*—*adj.* **no'tal.**

nova (*Astron.*). A star which makes a sudden appearance in the sky, generally decreasing rapidly in brightness after its first outburst. Also called NEW STAR, TEMPORARY STAR.

Novachord (*Acous.*). An electronic musical instrument using a single keyboard, sustaining and swell pedals. Lever stops regulate the wave-form and envelope of the current applied to the loudspeaking radiators, the frequencies of the notes being divided by multivibrators from frequencies generated for the highest chromatic octave.

novac'ulite (*Geol.*). A fine-grained or crypto-crystalline rock composed of quartz or other forms of silica, with accessory feldspar or garnet. Used as a whetstone.

No'vocaine (*Chem.*). $H_2N{\cdot}C_6H_4{\cdot}CO{\cdot}O{\cdot}CH_2{\cdot}CH_2{\cdot}N(C_2H_5)_2, HCl$, the hydrochloride of diethylaminoethyl *p*-aminobenzoate. Colourless needles; m.p. 156° C.; a widely used local anaesthetic. A trade-name.

Novoid (*Build.*). Trade-name for a powder having a colloidal silica basis; used for making cement surfaces water-, oil-, and acid-proof.

Novolak (*Chem.*). Trade-name for the soluble, fusible, resinous products obtained by the condensation of phenols with formaldehyde.

nozzle. An outlet tube through which a discharge of fluid finally passes.

nozzle (*Eng.*). (1) In impulse turbines, specially shaped passages for expanding the steam, thus creating kinetic energy of flow with minimum loss.—(2) In oil engines, orifices, open or controlled by the injection valve, through which the fuel is sprayed into the cylinder. See also **convergent-divergent nozzle.**

N.P.D. (*Astron.*). See **polar distance.**

N.R.M.E. (*Build.*). Abbrev. for *notched, returned, and mitred ends.*

N.S. (*Astron., etc.*). Abbrev. for *New Style* (q.v.).

Nt (*Chem.*). The symbol for *niton.*

N.T.P. (*Chem.*). An abbrev. for *normal temperature and pressure*, i.e. 0° C. and 760 mm. of mercury.

N.T.S. Abbrev. for *not to scale*; used by draughtsmen on some drawings.

N.U. tone (*Teleph.*). See **number-unobtainable tone.**

Nubian Sandstone (*Geol.*). The basal member of the Cretaceous System in Egypt, deposited in the southern part of the Tethys. By its disintegration it has formed the great Libyan desert.

nucel'lar budding (or **embryony**) (*Bot.*). The formation of an embryo from cells of the nucellus and not from the fertilised egg.

nucel'lus (*Bot.*). A mass of thin-walled cells occupying the middle of an ovule, protected by the integument or integuments, and containing the embryo sac.

nu'chal (*Zool.*). Pertaining to, or situated on, the back of the neck.

nuchal bone (*Zool.*). In Sturgeons and their allies, a posterior unpaired membrane bone of the skull situated just behind the dermoccipital.

nuchal cartilage (*Zool.*). In some *Cephalopoda*, a thin plate of cartilage situated at the back of the neck.

nuchal flexure (*Zool.*). In developing Vertebrates, the flexure of the brain occurring in the hinder part of the medulla oblongata, which bends in the same direction as the primary flexure.

nuchal organ (*Zool.*). In *Polychaeta*, one of a pair of ciliated pits on the surface of the prostomium, believed to be olfactory in function: in branchiopod *Crustacea*, a group of sensory cells containing refractive bodies occurring on the upper side of the head, the function of which is unknown.

nuchal plate (*Zool.*). In *Chelonia*, the most anterior median plate of the carapace.

nuciv'orous (*Zool.*). Nut-eating.

nu'clear, nu'cleate, nucle'ic, nucle'iform. *Adjs.* from *nucleus.*

nuclear budding (*Cyt.*). Production of two daughter nuclei of unequal size by constriction of the parent nucleus.

nuclear chemistry (*Chem.*). The study of reactions in which new elements are produced.

nuclear division (*Cyt.*). See **mitosis, meiosis, amitosis.**

nuclear fragmentation (*Cyt.*). The formation of two or more portions from a nucleus by direct break up, and not by mitosis.

nuclear membrane (*Cyt.*). The delicate bounding membrane of the nucleus separating nucleoplasm from cytoplasm.

nuclear plate (*Cyt.*). The aggregation of chromosomes in the equatorial plane during mitosis or meiosis.

nuclear retic'ulum (*Cyt.*). A meshwork of delicate threads of chromatin seen in stained preparations of metabolic nuclei.

nuclear sap (*Cyt.*). See **karyolymph.**

nuclear spindle (*Cyt.*). The fusiform structure, composed of fine fibrils arranged longitudinally and converging at the poles, which appears in the cytoplasm of a cell surrounding the nucleus during mitosis and meiosis.

nuclear stain (*Micros.*). A stain which will pick out the nuclei in a tissue or organ in a different colour or shade.

nuclear symbols (*Chem.*). See **isotopic symbols.**

nu'cleases (*Chem.*). Enzymes inducing hydrolysis of nucleic acid.

nu'cleate (*Biol.*). Possessing a nucleus or nuclei. —(*Bot.*) An old term meaning *guttate.*

nuclei. *Pl.* of *nucleus.*

nuclei (*Met.*). Points at which crystals begin to grow during solidification. In general, they are minute crystal fragments formed spontaneously in the melt, but frequently non-metallic inclusions act as nuclei. See also **crystal nuclei.**

nucle'ic acid (*Chem.*). The acid component of nucleoproteins, from which it can be obtained by complete hydrolysis. It is a complex acid, composed of phosphate radicals, carbohydrates, and purine and pyrimidine bases.

nu'clein (*Chem.*). A product of the partial hydrolysis of nucleoproteins, consisting of a protein molecule attached to a molecule of nucleic acid.

nu'cleo- (Latin, *nucleus*). A prefix used in the construction of compound terms; e.g. *nucleomicrosome*, a microsome occurring within the nucleus.

nucleochyle'ma (*Cyt.*). See **nuclear sap.**

nucleohy'aloplasm (*Zool.*) See **nuclear sap.**

nu'cleolate (*Bot.*). Said of a spore which contains one or more conspicuous oil-drops.

nucleolin'i (*Cyt.*). Special particles occurring within the nucleolus which do not disappear during mitosis.

nucleo'lo-centrosome (*Cyt.*). A prominent deeply staining body found in the nucleus in some lower plants.

nucleo'lus (*Cyt.*). A homogenous spherical body occurring within a cell-nucleus.—*adj.* **nucleo'lar.**

nu'cleome (*Bot.*). The whole of the nuclear substance in a protoplast.

nu'cleoplasm (*Cyt.*). The dense protoplasm composing the nucleus of a cell. Cf. *cytoplasm.*

nucleoplas'mic ratio (*Cyt.*). The ratio between the volume of the nucleus and of the cytoplasm in any given cell.

nucleopro'teins (*Chem.*). A group of compounds containing a protein molecule combined with a nuclein. They are important constituents of the nuclei of living cells, e.g. blood corpuscles, yeast cells, etc., containing phosphoric acid. They are insoluble in water and in acids, but soluble in alkalis. On hydrolysis they yield a protein and a nuclein, and the latter yields on further hydrolysis a second protein and nucleic acid.

nucleus (*Astron.*). The term applied to the denser core of a tenuous body such as a comet, and to the starry condensations seen in gaseous nebulae.

nucleus (*Biol.*). The chief organ of the cell. It is a usually spheroidal cavity in the cytoplasm, bounded by a nuclear membrane and containing, bathed in nuclear sap, a complicated system of proteins disposed in the form of a network and/or of rounded nucleoli. This system of proteins appears to control the activities of the cell and to determine the transmission of inheritable characters when the nucleus divides.

nucleus (*Bot.*). (1) An old term for the nucellus.—(2) An old term for an oil-drop.—(3) See **centrum.**

nucleus (*Phys.*). The nucleus of an atom is thought to be positively charged and to contain practically all the mass of the atom. Its diameter is estimated at 10^{-13}-10^{-12} cm. It is probably composed of protons, electrons, and, perhaps, neutrons, the algebraic sum of whose charges equals the atomic number. See **atom, isotopes, Bohr theory.**

nucleus (*Zool.*). (1) Any nut-shaped structure.—(2) A nerve centre in the brain.—(3) In some *Hemimyaria*, a relatively small dark mass at the hinder end of the body, representing the oesophagus, stomach, and intestine.—(4) A collection of nerve cells on the course of a nerve or tract of nerve fibres.

nucleus pulpo'sus (*Zool.*). A gelatinous mass in the centre of an invertebral disc, representing the remnant of the notochord in the adults of higher Vertebrates.

Nu'da (*Zool.*). A subclass of *Ctenophora* the members of which do not possess tentacles.

nudation (*Bot.*). The formation, by natural or artificial means, of an area bare of plants.

nudibran'chiate (*Zool.*). Having the gills exposed, not within a branchial chamber.

nudicau'date (*Zool.*). Having the tail uncovered by fur or hair, as Rats.

nullip'ara (*Med.*). A woman who has never given birth to a child.—*adj.* **nullip'arous.**

nul'liplex (*Gen.*). Polyploid, but lacking the dominant of any given pair of allelomorphs.

number-unobtainable tone (*Teleph.*). The tone which is placed on a subscriber's line to indicate that the number demanded or dialled is not obtainable, either because it does not exist, or because, for the moment, there is an insufficiency of apparatus for connexion to be completed. Abbrev. **N.U. tone.**

numerical selector (*Auto. Teleph.*). One of the selectors which are controlled by impulses corresponding to the required number in the desired exchange, and not by the coded trains which are required for finding the exchange.

nummula'tion (*Zool.*). The tendency shown by erythrocytes to form rouleaux.

Nummulit'ic Limestone (*Geol.*). A thick bed of limestone, of Eocene age, composed mainly of foraminifera; stretches from the Alps through Persia to China.

nun's veiling (*Textiles*). A light-weight dress fabric, of plain weave, made from single Botany worsted yarns.

nu'natak (*Geol.*). An isolated mountain peak which projects through an ice sheet.

nuptial chamber (*Zool.*). The small burrow formed by a pair of sexual Termites initiating a new colony.

nuptial flight (*Zool.*). The flight of a virgin Queen Bee, during which she is followed by a number of males, copulation and fertilisation taking place in mid-air.

nurse (*Zool.*). A budding form in *Cyclomyaria.*

nurse balloon (*Aero.*). A balloon connected to another balloon or airship while grounded, to stabilise the gas pressure therein, or to act as a reservoir.

nurse cells (*Zool.*). Cells surrounding, or attached to, an ovum, probably to perform a nutritive function.

Nust (*Paint.*). Trade-name for a preservative paint for iron surfaces.

nut (*Bot.*). A hard, dry, indehiscent fruit formed from a syncarpous gynaeceum, and usually containing one seed. The term is used loosely for any fairly-large to large hard, dry, one-seeded fruit.

nut (*Eng.*). A metal collar, screwed internally, to fit a bolt; usually hexagonal in shape, but sometimes square or round.

See **castle—** **lock—**

nut (*Typog.*). See **en quad.**

nut-galls (*Chem.*). See **Aleppo galls.**

nu'tant (*Bot.*). Hanging with the apex downwards; nodding.

nutation (*Astron.*). A relatively short-period fluctuation in the precessional movement of the earth's pole about the pole of the ecliptic, by which the true celestial pole differs from its mean place by an amount resolved into two components, called respectively *nutation in longitude* and *nutation in obliquity.*

nutation (*Bot.*) The rotation in space of the apex of an axis which is growing in length.

nutlet (*Bot.*). A one-seeded portion of a fruit which fragments as it matures.

nu'tricism (*Zool.*). Any association between two animals which is beneficial to one partner only.

nutrient (*Med.*). Conveying, serving as, or providing nourishment. Nourishing food. For NUTRIENT ENEMA, see **enema.**

nutrient solution (*Bot.*). An artificially prepared solution containing some or all of the mineral substances used by a plant in its nutrition.

nutrition (*Zool.*). The process of feeding and the subsequent digestion and assimilation of food-material.—*adj.* **nu'tritive.**

N.V.M. (*Chem.*). An abbrev. for *non-volatile matter.*

N.W. (*Build.*). An abbrev. for *narrow widths.*

nyctalo'pia (*Med.*). Night blindness; moon blindness. Abnormal difficulty in seeing objects in the dark; due often to deficiency of vitamin A in the diet.

nyc'tanthous (*Bot.*). Said of flowers which open at night.

nyctinas'tic movements (*Bot.*). Movements of plants associated with the alternation of day and night, due to changes in temperature and illumination; sleep-movements.

nyctipelagic, —aj'ik (*Zool.*). Found in the surface waters of the sea at night only.

nyctitrop'ic (*Bot.*). A term referring to the position assumed by leaves, etc., at night.

nymph (*Zool.*). In *Acarina,* the immature stage intervening between the period of acquisition of four pairs of legs and the attainment of full maturity: in *Insecta,* a young stage of *Exopterygota* intervening between the egg and the adult, and differing from the latter only in the rudimentary condition of the wings and genitalia.

nym'phae (*Zool.*). See **labia minora.**

nystag'moid (*Med.*). Resembling nystagmus.

nystag'mus (*Med.*). An abnormal and involuntary to-and-fro movement of the eyeballs.

o- (*Chem.*). An abbrev. for *ortho-*, i.e. containing a benzene nucleus substituted in the 1.2 positions.

ω (*Chem.*). A symbol for specific magnetic rotation.

ω- (*Chem.*). A symbol indicating: (1) substitution in the side chain of a benzene derivative; (2) substitution on the last carbon atom of a chain, farthest from a functional group.

ω (*Elec. Comm., Elec. Eng., etc.*). The most frequently used symbol for *radian frequency* or *pulsatance*, i.e. frequency $\times 2\pi$.

② (*Build.*). Abbrev. for *two coats in oil.*

O (*Chem.*). The symbol for *oxygen.*

O- (*Chem.*). A symbol indicating that the radical is attached to the oxygen atom.

—Ω (*Chem.*). A symbol for the ultimate disintegration product of a radioactive series, an isotope of lead.

oak (*Timber*). A strong, tough, and heavy hardwood, very durable in exposed positions. Commonly used in constructional work for timber bridges, dock gates, heavy framing, piles, as well as for joinery.

oakum (*Plumb.*). Untwisted rope or hemp used for caulking joints.

oast (*Build.*). A hop-drying kiln.

oatmeal cloths (*Textiles*). Fabrics having a resemblance to oatmeal and a rough appearance; made with a crêpe type of weave from crossbred worsted yarns.

O.B. (*Elec. Comm.*). Abbrev. for *outside broadcast.*

ob- (*Bot.*). Prefix meaning *reversed, turned about.* Thus, *obclavate* is reversed *clavate*, i.e. attached by the broad and not the narrow end.

Obach cell, ŏ'bahh (*Elec. Eng.*). A dry primary cell having ingredients similar to the Leclanché cell—i.e. a carbon positive electrode surrounded by a depolariser of manganese dioxide paste—and having the electrolyte in the form of a paste of salammoniac, plaster of Paris, and flour.

Obach process (*Gutta Percha*). A process for deresinating raw gutta-percha; the solvent is lythene, a low-boiling fraction of petroleum.

obcompressed (*Bot.*). Flattened from front to back.

obcon'ic, obcon'ical (*Bot.*). Cone-shaped but attached by the point.

obdiplostem'onous (*Bot.*). Having two whorls of stamens, the members of the outer whorl placed opposite to the petals and not alternating with them.

obelisk (*Arch.*). A slender stone shaft, generally monolithic, square in section, and tapering towards the top, which is surmounted by a small pyramid.

O'bernetter's process (*Photog.*). The production of an intaglio copper plate by applying a film containing a silver chloride image, with subsequent electrolysis.

object glass or **objective** (*Light*). That lens in an optical instrument which is directed towards the object to be observed, of which it serves to form an image which may be examined with the eyepiece.

objective noise-meter (*Acous.*). A noise-meter in which the noise-level to be measured operates a microphone, amplifier, and detector, the last-named indicating the noise-level on the phon scale. The apparatus is previously calibrated with known intensities of the reference tone, 1000 cycles per second, suitable weighting networks and an integrating circuit being incorporated in the amplifier to simulate the relevant properties of the ear in appreciating noise.

objective prism (*Astron.*). One of the forms of prism spectroscope in which the prism is placed in front of instead of behind the objective, the light from the star passing through the prism and being drawn out into a spectrum without the use of a slit; hence the alternative term for this instrument, SLITLESS SPECTROSCOPE.

oblate. Globose, but noticeably wider than long.

obligate (*Bot., Zool.*). Compelled; without the power of choice of mode of life; as an *obligate* parasite, which is incapable of leading a free-living existence. Cf. *facultative.*

obligate saprophyte (*Biol.*). An organism which lives on dead organic material and cannot attack a living host.

oblique aerial photograph (*Surv.*). A photograph taken from the air, for purposes of aerial survey work, with the optical axis of the camera inclined from the vertical, generally at some predetermined angle.

oblique arch (*Civ. Eng.*). An arch whose axis is not normal to the face.

oblique division (*Bot.*). The development of a septum which is neither parallel to the longitudinal axis of the cell nor across it at right-angles.

oblique joint (*Carp., etc.*). An angle joint between pieces which are not mutually at right-angles.

oblique offset (*Surv.*). The horizontal distance measured to a point from a main survey line in a direction which is not at right-angles to the latter.

oblique plane (*Bot.*). Any plane of a flower other than the median and lateral planes.

oblique system (*Crystal.*). See **monoclinic system.**

obliquity of the ecliptic (*Astron.*). The angle at which the earth's orbital plane, or the ecliptic, is inclined to the earth's equatorial plane, or the celestial equator; it amounts to 23° 27′ 8·26″ and is very slowly decreasing.

obliquus, ob-lē'kwus (*Zool.*). An asymmetrical or obliquely placed muscle.

obliterating paint (*Paint.*). A special dense *flatting* (q.v.) used over a primary coat to give a ground for a final coat of glossy paint or enamel.

obliteration (*Bot.*). The crushing and closing up of tubular elements within a plant by the pressure set up by new elements as they develop.

obliterative coloration (*Zool.*). A type of coloration shown by many animals that are usually subject to light striking them from above; the upper parts of the body are dark-coloured (to counteract the greater intensity of light on those parts), and shade gradually into the light-coloured lower parts.

oblong (*Bot.*). Elliptical, blunt at each end, having nearly parallel sides, and two to four times as long as broad.

O.B.M. (*Surv.*). Common abbrev. for *Ordnance Bench Mark.*

ob'ovate' (*Bot.*). Having the general shape of the longitudinal section of an egg, not exceeding twice as long as broad, and with the greatest width slightly above the middle; hence, attached by the narrower end.

ob'ovoid' (*Bot.*). Solid, egg-shaped, and attached by the narrower end.

obscuration (*Paint.*). The area which a given quantity of paint will cover without thinning unduly.

obscure (*Bot.*). Said of venation which is very little developed, so that hardly more than the midrib can be seen.

obscured glass (*Build.*). Glass which is so treated as to render it not transparent.

obsession (*Psycho-path.*) The morbid persistence of an idea in the mind, against the wish of the obsessed person.

obsessional neurosis (*Psycho-path.*). A functional nervous disorder characterised by a need to perform routine patterns of behaviour, in an attempt to solve the strong underlying unconscious conflicts—e.g. repeated handwashing, repeated confirmation of locked doors, ceremonial routines performed periodically each day. A high degree of doubt is present about everything in the minds of those individuals. This neurosis arises from an emotional arrest at a pregenital anal phase of development, and shows the corresponding character traits. See **anal-erotic individual, anal-sadistic.**

obsid'ian (*Geol.*). A volcanic glass of granitic composition, generally black with vitreous lustre and conchoidal fracture; occurs at Mt. Hecla in Iceland, in the Lipari Isles, and in the Yellowstone Park, U.S.A. A green silica glass found in ploughed fields in Moravia is cut as a gemstone and sold under the name *obsidian*. True obsidian is used as a gemstone and is often termed ICELAND AGATE.

obstetrician. A medically qualified person who practises obstetrics.

obstetrics. That branch of medical science which deals with the problems and management of pregnancy and labour.

obstipation (*Med.*). Severe and intractable constipation.

ob'struent (*Med.*). Obstructing: that which obstructs: an astringent drug.

obtect (*Zool.*). Said of pupae which have the wings and legs glued to the body and which are therefore incapable of movement.

obturation (*Artillery*). The method used for preventing the escape of gas to the rear when firing. It is achieved by the cartridge case in Q.F. guns and by an asbestos pad in B.L. guns.

ob'turator (*Zool.*). Any structure which closes off a cavity; e.g. all the structures which close the large oval foramen formed by the ischio-pubic fenestra: the foramen itself.

obturator fissure (*Zool.*). In Birds, a space between the ischium and the pubis which serves for the passage of the obturator nerve and corresponds to the obturator foramen in Mammals.

obtu'silin'gual (*Zool.*). Having a short blunt tongue.

obvol'vent (*Zool.*). Folded downwards and inwards, as the wings in some Insects.

occasional species (*Bot.*). A species which is found from time to time in a given plant community but is not a regular member of that community.

occidental topaz (*Min.*). A trade name for certain yellow-coloured varieties of quartz used as semi-precious gemstones. See also **Spanish topaz.**

occipital, ok-sip'— (*Zool*). A bone of the Vertebrate skull, one of the *occipitalia* (q.v.): pertaining to the occiput.

occipita'lia (*Zool.*). A set of cartilage bones forming the posterior part of the brain-case in the Vertebrate skull.

oc'ciput (*Zool.*). In Insects, the part of the epicranium between the vertex and the neck: the occipital region of the Vertebrate skull forming the back of the head.—*adj.* **occipital.**

occlusion (*Bot.*). The blocking of a stoma by the ingrowth of parenchymatous cells into the sub-stomatal cavity.—(*Zool.*) Closure of a duct or aperture.

occlusion (*Chem.*). The retention of a gas or a liquid in a solid mass or on the surface of solid particles; especially the retention of gases by solid metals.

occlu'sor (*Zool.*). A muscle which by its contraction closes an operculum or other movable lid-like structure.

occultation (*Astron.*). The hiding of one celestial body by another interposed between it and the observer, as the hiding of the stars and planets by the moon, or the satellites of a planet by the planet itself.

occupancy (*Teleph.*). The fraction of time during which a circuit or switch is occupied in passing calls.

ocean. Any of the major expanses of salt water on the face of the globe.

ocean depths. The greatest depth (over 10,400 metres) discovered in the various oceans lies in the Pacific; depths of over 8500 metres and 7000 metres have been recorded in the Atlantic and the Indian Ocean respectively.

ocean temperatures. The mean surface temperature of the Pacific and Atlantic Oceans is 17° C.; that of the Indian Ocean 18° C. Maximum temperatures are respectively 32° C., 30° C., and 35° C.

o'ceanite (*Geol.*). A type of basaltic igneous rock occurring typically in the oceanic islands as lava flows; characterised by a higher percentage of coloured silicates (olivine and pyroxene), and a lower percentage of alkalies, than in normal basalt.

ocel'late (*Bot.*). Marked by a round patch different in colour from the ground.

ocel'lus (*Bot*). (1) An enlarged discoloured cell in a leaf.—(2) A swelling on the sporangiophore in some fungi; it may be able to perceive light.

ocellus (*Zool.*). A simple eye or eye-spot in *Invertebrata*: an eye-shaped spot or blotch of colour —*adj.* **ocel'late.**

ocher (*Paint.*). See **ochre.**

ochlopho'bia (*Med.*). Morbid fear of crowds.

ochra'ceous, o'chreous, o'chery (*Bot.*). Yellowish-brown.

ochre, ocher (*Paint.*). A natural earth pigment which mixes with clay and stains it yellow. The dried and ground clay is mixed with linseed oil or water to form paint.

och'rea, oc'rea (*Bot.*). A cup-shaped structure around a stem, formed from united stipules or united leaf bases.

ochroleu'cous (*Bot.*). Yellowish-white.

ochrono'sis (*Med.*). A rare condition in which a dark-brown or black pigment is deposited in the cartilages and other tissues of the body; associated often with alkaptonuria (in which homogentisic acid is present in the urine), and sometimes following the prolonged use of dressings of carbolic acid.

och'rophore (*Zool.*). See **xanthophore.**

ochrospo'rous (*Bot.*). Having yellow or yellow-brown spores.

octa- (*Chem.*). Containing eight atoms, groups, etc.

octahe'dral sulphur (*Chem.*). A crystalline form of sulphur which is octahedral in shape.

octahedral system (*Crystal.*). See **cubic system.**

octahedrite (*Min.*). A form of *anatase* (q.v.), crystallising in tetragonal bipyramids (*not* in octahedra—thus the name is a misnomer). It is usually of secondary origin, derived from other titanium-bearing minerals.

octahedron (*Crystal.*). A form of the cubic system which is bounded by eight similar faces, each being an equilateral triangle with plane angles of 60°.—*pl.* **octahedra.**

octam'erous (*Bot.*). Having parts in eights.

octane (*Chem.*). C_8H_{18}, a paraffin hydrocarbon.

There are eighteen compounds of this formula. The normal octane, a colourless liquid, b.p. 126° C., sp. gr. 0·702 at 20°, is found in petroleum. It has been synthesised.

octane number (*I.C. Engs.*). The percentage, by volume, of *iso*-octane (2,2,4-trimethylpentane) in a mixture of *iso*-octane and *normal* heptane which has the same knocking characteristics as the motor fuel under test; it serves as an indication of the knock-rating of a motor fuel.

octant division (*Bot.*). The division of an embryonic cell by walls at right-angles, giving eight cells.

octastyle (*Arch.*). A building having a colonnade of eight columns in front.

octava′lent (*Chem.*). Capable of combining with eight atoms of hydrogen or their equivalent.

octa′vo (*Print.*). A book having sixteen pages to the sheet; written 8*vo*.

octet (*Chem.*). An extremely stable group of eight electrons, formed in most cases of combination between atoms.

octode (*Thermionics*). A thermionic valve containing a cathode, anode, and six intermediate electrodes, used as a frequency changer in superheterodyne receivers. The first three electrodes, starting from the cathode, form the local oscillator system, and the remaining five constitute a pentode system whose emission varies at the frequency of the local oscillator.

octodecimo or **eighteenmo** (*Print.*). A book having thirty-six pages to the sheet; written 18*vo*.

octopod (*Zool.*). Having eight feet, arms, or tentacles.

Octop′oda (*Zool.*). An order of *Dibranchia* having eight normal arms, sessile suckers, no internal shell, and no lateral fins; living in crevices of rocks; carnivorous forms. Octopus.

oc′toses (*Chem.*). A group of monosaccharoses, containing eight oxygen atoms in the molecule; e.g. $HO \cdot CH_2 \cdot (CHOH)_6 \cdot CHO$.

octospo′rous (*Bot.*). Containing eight spores.

oc′tuple phantom circuit (*Teleph.*). A telephonic channel using two quadruple phantoms in parallel for both go and return speech channels.

ocul-, oculo- (Latin *oculus*, eye). A prefix used in the construction of compound terms; e.g. *oculo-nasal*, pertaining to the eye and to the nose.

oc′ular. An *eyepiece* (q.v.).

ocular (*Zool.*). Pertaining to the eye: capable of being perceived by the eyes.

ocular plates (*Zool.*). In *Echinoidea*, small plates occurring at the aboral end of each radius or ambulacral area.

ocular sclerites (*Zool.*). Annular sclerites surrounding the compound eye of each side in Insects.

oc′ulate (*Zool.*). Possessing eyes: having markings which resemble eyes.

oculist (*Med.*). One skilled in the knowledge and treatment of diseases of the eye.

o′culomo′tor (*Zool.*). Pertaining to, or causing movements of, the eye: the third cranial nerve of Vertebrates, running to the muscles of the eyeball.

oculus (*Build.*). A round window.

odd-side (*Moulding*). A cope rammed-up with a flat joint, to take the place of a *turn-over board* (q.v.), or rammed with dry sand, the parting joint made, and stoved, to act as a semi-permanent means of forming the joint on the drag, which is rammed-up on it.

odom′eter (*Ocean.*). A recording sheave used with line and weight sounders and other machines when it is necessary to know how much warp or wire has been paid out.—(*Surv.*) See **perambulator.**

Odona′ta (*Zool.*). An order of large- or medium-sized *Exopterygota* having two pairs of equal or subequal membranous wings; the antennae are small and inconspicuous but there is a pair of large compound eyes; the mouth-parts are adapted for biting; many species are brilliantly coloured; the immature forms are active, aquatic, and carnivorous, and usually show some adaptation for air-breathing. Dragon-flies, Damsel-flies.

odontal′gia (*Med.*). Toothache.

odon′tic (*Anat.*). Pertaining to the teeth.

odon′toblast (*Zool.*). A dentine-forming cell, one of the columnar cells lining the pulp-cavity of a tooth.

odon′toclast (*Zool.*). A dentine-destroying cell, one of the large multinucleate cells which absorb the roots of the milk-teeth in Mammals.

odontogeny, —toj′en-i (*Zool.*). The origin and development of teeth.

odon′tograph (*Eng.*). An approximate but practical method of setting out the profiles of involute gear-teeth, in which a pair of circular arcs is substituted for the true involute curve.

odon′toid (*Bot., Zool.*). Tooth-like.

odontoid process (*Zool.*). A process of the anterior face of the centrum of the axis vertebra which forms a pivot on which the atlas vertebra can turn.

odon′tolite (*Min.*). See **bone turquoise.**

odonto′ma. A term applied to any one of a variety of tumours that arise in connexion with the teeth.

odon′tophore (*Zool.*). The radula apparatus of *Mollusca*, comprising the radula, radula sac, and associated muscles and cartilages.

odontosto′matous (*Zool.*). Having jaws which bear teeth.

odorim′etry (*Chem.*). The measurement of the intensity and permanency of odours.

odor′iphore (*Chem.*). A group of atoms which confer an odour on a compound.

oedema or **edema,** *both* ē-dē′ma (*Bot.*). A large mass of unhealthy parenchyma.

oedema (*Med.*). Dropsy. Pathological accumulation of fluid in the tissue spaces and serous sacs of the body; sometimes the term is restricted to such accumulation in tissue spaces only. See also **Milroy's disease.**

oede′matous (*Med.*). Affected by oedema.

Oedipus complex (*Psycho-an.*). A Freudian name for a complex, present in all boys at an early age (often persisting into adult life), characterised by an unconscious rivalry for the mother's love, resulting in hostility to the father. Named from a circumstance in the legend of the Greek hero Oedipus. Cf. *Electra complex.*

oenan′thal (*Chem.*). Oenanthic aldehyde or *normal* heptylic aldehyde, $C_6H_{13} \cdot CHO$.

oe′nocytes (*Zool.*). In Insects, certain usually large cells which occur in groups in the pleural region of the abdomen; they are of ectodermal origin, and are believed to be ductless glands, secreting enzymes or hormones into the blood.

oe′nocytoids′ (*Zool.*). Rounded cells with homogenous acidophile protoplasm which do not exhibit phagocytosis, occurring in the haemolymph of Insects.

oersted, ėr′sted (*Elec. Eng.*). The name given to the c.g.s. electromagnetic unit of magnetising force. The name was at one time suggested (and is occasionally used) for the unit of reluctance.

oesophagec′tasis, oesophagecta′sia (*Med.*). Pathological dilatation of the oesophagus.

oesophagec′tomy (*Surg.*). Surgical removal of the oesophagus or part of it.

oesophagis′mus (*Med.*). See **achalasia of the cardia.**

oesophagi′tis (*Med.*). Inflammation of the oesophagus.

oesoph′agoscope (*Surg.*). An instrument for viewing the interior of the oesophagus.

oesoph'agospasm (*Med.*). See **achalasia of the cardia.**

oesoph'agosteno'sis (*Med.*). Pathological constriction of any part of the oesophagus.

oesophagostomi'asis (*Med.*). Infestation of the intestine with nematode worms of the genus *Oesophagostomum*; occurs in the tropics.

oesophago'stomy (*Surg.*). The surgical formation of an artificial opening into the oesophagus.

oesophagot'omy (*Surg.*). Surgical incision into the oesophagus.

oesoph'agus, esoph'agus (*Zool.*). In Vertebrates, the section of the alimentary canal leading from the pharynx to the stomach; usually lacking a serous coat and digestive glands; the corresponding portion of the alimentary canal in *Invertebrata.* —*adj.* **oesopha'geal.**

oestri'asis (*Vet.*). Infection of the nostrils of sheep and goats by the larvae of the sheep-nasal fly *Oestrus ovis.*

Oes'trin (*Physiol.*). A proprietary term denoting the follicular hormone *oestradiol** (q.v.).

oes'trogen, oes'trone (*Physiol.*). See Supplement.

oestroma'nia (*Vet.*) Nymphomania of animals.

oestrous cycle (*Physiol.*). In female Mammals, the succession of changes in the genitalia commencing with one oestrous period and finishing with the next.

oestrus, oestrum (*Zool.*). In female Mammals, the period of sexual desire and acceptance of the male occurring between prooestrum and metoestrum: more generally, the period of sexual desire.—*adj.* **oestral.**

office, central (*Teleph.*). See **central office.**

official, officinal, —fis'in-al (*Bot*). Used in medicine.

off colour (*Gems*). See under **first water.**

off-lap (*Geol.*). The dispositional arrangement of a series of conformable strata laid down in the waters of a shrinking sea, or on the margins of a rising landmass, so that the successive strata cover smaller areas than their predecessors. Cf. *overlap.*

off-peak load (*Elec. Eng.*). Load on a generating station or power supply system taken at times other than the time of the system peak load; e.g. during the night.

offset (*Bot.*). See **stolon.**

offset (*Build.*). A ledge formed at a place where part of a wall is set back from the general face of the wall.

offset (*Print.*). (1) A synonym for *set-off* (q.v.).—(2) Abbrev. for *offset printing.*

offset (*Surv.*). The horizontal distance measured to a point from a main survey line, in a direction at right-angles to the latter.

offset printing (*Print.*). A process in which the ink impression from a lithographic plate is received upon a rubber surface from which it is transferred to paper. The resilient rubber makes perfect contact even with paper of rough surface. Also called LITHO-OFFSET, OFFSET-LITHO.

offset rod (*Surv.*). A wooden pole painted in bands of different colours, each band being one foot or one link long so that the pole may be used for the measurement of short distances.

offset scale (*Surv.*). An instrument used in plotting detail from field notes of *offsets* (q.v.). It consists of a short graduated scale, often with its zero in the middle of the length.

offset tone-arm (*Acous.*). In a gramophone-record reproducer, a tone-arm which has been bent in order to minimise the effect of the arc which the needle normally traverses, as compared with the radial motion of the stylus which originally cut the track as a record.

off-shore dock (*Civ. Eng.*). A form of *self-docking dock* (q.v.) built in two equal-length sections of L-shaped end elevation, the side wall being connected to the shore by girders hinged at each end. Self-docking is effected by carrying one section in the lap of the other.

off-take lad (*Mining*). See **shackler.**

off the line (*Cinema.*). See under **on the line.**

O.F.H.C. (*Met.*). See **blister copper.**

O.G. (*Build.*). Abbrev. for *ogee.*

Ogden's method (*Chem.*). A method for estimating albumen in the urine, based on the appearance of a precipitate between the albuminous solution and concentrated nitric acid.

o'gee (*Arch.*). See **cyma.**

ogee arch (*Arch*). A pointed arch of which each side consists of a reverse curve.

oge'val arch (*Arch.*). An *ogee arch* (q.v.).

Ohio Shale (*Geol.*). Black shale formed in the Upper Devonian sea in Ohio, Michigan, and parts of Pennsylvania, and lying immediately beneath the basal members of the Mississippian System.

ohm (*Elec. Eng.*). The practical unit of resistance of an electrical circuit.

See **B.A.—** **legal—** **true—**
international— **thermal—**

Ohm's law (*Elec. Eng.*). The law governing the flow of a steady current in an electric circuit. It states that the voltage drop produced by the current is proportional to the magnitude of the current. Voltage divided by current defines resistance, which is constant with invariant temperature, except in special materials (see **Varistor**).

ohmic drop (*Elec. Eng.*). Voltage drop caused in a circuit owing to the current passing through the ohmic resistance of a circuit.

ohmic loss (*Elec. Eng.*). Loss in an electric circuit caused by the current passing through its resistance; equal to I^2R watts.

ohmic resistance (*Elec. Eng.*). See **d.c. resistance.**

ohm'meter (*Elec. Eng.*) An indicating instrument for giving a direct reading of the resistance of an electric circuit.

-oid (*Bot.*). Suffix meaning ***resembling, imitating.***

oidiomyco'sis, ō-id'— (*Vet.*). An infection of the mucous membrane of the mouth or crop of birds by the fungus *Oidium albicans.*

oidium, ō-id'i-um (*Bot*). One of a number of similar spores formed in a chain by the development of transverse septa in a hypha and the subsequent separation of the spores across the septa.

oik'oplast (*Zool.*). In *Larvacea*, one of the glandular ectoderm cells by which the test or capsule is secreted.

oils (*Chem.*). A group of neutral liquids comprising three main classes: (1) *fixed* (*fatty*) *oils*, from animal, vegetable, and marine sources, consisting chiefly of glycerides and esters of fatty acids; (2) *mineral oils*, derived from petroleum, coal, shale, etc., consisting of hydrocarbons; (3) *essential oils*, volatile products, mainly hydrocarbons with characteristic odours, derived from certain plants.

oils (*Diel.*). (As used in transformers, cables, switchgear.) See B.S.S. 148, 1933. Class A oils have a maximum sludge of 0·1% and may be used in transformers above 80° C. and in oil-switches above 70° C. Class B oils have a maximum of 0·8% and may be used in transformers up to 75° C.

oil absorption (*Chem.*). (A term usually applied to pigments.) The amount of linseed oil a pigment will absorb to reach a given consistency as determined by certain standards.

oil-blast circuit-breaker (*Elec. Eng.*). A form of oil circuit-breaker in which pressure set up by the gases produced as a result of the arc causes a blast of oil across the contact space, which ensures rapid extinction of the arc.

oil body (*Bot.*). A rounded mass of oily material occurring in the cell contents of many *Hepaticae.*

oil-break (*Elec. Eng.*). A term applied to switches, circuit-breakers, fuses, etc. to indicate that the circuit is opened under oil.

oilcloth. A waterproof material obtained by impregnating a cotton fabric with oxidised linseed or other oils. This process is performed in special oxidising chambers, under the action of heat. Transparent silk fabrics impregnated with oxidised oils are called *oilsilk*, and material with a cotton base *oiled cotton*. They are used for garments and as electrical insulating materials.

oil-cooled (*Eng., etc.*). Said of apparatus that is immersed in oil to facilitate cooling.

oil cooler (*I.C. Engs.*). A small air-cooled radiator used in aircraft and racing cars for cooling the lubricant after its return from the engine and before delivery to the oil tank.

Oildag (*Chem.*). Trade-name for a colloidal dispersion of graphite in oil, used for lubricating purposes; the graphite decreases the surface tension of the oil, thereby facilitating its flow and increasing its lubricating qualities. See **Aquadag.**

oil drop (*Bot.*). Any small droplet of oily substance included in the cytoplasm.

oil engines (*I.C. Engs.*). See **compression-ignition engines.**

oil-filled cable (*Cables*). This has a central duct, formed by an open spiral of steel tape, through which oil is fed to the cable. Gaseous voids and the consequent ionisation are thus eliminated. Used up to the highest voltages (220 kV). Development is due to Emanueli.

oilgas (*Chem.*). A gas of high calorific value, obtained by the destructive distillation of high-boiling mineral oils. It consists chiefly of methane, ethylene, acetylene, benzene, and higher homologues.

oil gland (*Zool.*). The preen gland or uropygial gland of Birds, a cutaneous gland forming an oil secretion used in preening the feathers.

oil hardening (*Eng.*). The hardening of cutting tools, etc., of high carbon content by heating and quenching in oil, resulting in a cooling less sudden than is effected by water, and reduced risk of cracking.

oil-hardening steel (*Met.*). Alloy steel which can be hardened by cooling in oil instead of in water. A typical example is carbon 0·3%, nickel 3·0%, and chromium 0·75%.

oil-immersed (*Elec. Eng.*). Said of electrical apparatus which is immersed in oil. See **oil-break, oil-cooled, oil-insulated.**

oil-impregnated paper (*Diel.*). Used for low and high voltage cables; the oil has resin in it to increase viscosity at working temperatures.

oil-insulated (*Elec. Eng.*). Said of electrical apparatus which is immersed in oil in order to facilitate its insulation.

oil-less circuit-breaker (*Elec. Eng.*). A circuit-breaker which does not use oil either as the quenching medium or for insulation purposes. See **air-blast circuit-breaker, expansion circuit-breaker.**

oil of bitter almonds (*Chem.*). See **bitter almond oil.**

oil of cloves (*Chem.*). See **cloves oil.**

oil of mirbane (*Chem.*). A commercial name for *nitrobenzene*.

oil of turpentine (*Dec.*). See **turpentine.**

oil of vitriol (*Chem.*). An old name for *sulphuric acid*.

oil paints. Pigments, with or without fillers, ground in oil as a vehicle or medium.

oil-pigment process (*Photog.*). The application of oil-pigment to a developed bichromate matrix by dabbing while moist.

oil-poor circuit-breaker (*Elec. Eng.*). A circuit-breaker which employs a very much smaller quantity of oil (about 10%) than an ordinary oil circuit-breaker. Certain types of impulse and expansion breakers are classed under this heading.

oil pressure relief valve (*Eng.*). A spring-loaded valve in the delivery side of a forced lubrication system, for relieving the pressure on the oil pump when the oil is cold and unduly viscous.

oil proofing (*Build.*). The process of making cement surfaces acid-resistant.

oil pump (*I.C. Engs.*). A small auxiliary pump, driven from an engine crankshaft, which forces oil from the sump or oil tank to the bearings; often of the gear type. See **gear pump.**

oil-quenched fuse (*Elec. Eng.*). A liquid-quenched fuse having oil as the quenching medium.

oil rectifier (*Automobiles*). An exhaust-heated still sometimes fitted in the oil-circulation system, through which the lubricant is pumped to remove fuel contamination.

oil ring (*I.C. Engs.*). A *scraper ring* (q.v.).

oil-shale (*Geol.*). One of the argillaceous rocks of sedimentary origin containing diffused hydrocarbons in a state suitable for distillation into paraffin and other mineral oils by the application of heat. See **shale oils.**

Oil Shale Group (*Geol.*). The middle division of the Lower Carboniferous rocks of the Midland Valley of Scotland, comprising several thousand feet of shales (including some which yield oil on destructive distillation), non-marine limestones, valuable coal-seams, and thick sandstones. It overlies the Cementstone Group and is succeeded by the so-called Carboniferous Limestone Series (of Scotland).

oilsilk. See under **oilcloth.**

oil sink (*Horol.*). The spherical recess around a pivot hole in a watch or clock plate. Its purpose is to act as a reservoir for the oil.

oil slip (*Carp., Join., etc.*). A small, shaped piece of oilstone used for putting an edge on gouges.

oilstone. A smooth stone used to impart a fine keen edge to a cutting tool, for which purpose it is first moistened with oil.

oil sump (or **pan**) (*I.C. Engs.*). The lower part of the crankcase of an automobile engine, which acts usually as an oil reservoir.

oil-switch (or **circuit-breaker**) (*Elec. Eng.*). The usual type of switch or circuit-breaker used on high and medium power a.c. circuits; the contacts are immersed in oil for insulating and arc-rupturing purposes.

oil tankers (*Ship Constr.*). Ships constructed for the carriage of oil in bulk, i.e. not barrelled. They are usually of abnormal structural types.

oil-transfer process (*Photog.*). A process involving the transference of an oil print to another support.

oil varnishes (*Diel.*). These contain a drying oil, resin, and driers. The oils used are linseed, china wood, soya bean, poppy-seed, cotton-seed, and castor-oil.

oiled cotton. See under **oilcloth.**

oiled paper (*Paper*). Paper impregnated with non-drying oil, e.g. oiled wrapping; or with linseed oil, e.g. oiled manilla.

oiled-silk tape (*Diel.*). Silk tape varnished with oil (linseed); used in cable joints for keeping spreaders in position.

oiling (*Textiles*). The process of sprinkling wool with oil or oil emulsion in some of the early stages of yarn manufacture, in order to prevent waste while being machined.

oiling ring (*Eng.*). A simple device commonly used to feed oil to a journal bearing. It consists of a light metal ring, larger in diameter than the shaft, and riding loosely thereon, located at the mid-point of the brasses, the upper brass being slotted to receive it. The ring dips into an oil reservoir in the base of the housing, and as it rotates, feeds oil to the brasses.

oilostatic cable (*Cables*). Three cores with an H-paper covering are drawn into a steel tube filled with oil under a pressure of 200 lb./in.^{2}

O'Kaycrete (*Build.*). A trade-name for a rapid-hardening cement.

ökotype, ē'kō-tīp (*Bot.*). See **ecotype.**

Old English (*Typog.*). The black-letter type in which early books were printed.

Old Face (*Typog.*). The earliest form of roman type, as this: Caslon.

Old Red Sandstone (*Geol.*). The continental facies of the Devonian System, comprising perhaps 40,000 ft. of red, brown, or chocolate sandstones, red and green marls, cornstones, breccias, flags, and conglomerates, yielding on certain horizons the remains of archaic fishes, eurypterids, plants, and rare shelly fossils. See **Downtonian, Dittonian, Brownstones, Farlovian.**

Old Style (*Astron., etc.*). A name given to the system of date-reckoning superseded by the adoption of the *Gregorian Calendar* (q.v.).

Old Style (*Typog.*). A type-face imitating the old style of roman letter used in the seventeenth century, as this: Old Style No. 2. It is the most generally used style of type-face in bookwork.

old woman's tooth (*Carp., Join., etc.*). The cutting iron of a router plane.

Oldbury Stone (*Geol.*). A local quartzite or cherty sandstone of Lower Cretaceous age occurring in the Folkestone Beds at Oldbury Hill near Ightham, Kent.

Oldham coupling (*Eng.*). A coupling permitting misalignment of the shafts connected. It consists of a pair of flanges whose opposed faces carry diametrical slots, and between which a floating disc is supported through corresponding diametral tongues arranged at right-angles.

old'hamite (*Min.*). Sulphide of calcium, usually found as cubic crystals in meteorites.

Oldhaven Beds (*Geol.*). A member of the so-called Lower London Tertiaries, consisting of fine-grained yellow sands, usually very richly fossiliferous, occurring sporadically in the Blackheath Beds below the London Clay in the eastern part of the London Basin.

olecra'non (*Zool.*). In land Vertebrates, a process at the upper end of the ulna which forms the point of the elbow.

o'lefines (*Chem.*). Hydrocarbons of the ethylene series, having the general formula C_nH_{2n}. They contain a double bond and are very reactive substances, forming derivatives by the addition of halogen, hydrogen, HCl, etc.

ole'ic acid (*Chem.*). $C_{18}H_{34}O_2$, a colourless liquid, m.p. 14° C. It is an unsaturated acid of the formula $CH_3{\cdot}(CH_2)_7{\cdot}CH{:}CH{\cdot}(CH_2)_7{\cdot}COOH$, and occurs as the glycerine ester in fatty oils. Oleic acid oxidises readily on exposure to the air, turns yellow and becomes rancid.

oleic acid series (*Chem.*). A group of unsaturated aliphatic acids of the general formula $C_nH_{2n-1}{\cdot}COOH$. Its most important members are acrylic acid, the crotonic acids, angelic acid, tiglic acid, oleic acid and erucic acid.

olein, ō'le-in (*Chem.*). A glycerine ester of oleic acid.

o'leobrom process (*Photog.*). The production of a pigment print from a bromide print, using rollers instead of brushes.

o'leocyst (*Zool.*). In some *Siphonophora*, a diverticulum of a nectocalyx containing a drop of oil.

o'leosome (*Bot.*). A large fatty inclusion in the cytoplasm of a cell.

oleotho'rax (*Med.*). The injection of oil into the pleural cavity (between the lung and the chest-wall) in order to compress the diseased lung.

o'leum (*Chem.*). A commercial name for *fuming sulphuric acid* (q.v.).

olfactom'etry (*Chem.*). See **odorimetry.**

olfac'tory (*Zool.*). Pertaining to the sense of smell: the first cranial nerve of Vertebrates, running to the olfactory organ.

olfactory lobes (*Zool.*). Part of the fore brain in Vertebrates, which is concerned with the sense of smell, and from which the olfactory nerves originate.

olfactory pit (*Zool.*). In Invertebrates, a small depression lined by sensory cells and subserving the sense of smell: in developing Vertebrates, a depression which will later give rise to one of the external nares.

olig-, oligo- (Greek *oligos*, few, small). A prefix used in the construction of compound terms; e.g. *oligacanthous*, having few spines.

oligae'mia, olige'mia (*Med.*). Diminution in the volume of the blood.

ol'igiste-iron (*Min.*). See **haematite.**

Ol'igocene (*Geol.*). The period of geological time which followed the Eocene period in the Tertiary era. Rocks of the Oligocene System are restricted in Britain to the Hampshire Basin and Isle of Wight. See **Bembridge Beds, Hamstead Beds, Osborne Beds.**

Ol'igochaeta, —kē'ta (*Zool.*). A class of *Annelida* of terrestrial or fresh-water habit, lacking parapodia but possessing conspicuous locomotor setae; without a distinct head; the perivisceral cavity is subdivided by septa; the individuals are hermaphrodite, with a limited number of gonads; development is direct. Earthworms.

ol'igoclase (*Min*). One of the plagioclase feldspars, consisting of the Albite (Ab) and Anorthite (An) molecules combined in the proportions of Ab, An_1 to Ab_7 An_3. It is found especially in the more acid igneous rocks.

oligocythae'mia, oligocythe'mia (*Med.*). Diminution in the number of red cells in the blood.

oligodendro'glia (*Zool.*). A type of small neuroglia cell occurring more frequently in white matter than in grey matter, containing no fibres and having no feet; more generally, a neuroglia cell.

oligodendroglio'ma (*Med.*). A cerebral tumour composed of oligodendroglia.

oligolec'tic (*Zool.*). (Of Bees) showing restricted choice of flowers when in search of nectar.

oligomenorrhoe'a, oligomenorrhe'a (*Med.*). Scantiness of the discharge during menstruation.

oligomer'ous (*Bot.*). Consisting of but few parts.

oligoneph'rous (*Zool.*). Having few Malpighian tubules.

ol'igopod (*Zool.*). (1) Having few legs or feet.—(2) Said of a phase in the development of larval Insects in which the thoracic limbs are large while the evanescent abdominal appendages of the polypod phase have disappeared.

oligopy'rene (*Zool.*). Said of spermatozoa in which the number of chromosomes is sub-normal. Cf. *eupyrene*.

oligosper'mia (*Med.*). Diminution, below the average, of the quantity of semen voided in an ejaculation.

oligospo'rous (*Bot.*). Containing only few spores.

oligoto'kous (*Zool.*). Bearing few offspring.

oligotro'phic (*Ecol.*). Said of a type of lake-habitat having steep and rocky shores and scanty littoral vegetation.

oligotro'phophyte (*Bot.*). A plant growing in a soil poor in soluble mineral salts.

oligozo'osper'mia (*Med.*). Diminution of the number of spermatozoa in the semen.

oligu'ria (*Med.*). Abnormally diminished secretion of urine.

oliph'agous (*Zool.*). Feeding on few different kinds of food; as phytophagous Insects which are limited to a few related food-plants.

oliva'ceous, olive (*Bot.*). Greyish-green with a touch of orange.

oliv'ary nucleus (*Zool.*). A wavy band of grey matter within the medulla oblongata, corresponding to the position of the olive.

olive (*Zool.*). In the medulla oblongata of higher Vertebrates, a prominence on the lateral aspect of each pyramid, corresponding to a wavy band of grey matter (the olivary nucleus) in the substance of the brain.—*adj.* **olivary.**

olive oil (*Chem.*). A pale-yellow or greenish oil obtained from the fruit of *Olea europea*; sp. gr. 0·91-0·92, acid value 1·9-5, saponification value 185-196, iodine value 77-88.

ol'ivenite (*Min.*). A hydrated arsenate of copper which crystallises in the orthorhombic system. It is a rare green mineral of secondary origin found in copper deposits.

oliver. The name for a simple form of power hammer used in some branches of chain-making.

ol'ivine (*Min.*). Orthosilicate of iron and magnesium, crystallising in the orthorhombic system, which occurs widely in the basic and ultramafic igneous rocks, and includes olivine-gabbro, olivine-dolerite, olivine-basalt, peridotites, etc. See **chrysolite.** The clear-green variety is used as a gemstone under the name *peridot.* For *olivine-nephelinite* see **nephelinite**; and for *iron-olivine* see **fayalite.**

olivine-nodules (*Geol.*). Xenolithic masses of olivine found in some basic igneous rocks, such as the Carboniferous basalts in Derbyshire, England.

olivine-rock (*Geol.*). See **dunite.**

Olson microphone (*Acous.*). The original ribbon microphone.

O.M. (*Chem.*). An abbrev. for *organic matter.*

omasi'tis (*Vet.*). Impaction of the omasum.

oma'sum (*Zool.*). See **psalterium.**

ombré (*Textiles*). The term for stripes that are produced by yarns of the same colour but different tones; a shaded effect.

ombrom'eter (*Meteor.*). A rain-gauge.

om'brophile (*Bot.*). A plant characteristic of a place where rain is abundant.

om'brophyte (*Bot.*). A plant inhabiting shady places.

omen'topex'y (*Surg.*). The stitching of the omentum to the abdominal wall in the treatment of cirrhosis of the liver.

omen'tum (*Zool.*). In Vertebrates, a portion of the serosa connecting two or more folds of the alimentary canal.—*adj.* **omental.**

ommate'um (*Zool.*). A compound eye.

ommatid'ium (*Zool.*). One of the visual elements composing the compound eyes of *Arthropoda.*

om'matoids (*Zool.*). In *Pedipalpi*, two or four white patches on the last somite of the opisthosoma; their nature and function are unknown.

ommat'ophore (*Zool.*). An eye-stalk.

omnibus-bar (*Elec. Eng.*). The original term from which the commonly used expression *bus-bar* (q.v.) is derived.

omnidirectional antenna (*Radio*). An antenna transmitting or receiving equally in all directions in the horizontal plane.

om'nigraph (*Instruments*). A copying instrument used to reproduce drawings on the same or some other scale.

omnim'eter (*Surv.*). A special tacheometric instrument consisting of a transit theodolite having a microscope permanently fixed at right-angles to the line of sight of the telescope, enabling readings to be taken on a horizontal graduated scale. Two such readings are made, corresponding to two pointings of the telescope at marks ten feet apart on a distant vertical staff, and from them horizontal and vertical components of distance are deduced.

omniv'orous (*Bot.*). Said of a parasitic fungus which attacks several or many species of host plant.—(*Zool.*) Including both animal and vegetable tissue in the diet.

omo- (*Zool.*). (Greek *omos*, **shoulder**). A prefix used in the construction of compound terms; e.g. *omohyoid*, pertaining to the shoulder and the hyoid.

omoideum, ō'mo-id'— (*Zool.*). In Birds, the pterygoid.

omoster'num (*Zool.*). An anterior element of the sternum in *Amphibia.*

om'phacite (*Min.*). An aluminous pyroxene, near diopside in composition, occurring in eclogites as pale-green mineral grains; in a thin section colourless, superficially resembling olivine.

omphal-, omphalo- (Greek *omphalos*, **navel**). A prefix used in the construction of compound terms; e g. *omphalomesenteric*, pertaining to the umbilicus and the mesentery.

omphalec'tomy (*Surg.*). Surgical removal of the umbilicus.

omphal'ic (*Zool.*). Pertaining to the umbilicus.

omphali'tis (*Med.*). Inflammation of the umbilicus.

omphal'oid (*Zool.*). Navel-shaped.

om'phalophlebi'tis (*Vet.*). Inflammation of the navel or umbilical cord. See **pyosepticaemia.**

on-costs (*Build.*, *Eng.*, *etc.*). All items of expenditure that cannot be allocated to a definite job, i.e. all expenses other than *prime cost* (q.v.). Also called OVERHEAD EXPENSES, ESTABLISHMENT CHARGES, LOADING, BURDEN.

on-cost men (*Mining*). Those mine workers who receive day wages.

on-setter (*Mining*). See **head hitcher.**

on the line (*Cinema.*). Said of the synchronous motors which drive cameras in a motion-picture studio when they are switched on to the driving mains. *Off the line* denotes the opposite condition.

once-through boiler (*Eng.*). See **Benson boiler, flash boiler.**

on'chocerci'asis (*Med.*). Infestation of the skin and subcutaneous tissues with the nematode worm of the genus *Onchocerca.*

on'chosphere, oncosphere (*Zool.*). In *Cestoda*, a larval form characterised by the possession of three pairs of hooks.

oncogenous, on-koj'— (*Med.*). Inducing, or tending to induce, the formation of tumours.

oncol'ogy (*Med.*). That part of medical science dealing with new-growths (tumours) of body-tissue.

oncom'eter (*Med.*). An apparatus for measuring variations in the size of bodily organs.

ondé, on-dā (*Textiles*). Generally a fourfold yarn with a spiral effect produced by a coarse thread which is incorporated.

on'dograph (*Elec. Eng.*). A recording device for tracing out a.c. wave-forms by a step-by-step method. A condenser is connected to the voltage under investigation at successive points in the cycle, and is made to discharge through a ballistic galvanometer, whose deflection will be proportional to the voltage at that point.

ondule (*Weaving*). A wave effect running the length of a fabric; developed by alternately spacing out and closing up certain warp threads by means of a special reed.

one-at-once wheel (or **engine**) (*Lace*). A small machine which winds a length of yarn on a brass bobbin, uniform tension being maintained.

one-at-once winding (*Lace*). The operation of filling up a brass bobbin with a special kind of yarn.

one-coat work (*Plast.*). Plastering in one coat only—a coat of coarse stuff.

one-hour rating (*Elec. Eng.*). A form of rating commonly used for electrical machinery supplying an intermittent load; e.g. traction motors for suburban service. It indicates that the machine will deliver its specified rating for a period of one hour without exceeding the specified temperature rises.

one-phase (*Elec. Eng.*). See **single-phase.**

one-pipe system (*Plumb.*). A plumbing system in which both soil and waste are carried by a common pipe, the fittings being protected with specially deep seals.

one-sided inheritance (*Gen.*). Inheritance through a chromosome which occurs in one sex only, e.g. a Y-chromosome.

one-to-one transformer (*Elec. Eng.*). A transformer having the same number of turns on the primary as on the secondary; used in circuits when it is desired to insulate one part of a circuit from another.

one-way switch (*Elec. Eng.*). A switch providing only one path for the current. Cf. *double-throw switches* (two-way switches).

onei'ric, oni'ric (*Med.*). Pertaining to dreams.

Oneon'ta Group (*Geol.*). A series of flagstones, red, grey and greenish shales, yielding plant remains, and reaching a thickness of 3000 ft. in eastern New York State. See also **Portage Group.**

onomatoma'nia (*Med.*). An obsessional state of mind in which forgetfulness of certain words is associated with an irresistible impulse to repeat other words, often obscene.

Onondaga Limestone,—daw'ga (*Geol.*). The coral-reef limestone in the Ulsterian of the Middle Devonian, extending from New York to Ohio, Michigan, and Kentucky. Famed for its well-preserved fossils; an important oil-bearing formation in Ontario, Canada, and in the eastern central United States.

ontogeny, ontogen'esis, on-toj'en-i (*Biol.*). The history of the development of an individual; cf. *phylogeny.—adj.* **ontogenetic.**

onych-, onycho-, on-i'ko *or* on'ik-o (Greek *onyx*, gen. *onychos*, a nail or claw). A prefix used in the construction of compound terms; e.g. *onychocryptosis* (q.v.).

ony'chia (*Med.*). Inflammation of the nail-bed.

ony'chium (*Zool.*). In Insects, a pulvillus: in some Spiders, an extension of the tarsus between the paired claws.

onychocrypto'sis (*Med.*). Ingrowing toe-nail.

onychogenic, —jen'ik (*Zool.*). Nail-forming, nail-producing; as a substance similar to eleidin occurring in the superficial cells of the nail-bed.

onychogrypho'sis, onychogrypo'sis (*Med.*). Thickening, twisting, and overgrowth of the nails (usually of the toes) as a result of chronic infection and irritation.

onychomyco'sis (*Bot.*). A disease of the nails due to a fungus.

Onychoph'ora (*Zool.*). See **Prototracheata.**

onyx (*Min.*). A cryptocrystalline variety of silica which consists of layers of different colours, white, black, and red, the bands being straight, not curved (as in agate).

onyx marble (*Min.*). Oriental alabaster (see under **alabaster**).

oö-, ō'o (Greek *oon*, egg). A prefix used in the construction of compound terms; e.g. *oöplasm*, the cell-substance of an egg.

oöblas'tema (*Zool.*). A fertilised egg.

o'öcyst (*Zool.*). In certain *Protozoa*, the cyst formed around two conjugating gametes: in *Sporozoa*, the passive phase into which an oökinete changes in the host.

o'öcyte (*Zool.*). An ovum prior to the formation of the first polar body: a female gametocyte.

oœcium, ō-ē'si-um (*Zool.*). A brood pouch.

o'ögamy (*Biol.*). (1) The union of gametes of dissimilar size, usually of a relatively large non-motile egg and a small active sperm.—(2) In *Protozoa*, anisogamy in which the female gamete is a hologamete.

oögen'esis (*Biol.*). The origin and development of ova.

oögo'nial branch (*Bot.*). A hypha on or in which an oögonium develops.

oögo'nium (*Bot.*). The female sexual organ in algae and fungi. It has a non-cellular wall, and contains one or more oöspheres, which are converted into oöspores at fertilisation and set free before they germinate.—(*Zool.*) An egg-mother-cell or oöcyte.

oöki'nete (*Zool.*). In certain *Protozoa*, an active vermiform stage developed from the zygote.

oölem'ma (*Zool.*). See **vitelline membrane.**

O'olite (*Geol.*). A stratigraphical term referring to the Jurassic oölitic limestones. See **Inferior Oölite Series, Great Oölite Series.**

oölith (*Geol.*). A more or less spherical concretion of calcium carbonate, chamosite, or dolomite, not exceeding 2 mm. in diameter, usually showing a concentric-layered and/or a radiating fibrous structure. Oöliths develop when certain substances pass from the colloidal to the crystalline condition.

oölitic (*Geol.*). A textural term applicable to sedimentary rocks, of several different kinds, which consist largely of oöliths. Cf. *pisolitic.*

oölysis, ō-ol'— (*Bot.*). The conversion of carpels and ovules into leafy structures.

Oomyce'tes (*Bot.*). One of the main subdivisions of the *Phycomycetes*, with some hundreds of species; these have a more or less well-developed mycelium on which oögonia with oöspores are formed.

oöphorec'tomy (*Surg.*). Removal of an ovary by operation.

oöphori'tis (*Med.*). Inflammation of an ovary.

oopho'rosalpingec'tomy (*Surg.*). Removal, by operation, of an ovary and a Fallopian tube.

oöphoros'tomy (*Surg.*). The surgical formation of an opening into an ovarian cyst.

oöphorot'omy (*Surg.*). Surgical incision of an ovary.

o'öphyte (*Bot.*). The gametophyte, in *Bryophyta* and *Pteridophyta.*

o'öplasm (*Bot.*). The central plasma in the oögonium of some *Oomycetes*, representing a more or less undifferentiated egg.

o'ösperm (*Zool.*). See **oöblastema.**

o'osphere (*Biol.*). The unfertilised female gamete or its homologue.

o'öspore (*Bot.*). A thick-walled spore, which normally germinates only after a period of inactivity, formed after the fertilisation of the oösphere in lower plants.

oöspore (*Zool.*). A fertilised ovum: in *Protozoa*, an encysted zygote.

oös'tegite (*Zool.*). In some higher *Crustacea*, a brood pouch formed by plates upon the thoracic limbs.

o'östeg'opod (*Zool.*). In some higher *Crustacea*, one of the thoracic limbs bearing the brood pouch.

o'öthe'ca (*Zool.*). An egg-case, as in the Cockroach.

oöto'coid (*Zool.*). Bringing forth the young in an immature condition and allowing them to complete their early development in a marsupium.

oöto'cous (*Zool.*). Oviparous.

o'ötype (*Zool.*). A section of the oviduct in which the egg-shell is secreted: in *Platyhelminthes*, a chamber, situated at the junction of the oviduct and vitelline ducts, into which the shell-glands open.

ooze (*Geol.*). A fine-grained, soft, deep-sea deposit, composed of shells and fragments of foraminifera, diatoms, and other organisms.

oözo'oid (*Zool.*). An individual which arises directly from an ovum, as opposed to a *blastozooid*, which arises by budding from another individual.

O.P. side. The side of the stage opposite to the *prompt side* (q.v.).

opacifier, ō-pas'— (*Pot.*). A material used in the manufacture of glazes and vitreous enamels to intensify the density of colour or opalescence.

opacity (*Photog.*). The reciprocal of the transmission ratio of an image, i.e. the ratio of the incident light intensity to the transmitted light intensity.

opal (*Min.*). An amorphous variety of silica with a varying amount of water. The transparent coloured varieties, exhibiting opalescence, are highly prized as gemstones. See **fire opal, wood opal.**

opal agate (*Min.*). A variety of opal, of different shades of colour and agate-like in structure.

opal glass (*Glass*). Glass which is opalescent or white; made by the addition of fluorides (e.g. fluorspar, cryolite) to the glass mixture.

opal jasper (*Min.*). Opal containing some yellow iron oxide and other impurities; it has the colour of yellow jasper with the lustre of common opal. Also called JASP OPAL.

opal lamp (*Illum.*). An electric filament lamp having the bulb made of opalescent glassware, so that the filament itself is not directly visible.

opales'cence (*Chem.*). The milky, iridescent appearance of a solution or mineral, due to the reflection of light from very fine, suspended particles.—(*Min.*) The play of colour exhibited by precious opal, due to interference at the surfaces of minutely thin films, the thicknesses of the latter being of the same order of magnitude as the wavelength of light.

o'paline (*Photog.*). A normal photographic print fixed on plate glass by squeegeeing.

O'palite (*Build.*). A composition, obtainable in many colours, which is applied to walls to produce the surface appearance of glazed bricks.

opaque. Totally absorbent of rays of a specified wavelength; e.g. wood is opaque to visible light but slightly transparent to infra-red rays, and completely transparent to X-rays and waves for radio communication.

opaque (*Bot.*). Dull, not shining.

open aestivation (*Bot.*). Aestivation in which the perianth leaves neither overlap nor meet by their edges.

open arc (*Illum.*). A carbon arc to which there is free access of the external atmosphere, any enclosure being for light diffusion or to give protection from draughts.

openband (or **right-hand**) **twine** (*Textiles*). The term used in the woollen trade to denote the direction of twist in a yarn produced by open-spindle bands; synonymous with the term *right-hand twist* used in the worsted industry.

opencast (*Mining*). A large open pit from which ore is extracted.

open channel (*Hyd.*). A channel for the conveyance of liquid, the free surface of which is always within the channel and at atmospheric pressure. Open channels are frequently covered over in practice.

open circuit (*Elec. Eng.*). A break in an electrical circuit along which current can normally pass. A generator or transformer is said to be on *open circuit* when it has a voltage across its terminals but is not delivering any current, owing to there not being a complete circuit between them.

open circuit (*Teleg.*). A circuit which is not completely closed during the spacing signal or the marking signal. See also **open-wire circuit.**

open-circuit characteristic (*Elec. Eng.*). A term commonly used to denote the curve obtained by plotting the e.m.f. generated by an electric generator on open circuit against the field current. Also called NO-LOAD CHARACTERISTIC.

open-circuit impedance (*Elec. Comm.*). The driving point or input impedance of a network or line when the end is open-circuited.

open-circuit loss (*Elec. Eng.*). See **no-load loss.**

open-circuit transition (*Elec. Eng.*). A method used, in the series-parallel control of traction motors, for changing the connexions of the motors from series to parallel; the circuit is broken while the reconnexion is being made. Cf. *bridge transition*, *short-circuit transition.*

open-circuit voltage (*Elec. Eng.*). The voltage appearing across the terminals of an electric generator or transformer when it is delivering no load. The term also refers to the voltage appearing across the electrodes of an arc-welding plant when no current is flowing.

open community (*Bot.*). A plant community which does not occupy the ground completely, so that bare spaces are visible.

open-diaphragm loudspeaker (*Acous.*). A loudspeaker in which the radiating diaphragm is not fitted with a horn but operates directly into the low radiation impedance of the air.

open floor (*Build.*). A floor which is not covered by a ceiling, the joists being therefore on view.

open-frame girder (*Struct.*). A girder consisting of upper and lower booms connected at intervals by (usually) vertical members, and not braced by any diagonal members.

open fuse (*Elec. Eng.*). A fuse in which the mounting is such that the fuse link is fully exposed, except for any external containing case.

open-hearth furnace (*Met.*). A furnace, of reverberatory type, used in steel-making. The charge is contained on a shallow hearth, and the furnace fired with gas on regenerative principle. Capacity 40-250 tons.

open-hearth process (*Met.*). A process for making steel from varying proportions of pig-iron (solid or liquid) and scrap. The metal is melted on a shallow hearth by burning producer gas over it. Oxidation of the impurities (C,Si,Mn.) is produced by the oxidising furnace gas and the addition of iron oxide. This process is used almost universally in Britain and for about 90% of the steel made in America. Also called SIEMENS-MARTIN PROCESS. See **acid process, basic process, steel-making.**

open mortise (*Join.*). A *slot mortise* (q.v.).

open newel stair (*Build.*). A stair having successive flights rising in opposite directions, and arranged about a rectangular well hole.

open pipe (*Acous.*). A pipe which is partially or completely open at the upper end, so that the wavelength of the fundamental resonance is approximately double the length of the air column.

open roof (*Build.*). A roof which is not covered in by a ceiling, the trusses being exposed.

open sand (*Moulding*). (1) A sand of good porosity or permeability, as distinct from a *close* sand.—(2) The process of casting in an open mould when the finish of the top surface is immaterial.

open shed (*Weaving*). A passage between upper and lower lines of warp threads; the individual threads remain stationary until required to move up or down. A thread which is up (or down), and is required in the same position when the next shed is formed, remains stationary: only those threads move which are required to change position.

open shedding (*Weaving*). The best method of separating warp threads during weaving, threads being moved only when required to change position; at other times they remain stationary. Maximum loom speed is obtainable with this type of shed.

open slating (*Build.*). Slating in which gaps of 1-4 in. are left between adjacent slates in any course.

open slot (*Elec. Eng.*). A type of slot, used in the armatures of electric machines, in which the opening is the same width as the rest of the slot. Cf. *semi-closed slot.*

open string (*Carp.*). See **cut string.**

open traverse (*Surv.*). A traverse in which the final line does not link up with the first line.

open-type (*Elec. Eng*). Said of electrical apparatus having no protecting enclosure around live parts; e.g. *open-type boiling plate*, an electric boiling plate in which the heating elements are exposed to the atmosphere.

open vascular bundle (*Bot.*). A bundle including cambium.

open well (*Build.*). A stair enclosing a vertical opening between the outer sides of the flights.

open-wire (or open) circuit (*Elec. Comm*). A circuit supported from insulators on poles and, with others, forming a pole route.

open woodland (*Bot.*). Grassy ground with trees here and there, often forming groups.

openwork or lace fabrics (*Hosiery*). Knitted fabrics with an openwork pattern produced by a transference of certain stitches from a needle or needles to adjacent needles; this process lightens the weight of the fabric. Openwork patterns may also be arranged by a disposal of stitches.

opening (*Cotton Spinning*). The first operation in preparing, for the spinning process, the compressed and matted cotton from a bale.

operating-duty (*Elec. Eng.*). A term applied to a switch or circuit-breaker to denote the series of making and breaking operations used in specifying its performance.

operating factor (*Elec. Eng.*). The ratio which the time during which an intermittently run motor is actually running bears to the length of the duty cycle.

operating room (*Teleph.*). The room in which the operators in a manual or automatic (enquiries, etc.) exchange are located in front of their switchboards.

operating time (*Teleph.*). The time during which a trunk circuit must be held while the operator is establishing the call. See **holding time.**

operator's position (*Teleph.*). The same as *position.*

oper'cular apparatus (*Zool.*). In Fish, the operculum, together with the branchiostegal membrane and rays.

opercular cell (*Bot.*). A lid cell by means of which some antheridia open.

opercular'e (*Zool.*). In Fish, a dorsal membrane bone of the operculum.

oper'culate (*Bot.*). (1) Possessing a lid.—(2) Opening by means of a lid.

oper'culum (*Bot.*). A cover or lid which opens to allow of the escape of spores from a sporangium or other container.

operculum (*Zool.*). In Fish, the gill-cover: in some tubicolous *Polychaeta*, an enlarged branch of a tentacle which tightly closes the mouth of the tube when the animal is retracted: in *Xiphosura*, the united anterior pair of abdominal appendages bearing the genital apertures: in Spiders, a small plate partially covering the opening of a lung book: in some *Cirripedia*, plates of the carapace which can be closed over the retracted thorax: in *Pterobranchia*, a ventral and lateral projection of the collar forming a lower lip.—*adjs.* **opercular, operculate, operculiform, operculigenous.**

ophical'cite (*Geol.*). See **forsterite-marble.**

ophiceph'alous (*Zool.*). Snake-headed: (in *Echinoidea*) said of small pedicellariae having a flexible stalk and short, broad jaws with toothed edges, which lack poison-glands but have a special articulating device.

ophidi'asis, o'phidism (*Med.*). Poisoning by snake venom.

ophi-mottling (*Geol.*). A textural character of certain basic gabbroic rocks in which large pyroxenes enclosing small plagioclase crystals ophitically are embedded in a groundmass essentially feldspathic.

ophioplu'teus (*Zool.*). In *Ophiuroidea*, a pelagic ciliated larval form, in which the posterolateral arms are large and are directed forwards. See also **pluteus.**

ophit'ic texture (*Geol.*). A texture characteristic of dolerites in which relatively large pyroxene crystals completely enclose smaller, lath-shaped plagioclases. See also **poikilitic.**

Ophi'uroi'dea (*Zool.*). A class of *Echinodermata* having a dorsoventrally flattened body of stellate form; the arms are sharply differentiated from the disc; the tube-feet lack ampullae and lie on the lower surface, but not in grooves; there is no anus; the madreporite is aboral, and there is a well-developed skeleton; free-living forms. Brittle Stars.

ophthalm-, ophthalmo- (Greek *ophthalmos*, eye). A prefix used in the construction of compound terms; e.g. *ophthalmoplegia* (q.v.).

ophthalmec'tomy (*Surg.*). Excision of an eye.

ophthal'mia (*Med*). Inflammation of various parts of the eye, especially of the conjunctiva.

ophthal'mic (*Zool*). Pertaining to or situated near the eye; as the *ophthalmic nerve*, which passes along the back of the orbit in lower Vertebrates.

ophthalmol'ogy (*Med.*). That part of medical science which deals with the eye and its diseases —*n.* **ophthalmol'ogist.**

ophthalmople'gia (*Med.*). Paralysis of one or more muscles of the eye.

ophthal'moscope (*Med.*). An instrument for inspecting the interior of the eye by means of light reflected from a mirror.

Opiliones, ō-pil'i-ō-nēz (*Zool.*). An order of *Embolobranchiata* having a uniform prosoma and a segmented opisthosoma; there is no telson; the pedipalpi are slender and tactile, the coxae having gnathobases; respiration is by tracheae; the body is usually globular, and the legs are very long and slender; carnivorous cosmopolitan forms. Harvestmen.

opisom'eter (*Surv.*). See **map measurer.**

opisth-, opistho- (Greek *opisthe*, behind, posterior). A prefix used in the construction of compound terms; e.g. *opisthocoelous* (q.v.).

opis'thial aperture (*Bot.*). The opening between the base of the stomatal pore and the substomatal cavity.

Opis'thobran'chia (*Zool.*). An order of marine *Euthyneura* which breathe by gills and show a tendency to reduction of the shell; the mantle-cavity is widely open or absent. Sea Hares, Sea Slugs, Sea Butterflies, etc.

opis'thocoelous, —sē'lus (*Zool.*). Concave posteriorly and convex anteriorly; said of vertebral centra.

Opisthoco'mifor'mes (*Zool.*). An order of *Coraciomorphae* having a schizognathous (*Opisthocomi*) or desmognathous (*Cuculi* and *Psittaci*) palate; zygodactylous arboreal Birds. Parrots and Cockatoos, Cuckoos, Hoatzin, and Plantain-eaters.

opisthode'tic (*Zool.*). In Bivalves, posterior to the beak.

opisthoglos'sal (*Zool.*). Having the tongue attached anteriorly, free posteriorly, as in *Frogs*.

opis'thomere (*Zool.*). A postoral somite.

Opis'thomi (*Zool.*). An order of *Neopterygii* of small size and eel-like form, with pelvic fins absent, and spiny dorsal fin; fresh-water carnivorous forms of Africa and Southern Asia. Spiny Eels.

opisthoneph'ros (*Zool.*). In Vertebrates, a type of excretory organ corresponding to the mesonephros together with the metanephros.—*adj.* **opisthonephric.**

opisthoso'ma (*Zool.*). In *Acarina*, the segments of the body posterior to the last pair of legs: in *Arachnida*, the abdomen, comprising the mesosoma and metasoma.

opisthot'ic (*Zool.*). A posterior bone of the auditory capsule in the Vertebrate skull.

opisthot'onos (*Med.*). Extreme arching backwards of the spine and the neck as a result of spasm of the muscles in these regions; e.g. in tetanus.

opossum (*Furs*). The dressed skin of the opossum, a marsupial climbing animal of America, and of other marsupials native to Australia; the fur is greyish and is often dyed.

opother'apy (*Med.*). (Literally, treatment by juices.) Treatment by administration of extracts of animal organs, especially of ductless glands.

oppo'nens (*Zool.*). A muscle which, by its contraction, assists the opposition of the digits.

opposed-cylinder engine (*I.C. Engs.*). An engine with cylinders, or banks of cylinders, on opposite sides of the crankcase in the same plane, their connecting-rods working on a common crankshaft placed between them.

opposed-voltage protective system (*Elec. Eng.*). A form of Merz-Price protective system in which the secondary voltages of current transformers situated at each end of the circuit to be protected are balanced against each other, so that there is normally no current on the pilots connecting them.

opposite (*Bot.*). (1) Said of leaves inserted in pairs at each node, with one on each side of the stem.—(2) Said of a stamen which stands opposite to the middle of a petal.

opposition (*Astron.*). The instant when the elongation of the moon or a planet is 180°; that is, when it is in line with the earth and sun, the earth being between the two.

op'sonin (*Zool.*). A substance, present in the blood, which enhances the phagocytic properties of leucocytes.

optics. The study of light. *Physical optics* deals with the nature of light and its wave properties; *geometrical optics* ignores the wave nature of light and treats problems of reflection and refraction from the ray aspect.

optic (*Zool.*). Pertaining to the sense of sight; the second cranial nerve of Vertebrates, running to the eye.

optic atrophy (*Med.*). The condition of the optic disc (where the nerve fibres of the retina pass through the eyeball) resulting from degeneration of the optic nerve, the disc becoming paler and more sharply defined than normal.

optic axial angle (*Min.*). The angle between the two optic axes in biaxial minerals, usually denoted as 2V (when measured in the mineral) or 2E (in air).

optic axis (*Light*). That direction in a doubly refracting crystal along which the ordinary and extraordinary rays pursue the same path with the same velocity. A uniaxial crystal has one and a biaxial crystal two optic axes.

optic lobes (*Zool.*). In Vertebrates, part of the mid-brain, which is concerned with the sense of sight, and from which the optic nerves originate.

optic neuritis (*Med.*). See **papillitis.**

optical activity (*Chem.*, *Phys.*). A property possessed by many substances whereby plane-polarised light, in passing through them, suffers a rotation of its plane of polarisation, the angle of rotation being proportional to the thickness of substance traversed by the light. In the case of molten or dissolved substances it is due to the possession of an asymmetric molecular structure. See **specific rotation.**

optical centre of a lens (*Light*). That point on the principal axis of a lens or lens system through which passes a ray whose incident and emergent directions are parallel.

optical double (*Astron.*). The name given to a pair of stars which appear in close proximity owing to the perspective in which they are seen, but which have no physical connexion.

optical flat (*Photog.*). A surface, generally of glass, which has been lapped by rubbing on an optically flat surface so that deviations from a true plane surface are small in comparison with the wavelength of light.

optical glass (*Glass*). Glass made expressly for its optical qualities. The composition varies widely both as to constituents and amounts, and the requirements as regards freedom from streaks and bubble are very exacting.

optical indicator (*I.C. Engs.*). An engine indicator in which a ray of light is deflected successively by mirrors in directions at right-angles, proportionately first to cylinder pressure, then to piston displacement, being finally focused on a ground-glass screen or photographic plate, on which it traces the *indicator diagram* (q.v.).

optical isomerism (*Chem.*). The existence of isomeric compounds which differ only in their optical activity.

optical-mechanical system (*Television*). Any system of television employing mechanical scanning.

optical printing (*Cinema.*). The process of printing positive frames by optical arrangements which can reduce, enlarge, re-shape, fade, or wipe the image on the negative. Used extensively for trailers and general editing, a duplicate negative being made for release prints.

optical pyrometer (*Heat*). An instrument which measures the temperatures of furnaces by estimating the colour of the radiation, or by matching it with that of a glowing filament.

optical scratch (*Cinema.*). A scratch on the sound-track caused by a particle of dirt which has entered the recording mechanism.

optical sign (*Min.*). Anisotropic minerals are either optically positive or negative, indicated by + or − in technical descriptions. See **negative mineral, positive mineral.**

optical square (*Surv.*). A hand instrument for setting out right-angles in the field. It works on the principle of the *sextant* (q.v.), the two reflecting surfaces being arranged in this case to yield lines of sight at a fixed angle of 90° apart.

op'ticon (*Zool.*). In Insects, the internal medullary mass or inner zone of the optic lobe of the brain.

optimum. Most favourable: the point at which any condition is most favourable or at its height; e.g. *optimum temperature, optimum humidity*, etc.

op'tocoele (*Zool.*). The cavity of one of the optic lobes of the Vertebrate brain.

op'togram (*Zool.*). A retinal image.

ora (*Zool.*). See **os.**

ora serra'ta (*Zool.*). The edge of the retina.

oral (*Zool.*). Pertaining to, or in the region of, the mouth.

orange lead (*Chem.*). Pb_3O_4. Obtained by heating white lead (basic lead carbonate) in air at approximately 450° C. Commercial varieties contain up to approximately 35% PbO_2.

Orase'ma (*Zool.*). A small hymenopterous Insect of which the immature stages are ectoparasitic on certain species of tropical ants. See **phthisaner, phthisergate, phthisogyne.**

orbic'ular (*Bot.*). Flat, with a circular or almost circular outline.

orbicular structure (*Geol.*). A structure exhibited by those igneous rocks which contain spherical orbs up to several inches in diameter, each showing a development of alternating concentric shells of different minerals, so deposited by rhythmic crystallisation. See, for example, **corsite.**

orbicular'es (*Zool.*). Muscles which surround an aperture; as the muscles which close the lips and eyelids in Mammals.

orbit (*Astron.*). The path of a heavenly body moving about another under gravitational attraction. See also **elements of an orbit.**

orbit (*Zool.*). A space lodging an eye: in Vertebrates, the depression in the skull containing the eye: in Arthropods, the hollow which receives the eye or the base of the eye-stalk: in Birds, the skin surrounding the eye.

orbital. *Adj.* from *orbit.*

orbi'to- (Latin *orbita*, orbit). A prefix used in the construction of compound terms; e.g. *orbitonasal*, pertaining to the orbit and the nose.

orbitosphe'noid (*Zool.*). A paired cartilage bone of the Vertebrate skull, forming the side wall of the brain-case in the region of the presphenoid.

Orca'dian Series (*Geol.*). A name sometimes applied to the Middle Old Red Sandstone of Scotland, including as the chief member the Caithness Flagstone Group, overlying barren red sandstones without fossils. The name *Orcadian* is also applied to the basin in which the Old Red Sandstone of Caithness, Moray, the Orkney and Shetland Islands was deposited.

orch-, orchi- (Greek *orchis*, testicle). A prefix used in the construction of compound terms; e.g. *orchi-epididymitis* (q.v.). **orchid-, orchido-** are falsely derived variants.

orchec'tomy (*Surg.*). See **orchidectomy.**

or'chic, orchit'ic (*Zool.*). Pertaining to the testis.

orchid-, orchido-. Prefix. See under **orch-.**

orchidal'gia (*Med.*). Pain in a testis.

orchidec'tomy, orchec'tomy (*Surg.*). Surgical removal of a testis.

or'chidopex'y (*Surg.*). The operation of stitching an undescended testis to the scrotum.

orchi-epididymi'tis (*Med.*). Inflammation of the testis and the epididymis.

orchi'tis (*Med.*). Inflammation of a testis.

or'cinol (*Chem.*). $CH_3{\cdot}C_6H_3(OH)_2$ (1,3,5), *m*-dihydroxy-toluene, a dihydric phenol, colourless crystals, m.p. 107° C., b.p. 288° C.

orcu'liform (*Bot.*). Said of a two-celled spore having a thick septum pierced by a connecting-tube between the two cells.

order (*Bot., Zool.*). A group of closely related plants or animals forming a subdivision of a *class*, and itself further subdivided into *families*. See *The Vegetable Kingdom*, *The Animal Kingdom*, in Appendix.

order form. A special paper form intended for requisitions.

order number (*Eng.*). (Of a torque impulse or a vibration, as the torsional oscillation of an engine crankshaft) the number of impulses or vibrations which occur during one revolution of the shaft.

order of reaction (*Chem.*). A classification of chemical reactions based on the index of the power to which concentration terms are raised in the expression for the instantaneous velocity of the reaction, i.e. on the apparent number of molecules which interact.

order wire circuit (*Teleph.*). A circuit between operators in different exchanges serving for exchange of information in setting up subscribers' calls.

ordinary ray (*Light*). Of the two plane-polarised components into which a ray of light is split in passing through a doubly refracting crystal, the *ordinary ray* is the one which obeys Snell's law and gives a constant refractive index for all angles of incidence.

ordnance (*Artillery*). A generic term embracing all artillery weapons, including guns, howitzers, and mortars.

Ordnance Bench Mark (*Surv.*). A bench mark established with reference to the Ordnance Datum.

Ordnance Datum (*Surv.*). The standard datum for Great Britain; originally the assumed mean sea-level at Liverpool (1844), now the mean sea-level at Newlyn, Cornwall (1921).

Ordovician, —vish'an (*Geol.*). The middle period in the lower Palaeozoic era, which followed the Cambrian period. It was named by Prof. Chas. Lapworth after the Ordovices, an old British tribe of the Welsh Border, in which area rocks of this age are found.

See **Ashgill Series** **Llandeilian Series**
Arenig do. **Llanvirn** do.
Bala do. **Ordovicic** do.
Caradocian do.

Ordovic'ic (*Geol.*). Comparable with *Ordovician.* See **Canadian, Cincinnatian,** and **Mohawkian.**

ore (*Min.*). A term applied to metalliferous minerals which are of economic value and can (or may) be profitably exploited. It is extended to non-metals and also to minerals which are potentially valuable.

ore hearth (*Met.*). See **Scotch hearth.**

Oregon pine (*Timber*). A strong light timber, much used for roofing timbers for public buildings and for floorings. Also called DOUGLAS FIR, BRITISH COLUMBIAN PINE.

Orford process (*Met.*). A process used by the International Nickel Co. for separating the copper and nickel in the matte obtained by bessemerising. The matte, which consists of copper-nickel sulphides, is fused with sodium sulphide, and a separation into two layers, the top rich in nickel and the bottom rich in copper, is obtained.

organ. A musical instrument, comprising ranks of pipes which radiate sound when blown by compressed air, the operation of the pipes being controlled by manuals on key-boards and by a set of pedals operated by the feet. By extension, any musical instrument producing by synthetic means tones similar to those obtained from pipes and operated from keyboards; e.g. the *Electrone* and *Hammond.*

organ pitch (*Acous.*). See **pitch of organ pipe stops.**

organ (*Bot., Zool.*). A part of the body of an animal or a plant adapted and specialised for the performance of a particular function.

or'gandie (*Textiles*). A light, transparent cotton dress material, with a stiff finish; usually plain-weave, but sometimes finished with a crimp stripe or with crammed stripes.

or'ganelle (*Cyt.*). A *cell organ* (q.v.).

organic axis (*Cyt.*). The principal axis of a cell, passing through the centrosome and the nucleus of the resting cell.

organic chemistry (*Chem.*). The study of the compounds of carbon. Owing to the ability of carbon atoms to combine together in long chains, these compounds are far more numerous than those of other elements. They are the basis of living matter.

organic disease. See under **functional disease.**

organised (*Biol.*). Showing the characteristics of an organism: having the tissues and organs formed into a unified whole.

organiser (*Zool.*). An organisation centre in development: a part of the body from which pass out organising influences to other regions of the embryo; as the anterior lip of the blastopore.

organism (*Biol.*). A living animal or plant.

organo-magnesium compounds (*Chem.*). *Grignard reagents* (q.v.), compounds of the type R.Mg.I.

organo-metallic compounds (*Chem.*). Compounds consisting of one or more alkyl radicals attached to the atom of a metal; e.g. $Na(CH_3)$, $Zn(C_2H_5)_2$, $Hg(C_2H_5)_2$, etc.

organogeny, organogen'esis (*Biol.*). The study of the formation and development of organs.

organog'raphy (*Bot.*). A descriptive study of the external form of plants, with relation to function.

or'ganon spira'le (*Zool.*). See **Corti's organ.**

organ'osol (*Chem.*). A colloidal solution in an organic liquid.

or'ganother'apy (*Med.*). Treatment of disease by administration of animal organs or extracts of them, especially of ductless gland extracts. See also **opotherapy.**

or'ganzine, —zēn (*Textiles*). Silk yarn intended to be used as warp; formed from two or more threads, run together, which have a slight twist imparted to them to withstand the strain of weaving.

or'gasm (*Zool.*). Turgescence: immoderate excitement.—*adj.* **orgastic.**

Orgatron (*Acous.*). An electronic musical instrument using the pneumatic action of a reed organ. The electrical current for the operation of radiating loudspeakers is obtained by electrostatic pick-ups operated by the motion of the languids of the air-operated reeds, using adequate amplifiers.

o'riel (*Build.*). A projecting window supported upon corbels or brackets.

Oriental alabaster (*Min.*). See under **alabaster.**

Oriental almandine (*Min.*). A trade name for corundum, of gemstone quality, which is deep-red in colour, resembling true almandine (a garnet) in this, but no other, respect.

Oriental amethyst, etc. (*Min.*). See **false amethyst,** etc.

Oriental cat's eye (*Min.*). See **cymophane.**

Oriental emerald (*Min.*). A trade name for corundum, of gemstone quality, resembling true emerald in colour.

oriental region (*Zool.*). One of the primary faunal regions into which the land surface of the globe is divided. It includes the southern coast of Asia east of the Persian Gulf, India south of the Himalayas, southern China and Malaysia, and the islands of the Malay Archipelago north and west of Wallace's line.

Oriental ruby (*Min.*). See **ruby.**

Oriental topaz (*Min.*). A variety of the mineral corundum in colour resembling topaz and sold as such.

orientation (*Biol.*). The position, or change of position, of a part or organ with relation to the whole: change of position of an organism under stimulus.
